hemitonia (hem/'i-to'ne-ah) [*hemi-* + Gr. *tonos* tension + *-ia*] hemihypertonia.

hemitoxin (hem/'i-tok'sin) a toxin the toxicity of which has been reduced by one half.

hemitremor (hem/'e-tre'mor) tremor of one side of the body.

hemivagotomy (hem/'e-va-got'o-ne) hyperexcitability of the vagus nerve on one side.

hemivertebra (hem/'e-ver'te-brah) 1. a developmental anomaly characterized by incomplete development of one side of a vertebra. 2. (pl., *hemivertebrae*) a vertebra which is incompletely developed on one side.

hemizygosity (hem/'e-zi-gos'i-te) the state of possessing only one of the pair of genes that influence the determination of a particular trait, as the male has no alleles on the Y chromosome for those on the X, so that his X-linked genes are expressed whether they are dominant or recessive.

hemizygote (hem/'e-zi'gōt) an individual or cell exhibiting hemizygosity.

hemizygotic (hem/'e-zi-got'ik) hemizygous.

hemizygous (hem/'e-zi'gus) possessing only one of a pair of genes that influence the determination of a particular trait; see *hemizygosity*.

hemlock (hem/'lok) 1. any fir tree of the genus *Tsuga*, especially *T. canadensis* (L.) Carr. (Pinaceae), the source of Canada pitch, of the volatile oil of hemlock, and of an astringent extract. 2. *Conium maculatum* L., or poison hemlock, a large, toxic, umbelliferous herb, which contains the poisonous alkaloid coniine; the dried, fully grown, unripe fruit has sedative, anodyne, and antispasmodic properties. 3. any of the plants of the genera *Cicuta* and *Conium*. **poison h.**, see *hemlock*, def. 2. **water h.**, *Cicuta maculata*.

hemo-, haemo-, hem-, haem-, hema-, haema-, hemat-, hemato-, haemato- (he'mo, hem, he'mah, hem'at, hem'ah-to)

[Gr. *haima*, *haimatos* blood] combining form denoting relationship to the blood.

hemoagglutination (he'mo-ah-gloo'ti-na'shun) hemagglutination.

hemoagglutinin (he'mo-ah-gloo'ti-nin) hemagglutinin.

hemoalkalimeter (he'mo-al'kah-lim'ē-ter) an instrument for ascertaining the alkalinity of the blood.

hemobilia (he'mo-bil'e-ah) hemato-bilia.

hemobilinuria (he'mo-bi-lin-u're-ah) [*hemo* + *bilin* + Gr. *ouron* urine + *-ia*] the presence of urobilin in the blood and urine.

hemoblast (he'mo-blast) hemocytoblast; see also *monophyletic theory*, under *theory*. **lymphoid h. of Pappenheim**, pro-normoblast.

hemoblastosis (he'mo-blas-to'sis) (*obs.*) proliferation of the blood-forming tissues; the term includes leukosis, erythrosis, and reticuloendotheliosis.

hemocatharsis (he'mo-kah-thar'sis) hematocatharsis.

hemocatheresis (he'mo-kah-ther'ē-sis) [*hemo* + Gr. *kathairesis* destruction] the destruction of blood, especially of erythrocytes.

hemocatheretic (he'mo-kath'er-et'ik) pertaining to, characterized by, or promoting hemocatheresis.

Hemoccult (he'mo-kult) trademark for a modification of the guaiac test for occult blood, in which guaiac-impregnated filter paper is used; the test is positive if the specimen turns blue.

hemocele (he'mo-sēl) hemocoelom.

hemocoelom (he'mo-se'lom) hemocoelom.

hemocholecyst (he'mo-ko'le-sist) nontraumatic hemorrhage of the gallbladder.

hemocholecystitis (he'mo-ko-le-sis-ti'tis) cholecystitis with hemorrhage into the gallbladder.

hemochorial (he'mo-ko're-al) [*hemo* + *chorion*] denoting a type of placenta in which maternal blood comes in direct contact with the chorion.

hemochromatosis (he'mo-kro'mah-to'sis) a disorder of iron metabolism characterized by excess deposition of iron in the tissues, especially in the liver and pancreas, and by bronze pigmentation of the skin, cirrhosis, diabetes mellitus, and associated bone and joint changes. The hereditary form is called *idiopathic (classic) hemochromatosis*. The exogenous forms are observed in patients who have received transfusions and/or iron compounds over a prolonged period, resulting in iron overload. Called also *bronze* or *bronzed diabetes*, *iron storage disease*, and *Recklinghausen-Applebaum disease*. Cf. *hemosiderosis*.

hemochromatotic (he'mo-kro'mah-to'tik) pertaining to or characterized by hemochromatosis.

hemochrome (he'mo-krōm) [*hemo* + Gr. *chrōma* color] an oxygen-carrying pigment found in the blood of various animals; the hemochromes include hemoglobin, erythrocyruin, chlorocruin, hemacyanin, and hemoerythrin.

hemochromogen (he'mo-kro'mo-jen) [*hemo* + Gr. *chrōma* color + *gennan* to produce] a general term for a compound of heme with various proteins and other substances. **hemoglobin h.**, a hemoglobin in which the globin has been denatured.

hemochromometer (he'mo-kro-mom'ē-ter) [*hemo* + Gr. *chrōma* color + *metron* measure] an instrument for making color tests of the blood to determine the proportion of hemoglobin.

hemochromometry (he'mo-kro-mom'ē-tre) the measurement of the quantity of hemoglobin in the blood.

hemochromoprotein (he'mo-kro'mo-pro'te-in) a colored, conjugated protein, with respiratory functions, found in the blood of animals.

hemoclasia (he'mo-kla'se-ah) the occurrence of postalbuminary leukopenia; see *hemoclastic crisis*, under *crisis*.

hemoclasia (he-mok'lah-sis) [*hemo* + Gr. *klasis* a breaking] hemolysis.

hemoclastic (he-mo-klas'tik) pertaining to, characterized by, or causing destruction or dissolution of erythrocytes; see also under *crisis*.

hemoclip (he'mo-klip) a metal clip used to ligate blood vessels.

hemocoagulin (he'mo-ko-ag'u-lin) a constituent of the venom of certain snakes which causes coagulation of the blood.

hemocoelom (he'mo-se'lom) [*hemo* + *coelom*] 1. the part of the coelom in which the heart is developed. 2. collectively, the spaces between the cells and tissues of many invertebrates, such as most mollusks, arthropods, and tunicates, through which a bloodlike fluid (hemolymph) circulates. Sometimes spelled *hemocele* and *hemocoel*.

hemocoeloma (he'mo-se-lo'mah) [*hemo* + *coeloma*] hemocoelom.

hemoconcentration (he'mo-kon'sen-tra'shun) decrease of the fluid content of the blood, with resulting increase in its concentration. Cf. *exemia*.

hemoconia (he'mo-ko'ne-ah) [*hemo* + Gr. *konia* dust] small, round or dumbbell-shaped particles demonstrating brownian movement, observed in blood platelets in a wet film of blood under

darkfield microscopy. Called also *blood dust* (of Müller) and *Müller's dust bodies*.

hemoconiosis (he'mo-ko'ne-o'sis) the presence in the blood of abnormal amounts of hemoconia.

hemocrine (he'mo-krin) having an endocrine influence in the blood.

hemocrinia (he'mo-krin'e-ah) [*hemo* + *endocrine*] the presence of endocrine substances (hormones) in the blood.

hemocrinotherapy (he'mo-krin'o-ther'ah-pe) treatment by injection of the patient's own blood mixed with an endocrine extract.

hemocryoscopy (he'mo-kri-os'ko-pe) [*hemo* + *cryoscopy*] cryoscopy of the blood; the ascertaining of the freezing point of the blood.

hemoculture (he'mo-kul'tūr) [*hemo* + *culture*] a bacteriological culture of the blood.

hemocuprein (he'mo-ku'pre-in) an organic copper and protein compound isolated from erythrocytes.

hemocyanin (he'mo-si'ah-nin) [*hemo* + Gr. *kyanos* blue] a chromoprotein occurring in the blood of mollusks and arthropods; it is a blue respiratory pigment and contains 0.17 to 0.38 per cent of copper. **keyhole-limpet h. (KLH)**, the oxygen-carrying blood pigment, hemocyanin, from the "keyhole limpet" (a mollusk), frequently used as an experimental antigen in mammals; immunization with KLH is used as a test in acute myelogenous leukemia.

hemocyte (he'mo-sit) [*hemo* + Gr. *kytos* hollow vessel] any blood corpuscle, or formed element of the blood.

hemocytoblast (he'mo-si'to-blast) [*hemocyte* + Gr. *blastos* germ] the free stem cell from which, according to the monophyletists, by development along different lines, all the other cells of the blood are derived.

hemocytoblastoma (he'mo-si'to-blas-to'mah) a tumor containing all the cells typical of bone marrow.

hemocytocatheresis (he'mo-si'to-kah-ther'ē-sis) [*hemocyte* + Gr. *kathairesis* destruction] the destruction of erythrocytes.

hemocytoma (he'mo-si-to'mah) a tumor containing undifferentiated blood cells.

hemocytometer (he'mo-si-tom'ē-ter) hemacytometer.

hemocytophagia (he'mo-si'to-fa'je-ah) [*hemocyte* + Gr. *phagein* to devour] the ingestion and destruction of blood corpuscles by the histiocytes of the reticuloendothelial system.

hemocytophagic (he'mo-si'to-faj'ik) pertaining to or characterized by hemocytophagia.

hemocytopoiesis (he'mo-si'to-poi'e-sis) hematopoiesis.

hemocytotripsis (he'mo-si'to-trip'sis) [*hemocyte* + Gr. *tribein* to rub] the disintegration of the blood corpuscles by reason of pressure.

hemocytozoa (he'mo-si'to-zo'ah) plural of *hemocytozoon*.

hemocytozoon (he'mo-si'to-zo'on), pl. *hemocytozoa* [*hemo* + Gr. *kytos* hollow vessel + *zōon* animal] (*obs.*) any animal microorganism parasitic in the blood cells.

hemodia (he-mo'de-ah) [Gr. *haimōdia* condition of having the teeth on edge] (*obs.*) unusual sensitiveness of the teeth.

hemodiagnosis (he'mo-di'ag-no'sis) [*hemo* + *diagnosis*] diagnosis by examination of the blood.

hemodialysis (he'mo-di-al'i-sis) the removal of certain elements from the blood by virtue of the difference in the rates of their diffusion through a semipermeable membrane, e.g., by means of a hemodialyzer.

hemodialyzer (he'mo-di'ah-liz'er) an apparatus by which hemodialysis may be performed, blood being separated by a semipermeable membrane from a solution of such composition as to secure diffusion of certain elements out of the blood. Popularly called *artificial kidney*. **ultrafiltration h.**, one in which differences in fluid pressure bring about filtration of a protein-free fluid from the blood.

hemodiapedesis (he'mo-di'ah-pē-de'sis) [*hemo* + *diapedesis*] the extravasation of blood through the skin.

hemodiastase (he'mo-di'as-tās) [*hemo* + *diastase*] an amolytic enzyme in the blood.

hemodilution (he'mo-di-lu'shun) increase of the fluid content of the blood with resulting decrease in concentration of its erythrocytes.

hemodynamic (he'mo-di-nam'ik) pertaining to the movements involved in the circulation of the blood.

hemodynamics (he'mo-di-nam'iks) [*hemo* + Gr. *dynamis* power] the study of the movements of the blood and of the forces concerned therein.

hemodynamometry (he'mo-di'nah-mom'ē-tre) measurement of blood pressure.

hemodystrophy (he'mo-dis'tro-fe) [*hemo* + *dys* + Gr. *trophē* nutrition] any blood disease due to faulty blood nutrition.

hemoendothelial (he'mo-en-do-the'le-al) [*hemo* + *endothelium*] denoting a type of placenta in which maternal blood comes in contact with the endothelium of chorionic vessels.

hemoerythrin (he''mo-e-rith''rin) [*hemo-* + Gr. *erythros* red] a red respiratory pigment found in the blood of certain worms.

Hemofil (he''mo-fil) trademark for a highly concentrated preparation of antihemophilic factor (coagulation Factor VIII).

hemofiltration (he''mo-fil-tra''shun) the removal of waste products from the blood by passing the blood through extracorporeal filters.

hemoflagellate (he''mo-flaj''ē-lāt) any flagellate protozoan parasite of the blood; the term includes the genera *Trypanosoma* and *Leishmania*.

hemofuscin (he''mo-fūs''in) [*hemo-* + L. *fuscus* brown] a brownish-yellow pigment that results from the decomposition of hemoglobin; it gives the urine a deep ruddy color.

hemogenesis (he''mo-jen''ē-sis) hematopoiesis.

hemogenic (he''mo-jen''ik) hematogenic.

hemoglobin (he''mo-glo''bin) the oxygen-carrying pigment of the erythrocytes, formed by the developing erythrocyte in bone marrow. It is a conjugated protein containing four heme groups and globin, and having the property of reversible oxygenation. A molecule of hemoglobin contains four globin polypeptide chains. They are designated α , β , γ , δ , in the adult; and each is composed of several hundred amino acids. Different types of hemoglobin are determined by the specific combination of these chains, the number of chains of the different types in the molecule being indicated by subscript numerals. For example, *hemoglobin F* (*fetal h.*), which is the predominant type in the newborn, may be written as $\alpha_2\gamma_2$. *Hemoglobin A* (*adult h.*), which is normally predominant in the adult is designated $\alpha_2\beta_2$ or $\alpha_2\beta_2$. Another hemoglobin, *hemoglobin A₂* (designated $\alpha_2\delta_2$ or $\alpha_2\delta_2$), is usually present in limited minor concentrations. Many hemoglobins with differing electrophoretic mobilities and characteristics have been reported, for example, S, C, D, E, G, H, I, J, K, L, M, N, Q, Norfolk, Barts, and many others. (See also *hemoglobinopathy*.) Because refined biochemical techniques may lead to the discovery of additional hemoglobins, certain standards for nomenclature have been devised. The hemoglobin electrophoretic mobility is designated by a capital letter; if two or more hemoglobins have the same mobility, the geographic area of discovery is indicated as a subscript, for example, hemoglobin M_S, or M_{Saskatoon}, and hemoglobin M_M, or M_{Milwaukee}. To restrict the increasing use of capital letters new hemoglobins are named simply for the laboratory, hospital, or town where they were discovered, for example, hemoglobin_{Norfolk}. When known, the number of each amino acid substituting in each polypeptide(s) in the molecule should be indicated by the appropriate superscript numeral. Symbol *Hb*.

h. A, normal adult hemoglobin, composed of two alpha and two beta chains, $\alpha_2\beta_2$. **h. A_{1c}**, a glycosylated hemoglobin A, having a hexose attached to the N-terminal of its β -chain; its levels are increased in poorly controlled diabetics. **h. A₂**, a normal adult hemoglobin, $\alpha_2\delta_2$, present in small amounts, in which delta chains replace the beta chains. **Bart's h.**, an abnormal hemoglobin composed of four gamma chains having high oxygen affinity. **h. C**, a relatively common, abnormal hemoglobin in which lysine replaces glutamic acid at position six of the beta chains. It was one of the earliest hemoglobins to have its molecular abnormality defined. In the homozygous state, it produces splenomegaly, moderate or mild hemolytic anemia, recurrent jaundice, and an increased number of target cells and reticulocytes in the peripheral blood, while in the heterozygous state (*h. C trait*) anemia or disease is absent, although increased numbers of target cells are seen in the peripheral blood. **h. carbamate**, a compound of hemoglobin and CO₂, important for the transportation of CO₂ in red cells. **h. Chesapeake**, an abnormal hemoglobin in which the amino acid substitution (leucine for arginine in the alpha chain) results in a molecule so structurally abnormal that it has a high oxygen affinity. **h. D**, an abnormal hemoglobin existing in several molecular forms, all characterized by electrophoretic migration on paper or cellulose acetate at a rate identical to that of hemoglobin S, but differentiated on acid agar gel electrophoresis. The homozygous state is manifested by mild hemolytic anemia with numerous target cells in the peripheral blood, while in the heterozygous state no clinical or hematologic abnormality occurs. **deoxygenated h.**, deoxyhemoglobin.

h. E, an abnormal hemoglobin resulting from a beta chain mutation in the hemoglobin molecule, occurring most commonly in Southeast Asia, especially Thailand. The homozygous state is manifested by mild hemolytic anemia, usually without splenomegaly, and large numbers of normochromic target cells in the peripheral blood, while in the heterozygous state no clinical or hematologic abnormality occurs. **h. F**, fetal h. "**fast**" h's, those with greater mobility on electrophoresis (in an alkaline buffer) than normal adult hemoglobin (h. A), including hemoglobin K, J, and N. **fetal h.**, the form of hemoglobin normally comprising more than half of the hemoglobin in the fetus, composed of two alpha and two gamma polypeptides ($\alpha_2\gamma_2$); it is also present in minimal amounts in adulthood and is abnormally elevated in aplastic anemia, leukemia, and certain types of thalassemia. Called also *h. F*. **glycosylated h.**, hemoglobin A_{1c}. **Gower h.**, a normal hemoglobin present in two forms, I and II, in early embryonic life, composed either entirely of epsilon chains (ϵ_4) or of two alpha and two epsilon chains ($\alpha_2\epsilon_2$) and

disappearing *in utero*. **h. Gun Hill**, an unstable hemoglobin resulting from a segmental deletion of amino acids in the beta polypeptide of the hemoglobin molecule, resulting in inability to bind heme and leading to mild hemolytic anemia. **h. H**, a rapidly migrating, abnormal hemoglobin composed of four beta chains, having a high oxygen affinity, found in a form of α -thalassemia in various ethnic groups, manifested by chronic hemolytic anemia associated with splenomegaly clinically and hypochromia, anisocytosis, and poikilocytosis of the red blood cells, with inclusion bodies detectable by supravital staining. **h. I**, an abnormal hemoglobin resulting from an amino acid substitution in the alpha chain which causes sickling in an unknown manner. **h. Lepore**, an abnormal hemoglobin having two normal alpha chains associated with two chains resulting from fusion of beta and delta chain segments. Although of considerable theoretical genetic interest, it produces only a mild anemia and, by itself, poses no special clinical problems. **h. M**, any of several hemoglobins having amino acid substitutions either in the alpha or beta chains and all associated with methemoglobinemia. **mean corpuscular h.**, see *MCH*. **muscle h.**, myoglobin. **nitric oxide h.**, a stable compound of nitric oxide and hemoglobin. **oxidized h.**, **oxygenated h.**, oxyhemoglobin. **h. Rainier**, a hemoglobin in which histidine replaces tyrosine at position 145 in the beta chain; it has increased oxygen affinity and is associated with erythrocytosis. **reduced h.**, deoxyhemoglobin. **h. S**, the most common abnormal hemoglobin, in which valine is substituted for glutamic acid at position six of the beta chain; the heterozygous state results in sickle cell trait, the homozygous in sickle cell anemia. The delineation of the basic abnormality in molecular structure is a milestone in biochemical genetics, for it paved the way for further investigation and demonstrated that a single amino acid substitution may produce widespread, untoward clinical effects. **h. Seattle**, an abnormal hemoglobin in which glutamic acid is substituted for alanine at position 76 of the beta chain; it has decreased oxygen affinity. "**slow**" h's, those less mobile on electrophoresis (in an alkaline buffer) than normal adult hemoglobin (h. A), including hemoglobin S and D. **h. Yakima**, an abnormal hemoglobin in which histidine is substituted for aspartic acid at position 99 of the beta chain; it has increased oxygen affinity and is associated with erythrocytosis.

hemoglobinated (he''mo-glo''bin-āt-ed) containing hemoglobin.

hemoglobinemia (he''mo-glo''bi-ne''me-ah) [*hemoglobin* + Gr. *haima* blood] the presence of excessive hemoglobin in the plasma of the blood.

hemoglobiniferous (he''mo-glo''bi-nif''er-us) carrying or yielding hemoglobin.

hemoglobinocholia (he''mo-glo''bi-no-ko''le-ah) [*hemoglobin* + Gr. *cholē* bile + *-ia*] the occurrence of hemoglobin in the bile.

hemoglobinolysis (he''mo-glo''bi-nol''ī-sis) [*hemoglobin* + Gr. *lysis* dissolution] splitting up of hemoglobin.

hemoglobinometer (he''mo-glo''bi-nom''ē-ter) [*hemoglobin* + Gr. *metron* measure] an instrument for measuring the hemoglobin of the blood.

hemoglobinometry (he''mo-glo''bi-nom''ē-tre) the measurement of the hemoglobin of the blood.

hemoglobinopathy (he''mo-glo''bi-nop''ah-the) [*hemoglobin* + Gr. *pathos* disease] a hematologic disorder caused by alteration in the genetically determined molecular structure of hemoglobin, which results in a characteristic complex of clinical and laboratory abnormalities and often, but not always, overt anemia. The specific features of these hemoglobin abnormalities are related to variation of the composite globin polypeptide chains, designated α , β , γ , δ , to changes or substitutions in the sequential arrangement of the amino acids constituting these chains, or to their deletion from their appropriate place in the molecule. When analysis has revealed the site of biochemical aberration, the abnormality of the peptide chain and the number of the altered amino acid and nature of its replacement also should be indicated. For example, hemoglobin S is expressed as $\alpha_2\beta_2^S$, or $\alpha_2\beta_2^{\text{valine}}$, and, more completely, hemoglobin G^{Philadelphia} is expressed as $\alpha_2\beta_2^{\text{Gly-Lys}}^{\text{Phe-Val}}$. If more than one hemoglobin is present, the phenotype should be designated by listing them in order of decreasing concentrations; for example, the phenotype for sickle cell trait is expressed as AS, for sickle cell anemia as SS, and for sickle cell-hemoglobin C disease as SC.

hemoglobinopepsia (he''mo-glo''bi-no-pep''se-ah) [*hemoglobin* + Gr. *pepsis* digestion] hemoglobinolysis.

hemoglobinoiphilia (he''mo-glo''bi-no-fil''ē-ah) [*hemoglobin* + Gr. *philein* to love] the property of growing well in culture media containing hemoglobin; said of microorganisms.

hemoglobinoiphilic (he''mo-glo''bi-no-fil''ik) living on hemoglobin; in bacteriology, growing especially well in culture media containing hemoglobin.

hemoglobinous (he''mo-glo''bi-nus) containing hemoglobin.

hemoglobinuria (he''mo-glo''bi-nu''re-ah) [*hemoglobin* + Gr. *ouron* urine + *-ia*] the presence of free hemoglobin in the urine. **bacillary h.**, an infectious toxemic disease caused by *Clostridium haemolyticum*, affecting primarily cattle, occasionally sheep,

and rarely dogs. In cattle, it is marked by inappetence, by cessation of rumination, lactation, and defecation, by fever, bloody diarrhea, and dark-red urine, and by anemia and hemoglobinuria. Called also *bovine h.* and *redwater disease*. **bovine h.**, 1. Texas fever. 2. bacillary h. **epidemic h.**, Winckel's disease. **intermittent h.**, hemoglobinuria occurring in isolated episodes; see *paroxysmal cold h.* and *paroxysmal nocturnal h.* **malarial h.**, blackwater fever. **march h.**, a rare form of hemoglobinuria following prolonged exercise. **paroxysmal cold h.**, a condition characterized by the sudden passage of hemoglobin in the urine following local or general exposure to cold. **paroxysmal nocturnal h.**, an uncommon, acquired paroxysmal form of hemolysis of unknown cause characterized by episodic hemoglobinuria occurring chiefly, but not always, at night, by hemosiderinuria, increased amounts of plasma hemoglobin, and a positive acid-serum (Ham) or sucrose-hemolysis test, and often associated with leukopenia or thrombocytopenia. Called also *Marchiafava-Micheli disease* or *syndrome*. **toxic h.**, that which is consequent upon the ingestion of various poisons.

hemoglobinuric (he'mo-glo'bi-nu'rik) pertaining to or characterized by hemoglobinuria.

hemogram (he'mo-gram) [*hemo-* + Gr. *gramma* a writing] the blood picture; a written record or a graphic representation of the differential blood count.

hemohistioblast (he'mo-his'te-o-blast') [*hemo-* + Gr. *histos* tissue + *blastos* germ] Ferrata's name for the hypothetical stem cell of all blood cells; hence sometimes called *Ferrata's cell*. Cf. *hemocytoblast*.

hemohydraulics (he'mo-hi-draw'liks) the branch of science which deals with blood in motion; the hydraulics of the blood.

hemokinesis (he'mo-ki-ne'sis) [*hemo-* + Gr. *kinēsis* movement] the flow of blood in the body.

hemokinetic (he'mo-ki-net'ik) pertaining to or promoting the flow of blood in the body.

hemolith (he'mo-lith) [*hemo-* + Gr. *lithos* stone] (*obs.*) a concretion in the wall of a blood vessel.

hemology (he-mol'o-je) hematology.

hemolutein (he'mo-lu'te-in) a yellow pigment from the blood serum of certain animals.

hemolymph (he'mo-limf) [*hemo-* + *lymph*] 1. the blood and lymph. 2. the bloodlike fluid moving through the hemocoelom of those invertebrates (e.g., mollusks, arthropods, and tunicates) with open circulatory systems, which combines the properties of blood and lymphlike interstitial fluid.

hemolymphangioma (he'mo-lim-fan'je-o'mah) hematomolymphangioma.

hemolysate (he-mol'i-sāt) the product resulting from hemolysis.

hemolysin (he-mol'i-sin) [*hemo-* + Gr. *lysis* dissolution] a substance which liberates hemoglobin from red blood corpuscles by interrupting their structural integrity. Hemolysins may be present naturally in the body or they may be formed therein as a result of injections of foreign red corpuscles. The hemolysin formed by the injection of blood from the same species of animal is called *isohemolysin* or *isohemolysin*, that by the injection from another species, a *heterolysin*; one which destroys cells of the animal's own body is an *autolysin*. Hemolysins are also produced by a variety of microorganisms. **acid h.**, one which reacts optimally at a pH below 7. **alpha h.**, a hemolysin produced by virulent human strains of streptococci that hemolyzes rabbit, sheep, cow, and goat erythrocytes but not those of man; it also destroys rabbit but not human leukocytes, and in this activity is called *Neisser-Wechsberg leukocidin*. **bacterial h.**, a toxic substance produced by bacteria and which lyses erythrocytes. **beta h.**, a staphylococcal hemolysin that hemolyzes sheep cells but only after a hot-cold lysis. **heterophile h.**, a hemolysin which has affinity for the red cells of some animal besides the one for which it is specific. **hot-cold h.**, a hemolytic toxic substance of bacterial origin that lyses erythrocytes in the cold following preliminary warm incubation. **immune h.**, a hemolysin produced by deliberate immunization of an animal with blood or blood corpuscles foreign to it, as with rabbit anti-sheep red blood cell serum (hemolysin) used in complement fixation tests.

hemolysis (he-mol'i-sis) [*hemo-* + Gr. *lysis* dissolution] the liberation of hemoglobin. Hemolysis consists of the separation of the hemoglobin from the red cells and its appearance in the plasma. It may be caused by hemolysins, by chemicals, by freezing or heating, or by distilled water. **alpha h.**, the production of a zone of greenish discoloration surrounding a bacterial colony on blood-agar medium, caused by partial decomposition of hemoglobin and characteristic of pneumococci and certain streptococci. **beta h.**, the production of a clear zone immediately surrounding a bacterial colony on blood-agar medium, which is characteristic of certain pathogenic bacteria. **biologic h.**, hemolysis by lysins produced in animals and plants. **contact h.**, the hastened hemolysis of blood cells in contact with a surface. **immune h.**, the lysis by complement of erythrocytes sensitized as a consequence of interaction with specific antibody to the erythrocytes. **passive h.**, the lysis of erythrocytes on which antigen has been adsorbed in the presence of complement and antiserum

to that antigen. **siderogenous h.**, hemolytic disease accompanied by excessive iron storage, which may cause a secondary hemochromatosis, e.g., Cooley's anemia. **venom h.**, hemolysis produced by snake venom.

hemolysoid (he-mol'i-soid) a hemolysin the toxophore group of which has been destroyed while the haptophore group has remained intact, enabling it to unite with the blood cell, but not to destroy it.

hemolysophilic (he'mo-li'so-fil'ik) uniting readily with hemolysin.

hemolytic (he'mo-lit'ik) pertaining to, characterized by, or producing hemolysis.

hemolyzable (he'mo-liz'ah-b'l) capable of undergoing hemolysis.

hemolysis (he'mo-li-za'shun) the production of hemolysis.

hemolyze (he'mo-liz) to subject to or to undergo hemolysis.

hemomanometer (he'mo-mah-nom'ē-ter) a manometer for determining blood pressure.

hemomediastinum (he'mo-me'de-as-ti'num) an effusion of blood in the mediastinum.

hemometer (he-mom'ē-ter) hemoglobinometer.

hemometra (he'mo-me'trah) hematometra.

hemometry (he-mom'ē-tre) hematometry.

hemonephrosis (he'mo-nēfro'sis) hematonephrosis.

hemo-opsonin (he'mo-op-so'nin) hemopsonin.

hemopathic (he'mo-path'ik) pertaining to disease of the blood; due to blood disorder.

hemopathology (he'mo-pah-thol'o-je) [*hemo-* + *pathology*] study of diseases of the blood.

hemopathy (he-mop'ah-the) [*hemo-* + Gr. *pathos* disease] any disease of the blood.

hemoperfusion (he'mo-per-fu'zhun) the passage of blood through an extracorporeal adsorptive system (e.g., an activated charcoal column) to remove compounds of larger molecular size (e.g., bile acids and protein-bound compounds) than can be removed by hemodialysis.

hemopericardium (he'mo-per'i-kar'de-um) [*hemo-* + *pericardium*] an effusion of blood within the pericardium.

hemoperitoneum (he'mo-per'i-to-ne'um) [*hemo-* + *peritoneum*] an effusion of blood in the peritoneal cavity.

hemopexin (he'mo-pek'sin) a serum glycoprotein (β_2 -globulin) synthesized in the liver, which binds with free heme in the plasma and maintains it in soluble form; it also binds with certain porphyrins.

hemophage (he'mo-fāj) hemophagocyte.

hemophagocyte (he'mo-fag'o-sit) [*hemo-* + *phagocyte*] a phagocyte which destroys blood cells.

hemophagocytosis (he'mo-fag'o-si-to'sis) hemocytophagia.

hemophil (he'mo-fil) [*hemo-* + Gr. *philein* to love] 1. thriving on blood. 2. a microorganism which grows best in media containing hemoglobin.

hemophilia (he'mo-fil'e-ah) [*hemo-* + Gr. *philein* to love + *ia*] a hereditary hemorrhagic diathesis due to deficiency of coagulation Factor VIII, and characterized by spontaneous or traumatic subcutaneous and intramuscular hemorrhages; bleeding from the mouth, gums, lips, and tongue; hematuria; and hemarthroses. It affects males, being transmitted as an X-linked recessive trait. Called also *h. A.*, *classical h.*, and *Factor VIII deficiency*. **h. A.**, hemophilia due to lack of coagulation Factor VIII; see *hemophilia*. **h. B.**, Factor IX deficiency; see *coagulation factors*, under *factor*. **h. C.**, Factor XI deficiency; see *coagulation factors*, under *factor*. **classical h.**, hemophilia A. **h. neonatorum**, purpura in newborn children. **vascular h.**, von Willebrand's disease.

hemophiliac (he'mo-fil'e-ak) an individual exhibiting hemophilia.

hemophilic (he-mo-fil'ik) 1. having an affinity for blood; living in blood. In bacteriology, growing especially well in culture media containing hemoglobin. 2. pertaining to or characterized by hemophilia.

hemophiloid (he'mo-fil'e-oid) [*hemophilia* + Gr. *eidos* form] resembling classical hemophilia clinically. Applied to a number of hereditary or acquired hemorrhagic disorders that are not due solely to a deficiency of blood coagulation Factor VIII. See *coagulation factors*, under *factor*.

Hemophilus (he-mof'i-lus) a genus of hemophilic bacteria of the family Brucellaceae, order Eubacteriales, made up of small gram-negative rods and characterized by a nutritional requirement for the constituents of fresh blood, including hemoglobin and certain allied compounds, called X factor, and for V factor. Spelled also *Haemophilus*. **H. aegyptius**, an organism that is related to *H. influenzae* and is the cause of acute contagious conjunctivitis. **H. bovis**, *Moraxella bovis*. **H. bronchisepticus**, *Brucella bronchiseptica*. **H. ducreyi**, the causative agent of chancroid. **H. du'plex**, *Moraxella lacunata*. **H. hemolyticus**, a hemolytic form of *H. influenzae*. **H. influen'zae**, a species once thought to be the cause of epidemic influenza in man; it produces a serious form of meningitis,

especially in infants. **H. parapatensis**, a species occasionally found in pertussis in man; called also *Bordetella parapatensis*. **H. pertussis**, the causative agent of pertussis in man; called also *Bordetella pertussis*, and *Bordet-Gengou bacillus*. **H. vaginae**, a hemophilic bacterium that causes vaginitis in women with normal ovarian function.

hemophilus (he-mof'i-lus) any member of the genus *Hemophilus*. **h. of Koch-Weeks**, *Hemophilus aegyptius*. **h. of Morax-Axenfeld**, *Hemophilus duplex*.

hemophoric (he'mo-for'ik) [*hemo-* + Gr. *phoros* bearing] carrying or conveying blood.

hemophotograph (he'mo-fot'o-graf) a photograph of blood corpuscles.

hemophotometer (hem'o-fotom'ē-ter) an instrument for measuring hemoglobin in blood by photometric or color technique.

hemophthalmia, **hemophthalmos**, **hemophthalmus** (he'mof-thal'me-ah; he'mof-thal'mos; he'mof-thal'mus) [*hemo-* + Gr. *ophthalmos* eye] an extravasation of blood with the eye.

hemophthisis (he-mof'thī-sis) [*hemo-* + Gr. *phthisis* wasting] a term once used to indicate anemia due to insufficient nutrition of blood cells.

hemopiezometer (he'mo-pi'e-zom'ē-ter) [*hemo-* + Gr. *piesis* pressure + *metron* measure] any apparatus for measuring blood pressure.

hemoplastic (he'mo-plas'tik) hematoplastic.

hemopleura (he'mo-ploo'rah) hemothorax.

hemopneumopericardium (he'mo-nu'mo-per'i' kar'de-um) pneumopericardium with hemorrhagic effusion.

hemopneumothorax (he'mo-nu'mo-tho'raks) pneumothorax with hemorrhagic effusion.

hemopoiesic (he'mo-poi-e'sik) hematopoietic.

hemopoiesis (he'mo-poi-e'sis) hematopoiesis.

hemopoietic (he'mo-poi-et'ik) hematopoietic.

hemopoietin (he'mo-poi-e'tin) [*hemo-* + Gr. *poiein* to make] erythropoietin.

hemopoietine (he'mo-poi-e'tin) a name originally given to a substance which stimulated erythropoiesis; probably the same as erythropoietin.

hemoporphyrin (he'mo-por'fi-rin) a compound $C_{34}H_{38}O_4N_4$, derived from hematoporphyrin.

hemoposia (he'mo-po'ze-ah) [*hemo-* + Gr. *posis* drinking + *-ia*] the drinking of blood, as by parasites.

hemoprecipitin (he'mo-pre-sip'i-tin) a blood precipitin.

hemoproctia (he'mo-prok'she-ah) [*hemo-* + Gr. *prōktos* anus] hemorrhage from the rectum.

hemoprotein (he'mo-pro'tēn) a conjugated protein containing heme as the prosthetic group.

Hemoproteus (he'mo-pro'te-us) *Haemoproteus*.

hemopsonin (he'mop-so'nin) [*hemo-* + *opsonin*] an opsonin that renders red blood cells more liable to phagocytosis; called also *hemotropin*.

hemoptic, hemoptoic (he-mop'tik; he-mop-to'ik) hemoptysic.

hemoptysic (he'mop-ti'sik) pertaining to or marked by hemoptysis.

hemoptysis (he-mop'tī-sis) [*hemo-* + Gr. *ptyein* to spit] the expectoration of blood or of blood-stained sputum. **cardiac h.**, hemoptysis due to heart disease and related pulmonary hypertension, as in mitral stenosis or Eisenmenger's syndrome. **endemic h.**, parasitic h. **Goldstein's h.**, hemoptysis due to bleeding telangiectases in the tracheobronchial tree. **Manson's h.**, hemoptysis due to infection of the lungs with *Paragonimus westermani*; parasitic h. **oriental h.**, parasitic h. **parasitic h.**, a disease caused by infection of the lungs with *Paragonimus westermani* and other lung flukes of the genus *Paragonimus*. It is marked by cough and spitting of blood and by gradual deterioration of health. Called also *endemic h.*, *pulmonary distomatosis*, and *lung fluke disease*. **vicarious h.**, that which occurs at the time of normal menstruation; see *vicarious menstruation*.

hemopyelectasis (he'mo-pi-ē-lek'tah-sis) [*hemo-* + Gr. *pyelos* pelvis + *ektasis* dilatation] dilatation of the renal pelvis with an accumulation of bloody fluid.

hemopyrrol (he'mo-pir'ol) 2,3-dimethyl-4-ethylpyrrole: pyrrole produced by the drastic chemical reduction of hematoporphyrin; it was useful in solving the structure of porphyrin.

hemorrhachis (he-mor'ah-kis) hematomyelia.

hemorrhage (hem'or-ij) [*hemo-* + Gr. *rhēgnynai* to burst forth] the escape of blood from the vessels; bleeding. Small hemorrhages are classified according to size as petechiae (very small), purpura (up to 1 cm.), and ecchymoses (larger). The massive accumulation of blood within a tissue is called a hematoma. **alveolar h.**, hemorrhage from a dental alveolus. **arterial h.**, the escape of blood from an artery, e.g., ruptured aneurysm. **brain h.**, bleeding into the substance of the brain; see *stroke syndrome*, under *syndrome*. **capillary h.**, the oozing of blood from the

minute vessels. **capsuloganglionic h.**, hemorrhage into the basal ganglia and internal and external capsule of the brain. **cerebral h.**, a hemorrhage into the cerebrum. See *stroke syndrome*, under *syndrome*. **concealed h.**, internal h. **dot h.**, microaneurysms of the retina, seen in diabetic retinopathy. **essential h.**, one not attributable to an established cause. **expulsive h.**, hemorrhage of the eye, breaking through both the choroid and the retina and extruding the ocular contents before it; usually occurring during the course of intraocular surgical procedure. **external h.**, one in which blood escapes from the body. **extradural h.**, intracranial hemorrhage into the epidural space. **fetomaternal h.**, the leakage of fetal red blood cells into the maternal circulation. **fibrinolytic h.**, hemorrhage resulting from abnormalities in the fibrinolytic system. **flame-shaped h's**, large hemorrhagic spots in the eyeground; called also *flame spots*. **gravitating h.**, hemorrhage into the spinal canal, in which the blood settles to the lower part of the canal from the force of gravity. **intermediary h.**, **intermediate h.**, bleeding of moderate degree. **internal h.**, hemorrhage in which the extravasated blood remains within the body. **intracerebral h.**, hemorrhage within the cerebrum; see *cerebral h.* **intracranial h.**, bleeding within the cranium, which may be extradural, subdural, subarachnoid, or cerebral. See *stroke syndrome*, under *syndrome*. **intramedullary h.**, hematomyelia. **intrapartum h.**, hemorrhage occurring during parturition. **massive h.**, loss of blood so rapid and profuse that shock supervenes unless appropriate replacement is instituted promptly. **nasal h.**, epistaxis. **parenchymatous h.**, capillary hemorrhage into the substance of an organ. **h. per rhexin**, hemorrhage from rupture of a blood vessel. **petechial h.**, hemorrhage that occurs in minute points beneath the skin. **plasma h.**, the loss of the fluid portion (plasma) of the blood. **postpartum h.**, that which occurs soon after labor or childbirth. **primary h.**, that which occurs immediately following injury. **pulmonary h.**, hemorrhage from the lungs; pneumorrhagia. **punctate h.**, spots of blood effused into the tissues from capillary hemorrhage. **recurring h.**, intermittent episodes of bleeding. **renal h.**, hemorrhage from the kidney; nephorrhagia. **secondary h.**, bleeding which follows an accident or injury after a lapse of time. **splinter h's**, linear hemorrhages beneath the nail; when located near the base of the nail they are characteristic of subacute bacterial endocarditis. **spontaneous h.**, bleeding occurring without overt provocation. **subarachnoid h.**, intracranial hemorrhage into the subarachnoid space. **subdural h.**, cerebral hemorrhage into the subdural space; see under *hematoma*, and see *stroke syndrome*, under *syndrome*. **unavoidable h.**, that which results from the detachment of a placenta previa. **uterine h.**, **essential**, a condition marked by hemorrhage from the uterus, and usually showing hypertrophy of the uterine mucosa and cystic disease of the ovary; called also *metropathia hemorrhagica*. **venous h.**, the escape of blood from the venous system; phleborrhagia. **vicarious h.**, the loss of blood from any area in consequence of the suppression of a bleeding in another area.

hemorrhagic (hem'o-rah-jen'ik) [*hemorrhage* + Gr. *gennan* to produce] causing hemorrhage.

hemorrhagic (hem'o-raj'ik) pertaining to or characterized by hemorrhage; descriptive of any tissue into which bleeding has occurred.

hemorrhagin (hem'o-ra'jin) a cytolytic existing in certain venoms and poisons, such as snake venom and ricin, which is destructive to endothelial cells and blood vessels. Cf. *endotheliotoxin*.

hemorrhagiparous (hem'o-rjip'ah-rus) [*hemorrhage* + L. *parere* to produce] hemorrhagic.

hemorrhhea (hem-o-re'ah) hematorrhea.

hemorrhheology (he'mo-re-ol'o-je) [*hemo-* + Gr. *rhoia* flow + *logos* treatise] the scientific study of the deformation and flow properties of cellular and plasmatic components of blood in macroscopic, microscopic, and submicroscopic dimensions, and the rheological properties of vessel structure with which the blood comes in direct contact.

hemorrhoid (hem'o-roid) [Gr. *haimorrhōis*] a varicose dilatation of a vein of the superior or inferior hemorrhoidal plexus, resulting from a persistent increase in venous pressure. **combined h.**, mixed h. **external h.**, a varicose dilatation of a vein of the inferior hemorrhoidal plexus, situated distal to the pectinate line and covered with modified anal skin. **internal h.**, a varicose dilatation of a vein of the superior hemorrhoidal plexus, originating above the pectinate line, and covered by mucous membrane. **lingual h.**, a varicose dilatation of veins of the tongue, usually on the ventral surface. **mixed h.**, a varicose dilatation of a vein connecting the superior and inferior hemorrhoidal plexuses, forming an external and an internal hemorrhoid in continuity. **mucocutaneous h.**, mixed h. **prolapsed h.**, an internal hemorrhoid which has descended below the pectinate line and protruded outside the anal sphincter. **strangulated h.**, an internal hemorrhoid which has been prolapsed sufficiently and for long enough time for its blood supply to become occluded by the constricting action of the anal sphincter. **thrombosed h.**, one containing clotted blood.

hemorrhoidal (hem''o-roi'dal) pertaining to, or of the nature of, hemorrhoids.

hemorrhoidectomy (hem''o-roid-ek'to-me) excision of hemorrhoids.

hemorrhoidolysis (hem''o-roid-ol'i-sis) [*hemorrhoid* + Gr. *lysis* dissolution] the dissolution of hemorrhoids by chemical or electrical means.

hemosalpinx (he''mo-sal'pink) [*hemo-* + Gr. *salpinx* tube] hematosalpinx.

hemoscope (he''mo-skōp) hematoscope.

hemosialemesia (he''mo-si'al-em'ē-sis) [*hemo-* + Gr. *sialon* saliva + *emesis* vomiting] the discharge of bloody saliva.

hemosiderin (he''mo-sid'er-in) [*hemo-* + Gr. *sidēros* iron] an insoluble form of storage iron in which the micelles of ferric hydroxide are so arranged as to be visible microscopically both with and without the use of specific staining methods.

hemosiderinuria (he''mo-sid'er-in-u're-ah) the presence of hemosiderin in the urine.

hemosiderosis (he''mo-sid'er-o'sis) a focal or general increase in tissue iron stores without associated tissue damage. Cf. *hemochromatosis*. **hepatic h.**, the deposit of an abnormal quantity of hemosiderin in the liver, usually in Kupffer cells; such deposition is not associated with cirrhosis, as is hemochromatosis. **pulmonary h.**, the deposition of abnormal amounts of hemosiderin in the lungs, due to bleeding into the lung interstitium. An idiopathic form, affecting primarily children, is marked by microcytic hypochromic anemia, diffuse pulmonary infiltration, and occasionally hemoptysis; hemosiderin-laden macrophages are abundant in the lungs and may be found in the sputum.

hemosite (he''mo-sīt) (*obs.*) a blood parasite.

hemospermia (he''mo-sper'me-ah) [*hemo-* + Gr. *sperma* seed + *-ia*] the presence of blood in the semen.

Hemosporidia (he''mo-spo-rid'e-ah) Haemosporidia.

hemostasia (he''mo-sta'ze-ah) hemostasis.

hemostasis (he''mo-sta'sis, he-mos'tah-sis) [*hemo-* + Gr. *stasis* halt] 1. the arrest of bleeding, either by the physiological properties of vasoconstriction and coagulation or by surgical means. 2. interruption of the flow of blood through any vessel or to any anatomical area.

hemostat (he''mo-stat) 1. a small surgical clamp for constricting a blood vessel. 2. an agent that checks hemorrhage when properly applied to a bleeding point.

hemostatic (he''mo-stat'ik) [*hemo-* + Gr. *statikos* standing] 1. checking the flow of blood. 2. an agent that arrests the flow of blood. **capillary h.**, an agent that reduces capillary bleeding time by increasing the contractility and resistance and decreasing the permeability of the capillary wall.

hemostyptic (he''mo-stip'tik) hemostatic.

hemotherapeutics (he''mo-ther'ah-pu'tiks) hemotherapy.

hemotherapy (he''mo-ther'ah-pe) [*hemo-* + Gr. *therapeia* treatment] treatment of disease by the administration of blood or blood products, such as blood plasma.

hemothorax (he''mo-tho'raks) [*hemo-* + Gr. *thōrax* chest] a collection of blood in the pleural cavity.

hemotoxic (he''mo-tok'sik) hematotoxic.

hemotoxin (he''mo-tok'sin) an exotoxin characterized by hemolytic activity. **cobra h.**, the constituent of cobra venom which is able to lyse red blood cells of man and of various other animals without the presence of blood serum.

hemotroph (he''mo-trof) [*hemo-* + Gr. *trophē* nourishment] the sum total of the nutritive substances supplied to the embryo from the maternal blood during gestation. Cf. *histiotroph*.

hemotrophe (he''mo-trof) hemotroph.

hemotrophic (he''mo-trōf-ik) pertaining to or derived through hemotroph.

hemotropic (he''mo-trop'ik) hematotropic.

hemotropin (he-mot'ro-pin) hemoposinin.

hemotympanum (he''mo-tim'pah-num) hematotympanum.

hemoxometer (he''mok-som'ē-ter) [*hemo-* + *oxygen* + Gr. *metron* measure] (*obs.*) an instrument for measuring the oxygen content of the blood.

hemozoin (he''mo-zo'in) the pigment found in malarial parasites.

hemozoon (he''mo-zo'on) hematozoon.

hemuresis (hem''u-re'sis) [*hem-* + *uresis*] the voiding of bloody urine.

henbane (hen'bān) hyoscyamus.

Hench-Aldrich test (index) (hench al'drich) (Philip S. *Hench*, American physician, 1896–1965, co-winner, with E. C. Kendall and Tadeus Reichstein, of the Nobel prize for medicine and physiology in 1950 for their discoveries concerning the adrenal cortex hormones; Martha *Aldrich*, American biochemist, born 1897] see under *test*.

Henderson-Hasselbalch equation (hen'der-son-has'el-balk) [Lawrence Joseph *Henderson*, Boston chemist, 1878–1942; Karl A. *Hasselbalch*, Copenhagen scientist, 1874–1962] see under *equation*.

Henderson-Jones disease (hen'der-son-jōnz') [Melvin Starkey *Henderson*, American orthopedic surgeon, 1883–1954; Hugh T. *Jones*, American orthopedic surgeon, born 1892] see under *disease*.

Henke's space, triangle (trigone) (hen'kēz) [Philipp Jakob Wilhelm *Henke*, German anatomist, 1834–1896] see under *space* and *triangle*.

Henle's loop, etc. (hen'lēz) [Friedrich Gustav Jakob *Henle*, German anatomist, 1809–1885, a celebrated anatomist and histologist] see under *ampulla*, *ansa*, *canal*, *cell*, *fiber*, *fissure*, *gland*, *layer*, *ligament*, *loop*, *membrane*, *reaction*, *sheath*, *sphincter*, *spine*, and *tubule*.

Henle-Coenen test (sign) (hen'le-ke'nan) [Adolf Richard *Henle*, German surgeon, born 1864; Hermann *Coenen*, German surgeon, born 1875] see under *tests*.

henna (hen'ah) the dried and powdered leaves of *Lawsonia inermis* L. (Lythraceae) and other species, which have fungicidal properties; it has been used in intestinal candidiasis, and is used as a cosmetic and hair dye.

Hennebert's sign (test) (en-bärz') [Belgian otologist] see under *sign*.

Henoch's chorea, purpura (disease) (hen'ōks) [Edouard Heinrich *Henoch*, German pediatricist, 1820–1910] see *spasmodic tic*, under *tic*, and under *purpura*.

henogenesis (hen''o-jen'ē-sis) [Gr. *hen* one + *genesis* origin] ontogeny.

henpue, henpuye (hen-poo'ye) [West African] goundou.

henry (hen're) [Joseph *Henry*, American physicist, 1797–1878] the unit of electric induction.

Henry's law (hen'rēz) [William *Henry*, English chemist, 1774–1836] see under *law*.

Henry's melanin test (reaction) [Adolf Felix Gerhard *Henry*, Istanbul pathologist, born 1894] see under *tests*.

Hensen's canal, etc. (hen'sen) [Victor *Hensen*, German anatomist and physiologist, 1835–1924] see under *body*, *canal*, *cell*, *disk*, *duct*, *knot*, *line*, and *node*.

Henshaw test (hen'shaw) [Russell *Henshaw*, New York physician] see under *tests*.

Hensing's ligament (fold) (hen'singz) [Frederich Wilhelm *Hensing*, German anatomist, 1719–1745] see under *ligament*.

hepar (he'par) [Gr. *hēpar* liver] 1. [NA] a large gland of a dark red color situated in the upper part of the abdomen on the right side; see *liver*. 2. the liver of certain animals, used in pharmaceutical preparations. 3. a liver-like or liver-colored substance. **h. adipo'sum**, fatty liver. **h. loba'tum**, a liver divided into numerous lobes by deep fissures produced by syphilis. **h. sicca'tum**, the dried and powdered liver of pigs; used as a food and medicine in organic diseases of the liver. **h. sul'furis**, sulfurated potash.

heparan sulfate (hep'ah-ram) a sulfated mucopolysaccharide structurally related to heparin; it contains alternating hexuronic acid residues (both α -L-iduronic acid and β -D-glucuronic acid) and D-glucosamine. Normally occurring in the liver, aorta, and lung, it is an accumulation product in several mucopolysaccharidoses. Called also *heparatin sulfate*.

heparin (hep'ah-rin) an acidic mucopolysaccharide composed of D-glucuronic acid and D-glucosamine, present in many tissues, especially the liver and lungs, and having potent anticoagulant properties. It is believed to act by inhibiting conversion of prothrombin to thrombin, and thus fibrinogen to fibrin. Heparin also has lipotropic properties, promoting transfer of fat from blood to the fat depots by activation of lipoprotein lipase. **h. sodium** [USP], a mixture of active principles capable of prolonging blood clotting time, usually obtained from the lungs, intestinal mucosa, or other suitable tissues of domestic mammals used for human consumption; used in the prophylaxis and treatment of disorders in which there is excessive or undesirable clotting, such

as thrombophlebitis, pulmonary embolism, and certain cardiac conditions, administered intravenously or subcutaneously.

heparinate (hep'ah-rin-āt) any salt of heparin.

heparinemia (hep'ah-rin-e'me-ah) the presence of heparin in the blood.

heparinize (hep'er-i-nīz') to treat with heparin in order to increase the clotting time of the blood.

heparitin sulfate (hep'ah-rī-tin) heparan sulfate.

hepat- see *hepato-*.

hepatalgia (hep'ah-tal'je-ah) [*hepat-* + Gr. *algos* pain + *-ia*] pain in the liver.

hepatargia (hep'ah-tar'je-ah) [*hepat-* + Gr. *argia* inactivity] (*obs.*) autointoxication from defective liver action.

hepatargy (hep'ah-tar'je) (*obs.*) hepatargia.

hepatatrophia (hep'ah-tah-tro'fe-ah) [*hepat-* + Gr. *atrophia* atrophy] atrophy of the liver.

hepatatrophie (hep'ah-tat'ro-fe) hepatatrophie.

hepatauxe (hep'ah-tawk'se) [*hepat-* + Gr. *auxē* increase] (*obs.*) hepatomegaly.

hepatectomize (hep'ah-tek'to-mīz) to deprive of the liver by surgical removal.

hepatectomy (hep'ah-tek'to-me) [*hepat-* + Gr. *ektomē* excision] excision of the entire (total *h.*) or of a portion (partial or subtotal *h.*) of the liver.

hepatic (hē-pat'ik) [L. *hepaticus*; Gr. *hepatikos*] pertaining to the liver.

hepatico- (hē-pat'i-ko) [Gr. *hepatikos* of the liver] a combining form denoting relationship to a hepatic duct.

hepaticocholangiojejunostomy (hē-pat'i-ko-ko-lan'je-o-je'ju-nos'to-me) surgical creation of a communication between the hepatic duct, another biliary duct, and the jejunum.

hepaticocholedochostomy (hē-pat'i-ko-ko-led'o-kos'to-me) surgical anastomosis of the hepatic duct and the common bile duct.

hepaticodochotomy (hē-pat'i-ko-do-kot'o-me) surgical incision of the hepatic duct and the common bile duct.

hepaticoduodenostomy (hē-pat'i-ko-du'o-de-nos'to-me) surgical creation of a communication between the hepatic duct and the duodenum.

hepaticoenterostomy (hē-pat'i-ko-en'ter-os'to-me) [*hepatico-* + Gr. *enteron* intestine + *stomoun* to provide with an opening, or mouth] surgical creation of a communication between the hepatic duct and the intestine.

hepaticogastrostomy (hē-pat'i-ko-gas-tros'to-me) [*hepatico-* + Gr. *gastēr* stomach + *stomoun* to provide with an opening, or mouth] surgical creation of a communication between the hepatic duct and the stomach.

hepaticojejunostomy (hē-pat'i-ko-je'ju-nos'to-me) [*hepatico-* + *jejunum* + Gr. *stomoun* to provide with an opening, or mouth] surgical creation of a communication between the hepatic duct and the jejunum.

Hepaticola (hep'ah-tik'o-lah) [*hepat-* + *colere* to inhabit] *Capillaria*.

hepaticoliasis (hē-pat'i-ko-li'ah-sis) capillariasis.

hepaticolithotomy (hē-pat'i-ko-li-thot'o-me) incision of the hepatic duct and removal of one or more calculi.

hepaticolithotripsy (hē-pat'i-ko-lith'o-trip-se) the operation of crushing a stone in the hepatic duct.

hepaticopulmonary (hē-pat'i-ko-pul'mo-nar'e) pertaining to the liver and the lungs.

hepaticostomy (hē-pat'i-kos'to-me) [*hepatico-* + Gr. *stomoun* to provide with an opening, or mouth] surgical creation of an artificial opening into the hepatic duct.

hepaticotomy (hē-pat'i-kot'o-me) [*hepatico-* + Gr. *tomē* cutting] incision of the hepatic duct.

hepatin (hep'ah-tin) glycogen.

hepatism (hep'ah-tizm) ill health due to liver disease.

hepatitides (hep'ah-tit'i-dēz) plural of *hepatitis*.

hepatitis (hep'ah-ti'tis), pl. *hepatitides* [*hepat-* + *-itis*] inflammation of the liver. **h. A.**, viral *h. type A*. **amebic h.**, invasion of liver parenchyma by trophozoites of *Entamoeba histolytica*, leading to amebic abscess. **anicteric h.**, viral hepatitis without jaundice, tending to occur chiefly in infants and young children; symptoms include mild anorexia and gastrointestinal disturbances, slight fever, and enlargement and tenderness of the liver. **h. B.**, viral *h. type B*. **canine virus h.**, *h. contagiosa canis*. **cholangiolitic h.**, inflammation of the bile ducts of the liver associated with obstructive jaundice; symptoms include progressively deepening jaundice, pruritus, dark urine, acholic stools, and a protracted course. It usually occurs in viral hepatitis. Called also *cholestatic h.* **cholestatic h.**, cholangiolitic *h.* **chronic active h.**, chronic persisting *h.* **chronic aggressive h.**, chronic persisting *h.* **chronic interstitial h.**, cirrhosis of the liver. **chronic persisting h.**, chronic inflammatory liver disease in which an expanding mesenchymal reaction in the portal triads progressively destroys adjacent liver cells. There is mononuclear and plasma cell infiltration of the liver

which is particularly marked adjacent to the hepatic lobules. Progressive fibrosis with nodular regeneration leads to macronodular cirrhosis. Hypergammaglobulinemia is associated with positive serological tests (LE, antinuclear, STS, and rheumatoid factor). This form of hepatitis may be a result of viral infection (some patients have positive tests for the hepatitis B antigen) and may also result from sensitivity to drugs (e.g., the laxative oxyphenisatin). Called also *chronic active* or *aggressive h.* **h. contagio/sa ca'nis**, a viral disease of dogs characterized by sore throat, fever, cough, weakness, and collapse. **enzootic h.**, Rift Valley fever. **epidemic h.**, viral *h. type A*. **familial h.**, hepatolenticular degeneration. **fulminant h.**, an acute fulminating form of viral hepatitis in which death is usually caused by acute yellow atrophy (q.v.) of the liver, which may cause massive destruction of large areas of the liver or of the entire organ. It is characterized by severe preicteric symptoms, the early appearance of jaundice, a sharp rise in temperature, and hemorrhages from the mucous membranes and into the skin; the liver may be tender and may decrease in size. Finally, there is confusion, drowsiness, and stupor, followed by coma, which deepens until death occurs. **giant cell h.**, neonatal *h.* **homologous serum h.**, serum *h.* **infectious h.**, viral *h. type A*. **infectious necrotic h. of sheep**, black disease. **inoculation h.**, viral *h. type B*. **long-incubation h.**, viral *h. type B*. **lupoid h.**, chronic active hepatitis, most commonly occurring in young women, characterized by the presence of LE cells in the peripheral blood. Called also *plasma cell h.* and *Kunkel's syndrome*. **MS-1 h.**, viral *h. type A*. **MS-2 h.**, viral *h. type B*. **neonatal h.**, hepatitis of uncertain etiology, occurring soon after birth; it generally tends to be chronic and is sometimes fatal. The principal characteristics include transformation of the liver cells into multinucleated giant cells, scattered throughout the lobules of the liver; prolonged persistent jaundice, leading to cirrhosis of the liver; hepatomegaly; acholic stools; bile in the urine; and low levels of urinary urobilinogen. Called also *giant cell h.* **neonatal giant cell h.**, neonatal *h.* **non-A, non-B h.**, a form of serum hepatitis (see *viral h. type B*) caused by a virus closely resembling hepatitis virus B. **plasma cell h.**, lupoid *h.* **h. seques/trans** (*obs.*), hepatitis with necrosis and disintegration of the liver tissue. **serum h.**, viral *h. type B*. **short-incubation h.**, viral *h. type A*. **suppurative h.**, inflammation of the liver attended by abscess formation. **toxipathic h.**, hepatitis caused by direct action of a poison on the liver cells. **transfusion h.**, viral *h. type B*. **trophopathic h.** (*obs.*), hepatitis caused by deficiency of a nutritive factor. **viral h.**, see *viral h. type A* and *viral h. type B*; a third form, caused by non-A, non-B hepatitis virus, closely resembles viral hepatitis type B. **viral h. type A**, an acute viral illness of worldwide distribution, occurring most commonly in children and young adults. It is usually transmitted by oral ingestion of infected material, but may also be transmitted parenterally (see *viral h. type B*). Although the viral agent (hepatitis virus A) has not been isolated or detected by immunological tests, transmission studies and electron microscopy indicate that patients with viral hepatitis type A excrete the infective agent in their stools for a period of weeks in the prodromal and early icteric period of illness. The incubation is short (about 15 to 50 or 60 days). The prodromal (*preicteric*) stage usually begins abruptly with fever, malaise, and nonspecific gastrointestinal symptoms (anorexia, nausea, upper abdominal discomfort, and vomiting); the *icteric stage* usually reaches a peak within two weeks and is characterized by jaundice, variable pruritus, dark urine, pale stool, and liver enlargement with tenderness; the *posticteric period* refers to the period of convalescence, when malaise, tiredness, and minor abnormalities of hepatic function may persist. During the acute phase, characteristic pathological findings include necrosis of liver cells and portal and parenchymal infiltration, chiefly by mononuclear cells. Called also *h. A*, *epidemic h.* or *jaundice*, *infectious h.*, *MS-1 h.*, and *short-incubation h.* **viral h., type B**, an acute illness caused by hepatitis B virus, formerly considered to be transmitted only by parenteral exposure (contaminated needles and administration of blood or blood products), but now known also to be transmitted by oral ingestion of contaminated material. The incubation period is long—50 to 160 or as many as 180 days. Prodromal symptoms and signs may be insidious in onset and include urticarial skin lesions and arthritis, and the acute illness tends to be more prolonged than in viral hepatitis type A; otherwise, the clinical and pathological symptoms are similar (see *viral h. type A*). Anicteric, icteric, fulminant, cholestatic, recurrent, chronic and persistent forms have been characterized. Serum antigens detected include hepatitis B surface and core antigens and e antigen, as have complete virions or Dane particles and DNA polymerase. Called also *h. B*, *inoculation h.*, *long-incubation h.*, *MS-2H*, *serum h.*, *transfusion h.*, and *homologous serum h.* or *jaundice*.

hepatization (hep'ah-ti-za'shun) transformation into a liver-like mass, as the solidified state of the lung in pneumonia. **gray h.**, hepatization of the lung in which the affected tissue has a gray color. **red h.**, a form in which the affected tissue is red from excess of blood. **yellow h.**, a stage in hepatization in which the exudate is purulent.

hepatized (hep'ah-tīzd) changed into a liver-like substance.

hepato-, hepat- [Gr. *hēpar*, *hēpatos* liver] combining form denoting relationship to the liver.

hepatobiliary (hep''ah-to-bil'e-ār'e) pertaining to the liver and the bile or the biliary ducts.

hepatoblastoma (hep''ah-to-blas-to'mah) a malignant intrahepatic tumor occurring in infants and young children and consisting chiefly of embryonic hepatic tissue.

hepatobronchial (hep''ah-to-brong'ke-al) pertaining to or communicating with the liver and a bronchus, as a hepatobronchial fistula.

hepatocarcinogenesis (hep''ah-to-kar''si-no-jen'ē-sis) the production of carcinoma of the liver.

hepatocarcinogenic (hep''ah-to-kar''sī-no-jen'ik) causing carcinoma of the liver.

hepatocarcinoma (hep''ah-to-kar''sin-o'mah) hepatocellular carcinoma.

hepatocoele (he-pat'o-sēl) [*hepato-* + Gr. *kēlē* hernia] hernial protrusion of a part of the liver.

hepatocellular (hep''ah-to-sel'u-lar) pertaining to or affecting liver cells.

hepatocholangitis (hep''ah-to-ko-lan''je-i'tis) inflammation of the liver and bile ducts.

hepatocholangiocarcinoma (hep''ah-to-ko-lan''je-o-kar''sin-o'mah) cholangiohepatoma.

hepatocholangioduodenostomy (hep''ah-to-ko-lan''je-o-du'o-dē-nos'to-me) the operation of establishing drainage of the hepatic ducts into the duodenum.

hepatocholangioenterostomy (hep''ah-to-ko-lan''je-o-en''ter-os'to-me) [*hepato-* + Gr. *cholē* bile + *angeion* vessel + *enteron* intestine + *stomoun* to provide with an opening, or mouth] surgical creation of a communication between the hepatic duct and the intestine.

hepatocholangiogastronomy (hep''ah-to-ko-lan''je-o-gas-tros'to-me) the operation of establishing drainage of the hepatic duct into the stomach.

hepatocholangiostomy (hep''ah-to-ko-lan''je-os'to-me) the operation of establishing drainage of the hepatic duct either through the abdominal wall (*external h.*) or into some part of the gastrointestinal tract (*internal h.*).

hepatocholangitis (hep''ah-to-ko''lan-ji'tis) inflammation of the liver and bile ducts.

hepatocirrhosis (hep''ah-to-sī-ro'sis) [*hepato-* + *cirrhosis*] cirrhosis of the liver.

hepatocolic (hep''ah-to-kol'ik) pertaining to the liver and the colon.

hepatocuprein (hep''ah-to-koo'prin) a soluble, bluish green copper protein present in liver tissue; it contains about 0.34 per cent copper.

hepatocystic (hep''ah-to-sis'tik) pertaining to the liver and gallbladder.

hepatocyte (hep''ah-to-sit) a parenchymal liver cell.

hepatoduodenostomy (hep''ah-to-du'o-dē-nos'to-me) [*hepato-* + *duodenum* + Gr. *stomoun* to provide with an opening, or mouth] the surgical creation of a communication between the liver and the duodenum.

hepatodynia (hep''ah-to-din'e-ah) [*hepato-* + Gr. *odynē* pain] pain in the liver.

hepatodystrophy (hep''ah-to-dis'tro-fe) acute yellow atrophy; see under *atrophy*.

hepatoenteric (hep''ah-to-en-ter'ik) pertaining to the liver and intestine.

hepatoenterostomy (hep''ah-to-en''ter-os'to-me) surgical creation of a communication between the liver and the intestine.

hepatoflavin (hep''ah-to-fla'vin) riboflavin obtained from liver tissue.

hepatofugal (hep''ah-tof'u-gal) [*hepato-* + L. *fugere* to flee from] directed or flowing away from the liver.

hepatogastric (hep''ah-to-gas'trik) pertaining to the liver and stomach.

hepatogenic (hep''ah-to-jen'ik) 1. giving rise to or forming liver tissue. 2. hepatogenous.

hepatogenous (hep''ah-to-jē-nus) 1. produced in or originating in the liver. 2. hepatogenic.

hepatoglycemia **glycogenetica** (hep''ah-to-gli-se'me-ah gli'ko-jē-net'i-kah) glycogen storage disease; see under *disease*.

hepatogram (hep''ah-to-gram'') 1. a tracing of the liver pulse in the sphygmogram. 2. a roentgenogram of the liver.

hepatography (hep''ah-to-graph'fe) [*hepato-* + Gr. *graphein* to record] 1. a treatise on the liver. 2. the recording of a tracing of the liver pulse. 3. the making of a roentgenogram of the liver.

hepatohemia (hep''ah-to-he'me-ah) [*hepato-* + Gr. *haima* blood] (*obs.*) congestion of the liver.

hepatoid (hep''ah-toid) [*hepato-* + Gr. *eidos* form] resembling the liver in structure.

hepatojugular (hep''ah-to-jug'u-lar) pertaining to the liver and jugular vein; see under *reflux*.

hepatolenticular (hep''ah-to-len-tik'u-lar) pertaining to the liver and the lenticular nucleus.

hepatolienal (hep''ah-to-li'e-nal) pertaining to the liver and spleen.

hepatolienography (hep''ah-to-li''ē-nog'rah-fe) [*hepato-* + L. *lien* spleen + Gr. *graphein* to record] roentgenography of the liver and spleen after intravenous injection of an opaque medium.

hepatolienomegaly (hep''ah-to-li''ē-no-meg'ah-le) hepatosplenomegaly.

hepatolith (hep''ah-to-lith'') [*hepato-* + Gr. *lithos* stone] a gallstone, especially one within the liver.

hepatolithectomy (hep''ah-to-li-thek'to-me) [*hepato-* + Gr. *lithos* stone + *ektomē* excision] removal of a calculus from the liver.

hepatolithiasis (hep''ah-to-li-thi'ah-sis) [*hepato-* + *lithiasis*] the formation or presence of calculi in the intrahepatic biliary ducts.

hepatologist (hep''ah-tol'o-jist) a specialist in hepatology.

hepatology (hep''ah-tol'o-je) [*hepato-* + *-logy*] the study of the liver.

hepatolysin (hep''ah-tol'i-sin) a cytolysin destructive to liver cells.

hepatolysis (hep''ah-tol'i-sis) [*hepato-* + Gr. *lysis* dissolution] destruction of the liver cells.

hepatolytic (hep''ah-to-lit'ik) pertaining to, characterized by, or causing hepatolysis.

hepatoma (hep''ah-to'mah) a tumor of the liver, especially hepatocellular carcinoma. **malignant h.**, hepatocellular carcinoma.

hepatomalacia (hep''ah-to-mah-la'she-ah) [*hepato-* + Gr. *malakia* softening] softening of the liver.

hepatomegalia (hep''ah-to-mē-ga'le-ah) [*hepato-* + Gr. *megas* big] hepatomegaly. **h. glycogen'ica**, glycogen storage disease; see under *disease*.

hepatomegaly (hep''ah-to-meg'ah-le) enlargement of the liver. **glycogenic h.**, glycogen storage disease; see under *disease*.

hepatomelanos (hep''ah-to-mel'ah-no'sis) melanosis of the liver.

hepatometry (hep''ah-tom'ē-tre) determination of the size of the liver.

hepatomphalocoele (hep''ah-tom'fah-lo-sēl'') omphalocoele with the liver also being projected into the membranous sac outside the abdomen.

hepatomphalos (hep''ah-tom'fah-los) [*hepat-* + Gr. *omphalos* navel] projection of the liver through the abdominal wall near the umbilicus.

hepatonephric (hep''ah-to-nef'rik) pertaining to the liver and kidney.

hepatonephritic (hep''ah-to-nē-frit'ik) pertaining to or characterized by hepatonephritis.

hepatonephritis (hep''ah-to-nē-fri'tis) [*hepato-* + Gr. *nephros* kidney] a form of severe jaundice due to simultaneous inflammation of the liver and kidneys from the same cause, e.g., leptospiral infection.

hepatonephromegaly (hep''ah-to-nef''ro-meg'ah-le) [*hepato-* + Gr. *nephros* kidney + *megas* large] enlargement of the liver and kidney.

hepatopancreas (hep''ah-to-pan'kre-as) any of certain digestive glands of invertebrates, as the so-called liver of certain crustaceans, which secretes a fluid acting on both fats and proteins.

hepatopath (hep''ah-to-path) a person with liver disease.

hepatopathy (hep''ah-top'ah-the) [*hepato-* + Gr. *pathos* disease] any disease of the liver.

hepatoperitonitis (hep''ah-to-per'i-to-ni'tis) [*hepato-* + *peritonitis*] inflammation of the peritoneum covering the liver.

hepatopetal (hep''ah-top'ē-tal) [*hepato-* + L. *petere* to seek] directed or flowing toward the liver.

hepatopexy (hep''ah-to-pek'se) [*hepato-* + Gr. *pēxis* fixation] surgical fixation of the displaced liver.

hepatophag (hep''ah-to-fāj) [*hepato-* + Gr. *phagein* to eat] a giant cell supposed to destroy the liver cells.

hepatophlebitis (hep''ah-to-flē-bi'tis) inflammation of the veins of the liver.

hepatophlebography (hep''ah-to-flē-bog'rah-fe) radiologic visualization of the outflow of the venous network of the liver performed through retrograde injection of a radiopaque solution.

hepatophlebectomy (hep''ah-to-flē-bot'o-me) [*hepato-* + *phlebotomy*] the aspiration of blood from the liver.

hepatophyma (hep''ah-to-fi'mah) [*hepato-* + Gr. *phyma* growth] (*obs.*) abscess of the liver.

hepatopleural (hep''ah-to-ploo'ral) pertaining to the liver and

- the pleura, or communicating with the liver and pleural cavity, as a hepatopleural fistula.
- hepatopneumonic** (hep'ah-to-nu-mon'ik) [*hepato-* + Gr. *pneumonikos* of the lungs] pertaining to, affecting, or communicating with the liver and lungs; hepatopulmonary.
- hepatoportal** (hep'ah-to-por'tal) pertaining to the portal system of the liver.
- hepatoptosis** (hep'ah-to-to'sis) [*hepato-* + Gr. *ptōsis* falling] (*obs.*) dislocation of the liver; movable liver.
- hepatopulmonary** (hep'ah-to-pul'mo-nar'e) hepatopneumonic.
- hepatorenal** (hep'ah-to-re'nal) pertaining to the liver and kidneys.
- hepatorrhagia** (hep'ah-to-ra'je-ah) [*hepato-* + Gr. *rhēgnynai* to burst forth] hemorrhage from the liver.
- hepatorrhaphy** (hep'ah-tor'ah-fe) [*hepato-* + Gr. *rhaphē* suture] the suturing of the liver.
- hepatorrhea** (hep'ah-to-re'ah) [*hepato-* + Gr. *rhoia* flow] a morbidly excessive secretion of bile; any morbid flow from the liver.
- hepatorrhesis** (hep'ah-to-rek'sis) [*hepato-* + Gr. *rhēxis* rupture] rupture of the liver.
- hepatoscan** (hep'ah-to-skan) a surface scintiscan of the liver.
- hepatoscopy** (hep'ah-tos'ko-pe) [*hepato-* + Gr. *skopein* to examine] examination of the liver.
- hepatosis** (hep'ah-to'sis) any functional disorder of the liver. **serous h.**, veno-occlusive disease of the liver; see under *disease*.
- hepatosolenotropic** (hep'ah-to-so-le'no-trop'ik) [*hepato-* + Gr. *sōlēn* a channel, gutter, pipe + *tropē* a turn, turning] having an affinity for or exerting a specific effect on the cholangioles and interlobular ducts of the liver.
- hepatosplenitis** (hep'ah-to-splē-ni'tis) inflammation of the liver and spleen.
- hepatosplenography** (hep'ah-to-splē-nog'rah-fe) roentgenography of the liver and spleen.
- hepatosplenomegaly** (hep'ah-to-splē'no-meg'ah-le) [*hepato-* + Gr. *splēn* spleen + *megas* big] enlargement of the liver and spleen.
- hepatosplenometry** (hep'ah-to-splē-nom'ē-tre) determination of the size of the liver and spleen.
- hepatosplenopathy** (hep'ah-to-splē-nop'ah-the) any combined disorder of the liver and spleen.
- hepatostomy** (hep'ah-tos'to-me) [*hepato-* + Gr. *stoma* mouth] surgical creation of an opening into the liver.
- hepatotherapy** (hep'ah-to-ther'ah-pe) [*hepato-* + Gr. *therapeia* treatment] treatment of disease by the administration of liver or liver extract.
- hepatotomy** (hep'ah-tot'o-me) [*hepato-* + Gr. *tomē* a cutting] surgical incision of the liver. **transthoracic h.**, incision of the liver by resecting a rib, opening the pleural sac, and incising the diaphragm; often performed in two or three stages.
- hepatotoxemia** (hep'ah-to-tok-se'me-ah) [*hepato-* + *toxemia*] blood poisoning originating in the liver.
- hepatotoxic** (hep'ah-to-tok'sik) toxic to liver cells.
- hepatotoxicity** (hep'ah-to-tok-sis'i-te) the quality or property of exerting a destructive or poisonous effect upon liver cells.
- hepatotoxin** (hep'ah-to-tok'sin) [*hepato-* + *toxin*] a toxin destructive to liver cells, especially one produced by injecting an animal with liver cells.
- hepatotropic** (hep'ah-to-trop'ik) [*hepato-* + Gr. *tropos* a turning] having a special affinity for or exerting a specific effect on the liver.
- hepatotoxic** (hep'ah-tok'sik) hepatotoxic.
- Hepatozoon** (hep'ah-to-zo'on) [*hepato-* + Gr. *zōon* animal] a genus of sporozoan parasites of the order Coccidia, found in the red blood cells of birds and mammals. *H. canis* is transmitted to dogs by the tick *Rhipicephalus appendiculatus*. *H. muris*, found in the liver cells of rats, and *H. perniciosum*, found in dogs, are transmitted by the mite *Echinolaelaps echidninus*.
- Hepecebrin** (hep'i-se'brin) trademark for a preparation of hexavitamin.
- hepta-, hept-** [Gr. *hepta* seven] a combining form meaning seven.
- heptabarbital** (hep'tah-bar'bī-tal) chemical name: 5-(1-cyclohepten-1-yl)-5-ethyl-2,4,6-(1*H*,3*H*,5*H*)-pyrimidinetrione. A short-acting barbiturate, C₁₃H₁₈N₂O₃, occurring as a white, crystalline powder, used as a sedative and hypnotic, administered orally.
- heptachromic** (hep'tah-kro'mik) [*hepta-* + Gr. *chrōma* color] 1. pertaining to or exhibiting seven colors. 2. able to distinguish all seven colors of the spectrum; possessing full color vision.
- heptad** (hep'tad) any element having a valency of seven.
- heptadactylia** (hep'tah-dak'til'e-ah) heptadactyly.
- heptadactylism** (hep'tah-dak'ti-lizm) heptadactyly.
- heptadactyly** (hep'tah-dak'ti-le) [*hepta-* + Gr. *daktylos* finger] the occurrence of seven digits (fingers or toes) on one limb.
- heptanal** (hep'tah-nal) oenanthol.
- heptapeptide** (hep'tah-pep'tid) a polypeptide containing seven amino acids.
- heptaploid** (hep'ta-ploid) 1. pertaining to or characterized by heptaploidy. 2. an individual or cell having seven sets of chromosomes.
- heptaploidy** (hep'tah-ploi'de) the state of having seven sets of chromosomes (7n).
- heptargia** (hep-tar'je-ah) (*obs.*) hepatargia.
- heptatomic** (hep'tah-tom'ik) septivalent.
- heptavalent** (hep-tav'ah-lent) [*hepta-* + L. *valere* to be able] septivalent.
- heptoglobin** (hep'to-glo-bin) a protein which is one of the fractions of blood plasma; it is said to be increased in infections, malignancy, and certain endocrine disorders.
- heptoglobinemia** (hep'to-glo-bi-ne'me-ah) abnormal increase in heptoglobin in the blood plasma.
- heptose** (hep'tōs) [*hept-* + *-ose*] a monosaccharide containing seven carbon atoms in a molecule.
- heptosuria** (hep'to-su're-ah) presence of a heptose in the urine.
- herb** (erb, herb) [L. *herba*] any leafy plant without a woody stem, especially one used as a household remedy or as a flavoring.
- death's h.**, belladonna leaf. **vulnerary h.**, an herb anciently regarded as healing wounds.
- herbaceous** (her-ba'shus) having the characters of an herb.
- herbal** (her'bal) a book on herbs.
- herbalist** (her'bal-ist) a herb doctor, or one versed in herbal lore.
- Herbert's operation, pits** (her'berts) [Major Herbert Herbert, Indian Medical Service, 1865–1942] see under *operation* and *pit*.
- herbicide** (her'bī-sid) [L. *herba* herb + *caedere* to kill] an agent that is destructive to weeds or causes an alteration in their normal growth.
- herbivore** (her'bī-vōr) a herbivorous animal.
- herbivorous** (her-biv'o-rus) [L. *herba* herb + *vorare* to eat] subsisting upon plants.
- Herb. recent.** abbreviation for L. *herbarium recentium*, of fresh herbs.
- Herbst's corpuscles** (herbsts) [Ernst Friedrich Gustav Herbst, German physician, 1803–1893] see under *corpuscle*.
- hereditary** (he-red'i-ter-e) [L. *hereditarius*] genetically transmitted from parent to offspring.
- heredity** (he-red'i-te) [L. *hereditas*] 1. the genetic transmission of a particular quality or trait from parent to offspring. 2. the genetic constitution of an individual. **autosomal h.**, the transmission of a quality or trait by a gene located on an autosome. **sex-linked h.**, the transmission of a quality or trait by a gene located on a sex-chromosome, for practical clinical purposes limited to transmission of a trait by a gene carried on the X chromosome. **X-linked**, sex-linked h.
- heredoataxia** (her'ē-do-ah-tak'se-ah) hereditary ataxia, as in Friedreich's ataxia.
- heredobiologic** (her'ē-do-bi'o-loj'ik) pertaining to or due to hereditary endogenic factors.
- heredodegeneration** (her'ē-do-de-jen'er-a'shun) a hereditary degeneration due to disease or defect of the hyaloplasm; hereditary cerebellar ataxia (Marie).
- heredodiathesis** (her'ē-do-di-ath'ē-sis) hereditary diathesis or predisposition.
- heredofamilial** (her'ē-do-fah-mil'e-al) occurring in certain families under circumstances that implicate a hereditary basis, as heredofamilial disease. The term is being discarded in favor of *familial*, *hereditary*, or *genetic*, whichever is more appropriate.
- heredoimmunity** (her'ē-do-i-mu'ni-te) hereditary or inherited immunity.
- heredoinfection** (her'ē-do-in-fek'shun) germinal infection.
- heredolues** (her'ē-do-lu'ēz) congenital syphilis.
- heredoluetic** (her'ē-do-lu-et'ik) pertaining to congenital syphilis.
- heredopathia** (her'ē-do-path'e-ah) an inherited pathological condition. **h. atac'tica polynuritiformis**, Refsum's disease.
- heredosyphilis** (her'ē-do-sif'i-lis) congenital syphilis.
- heredosyphilitic** (her'ē-do-sif'i-lit'ik) a person affected with congenital syphilis.
- heredosyphilology** (her'ē-do-sif'i-lol'o-je) the study of congenital syphilis.
- Hérelle** see *d'Hérelle*.
- Herellea** (hē-rel'e-ah) a genus of nonmotile, paired, gram-negative, enteric bacilli. **H. vaginalis**, a species that causes various nosocomial infections; called also *Acinetobacter anitratus*.

Herff's clamp (herfs) [Otto von Herff, Swiss gynecologist, 1856–1916] see under *clamp*.

Hering's law, etc. (her'ingz) [Carl Ewald Konstantin Hering, physiologist in Leipzig, 1834–1918] see under *law*, *test*, and *theory*.

Hering's nerve, phenomenon (her'ingz) [Heinrich Ewald Hering, physiologist in Cologne, 1866–1948] see *ramus sinus carotici nervi glossopharyngei*, and see under *phenomenon*.

heritability (her'i-tah-bil'i-te) the quality of being heritable; a measure of the extent to which a phenotype is influenced by the genotype.

heritable (her'i-tah-b'l) capable of being inherited, as a genetic trait.

Hermann-Perutz reaction, test (her'man-pa'root) [Otto Hermann, Vienna physician; Alfred Perutz, Austrian dermatologist, born 1885] Perutz's reaction.

hermaphroditism (her-maf'ro-dizm) hermaphroditism.

hermaphrodite (her-maf'ro-dit) [Gr. *hermaphroditos*] an individual exhibiting hermaphroditism (q.v.). **pseudo-h.**, see *pseudohermaphrodite*. **true h.**, an individual who has both testicular and ovarian tissue and exhibits ambiguous morphological criteria of sex; called also *true intersex*.

hermaphroditism (her-maf'ro-di-tizm") [Gr. *hermaphroditos* a person partaking of the attributes of both sexes] originally, a state characterized by the presence of both male and female sex organs. In humans, *true hermaphroditism* is caused by anomalous differentiation of the gonads, with the presence of both ovarian and testicular tissue and of ambiguous morphologic criteria of sex. If only testicular tissue is present, but there are some female morphological criteria of sex, it is known as *male pseudohermaphroditism*. If only ovarian tissue is present, but there are some male morphological criteria of sex, it is known as *female pseudohermaphroditism*. See also *intersex* and *pseudohermaphroditism*. **bilateral h.**, that in which gonadal tissue typical of both sexes occurs on each side of the body. **dimidiate h.**, lateral h. **h. with excess**, a condition characterized by the presence of the normal organs typical of one sex with some that pertain to the opposite sex. **false h.**, pseudohermaphroditism. **lateral h.**, presence of gonadal tissue typical of one sex on one side of the body and tissue typical of the other sex on the opposite side. **protandrous h.**, the state of an organism having generative organs typical of both sexes, in which the male organs develop first, and those typical of the female sex develop later. **protogynous h.**, the state of an organism having generative organs typical of both sexes, in which the female organs develop first, and those typical of the male sex develop later. **spurious h.**, pseudohermaphroditism. **synchronous h.**, that in which the gonads of both sexes are functional at the same time. **transverse h.**, a condition in which the external genital organs are characteristic of one sex and the gonads are typical of the other. **true h.**, coexistence, in the same individual, of both ovarian and testicular tissue, with somatic characters typical of both sexes; called also *true intersex*. **unilateral h.**, presence of gonadal tissue typical of both sexes on one side and of an ovary or testis on the other.

hermaphroditismus (her-maf'ro-di-tiz'mus) hermaphroditism. **h. ve'rus**, true hermaphroditism. **h. ve'rus bilatera'lis**, bilateral hermaphroditism. **h. ve'rus latera'lis**, lateral hermaphroditism. **h. ve'rus unilatera'lis**, unilateral hermaphroditism.

Hermetia illucens (her-me'she-ah il-lu'senz) the soldier fly, the larvae of which may cause intestinal myiasis or pseudomyiasis in man.

hermetic (her-met'ik) [L. *hermeticus*] impervious to air; airtight.

hermetically (her-met'i-kal-le) in an airtight manner.

hernia (her'ne-ah) [L.] the protrusion of a loop or knuckle of an organ or tissue through an abnormal opening. See Plate XXI.

abdominal h., hernia of some internal body structure through the abdominal wall. **acquired h.**, one brought on by lifting or by a strain or other injury. **h. adipo'sa**, fat h. **Barth's h.**, hernia of loops of intestine between the serosa of the abdominal wall and that of a persistent vitelline duct. **Béclard's h.**, femoral hernia through the saphenous opening. **Birkett's h.**, synovial h. **h. of the bladder**, hernia of a part of the bladder through any normal or other opening. **Bochdalek's h.**, congenital posterolateral diaphragmatic hernia, with extrusion of bowel and other abdominal viscera into the thorax; it is due to failure of closure of the pleuroperitoneal hiatus (foramen of Bochdalek). **cecal h.**, one that contains the cecum or a part of it. **celomic h.**, congenital protrusion of tissue through the foramen of Morgagni. **h. cere'bri**, protrusion of the brain substance through the skull, usually occurring after a brain tumor operation. **Cloquet's h.**, crural h., pectineal. **complete h.**, one in which the sac and its contents have passed through the orifice. **concealed h.**, hernia not perceptible on palpation. **congenital h.**, that which exists at birth, most commonly scrotal or umbilical. **Cooper's h.**, retroperitoneal hernia. **crural h.**, femoral h. **crural h.**, pectineal, hernia within and behind the femoral vessels, the tumor resting upon the pectineus

muscle; called also *Cloquet's h.* **cystic h.**, cystocele. **diaphragmatic h.**, hernia through the diaphragm. **direct h.**, see under *inguinal h.* **diverticular h.**, the protrusion of a congenital diverticulum of the gut; called also *Littre's h.* **dry h.**, a hernia in which the sac and its contents have become intimately adherent to each other. **duodenojejunal h.**, Treitz's h. **encysted h.**, scrotal or oblique inguinal hernia in which the bowel, enveloped in its own proper sac, passes into the tunica vaginalis in such a way that the bowel has three coverings of peritoneum; called also *Hey's h.* **epigastric h.**, a hernia through the linea alba above the navel. **external h.**, see under *inguinal h.* **extrasaccular h.**, sliding h. **fat h.**, hernial protrusion of preperitoneal fat through the abdominal wall; called also *h. adiposa*. **femoral h.**, hernia into the femoral canal. **foraminal h.**, hernia through the epiploic foramen. **funicular h.**, hernia of the umbilical or spermatic cord. **gastroesophageal h.**, a form of hiatal hernia in which the lower end of the esophagus and the adjacent part of the stomach herniate into the thorax. **Gibbon's h.**, hydrocele with large hernia. **gluteal h.**, femoral h. **Goyrand's h.**, inguinal hernia that does not descend into the scrotum. **Gruber's h.**, internal mesogastric hernia. **Grynfelt h.**, congenital hernia through the superior lumbar space. **Hesselbach's h.**, hernia with a diverticulum through the cribriform fascia. **Hey's h.**, encysted h. **hiatal h.**, **hiatus h.**, protrusion of any structure through the esophageal hiatus of the diaphragm, but usually a sliding or paraesophageal hernia. **Holthouse's h.**, an inguinal hernia which has turned outward into the groin; called also *inguinocrural h.* **incarcerated h.**, hernia so occluded that it cannot be returned by manipulation; it may or may not become strangulated. Called also *irreducible h.* **incisional h.**, hernia occurring through an old abdominal incision. **incomplete h.**, one which has not passed quite through the orifice. **indirect h.**, see under *inguinal h.* **infantile h.**, oblique inguinal hernia behind the funicular process of the peritoneum. **inguinal h.**, hernia into the inguinal canal. An *indirect* inguinal hernia (*external or oblique* hernia) leaves the abdomen through the deep inguinal ring, and passes down obliquely through the inguinal canal, lateral to the inferior epigastric artery. A *direct* inguinal hernia (*internal* hernia) emerges between the inferior epigastric artery and the edge of the rectus muscle. **inguinocrural h.**, Holthouse's h. **inguinofemoral h.**, a combined inguinal and femoral hernia. **inguinoproperitoneal h.**, hernia that is partly inguinal and partly properitoneal; called also *Krönlein's h.* **inguinosuperficial h.**, interstitial hernia which passes through the internal inguinal ring, the inguinal canal, and the external inguinal ring, but at this point is deflected upward and outward so as to lie upon the aponeurosis of the external oblique; called also *Kürster's h.* **intermuscular h.**, **interparietal h.**, an interstitial hernia which lies between one or another of the fascial or muscular planes of the abdomen. **internal h.**, 1. a hernia which lies within the abdomen without involving the abdominal wall. 2. see under *inguinal h.* **intersigmoid h.**, hernia of the intestine through the intersigmoid fossa. **interstitial h.**, a hernia in which a knuckle of intestine lies between two layers of the abdominal wall. **h. of the iris**, protrusion of a part of the iris. **irreducible h.**, incarcerated h. **ischiatric h.**, hernia through the sacrosacral foramen. **ischio-rectal h.**, a protrusion of the abdominal viscera between fibers of the levator ani muscle; called also *perineal h.* **Krönlein's h.**, inguinoproperitoneal h. **Küster's h.**, inguinoperitoneal h. **labial h.**, the protrusion of a knuckle of the gut into a labium majus. **labial h.**, posterior, vaginolabial h. **Laugier's h.**, a femoral hernia perforating Gimbernat's ligament. **levator h.**, pudendal h. **Littre's h.**, diverticular h. **lumbar h.**, hernia in the loin. **mesenteric h.**, the passage of a portion of the gut through an opening in the mesentery. **mesocolic h.**, hernia into a pouch of the mesocolon. **mucosal h.**, hernia of the mucous membrane of the intestine through an opening in the muscular coat. **oblique h.**, see under *inguinal h.* **oburator h.**, protrusion through the obturator foramen. **omental h.**, a protrusion of a knuckle of omentum. **ovarian h.**, hernial protrusion of an ovary. **paraesophageal h.**, hiatal hernia in which part or almost all of the stomach protrudes through the hiatus into the thorax to the left of the esophagus, with the gastroesophageal junction remaining in place. **paraperitoneal h.**, hernia of the bladder in which only a part of the protruded bladder is covered by the peritoneum of the sac. **para-saccular h.**, sliding h. **h. par glissement** (glēs-maw'), sliding h. **parietal h.**, Richter's h. **parumbilical h.**, hernia in the region of the navel. **pectineal h.**, hernia situated beneath the pectineal fascia. **perineal h.**, ischio-rectal h. **Petit's h.**, lumbar hernia in Petit's triangle. **properitoneal h.**, an interstitial hernia which is located between the parietal peritoneum and the transversalis fascia. **pudendal h.**, a hernia located in the pudendum, having passed through a rent in the levator muscle and its fascia; called also *levator h.* **h. of pulp**, protrusion of the dental pulp through the dentin wall of the pulp cavity. **pulsion h.**, a hernia produced by sudden increase of intra-abdominal pressure. **rectal h.**, **h. in rec'to**, a hernia into the wall of the rectum. **rectovaginal h.**, rectocele. **reducible h.**, one that may be returned by manipulation.

retrocecal h., protrusion of the intestine into a pouch behind the cecum; called also *Rieux's h.* **retrograde h.**, herniation of two loops of intestine, the portion of intestine between the two loops lying within the abdominal cavity. **retroperitoneal h.**, hernia of the intestine into the superior duodenal recess. **Richter's h.**, an incarcerated or strangulated hernia in which only a portion of the circumference of the bowel wall is involved; called also *parietal h.* **Rieux's h.**, retrocecal h. **Rokitansky's h.**, protrusion of a sac of mucous membrane or of the peritoneum through separated muscular fibers of the intestine. **root h.**, finger and toe disease. **sciatic h.**, hernia through the great sacrosciatic foramen. **scrotal h.**, an inguinal hernia which has descended into the scrotum. **sliding h.**, hernia of the cecum (on the right) or the sigmoid colon (on the left) in which the wall of the viscus forms a portion of the hernial sac, the remainder of the sac being formed by the parietal peritoneum. Called also *slip h.* and *slipped h.* **sliding hiatal h.**, hiatal hernia in which the upper stomach and the cardioesophageal junction protrude upward into the posterior mediastinum; the protrusion, which may be fixed or intermittent, is partially covered by a peritoneal sac. **slip h.**, **slipped h.**, sliding h. **spigelian h.**, abdominal hernia through the linea semilunaris. **strangulated h.**, an incarcerated hernia that is so tightly constricted as to compromise the blood supply of the hernial sac, leading to gangrene of the sac and its contents. **subpubic h.**, obturator h. **synovial h.**, protrusion of the inner lining membrane through the stratum fibrosum of a joint capsule; called also *Birkett's h.* **thyroidal h.**, obturator h. **tonsillar h.**, the extrusion of the tonsilla cerebelli through the foramen magnum. **transmesenteric h.**, protrusion of a loop of bowel through a congenital defect of the mesentery, where it may become incarcerated. **Treitz's h.**, a retroperitoneal hernia through the superior duodenal recess; called also *duodenojejunal h.* **tunicary h.**, mucosal h. **umbilical h.**, protrusion of part of the intestine at the umbilicus, the defect in the abdominal wall and protruding bowel being covered with skin and subcutaneous tissue; called also *exomphalos*. **h. u'teri inguina'le**, see *persistent müllerian duct syndrome*, under *syndrome*. **uterine h.**, hernial protrusion of the uterus. **vaginal h.**, hernia into the vagina; colpocele. **vaginal h.**, **posterior**, downward protrusion of the pouch of Douglas, with its intestinal contents, between the posterior vaginal wall and the rectum; called also *enterocele*. **vaginolabial h.**, hernia of a viscus into the posterior end of the labium majus. **Velpeau's h.**, femoral hernia in front of the femoral vessels. **ventral h.**, hernia through the abdominal wall. **vesical h.**, protrusion of the bladder. **Von Bergmann's h.**, a small, generally intermittent form of hiatus hernia. **W h.**, retrograde h.

hernial (her'ne-al) pertaining to a hernia.

herniary (her'ne-a-re) pertaining to or associated with hernia.

herniated (her'ne-ät'ed) protruding like a hernia; enclosed in a hernia.

herniation (her'ne-a'shun) the abnormal protrusion of an organ or other body structure through a defect or natural opening in a covering membrane, muscle, or bone. **h. of intervertebral disk**, protrusion of the nucleus pulposus or annulus fibrosus of the disk, which may impinge on nerve roots. **h. of nucleus pulposus**, rupture or prolapse of the nucleus pulposus into the spinal canal. **tonsillar h.**, protrusion of the cerebellar tonsils through the foramen magnum, exerting pressure on the medulla oblongata. **transtentorial h.**, downward displacement (caudal transtentorial h.; uncal h.) of the medial structures through the tentorial notch by a supratentorial mass, exerting pressure on the underlying structures, including the brain stem. **uncal h.**, transtentorial h.

hernioappendectomy (her'ne-o-ap'en-dek'to-me) herniotomy combined with appendectomy.

hernioenterotomy (her'ne-o-en'ter-ot'o-me) herniotomy combined with enterotomy.

hernioid (her'ne-oid) resembling hernia.

herniolaparotomy (her'ne-o-lap'ah-rot'o-me) laparotomy for the treatment of hernia.

herniology (her'ne-ol'o-je) [*hernia* + *-logy*] the study and science of hernias.

hernioplasty (her'ne-o-plas'te) operation for the repair of hernia.

herniopuncture (her'ne-o-pungk'tür) [*hernia* + *puncture*] surgical puncture of a hernia.

herniorrhaphy (her'ne-or'ah-fe) [*hernia* + Gr. *rhaphe* suture] surgical repair of a hernia.

herniotomy (her'ne-ot'o-me) [*hernia* + Gr. *tomē* a cutting] a cutting operation for the repair of hernia; kelotomy.

heroin (her'o-in) diacetylmorphine.

heroinism (her'o-in-izm') addiction to the use of heroin, with its morbid effects.

heroinomania (her'o-in'o-ma'ne-ah) heroinism.

Herophilus of Chalcedon (hē-rof'i-lus) (c. 300 B.C.) a renowned Greek physician and anatomist of Alexandria who performed dissection of the human body, and whose important

anatomical observations (e.g., on the brain, duodenum, and genitalia, and on the differentiation between nerves and blood vessels) have led many to regard him as "the Father of Anatomy."

herpangina (herp'an-ji'nah) [*herpes* + *angina*] a specific infectious disease characterized by sudden onset of fever of short duration and appearance of typical vesicular or ulcerated lesions in the faucial area or on the soft palate; caused by a coxsackievirus of the A group.

herpes (her'pēz) [L.; Gr. *herpēs*] any inflammatory skin disease characterized by the formation of small vesicles in clusters. The term was once used to denote any creeping vesicular skin disorder, including many fungal disorders, e.g., herpes circinatus (see *tinea circinata*) and herpes tonsurans maculosus (see *pityriasis rosea*), but is now usually restricted to such diseases caused by herpesviruses. When used alone, the term may refer to *herpes simplex* (dermatology) or to *herpes zoster*. **h. catarrha'lis**, h. simplex. **h. cor'neae**, herpetic inflammation involving the cornea. **h. digita'lis**, herpes simplex of the fingers. **h. facia'lis**, herpes simplex of the face. **h. febril'is**, herpes simplex occurring as a concomitant of fever, commonly about the lips and nares; called also *fever blisters* and *cold sores*. **h. generalisa'tus**, herpetic inflammation scattered over the body. **genital h.**, **h. genita'lis**, herpes simplex of the genitals. In women, the vesicular stage may give rise to confluent painful ulcerations and may be accompanied by neurologic symptoms. Called also *h. progeneritalis*. **h. gestatio'nis**, a variant form of dermatitis herpetiformis peculiar to pregnant women, which clears upon termination of pregnancy. **h. i'ris**, erythema multiforme in which the lesions are vesicular. **h. labia'lis**, h. febrilis. **h. menstrua'lis**, a form of herpes simplex that recurs at the menstrual period. **h. menta'lis**, herpes simplex of the submental region. **nasal h.**, an acute febrile rhinitis with eruption of vesicles around the nares and ulcerous lesions of the nasal mucous membranes, caused by a herpesvirus. **neuralgic h.**, genital herpes accompanied by rectal and vesical tenesmus and sphincteric spasms. **ocular h.**, herpes of the eye and its adnexa; see *herpetic keratoconjunctivitis*. **h. praeputia'lis**, a former name for herpes progeneritalis in the male. **h. progenita'lis**, genital h. **h. recur'rens**, herpes simplex occurring in repeated attacks. **h. sim'plex**, an acute viral disease marked by groups of vesicles, each vesicle about 3 to 6 mm. in diameter, on the skin, often on the borders of the lips or the nares (*h. labialis*, cold sores), or on the genitals (*h. genitalis*). It often accompanies fever (*h. febrilis*, fever blisters), although there are other precipitating factors, such as the common cold, sunburn, skin abrasions, and emotional disturbances. Often called *herpes*. See also *Herpesvirus hominis*. **h. sim'plex recur'rens**, recurrent episodes of herpes simplex at the same site. **traumatic h.**, a self-limited cutaneous herpesvirus infection following trauma, the virus entering through burns or other wounds; the temperature rises moderately, and vesicles appear around the wound. Called also *wrestler's herpes*. **wrestler's h.**, traumatic h. **h. zos'ter**, an acute, unilateral, self-limited inflammatory disease of the cerebral ganglia and ganglia of the posterior nerve roots and peripheral nerves in a segmented distribution, caused by the virus of chickenpox. It is characterized by groups of small vesicles on inflammatory bases occurring in the cutaneous areas supplied by the affected segments and associated with neuralgic pain. Called also *acute posterior ganglionitis*, *shingles*, *zoster*, and *zona*. **h. zos'ter auricula'ris**, Ramsay Hunt syndrome, def. 1. **h. zos'ter ophthal'micus**, herpes infection involving the ophthalmic, or first division of the trigeminal nerve, characterized by a cutaneous vesicular rash on an erythematous base along the nerve path, preceded by lancinating pain. There is iridocyclitis, and corneal involvement that may lead to keratitis and corneal anesthesia. Called also *gasserian ganglionitis*. **h. zos'ter o'ticus**, Ramsay Hunt syndrome, def. 1. **h. zos'ter varicello'sus**, herpes zoster with secondary varicelliform eruption.

herpesencephalitis (her'pēz-en-sef'ah-li'tis) see under *encephalitis*.

Herpesviridae (her'pēs-vi'ri-de) a systematic name for the family of herpesviruses.

Herpesvirus hominis (her'pēz-vi'rus hom'i-nis) the herpesvirus that causes herpes simplex; it occurs in two immunological types: Type I infections are primarily nongenital (e.g., herpes labialis and ocular herpes), whereas type II infections are primarily genital (herpes genitalis).

herpesvirus (her'pēz-vi'rus) any of a large group of DNA viruses found in many animal species, with a nucleocapsid about 100 mμ in diameter, composed of 162 capsomers, and sometimes enclosed in a loose membrane; the nucleic acid is a single molecule of double-stranded DNA with a molecular weight of about 100 million daltons; the viruses mature in the nucleus of the infected cell, where they induce formation of a characteristic inclusion body; some also induce formation of a cytoplasmic inclusion body. Herpesviruses are causative agents of such conditions as oral herpes simplex, genital herpes simplex, varicella, herpes zoster, cytomegalic inclusion disease in humans, and of pseudorabies and other diseases of animals. See also *herpes*.

herpetic (her-pet'ik) [L. *herpeticus*] pertaining to or of the nature of herpes; relating to or caused by herpesviruses.

TYPES OF INTESTINAL HERNIA: ABDOMINAL AND PELVIC OPENINGS

TYPES OF INDIRECT INGUINAL HERNIA

herpetiform (her-pet'i-form) [L. *herpes* herpes + *forma* form] resembling herpes; having grouped vesicles.

herpetologist (her'pē-to'l'o-gist) a specialist in herpetology.

herpetology (her'pē-to'l'o-ge) the branch of zoology that specializes in the study of reptiles and amphibians.

Herpetomonas (her'pē-to-m'o-nas) [Gr. *herpeton* creeper + *monas* monad] a genus of flagellate protozoa of the family Trypanosomatidae, order Protomastigida, found as parasites in insects, and having leptomonal, leishmanial, and crithidial stages, plus a stage that closely resembles the trypanosomes, except that it lacks an undulating membrane.

herpetophobia (her-pet'o-fō-be-ah) the morbid fear of lizards or reptiles.

Herplex (her'pleks) trademark for a preparation of idoxuridine.

Herrick's anemia (her'iks) [James Bryan Herrick, Chicago physician, 1861-1954] sickle cell anemia; see under *anemia*.

Herring bodies (her'ing) [Percy Theodore Herring, English physiologist, born 1872] see under *body*.

Herrmannsdorfer diet (her'mans-dor'fer) [Adolf Herrmannsdorfer, Berlin surgeon, born 1889] see *Gerson's diet*, under *diet*.

hersege (ār-sahzh') [Fr. "combing"] surgical dissociation of the fibers of a peripheral nerve by splitting the sheath and separating the nerve, throughout the diseased area, into a ribbon of fine free fibers.

Hershey (her'she), Alfred Day. American biologist, born 1908; co-winner, with Max Delbruck and Salvador E. Luria, of the Nobel Prize in medicine and physiology for 1969, for research on the mechanism and materials of inheritance in bacteriophage.

Herter's disease (infantilism), test (her'terz) [Christian Archibald Herter, American physician, 1865-1910] see *infantile form of nontropical sprue*; under *sprue*, and see under *tests*.

Herter-Heubner disease (her'ter-hoib'ner) [C. A. Herter; Johann Otto Leonhard Heubner, pediatrician in Berlin, 1843-1926] the infantile form of nontropical sprue, or celiac disease.

Hertig-Rock ova (her'tigh rok) [Arthur T. Hertig, American pathologist, born 1904; John Rock, American gynecologist, born 1890] see under *ovum*.

Hertwig's sheath (her'tvigz) [Richard Hertwig, German zoologist, 1850-1937] root sheath, def. 1.

Hertwig-Magendie phenomenon, sign (her'tvig mah-jen'de) [Richard Hertwig; François Magendie, French physiologist, 1783-1855] skew deviation.

hertz (hertz) a unit of frequency equal to one cycle per second; abbreviated Hz.

hertzian waves (rays) (hertz'e-an) [Heinrich Rudolf Hertz, German physicist, 1857-1894] see under *wave*.

Herxheimer's fever, fibers (spirals), reaction (herks'him-erz) [Karl Herxheimer, German dermatologist, born 1861] see under *fever* and *fiber*, and see *Jarisch-Herxheimer reaction*, under *reaction*.

Heryng's sign (her'ingz) [Teodor Heryng, Polish laryngologist, 1847-1925] see under *sign*.

Heschl's convolution, gyrus (hesh'l'z) [Richard L. Heschl, Austrian pathologist, 1824-1881] see *gyri temporales transversi*.

hesperanopia (hes'per-ah-no'pe-ah) [Gr. *hespera* evening + *an* neg. + *ops* eye] nyctalopia, def. 2.

hesperidin (hes-per'i-din) chemical name: 7-[[6-O-(6-deoxy- α -L-mannopyranosyl)- β -D-glucopyranosyl]oxy]-2,3-dihydro-5-hydroxy-2-(3-hydroxy-4-methoxyphenyl)-H-benzopyran-4-one. A bioflavonoid, $C_{28}H_{34}O_{15}$, found in certain citrus fruits; it has been reported to reduce capillary fragility.

Hess (hes), Walter Rudolf. Swiss physiologist, born 1881, noted for research on the nervous system; co-winner, with Antonio Egas Moniz, of the Nobel prize in medicine and physiology for 1949, for his discovery of the functional organization of the interbrain as a coordinator of the activities of the internal organs.

Hesselbach's hernia, ligament, triangle (hes'el-bahks) [Franz Kaspar Hesselbach, German surgeon, 1759-1816] see under *hernia*, and see *ligamentum interfoveolare* and *trigonum inguinale*.

hetacillin (het'ah-sil'in) [USP] chemical name: 6-(2,2-dimethyl-5-oxo-4-phenyl-1-imidazolidinyl)-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo [3.2.0] heptane-2-carboxylic acid. A semisynthetic penicillin, $C_{18}H_{23}N_3O_4S$, occurring as a white to off-white powder, which itself has no antibacterial activity, but is converted in the body to ampicillin and has actions and uses similar to those of ampicillin (q.v.); administered orally. **h. potassium** [USP], the potassium salt of hetacillin, $C_{18}H_{22}KN_3O_4S$, having antibacterial actions and uses similar to those of ampicillin; administered intravenously and intramuscularly.

hetaflur (het'ah-floor) chemical name: hexadecylamine hydrofluoride; a dental caries prophylactic, $C_{16}H_{33}N \cdot HF$.

hetastarch (het'ah-starch) a starch containing not more than 90 per cent of amylopectin, and that has been etherified so that an average of 7 to 8 of the OH groups in every 10-D-glucopyranose units of starch polymer have been converted into OCH_2CH_2OH

groups; used as a plasma volume expander, administered by infusion.

heter- see *hetero-*.

heteradelphia (het'er-ah-del'fe-ah) [*heter-* + Gr. *adelphos* brother] a joined twin monstrosity in which one fetus is much more fully developed than the other.

heteradelphus (het'er-ah-del'fus) a monster exhibiting heteradelphia.

heteradenia (het'er-ah-de'ne-ah) [*heter-* + Gr. *adēn* gland] any abnormality of the gland tissue.

heteradenic (het'er-ah-den'ik) pertaining to, affected with, or of the nature of heteradenia.

Heterakis gallinae (het'er-a'kis gah-li'ne) a nematode parasitic in the ceca of wild and domestic fowl.

heteralius (het'er-a'le-us) [*heter-* + Gr. *halios* fruitless] an extreme example of heteradelphia.

heterauxesis (het'er-awk-ze'sis) [*heter-* + Gr. *auxēsis* growth] disproportionate growth of a part in relation to another part.

heteraxial (het'er-ak'se-al) [*heter-* + *axis*] having axes of unequal length.

heterecious (het'er-e'shus) [*heter-* + Gr. *oikos* house] living upon one host in one stage or generation and upon another in the next.

heterecism (het'er-e'sizm) the state of being heterecious.

heterergic (het'er-er'jik) [*heter-* + Gr. *ergon* work] having different effects; said of two drugs one of which produces a particular effect and the other does not.

heteresthesia (het'er-es-the'ze-ah) [*heter-* + Gr. *aisthēsis* perception] variation in the degree of cutaneous sensibility on adjoining areas of the body surface.

hetero-, heter- [Gr. *heteros* other] a combining form meaning other, or denoting relationship to another.

heteroagglutination (het'er-o-ah-gloo'ti-na'shun) agglutination of particulate antigens (on cells or adsorbed on inert carrier particles) of one species by agglutinins derived from organisms of another species.

heteroagglutinin (het'er-o-ah-gloo'ti-nin) an agglutinin with reactive specificity for particulate antigen(s) in one or more species other than the species in which it originates.

heteroalbumose (het'er-o-al'bu-mōs) [*hetero-* + *albumose*] a form of hemialbumose that is not soluble in water, but is soluble in hydrochloric acid and sodium chloride solutions.

heteroalbumuria (het'er-o-al'bu-mo-su're-ah) [*heteroalbumose* + Gr. *ouron* urine + *-ia*] the presence of heteroalbumose in the urine.

heteroallele (het'er-o-ah-lēl') a mutation occurring in different codons of a particular cistron in homologous chromosomes.

heteroallelic (het'er-o-ah-le'lik) pertaining to a heteroallele.

heteroantibody (het'er-o-an'ti-bod'e) an antibody specific for antigens originating in a species other than that of the antibody producer.

heteroantigen (het'er-o-an'ti-jen) an antigen originating in a species different from, and therefore foreign to, the antibody producer.

heteroatom (het'er-o-at'om) any atom with a ring-shaped chemical nucleus other than the carbon atoms.

heteroauxin (het'er-o-auk'sin) a compound occurring in urine which acts as a plant growth hormone; called also *auxin B*.

Heterobasidiomycetidae (het'er-o-bah-sid'e-o-mi-se'ti-de) a subclass of true fungi of the Basidiomycetes, made up of the rusts and smuts, in which the basidiospores germinate by budding, repetition, or by the production of conidia, and the basidium starts as a hyphal cell with two nuclei.

Heterobilharzia (het'er-o-bil-har'ze-ah) a genus of schistosomes that parasitize mammals, including human beings. **H. americana**, a species whose cercariae may cause a nonpatent visceral schistosomiasis in man.

heteroblastic (het'er-o-blas'tik) [*hetero-* + Gr. *blastos* germ] having origin in different kinds of tissue.

heterocaryon (het'er-o-kar'e-on) heterokaryon.

heterocellular (het'er-o-sel'u-lar) composed of cells of different kinds.

heterocentric (het'er-o-sen'trik) [*hetero-* + L. *centrum* center] made up of rays that are neither parallel nor meet in one point; said of a ray of light.

heterocephalus (het'er-o-sef'ah-lus) [*hetero-* + Gr. *kephalē* head] a monster with two unequal heads.

heterochiral (het'er-o-ki'ral) [*hetero-* + Gr. *cheir* hand] reversed as regards right and left, but otherwise the same in form and size, as the hands.

heterochromatin (het'er-o-kro'mah-tin) that state of chromatin in which it is dark-staining, genetically inactive, and tightly coiled; cf. *euchromatin*.

heterochromatinization (het'er-o-kro'mah-tin-i-za'shun) the formation of heterochromatin.

heterochromatosis (het/'er-o-kro/'mah-to/'sis) heterochromia.

heterochromia (het/'er-o-kro/'me-ah) [*hetero-* + Gr. *chrōma* color + *-ia*] diversity of color in a part or parts that should normally be of one color. **h. iridis**, difference of color in the two irides, or in different areas of the same iris.

heterochromosome (het/'er-o-kro/'mo-sōm) [*hetero-* + *chromosome*] a sex chromosome.

heterochromous (het/'er-o-kro/'mus) marked by diversity of color; exhibiting heterochromia.

heterochron (het/'er-o-krōn') having different or varying chronaxy.

heterochronia (het/'er-o-kro/'ne-ah) [*hetero-* + Gr. *chronos* time + *-ia*] 1. the formation of parts or tissues, or the occurrence of a phenomenon, at an unusual time. Cf. *synchronia* (def. 2). 2. a difference in the rate or time of occurrence between two processes. 3. difference of more than 100 per cent between the chronaxy of a muscle and that of its nerve.

heterochronic (het/'er-o-kron/'ik) [*hetero-* + Gr. *chronos* time] 1. pertaining to or characterized by heterochronia. 2. denoting different ages or stages of development, as between the excised organ and the implanted organ in transplantation procedures.

heterochronous (het/'er-ok/'ro-nus) heterochronic.

heterochthonous (het/'er-ok/'tho-nus) [*hetero-* + Gr. *chthōn* a particular land or country] originating in a region other than that in which it is found. Cf. *autochthonous*.

heterochylia (het/'er-o-ki/'le-ah) the sudden varying of the gastric secretion from normal acidity to hyperacidity or anacidity.

heterocinesia (het/'er-o-si-'ne-se-ah) [*hetero-* + Gr. *kinēsis* movement] a condition in which the patient performs movements other than those he is instructed to perform.

heterocladic (het/'er-o-klad/'ik) [*hetero-* + Gr. *klados* branch] indicating an anastomosis between terminal branches from different arteries.

heterocomplement (het/'er-o-kom/'plē-ment) [*hetero-* + *complement*] complement derived from an animal of a species different from the one which furnishes the antibody.

heterocrine (het/'er-o-krin) [*hetero-* + Gr. *krinein* to separate] secreting more than one kind of matter.

heterocrisis (het/'er-ok/'ri-sis) [*hetero-* + Gr. *krisis* division] an abnormal crisis with unusual timing and symptoms.

heterocyclic (het/'er-o-sik/'lik) [*hetero-* + Gr. *kyklos* circle] having or pertaining to a closed chain or ring formation which includes atoms of different elements.

heterocytolysin (het/'er-o-si-'tol/'i-sin) heterolysin.

heterocytotoxin (het/'er-o-si/'to-tok/'sin) a toxin of one species which destroys cells from an organism of a different species.

heterocytotropic (het/'er-o-si/'to-trop/'ik) [*hetero-* + *cyto-* + Gr. *tropos* a turning] having an affinity for cells of different species; see under *antibody*.

Heterodera radicola (het/'er-od/'er-ah rad/'i-sik/'o-lah) a nematode parasitic on the common root vegetables, such as radishes, carrots, turnips, potatoes, etc., as well as on celery. When infested vegetables are eaten, ova of the parasite may appear in the stools and must be distinguished from those of true parasites.

heterodermic (het/'er-o-der/'mik) [*hetero-* + Gr. *derma* skin] denoting a skin graft taken from an individual of another species. See *dermatoheteroplasty*.

heterodesmotic (het/'er-o-des-mot/'ik) [*hetero-* + Gr. *desmos* a bond] joining dissimilar parts of the central nervous system; see under *fiber*.

heterodidymus (het/'er-o-did/'i-mus) heterodymus.

heterodont (het/'er-o-dont) [*hetero-* + Gr. *odous* tooth] having teeth of different types, such as incisors and molars.

Heterodoxus (het/'er-o-dok/'sus) a genus of insects of the order Mallophaga, the biting lice. *H. longitarsus* is parasitic on kangaroos, wallabies, and sometimes dogs in Australia. *H. spiniger* is parasitic on coyotes and wolves in the New World, and may also infest dogs.

heterodromous (het/'er-od/'ro-mus) [*hetero-* + Gr. *dromos* running] moving, acting, or arranged in the opposite direction.

heterodymus (het/'er-od/'i-mus) [*hetero-* + Gr. *didymos* twin] a monster with a second head, neck, and thorax attached to the thorax.

heteroecious (het/'er-o-e-'shus) requiring two or more hosts to complete the life cycle; said of certain fungi and insects. Cf. *autoecious*.

heteroerotism (het/'er-o-er/'o-tizm) [*hetero-* + Gr. *erōs* love] sexual feeling directed toward another individual. Cf. *autoerotism*.

heterofermenter (het/'er-o-fer-'ment'er) a group of bacteria which produce, by fermentation, large quantities of lactic acid, along with acetic acid, ethanol, and CO₂.

heterogamete (het/'er-o-gam/'ēt) a gamete of different size and structure than the one with which it unites.

heterogametic (het/'er-o-gah-'met/'ik) characterized by the production of gametes of different kinds, as by the production of X and Y gametes in the human male.

heterogamety (het/'er-o-gam/'ē-te) the production of unlike gametes by an individual of one sex, as the production of X- and Y-bearing gametes by the human male.

heterogamous (het/'er-og/'ah-mus) having the conjugating elements (gametes) unlike in size and structure; oogamous.

heterogamy (het/'er-og/'ah-me) [*hetero-* + Gr. *gamōs* marriage] reproduction resulting from the union of two cells (gametes) which differ in size and structure; oogamy.

heteroganglionic (het/'er-o-gang/'gle-on/'ik) [*hetero-* + Gr. *ganglion* ganglion] connecting various ganglia (of the sympathetic nervous system).

heterogeneity (het/'er-o-jē-'nē-'i-te) the state or quality of being heterogeneous. In genetics, the production of identical or similar phenotypes by different genetic mechanisms. A phenotype so produced is called a genocopy or genetic mimic. **genetic h.**, the production of a specific clinical or biochemical phenotype by more than a single genotype.

heterogeneous (het/'er-o-jē-'ne-us) [*hetero-* + Gr. *genos* kind] consisting of or composed of dissimilar elements or ingredients; not having a uniform quality throughout. In genetics, the term denotes a trait that can be produced by genes at more than one locus.

heterogenesis (het/'er-o-jen/'ē-sis) [*hetero-* + Gr. *genesis* generation] 1. alternation of generations; reproduction that differs in character in successive generations. 2. asexual generation. 3. (obs.) the development of a living thing from some other kind of living thing. 4. spontaneous generation.

heterogenetic (het/'er-o-jē-'net/'ik) 1. pertaining to heterogenesis. 2. not arising within the organism.

heterogenic (het/'er-o-jen/'ik) 1. occurring in the wrong sex, as a beard upon a woman. 2. derived from a different source or species; see *xenograft*.

heterogenicity (het/'er-o-jē-'nis/'i-te) heterogeneity.

heterogenote (het/'er-o-jē-'nōt) [*hetero-* + *gene* (analogy with zygote)] a cell which has an additional genetic fragment, different from its intact genotype; it usually results from transduction.

heterogenous (het/'er-oj/'ē-nus) derived from a different source or species; see *xenograft*.

heteroglobulose (het/'er-o-glob/'u-lōs) a heteroalbumose obtained from a globulin.

heterogony (het/'er-og/'ō-ne) [*hetero-* + Gr. *gonos* procreation] heterogenesis.

heterograft (het/'er-o-graft) xenograft.

heterography (het/'er-og/'rah-fe) [*hetero-* + Gr. *graphein* to record] the writing of words other than those intended by the writer.

heterohemagglutination (het/'er-o-hem/'ah-gloo/'tī-na/'shun) agglutination of erythrocytes of one species by hemagglutinins derived from an individual of a different species.

heterohemagglutinin (het/'er-o-hem/'ah-gloo/'tī-nin) a hemagglutinin derived from one species that agglutinates erythrocytes of organisms of one or more other species.

heterohemolysin (het/'er-o-he-'mol/'i-sin) 1. a hemolysin occurring spontaneously in the blood of an untreated animal that will hemolyze the blood cells of an animal of another species. 2. hemolysin established in one species by deliberate immunization with blood cells of an animal of another species.

heterohexosan (het/'er-o-hek/'so-san) any one of a class of heterosaccharides which contain hexose units; they are lignocellulose, pectocellulose, and lipocellulose.

heteroimmune (het/'er-o-im-'mūn') pertaining to or characterized by heteroimmunity.

heteroimmunity (het/'er-o-im-'mū-'nē-'te) 1. an immune state that results from the immunization of an animal belonging to one species with cells of an animal of a different species. 2. a state in which immunological response by the body to exogenous antigens, which include drugs and infectious agents, results in immunopathological changes.

heteroinfection (het/'er-o-in-'fek/'shun) infection from outside the organism; exogenous infection.

heteroinoculable (het/'er-o-in-ok/'u-lah-'b'l) susceptible of being inoculated from one individual to another.

heteroinoculation (het/'er-o-in-ok/'u-la/'shun) inoculation from one individual to another.

heterointoxication (het/'er-o-in-'tok/'sī-'ka/'shun) poisoning by material introduced from outside the body.

heterokaryon (het/'er-o-kar/'e-on) [*hetero-* + Gr. *karyon* nucleus] a cell or hypha containing two or more nuclei of different genetic constitutions.

heterokaryosis (het/'er-o-kar/'e-'o-'sis) the formation of, or the state of containing, heterokaryons.

heterokeratoplasty (het/'er-o-ker/'ah-to-'plas/'te) [*hetero-* + *keratoplasty*] grafting of corneal tissue from an individual of a species other than that of the recipient.

heterokinesis (het/'er-o-ki-'ne-'sis) [*hetero-* + Gr. *kinēsis* motion] the differential distribution of the sex chromosomes (X and Y in humans) in the developing gametes of a heterogametic organism.

heterolactic (het'er-o-lak'tik) bacterial fermentation which produces large quantities of lactic acid along with acetic acid, ethanol, and CO₂.

heterolalia (het'er-o-la'le-ah) [*hetero-* + Gr. *lalia* utterance] heterophasia.

heterolateral (het'er-o-lat'er-al) [*hetero-* + L. *latus* side] relating to the opposite side; contralateral.

heteroliteral (het'er-o-lit'er-al) marked by the substitution of one letter for another in pronouncing words.

heterolith (het'er-o-lith) [*hetero-* + Gr. *lithos* stone] an intestinal concretion not formed of mineral matter.

heterologous (het'er-ol'o-gus) [*hetero-* + Gr. *logos* due relation, proportion] 1. made up of tissue not normal to the part. 2. xenogeneic.

heterology (het'er-ol'o-je) abnormality in structure, arrangement, or manner of formation. In chemistry, the relationship between substances of partial identity of structure but of different properties.

heterolysin (het'er-ol'i-sin) a lysin that dissolves cells of species other than the one in which it is formed, by leading to interruption of the integrity of the cell membranes; a lysin that is formed on the introduction of antigen from a different species.

heterolysis (het'er-ol'i-sis) [*hetero-* + Gr. *lysis* dissolution] lysis of the cells of one species by lysin from a different species.

heterolysosome (het'er-o-li'so-sōm) a vacuole of lysosome containing exogenous substances with digestion in progress.

heterolytic (het'er-o-lit'ik) pertaining to or caused by heterolysis or a heterolysin.

heteromastigote (het'er-o-mas'ti-gōt) [*hetero-* + Gr. *mastix* lash] having several forward flagella together with one directed backward.

heteromer (het'er-om'er-al) heteromeric.

heteromeric (het'er-o-mer'ik) [*hetero-* + Gr. *meros* part] sending processes through one of the commissures to the white matter of the other side of the spinal cord; said of nerve cells.

heteromeric (het'er-om'er-us) heteromeric.

heterometaplasia (het'er-o-met'ah-pla'se-ah) [*hetero-* + *metaplasia*] development of tissue into a variety foreign to the part where it is produced.

heterometropia (het'er-o-mě-tro'pe-ah) the state in which there is a different kind of refraction in the two eyes; antimetropia.

heteromorphic (het'er-o-mor'fik) heteromorphous.

heteromorphosis (het'er-o-mor'fo-sis) [*hetero-* + Gr. *morphōsis* a forming] the development, in regeneration, of an organ or structure different from the one that was lost.

heteromorphous (het'er-o-mor'fus) [*hetero-* + Gr. *morphē* form] 1. of abnormal shape or structure; differing from the type. 2. having synaptic chromosome mates which differ in size, form, or structure.

heteronephrolysine (het'er-o-ne-frol'i-sin) [*hetero-* + *nephrolysine*] (*obs.*) a nephrotoxin which acts on the cells of animals from a different species.

heteronomous (het'er-on'o-mus) [*hetero-* + Gr. *nomos* law] 1. in biology, subject to different laws of growth; specialized along different lines. 2. in psychology, subject to another will, as in hypnotism.

heteronym (het'er-on'i-mus) [*hetero-* + Gr. *onyma* name] 1. having names indicative of correlation, as male and female. 2. standing in opposite relations; see under *hemianopia*.

hetero-osteoplasty (het'er-o-os'te-o-plas'te) [*hetero-* + Gr. *osteon* bone + *plassein* to shape] the surgical grafting in one individual of bone taken from an individual of another species.

hetero-ovular (het'er-o-ov'u-lar) pertaining to or derived from different ova; dizygotic.

heteropagus (het'er-op'ah-gus) [*hetero-* + Gr. *pagos* thing fixed] a twin monster in which one component (the parasite) is much smaller than and dependent on the other (the autosite).

heteropancreatism (het'er-o-pan'kre-ah-tizm) an irregular condition of functioning on the part of the pancreas.

heteropathy (het'er-op'ah-the) [*hetero-* + Gr. *pathos* disease] 1. abnormal or morbid sensitiveness to stimuli. 2. allopathy.

heteropentosan (het'er-o-pen'to-san) a heterosaccharide which contains pentose units, such as gums, mucilages, and pectic substances.

heterophagosome (het'er-o-fag'o-sōm) [*hetero-* + *phagosome*] an intracytoplasmic vacuole formed by phagocytosis or pinocytosis, which becomes fused with a lysosome, subjecting its contents to enzymatic digestion. Called also *heterophagic vacuole*.

heterophagy (het'er-of'ah-je) [*hetero-* + Gr. *phagein* to eat] the taking into a cell of exogenous material by phagocytosis or pinocytosis and the digestion of the ingested material after fusion of the newly formed vacuole with a lysosome. Cf. *autophagy*.

heterophany (het'er-of'ah-ne) [*hetero-* + Gr. *phainein* to appear] a difference in the manifestations of the same condition.

heterophasia (het'er-o-fa'ze-ah) [*hetero-* + Gr. *phasis* speech +

-ia] the uttering of words other than those intended by the speaker.

heterophasis (het'er-o-fa'sis) heterophasia.

heterophemia (het'er-o-fe'me-ah) [*hetero-* + Gr. *phēmē* word] heterophasia.

heterophil (het'er-o-fil') 1. a granular leukocyte represented by neutrophils in man but characterized in other mammals by granules which have variable sizes and staining characteristics; called also *heterophilic leukocyte*. See also *neutrophil* (def. 2). 2. heterophilic.

heterophilic (het'er-o-fil'ik) [*hetero-* + Gr. *philein* to love] 1. having affinity for antigens or antibodies other than the one for which it is specific. 2. staining with a type of stain other than the usual one.

heterophoralgia (het'er-o-fo-ral'je-ah) [*hetero-* + Gr. *phoros* bearing + *algia*] heterophoria associated with pain.

heterophoria (het'er-o-fo're-ah) [*hetero-* + Gr. *pherein* to bear + -ia] failure of the visual axes to remain parallel after the visual fusional stimuli have been eliminated. The various forms of heterophoria are called *phorias*, their direction being indicated by the appropriate prefix. See *cyclophoria*, *esophoria*, *exophoria*, *hyperphoria*, *hypophoria*, and *latent deviation*.

heterophoric (het'er-o-fo'rik) pertaining to or characterized by heterophoria.

heterophosphatase (het'er-o-fos'fah-tās) hexokinase.

heterophthalmia (het'er-of-thal'me-ah) [*hetero-* + Gr. *ophthalmos* eye + -ia] difference in the direction of the axes, or in the color, of the two eyes.

heterophthalmos (het'er-of-thal'mos) heterophthalmia.

heterophydisias (het'er-o-fi-di'ah-sis) heterophyiasis.

Heterophyes (het'er-of'i-ēz) [*hetero-* + Gr. *phye* stature] a genus of minute trematode worms found in the middle third of the small intestine of man, dogs, cats, and other fish-eating mammals. *H. heterophyes* is found in Egypt, Asia, and Asia Minor. *H. katsuradai* and *H. brevicæca* have been reported in man in Japan and the Philippines.

heterophyiasis (het'er-o-fi-i'ah-sis) infection with trematodes of the genus *Heterophyes*; it is generally asymptomatic.

heteroplasia (het'er-o-pla'ze-ah) [*hetero-* + Gr. *plassein* to mold] the replacement of normal by abnormal tissue; malposition of normal cells.

heteroplasm (het'er-o-plazm) any heterologous tissue.

heteroplastic (het'er-o-plas'tik) pertaining to heteroplasia or to heteroplasty.

heteroplastid (het'er-o-plas'tid) a xenograft.

heteroplasty (het'er-o-plas'te) [*hetero-* + Gr. *plassein* to mold] heterotransplantation.

heteroploid (het'er-o-ploid') 1. pertaining to or characterized by heteroploidy. 2. an individual or cell with an abnormal number of chromosomes.

heteroploidy (het'er-o-ploi'de) the state of having an abnormal number of chromosomes.

Heteropoda (het'er-op'o-dah) a genus of large spiders sometimes confused with tarantulas. *H. venatoria*, a large spider found in shipments of tropical fruit, particularly bananas; its bite is painful, but not serious.

heteropodal (het'er-op'o-dal) [*hetero-* + Gr. *pous* foot] having branches or processes of different kinds; said of nerve cells.

heteropolymeric (het'er-o-pol'e-mer'ik) [*hetero-* + *poly-* + Gr. *meros* part] composed of dissimilar constituent building units, as a macromolecule, e.g., a protein.

heteropolysaccharide (het'er-o-pol'e-sak'ah-rid) any polysaccharide macromolecule containing two or more different sugars, its function varying with the nature of its residues.

heteroprosopus (het'er-o-pro'so-pus) [*hetero-* + Gr. *prosōpon* face] janiceps.

heteroproteose (het'er-o-pro'te-ōs) a primary proteose that is insoluble in water, but soluble in dilute salt solution.

heteropsia (het'er-op'se-ah) [*hetero-* + Gr. *opsis* vision] unequal vision in the two eyes.

heteropsychologic (het'er-o-si'ko-loj'ik) pertaining to ideas formed outside the individual mind.

Heteroptera (het'er-op'ter-ah) [*hetero-* + Gr. *pteron* wing] a suborder of Hemiptera characterized by the possession of two pairs of wings, one horny, the other membranous; it includes the medically important families Cimicidae and Reduviidae.

heteroptics (het'er-op'tiks) [*hetero-* + Gr. *optikos* optic] false or perverted vision; visual perception of objects not in the field of vision or misinterpretation of visual images.

heteropyknosis (het'er-o-pik-no'sis) [*hetero-* + Gr. *pyknōsis* condensation] 1. the quality of showing variations in density throughout. 2. a state of differential condensation observed in comparison of different chromosomes, or of different regions of the same chromosome. **negative h.**, attenuation of condensation observed in comparison of different chromosomes, or of different regions of the same chromosome. **positive h.**, accentuation of

condensation observed in comparison of different chromosomes, or of different regions of the same chromosome.

heteropyknotic (het'er-o-pik-not'ik) pertaining to or characterized by heteropyknosis. **negatively h.**, showing areas of lesser condensation than normal. **positively h.**, showing areas of greater condensation than normal.

heterosaccharide (het'er-o-sak'ah-rid) a polysaccharide containing a carbohydrate and a noncarbohydrate unit. Cf. *holosaccharide*.

heteroscope (het'er-o-skōp) [*heterophoria* + Gr. *skopein* to examine] a pair of fusion tubes so mounted as to subserve the observation of the progress of cases of heterophoria.

heteroscopy (het'er-os'ko-pe) inequality of vision in the two eyes.

heteroserotherapy (het'er-o-se'ro-ther'ah-pe) treatment of a patient by serum derived from some other individual.

heterosexual (het'er-o-seks'u-al) 1. pertaining to the opposite sex; directed toward a person of the opposite sex; the opposite of homosexual. 2. one who is sexually attracted to persons of the opposite sex.

heterosexuality (het'er-o-seks'u-al'i-te) sexual desire directed toward persons of the opposite sex, as distinguished from homosexuality.

heterosis (het'er-o'sis) [Gr. *heterōsis* alteration] the condition in which the first generation hybrid shows more vigor as measured by growth, survival, and fertility, than either of the parent strains; it is believed to be caused by the dominance (or interaction) of favorable alleles not common to both parental populations. Called also *hybrid vigor*.

heterosmia (het'er-os'me-ah) [*hetero* + Gr. *osmē* smell] a condition in which odors are incorrectly interpreted.

heterosome (het'er-o-sōm) [*hetero* + Gr. *sōma* body] a sex chromosome.

heterospore (het'er-o-spōr) a heterosporous organism.

heterosporous (het'er-os'po-rus) [*hetero* + Gr. *sporos* seed] having spores of two kinds, which reproduce asexually.

heterostimulation (het'er-o-stim'u-la'shun) stimulation of an animal with antigenic material originating from a different species.

heterosuggestion (het'er-o-sug-jes'chun) [*hetero* + *suggestion*] suggestion received from another person; opposed to autosuggestion.

heterotaxia (het'er-o-tak'se-ah) [*hetero* + Gr. *taxis* arrangement] anomalous placement or transposition of viscera or parts.

heterotaxic (het'er-o-tak'sik) affected with heterotaxia.

heterotaxis (het'er-o-tak'sis) heterotaxia.

heterotaxy (het'er-o-tak'se) heterotaxia.

heterothallic (het'er-o-thal'ik) pertaining to or exhibiting heterothallism.

heterothallism (het'er-o-thal'izm) a form of sexual reproduction in which the isogamete must fuse with a gamete formed by a cell of a different mating type, as in various algae and fungi.

heterotherapy (het'er-o-ther'ah-pe) [*hetero* + Gr. *therapeia* treatment] treatment of disease by remedies which are antagonistic to the principal symptoms of the disease; nonspecific therapy.

heterotherm (het'er-o-ther'm) an animal which exhibits heterothermy.

heterothermic (het'er-o-ther'mik) pertaining to or characterized by heterothermy.

heterothermy (het'er-o-ther'me) [*hetero* + Gr. *thermē* heat] the exhibition of widely different body temperatures at different times or under different conditions, as certain species of birds, marsupials, or hibernating species.

heterotonia (het'er-o-to'ne-ah) [*hetero* + Gr. *tonostension* + *-ia*] a state characterized by variations in tension or tone.

heterotonic (het'er-o-ton'ik) pertaining to or characterized by heterotonia.

heterotopia (het'er-o-to'pe-ah) [*hetero* + Gr. *topos* place + *-ia*] 1. displacement or misplacement of parts or organs; the presence of a tissue in an abnormal location. 2. a jumbling of sounds in words.

heterotopic (het'er-o-top'ik) occurring at an abnormal place or upon the wrong part of the body.

heterotopy (het'er-ot'o-pe) heterotopia.

heterotransplant (het'er-o-trans'plant) xenograft.

heterotransplantation (het'er-o-trans'plan-ta'shun) the operative replacement of lost or damaged parts or tissues by tissue taken from an individual of a different species (a xenograft).

heterotrichosis (het'er-o-tri-ko'sis) [*hetero* + Gr. *trichōsis* growth of hair] growth of hair of different colors on the body. **h. superciliorum**, difference in color of the hairs of the two eyebrows (von Walther).

heterotrichous (het'er-ot'ri-kus) having irregular cilia, in size, shape, function, or distribution.

heterotroph (het'er-o-trōf'f) a heterotrophic organism, such as an animal or a chlorophyll-free plant.

heterotrophia (het'er-o-tro'fe-ah) [*hetero* + Gr. *trophē* nourishment] any disorder or fault of nutrition.

heterotrophic (het'er-o-tro'fik) [*hetero* + Gr. *trophē* nutrition] not self-sustaining; said of organisms which require a reduced form of carbon for energy and synthesis. Cf. *autotrophic*.

heterotrophy (het'er-ot'ro-fe) 1. the state of being heterotrophic; heterotrophic nutrition. 2. heterotrophia.

heterotropia (het'er-o-tro'pe-ah) [*hetero* + Gr. *tropē* a turn, turning + *-ia*] failure of the visual axes to remain parallel when fusion is a possibility. See *strabismus*. **comitant h.**, **concomitant h.**, deviation of a visual axis in which the angular relation between the two visual axes remains fairly constant, whatever the position of the fixing eye. **noncomitant h.**, deviation in which the angular relation between the visual axes is not maintained. **paralytic h.**, heterotropia due to paralysis of one or more of the extraocular muscles.

heterotropy (het'er-ot'ro-pe) heterotropia.

heterotrypsin (het'er-o-trip'sin) an enzyme of the pancreatic juice.

heterotypic (het'er-o-tip'ik) pertaining to, characteristic of, or belonging to a different type.

heterotypical (het'er-o-tip'e-k'l) of a type differing from that usually or normally encountered; having characteristics peculiar to a different type; sometimes applied to the first meiotic division of the germ cells.

heterovaccine (het'er-o-vak'sēn) a vaccine made from some microorganism other than the one causing the disease for which the vaccine is used; it is one form of nonspecific therapy.

heteroxenous (het'er-ok'se-nus) [*hetero* + Gr. *xenos* guest-friend, stranger] requiring more than one host in order to complete the life cycle; said of parasitic organisms. Cf. *monoxenous*.

heteroxeny (het'er-ok'sē-ne) the quality or condition of being heteroxenous.

heterozoic (het'er-o-zo'ik) [*hetero* + Gr. *zōon* animal] pertaining to another animal or species of animal.

heterozygosis (het'er-o-zi-go'sis) the formation of a zygote by the union of gametes of unlike genetic constitution.

heterozygosity (het'er-o-zi-go'si-te) [*hetero* + *zygosity*] the state of possessing different alleles at a given locus or loci in regard to a given character.

heterozygote (het'er-o-zi-gōt) [*hetero* + *zygote*] an individual possessing different alleles in regard to a given character.

heterozygotic (het'er-o-zi-got'ik) heterozygous.

heterozygous (het'er-o-zi-gus) possessing different alleles at a given locus. *Doubly heterozygous*: having different alleles at each of two separate loci.

Hetrazan (het'rah-zan) trademark for preparations of diethyl-carbamazine citrate.

Heublein method (hoib'lin) [Arthur Carl Heublein, radiologist, 1879-1932] see under *method*.

Heubner's disease (endarteritis) (hoib'nerz) [Johann Otto Leonhard Heubner, pediatrician in Berlin, 1843-1926] see under *disease*.

Heubner-Herter disease (hoib'ner-her'ter) [J. O. L. Heubner; Christian Archibald Herter, American physician, 1865-1910] the infantile form of nontropical sprue, or celiac disease.

heuristic (hu-ris'tik) [Gr. *heuriskein* to find out, discover] encouraging or promoting investigation; conducive to discovery.

heurteloup (her'tel-ōp, Fr., urt-loo') [Baron Charles Louis Stan Heurteloup, French surgeon, 1793-1864] an artificial leech, or cupping apparatus.

Heuser's membrane (hoi'zerz) [Chester Heuser, American embryologist, born 1885] see under *membrane*.

hex-, hexa- [Gr. *hex* six] a combining form meaning six.

hexabasic (hek'sah-ba'sik) [*hexa* + *basic*] having six atoms replaceable by a base.

Hexa-Betalin (hek'sah-be'tah-lin) trademark for preparations of pyridoxine hydrochloride.

hexabiose (hek'sah-bi'ōs) disaccharide.

hexachlorobenzene (hek'sah-klor'o-ben'zēn) a compound, C₆Cl₆, used in organic synthesis and as a fungicide.

hexachlorocyclohexane (hek'sah-klo'ro-si' klo-hek'sān) benzene hexachloride.

hexachloroethane (hek'sah-klor'o-eth'ān) a crystal compound, CCl₃CCl₃, used against liver flukes in cattle and sheep.

hexachlorophene (hek'sah-klo'ro-fēn) [USP] chemical name: 2,2'-methylolenebis-(3,4,6-trichlorophenol). An antibacterial, C₁₂H₆Cl₆O₂, occurring as a white to light tan, crystalline powder, effective against gram-positive organisms; used as a topical anti-infective and detergent, mainly in soaps and dermatological preparations, and in veterinary medicine to combat flukes in ruminants.

hexachromic (hek'sah-kro'mik) [*hexa* + Gr. *chrōma* color] 1.

pertaining to or exhibiting six colors. 2. able to distinguish only six of the seven colors of the spectrum.

hexacosane (heks-ak'o-sān) [*hexa-* + Gr. *eikosi* twenty] an aliphatic hydrocarbon, $C_{26}H_{54}$, extracted from plant waxes; called also *cerane*.

hexad (hek'sad) 1. a group or combination of six similar or related entities. 2. any element having a valency of six.

hexadactylia (hek'sah-dak-til'e-ah) hexadactyly.

hexadactylism (hek'sah-dak'ti-lizm) hexadactyly.

hexadactyly (hek'sah-dak'ti-le) [*hexa-* + Gr. *daktylos* finger + *-ia*] the occurrence of six digits (fingers or toes) on one limb.

hexadecanoate (hek'sah-dek'ah-no'āt) systematic name for palmitate, denoting that it has sixteen (*hexa* six + *deca* ten) carbon atoms in a straight chain.

Hexadrol (hek'sah-drol) trademark for dexamethasone.

hexafluorenum bromide (hek'sah-flūr-en'i-um) [USP] chemical name: *N,N'*-di-9-*H*-fluoren-9-yl-*N,N,N',N'*-tetramethyl-1,6-hexanediaminium dibromide. A neuromuscular blocking agent, $C_{26}H_{12}Br_2N_2$, occurring as a white, crystalline powder; used in anesthesiology to prolong and potentiate the skeletal muscle relaxing action of succinylcholine during surgery, administered intravenously.

Hexagenia bilineata (hek'sah-je'ne-ah bi-lin'e-a'tah) a mayfly of the shores of Lake Erie whose cast skins may cause asthma; called also *lake fly*.

hexahydric (hek'sah-hi'drik) containing six atoms of hydrogen.

hexahydrohematoporphyrin (hek'sah-hi'dro-hem'ah-to-por'fi-rin) one of the resulting products of the treatment of heme with alcohol and a reducing agent.

hexamer (heks'ah-mer) 1. a polymer molecule composed of six monomers. 2. a capsomer having six structural subunits.

hexamethonium (hek'sah-mē-tho'ne-um) chemical name: *N,N,N',N'*-hexamethyl-1,6-hexanediaminium; a quaternary ammonium ganglion-blocking agent, $C_{10}H_{24}N_2$. **h. bromide**, the dibromide ester of hexamethonium, $C_{12}H_{30}Br_2N_2$, having the same actions as the base; has been used as an antihypertensive, but has been largely replaced by more effective drugs. **h. chloride**, the dichloride salt of hexamethonium, $C_{12}H_{30}Cl_2N_2$, having the same actions as the base; used as an antihypertensive, administered orally and parenterally.

hexamethylated (hek'sah-meth'i-lāt-ed) containing six methyl groups.

hexamethylenamine (hek'sah-meth'il-ēn-am'in) methenamine.

hexamethylendiamine (hek'sah-meth'il-ēn-di'am-in) a ptomaine, $NH_2(CH_2)_6NH_2$, from decomposing pancreas and muscle.

hexamethylpararosanilin (hek'sah-meth'il-par'ah-ro-san'i-lin) see *gentian violet*, under *violet*.

hexamine (hek'sah-min) methenamine.

Hexamita (heks-am'i-tah) a genus of elongate flagellate protozoa of the order Polymastigida, class Zoomastigophora, which have two anterior nuclei, six anterior flagella, and two trailing flagella. It includes free-living species as well as intestinal parasites. *H. meleagridis* causes severe enteritis in wild and domestic fowl, including turkeys, chickens, quail, and partridges. *H. muris* is found in rats, mice, hamsters, and various wild rodents. *H. salmonis* in trout and salmon, and *H. columbae* in pigeons.

hexamitiasis (heks-am'i-ti'ah-sis) infection with parasites of the genus *Hexamita*.

hexamylose (heks-am'i-lōs) a crystalline amylose, $(C_6H_{10}O_5)_6$.

hexane (hek'sān) *n*-hexane; an aliphatic hydrocarbon of the methane series, C_6H_{14} , obtained by distillation from petroleum, occurring as a colorless, volatile, highly flammable liquid with a characteristic odor; it is a constituent of petroleum benzene, and is used as a solvent and in spectrophotometry.

Hexanicotol (hek'sah-nik'o-tol) trademark for a preparation of inositol niacin.

hexaploid (hek'sah-ploid) 1. pertaining to or characterized by hexaploidy. 2. an individual or cell having six sets of chromosomes.

hexaploidy (hek'sah-ploi'de) the state of having six sets of chromosomes (6 *n*).

Hexapoda (heks-ap'o-dah) [*hexa-* + Gr. *pous* foot] insecta.

hexatomic (hek'sah-tom'ik) [*hex-* + *atom*] 1. containing six atoms of an element, or six replaceable univalent atoms. 2. in immunology, having the power of binding six complements of different strains.

hexavaccine (hek'sah-vak'sēn) a vaccine containing six different organisms.

hexavalent (hek'sah-va'lent) having a valency of six.

Hexavibex (hek'sah-vi'bek) trademark for a preparation of pyridoxine hydrochloride.

hexavitamin (hek'sah-vi'tah-min) [NF] a preparation, in capsule or tablet form, containing vitamin A, vitamin D, ascorbic acid, thiamine hydrochloride, riboflavin, and niacinamide.

hexedine (hek'sē-dēn) chemical name: 2,6-bis(2-ethylhexyl)-hexahydro-7a-methyl-1*H*-imidazo[1,5-*c*]imidazole; an antibacterial, $C_{22}H_{45}N_3$.

hexenmilch (hek'sen-milk) [Ger. "witches' milk"] a milklike secretion from the breast of a newborn infant; *witch's milk*.

hexestrol (hek-ses'trol) chemical name: 4,4'-(1,2-diethyl-1,2-ethanedyl)bisphenol. A diethylstilbestrol derivative, $C_{18}H_{22}O_2$, occurring as a white, crystalline powder, having the uses of estrogen (q.v.); administered orally and parenterally.

hexethal sodium (hek'sē-thal) chemical name: 5-ethyl-5-hexyl-2,4,6(1*H*,3*H*,5*H*)-pyrimidinetrione monosodium salt. A short-acting barbiturate, $C_{12}H_{18}N_2NaO_5$, used as a sedative and hypnotic.

hexetidine (heks-et'i-dēn) chemical name: 1,3-bis(2-ethylhexyl)hexahydro-5-methyl-5-pyrimidinamine. An antifungal, antiprotozoal, and antibacterial agent, $C_{21}H_{45}N_3$, used mainly as a topical anti-infective in the treatment of vaginitis.

hexhydric (heks-hi'drik) containing six atoms of replaceable hydrogen.

hexobarbital (hek'so-bar'bi-tal) [USP] chemical name: 5-(1-cyclohexen-1-yl)-2,4,6(1*H*,3*H*,5*H*)-pyrimidinetrione. A short-acting barbiturate, $C_{12}H_{16}N_2O_3$, occurring as colorless crystals or white, crystalline powder; used as a sedative, administered orally. **h. sodium**, the sodium salt of hexobarbital, $C_{12}H_{15}N_2NaO_3$, which is a very short-acting barbiturate; used for pre- and postanesthesia sedation and hypnosis, administered orally, and for induction of short anesthesia, administered intravenously.

hexobarbitone (hek'so-bar'bi-tōn) hexobarbital.

hexobendine (hek'so-ben'dēn) chemical name: 3,4,5-trimethoxybenzoic acid 1,2-ethanedylbis(methylimino)-3,1-propanediylyl ester. A vasodilator, $C_{20}H_{24}N_2O_{10}$, which has been used in the treatment of coronary insufficiency and angina of effort.

hexocyclium methylsulfate (hek'so-si'kle-um) chemical name: 4-(2-cyclohexyl-2-hydroxy-2-phenylethyl)-1,1-dimethylpiperazinium methyl sulfate (salt). A quaternary ammonium anticholinergic, $C_{21}H_{36}N_2O_8S$, occurring as a white crystalline powder, which inhibits gastric secretion and gastrointestinal motility; used especially as an adjunct in the treatment of peptic ulcer, administered orally.

hexokinase (hek'so-ki'nās) ATP:D-hexose 6-phosphotransferase. An enzyme that catalyzes the transfer of a high-energy phosphate group of a donor to D-glucose, producing D-glucose-6-phosphate. See also *kinase* (def. 1).

hexonate (hek'so-nāt) chemical name: hexamethylene-1,6-bis(trimethylammonium) nicotinate. A ganglionic blocking agent.

hexone (hek'sōn) see under *base*.

hexosamine (hek'sōs-am'in) a nitrogenous sugar in which an amino group replaces a hydroxyl group.

hexosaminidase (heks'ōs-ah-min'i-dās) an enzyme occurring in two forms that catalyzes the cleavage of hexose from ganglioside GM₂. Hexosaminidase A is deficient in Tay-Sachs disease, and hexosaminidase A and B are deficient in Sandhoff's disease. The B form also catalyzes the cleavage of globoside.

hexosan (hek'so-san) an anhydride or a polymerized form of a hexose.

hexosazone (hek'so-sa'zōn) an osazone formed from a hexose.

hexose (hek'sōs) a monosaccharide containing six carbon atoms in a molecule. **h. diphosphate**, see *Harden-Young ester*, under *ester*. **h. monophosphate**, see *hexosephosphate*.

hexosephosphatase (hek'sōs-fos'fah-tās) an enzyme that catalyzes the removal of a phosphate group from hexose phosphates.

hexosephosphate (hek'sōs-fos'fāt) an ester of glucose with phosphoric acid, which aids in the absorption of sugars and which, as the Cori, Embden, Harden-Young, Neuberg and Robison esters, is important in carbohydrate metabolism. See under *ester*.

hexosyltransferase (hek'so-sil-trans'fer-ās) any of a group of enzymes that catalyzes the transfer of a hexose group, including the glucosyltransferases; called also *transhexosylase*.

hexoxidase (heks-ok'si-dās) an enzyme that catalyzes the oxidation of hexuronic (ascorbic) acid.

hexyl (hek'sil) [*hex-* + Gr. *hylē* matter] a hydrocarbon, C_6H_{13} , in many isomeric forms.

***n*-hexylamine** (hek'sil-ah'mēn) a poisonous ptomaine, $CH_3(CH_2)_5NH_2$, from spoiled yeast and rancid cod liver oil; called also *caproylamine*.

hexylcaine hydrochloride (hek'sil-kān) [USP] chemical name: 1-cyclohexylamino-2-propanol benzoate (ester) hydrochloride. A local anesthetic, $C_{12}H_{19}NO_2 \cdot HCl$, occurring as a white powder; used for infiltration, block, and topical anesthesia.

hexylresorcinol (hek'sil-rē-zor'si-nol) [USP] chemical name: 4-hexyl-1,3-benzenediol. An anthelmintic, $C_{12}H_{19}O_2$, occurring as white, or yellowish white, needle-shaped crystals; used in the treatment of roundworm and trematode infections, administered orally.

Hey's amputation (operation), derangement, hernia, ligament, saw (hāz) [William Hey, English surgeon, 1736-1819] see under *amputation*, *derangement*, and *saw*; see *en-*

cysted hernia, under *hernia*; and see *margo falciformis hiatus saphenus*.

Heymans (hay'manz), Corneille. French-Belgian physiologist, born 1892; winner of the Nobel prize for medicine and physiology in 1938 for his discovery of the role played by the sinus and aortic mechanisms in the regulation of respiration.

Heynsius' test (hin'se-oos) [Adrian Heynsius, Dutch physician, 1831-1885] see under *tests*.

HF Hageman factor (coagulation Factor XII).

Hf chemical symbol of *hafnium*.

Hfr high frequency of recombination; Hfr cells are the sexual or donor (male) stage of bacteria having the F (fertility) factor in the chromosome, which enables them to transfer chromosomal material to recipient (female) bacteria not having this factor.

Hg chemical symbol for mercury (L. *hydrargyrum*).

Hgb hemoglobin.

HgCl₂ corrosive mercuric chloride.

Hg₂Cl₂ mild mercurous chloride.

HGF hyperglycemic-glycogenolytic factor (glucagon).

HGG human gammaglobulin.

HGH human (pituitary) growth hormone.

HgI₂ mercuric iodide.

Hg₂I₂ mercurous iodide.

Hg(NO₃)₂ mercuric nitrate.

HgO mercuric oxide.

Hg₂O mercurous oxide.

HHb chemical symbol for *un-ionized hemoglobin*.

H. + Hm. compound hypermetropic astigmatism.

HI hydriodic acid.

5-HIAA 5-hydroxyindoleacetic acid, a metabolic product of serotonin.

hiatal (hi-a'tal) pertaining to or affecting a hiatus.

hiation (hi-a'shun) the act of yawning.

hiatopexia, hiatopexy (hi'at-o-pek'se-ah; hi-at'o-pek'se) [*hiatus* + Gr. *pēxis* fixation] surgical fixation or repair of a genital hiatus.

hiatus (hi-a'tus) [L.] [NA] general term for a gap, cleft, or opening. **adductor h.**, h. tendineus. **h. adductorius**, NA alternative for *h. tendineus*. **aortic h.**, **h. aorticus** [NA], the opening in the diaphragm through which the aorta and thoracic duct pass. **Breschet's h.**, helicotrema. **h. of canal for greater petrosal nerve**, h. canalis nervi petrosi majoris. **h. of canal for lesser petrosal nerve**, h. canalis nervi petrosi minoris. **h. cana'lis facia'lis**, **h. cana'lis ner'vi petro'si majo'ris** [NA], hiatus of canal for greater petrosal nerve: an opening in the petrous part of the temporal bone in the floor of the middle cranial fossa that transmits the greater petrosal nerve and a branch of the middle meningeal artery. **h. cana'lis ner'vi petro'si mino'ris** [NA], hiatus of canal for lesser petrosal nerve: the small, laterally placed opening on the anterior surface of the pyramid of the temporal bone that transmits the lesser petrosal nerve. **esophageal h.**, **h. esopha'geus** [NA], the opening in the diaphragm for the passage of the esophagus and the vagus nerves. **h. of facial canal**, **h. of fallopian canal**, **h. fallo'pii**, **false h. of fallopian canal**, h. canalis nervi petrosi majoris. **h. femora'lis**, anulus femoralis. **h. fina'lis sacra'lis**, a cleft in the lowermost sacral vertebra. **h. for greater superficial petrosal nerve**, h. canalis nervi petrosi majoris. **h. interme'dius lumbosacra'lis**, a cleft in the region of the first sacral vertebra, considered to represent a normally delayed ossification in young subjects. **h. interos'seus**, the opening above the interosseous membrane of the forearm for the passage of the posterior interosseous vessels. **h. leuke'micus**, a condition observed in acute myeloblastic leukemia in which there are numerous myeloblasts and a number of mature neutrophils in the peripheral blood, with few or no intermediate forms; called also *hiatus leukemicus* of Naegeli. **h. lumbosacra'lis**, the gap between the arches of the fifth lumbar and first sacral vertebrae, which is greater than the space between any vertebrae at a higher level. **h. maxilla'ris** [NA], **maxillary h.**, **h. of maxillary sinus**, a very irregular opening on the medial surface of the maxillary sinus, in the articulated skull, being largely filled by parts of several adjoining bones. **neural h.**, an opening in the neural tube during the process of closure. **h. oesopha'ge'us**, h. esophageus. **h. pleuroperitonea'lis**, an opening in the fetal diaphragm; its failure to close leaves a congenital defect which may become a site for congenital diaphragmatic hernia. Called also *foramen of Bochdalek*. **sacral h.**, **h. sacra'lis** [NA], the opening at the inferior end of the sacral canal formed by failure of the laminae of the fifth and sometimes the fourth sacral vertebrae to meet in the midline. **saphenous h.**, **h. saph'e'nus** [NA], the depression in the fascia lata that is bridged by the cribriform fascia and perforated by the great saphenous vein; called also *fossa ovalis femoris* and *oval fossa of thigh*. **Scarpa's h.**, helicotrema. **semilunar h.**, **h. semiluna'ris** [NA], the deep semilunar groove anterior and inferior to the bulla of the ethmoid bone; the

anterior ethmoidal air cells, the maxillary sinus, and sometimes the frontonasal duct drain through it via the ethmoid infundibulum. **subarcuate h.**, fossa subarcuata ossis temporalis. **h. tendin'eus** [NA], the opening between the long tendon of the adductor magnus and the femur, marking the distal end of the adductor canal; called also *h. adductorius*. **tentorial h.**, incisura tentorii cerebelli. **h. tota'lis sacra'lis**, a cleft in all of the sacral vertebrae, sometimes also involving one or several of the contiguous lumbar vertebrae. **vena caval h.**, foramen venae cavae. **h. of Winslow**, foramen epiploicum.

Hibbs' frame, operation (hibz) [Russell Aubra Hibbs, New York surgeon, 1869-1932] see under *frame* and *operation*.

hibernation (hi'ber-na'shun) [L. *hiberna* winter] the dormant state in which certain animal species pass the winter; it is characterized by narcosis and by sharp reduction in body temperature and metabolic activity. Cf. *estivation*. **artificial h.**, a state of reduced metabolism, muscle relaxation, and a twilight sleep resembling narcosis, produced pharmacodynamically by controlled inhibition of the sympathetic nervous system and reducing the level of the homeostatic reactions of the organism.

hibernoma (hi'ber-no'mah) a rare tumor made up of large polyhedral cells with coarsely granular cytoplasm, occurring on the back or around the hips. So called because it is considered by some to be a manifestation of a vestigial fat storage organ and comparable to the dorsal fat pads of hibernating animals. See also *lipoma*.

hiccough (hik'up) hiccup.

hiccup (hik'up) an involuntary spasmodic contraction of the diaphragm, causing a beginning inspiration which is suddenly checked by closure of the glottis, causing the characteristic sound; called also *singultus*. **epidemic h.**, a condition frequently seen in epidemic encephalitis.

Hicks' sign (hiks) [John Braxton Hicks, English gynecologist, 1823-1897] see under *sign*.

hidebound (hid'bownd) bound down tightly to the subcutaneous tissues, said of the skin in scleroderma.

hidradenitis (hi'drad-ē-ni'tis) [Gr. *hidrōs* sweat + *adēn* gland + *-itis*] inflammation of a sweat gland, usually of the apocrine type. **h. axilla'ris**, hidradenitis suppurativa of the axilla. **h. suppurati'va**, a disease of the apocrine sweat glands marked by the development of one or more shotlike cutaneous nodules, which gradually enlarge to the size of a pea, and undergo softening and suppuration, with subsequent discharge; called also *hidrosadenitis axillaris* and *hidrosadenitis suppurativa*.

hidradenoid (hi-drad'ē-noid) resembling a sweat gland; having components resembling elements of a sweat gland.

hidradenoma (hi'drad-ē-no'mah) a general term for tumors of the skin the components of which resemble epithelial elements of sweat glands. Several subtypes are recognized, and these are variously designated according to histologic pattern and specific component of the sweat gland unit from which the particular tumor is thought to be derived. The tumors may be nodular (solid) or papillary. The nodular types show various histologic patterns, each of which has been given a different designation: clear cell hidradenoma, epithelioma, or carcinoma; clear cell myoepithelioma; myoepithelioma; eccrine spiradenoma; eccrine acrospiroma; and mixed tumor of the skin (chondroid syringoma). The papillary hidradenoma (also known as syringocystadenoma papilliferum) is generally found only in the vulvar or perianal region. **h. erupti'vum**, hidradenoma that develops about the time of puberty, in which the lesions appear as small, yellowish papules on the chest, limbs, and lower eyelids.

hidro- (hid'ro) [Gr. *hidrōs* sweat] a combining form denoting relation to sweat or to a sweat gland.

hidroadenoma (hid'ro-ad'ē-no'mah) hidradenoma.

hidrocystoma (hid'ro-sis-to'mah) [*hidro-* + *cystoma*] a retention cyst of a sweat gland.

hidrocystomatosis (hi'dro-sis'to-mah-to'sis) cystic hyperplasia of the sweat glands.

hidropoiesis (hid'ro-poi-e'sis) [*hidro-* + Gr. *poiēsis* formation] the formation and secretion of sweat.

hidropoietic (hid'ro-poi-et'ik) pertaining to, characterized by, or promoting hidropoiesis.

hidrorrhea (hid-ro-re'ah) [*hidro-* + Gr. *rhoia* flow] hyperhidrosis.

hidrosadenitis (hi'dros-ad'ē-ni'tis) [*hidro-* + Gr. *adēn* gland + *-itis*] hidradenitis. **h. axilla'ris**, hidradenitis suppurativa.

h. des'truens suppurati'va (obs.), papulonecrotic tuberculid. **h. suppurati'va**, see under *hidradenitis*.

hidroschesis (hid-ros'kē-sis) [*hidro-* + Gr. *schesis* holding] anhidrosis.

hidrotic (hi-drot'ik, hi-drot'ik) pertaining to, characterized by, or causing sweating.

hiemal (hi'ē-mal) pertaining to or occurring in winter.

hier- see *hiero-*.

hialgia (hi'er-al'je-ah) [*hier-* + *-algia*] pain in the sacrum.

hiero-, hier- (hi'er-o, hi'er) [Gr. *hiern* sacred, or sacrum] a combining form denoting relationship to the sacrum, or to religion.

hierolisthesis (hi'er-o-lis-the'sis) [*hier-* + Gr. *olisthanein* to slip] displacement of the sacrum.

Highmore's antrum, body (hi'mörz) [Nathaniel Highmore, English surgeon, 1613–1685] see *sinus maxillaris* and *mediastinum testis*.

hila (hi'lah) [L.] plural of *hilum*.

hilar (hi'lar) pertaining to a hilus.

hilastic (hi-las'tik) [Gr. *hilasmos* propitiation, sacrifice] in Greek medicine, prophylactic, in the sense of diverting disease by rites of propitiation.

Hildebrandt's test (hil'de-brants) [Fritz Hildebrandt, German pharmacologist, born 1887] see under *tests*.

Hildenbrand's disease (hil'den-brands) [Johann Valentin von Hildenbrand, Austrian physician, 1763–1818] typhus.

hili (hi'li) [L.] plural of *hilus*.

hilifuge (hi'lī-fūj) [L. *hilus* + *fugere* to flee] radiating from the hilus of the lung; said of opacities seen on x-ray films.

hilitis (hi-li'tis) inflammation of a hilus, especially of the hilus of the lung.

Hill (hil'), Archibald Vivian. English biochemist, born 1886, noted for work on heat loss in muscle contraction; co-winner, with Otto Fritz Meyerhof, of the Nobel prize for medicine and physiology in 1922 for his discovery relating to the production of heat in muscle.

hillock (hil'ok) a small prominence or elevation. **auricular h's**, embryonic tubercles adjoining the first branchial groove that give rise to the auricle of the ear. **axon h.**, the conical expansion of an axon at its point of attachment to the body of the nerve cell. **Doyère's h.**, see under *eminence*. **germ h.**, **germ-bearing h.**, cumulus oophorus. **seminal h.**, colliculus seminalis.

Hilton's law, line, muscle, sac (hil'tunz) [John Hilton, English surgeon, 1804–1878] see under *law*; see *pectinate line*, under *line*; and see *musculus aryepiglotticus* and *sacculus laryngis*.

hilum (hi'lum), pl. *hi'la* [L.] hilus; see also entries under *hilus*.

hilus (hi'lus), pl. *hi'li* [L. "a small thing"] [NA] a general term for a depression or pit at that part of an organ where the vessels and nerves enter. Called also *hilum*. **h. glan'dulae sup-rarena'lis** [NA], hilus of suprarenal gland: the depression on the anterior surface of the suprarenal gland where the suprarenal vein enters the gland. **h. hep'atis**, porta hepatis. **h. of kidney**, *h. renalis*. **h. lie'nis** [NA], hilus of the spleen: the fissure on the gastric surface of the spleen where the vessels and nerves enter. **h. of lung**, *h. pulmonis*. **h. of lymph node**, *h. nodi lymphatici*. **h. lymphoglan'dulae**, *h. nodi lymphatici*. **h. no'di lymphat'ici** [NA], hilus of lymph node: the indentation on a lymph node where the arteries enter and the veins and efferent lymphatic vessels leave; called also *h. lymphoglandulae*. **h. nu'clei denta'ti** [NA], the white core of the dentate nucleus of the cerebellum. **h. nu'clei oliva'ris** [NA], hilus of olivary nucleus: the white core of the inferior olivary nucleus of the medulla oblongata, most prominent medially. **h. of olivary nucleus**, *h. nuclei olivaris*. **h. ova'rii** [NA], **h. of ovary**, the point on the mesovarian border of the ovary where the vessels and nerves enter. **h. pulmo'nis** [NA], hilus of the lung: the depression on the mediastinal surface of the lung where the bronchus and the blood vessels and nerves enter. **h. rena'lis** [NA], hilus of the kidney: the point on the medial margin of the kidney where the vessels, nerves, and ureter enter. **h. of spleen**, *h. lienis*. **h. of suprarenal gland**, *h. glandulae suprarenalis*.

himantosis (hi'man-to'sis) [Gr. *himantōsis*, from *himas* strap] elongation of the uvula.

hinchazon (hinch'ah-zon') [Cuban] beriberi.

hindbrain (hind'brān) rhombencephalon.

Hindenlang's test (hin'den-lahngz) [Karl Hindenlang, German physician, 1854–1884] see under *tests*.

hindfoot (hind'foot) the posterior portion of the foot, comprising the region of the talus and calcaneus.

hindgut (hind'gut) the embryonic structure from which chiefly the colon is formed.

hind-kidney (hind-kid'ne) the metanephros.

Hines-Brown test (hinz-brown) [Edgar Alphonso Hines, Jr., American physician, born 1906; George Elgie Brown, American physician, 1885–1935] see under *tests*.

hinge-bow (hinj'bo) a face-bow whose caliper ends can be adjusted to permit location of the axis of rotation of the mandible; adjustable axis face-bow.

Hinton test (hin'ton) [William Augustus Hinton, American bacteriologist, born 1883] see under *tests*.

HIO₃ iodic acid.

hip (hip) 1. the area of the body lateral to and including the hip joint; called also *coxa* [NA]. 2. loosely, the hip joint. **h. pointer**, contusion of the bone of the iliac crest or avulsion of muscle attachments of the iliac crest. **snapping h.**, a condition marked by a slipping around of the hip joint, sometimes with

an audible snap, due to the slipping of a tendinous band over the greater trochanter; called also *Perrin-Ferraton disease*.

hipped (hipt) having a fracture at the point of the hip; said of horses.

Hippel's disease (hip'elz) [Eugen von Hippel, German ophthalmologist, 1867–1939] von Hippel's disease; see under *disease*.

Hippelates (hip'ē-la'tēz) a genus of insects of the family Chlopididae, order Diptera. **H. fla'vipes**, the probable mechanical vector of yaws in Haiti. **H. pal'lipes**, a species that is thought to be the mechanical vector of yaws in Jamaica; called also *Oscinis pallipes*. **H. pu'sio**, the "eye gnat" of California and Florida and other southern states, which is the mechanical vector of epidemic conjunctivitis, usually of a severe, follicular type.

Hippel-Lindau disease (hip'el-lin'dow) [Eugen von Hippel; Arvid Lindau, Swedish pathologist, born 1892] von Hippel-Lindau disease; see under *disease*.

Hippeutis (hi-pu'tis) a genus of fresh-water snails. **H. can-to'ri**, one of the principal intermediate hosts of the trematode *Fasciolopsis buski* in eastern China.

hippo (hip'po) ipecac.

hippo- [Gr. *hippos* horse] a combining form denoting relationship to a horse.

Hippobosca (hip-o-bos'kah) [*hippo-* + Gr. *boskein* to feed] the typical genus of the family Hippoboscidae. They are pupiparous, dipterous, parasitic insects, called winged tick flies. **H. ru'fifipes**, a fly of South America whose bite transmits *Trypanosoma theileri*.

Hippoboscidae (hip'o-bos'kī-de) a family of parasitic flies found on bird and mammals; some have wings, others are wingless. It includes the genera *Hippobosca*, *Melaphagus*, and *Pseudolynchia*.

hippocampal (hip'o-kam'pal) pertaining to the hippocampus.

hippocampus (hip'o-kam'pus) [Gr. *hippokampos* sea horse] [NA] a curved elevation in the floor of the inferior horn of the lateral ventricle; interlocked with the more medially placed dentate gyrus, it consists of archipallium with three variable cell layers: the stratum oriens with polymorphic cells; a layer of double pyramids subdivided into the stratum radiatum (dendritic segment) and the stratum lucidum (cellular segment); and a layer of polymorphic cells comprising the stratum moleculare and stratum lacunosum. It is an important functional component of the limbic system and its efferent projections form the fornix. Called also *hippocampus major*, *Ammon's horn*, and *cornu Ammonis*. **h. ma'jor**, hippocampus. **h. mi'nor**, calcar avis. **h. nu'dus** (obs.), an inconstant small part of the hippocampus in the space formed by the splenic bending of the fascia dentata.

hippocoprosterol (hip'o-ko-pros'ter-ol) [*hippo-* + Gr. *kopros* dung + *sterol*] a sterol found in the feces of herbivorous animals and derived from the phytosterol of grass and other food plants, C₂₇H₅₄O; possibly related to coprostanol.

Hippocrates (hip-pok'rah-tēz) of Cos (late 5th century B.C.) the famous Greek physician who is generally regarded as the "Father of Medicine." Many of the writings of Hippocrates and his school have survived—the so-called *Corpus Hippocraticum*, but it is not certain which were written by Hippocrates himself; these writings are usually characterized by the stress laid on treatment and prognosis. An oath which appears in the body of work attributed to Hippocrates and his school, and known as the *Hippocratic oath*, has been the ethical guide of the medical profession since those days. It is as follows:

"I swear by Apollo the physician, by Æsculapius, Hygeia, and Panacea, and I take to witness all the gods, all the goddesses, to keep according to my ability and my judgment the following Oath:

"To consider dear to me as my parents him who taught me this art; to live in common with him and if necessary to share my goods with him; to look upon his children as my own brothers, to teach them this art if they so desire without fee or written promise; to impart to my sons and the sons of the master who taught me and the disciples who have enrolled themselves and have agreed to the rules of the profession, but to these alone, the precepts and the instruction. I will prescribe regimen for the good of my patients according to my ability and my judgment and never do harm to anyone. To please no one will I prescribe a deadly drug, nor give advice which may cause his death. Nor will I give a woman a pessary to procure abortion. But I will preserve the purity of my life and my art. I will not cut for stone, even for patients in whom the disease is manifest; I will leave this operation to be performed by practitioners (specialists in this art). In every house where I come I will enter only for the good of my patients, keeping myself far from all intentional ill-doing and all seduction, and especially from the pleasures of love with women or with men, be they free or slaves. All that may come to my knowledge in the exercise of my profession or outside of my profession or in daily commerce with men, which ought not to be spread abroad, I will keep secret and will never reveal. If I keep this oath faithfully, may I enjoy my life and practice my art, respected by all men and in all times; but if I swerve from it or violate it, may the reverse be my lot."

hippocratic (hip'po-kra't'ik) pertaining to or described by Hip-

pocrates of Cos, or pertaining to the school of medicine founded by him.

hippocratism (hip-pok'rah-tizm) the system of medicine attributed to Hippocrates and his school, based on imitating the processes of nature, and emphasizing treatment and prognosis.

hippocratist (hip-pok'rah-tist) a believer in or practitioner of the system of medicine attributed to Hippocrates and his school.

hippolite (hip'o-lit) hippolith.

hippolith (hip'o-lith) [*hippo-* + Gr. *lithos* stone] a bezoar, or concretion, from the alimentary tract of the horse.

hippomane (hi-pom'ah-ne) small, rounded, flat, amber bodies found in the allantoic fluid of various animals, especially the ungulates and ruminants.

hippomelanin (hip'o-mel'ah-nin) [*hippo-* + Gr. *melas* black] a black pigment from tumors and marrow of horses affected with melanosis.

hippostercorin (hip'o-ster'ko-rin) hippocoprosterol.

hippulin (hip'u-lin) a crystalline estrogenic steroid, $C_{18}H_{20}O_2$, with four double bonds, obtained from the urine of pregnant mares.

hippurase (hip'u-rās) hippuricase.

hippurate (hip'u-rāt) any salt of hippuric acid.

hippuria (hi-pu're-ah) [*hippo-* + Gr. *ouron* urine + *-ia*] excess of hippuric acid in the urine.

hippuric (hi-pu'rik) [*hippo-* + Gr. *ouron* urine] derivable from the urine of horses; see under *acid*.

hippuricase (hi-pu'ri-kās) aminocyclase.

hippus (hip'us) [Gr. *hippos* a complaint of the eyes, such that they are always winking] abnormally exaggerated rhythmic contraction and dilation of the pupil, independent of changes in illumination or in fixation of the eyes; called also *pupillary athetosis*.

Hiprex (hi'preks) trademark for a preparation of methenamine hippurate.

hirci (hir'si) [L., plural of *hircus*] [NA] the hairs growing in the axilla.

hircin (hir'sin) [L. *hircus* goat] (*obs.*) ill-smelling component(s) of the suet of goats.

hircismus (hir-siz'mus) [L. *hircus* goat] the strong odor of the axillae caused by bacterial decomposition of apocrine sweat, formed only in that site.

hircus (hir'kus), pl. *hir'ci* [L. "a goat"] see *hirci*.

Hirschberg's magnet, method (hirsh'bergz) [Julius Hirschberg, German ophthalmologist, 1843-1925] see under *magnet* and *method*.

Hirschfeld's canals (hirsh'feldz) [I. Hirschfeld, American dentist] interdental canals.

Hirschfeld's disease (Felix Hirschfeld, German physician, born 1863] see under *disease*.

Hirschfelder's tuberculin (hirsh'fel-derz) [Joseph Oakland Hirschfelder, American physician, 1854-1920] oxytuberculin.

Hirschsprung's disease (hirsh'sproongz) [Harald Hirschsprung, a Danish physician, 1830-1916] see under *disease*.

hirsute (her'soot) [L. *hirsutus*] shaggy; having abundant or excessive hair.

hirsuties (her-soo'she-ēz) hirsutism.

hirsutism (her'soot-izm) abnormal hairiness, especially an adult male pattern of hair distribution in women. Cf. *hypertrichosis*.

hirudicidal (hi-roo'di-si'dal) destructive to leeches.

hirudicide (hi-roo'di-sid) an agent that is destructive to leeches.

hirudin (hi-roo'din) [L. *hirudo* leech] the active principle of the secretion of the buccal glands of leeches; it has the power of preventing coagulation of the blood by acting as an antithrombin.

Hirudinaria (hir'u-di-na're-ah) a genus of leeches of the family Gnathobdella.

Hirudinea (hir'u-din'e-ah) a class of the Annelida; the leeches. It includes the genera *Haementeria*, *Hirudo*, *Hirudinaria*, *Haemadipsa*, *Limnatis*, *Macrobdella*, and *Haemopsis*.

hirudiniasis (hir'u-di-ni'ah-sis) invasion of the nose, mouth, pharynx, or larynx by leeches; attachment of leeches to the skin.

hirudinization (hi-roo'di-ni-za'shun) [L. *hirudo* leech] 1. the process of rendering the blood noncoagulable by the injection of hirudin. 2. the application of leeches; leeching.

hirudinize (hi-roo'di-niz) to render the blood noncoagulable by the injection of hirudin.

Hirudo (hi-roo'do), pl. *hiru'dines* [L. "leech"] a genus of leeches of the family Gnathobdellidae, class Hirudinea. **H. aegyptiaca**, *Limnatis nilotica*. **H. japonica**, the medicinal leech of Japan. **H. javanica**, a leech of Java, Batavia, and Burma, reported to produce internal hirudiniasis. **H. mediana**, olive-gray leech formerly used extensively for therapeutic purposes. **H. quinquestrata**, a leech occurring in Australia. **H. sanguisorba**, *Haemopsis sanguisuga*. **H. troctina**, the

common European leech, which is marked with green, orange, and black somewhat like a trout.

His histidine.

His bundle (band), disease, spindle (his'ez) [Wilhelm His, Jr., Swiss physician, 1863-1934] see under *bundle*, and see *trench fever*, under *fever*, and *aortic spindle* under *spindle*.

His bursa, canal (duct), space, zones [Wilhelm His, eminent German anatomist and embryologist, 1831-1904] see under *bursa*, *space*, and *zone*, and see *ductus thyroglossus*.

His-Werner disease (his'ver'ner) [William His, Jr.; Heinrich Werner, German physician, born 1874] trench fever.

Hispril (his'pril) trademark for a preparation of diphenylpyralline hydrochloride.

Hiss capsule stain (his) [Philip Hanson Hiss, Jr., American bacteriologist, 1869-1913] see under *Table of Stains*.

hist- see *histo-*.

Histadyl (his'tah-dil) trademark for preparations of methapyrilene.

histaffine (his-taf'in) [Gr. *histo* tissue + L. *affinis* having affinity for] 1. having affinity for tissues. 2. a substance present in the blood serum of animals affected with certain diseases that combines with certain constituents of the tissues to produce the phenomenon of complement fixation.

Histalog (his'tah-log) trademark for a preparation of betazole.

histaminase (his-tam'i-nās) diamine:oxygen oxidoreductase. An enzyme that has the power of deaminating histamine; it has been used in the treatment of allergic dermatoses and intestinal intoxications. Called also *diamine oxidase*.

histamine (his'tah-mēn) chemical name: 1*H*-imidazole-4-ethanamine. A decarboxylation product of histidine, $C_6H_9N_3$, found in all body tissues, particularly in the mast cells and their related blood basophils, the highest concentration being in the lungs. It is also present in ergot and other plants and may be synthesized outside the body from histidine or citric acid. It has several functions, including (1) dilation of capillaries, which increases capillary permeability and results in a drop of blood pressure, (2) contraction of most smooth muscle tissue, including bronchial smooth muscle of the lung, (3) induction of increased gastric secretion, and (4) acceleration of the heart rate. It is also responsible for the triple response, and is implicated as a mediator of immediate hypersensitivity. On the basis of the antagonistic effects of antihistamines, it is postulated that cellular receptors of histamine are of two types: The H_1 receptors mediate the contraction of smooth muscle and the effects on capillaries; the H_2 receptors mediate the acceleration of heart rate and the promotion of gastric acid secretion. Both H_1 and H_2 receptors mediate the contraction of vascular smooth muscle. Histamine has also been postulated to be a neurotransmitter in the central nervous system. **h₁**, the cellular receptor site for histamine responsible for the dilation of blood vessels and the contraction of smooth muscle; abbreviated H_1 . **h₂**, the cellular receptor site for histamine responsible for the stimulation of heart rate and gastric secretion; abbreviated H_2 . **h. hydrochloride**, the dihydrochloride salt of histamine, $C_6H_9N_3 \cdot 2HCl$, having the same actions as the base; used as an active ingredient of several analgesic dermatological preparations. **h. phosphate** [USP], the phosphate salt of histamine, $C_6H_9N_3 \cdot 2H_3PO_4$, occurring as colorless, long prismatic crystals, having the same actions as the base; used as a diagnostic aid in testing gastric secretion, administered subcutaneously. It is also used in the diagnosis of pheochromocytoma and has been used in treating various allergic manifestations, for desensitization in cases of hypersensitivity, and in the treatment of peripheral vascular diseases, Meniere's disease, and headache.

histaminemia (his-tam'i-ne'me-ah) the presence of histamine in the blood.

histaminergic (his'tah-min-er'jic) denoting those responses by histamine receptors to histamine that are blocked by histamine antagonists (e.g., cimetidine).

histaminia (his'tah-min'e-ah) a condition of shock caused by excess of histamine developed in the body or administered therapeutically.

histanoxia (his'tan-ok'se-ah) [*hist-* + *anoxia*] oxygen deprivation of the tissues due to a lessening of the blood supply.

Histaspan (his'tah span) trademark for preparations of chlorpheniramine maleate.

histic (his'tik) pertaining to or of the nature of tissue.

histidase (his'ti-dās) L-histidine ammonia-lyase. An enzyme of the liver that opens the imidazole ring of histidine, liberating ammonia.

histidinase (his'ti-dī-nās) histidase.

histidine (his'ti-din) an α -amino acid, beta-4-imidazolyl alanine, $N:CH \cdot NH \cdot CH:C \cdot CH_2CH(NH_2)COOH$, essential for optimal

growth in infants; first found as a decomposition product of the protamine of sturgeon testes (Kossel, 1896), obtainable from many proteins by the action of sulfuric acid and water. The decarboxylation of histidine results in the formation of histamine. **h.**

monohydrochloride, a crystalline substance, $C_6H_5N_3O_2 \cdot HCl$, once believed to be useful in the treatment of peptic ulcer.

histidinemia (his/'ti-dī-ne'me-ah) a hereditary defect of metabolism characterized by excessive amounts of histidine in the blood and urine owing to deficient histidase activity, with consequent failure to metabolize histidine to urocanic acid. Many affected persons suffer modest mental retardation and disordered speech development. It is transmitted as an autosomal recessive trait. Called also *ahistidasia*.

histidinuria (his/'ti-dī-nu're-ah) an excess of histidine in the urine; see *histidinemia*.

histio- (his'te-o) [Gr. *hístion*, diminutive of *histos* web, tissue] a combining form denoting relationship to tissue.

histioblast (his'te-o-blast') a local histiocyte (macrophage).

histiocyte (his'te-o-sit') [*histio-* + Gr. *kytos* hollow vessel] macrophage. **cardiac h.**, Anitschkow's myocyte. **sea-blue h.**, a morphologically distinct, granulated histiocyte, sea-blue in color; see under *syndrome*. **wandering h's**, an active macrophage.

histiocytic (his'te-o-sit'ik) pertaining to or containing histiocytes.

histiocytoma (his'te-o-si-to'mah) [*histiocyte* + *-oma*] a tumor containing histiocytes (macrophages). **fibrous h.**, dermatofibroma. **lipoid h.**, fibroxanthoma.

histiocytomatosis (his'te-o-si-to'mah-to'sis) any generalized disorder of the reticuloendothelial system, such as xanthomatosis, Gaucher's disease, Niemann-Pick disease, lymphogranulomatosis, etc.

histiocytosis (his'te-o-si-to'sis) a condition marked by the abnormal appearance of histiocytes (macrophages) in the blood. **lipid h.**, Niemann-Pick disease. **sinus h.**, a disorder of the lymph nodes in which the distended sinuses are completely, or nearly completely, filled by histiocytes, as a result of active multiplication of the littoral cells. **h. X**, a generic term embracing eosinophilic granuloma, Letterer-Siwe disease, and Hand-Schüller-Christian disease, and indicating a shared common origin for the three entities and a common morphologic characteristic: a granulomatous infiltration composed of large histiocytes with pale eosinophilic, foamy cytoplasm and well-delimited nuclei.

histiogenic (his'te-o-jen'ik) histogenous.

histioid (his'te-oid) histoid.

histio-irritative (his'te-o-ir'i-ta'tiv) [*histio-* + *irritative*] having an irritative effect on connective tissue.

histioma (his'te-o'mah) histoma.

histionic (his'te-on'ik) pertaining to or derived from a tissue.

histo-, hist- [Gr. *histos* web, tissue] a combining form denoting relationship to tissue.

histoblast (his'to-blast) [*histo-* + Gr. *blastos* germ] a tissue-forming cell.

histochemical (his'to-kem'i-kal) pertaining to histochemistry or to the chemical components or activities of cells or tissues.

histochemistry (his'to-kem'is-tre) that branch of histology which deals with the identification of chemical components in cells and tissues.

histochemotherapy (his'to-ke'mo-ther'ah-pe) see *chemotherapy*.

histochromatosis (his'to-kro'mah-to'sis) [*histo-* + Gr. *chrōma* color] a general term for affections of the reticuloendothelial system, including xanthochromatosis, Gaucher's disease, and lymphogranulomatosis.

histoclastic (his'to-klas'tik) [*histo-* + Gr. *klastos* broken] breaking down tissue; said of certain cells.

histoclinical (his'to-klin'i-kal) combining histological and clinical evaluation.

histocompatibility (his'to-kom-pat'i-bil'i-te) the quality or state of being histocompatible.

histocompatible (his'to-kom-pat'i-b'l) capable of being accepted and remaining functional; said of that relationship between the genotypes of donor and host in which a graft generally will not be rejected, a relationship determined by the presence of compatible HLA antigens (see under *antigen*).

histocyte (his'to-sit) histiocyte.

histodiagnosis (his'to-di'ag-no'sis) [*histo-* + *diagnosis*] diagnosis by microscopical examination of the tissues.

histodialysis (his'to-di-al'i-sis) [*histo-* + *dialysis*] the disintegration or breaking down of tissues.

histodifferentiation (his'to-dif'er-en'she-a'shun) the acquisition of tissue characteristics by cell groups.

histofluorescence (his'to-floo'o-res'ens) fluorescence produced in the body by the administration of some substance previous to exposure to the roentgen rays.

histogenesis (his'to-jen'ē-sis) [*histo-* + Gr. *genesis* production] the formation or development of tissues from the undifferentiated cells of the germ layers of the embryo.

histogenetic (his'to-jē-net'ik) pertaining to histogenesis.

histogenous (his-toj'ē-nus) [*histo-* + Gr. *gennan* to produce] formed by the tissues.

histogeny (his-toj'ē-nē) histogenesis.

histogram (his'to-gram) [*histo-* + Gr. *gramma* a drawing, picture] a diagram or graph in which the values found in a statistical study are represented by vertical bars or rectangles.

histography (his-tog'rah-fe) [*histo-* + Gr. *graphein* to write] description of the tissues.

histohematin (his'to-hem'ah-tin) [*histo-* + *hematin*] cytochrome, def. 1.

histohematogenous (his'to-hem'ah-toj'ē-nus) [*histo-* + Gr. *haima* blood + *gennan* to produce] formed from both the tissues and the blood.

histohydria (his'to-hi'dre-ah) the presence of an excessive amount of water in body tissue.

histohypoxia (his'to-hi-pok'se-ah) an abnormally diminished concentration of oxygen in the tissues.

histoid (his'toid) [*histo-* + Gr. *eidōs* form] 1. weblike. 2. developed from but one kind of tissue. 3. like one of the tissues of the body.

histoincompatibility (his'to-in'kom-pat'i-bil'i-te) the quality or state of being histoincompatible.

histoincompatible (his'to-in'kom-pat'i-b'l) not being accepted or remaining functional; said of that relationship between the genotypes of donor and host in which a graft generally will be rejected.

histokinesis (his'to-ki-nē'sis) [*histo-* + Gr. *kinēsis* motion] movement in the tissues of the body.

histologic, histological (his'to-log'ik; his'to-log'i-kal) pertaining to histology.

histologist (his-tol'o-jist) one who specializes in histology.

histology (his-tol'o-je) [*histo-* + *-logy*] that department of anatomy which deals with the minute structure, composition, and function of the tissues; called also *microscopical anatomy*. **normal h.**, the histology of normal tissues. **pathologic h.**, the histology of diseased tissues; histopathology.

histolysate (his-tol'i-zāt) a substance formed by histolysis.

histolysis (his-tol'i-sis) [*histo-* + Gr. *lyein* to loosen] the dissolution or the breaking down of tissues.

histolytic (his'to-lit'ik) pertaining to, characterized by, or causing histolysis.

histoma (his'to'mah) [*histo-* + *-oma*] any tissue tumor, as a fibroma.

histometaplastic (his'to-met'ah-plas'tik) pertaining to, characterized by, or stimulating metaplasia of tissue.

Histomonas (his'to-mo-nas) a genus of parasitic protozoa of the order Rhizomastigida, class Zoomastigophora, found in the cecum, liver, and other tissues of turkeys, chickens, ducks, and geese. They have both an ameboid and a flagellate stage. *H. meleagridis* causes histomoniasis (blackhead) of turkeys.

histomoniasis (his'to-mo-ni'ah-sis) infection with organisms of the genus *Histomonas*. **h. of turkeys**, an infectious disease of turkeys caused by *Histomonas meleagridis*, with lesions of the intestine and liver and a dark discoloration of the comb; called also *blackhead*, *enterohepatitis*, and *typhlohepatitis*.

histomorphology (his'to-mor-fol'o-je) the morphology of tissues; histology.

histone (his'tōn) a simple protein containing many basic groups, soluble in water and insoluble in dilute ammonia. The globin of hemoglobin is a histone. Combined with nucleic acids they form nucleohistone, and are associated with DNA in chromatin. Some are decidedly poisonous and contain a considerable amount of phosphorus. Blood treated with histone is altered so that it coagulates with difficulty. Histone has been found in the urine in leukemia and febrile conditions. Cf. *protamine*. **h. nucleinate**, a compound of nucleic acid and histone, the characteristic constituent of lymph glands, spleen, and thymus.

histoneurology (his'to-nu-rol'o-je) [*histo-* + *neurology*] the histology of the nervous system; neurohistology.

histonomy (his-ton'o-me) [*histo-* + Gr. *nomos* law] the scientific study of tissues based on the translation, into biological terms, of quantitative laws derived from histological measurement.

histonuria (his-tōn-u're-ah) [*histone* + Gr. *ouron* urine + *-ia*] the presence of histone in the urine.

histopathology (his'to-pah-thol'o-je) [*histo-* + *pathology*] pathologic histology.

histophysiology (his'to-fiz'e-ol'o-je) [*histo-* + *physiology*] the correlation of function with the microscopic structure of cells and tissues.

Histoplasma (his'to-plaz'mah) a genus of imperfect fungi of the family Moniliaceae, order Moniliales. **H. capsula'tum**, the etiologic agent of classic histoplasmosis, occurring as small, oval, yeastlike cells which in tissue seem to be encapsulated but are not. It grows as a mycelial fungus in the soil and as a yeast at 37° C. on agar or in tissue. Formerly called *Cryptococcus capsulatus*. **H. capsula'tum** var. *duboi'sii*, a species larger than *H. capsulatum* and *H. farciminosus*, that is the cause of the African form of histoplasmosis. **H. farcimino'sus**, the etiologic agent of lymphangitis epizootica, differing from *H. cap-*

sulatum and *H. duboisii* in having smooth macroaleuriospores in the saprophytic stage; formerly called *Blastomyces farciminosus*, *Leishmania farciminosus*, and *Zymonema farciminosum*.

histoplasmin (his'to-plaz'min) [USP] a sterile, standardized liquid concentrate of the soluble growth products developed by the fungus *Histoplasma capsulatum*, when grown in the mycelial phase on a synthetic medium, which contains a certified red dye; used as a dermal reactivity indicator in the diagnosis of histoplasmosis. Infection, past or present, is indicated by an area of induration of 5 mm. or larger, appearing 24 to 48 hours after injection.

histoplasmosis (his'to-plaz-mo'sis) [Histoplasma + Gr. -oma tumor] a rounded granulomatous density of the lung caused by infection with *Histoplasma capsulatum* and seen radiographically as a coin-shaped lesion.

histoplasmosis (his'to-plaz-mo'sis) infection resulting from inhalation or, infrequently, the ingestion of spores of *Histoplasma capsulatum*. Worldwide in distribution, it is particularly common in midwestern United States. The infection is asymptomatic in most cases, but in 1-5 per cent, it causes acute pneumonia, or disseminated reticuloendothelial hyperplasia with hepatosplenomegaly and anemia, or an influenza-like illness with joint effusion and erythema nodosum. Reactivated infection involves the lungs, meninges, heart, peritoneum, and adrenals in that order of frequency. It can be diagnosed by culture, or by demonstration of a rise in complement-fixing antibody titers in serum. **African h.**, a disease differentiated from the classic form of histoplasmosis by large yeast forms of *Histoplasma capsulatum* var. *duboisii* in the tissues. **ocular h.**, disseminated choroiditis resulting in scars in the periphery of the fundus near the optic nerve, and characteristic disciform macular lesions; *Histoplasma capsulatum* is strongly implicated as the causative agent.

histoplast (his'to-plast) (obs.) Wassermann's preparation containing extract of live staphylococcus; used locally in treatment of furuncle.

historadiography (his'to-ra'de-og'rah-fe) [histo- + radiography] roentgenography of microscopic sections of tissue.

historentention (his'to-re-ten'shun) retention of matter by the tissues.

historrhesis (his'to-rek'sis) [histo- + Gr. *rhēsis* rupture] breaking up of tissue; Southard's term for focal destruction of nerve tissue of noninfectious nature.

histoteliolysis (his'to-tel'e-o'sis) [histo- + Gr. *tēle* + -osis] the final differentiation of cells whose fate has already been determined irreversibly.

histotherapy (his'to-ther'ah-pe) [histo- + therapy] the treatment of disease by the administration of animal tissues.

histothrombin (his'to-throm'bin) thrombin from connective tissue.

histotome (his'to-tōm) [histo- + Gr. *tomē* a cutting] microtome.

histotomy (his-tot'o-me) [histo- + Gr. *temnein* to cut] the dissection of the tissues; microtomy.

histotoxic (his'to-tok'sik) [histo- + Gr. *toxikon* poison] poisonous to tissue or tissues.

histotroph (his'to-trōf) [histo- + Gr. *trophē* nourishment] the sum total of nutritive substances supplied to the embryo in viviparous animals from sources other than the mother's blood. Cf. *hemotroph*.

histotrophic (his'to-trof'ik) 1. encouraging the formation of tissue. 2. pertaining to histotroph; with reference to nutrition through histotroph.

histotropic (his'to-trop'ik) [histo- + Gr. *tropos* a turning] having special affinity for tissue cells.

histozoic (his'to-zō'ik) [histo- + Gr. *zōē* life] living on or within the tissues; said of parasites.

histozyme (his'to-zīm) [histo- + Gr. *zymē* leaven] aminoacylase.

histrionic (his'tre-on'ik) pertaining to or characterized by histrionism.

histrionism (his'tre-o-nizm') [L. *histrion* actor] the morbid or hysterical adoption of an exaggerated manner and gestures.

Hittorf's number, tube (hit'orf) [Johann Wilhelm Hittorf, German physicist, 1824-1914] see under *number*, and see *Crookes' tube*, under *tube*.

Hitzig's girdle, test (hits'igz) [Eduard Hitzig, German psychiatrist, 1838-1907] see under *girdle* and *tests*.

hives (hivz) urticaria.

HL symbol for *latent hyperopia*.

HLA see under *antigen*.

Hm symbol for *manifest hyperopia*.

HMG human menopausal gonadotropin.

HMO health maintenance organization.

HNO₂ nitrous acid.

HNO₃ nitric acid.

Ho chemical symbol for *holmium*.

H₂O water.

H₂O₂ hydrogen peroxide.

hoarseness (hōrs'nes) a rough or noisy quality of voice.

Hoboken's nodules, valves (ho'bo-kenz) [Nicolas von Hoboken, Dutch anatomist and physician, 1632-1678] see under *nodule* and *valve*.

Hoche's bandelette (hōk'ez) [Alfred Erich Hoche, German psychiatrist, 1865-1943] a small bundle of nerve fibers forming part of the fasciculi proprii.

Hochenegg's operation (hōk'en-egz) [Julius von Hochenegg, Vienna surgeon, 1859-1940] see under *operation*.

Hochsinger's phenomenon, sign (hōk'sing-erz) [Karl Hochsinger, Austrian pediatrician, born 1860] see under *phenomenon* and *sign*.

hock (hok) the tarsal joint or region of the tarsus in the hind leg of the horse or ox. **capped h.**, a cyst or a thickening of the skin over the point of the calcaneus in the horse. **curby h.**, a hock affected with curb. **spring h.**, stringhalt.

Hodara's disease (ho-dar'ahz) [Menahem Hodara, Turkish physician, died 1926] see under *disease*.

hodegetics (hod'ē-jet'iks) [Gr. *hodēgetikos* fitted for guiding] medical ethics.

Hodge's forceps, pessary, plane, etc. (hoj'ez) [Hugh Lenox Hodge, American gynecologist, 1796-1873] see under the nouns.

Hodgen splint (apparatus) (hoj'en) [John Thompson Hodgen, American surgeon, 1826-1882] see under *splint*.

Hodgkin (hoj'kin), Alan Lloyd. English physiologist, born 1914; co-winner, with John Carew Eccles and Andrew Fielding Huxley, of the Nobel prize in medicine and physiology for 1963, for discoveries concerning the ionic mechanisms involved in excitation and inhibition in the peripheral and central portions of the nerve cell membrane.

Hodgkin's cells, disease (granuloma), sarcoma (hoj'kinz) [Thomas Hodgkin, English physician, 1798-1866] see Sternberg-Reed cells, under *cell*, and see under *disease* and *sarcoma*.

Hodgson's disease (hoj'sonz) [Joseph Hodgson, English physician, 1788-1869] see under *disease*.

hodoneuromere (ho'do-nu'ro-mēr) [Gr. *hodos* path + *neuron* nerve + *meros* part] a segment of the embryonic trunk with its pair of nerves and their branches.

Hoehne's sign (ha'nez) [Ottomar Hoehne, German gynecologist, 1871-1932] see under *sign*.

hof [Ger. "court"] the area of the cytoplasm of a cell encircled by the concavity of the nucleus.

Hofacker-Sadler law (hof-ak'er sad'ler) [Johann Daniel Hofacker, German obstetrician, 1788-1828; Michael Thomas Sadler, English obstetrician, 1834-1923] see under *law*.

Hofbauer cells (hof'bow-er) [J. Isfred Isidore Hofbauer, American gynecologist, born 1878] see under *cell*.

Hoff see *van't Hoff*.

Hoffa's disease, operation (hof'az) [Albert Hoffa, German surgeon, 1859-1907] see under *disease*, and see *Lorenz's operation*, under *operation*.

Hoffa-Lorenz operation (hof'ah-lo'rents) [A. Hoffa; Adolf Lorenz, Austrian surgeon, 1854-1946] Lorenz's operation.

Hoffmann's anodyne, drops (hof'manz) [Friedrich Hoffmann, German physician, 1660-1742] see *compound ether spirit* and *ether spirit*, under *spirit*.

Hoffmann's atrophy, sign (phenomenon, reflex) [Johann Hoffmann, Heidelberg neurologist, 1857-1919] see *Werdnig-Hoffman paralysis*, under *paralysis*, and see under *sign*.

Hoffmann's duct [Moritz Hoffmann, German anatomist, 1622-1698] ductus pancreaticus.

Hoffmann-Werdnig syndrome (hof'man-verd'nig) [Johann Hoffmann; Guido Werdnig, Austrian neurologist] Werdnig-Hoffmann paralysis.

Hofmann's bacillus [Georg von Hofmann-Wellenhof, Austrian bacteriologist] *Corynebacterium pseudodiphtheriticum*.

Hofmann's violet [August Wilhelm von Hofmann, German chemist, 1818-1892] dahlia.

Hofmeister's test (hōf'mis-terz) [Franz Hofmeister, German physiologic chemist, 1850-1922] see under *tests*.

Högyes's treatment (hed'yes-ez) [Endre Högyes, Hungarian physician, 1847-1906] see under *treatment*.

hol- see *holo-*.

holagogue (hol'ah-gog) [hol- + Gr. *agōgos* leading] a medicine capable of expelling all disease humors; a drastic or radical remedy.

holandric (hol-an'drik) [Gr. *holos* entire + *aner* man] inherited exclusively through the male descent; transmitted through genes located on the Y chromosome.

holarthritis (hol'ar-thri'tis) hamarthritis.

Holden's line (hōl'denz) [Luther Holden, English surgeon, 1815-1905] see under *line*.

holergasia (hol'er-ga'ze-ah) Meyer's term of the major psychoses; see *holergastic*.

holergastic (hol'er-gas'tik) [*hol-* + Gr. *ergon* work] Meyer's term for sweeping disorders of psychic function, i.e., major psychoses, in which the socially organized personality is deranged. Cf. *merergastic*.

holism (hōl'izm) [Gr. *holos* whole] the conception of man as a functioning whole.

holistic (ho-lis'tik) considering man as a functioning whole, or relating to the conception of man as a functioning whole; see also under *health*.

hollow (hol'o) a depressed area or concavity. **Sebileau's h.**, a depressed area beneath the tongue, formed by the oral mucosa and the sublingual glands.

hollow-back (hol'o-bak) see *lordosis*.

Holmes (hōmz), Oliver Wendell (1809–1894). Noted American physician, anatomist, and writer, whose paper *On the Contagiousness of Puerperal Fever* (1843) antedated the work of Semmelweis in its appeal for surgical cleanliness to combat this disease.

Holmes's degeneration phenomenon (sign) (hōmz) [Gordon Holmes, British neurologist] see under *degeneration*, and see *rebound phenomenon*, under *phenomenon*.

Holmes's operation (hōmz) [Timothy Holmes, English surgeon, 1825–1907] see under *operation*.

Holmes-Stewart phenomenon (hōmz-stu'art) [Gordon Holmes; Purves Stewart, London physician, 1869–1949] rebound phenomenon.

Holmgren's test (holm'grenz) [Alarik Fritnief Holmgren, Swedish physiologist, 1831–1897] see under *tests*.

holmium (hol'me-um) one of the rare earths; symbol, Ho; atomic number, 67; atomic weight, 164.930.

holo-, hol- [Gr. *holos* entire] a combining form meaning entire, or denoting relationship to the whole.

holoacardius (hol'o-ah-kar'de-us) [*holo-* + a neg. + Gr. *kardia* heart] a separate, monozygotic twin represented by a more or less shapeless and unidentifiable mass; the vascular systems of the two fetuses are connected, and the circulation is accomplished solely by the heart of the more perfect twin. **h. aceph'alus**,

Holoacardius acormus.

Holoacardius acephalus.

an imperfectly formed free twin fetus lacking the cranial part of the body. **h. acor'mus**, an imperfectly formed free twin fetus lacking the caudal part of the body. **h. amor'phus**, an imperfectly formed free twin fetus entirely without form and recognizable parts.

holoantigen (hol'o-an'ti-jen) complete antigen, as opposed to hapten.

holoblastic (hol'o-blas'tik) [*holo-* + Gr. *blastos* germ] undergoing cleavage in which the entire ovum participates; dividing completely.

Holocaine (ho'lo-kān) trademark for a preparation of phenacaine hydrochloride.

holocephalic (hol'o-sē-fal'ik) [*holo-* + Gr. *kephalē* head] having the head entire; said of a monster.

holocrine (hol'o-krīn) [*holo-* + Gr. *krinein* to separate] wholly secretory; denoting that type of glandular secretion in which the entire secreting cell, along with its accumulated secretion, forms the secreted matter of the gland, as in the sebaceous glands. Cf. *merocrine* and *apocrine*.

holodiastolic (hol'o-di'ah-stol'ik) [*holo-* + *diastole*] pertaining to the entire diastole.

holoendemic (hol'o-en-dem'ik) [*holo-* + Gr. *endēmos* dwelling in a place] affecting practically all of the residents of a particular area.

holoenzyme (hol'o-en-zīm) the functional compound formed by the combination of an apoenzyme and its appropriate coenzyme.

hologamy (ho-log'ah-me) [*holo-* + Gr. *gamos* marriage] the condition in which the gametes are of the same size and structural type as the somatic cells.

hologastroschisis (hol'o-gas-tros'ki-sis) [*holo-* + Gr. *gaster* belly + *schisis* cleft] a developmental anomaly characterized by a fissure extending the entire length of the abdomen.

hologenesis (hol'o-jen'ē-sis) [*holo-* + Gr. *genesis* formation]

the theory that man originated everywhere on earth, instead of in certain special region or regions.

hologram (hol'o-gram") a three-dimensional image produced by holography.

holography (hol-og'raf-e) the recording of images in three-dimensional form on photographic film by exposing it to a laser beam reflected from the object under study. **acoustical h.**, holography in which sound waves reflected from an object under study are converted into light waves, which act on the emulsion of the film. The film is then exposed to a laser beam to give a three-dimensional effect.

hologynic (hol'o-jin'ik) [*holo-* + Gr. *gynē* woman] inherited exclusively through the female descent; transmitted through genes located on X chromosomes.

holomastigote (hol'o-mas'ti-gōt) [*holo-* + Gr. *mastix* lash] having numerous flagella scattered over the body.

holomorphosis (hol'o-mor-fō'sis) [*holo-* + Gr. *morphōsis* formation] the complete regeneration of a lost part.

holomyarial (hol'o-mi-a're-al) a type of arrangement of the muscular system in the Nematoda. The muscle cells are small, numerous, close together, and form a band below the cuticle.

Holophyra coli (hol-of'ir-ah ko'le) *Balantidium coli*.

holophytic (hol'o-fit'ik) [*holo-* + Gr. *phyton* plant] obtaining food like a plant; said of certain protozoa. Cf. *holozoic*.

holoprosencephaly (hol'o-pros'en-sef'ah-le) failure of cleavage of the prosencephalon with a deficit in midline facial development. Cyclopia occurs in the severe form. In that due to an extra chromosome in the 13–15 group (trisomy 13–15, or trisomy D₁), there are, characteristically, low-set ears, bilateral cleft lip and palate, microcephaly, ocular anomalies, hypotelorism, mental retardation, deafness, convulsions, and ventricular septal defect. Called also *Patau's syndrome*. **familial alobar h.**, a form in which the chromosome count is normal but otherwise resembling that due to trisomy 13–15 (see *holoprosencephaly*).

holorachischisis (hol'o-rah-kis'ki-sis) [*holo-* + Gr. *rhachis* spinal column + *schisis* cleft] fissure of the entire spinal cord.

holosaccharide (hol'o-sak'ah-rid) a polysaccharide composed of sugar units only. Cf. *heterosaccharide*.

holoschisis (hol'o-ski'sis) [*holo-* + Gr. *schisis* cleft] amiosis.

Holospora (hol'o-spo'rah) [*holo-* + Gr. *sporos* seed] a genus of microorganisms of uncertain affinities which are parasitic on protozoa.

holosystolic (hol'o-sis-to'l'ik) [*holo-* + *systole*] pertaining to the entire systole.

holothurin (ho'lo-thu'rin) a hemotoxic mixture of steroid glycosides obtained from holothurians, or sea cucumbers.

Holothyrus (hol'o-thi'rus) a genus of mites. The toxic secretions of *H. coccinella*, of Mauritius, may cause the death of ducks, geese, and chickens after ingestion; in humans it may produce a painful swelling of the tongue and throat.

holotonia (hol'o-to'ne-ah) [*holo-* + Gr. *tonos* tension + *-ia*] muscular spasm of the whole body.

holotonic (hol'o-ton'ik) pertaining to, characterized by, or causing holotonia.

holotopy (ho-lot'o-pe) [*holo-* + Gr. *topos* place] the position of an organ in relation to the whole body.

holotrichous (ho-lot'ri-kus) [*holo-* + Gr. *thrix* hair] covered uniformly with cilia.

holotype (hol'o-tīp) the type culture of a species or subspecies of microorganisms, either because it was so designated in the original description or because the original description was based on only one strain.

holozoic (hol'o-zo'ik) [*holo-* + Gr. *zōon* animal] having the nutritional characters of an animal, i.e. digesting protein. Cf. *holophytic*.

holozymase (hol'o-zi'mās) holoenzyme.

Holten's test (hol'tenz) [Cai Holten, Danish physician, born 1894] see under *test*.

Holth's operation (holths) [Sören Holth, Oslo ophthalmologist, 1863–1937] see under *operation*.

Holthouse's hernia (holt'howz-es) [Carsten Holthouse, English surgeon, 1810–1901] see under *hernia*.

Holzknacht's chromoradiometer, etc. (holts-knekt) [Guido Holzknacht, radiologist in Vienna, 1872–1931] see under *chromoradiometer*, *scale*, *space*, *stomach*, and *unit*.

homalocephalus (hom'ah-lo-sef'ah-lus) [Gr. *homalos* level + *kephalē* head] a person with a flat head.

homalography (hom'ah-log'rah-fe) [Gr. *homalos* level + *graphein* to write] (*obs.*) the study of anatomy by means of plane sections of the parts.

homaluria (hom'ah-lu're-ah) [Gr. *homalos* level, even + *ourein* to make water + *-ia*] production and excretion of urine at a normal, even rate.

Homans' sign (ho'manz) [John Homans, American physician, 1877–1954] see under *sign*.

Homapin (ho'mah-pin) trademark for preparations of homatropine methylbromide.

homarine (hom'ah-rin) an organic nitrogen compound which is found in lobster muscle and tissues of other marine animals. It is the methyl betaine of picolinic acid, $C_8H_4N^+(CH_3)CO_2^-$.

homatropine (ho-mat'ro-pen) chemical name: *endo- α -hydroxybenzeneacetic acid 8-methyl-8-azabicyclo[3.2.1]oct-3-yl*. The tropine ester of mandelic acid, $C_{16}H_{21}NO_3$, having anticholinergic effects similar to but weaker than those of atropine. **h. hydrobromide** [USP], the hydrobromide salt of homatropine, $C_{16}H_{21}NO_3 \cdot HBr$, occurring as white crystals or white, crystalline powder; used in ophthalmology as a cycloplegic and mydriatic, applied topically to the conjunctiva. **h. methylbromide** [USP], the 8-methyl derivative of homatropine hydrobromide, $C_{17}H_{24}BrNO_3$, occurring as a white powder; used as an antispasmodic and inhibitor of secretions, especially in gastrointestinal disorders, administered orally.

homaxial (ho-mak'se-al) having axes of the same length.

Homén's syndrome [Ernest Alexander *Homén*, Finnish physician, 1851–1926] see under *syndrome*.

homeo-, homoeo-, homoio- (ho'me-o) [Gr. *homoios* like, resembling; always the same, unchanging] a combining form denoting sameness, similarity, or a constant, unchanging state.

homeochrome (ho'me-o-krôm') [*homeo-* + Gr. *chrôma* color] staining with mucin stains after formal-bichromate fixation; applied to certain serous cells of the salivary glands. Cf. *tropochrome*.

homeograft (ho'me-o-graft) allograft.

homeokinesis (ho'me-o-ki-ne'sis) [*homeo-* + Gr. *kinêsis* motion] the stage of meiosis in which the daughter cells receive equal amounts and kinds of chromatin.

homeomorphous (ho'me-o-mor'fus) [*homeo-* + Gr. *morphê* form] of like form and structure.

homeo-osteoplasty (ho'me-o-os'te-o-plas'te) [*homeo-* + Gr. *os-teon* bone + *plassein* to mold] the surgical implantation in an individual of a piece of a bone from an individual of the same species.

homeopath (ho'me-o-path) homeopathist.

homeopathic (ho'me-o-path'ik) pertaining to homeopathy.

homeopathist (ho'me-op'ah-thist) one who practices homeopathy.

homeopathy (ho'me-op'ah-the) [*homeo-* + Gr. *pathos* disease] a system of therapeutics founded by Samuel Hahnemann (1755–1843), in which diseases are treated by drugs which are capable of producing in healthy persons symptoms like those of the disease to be treated, the drug being administered in minute doses. Cf. *allopathy*.

homeoplasia (ho'me-o-pla'ze-ah) [*homeo-* + Gr. *plassein* to form] the formation of new tissue like that adjacent to it and normal to the part.

homeoplastic (ho'me-o-plas'tik) 1. resembling in structure the adjacent parts. 2. pertaining to, characterized by, or stimulating homeoplasia.

homeorrhexis (ho'me-o-re'sis) [*homeo-* + Gr. *rhein* to flow] the tendency to maintain a biological process, as a growth process, along a particular pathway despite the operation of factors tending to divert it.

homeosis (ho'me-o'sis) [Gr. *homoiôsis* likeness, resemblance] the formation of a body part having the characteristics normally found in a related part at a different body site.

homeostasis (ho'me-o-sta'sis) [*homeo-* + Gr. *stasis* standing] a tendency to stability in the normal body states (internal environment) of the organism. It is achieved by a system of control mechanisms activated by negative feedback; e.g., a high level of carbon dioxide in extracellular fluid triggers increased pulmonary ventilation, which in turn causes a decrease in carbon dioxide concentration. **immunologic h.**, the normal state of the adult animal in which it produces antibodies or develops cell-mediated immunity to foreign antigens but not to its own antigens.

homeostatic (ho'me-o-stat'ik) pertaining to homeostasis.

homeotherapy (ho'me-o-ther'ah-pe) [*homeo-* + Gr. *therapeia* treatment] treatment or prevention of disease with a substance similar to but not the same as the causative agent of the disease.

homeotherm (ho'me-o-therm) homoiotherm.

homeothermal (ho'me-o-ther'mal) [*homeo-* + Gr. *thermê* heat] homoiothermic.

homeotransplant (ho'me-o-trans'plant) allograft.

homeotransplantation (ho'me-o-trans'plan-ta'shun) [*homeo-* + *transplantation*] transplantation of tissues or cells from an animal of one inbred strain to a member of another within the same species, or from one individual to another of the same species, but of disparate genotype (an allograft).

homeotypic, homeotypical (ho'me-o-tip'ik; ho'me-o-tip'i-k'l) [*homeo-* + Gr. *typos* type] resembling the normal or usual type.

homergic (hôm-er'jik) [*hom(o)-* + Gr. *ergon* work] having the same effect; said of two drugs each of which produces the same overt effect.

homicide (hom'i-sid) [L. *homo* man + *caedere* to kill] the taking of the life of another individual.

homiculture (hom'i-kul'tūr) [L. *homo* man + *cultura* culture] positive eugenics.

homidium (ho-mid'e-um) chemical name: 3,8-diamino-5-ethyl-6-phenylphenanthredium, an effective trypanosomicide. Its bromide and chloride are used in the treatment of infections with *Trypanosoma congolense* and *T. vivax* in cattle and horses. Called also *ethidium*.

hominal (hom'i-nal) [L. *homo* man] pertaining to man; pertaining to human beings.

hominid (hom'i-nid) 1. pertaining to the family of humans (Hominidae). 2. a living or extinct human or humanlike type.

Hominidae (ho-min'i-de) [L. *homo* man + Gr. *eidos* resemblance] a family of primates (superfamily Hominoidea, suborder Anthropoidea), including both modern man (*Homo sapiens*) and fossil hominids.

homininnoxious (hom'in-e-nok'shus) injurious to man.

hominoid (hom'i-noid) 1. pertaining to the Hominoidea. 2. a member of the Hominoidea.

Hominoidea (hom'i-noi'de-ah) [L. *homo* man + Gr. *ooides* likeness] a superfamily of primates (suborder Anthropoidea), including the families Pongidae (anthropoid apes) and Hominidae (man, both modern and extinct).

homme (um) [Fr.] man. **h. rouge** (um-roozh') [Fr. "red man"], a stage in mycosis fungoides in which the red plaques become infiltrated and coalesce over a wide area of the body.

Homo (ho'mo) [L. *man*] the genus of primates (family Hominoidea, superfamily Hominoidea) that includes man (*H. sapiens*) and fossil hominids.

homo- [Gr. *homos* same] 1. combining form meaning the same. 2. a prefix in chemical names indicating the addition of one CH_2 group to the main compound.

homoarterenol hydrochloride (ho'mo-ar'tē-re'nol) nordefrin hydrochloride.

Homobasidiomycetidae (ho'mo-bah-sid'e-o-mi-se'ti-de) a subclass of true fungi of the Basidiomycetes, including the series Hymenomycetes and Gasteromycetes.

homobiotin (ho'mo-bi'o-tin) a homologue of biotin having an additional CH_2 group in the side chain and acting as a biotin antagonist.

homocarnosine (ho'mo-kar'no-sēn) a dipeptide consisting of γ -aminobutyric acid and histidine that is a normal constituent of the human brain.

homocentric (ho'mo-sen'trik) [*homo-* + Gr. *kentron* center] having the same center or focus.

homochronous (ho-mok'ro-nus) [*homo-* + Gr. *chronos* time] occurring at the same age in successive generations.

homocinchonine (ho'mo-sin'ko-nin) an alkaloid, $C_{19}H_{22}ON_2$, from cinchona, isomeric with cinchonine.

homocladic (ho'mo-klad'ik) [*homo-* + Gr. *klados* branch] formed between small branches of the same artery; said of such an anastomosis.

homocyclic (ho'mo-sik'lik) having or pertaining to a closed chain or ring formation which includes only atoms of the same element.

homocysteine (ho'mo-sis-te'in) a transmethylation product of methionine, $HSCH_2CH_2CHNH_2COOH$; it is an intermediate in the synthesis of cysteine.

homocystine (ho'mo-sis'tin) a synthetic alpha-alpha'-dithiobis alpha-aminobutyric acid, $[S \cdot CH_2 \cdot CH_2 \cdot CH(NH_2) \cdot COOH]_2$, which results from the demethylation of methionine. It is homologous with cystine and able to function as a source of sulfur in the body.

homocystinemia (ho'mo-sis'tin-e'me-ah) an excess of homocystine in the blood; see *homocystinuria*.

homocystinuria (ho'mo-sis'tin-u're-ah) an inborn error of sulfur amino acid metabolism due to absence or deficiency of the liver enzyme cystathionine synthase, characterized chemically by elevated levels of methionine and homocystine in the plasma and large amounts of homocystine in the urine. Typically, the affected person is fair-skinned and blond, with mental retardation, hepatomegaly, ectopia lentis, cardiovascular disorders, and skeletal disorders, including kyphosis, scoliosis, pectus excavatum, and arachnodactyly. The clinical manifestations resemble those of Marfan's syndrome.

homocytotropic (ho'mo-si'to-trop'ik) [*homo-* + *cyto-* + Gr. *tropos* a turning] having an affinity for cells from the same species; see under *antibody*.

homodesmotic (ho'mo-des-mot'ik) [*homo-* + Gr. *desmos* bond] joining similar parts of the central nervous system; see under *fiber*.

homodont (ho'mo-dont) [*hom-* + Gr. *odous* tooth] having teeth of only one type.

homodromous (ho-mod'ro-mus) [*homo-* + Gr. *dromos* running] moving or acting in the same direction.

homoeo- see *homeo-*.

homoeosis (ho/'me-o'sis) homeosis.

homoeerotic (ho/'mo-ē-rot'ik) pertaining to homoeeroticism; homoeosexual.

homoeeroticism (ho/'mo-ē-rot'i-sizm) eroticism directed toward a person of the same sex, especially when the role assumed by the affected person is passive.

homofermenter (ho/'mo-fer-ment'er) an organism which ferments glucose almost exclusively to lactic acid, by way of the Embden-Meyerhof pathway.

homogamete (ho/'mo-gam'et) one of two gametes of the same size and structure, as the X chromosome in the human female.

homogametic (ho/'mo-gah-met'ik) characterized by the production of gametes of only one kind in respect to the sex chromosomes, as in the human female.

homogamous (ho-mog'ah-mus) characterized by or pertaining to homogamy.

homogamy (ho-mog'ah-me) 1. inbreeding. 2. reproduction resulting from the union of two cells (gametes) that are identical in size and structure. 3. maturation of the male (stamens) and female (pistils) gametes of a flower at the same time.

homogenate (ho-moj'ē-nāt) material subjected to homogenization, as tissue that is finely shredded and mixed.

homogeneity (ho/'mo-jē-ne'i-te) the state or quality of being homogeneous.

homogeneization (ho/'mo-jē'nē-i-za'shun) homogenization.

homogeneous (ho/'mo-jē-ne-us) [*homo-* + Gr. *genos* kind] consisting of or composed of similar elements or ingredients; of a uniform quality throughout.

homogenesis (ho/'mo-jen'ē-sis) [*homo-* + Gr. *genesis* production] the reproduction by the same process in each generation, as contrasted with heterogenesis.

homogenetic (ho/'mo-jē-net'ik) pertaining to or characterized by homogenesis.

homogenic (ho/'mo-jen'ik) homozygous.

homogenicity (ho/'mo-jē-nis'i-te) homogeneity.

homogenization (ho-moj'ē-ni-za'shun) the act or process of rendering homogeneous.

homogenize (ho-moj'ē-niz) to render homogeneous, or of uniform quality or consistency throughout.

homogenous (ho-moj'ē-nus) having a similarity of structure because of descent from a common ancestor.

homogentisuria (ho/'mo-jen'ti-su're-ah) the excretion of homogentisic acid in the urine, as in spontaneous alkaptonuria.

homogeny (ho-moj'ē-ne) homogenesis.

homoglandular (ho/'mo-glan'du-lar) pertaining to the same gland.

homograft (ho/'mo-graft) allograft.

homoio- see *homeo-*.

homoioplasia (ho/'moi-o-pla'se-ah) homeoplasia.

homoiopodal (ho/'moi-op'o-dal) [*homoio-* + Gr. *pous* foot] having processes of one kind only; said of nerve cells.

homoioistasis (ho/'moi-os'tah-sis) homeoestasis.

homoiotherm (ho-'moi'o-therm) an animal which exhibits homoiothermy; a so-called warm-blooded animal, as opposed to a poikilotherm.

homoiothermal (ho/'moi-o-ther'mal) homoiothermic.

homoiothermic (ho-'moi'o-ther'mik) pertaining to or characterized by homoiothermy.

homoiothermism (ho/'moi-o-ther'mizm) homoiothermy.

homoiothermy (ho-'moi'o-ther'me) [*homoio-* + Gr. *thermē* heat] the maintenance of a constant body temperature despite changes in the environmental temperature, as in birds and mammals. Cf. *poikilothermy*.

homoiotoxin (ho-'moi'o-tok-sin) a toxin from one individual which is toxic for other individuals of the same species.

homokeratoplasty (ho/'mo-ker'ah-to-plas'te) corneal grafting with tissue derived from another individual of the same species.

homolateral (ho/'mo-lat'er-al) situated on, pertaining to, or affecting the same side; ipsilateral.

homologen (ho-mol'o-jen) homologue, def. 2.

homologous (ho-mol'o-gus) [Gr. *homologos* agreeing, corresponding] 1. corresponding in structure, position, origin, etc., as (a) the feathers of a bird and the scales of a fish, (b) antigen and its specific antibody, (c) allelic chromosomes. Cf. *analogous*. 2. allogeneic.

homologue (hom'o-log) 1. any homologous organ or part; an organ similar in structure, position, and origin to another organ, as the front flippers of a seal and human hands. See *analogue*. 2. in chemistry, one of a series of compounds, each of which is formed from the one before it by the addition of a constant element or a constant group of elements, as in the homologous series CH₄, C₂H₆, C₃H₈, etc.; called also *homologen*.

homology (ho-mol'o-je) [Gr. *homologia* agreement] the quality of being homologous; the morphological identity of corresponding parts; structural similarity due to descent from a common form.

homolysin (ho-mol'i-sin) a lysin (e.g., isohemolysin) produced by injection into the body of antigen derived from an individual of the same species.

homolysis (ho-mol'i-sis) [*homo-* + Gr. *lysis* dissolution] lysis of a cell by extracts of the same type of tissue.

homomorphic (ho-mo-mor'fik) [*homo-* + Gr. *morphē* form] having chromosome mates of similar size and form during synapsis of the first meiotic division.

homomorphosis (ho/'mo-mor-fo'sis) [*homo-* + Gr. *morphōsis* formation] regenerative replacement of a lost part by a similar part.

homonomous (ho-mon'o-mus) [*homo-* + Gr. *nomos* law] designating homologous serial parts, such as somites.

homonymous (ho-mon'i-mus) [*homo-* + Gr. *onoma* name] 1. having the same or corresponding sound or name. 2. standing in the same relation; see under *hemianopia*.

homophil (ho/'mo-fil) an antibody that reacts only with a specific antigen.

homophilic (ho/'mo-fil'ik) [*homo-* + Gr. *philein* to love] having affinity for or reacting with a specific antigen; said of an antibody.

homoplastic (ho/'mo-plas'tik) [*homo-* + Gr. *plassein* to form] 1. denoting a transplantation or grafting of tissue taken from another individual of the same species or from a member of another inbred strain of the same species. 2. denoting organs or parts, as the wings of birds and insects, that resemble one another in structure and function but not in origin or development.

homoplasty (ho/'mo-plas'te) 1. operative replacement of lost parts or tissues by similar parts from another individual of the same species or from a member of another inbred strain of the same species. 2. similarity between organs or parts not due to common ancestry.

homopolysaccharide (ho/'mo-pol'e-sak'ah-rid) a polysaccharide consisting of a single recurring monosaccharide unit, as glycogen is a polymer of glucose.

homorganic (hom'or-gan'ik) [*homo-* + Gr. *organon* organ] produced by the same or by homologous organs.

homosalate (ho/'mo-sal'at) chemical name: 2-hydroxybenzoic acid 3,3,5-trimethylcyclohexyl ester; an ultraviolet sunscreen, C₁₆H₂₂O₃.

homosexual (ho/'mo-seks'u-al) 1. pertaining to the same sex. 2. an individual who is sexually attracted toward a person of the same sex, as opposed to heterosexual.

homosexuality (ho/'mo-seks'u-al'i-te) [*homo-* + *sexuality*] sexual attraction toward those of the same sex. Cf. *heterosexuality*. **female h.**, lesbianism.

homospore (ho/'mo-spōr) a homosporous organism.

homosporous (ho-mos'po-rus) [*homo-* + Gr. *sporos* seed] having spores of only one kind, which reproduce asexually.

homostimulant (ho/'mo-stim'u-lant) 1. stimulating the same organ from which it is derived. 2. an extract from an organ which, on injection into the body, stimulates the same organ from which it is derived.

homostimulation (ho/'mo-stim'u-la'shun) treatment by a homostimulant.

Homo-Tet (ho/'mo-tet) trademark for a preparation of tetanus immune human globulin.

homothallic (hom'o-thal'ik) pertaining to or exhibiting homothallism.

homothallism (hom'o-thal'izm) a form of sexual reproduction in which the isogamete produced by one cell can fuse with another isogamete produced by the same cell, as in various algae and fungi. Cf. *heterothallism*.

homotherm (ho/'mo-therm) homoiotherm.

homothermal (ho/'mo-ther'mal) homoiothermic.

homothermic (ho/'mo-ther'mik) homoiothermic.

homotonia (ho/'mo-to'ne-ah) isotonia.

homotonic (ho/'mo-ton'ik) isotonic.

homotopic (ho/'mo-top'ik) [*homo-* + Gr. *topos* place] occurring at the same place upon the body.

homotransplant (ho/'mo-trans'plant) allograft.

homotropism (ho-mot'ro-pizm) [*homo-* + Gr. *tropos* a turning] the property of cells to attract cells of a like order.

homotype (hom'o-tip) [*homo-* + Gr. *typos* type] a part that has a reversed symmetry with its fellow of the opposite side of the body, as the hand.

homotypic (ho/'mo-tip'ik) pertaining to or characteristic of a homotype.

homozoic (ho/'mo-zo'ik) [*homo-* + Gr. *zōon* animal] pertaining to the same animal or same species.

homozygosis (ho/'mo-zi-go'sis) the formation of a zygote by the union of gametes that possess one or more identical alleles.

homozygosity (ho/'mo-zi-gos'i-te) [*homo-* + *zygosity*] the state of possessing a pair of identical alleles at a given locus or loci.

homozygote (ho/'mo-zi-gōt) [*homo-* + *zygote*] an individual possessing a pair of identical alleles at a given locus or loci.

homozygous (ho'mo-zi'gus) possessing a pair of identical alleles at a given locus or loci.

homunculus (ho-munk'u-lus) [L. "a little man"] 1. a dwarf without deformity or disproportion of parts. 2. the miniature human form once thought to be preformed in the sperm or ovum.

honey (hon'e) a sweet-tasting substance deposited by the honeybee, which contains between 62 and 83 per cent dextrose and fructose, and small amounts of sucrose, dextrin, and malic and acetic acids; its pH is 3.8 to 4.3.

honorarium (on'o-ra're-um), pl. *honora'ria* [L.] a gratuity that substitutes for a professional fee.

hood (hood) a flexible covering. **tooth h.**, dental operculum.

hoof (hōf) [L. *ungula*] the hard, horny casing of the foot or ends of the digits of many animals which are, because of this feature, designated ungulates. **curved h.**, a condition in which the hoof has the wall of one side concave and the other convex. **dished h.**, a hoof which is concave from the coronet to the plantar surface. **false h.**, the hoof of an unused digit. **ribbed h.**, **ringed h.**, a condition in which the wall of a horse's hoof is marked by ridges running parallel with the coronary margin.

hoof-bound (hōf'bound) dryness and contraction of a horse's hoof, causing lameness; called also *contracted foot* and *contracted heel*.

hook (hook) a curved instrument, usually with a sharp point, designed for holding, elevating, or exerting traction on a tissue. **blunt h.**, an instrument for exercising traction upon the fetus in certain cases of breech presentation. **Bose's h's**, small hooks used in tracheostomy. **Braun's h.**, a hook for decapitating the fetus. **Loughnane's h.**, a double-pronged hook for removing fragments of the prostate in transurethral prostatectomy. **Malgaigne's h's**, two pairs of hooks connected by a screw for approximating the pieces of a broken patella. **muscle h.**, a hook for securing and isolating an extraocular muscle; called also *squint h.* **Pajot's h.**, a hook for decapitating the fetus. **palate h.**, **posterior**, a hook for raising the palate in rhinoscopy. **squint h.**, muscle h. **tracheostomy h.**, a hook for use in tracheostomy. **Tyrrell's h.**, a slender hook used in eye surgery.

hook-up (hook'up) the method of arranging circuits, appliances, and electrodes for a particular diagnostic or therapeutic procedure.

hookworm (hook'worm) a nematode parasitic in the intestine of man and other vertebrates; infection may cause serious illness. See also under *disease*, and see *ground itch*, under *itch*. **American h.**, *Necator americanus*. **h. of the dog**, *Ancylostoma caninum*. **European h.**, *Ancylostoma duodenale*. **h. of the rat**, *Nippostrongylus muris*. **h. of ruminants**, *Bunostomum*. **New World h.**, *Necator americanus*. **Old World h.**, *Ancylostoma duodenale*.

hoolamite (hoo'lah-mit) a chemical detector for carbon monoxide, containing fuming sulfuric acid, iodine pentoside, and powdered pumice; it changes from light gray to green under the influence of carbon monoxide.

hoose (hōoz) a disease of sheep, cattle, goats, and swine, caused by the presence of various species of nematodes of the genera *Dictyocaulus*, *Metastrongylus*, and *Protostrongylus* in the bronchial tubes or in the lungs. It is marked by cough, dyspnea, anorexia, and constipation. Called also *verminous bronchitis*.

Hoover's sign (hoo'verz) [Charles Franklin Hoover, American physician, 1865–1927] see under *sign*.

HOP high oxygen pressure.

Hope's sign (hōps) [James Hope, London physician, 1801–1841] see under *sign*.

Hopkins (hop'kinz), Sir Frederick Gowland. English biologist, 1861–1947, noted for his pioneering work in vitamin research and nutritional chemistry; co-winner, with Christiaan Eijkman, of the Nobel prize in medicine and physiology in 1929.

Hopkins-Cole test (hop'kinz-kol) [Sir Frederick Gowland Hopkins; Sidney William Cole, English physiologist, born 1877] see under *tests*.

Hoplipsyllus anomalus (hop'lo-sil'us ah-nom'ah-lus) a species of flea found in the ground squirrels of western United States and transmitting plague.

Hopmann's polyp (papilloma) (hop'manz) [Carl Melchior Hopmann, German rhinologist, 1849–1925] see under *polyp*.

Hoppe-Seyler's test (hop'ē-si'lerz) [Ernst Felix Immanuel Hoppe-Seyler, German physiologic chemist, 1825–1895] see under *tests*.

hoquizil hydrochloride (ho'kwī-zil) chemical name: 2-hydroxy-2-methylpropyl 4-(6,7-dimethoxy-4-quinazolinyl)-1-piperazine-carboxylate monohydrochloride; a bronchodilator, C₁₉H₂₈N₄O₆·HCl.

Hor. decub. abbreviation for L. *ho'ra decu'bitus*, at bedtime.

hordein (hor'de-in) [L. *hordeum*, barley] a simple native protein from barley, a prolamine insoluble in water, but soluble in 80 per cent alcohol.

hordeolum (hor-de'o-lum) [L. "barleycorn"] a localized, puru-

lent, inflammatory staphylococcal infection of one or more sebaceous glands (meibomian or zeisian) of the eyelids; called also *stye*. An *external hordeolum* occurs on the surface of the skin at the edge of the lid. An *internal hordeolum* is marked by swelling on the conjunctival surface of the lid.

hordeum (hor'de-um), gen. *hor'dei* [L.] barley.

horehound (hōr'hound) the labiate plant, *Marrubium vulgare* (Tourn.) L. (Labiatae), also its leaves and tops (L. *marrubium*); used as an expectorant, bitter tonic, vermifuge, and laxative.

Hor. interm. abbreviation for L. *ho'ris interme'diis*, at the intermediate hours.

horizon (hō-ri'zon) a numbered stage of human embryonic development defined by anatomical characteristics in order to circumvent individual uncertainties of age and variations of dimension from both natural and technical causes. Streeter outlined 23 horizons, each spanning 2 or 3 days, covering the 7-week period beginning with fertilization. **Streeter's h's**, see *horizon*.

horizontalis (hor'i-zon-ta'lis) horizontal, or parallel to the plane of the horizon; [NA] a term denoting relationship to this orientation when the body is in the anatomical, i.e., the upright position.

horme (hor'ma) Monakow's term for the central source of instincts.

hormesis (hor-me'sis) [Gr. *hormēsis* rapid motion] the stimulating effect of subinhibitory concentrations of any toxic substance on any organism.

hormetic (hor-met'ik) relating to the direct motivational traits of personality, as needs, attitudes, etc.

hormic (hor'mik) [Gr. *hormē* an urge] a term applied to the theory that organic phenomena are determined by inborn instincts, tendencies, and dispositions.

hormion (hor'me-on) [Gr. *hormos* a wreath] the median anterior point of the speno-occipital bones.

Hormocardiol (hor'mo-kar'de-ol) [*hormone* + Gr. *kardia* heart] a commercial preparation of an extract from the sinus of the frog's heart that stimulates the contraction of the frog's ventricle; used as coronary vasodilator.

Hormodendrum (hor'mo-den'drum) a former genus of Fungi Imperfecti; at present, most saprophytic species are placed in the genus *Cladosporium*, and the human pathogens, e.g., *H. pedrosoi*, in the genus *Fonsecaea*.

hormonagogue (hor-mōn'ah-gog) [*hormone* + Gr. *agōgos* leading] an agent that stimulates the production of hormones.

hormonal (hor'mo-nal) pertaining to or of the nature of a hormone.

hormone (hor'mōn) [Gr. *hormaein* to set in motion, spur on] a chemical substance, produced in the body by an organ or cells of an organ which has a specific regulatory effect on the activity of a certain organ; originally applied to substances secreted by various endocrine glands and transported in the blood stream to the target organ on which their effect was produced, the term was later applied to various substances not produced by special glands but having similar action. See also *endocrine system*, under *system*. **adaptive h.**, one, such as corticotropin or the corticoids, which is secreted during adaptation to unusual circumstances. **adenohypophyseal h.**, any hormone secreted by the adenohypophysis, including somatotropin (STH), thyrotropin (TSH), prolactin, follicle-stimulating hormone (FSH), luteinizing hormone (LH), melanocyte-stimulating hormone (MSH), and adrenocorticotrophic hormone (ACTH). **adipokinetic h.**, 1. a hypothetical lipolytic hormone secreted by the pituitary gland. 2. lipolytic h. **adrenocortical h.**, any of the corticosteroids elaborated by the adrenal cortex, the major ones being the glucocorticoids and mineralocorticoids, and including some androgens, progesterone, and perhaps estrogens. See also *corticosteroid*. **adrenocorticotrophic h.**, corticotropin. **adrenomedullary h's**, substances secreted by the adrenal medulla, including epinephrine and norepinephrine. **androgenic h's**, the masculinizing hormones, androsterone and testosterone. **anterior pituitary h.**, any of the several protein or polypeptide hormones secreted by the anterior lobe of the pituitary gland, including the corticotrophic, growth, thyrotrophic, and gonadotropic hormones. **antidiuretic h.**, a hormone secreted by the supraoptic nucleus of the hypothalamus, stored in the posterior pituitary, and released on signal by osmoreceptors in the nucleus. It has a specific effect on the epithelial cells of the distal portion of the uriniferous tubule, stimulating reabsorption of water independently of solids, and resulting in concentration of urine. It also has vasopressor activity. Called also *vasopressin*. **Aschheim-Zondek h.**, luteinizing h. **chondrotrophic h.**, growth h. **chromaffin h's**, epinephrine. **chromatophoretropic h.**, intermedin. **conjugated estrogen h's**, an amorphous preparation of naturally-occurring, water-soluble, conjugated forms of mixed estrogens, chiefly sodium estrone sulfate, extracted from the urine of pregnant mares; used in estrogen hormone therapy. **corpus luteum h.**, progesterone. **cortical h.**, see *adrenocortical h.* **diabetogenic h.**, a substance in extracts of the anterior pituitary that tends to elevate the blood sugar by acting as an

antagonist to insulin. It is probably not a distinct entity and its effects are probably related to those of known pituitary hormones, especially human growth hormone. **estrogenic h's**, substances capable of producing certain biological effects, the most characteristic of which are the changes which occur in mammals at estrus; the naturally occurring estrogenic hormones are β -estradiol, estrone, and estriol. **fat-mobilizing h's**, lipolytic h's. **follicle h.**, an estrogenic hormone produced by the graafian follicle. **follicle-stimulating h. (FSH)**, one of the gonadotropic hormones of the anterior pituitary, which stimulates the growth and maturation of graafian follicles in the ovary, and stimulates spermatogenesis in the male. An extract from postmenopausal urine, known as human follicle-stimulating hormone or *menotropins* (q.v.), is used to induce ovulation and to promote spermatogenesis. **follicle-stimulating h., human, 1.** follicle-stimulating h. 2. *menotropins*. **follicle-stimulating hormone releasing h. (FSH-RH)**, gonadotropin releasing h. **follicular h.**, one produced by the graafian follicle. **galactopoietic h.**, prolactin. **gastrointestinal h.**, hormones that originate in and regulate motor and secretory activity of the digestive organs, i.e., gastrin, secretin, and cholecystokinin. **gonadotropic h.**, any hormone that has an influence on the gonads. **gonadotropic h's, pituitary**, three hormones, including follicle-stimulating hormone and luteinizing hormone in mammals and prolactin in certain birds, secreted by the anterior pituitary gland which have an influence on the gonads. **gonadotropin releasing h. (Gn-RH)** a decapeptide hormone elaborated by the median eminence of the hypothalamus that stimulates the release of follicle-stimulating hormone and luteinizing hormone from the anterior lobe of the pituitary gland. A preparation of the acetate and hydrochloride salts of the same principle obtained from pigs, sheep, or other species is used in the differential diagnosis of hypothalamic, pituitary, and gonadal dysfunction. Called also *gonadorelin*. **growth h. (GH)**, any substance that stimulates growth, especially one secreted by the anterior pituitary, which exerts a direct effect on protein, carbohydrate, and lipid metabolism, and controls the rate of skeletal and visceral growth. Human growth hormone (HGH) is composed of a single chain of 188 amino acids without carbohydrate substituents. Called also *somatotropin*. **growth hormone release inhibiting h.**, somatostatin. **growth hormone releasing h. (GH-RH)**, see under *factor*. **human (pituitary) growth h. (HGH)**, see *growth h.* **hypophysiotropic h.**, any of the hormones of the hypothalamus that stimulate or inhibit the hypophysis, including the releasing factors. **inhibiting h's**, hormones elaborated by one structure (as by the hypothalamus) that inhibit release of hormones from another structure (as from the anterior pituitary gland), e.g., *somatostatin* (growth hormone release inhibiting h.). The term is applied to substances of established clinical identity, whereas substances of unknown chemical structure are called *inhibiting factors* (see under *factor*). **inhibitory h.**, a substance that exerts a depressing influence on certain of its target organs, e.g., enterogastrone. **interstitial cell-stimulating h.**, luteinizing h.; so called because it also stimulates the Leydig (interstitial) cells of the testis. Abbreviated ICSH. **juvenile h.**, the secretion of the corpora allata which prevents metamorphosis, keeping the insect in the larval state and ensuring that the larva will molt several times and reach large size before pupating. **ketogenic h's**, lipolytic h's. **lactation h.**, prolactin. **lactogenic h.**, prolactin. **langerhansian h.**, one of the hormones secreted by the islets of Langerhans of the pancreas, including both insulin and glucagon. **lipolytic h's**, any hormone that serves to mobilize fat, i.e., to induce lipolysis, including the catecholamines, glucagon, tropic hormones of the anterior pituitary (ACTH, TSH, MSH, etc.), and growth hormone; called also *fat-mobilizing h's* and *ketogenic h's*. **local h.**, a substance with hormone-like properties, produced from blood or other body fluid precisely when and where it is needed, and usually rapidly destroyed. **luteal h.**, one secreted by the corpus luteum; see *progesterone*. **luteinizing h.**, a gonadotropic hormone of the anterior pituitary which acts with the follicle-stimulating hormone to cause ovulation of mature follicles and secretion of estrogen by thecal and granulosa cells. It is also concerned with corpus luteum formation and, in the male, stimulates the development and functional activity of Leydig (interstitial) cells. **luteinizing hormone releasing h. (LH-RH)**, gonadotropin releasing h. **luteotropic h.**, luteotropin. **mammotropic h.**, prolactin. **melanocyte-stimulating h.**, **melanophore-stimulating h.**, a peptide derived from the anterior pituitary gland in man and from the pars intermedia (hence sometimes called *intermedin*) in lower vertebrates, which influences the formation of deposition of melanin in the body and produces the color changes in the skin of amphibians, fishes, and reptiles. Abbreviated MSH. It occurs in two forms: α -MSH contains 13 amino acids and is identical in various species; β -MSH varies in size and in amino acid sequence from species to species. **neurohypophyseal h's**, the hormones that are stored and released by the neurohypophysis, i.e., oxytocin and vasopressin. **orchidic h.**, testosterone. **ovarian h.**, one secreted by the ovary, including the estrogens and gestagens. **parathyroid h.**, a polypeptide hormone secreted by the parathyroid glands, which promotes release of calcium from

bone into the extracellular fluid by activating osteoclasts and promotes increased intestinal absorption and renal tubular reabsorption of calcium, as well as increased renal excretion of phosphates. Secretion of parathyroid hormone is induced by decreased levels of calcium in the extracellular fluid. Its action is opposed by that of calcitonin. Called also *parathormone*. **placental h.**, a hormone produced by the placenta during pregnancy, including chorionic gonadotrophin, relaxin, and other substances having estrogenic, progesteronic, or adrenocorticoid activity. **placental growth h.**, human placental lactogen. **plant h.**, phytohormone. **posterior pituitary h's**, hormones derived from the posterior lobe of the pituitary, including antidiuretic hormone and oxytocin; now believed to be formed in the neuronal cells of the hypothalamic nuclei and to be stored in nerve cell endings in the posterior pituitary (neurohypophysis) for release as necessary. **progestational h.**, 1. progesterone. 2. [pl] see under *agent*. **proparathyroid h.**, an inactive precursor of parathyroid hormone; it is of larger molecular size than the active hormone. **prothoracicotropic h.**, in the development of insects, the hormone that controls secretion of ecdysone by the prothoracic glands. It is secreted by the intercerebral gland in the brain. **P.U. h.** (pregnancy urine h.), the chorionic gonadotropin found in the urine in pregnancy. **releasing h's**, hormones elaborated in one structure (as in the hypothalamus) that effect the release of hormones from another structure (as from the anterior pituitary gland); they include gonadotropin releasing hormone and thyrotropin releasing hormone. The term is applied to substances of established chemical identity, whereas substances of unknown chemical structure are called *releasing factors* (see under *factor*). **sex h's**, hormones having estrogenic (*female sex h's*) or androgenic (*male sex h's*) activity. **somatotropic h.**, **somatotropic h.**, growth h. **somatotropin release inhibiting h.**, somatostatin. **somatotropin releasing h. (SRH)**, growth hormone releasing f. **steroid h.**, a group of biologically active organic compounds that are secreted by the adrenal cortex, testis, ovary, and placenta and which have in common a cyclopentanoperhydrophenanthrene nucleus. **testicular h.**, **testis h.**, testosterone. **thyroid h's**, thyroxine, triiodothyronine, and calcitonin; in the singular, it refers to thyroxine and/or triiodothyronine. **thyroid-stimulating h. (TSH)**, thyrotropin. **thyrotropic h.**, thyrotropin. **thyrotropin releasing h. (TRH)**, a tripeptide hormone elaborated by the median eminence of the hypothalamus or obtained by synthesis, which stimulates release of thyrotropin from the anterior pituitary gland. In human subjects, it also acts as a prolactin releasing factor. A preparation is used in the diagnosis of mild hyperthyroidism and Graves' disease, and in differentiating between primary, secondary, and tertiary hypothyroidism. Called also *protirelin*.

hormonic (hor-mon'ik) hormonal.

hormonogen (hor'mon-o-jen') prohormone.

hormonogenesis (hor'mo-no-jen'-e-sis) hormonopoiesis.

hormonogenic (hor'mo-no-jen'ik) hormonopoietic.

hormonology (hor'mo-nol'o-je) the science of hormones; clinical endocrinology.

hormonopexic (hor'mo-no-pek'sik) [*hormone* + Gr. *pēxis* fixation] fixing hormones.

hormonopoiesis (hor'mo-no-poi-e'sis) [*hormone* + Gr. *poiesis* a making, creation] the production of hormones.

hormonopoietic (hor'mo-no-poi-et'ik) pertaining to, characterized by, or stimulating hormonopoiesis.

hormonoprivia (hor-mōn'o-priv'e-ah) [*hormone* + L. *privus* without, deprived of] lack of hormone, or the condition produced by a deficiency of hormone in the body.

hormonosis (hor-mo-no'sis) the condition of having an excess of hormones; exogenous hormonosis is a result of therapeutic administration, as in cortisone therapy.

hormonotherapy (hor'mo-no-ther'ah-pe) treatment by the use of hormones; endocrinotherapy.

hormopoiesis (hor'mo-poi-e'sis) hormonopoiesis.

hormopoietic (hor'mo-poi-et'ik) hormonopoietic.

horn (horn) [L. *cornu*] a pointed projection such as the paired processes on the head of various animals; any structure resembling a horn in shape. Called also *cornu* [NA]. **h. of Ammon**, hippocampus. **anterior h. of lateral ventricle**, cornu anterius ventriculi lateralis. **anterior h. of spinal cord**, cornu anterius medullae spinalis. **cicatricial h.**, a hard, dry outgrowth from a cicatrix, commonly scaly and very rarely osseous. **coccygeal h.**, cornu coccygeum. **cutaneous h.**, a horny excrescence of the skin, chiefly seen on the scalp and face; called also *cornu cutaneum*. **gray h. of spinal cord, anterior**, columna anterior medullae spinalis. **gray h. of spinal cord, lateral**, columna lateralis medullae spinalis. **gray h. of spinal cord, posterior**, columna posterior medullae spinalis. **greater h. of hyoid bone**, cornu majus ossis hyoidei. **inferior h. of cerebrum**, cornu inferius ventriculi lateralis. **inferior h. of falciform margin**, cornu inferius marginis falciformis. **inferior h. of lateral ventricle**, cornu inferius ventriculi lateralis. **inferior h. of thyroid cartilage**, cornu inferius cartilaginis thyroideae. **lateral h. of hyoid**

bone, cornu majus ossis hyoidei. **lateral h. of spinal cord**, cornu laterale medullae spinalis. **lesser h. of hyoid bone**, cornu minus ossis hyoidei. **posterior h. of lateral ventricle**, cornu posterius ventriculi lateralis. **posterior h. of spinal cord**, cornu posterius medullae spinalis. **h. of pulp**, an extension of the pulp into an accentuation of the roof of the pulp chamber directly under a cusp or a developmental lobe of the tooth. **sacral h.**, cornu sacrale. **superior h. of falciform margin**, cornu superius marginis falciformis. **superior h. of hyoid bone**, cornu minus ossis hyoidei. **superior h. of thyroid cartilage**, cornu superius cartilaginis thyroideae.

Horn's sign (hornz) [C. ten Horn, Dutch surgeon] see under *sign*.

Horner's law, syndrome (ptosis) (hor'nerz) [Johann Friedrich Horner, Swiss ophthalmologist, 1831–1886] see under *law* and *syndrome*.

Horner's muscle (hor'nerz) [William Edmonds Horner, American anatomist, 1793–1853] pars lacrimalis musculi orbicularis oculi.

hornification (hor'ni-fi-ka'shun) cornification.

horny (hor'ne) having the nature and appearance of horn.

horopter (ho-rop'ter) [Gr. *horos* limit + *optēr* observer] the sum of all the points in space, the images of which fall on corresponding points of the retina. **Vieth-Müller h.**, a circle which joins the fixation point with the nodal points of the two eyes.

horopter (hor'op-ter'ik) pertaining to a horopter.

horrida cutis (hor'i-dah ku'tis) (obs.) cutis asnerina.

horripilation (hor'i-pi-la'shun) [L. *horrere* to bristle, to stand on end + *pilus* hair] erection of the fine hairs of the skin, as in cutis asnerina.

horror (hor'or) [L.] dread; terror. **h. autotox'icus** [L. "fear of self poisoning"], a term coined by Ehrlich and Morgenroth in 1900 to express the refusal of a normal animal to form autoantibodies; it was believed that formation of such antibodies might result in self-destruction of the antibody producer as a result of the reaction between autoantibody and the corresponding antigen present in tissues. Now called *self-tolerance*.

horsepox (hors'poks) a mild form of poxvirus infection affecting horses, marked by a pustular eruption of the skin and sometimes of the mucosa of the mouth and nose; called also *equine smallpox*.

horse-sickness (hors-sik'nes) see *African horse sickness* and *Gambian horse sickness*, under *sickness*.

Horsley's operation, test, trephine, wax (putty) (hors'-lēz) [Sir Victor Alexander Haden Horsley, English surgeon, 1857–1916] see under *operation*, *tests*, *trephine*, and *wax*.

Hortega cell, method (hor-ta'gah) [Pío del Río Hortega, Spanish histologist in Buenos Aires, 1882–1945] see *microglia* and under *Table of Stains*.

hortobezoar (hor'to-be-zōr') phytobezoar.

Horton's headache, disease (arteritis, syndrome) (hōr'tunz) [Bayard Taylor Horton, American physician, born 1895] see *migrainous neuralgia*, under *neuralgia*, and *temporal arteritis*, under *arteritis*.

hortungskörper (hor'tungs-ker'per) [Ger., pl., "storage substances"] material deposited in body organs as one of the manifestations of aging.

H₂OsO₄ osmic acid.

Hor. un. spatio abbreviation for L. *ho'rae uni'us spa'tio*, at the end of one hour.

hospital (hos'pit-l) [L. *hospitalium*; *hospes* host, guest] an institution for the treatment of the sick. "An institution suitably located, constructed, organized, managed and personneled, to supply, scientifically, economically, efficiently and unhindered, all or any recognized part of the complex requirements for the prevention, diagnosis, and treatment of physical, mental, and the medical aspect of social ills; with functioning facilities for training new workers in the many special professional, technical and economic fields essential to the discharge of its proper functions; and with adequate contacts with physicians, other hospitals, medical schools and all accredited health agencies engaged in the better health program."—Council on Medical Education. **base h.**, a hospital unit within the line of communication of the army, usually in a permanent building, designed for the reception of wounded and other patients received via field hospitals from the front, and for cases originating within the line of communication itself. **camp h.**, an immobile military unit organized and equipped for the care of the sick and wounded in camp in order to prevent immobilization of field hospitals or other mobile sanitary organizations. **closed h.**, a hospital in which only members of the staff are permitted to treat patients. **cottage h.**, a hospital consisting of a number of detached cottages. **day h.**, see *partial hospitalization*, under *hospitalization*. **evacuation h.**, a mobile advance hospital unit within the line of communication, designed to take over the functions of field hospitals when they move away with their divisions and to supplement base hospitals in their functions. **field h.**, a portable military hos-

pital, manned by noncommissioned officers and men, located beyond the zone of conflict, 3–4 miles beyond the dressing stations, designed to shelter and care for wounded brought in by ambulance companies until they can be transported to the line of communications. **lying-in h.**, an institution for the care of obstetric patients; called also *maternity h.* **night h.**, see *partial hospitalization*, under *hospitalization*. **open h.**, 1. a mental hospital, or section of a hospital, without locked doors or other forms of physical restraint. 2. a hospital to which physicians who are not staff members may send their own patients and supervise their treatment. **teaching h.**, one that allocates a substantial part of its resources to conduct, in its own name or in association with a college or university, formal educational programs or courses of instruction that lead to granting of recognized certificates, diplomas, or degrees, or that are required for professional certification or licensure. **weekend h.**, see *partial hospitalization*, under *hospitalization*.

hospitalism (hos'pit-l-izm) 1. the morbid conditions due to the assembling of diseased persons in a hospital. 2. a psychoneurotic habit of attending hospital dispensaries as a patient. 3. anaclitic depression.

hospitalization (hos'pit-l-i-za'shun) the confinement of a patient in a hospital, or the period of such confinement. **partial h.**, a psychiatric treatment program for patients who do not need full-time hospitalization, involving a special facility or an arrangement within a hospital setting to which the patient may come for treatment during the day and return home at night (*day hospital*); or return at night after a day in the community to receive treatment during the evening and to remain all night (*night hospital*); or return at the end of the week to receive treatment and remain all weekend, resuming his normal activities during the week (*weekend hospital*).

hospitalize (hos'pit-l-i-iz) to place a patient in a hospital.

host (hōst) [L. *hospes*] 1. an animal or plant that harbors or nourishes another organism (parasite). 2. the recipient of an organ or other tissue transplanted from another organism (the donor). **accidental h.**, one that harbors an organism that is not ordinarily parasitic in the particular species. **alternate h.**, intermediate h. **definitive h.**, **final h.**, the animal in which a parasite passes its adult and sexual existence. **intermediary h.**, intermediate h. **intermediate h.**, the animal in which a parasite passes its larval or nonsexual existence. **paratenic h.**, an animal acting as a substitute intermediate host of a parasite, usually having acquired the parasite by ingestion of the original host. **h. of predilection**, the host preferred by a parasite. **primary h.**, definitive h. **reservoir h.**, an animal (or species) that is infected by a parasite and which serves as a source of infection for man or another species. **secondary h.**, intermediate h. **transfer h.**, one that serves until the appropriate definitive host is reached, but is not necessary to completion of the life cycle of the parasite.

HOT human old tuberculin.

hot (hot) 1. characterized by high temperature. 2. containing dangerous radioactive material; dangerously radioactive.

Hotchkiss' operation (hoch'kis) [Lucius Wales Hotchkiss, American surgeon, 1860–1926] see under *operation*.

hot line (hot lin) telephone assistance for those in need of crisis intervention (q.v.), as in suicide prevention, usually available 24 hours a day, seven days a week, and staffed by nonprofessionals with mental health professionals serving as advisors or in a back-up capacity.

Hottentot bustle (hot'ten-tot) [*Hottentot*, a people of southern Africa] steatopygia.

hottentotism (hot'en-tot-izm) an exaggerated form of stuttering.

hough (hok) hock.

Houghton's test (how'tonz) [E. Mark Houghton, American physician, 1867–1937] see under *tests*.

Houssay animal, phenomenon (how-sāz') [Bernardo Alberto Houssay, physiologist in Buenos Aires, 1887–1971; co-winner, with C. F. and G. T. Cori, of the Nobel prize in medicine and physiology for 1947 for his discovery of the role of a hormone of the anterior pituitary lobe in the metabolism of sugar.] see under *animal* and *phenomenon*.

Houston's muscle, valve (hu'stonz) [John Houston, Irish surgeon, 1802–1845] see under *muscle* and *valve*.

hoven (ho'ven) tympany of the stomach.

Hoverbed (hov'er-bed) trademark for a bed used for burn victims in which the entire body of the victim is supported on a stream of warm sterile air flowing upward through openings along the length of the bed.

Hovius' canal, circle, membrane, plexus (ho've-us) [Jacob Hovius, Dutch ophthalmologist, born c. 1675] see under *canal*, *circle*, and *plexus*, and see *entochoroidea*.

Howard's method (how'ardz) [Benjamin Douglas Howard, American physician, 1840–1900] see under *respiration*, *artificial*.

Howell's bodies, method, test (how'elz) [William Henry Howell, American physiologist, 1860–1945] see *Howell-Jolly bodies*, under *body*, and see under *method* and *tests*.

Howell-Jolly bodies [W. H. Howell; Justin Marie Jules Jolly, French histologist, 1870–1953] see under *body*.

Howship's lacunae (how'ships) [John Howship, English surgeon, 1781–1841] see *absorption lacuna*, under *lacuna*.

H.P. house physician.

Hp haptoglobin.

HPG human pituitary gonadotropin.

HPL human placental lactogen.

HPO₃ metaphosphoric acid.

H₃PO₂ hypophosphorous acid.

H₃PO₃ phosphorous acid.

H₃PO₄ orthophosphoric acid; phosphoric acid.

H₄P₂O₆ hypophosphoric acid.

H₄P₂O₇ pyrophosphoric acid.

H.S. house surgeon.

h.s. abbreviation for *L. ho'ra som'ni*, at bedtime.

H₂S hydrogen sulfide.

HSA human serum albumin.

H₂SiO₃ metasilicic acid.

H₄SiO₄ orthosilicic acid.

H₂SO₃ sulfurous acid.

H₂SO₄ sulfuric acid.

5-HT 5-hydroxytryptamine (serotonin).

Ht symbol for *total hyperopia*.

htone na (hut-to'ne-nah) a peripheral neuritis attributed to malarial origin occurring in Burma.

Hua (hu'ah) a genus of fresh-water snails. **H. ningpoen'sis**, a species of central and southern China that ingests the eggs of *Clonorchis sinensis* and in whose body the eggs hatch. **H. tou'cheana**, a first intermediate host of *Paragonimus westermani*.

Huchard's disease, sign (symptom) (e-shar'z') [Henri Huchard, physician in Paris, 1844–1910] see under *disease* and *sign*.

Hueck's ligament (heks) [Alexander Friedrich Hueck, German anatomist, 1802–1842] ligamentum pectinatum anguli iridocornealis.

Huët-Pelger nuclear anomaly (hew'et-pel'ger) [G. J. Huët, Dutch physician, born 1879; Karel Pelger, Dutch physician, 1885–1931] see *Pelger-Huët nuclear anomaly*, under *anomaly*.

Hueter's bandage, etc. (he'terz) [Karl Hueter, German surgeon, 1838–1882] see under *bandage*, *line*, *maneuver*, and *sign*.

Huggins operation, test (hug'inz) [Charles Brenton Huggins, Canadian-born surgeon in the United States, born 1901; co-winner, with Francis Peyton Rous, of the Nobel prize in medicine and physiology for 1966, for his discoveries concerning hormonal treatment of cancer of the prostate] see under *operation* and *tests*.

Hughes' reflex (hūz) [Charles Hamilton Hughes, American neurologist, 1839–1916] virile reflex, def. 2.

Huguenin's edema (e-gen-az') [Gustave Huguenin, Swiss psychiatrist, 1841–1920] see under *edema*.

Huguier's canal, etc. (e-ge-az') [Pierre Charles Huguier, French surgeon, 1804–1873] see under *canal*, *circle*, and *sinus*.

Huhner test (hoon'er) [Max Huhner, New York urologist, 1873–1947] see under *tests*.

hum (hum) an indistinct, low, prolonged sound. **venous h.**, a continuous blowing, singing, or humming murmur heard on auscultation over the right jugular vein in the sitting or erect position; it is an innocent sign that is obliterated on assumption of the recumbent position or on exerting pressure over the vein. Called also *bruit de diable* and *humming-top murmur*.

Human's sign (hu'manz) [J. U. Human, London physician] chin-retraction sign.

Humatin (hu'mah-tin) trademark for preparations of paromomycin sulfate.

humectant (hu-mek'tant) [*L. humectus*, from *humectare* to be moist] 1. moistening. 2. a moistening or diluent substance.

humectation (hu'mek-ta'shun) the act of moistening.

humeral (hu'mer-al) [*L. humeralis*] of or pertaining to the humerus.

humeri (hu'mer-i) [*L.*] plural of *humerus*.

humeroradial (hu'mer-o-ra'de-al) pertaining to the humerus and the radius.

humeroscapular (hu'mer-o-skap'u-lar) pertaining to the humerus and the scapula.

humeralnar (hu'mer-o-ul'nar) pertaining to the humerus and the ulna.

humerus (hu'mer-us), pl. *hu'meri* [*L.*] [*NA*] the bone that extends from the shoulder to the elbow articulating proximally with the scapula and distally with the radius and ulna; see *Plate* accompanying *skeleton*. **h. va'rus**, a bent humerus.

humidifier (hu-mid'i-fi'er) an apparatus for controlling humidity by adding to the content of moisture in the air of a room.

humidity (hu-mid'i-te) [*L. humiditas*] the degree of moisture, especially of that in the air. **absolute h.**, the actual amount of vapor in the atmosphere expressed in grains per cubic foot. **relative h.**, the percentage of moisture in the air as compared to the amount necessary to cause saturation, which is taken as 100.

humin (hu'min) 1. humic acid. 2. the dark amorphous material which is formed during the acid hydrolysis of a protein, chiefly from tryptophan.

humor (hu'mor), pl. *humors*, *humores* [*L. "a liquid"*] a fluid or semifluid substance; used in anatomical nomenclature to designate certain fluid materials in the body. See also *humoralism*. **aqueous h.**, **h. aquo'sus** [*NA*], the fluid produced in the eye, occupying the anterior and posterior chambers, and diffusing out of the eye into the blood; regarded as the lymph of the eye, its composition varies from that of lymph in the body generally. Called also *aqueous* and *hydatoid*. **h. cristalli'nus**, **crystalline h.**, 1. the crystalline lens. 2. the vitreous body. **ocular h.**, one of the humors of the eye—the aqueous or vitreous. **plasmoid h.**, aqueous or vitreous humor containing an abnormally high amount of protein; formed after trauma or inflammation, it has a cloudy appearance and the proteins tend to coalesce. **vitreous h.**, 1. corpus vitreum. 2. humor vitreus. **h. vit'reus** [*NA*], the vitreous humor: the watery substance, resembling aqueous humor, contained within the interstices of the stroma in the vitreous body.

humoral (hu'mor-al) pertaining to the humors of the body. See also under *theory*.

humoralism (hu'mor-al-izm") the obsolete doctrine that all diseases arise from some change of the humors; see *humoral theory*, under *theory*.

humorism (hu'mor-izm) humorism.

Humorsol (hu'mor-sol) trademark for a solution of demecarium bromide.

humpback (hump'bak) kyphosis.

Humphry's ligament (hum'frēz) [Sir George Murray Humphry, English anatomist, 1820–1896] ligamenta meniscofemorale anteriora.

humus (hu'mus) [*L.*] a dark mold of decayed vegetable material, used therapeutically in certain forms of the mud bath.

hunchback (hunch'bak) 1. kyphosis. 2. an individual characterized by a rounded deformity of the back, or kyphosis.

hunger (hung'ger) a craving, as for food. **air h.**, a distressing dyspnea occurring in paroxysms; called also *Kussmaul's* or *Kussmaul-Kien respiration*. **calcium h.**, a condition due to calcium defect, marked by severe headache during and after menstruation. **chlorine h.**, a desire for salt due to deficiency of chlorine in the blood. **hormone h.**, deficiency in the supply to any organ of the specific hormone on which its proper functioning depends.

Hunner's ulcer (hun'erz) [Guy LeRoy Hunner, American surgeon, born 1868] see under *ulcer*.

Hunt's atrophy, etc. (huntz) [James Ramsay Hunt, American neurologist, 1872–1937] see under *atrophy* and *phenomenon*; see *dyssynergia cerebellaris myoclonica*; and see *Ramsay Hunt syndrome*, under *syndrome*.

Hunt's method, reaction (test) [Reid Hunt, American pharmacologist, 1870–1948] see under *method* and *reaction*.

Hunter's canal, gubernaculum, operation (hunt'erz) [John Hunter, Scottish anatomist and surgeon, 1728–1793] see *canalis adductorius* and *gubernaculum testis*, and see under *operation*.

Hunter's glossitis [William Hunter, English physician, 1861–1937] see under *glossitis*.

Hunter's ligament, line [William Hunter, Scottish anatomist, 1718–1783, brother of John Hunter] see *ligamentum teres uteri* and *linea alba*.

hunterian (hun-te're-an) named for or described by John Hunter, as hunterian chancre (hard chancre).

Huntington's chorea (disease) (hunt'ing-tunz) [George Huntington, American physician, 1850–1916] see under *chorea*.

Huppert's test (hōop'erts) [Hugo Huppert, Bohemian physician, 1832–1904] see under *tests*.

Hurler's syndrome (disease) (hoor'lerz) [Gertrud Hurler, Austrian pediatrician] see under *syndrome*.

Hürthle cells, cell tumor (her'tel) [Karl Hürthle, German histologist, born 1860] see under *cell* and *tumor*.

Hurtley's test (hert'lēz) [William Holdsworth Hurtley, English scientist, 1867–1936] see under *tests*.

Huschke's canal, foramen, ligaments, valve (hoosh'kez) [Emil Huschke, German anatomist, 1797–1858] see under *canal* and *foramen*, and see *plicae gastropancreaticae* and *plica lacrimalis*, under *plica*.

husk (husk) hoose.

Hutchinson's disease, etc. (huch'in-sunz) [Sir Jonathan

- Hutchinson*, English surgeon, 1828–1913] see under *disease*, *facies*, *mask*, *patch*, *pupil*, *sign*, *tooth*, and *triad*.
- Hutchinson-Gilford disease, syndrome** (huch'in-sun-gil'-ford) [Sir Jonathan *Hutchinson*; Hastings *Gilford*, English physician, 1861–1941] progeria.
- hutchinsonian** (huch'in-so'ne-an) named for or described by Sir Jonathan Hutchinson.
- Hutchison type (syndrome)** (huch'i-son) [Sir Robert *Hutchison*, English pediatrician, 1871–1960] see under *type*.
- Hu-Tet** (hu'tet) trademark for a preparation of tetanus immune human globulin.
- Hutinel's disease** (e-tin-elz') [Victor Henri *Hutinel*, pediatrician in Paris, 1849–1933] see under *disease*.
- Huxley** (huks'le), Andrew Fielding. English physiologist, born 1917; co-winner, with John Carew Eccles and Alan Lloyd Hodgkin, of the Nobel prize in medicine and physiology for 1963, for discoveries concerning the ionic mechanism involved in excitation and inhibition in peripheral and central parts of the nerve cell membrane.
- Huxley's layer (membrane)** (huks'lēz) [Thomas Henry *Huxley*, English physiologist and naturalist, 1825–1895] see under *layer*.
- huygenian** (hi-jen'e-an) named for Christian *Huygens* (or Huyghens), a Dutch physicist, 1629–1695; see under *eyepiece*.
- HVL** half-value layer.
- Hy.** hyperopia.
- hyal** (hi'al) hyoid.
- hyal-** see *hyalo-*.
- hyalin** (hi'ah-lin) [Gr. *hyalos* glass] 1. a translucent albuminoid substance, one of the products of amyloid degeneration. 2. a substance composing the walls of hydatid cysts. **hematogenous h.**, hematohyaloid.
- hyaline** (hi'ah-lin) [Gr. *hyalos* glass] glassy and transparent or nearly so; see also under *membrane*.
- hyalinization** (hi'ah-lin'i-za'shun) conversion into a substance resembling glass.
- hyalinoses** (hi'ah-lin-o'sis) hyaline degeneration. **h. cu'tis et muco'sae**, lipid proteinosis.
- hyalinuria** (hi'ah-lin-u're-ah) the discharge of hyalin in the urine, usually in the form of casts composed of protein in an acid pH.
- hyalitis** (hi'ah-li'tis) 1. inflammation of a hyaloid membrane (membrana vitrea). 2. inflammation of the vitreous body; vitreocapsulitis. **asteroid h.**, see under *hyalosis*. **h. puncta'ta**, inflammation of the vitreous body marked by the formation of small opacities. **h. suppurati'va**, a purulent inflammation of the vitreous body.
- hyalo-, hyal-** [Gr. *hyalos* glass] a combining form denoting resemblance to glass.
- hyalogen** (hi-al'o-jen) [*hyalo-* + Gr. *gennan* to produce] an albuminous substance occurring in cartilage, the vitreous body, etc., and convertible into hyalin.
- hyaloid** (hi'ah-loid) [*hyal-* + Gr. *eidos* form] resembling glass.
- hyaloidin** (hi'ah-loid'in) a carbohydrate radical from mucoproteins; it resembles chondroitin, but contains no sulfuric acid.
- hyaloiditis** (hi'ah-loi-di'tis) hyalitis.
- hyalomere** (hi'ah-lo-mēr') [*hyalo-* + Gr. *meros* part] a zone of homogeneous or finely fibrillar pale blue cytoplasm surrounding the central granular portion (granulomere) of a platelet in a dry, stained blood smear. Cf. *granulomere*.
- hyalomitome** (hi'ah-lo-mit'ōm) hyaloplasm, def. 1.
- Hyalomma** (hi'ah-lom'ah) [*hyal-* + Gr. *omma* eye] a genus of ticks. *H. anatolicum* is a cattle tick of Africa, India, and southern Europe, which may transmit Uzbekistan hemorrhagic fever and a Near Eastern variety of equine encephalomyelitis. *H. marginatum* transmits Crimean hemorrhagic fever. *H. mauritanicum* transmits *Theileria parva*, a protozoan parasite that causes many deaths in cattle in northern Africa.
- hyalomucoid** (hi'ah-lo-mu'koid) the mucoid of the vitreous body.
- hyalonyxis** (hi'ah-lo-nik'sis) [*hyalo-* + Gr. *nyxis* pricking] the act of puncturing the vitreous body.
- hyalophagia** (hi'ah-lo-fa'je-ah) [*hyalo-* + Gr. *phagein* to eat] the eating of glass.
- hyalophagy** (hi'ah-lof'ah-je) hyalophagia.
- hyaloplasm** (hi'ah-lo-plazm') [*hyalo-* + Gr. *plasma* anything formed] 1. the more fluid, finely granular substance of the cytoplasm of cells; called also *paraplasm*, *interfilar mass*, *interfilar substance*, *interfibrillar substance* of Flemming, *paramitome*, *enchylema*, and *cytolymph*. 2. axoplasm. **nuclear h.**, karyolymph.
- hyaloseritis** (hi'ah-lo-se'ro-si'tis) [*hyalo-* + *serum* + *-itis*] a form of inflammation of serous membranes marked by hyalinization of the serous exudate into a pearly investment of the organ concerned. Cf. *frosted heart* and *perihepatitis chronica hyperplastica*. **progressive multiple h.**, Concato's disease.
- hyalosis** (hi'ah-lo'sis) degenerative changes in the vitreous humor. **asteroid h.**, a usually unilateral condition of the eye, most frequently seen in older men, characterized by the presence of spherical or star-shaped, calcium-containing opacities in the vitreous humor, which, when illuminated under an examining light, appear to sparkle; vision is usually unaffected. Called also *asteroid hyalitis* and *Benson's disease*.
- hyalosome** (hi-al'o-sōm) [*hyalo-* + Gr. *sōma* body] a structure resembling the nucleolus of a cell, but staining only slightly.
- hyalotome** (hi-al'o-tōm) hyaloplasm.
- hyalurate** (hi'ah-lu'rāt) a salt or ester of hyaluronic acid.
- hyaluronate** (hi'ah-lu'ro-nāt) a salt or ester of hyaluronic acid.
- hyaluronidase** (hi'ah-lu-rōn'i-dās) hyaluronate glycanohydrolase: an enzyme that catalyzes the hydrolysis of hyaluronic acid, the cement substance of the tissues. It is found in leeches, in snake and spider venom, in testes, and in malignant tissues, and is produced by a variety of pathogenic bacteria, enabling them to spread through the host's tissues. A pharmaceutical preparation suitable for injection [NF], which is a sterile, dry, soluble, enzyme product prepared from mammalian testes and capable of hydrolyzing mucopolysaccharides of the type of hyaluronic acid, is used to aid absorption and dispersion of other injected drugs and fluids, for hypodermoclysis, and for improving resorption of radiopaque media. Called also *Duran-Reynolds factor*, *invasin*, and *diffusion or spreading factor*.
- Hyazyme** (hi'ah-zīm) trademark for a preparation of hyaluronidase for injection.
- hybenzate** (hi-ben'zāt) USAN contraction for *o*-(4-hydroxybenzoyl)benzoate.
- hybrid** (hi'brid) [L. *hybrida* mongrel] an animal or plant produced from parents different in kind, such as parents belonging to two different strains, varieties, or species. **false h.**, an individual produced by a form of gynogenesis in which the foreign spermatozoon enters the ovum, activates it to cell division, but does not fuse with the egg nucleus.
- hybridism** (hi'brid-izm) 1. the state of being a hybrid. 2. the production of hybrids.
- hybridity** (hi-brid'i-te) the state of being a hybrid.
- hybridization** (hi'brid-i-za'shun) 1. the act or process of producing hybrids. In molecular genetics, the creation of RNA-DNA hybrids by annealing a radioactively labeled RNA fraction with denatured DNA, so that the RNA becomes associated with the complementary DNA. 2. the technique of fusing somatic cells of different species or of inserting foreign DNA into a bacterial plasmid. 3. in chemistry, a procedure whereby orbitals of intermediate energy and desired directional character are constructed by taking an appropriate linear combination of atomic orbitals e.g., sp^3 hybrid orbitals are formed from one *s* and three *p* orbitals.
- hybridoma** (hi'brī-do'mah) a cell culture consisting of a clone of fused (hybrid) cells of different kinds, e.g., mouse lymphocytes and myeloma cells. A spleen cell producing antibody against a specific antigenic determinant may be rendered "immortal" by fusing it with a tumor cell, with the aid of a surface-altering agent such as polyethylene glycol. The resulting hybrid will proliferate into a clone of cells producing homogeneous monoclonal antibody of a single specificity.
- hycanthone** (hi-kan'thōn) chemical name: 1-[[2-(diethylamino)ethyl]amino]-4-(hydroxymethyl)-9*H*-thioxanthen-9-one. A more active and less toxic metabolite of the antischistosomal drug lucanthone, $C_{20}H_{24}N_2O_2S$, highly effective against *Schistosoma haematobium* and *S. mansoni*. **h. mesylate**, the mesylate salt of hycanthone, $C_{20}H_{24}N_2O_2S \cdot CH_3SO_3H$, having the same actions as the base; administered intramuscularly.
- hyclate** (hi'klāt) USAN contraction for monohydrochloride hemiethanolate hemihydrate.
- Hycodan** (hi'ko-dan) trademark for preparations of hydrocodone bitartrate.
- hydantoin** (hi-dan'to-in) a crystalline base derivable from allantoin, $CO \cdot NH \cdot CH_2 \cdot CO \cdot NH_2$.
- hydantoinate** (hi'dan-to'in-āt) any salt of hydantoin.
- hydathode** (hi'dah-thōd) a water-secreting structure found on the edges and tips and leaves of many plants.
- hydatid** (hi'dah-tid) [L. *hydatis*, a drop of water] 1. a hydatid cyst. 2. any cystlike structure; see under *mole*. **alveolar h's**, see *hydatid disease*, *alveolar*, under *disease*. **h. of Morgagni**, a cystlike remnant of the müllerian duct attached to a testis or to the oviduct; see *appendix testis* and *appendices vesiculosi epooophori*. Called also *morgagnian cyst*. **sessile h.**, appendix testis. **Virchow's h.**, alveolar hydatid disease.
- hydatidiform** (hi'dah-tid'i-form) resembling a hydatid cyst; see under *mole*.
- hydatidosis** (hi'dah-tī-do'sis) hydatid disease; infection with *Echinococcus*.
- hydatidostomy** (hi'dah-tī-dos'to-me) [*hydatid* + Gr. *stoma* mouth] incision and drainage of a hydatid cyst.

hydatiduria (hi'dah-tī-du're-ah) the excretion of hydatid material in the urine.

Hydatigena (hi'dah-tij'en-ah) *Taenia*.

hydatism (hi'dah-tizm) [Gr. *hydatis* water] the sound caused by the presence of fluid in a cavity.

hydatoid (hi'dah-toid) 1. the aqueous humor. 2. the hyaloid membrane (membrana vitrea [NA]). 3. pertaining to the aqueous humor.

Hydeltra (hi-del'trah) trademark for preparations of prednisolone.

Hydergine (hi'der-jin) trademark for a mixture of equal parts of dihydroergocornine, dihydroergocristine, and dihydrocryptine, in the form of methansulfonate salts, used as a vasodilator for the treatment of peripheral vascular disease.

hydncarpate (hid-no-kar'pāt) a salt of hydncarpic acid.

Hydnocarpus (hid'no-kar'pus) a genus of Indomalayan trees. *H. wightiana* Blume and *H. anthelmintica* Pierre (Flacourtiaceae) are sources of chaulmoogra oil.

hydr- see *hydro-*.

hydracetin (hi-dras'ē-tin) acetylphenylhydrazine.

hydracid (hi-dras'id) 1. haloid acid. 2. binary acid.

hydradenitis (hi'drad-ē-ni'tis) hidradenitis.

hydradenoma (hi'drad-ē-no'mah) hidradenoma.

hydraeroperitoneum (hi-dra'ē-ro-per'ī-to-ne'um) [*hydr-* + Gr. *aēr* air + *peritoneum*] a collection of watery fluid and gas in the peritoneal cavity.

hydragogue (hi'drah-gog) [*hydr-* + Gr. *agōgos* leading] 1. producing watery discharge, especially from the bowels. 2. a cathartic which causes watery purgation.

hydralazine hydrochloride (hi-dral'ah-zēn) [USP] chemical name: 1-hydrazinophthalazine hydrochloride. An antihypertensive, $C_8H_8N_4 \cdot HCl$, occurring as a white crystalline powder; administered orally, intramuscularly, or intravenously.

hydramine (hi'drah-min) an amine derived from a glycol in which one hydroxyl is replaced by an amino group.

hydramnion (hi-dram'ne-on) hydramnios.

hydramnios (hi-dram'ne-os) [*hydr-* + *amnion*] excess of amniotic fluid.

hydranencephaly (hi'dran-en-seff'ah-le) complete or almost complete absence of the cerebral hemispheres, the space they normally occupy being filled with cerebrospinal fluid.

Hydrangea (hi-dran'je-ah) a genus of saxifragaceous trees and shrubs. A glycoside from the dried rhizome and roots of *H. arborescens* L. (Saxifragaceae) was formerly used as a diuretic. Called also *seven barks*.

hydrangiography (hi-dran'je-og'rah-fe) [*hydr-* + Gr. *angeion* vessel + *graphein* to write] 1. a description of the lymphatic vessels. 2. lymphangiography.

hydrangiology (hi-dran'je-ol'o-je) [*hydr-* + Gr. *angeion* vessel + *-logy*] lymphangiology.

hydrangiotomy (hi-dran'je-ot'o-me) [*hydr-* + Gr. *angeion* vessel + *tomē* a cutting] lymphangiotomy.

hydrargyri (hi-drar'ji-ri) genitive of L. *hydrargyrum*, mercury. **h. bichloridum**, mercuric bichloride. **h. chlo'idum corrosivum**, mercuric bichloride. **h. iodi'dum fla'vum**, mercurous iodide, yellow. **h. iodi'dum ru'brum**, mercuric iodide, red. **h. ox'idum fla'vum**, mercuric oxide, yellow. **h. sali'cyllas**, mercuric salicylate.

hydrargyria, hydrargyris (hi'drar-jir'e-ah; hi-drar'ji-rizm) mercury poisoning; see under *poisoning*.

hydrargyromania (hi-drar'ji-ro-ma'ne-ah) mental disorder due to mercury poisoning.

hydrargyrorelapsing (hi-drar'ji-ro-re-laps'ing) relapsing after apparently successful mercurial treatment.

hydrargyrosis (hi-drar'ji-ro'sis) mercury poisoning; see under *poisoning*.

hydrargyrum (hi-drar'ji-rum), gen. *hydrargyri* [L. "liquid silver"] mercury. **h. ammoniatum**, ammoniated mercury. **h. chlo'idum mi'te**, calomel. **h. olea'tum**, mercury oleate.

hydrarthrodial (hi'drar-thro'de-al) pertaining to hydrarthrosis.

hydrarthrosis (hi'drar-thro'sis) [*hydr-* + Gr. *arthron* joint + *-osis*] an accumulation of watery fluid in the cavity of a joint. **intermittent h.**, serous effusion into a joint occurring periodically.

hydrase (hi'drās) hydratase.

hydratase (hi'drah-tās) any enzyme (hydro-lyase) that catalyzes the hydration or dehydration of C—O linkages. Formerly called *hydrase*.

hydrate (hi'drāt) [L. *hydras*] 1. any compound of a radical with H_2O . 2. any salt or other compound that contains water of crystallization.

hydrated (hi'drāt-ed) [L. *hydratus*] combined with water; forming a hydrate or a hydroxide.

hydration (hi-dra'shun) 1. the act of combining or causing to

combine with water. 2. the condition of being combined with water.

hydraulics (hi-draw'liks) [*hydr-* + Gr. *aulos* pipe] the branch of physics which treats of the action of liquids under physical laws.

hydrazine (hi'drah-zin) a colorless, gaseous diamine, $H_2N \cdot NH_2$; also any member of a group of its substitution derivatives. Called also *diamide*.

hydrazinolysis (hi'drah-zin-ol'ī-sis) cleavage of the peptide bonds of a peptide by hydrazine, with the C-terminal residue appearing as a free amino acid.

hydrazone (hi-drah-zōn) a compound formed from an aldehyde or ketone by the action of phenylhydrazine.

Hydrea (hi-dre'ah) trademark for a preparation of hydroxyurea.

hyremia (hi-dre'me-ah) [*hydr-* + Gr. *haima* blood] excess of water in the blood; a condition in which the proportion of the serum in the blood to the corpuscles is excessive.

hyrencephalocoele (hi'dren-seff'ah-lo-sēl) [*hydr-* + *encephalocoele*] encephalocystocoele.

hyrencephalomeningocoele (hi'dren-seff'ah-lo-mē-ning'go-sēl) hernial protrusion through a cranial defect of the meninges containing cerebrospinal fluid and brain substance.

hyrencephalus (hi'dren-seff'ah-lus) hydrocephalus.

hyrencephaly (hi'dren-seff'ah-le) hydrocephalus.

hydropigastrium (hi'drep-ī-gas'tre-um) [*hydr-* + *epigastrium*] a collection of watery fluid between the peritoneum and the abdominal wall.

hydriatric (hi'dre-at'rik) [*hydr-* + Gr. *iatikos*, *iatrikos* healing] pertaining to hydrotherapy.

hydriatrics (hi'dre-at'riks) hydrotherapy.

hydric (hi'drik) pertaining to or combined with hydrogen; containing replaceable hydrogen.

hydride (hi'drid) [Gr. *hydōr* water] any compound of hydrogen with an element or radical.

hydrindicuria (hi'drin-dī-ku're-ah) the presence in the urine of indoles related to both tryptophan and phenylalanine.

hydriion (hi-dri'on) hydrogen ion.

hydro-, hydr- [Gr. *hydōr* water] combining form denoting relationship to water or to hydrogen.

hydroa (hid-ro'ah) a vesicular eruption attended with intense itching and burning, occurring on surfaces of the skin exposed to sunlight; it usually affects prepubertal boys, and tends to recur each summer. Some consider it to be associated with erythropoietic protoporphyria. The eruption in *h. aestiva'le* is polymorphic, whereas *h. vaccinifor'me*, which is considered by some to be a severe form of hydroa aestivale, is marked by the formation of umbilicated bullae that heal with scarring.

hydroadipsia (hi'dro-ah-dip'se-ah) [*hydro-* + a neg. + Gr. *dipsa* thirst] absence of thirst for water.

hydroappendix (hi'dro-ah-pen'diks) distention of the vermiform appendix with a watery fluid.

Hydrobiidae (hi'dro-be'ī-de) a family of snails (order Mesogastropoda) that includes the subfamilies Hydrobiinae and Buliminae, which are intermediate hosts of various species of parasitic flukes.

Hydrobiinae (hi'dro-be'ī-ne) a subfamily of snails (family Hydrobiidae, order Mesogastropoda) that includes the genus *Oncomelania*, the intermediate host of *Schistosoma japonicum*.

hydrobilirubin (hi'dro-bil'ī-roo'bin) [*hydro-* + *bilirubin*] a brownish-red pigment, $C_{32}H_{40}N_4O_7$, derivable from bilirubin by reduction. It is believed to be identical with stercobilin and urobilin.

hydroblepharon (hi'dro-bleff'ah-ron) [*hydro-* + Gr. *blepharon* eyelid] edema of the eyelids.

hydrobromide (hi'dro-bro'mīd) an addition salt of hydrobromic acid. Cf. *hydrochloride*.

Hydrocal (hi'dro-kal) trademark for an artificial stone (a gypsum product) used in dentistry.

hydrocalycosis (hi'dro-kal'ī-ko'sis) [*hydro-* + *calyx* + *-osis*] a usually asymptomatic cystic dilatation of a major renal calyx, lined by transitional epithelium and due to obstruction of the infundibulum.

hydrocalyx (hi'dro-kal'iks) a cyst in the renal cortex caused by obstruction at the infundibulum; the entire calyx dilates to form the cyst wall.

hydrocarbarism (hi'dro-kar'bar-izm) hydrocarbonism.

hydrocarbon (hi'dro-kar'bon) an organic compound that contains carbon and hydrogen only. The hydrocarbons are divided into *alicyclic*, *aliphatic*, and *aromatic* hydrocarbons, according to the arrangement of the atoms and the chemical properties of the compounds. **alicyclic h.**, a hydrocarbon that has cyclic structure and aliphatic properties. **aliphatic h.**, a hydrocarbon in which no carbon atoms are joined to form a ring. **aromatic h.**, a hydrocarbon that has cyclic structure and a closed conjugated system of double bonds that gives it the characteristic chemical properties of the parent aromatic hydrocarbon, benzene

(C_6H_6); other typical aromatic hydrocarbons are toluene (C_7H_8), naphthalene ($C_{10}H_8$), anthracene ($C_{14}H_{10}$), and phenanthrene ($C_{14}H_{10}$). **carcinogenic h.**, a condensed nuclear aromatic hydrocarbon that tends to cause cancer when applied to the skin or when otherwise administered. **cyclic h.**, one of a series of hydrocarbons having the general formula C_nH_{2n} , the carbon atoms being thought of as having a closed ring structure. **saturated h.**, a hydrocarbon that has the maximum number of hydrogen atoms for a given carbon structure, such as methane, ethane, propane, cyclopropane, and the butanes. **unsaturated h.**, an aliphatic or alicyclic hydrocarbon that has less than the maximum number of hydrogen atoms for a given carbon structure, such as ethylene, acetylene, propylene, cyclohexene, and the butanes.

hydrocarbonism (hi'dro-kar'bon-izm) poisoning by hydrocarbons.

hydrocardia (hi'dro-kar'de-ah) hydropericardium.

hydrocele (hi'dro-sel) [*hydro-* + Gr. *hēlē* tumor] a circumscribed collection of fluid, especially a collection of fluid in the tunica vaginalis of the testicle or along the spermatic cord.

cervical h., a serous dilatation of a persistent cervical duct, or sometimes of a deep cervical lymph space; called also *h. colli* and *Maunoir's h.* **chylous h.**, a form in which the fluid is milky in appearance. **h. colli**, cervical **h. communicating h.**, hydrocele in which the processus vaginalis testis is patent. **congenital h.**, hydrocele in the unobliterated canal between the peritoneal cavity and that of the tunica vaginalis. **diffused h.**, a collection of fluid diffused in the loose connective tissue of the spermatic cord. **Dupuytren's h.**, bilocular hydrocele of the tunica vaginalis testis. **encysted h.**, one which occurs in cysts outside the cavity of the tunica vaginalis testis. **h. feminae**, an affection of the round ligament of the female resembling ordinary hydrocele. **funicular h.**, hydrocele of the tunica vaginalis of the spermatic cord in a space closed toward the testis and open toward the peritoneal cavity. **Gibbon's h.**, see under *hernia*. **hernial h.**, distention of the hernial sac with a fluid. **Maunoir's h.**, cervical hydrocele. **h. muliebri** (*obs.*), a watery dilatation of the canal of Nuck; called also *Nuck's h.* **h. of neck**, cervical **h. Nuck's h.** (*obs.*), *h. muliebri*. **h. rena'lis**, a condition in which the renal capsule forms part of a cyst wall so that the kidney is partially or almost wholly surrounded by the cyst; although often found after trauma in adults, such a cyst is of congenital origin. **scrotal h.**, a circumscribed collection of fluid in the scrotum. **h. spina'lis**, spina bifida.

hydroelectomy (hi'dro-se-lek'to-me) [*hydrocele* + Gr. *ektomē* excision] excision of a hydrocele.

hydrocenosis (hi'dro-se-no'sis) [*hydro-* + Gr. *kenōsis* emptying] removal of dropsical fluid.

hydrocephalic (hi'dro-sē-fal'ik) pertaining to or affected with hydrocephalus.

hydrocephalocoele (hi'dro-sef'ah-lo-sēl') encephalocystocoele.

hydrocephaloid (hi'dro-sef'ah-loid) 1. resembling hydrocephalus. 2. see under *disease*.

hydrocephalus (hi'dro-sef'ah-lus) [*hydro-* + Gr. *kephalē* head] a condition marked by dilatation of the cerebral ventricles, most often occurring secondarily to obstruction of the cerebrospinal fluid pathways (see *ventricular block*, under *block*), and accompanied by an accumulation of cerebrospinal fluid within the skull; the fluid is usually under increased pressure, but occasionally may be normal or nearly so. It is typically characterized by enlargement of the head, prominence of the forehead, brain atrophy, mental deterioration, and convulsions, and may be congenital or

acquired, and be of sudden onset (*acute h.*) or be slowly progressive (*chronic* or *primary h.*). **communicating h.**, hydrocephalus in which there is no obstruction in the ventricular system, and cerebrospinal fluid passes readily out of the brain into the spinal canal, but is not absorbed. **h. ex vac'uo**, a compensatory replacement by cerebrospinal fluid of the volume of tissue lost in atrophy of the brain. **noncommunicating h.**, obstructive **h. normal-pressure h.**, normal-pressure **occult h.**, dementia, ataxia, and urinary incontinence with pneumoencephalographic evidence of hydrocephalus, i.e., with enlarged ventricles associated with inadequacy of the subarachnoid spaces, but with normal cerebrospinal fluid pressure; occurring in middle-aged and older persons. Called also *occult normal-pressure h.* **obstructive h.**, hydrocephalus due to ventricular block (q.v.); called also *noncommunicating h.* **occult normal-pressure h.**, normal-pressure **h. otitic h.**, acute hydrocephalus caused by spread of the inflammation of otitis media to the cranial cavity. **secondary h.**, hydrocephalus resulting from meningitis.

hydrocephaly (hi'dro-sef'ah-le) hydrocephalus.

hydrochloride (hi'dro-klo'rid) an addition salt of hydrochloric acid, for instance with quinine. The hydrochloric acid adds on in such a way that the valence of the basic nitrogen is changed from three to five. In a sense the alkaloid hydrochlorides may be looked on as derivatives of ammonium chloride:

hydrochlorothiazide (hi'dro-klo'ro-thi'ah-zid) [USP] chemical name: 6-chloro-3,4-dihydro-2H-1,2,4-benzothiadiazine-7-sulfonamide-1,1-dioxide. An orally effective diuretic and antihypertensive, $C_7H_6ClN_3 \cdot O_4S_2$, occurring as a white or nearly white, crystalline powder.

hydrocholecystis (hi'dro-ko'le-sis'tis) [*hydro-* + Gr. *cholē* bile + *kystis* bladder] distention of the gallbladder with watery fluid; hydrops of the gallbladder.

hydrocholeresis (hi'dro-ko'le-re'sis) [*hydro-* + Gr. *cholē* bile + *hairesis* a taking] choleresis characterized by increase in water output, or induction of the excretion of bile relatively low in specific gravity, viscosity, and total solid content.

hydrocholeretic (hi'dro-ko'le-ret'ik) pertaining to, characterized by, or producing hydrocholeresis.

hydrocholesterol (hi'dro-ko-les'ter-ol) a reduced form of cholesterol.

hydrocinchonidine (hi'dro-sin-kon'ti-din) an alkaloid, $C_{18}H_{24}ON_2$, isomeric with cinchonine.

hydrocirsocele (hi'dro-sir'so-sel) [*hydro-* + *cirsocele*] hydrocele combined with varicocele.

hydrocodone bitartrate (hi'dro-ko'dōn) [USP] a semisynthetic product of codeine, $C_{18}H_{21}NO_3 \cdot C_4H_6O_6 \cdot 2\frac{1}{2}H_2O$, occurring as a fine, white, crystalline powder, having narcotic analgesic effects similar to but more active than those of codeine; used as an antitussive, administered orally. Called also *dihydrocodeinone bitartrate*.

hydrocollidine (hi'dro-kol'i-din) [*hydro-* + *collidine*] a poisonous oily ptomaine, $C_8H_{13}N$, from nicotine, decayed flesh, and stale fish.

hydrocolloid (hi'dro-kol'loid) [*hydro-* + *colloid*] a colloid system in which water is the dispersion medium. **irreversible h.**, a hydrocolloid which can be converted from the sol to the gel condition but cannot be reverted to a sol by any simple means. **reversible h.**, a hydrocolloid which can be reverted from the gel to the sol condition by increase in temperature.

hydrocolpos (hi'dro-kol'pos) [*hydro-* + Gr. *kolpos* vagina] a collection of watery fluid in the vagina.

hydroconion (hi'dro-ko'ne-on) [*hydro-* + Gr. *konis* dust] an atomizer or vaporizer for throwing liquids in a fine spray.

hydrocortamate hydrochloride (hi'dro-kor'tah-māt) chemical name: cortisol 21-ester with *N,N*-diethylglycine hydrochloride. A synthetic glucocorticoid, $C_{21}H_{34}NO_6 \cdot HCl$, used topically as an anti-inflammatory in the treatment of steroid-responsive dermatoses.

hydrocortisone (hi'dro-kor'ti-sōn) chemical name: 11β , 17α , 21 -trihydroxypregn-4-ene-3, 20 -dione. The major glucocorticoid, $C_{21}H_{30}O_5$, elaborated by the human adrenal cortex (or *cortisol*, as it is usually referred to by biochemists), or the same substance produced synthetically; it has life-maintaining properties and also has appreciable mineralocorticoid activity. The official preparation [USP] and its salts are used in the treatment of inflammations, allergies, pruritus, collagen diseases (rheumatoid arthritis, lupus erythematosus, etc.), some neoplasms, acute or chronic adrenocortical deficiency, severe status asthmaticus, and shock. **h. acetate** [USP], an ester of hydrocortisone, $C_{23}H_{32}O_6$, occurring as a white to practically white, crystalline powder, having actions and uses similar to those of the base; administered by intra-articular or soft-tissue injection or applied topically to the skin or conjunctiva. **h. cyclopentylpropionate**, **h. cypionate** [USP], an ester of hydrocortisone, $C_{29}H_{42}O_6$, occurring as

a white to practically white, crystalline powder, having actions and uses similar to those of the base; administered orally. **h. hemisuccinate** [USP], an ester of hydrocortisone, $C_{25}H_{34}O_8$, having actions and uses similar to those of the base. **h. sodium phosphate** [USP], a water-soluble ester of hydrocortisone, $C_{21}H_{28}Na_2O_8P$, occurring as a white to light yellow powder, having actions and uses similar to those of the base; administered intravenously or intramuscularly, especially for adrenocortical insufficiency. **h. sodium succinate** [USP], a water-soluble ester of hydrocortisone, $C_{25}H_{33}NaO_8$, occurring as a white or nearly white crystalline powder, having actions and uses similar to those of the base; administered intravenously or intramuscularly, especially for acute adrenocortical insufficiency. **h. valerate**, an ester of hydrocortisone, $C_{26}H_{38}O_8$, having actions similar to those of the base.

Hydrocortone (hi'dro-kor'tōn) trademark for preparations of hydrocortisone.

hydrocyanism (hi'dro-si'an-izm) poisoning with hydrocyanic acid.

hydrocyst (hi'dro-sist) [*hydro-* + Gr. *kystis* sac, bladder] a cyst with watery contents.

hydrocystadenoma (hi'dro-sis'tad-ě-no'mah) papillary hidradenoma; see *hidradenoma*.

hydrodiascope (hi'dro-di'ah-skōp) [*hydro-* + Gr. *dia* through + *skopein* to see] an instrument used in the treatment of astigmatism.

hydrodictiotomy (hi'dro-dik'te-ot'o-me) an operation for displacement of the retina (R. Secondi).

hydrodiffusion (hi'dro-di-fu'zhun) diffusion in an aqueous medium.

hydrodipsia (hi'dro-dip'se-ah) thirst for water.

hydrodipsomania (hi'dro-dip'so-ma'ne-ah) an epileptic condition characterized by attacks of insatiable thirst.

hydrodiuresis (hi'dro-di'u-re'sis) [*hydro-* + *diuresis*] copious secretion of urine of low specific gravity.

Hydrodiuril (hi'dro-di'u-ri) trademark for a preparation of hydrochlorothiazide.

hydrodynamics (hi'dro-di-nam'iks) [*hydro-* + *dynamics*] that branch of the science of mechanics which treats of the movement of fluids and of solids contained in fluids.

hydroelectric (hi'dro-e-lek'trik) pertaining to water and electricity.

hydroencephalocele (hi'dro-en-sef'ah-lo-sēl) encephalocystocele.

hydroflumethiazide (hi'dro-floo'mě-thi'ah-zid) [USP] chemical name: 3,4-dihydro-6-(trifluoromethyl)-2H-1,2,4-benzothiadiazine-7-sulfonamide 1,1-dioxide. An antihypertensive and diuretic, $C_8H_8F_3N_3O_4S_2$, occurring as a white to cream-colored, finely divided, crystalline powder; administered orally.

hydrogel (hi'dro-jel) a gel that has water as its dispersion medium.

hydrogen (hi'dro-jen) [*hydro-* + Gr. *gennan* to produce] the lightest element, an odorless, tasteless, colorless gas that is inflammable and explosive when mixed with air. It is found in water and in almost all organic compounds. Its ion is the active constituent of all acids in the water system. Its symbol is H; atomic number, 1; atomic weight, 1.00797; specific gravity, 0.069. Hydrogen exists in three isotopes: ordinary, or light, hydrogen is the mass 1 isotope, also called *protium*; heavy hydrogen is the mass 2 isotope, also called *deuterium*; mass 3 isotope is *tritium*. **arseniuretted h.**, see under *arsine*. **h. cyanide**, an extremely poisonous colorless liquid or gas, HCN, used as a rodenticide and insecticide, its toxic effect being due to its inhibition of the oxidation of cytochrome, resulting in suppression of cellular respiration; it can cause tachypnea, dyspnea, paralysis, and respiratory arrest. Called also *hydrocyanic acid*. **h. disulfide**, an ill-smelling liquid, H_2S_2 . **heavy h.**, see *hydrogen*. **light h.**, see *hydrogen*. **h. monoxide**, water, H_2O . **ordinary h.**, see *hydrogen*. **h. peroxide**, a strongly disinfectant cleansing and bleaching liquid, H_2O_2 , used in dilute solution in water, mainly as a wash or spray. **h. selenide**, a poisonous gas, H_2Se ; its inhalation causes an obstinate coryza and destroys the sense of smell. **h. sulfide**, an offensive and poisonous gas, H_2S , used as a chemical reagent; called also *hydrosulfuric* or *sulphydric acid*. **sulfuretted h.**, h. sulfide.

hydrogenase (hi'dro-jen-ās) hydrogen: ferredoxin oxidoreductase. An enzyme that catalyzes the reduction of various substances by means of molecular hydrogen. **fumaric h.**, a yellow enzyme that catalyzes the reduction of fumaric acid to succinic acid.

hydrogenate (hi'dro-jen-āt') to cause to combine with hydrogen; to reduce with hydrogen.

hydrogenize (hi'dro-jen-iz) hydrogenate.

hydrogenlyase (hi'dro-jen-li'ās) an adaptive enzyme formed by many strains of *Escherichia coli* that catalyzes the breakdown of formic acid to carbon dioxide and hydrogen.

hydrogenoid (hi-droj'ě-noid) a homeopathic term denoting a constitution or temperament that will not tolerate much moisture.

Hydrogenomonas (hi-dro'jě-no-mo'nas) a genus of schizomy-

cetes of the family Methanomonadaceae, suborder Pseudomonadinae, order Pseudomonadales, occurring as facultative chemoautotrophic, short, rod-shaped cells obtaining energy from the oxidation of hydrogen. It includes four species, *H. fa'cilis*, *H. fla'va*, *H. panto'tropha*, and *H. vit'rea*.

hydrogymnastic (hi'dro-jim-nas'tik) pertaining to exercises performed in the water.

hydrogymnastics (hi'dro-jim-nas'tiks) therapeutic exercise performed in water.

hydrohematonephrosis (hi'dro-hem'ah-to-něfro'sis) [*hydro-* + Gr. *haima* blood + *nephros* kidney] distention of the pelvis of the kidney with an accumulation of bloody urine.

hydrohepatosis (hi'dro-hep'ah-to'sis) [*hydro-* + Gr. *hēpar* liver] a condition in which there is a collection of watery fluid in the liver.

hydrohymenitis (hi'dro-hi'men-iftis) [*hydro-* + Gr. *hymēn* membrane + *-itis*] inflammation of a serous membrane.

hydrokinesitherapy (hi'dro-ki-ne'si-ther'ah-pe) [*hydro-* + Gr. *kinēsis* movement + *therapeia* treatment] treatment by underwater exercise.

hydrokinetic (hi'dro-ki-net'ik) relating to the movement of water or other fluid, as in a whirlpool bath.

hydrokinetics (hi'dro-ki-net'iks) [*hydro-* + Gr. *kinēsis* motion] that branch of mechanics which treats of fluids in motion.

hydrokollag (hi'dro-kol'ag) a suspension of finely particulate graphite, used in experimental study of ciliary action and lymphatic drainage.

hydrol (hi'drol) a final mother liquor obtained in the manufacture of glucose from cornstarch.

hydrolabile (hi'dro-la'bil) having a tendency to lose weight under carbohydrate or salt restriction or following infections or gastrointestinal disease. Cf. *hydrostabile*.

hydrolability (hi'dro-lah-bil'i-te) [*hydro-* + L. *labilis* liable to change] a condition in which tissue fluids tend to vary in quantity.

hydrolase (hi'dro-lās) one of the six main groups of enzymes, comprising those that catalyze the hydrolytic cleavage of a compound, such as esters, peptides, glycosides, and amides. **acetoacetylglutathione h.**, an enzyme that catalyzes the hydrolysis of acetoacetylglutathione to acetoacetate and glutathione. **acetyl-CoA h.**, an enzyme that catalyzes the hydrolysis of acetyl-CoA to CoA and acetate; called also *acetyl-CoA deacylase*. **acid h's**, a collective term for the enzymes of lysosomes. **formyl-CoA h.**, an enzyme that catalyzes the hydrolysis of formyl-CoA to CoA and formate. **guanosine h.**, an enzyme that catalyzes the conversion of guanosine into guanine and sugar. **hydroxyacylglutathione h.**, an enzyme that catalyzes the hydrolysis of S-2-hydroxyacylglutathione to glutathione and a 2-hydroxyacid anion; called also *glyoxalase II*. **3-hydroxyisobutyryl-CoA h.**, an enzyme that catalyzes the hydrolysis of 3-hydroxyisobutyryl-CoA to CoA and 3-hydroxyisobutyrate. **hydroxymethylglutaryl-CoA h.**, an enzyme that catalyzes the hydrolysis of 3-hydroxy-3-methylglutaryl-CoA to CoA and 3-hydroxy-3-methylglutarate. **palmitoyl-CoA h.**, an enzyme that catalyzes the hydrolysis of palmitoyl CoA to CoA and palmitate. **succinyl-CoA h.**, an enzyme that catalyzes the hydrolysis of succinyl-CoA to CoA and succinate.

hydrology (hi-drol'o-je) [*hydro-* + *-logy*] the sum of knowledge regarding water and its uses.

Hydrolöse (hi'dro-lōs) trademark for a preparation of methylcellulose.

hydro-lyase (hi'dro-li'ās) any lyase that removes water from a compound.

hydrolymph (hi'dro-limf) [*hydro-* + *lymph*] the thin, watery nutritive fluid of certain of the lower animals.

hydrolysate (hi-drol'i-zāt) a compound produced by hydrolysis. **protein h.**, a mixture of amino acids prepared by splitting a protein with acid, alkali, or enzyme. Such preparations provide the nutritive equivalent of the original material (casein, lactalbumin, fibrin, etc.) in the form of its constituent amino acids; used in special diets or for patients unable to take the ordinary food proteins.

hydrolysis (hi-drol'i-sis), pl. *hydrolyses* [*hydro-* + Gr. *lysis* dissolution] the splitting of a compound into fragments by the addition of water, the hydroxyl group being incorporated in one fragment, and the hydrogen atom in the other.

hydrolyst (hi'dro-list) an agent that promotes hydrolysis.

hydrolyte (hi'dro-lit) a substance undergoing hydrolysis.

hydrolytic (hi-dro-lit'ik) pertaining to, characterized by, or promoting hydrolysis.

hydrolyze (hi'dro-liz) to subject to hydrolysis.

hydroma (hi-dro'mah) hygroma.

hydromassage (hi'dro-mah-sahzh') massage by means of moving water.

hydromeningitis (hi'dro-men'in-ji'tis) [*hydro-* + *meningitis*] meningitis with serous effusion.

hydromeningocele (hi'dro-mě-ning'go-sēl) [*hydro-* + Gr.

mēninx membrane + *kēlē* hernia] protrusion of the meninges through a defect in the skull or spine, forming a sac containing cerebrospinal fluid.

hydrometer (hi-drom/'ē-ter) [*hydro-* + Gr. *metron* measure] an instrument for determining the specific gravities of a fluid.

hydrometra (hi-'dro-me'trah) [*hydro-* + Gr. *mētra* uterus] a collection of watery fluid in the uterus.

hydrometric (hi-'dro-met/'rik) pertaining to hydrometry.

hydrometrocolpos (hi-'dro-me-'tro-kol'pos) [*hydro-* + Gr. *mētra* uterus + *kolpos* vagina] a collection of watery fluid in the uterus and vagina.

hydrometry (hi-drom/'ē-tre) the measurement of the specific gravity of a fluid by means of the hydrometer.

hydromicrocephaly (hi-'dro-mi-'kro-sef'ah-le) microcephaly with an abnormal amount of cerebrospinal fluid.

hydromorphone (hi-'dro-mor'fōn) chemical name: 4,5α-epoxy-3-hydroxy-17-methyl-methylmorphinan-6-one. A morphine alkaloid, C₁₇H₁₉NO₃, occurring as a fine, white or practically white, crystalline powder, having narcotic analgesic effects similar to but greater and of shorter duration than those of morphine; administered as the sulfate salt by subcutaneous injection. **h. hydrochloride** [USP], the hydrochloride salt of hydromorphone, C₁₇H₁₉NO₃·HCl, having the same actions as the base; administered orally and subcutaneously. Called also *dihydromorphinone hydrochloride*.

Hydromox (hi-'dro-moks) trademark for preparations of quine-thazone.

hydromphalus (hi-drom/'fah-lus) [*hydro-* + Gr. *omphalos* navel] a cystic accumulation of watery fluid at the umbilicus.

hydromyelia (hi-'dro-mi-e'le-ah) a pathologic condition characterized by accumulation of fluid in the enlarged central canal of the spinal cord.

hydromyelocele (hi-'dro-mi-el'o-sēl) [*hydro-* + *myelocele*] hydromyeloeningocele.

hydromyelomeningocele (hi-'dro-mi-'ē-lo-mē-ning'go-sēl) [*hydro-* + Gr. *myelos* marrow + *mēninx* membrane + *kēlē* hernia] a defect of the spine marked by protrusion of the membranes and tissue of the spinal cord, forming a fluid-filled sac.

hydromyoma (hi-'dro-mi-o'mah) [*hydro-* + *myoma*] uterine leiomyoma with cystic degeneration.

hydronaphthylamine (hi-'dro-naf'thil-am'in) a powerfully mydriatic substance, C₁₀H₁₁NH₂.

hydronephrosis (hi-'dro-nē-fro'sis) [*hydro-* + Gr. *nephros* kidney] distention of the pelvis and calices of the kidney with urine, as a result of obstruction of the ureter, with accompanying atrophy of the parenchyma of the organ. **closed h.**, a permanent condition, resulting from complete obstruction of the ureter. **open h.**, an intermittent condition, resulting from sporadic or incomplete obstruction of the ureter.

hydronephrotic (hi-'dro-nē-frot'ik) pertaining to or characterized by hydronephrosis.

hydronium (hi-'dro-ne-um) the hydrated proton, H₃O⁺; it is the form in which the proton (hydrogen ion, H⁺) exists in aqueous solution, a combination of H⁺ and H₂O.

Hydronol (hi-'dro-nol) trademark for a preparation of isosorbide.

hydropancreatosis (hi-'dro-pan/'kre-ah-to'sis) the accumulation of watery fluid in the pancreas.

hydroparotitis (hi-'dro-par'o-ti'tis) distention of the parotid gland with watery fluid.

hydropathic (hi-'dro-path'ik) pertaining to hydropathy.

hydropathy (hi-'dro-pah'the) [*hydro-* + Gr. *pathos* disease] (*obs.*) treatment of disease by the application of water; particularly a system of treatment which professes to cure all diseases by the use of water; water cure.

hydropenia (hi-'dro-pe'ne-ah) [*hydro-* + Gr. *penia* poverty] deficiency of water in the body.

hydropenic (hi-'dro-pe'nik) relating to hydropenia.

hydropericarditis (hi-'dro-per'i-kar-di'tis) pericarditis attended with a watery effusion in the pericardial sac.

hydropericardium (hi-'dro-per'i-kar-de-um) [*hydro-* + *pericardium*] abnormal accumulation of serous fluid in the pericardial cavity.

hydrop erinephrosis (hi-'dro-per'i-nē-fro'sis) [*hydro-* + Gr. *peri* around + *nephros* kidney + *-osis*] a collection of fluid in the retroperitoneal connective tissue and opening into the pelvis of the kidney.

hydrop erion (hi-'dro-per'e-on) [*hydro-* + Gr. *peri* around + *ōn* egg] the fluid between the capsular and parietal decidua.

hydrop eritoneum (hi-'dro-per'i-to-ne'um) [*hydro-* + *peritoneum*] ascites, or abnormal accumulation of fluid in the peritoneal cavity.

hydrop eritonia (hi-'dro-per'i-to-ne-ah) ascites.

hydrop exia (hi-'dro-pek'se-ah) hydropexis.

hydrop exic (hi-'dro-pek'sik) [*hydro-* + Gr. *pēxis* fixation] fixing or holding water; pertaining to the holding of water.

hydropexis (hi-'dro-pek'sis) the fixation or holding of water.

hydrop hagogycytosis (hi-'dro-fag'o-si-to'sis) [*hydro-* + *phagocytosis*] the absorption by macrophages of plasma surrounding them; called also *Lewis' phenomenon*.

hydrop hil (hi-'dro-fil) hydrophilic.

hydrop hilia (hi-'dro-fil'e-ah) [*hydro-* + Gr. *philein* to love + *-ia*] the property of absorbing water.

hydrop hiliic (hi-'dro-fil'ik) readily absorbing moisture; hygroscopic; having strongly polar groups that readily interact with water.

hydrop hiliism (hi-'drof'i-lizm) hydrophilia.

hydrop hilius (hi-'drof'i-lus) hydrophilic.

Hydrop hiodae (hi-'drof'i-o-de) a family of venomous sea snakes of the Indo-Pacific region, characterized by an oarlike tail and immovable hollow fangs. See table accompanying *snake*.

hydrop hobia (hi-'dro-fō-be-ah) [*hydro-* + Gr. *phobein* to be frightened by + *-ia*] rabies. **paralytic h.**, see under *rabies*.

hydrop hobic (hi-'dro-fō'bik) 1. pertaining to or affected with hydrophobia (rabies). 2. not readily absorbing water, or being adversely affected by water, as a hydrophobic colloid. 3. lacking polar groups and, therefore, insoluble in water.

hydrop hograph (hi-'dro-fō-ro-graf) [*hydro-* + Gr. *phora* a bearing borne, or carried along + *graphein* to record] an instrument for measuring and recording the pressure and/or flow of a fluid, especially the flow of urine or the pressure of the spinal fluid.

hydrop hthalmia (hi-'drof-thal'me-ah) hydrophthalmos; buphthalmos.

hydrop hthalmos (hi-'drof-thal'mos) [*hydro-* + Gr. *ophthalmos* eye] a form of glaucoma characterized by marked enlargement and distention of the fibrous coats of the eye; buphthalmos. **h. ante'rior**, that which affects the anterior portion of the eyeball only. **h. poste'rior**, that affecting the posterior part of the eyeball only. **h. tota'lis**, that which affects the entire eyeball.

hydrop hthalmus (hi-'drof-thal'mus) hydrophthalmos; buphthalmos.

hydrop hysometra (hi-'dro-fi'so-me'trah) [*hydro-* + *physometra*] physohydrometra.

hydrop hYTE (hi-'dro-fit) [Gr. *hydrō* water + *phyton* plant] a plant adapted to grow in a very wet environment, either completely aquatic or rooted in water or mud but with stems and leaves above the water.

hydrop ic (hi-'drof'ik) [L. *hydropicus*; Gr. *hydrōpikos*] pertaining to or affected with dropsy.

hydrop igenous (hi-'dro-pij'ē-nus) causing dropsy.

hydrop lasma (hi-'dro-plaz'mah) [*hydro-* + Gr. *plasma* something formed] the watery or liquid part of the protoplasm.

hydrop neumatosis (hi-'dro-nu'mah-to'sis) [*hydro-* + Gr. *pneumatōsis* inflation] a collection of fluid and gas within the tissues.

hydrop neumogony (hi-'dro-nu-mo'go-ne) [*hydro-* + Gr. *pneuma* air + *gonyknee*] the injection of air into a joint with a view to obtaining information with regard to the presence of effusion in the joint.

hydrop neumopericardium (hi-'dro-nu'mo-per'i-kar-de-um) [*hydro-* + Gr. *pneuma* air + *pericardium*] a collection of watery fluid and gas within the pericardium.

hydrop neumoperitoneum (hi-'dro-nu'mo-per'i-to-ne'um) [*hydro-* + Gr. *pneuma* air + *peritoneum*] a collection of watery fluid and gas in the peritoneal cavity.

hydrop neumothorax (hi-'dro-nu'mo-tho'raks) [*hydro-* + Gr. *pneuma* air + *thōrax* chest] a collection of fluid and gas within the pleural cavity.

hydrop onics (hi-'dro-pon'iks) the soil-less cultivation of plants on liquid media containing the necessary nutrient.

hydrop otherapy (hi-'dro-po-ther'ah-pe) [Gr. *hydrōps* dropsy + *therapeia* treatment] the therapeutic injection of ascitic fluid.

hydrops (hi-'drops) [L.; Gr. *hydrōps*] the abnormal accumulation of serous fluid in the tissues or in a body cavity; called also *dropsy*. **h. abdom'inis**, ascites. **h. ad mat'ulam**, polyuria. **h. am'nii**, hydramnios. **h. an'tri**, effusion of serous fluid into the maxillary sinus. **h. artic'uli**, hydrarthrosis. **endolymphatic h.**, an accumulation of endolymph in the inner ear resulting in deafness and tinnitus, and sometimes vertigo (Meniere's disease); called also *labyrinthine h.* **fetal h.**, **h. feta'lis**, gross edema of the entire body, associated with severe anemia, occurring in erythroblastosis fetalis. **h. follic'uli**, accumulation of fluid in the graafian follicle, forming a large solitary follicular cyst. **h. hypos'trophos**, angioneurotic edema. **h. labyrin'thi**, **labyrinthine h.**, endolymphatic h. **h. pericar'dii**, hydropericardium. **h. spu'rius**, pseudomyxoma peritonaei. **h. tu'bae**, hydrosalpinx. **h. tu'bae prof'luens**, a condition in which the abdominal opening of the uterine tube becomes closed, and the tube may reach enormous proportions as it fills with serum; peristaltic action of the tube causes colicky pain, until the fluid escapes through the uterine opening. Called also *intermittent hydrosalpinx*.

hydropyonephrosis (hi'dro-pi'o-nē-fro'sis) [*hydro-* + Gr. *pyon* pus + *nephros* kidney + *-osis*] the accumulation of urine and pus in the pelvis of the kidney.

hydroquinone (hi'dro-kwin'ōn) [USP] chemical name: 1,4-benzenediol. A depigmenting agent, $C_6H_6O_2$, occurring as fine white needles; applied topically to the skin.

hydrorachis (hi-dror'ah-kis) [*hydro-* + Gr. *rhachis* spine] a collection of water in the vertebral canal.

hydrorachitis (hi'dro-rah-ki'tis) [*hydro-* + Gr. *rhachis* spine + *-itis*] inflammation within the vertebral canal, attended with a watery effusion.

hydrorrhea (hi'dro-re'ah) [*hydro-* + Gr. *rhoia* flow] a copious watery discharge. **h. gravida'rum**, a periodic or intermittent discharge of clear, yellowish, or bloody fluid from the uterus, caused by escape of amniotic fluid or resulting from decidual metritis. **nasal h.**, watery discharge from the nose.

hydrosalpinx (hi'dro-sal'pinks) [*hydro-* + Gr. *salpinx* trumpet] a collection of watery fluid in a uterine tube, occurring as the end-stage of pyosalpinx. **h. follicula'ris**, hydrosalpinx in which there is no central cystic cavity, the lumen being broken up into compartments as the result of fusion of the tubal plicae. **intermittent h.**, hydrops tubae profluens. **h. sim'plex**, hydrosalpinx characterized by excessive distention and thinning of the wall of the uterine tube, the plicae being few and widely separated.

hydrosarcocele (hi'dro-sar'ko-sēl) [*hydro-* + *sarcocele*] combined hydrocele and sarcocele.

hydroscheoce (hi-dros'ke-o-sēl') [*hydro-* + Gr. *oscheon* scrotum + *kēlē* hernia] a scrotal hernia containing a collection of serous fluid.

hydroscope (hi'dro-skōp) [*hydro-* + Gr. *skopein* to examine] an instrument for detecting the presence of water.

hydrosol (hi'dro-sol) a sol in which the continuous phase (dispersion medium) is water.

hydrosoluble (hi'dro-sol'u-b'l) soluble in water.

hydrophygmograph (hi'dro-sig'mo-graf) [*hydro-* + Gr. *sphygmōs* pulse + *graphein* to record] a sphygmograph with water for an index.

hydrospirometer (hi'dro-spi-rom'ē-ter) [*hydro-* + L. *spirare* to breathe + Gr. *metron* measure] a spirometer in which a column of water serves as an index.

hydrostable (hi'dro-sta'b'il) preserving a stable weight under diet restrictions or gastrointestinal disease. Cf. *hydrostable*.

hydrostat (hi'dro-stat) [*hydro-* + Gr. *histanai* to halt] a device by which the height of fluid in a container (column or reservoir) is regulated.

hydrostatic (hi'dro-stat'ik) [*hydro-* + Gr. *statikos* standing] pertaining to a liquid in a state of equilibrium; see under *pressure*.

hydrostatics (hi'dro-stat'iks) the science of liquids in a state of rest or equilibrium and of the pressures they exert.

hydrosynthesis (hi'dro-sin'the-sis) a chemical reaction in which water is formed.

hydrosyngomyelia (hi'dro-si-ring'go-mi-e'lē-ah) [*hydro-* + Gr. *syrix* tube + *myelos* marrow] coexistence of hydromyelia and syngomyelia.

Hydrotæa (hi'dro-te'ah) a genus of flies. **H. meteor'ica**, a species which attacks the eyes and nostrils of man and animals.

hydrotaxis (hi'dro-tak'sis) [*hydro-* + Gr. *taxis* arrangement] an orientation movement of motile organisms or cells in response to stimulation by water or moisture.

hydrotherapeutics (hi'dro-ther'ah-pu'tiks) hydrotherapy.

hydrotherapy (hi'dro-ther'ah-pe) [*hydro-* + Gr. *therapeia* service done to the sick] the application of water in any form, either internally or externally, in the treatment of disease.

hydrothermic (hi'dro-ther'mik) relating to the temperature effects of water, as in hot baths.

hydrothionammonemia (hi'dro-thi'o-nam'o-ne'me-ah) [*hydro-* + Gr. *theion* sulfur + *ammonium* + *haima* blood] the occurrence of ammonium hydrosulfide in the blood.

hydrothionemia (hi'dro-thi'o-ne'me-ah) [*hydro-* + Gr. *theion* sulfur + *haima* blood] the presence of hydrogen sulfide in the blood.

hydrothionuria (hi'dro-thi'o-nu're-ah) [*hydro-* + Gr. *theion* sulfur + *ouron* urine + *-ia*] the presence of hydrogen sulfide in the urine.

hydrothorax (hi'dro-tho'raks) [*hydro-* + Gr. *thorax* chest] a collection of watery fluid in the pleural cavity; pleural effusion with transudate. **chylous h.**, the presence of chyle in the thoracic cavity, due to obstruction of or rupture of the thoracic duct.

hydrotomy (hi-drot'o-me) [*hydro-* + Gr. *tomē* a cutting] the dissection or separation of parts by the forcible injection of water.

hydrotropism (hi-drot'ro-pizm) [*hydro-* + Gr. *trōpē* a turn, turning] a growth response of a nonmotile organism elicited by the presence of water or moisture.

hydrotubation (hi'dro-too-ba'shun) a method of maintaining

patency of the uterine tube, in which hydrocortisone in saline solution is introduced into the tube followed by chymotrypsin in saline solution.

hydroureter (hi'dro-u-re'ter) abnormal distention of the ureter with urine or with a watery fluid, due to obstruction from any cause; cf. *megaloureter*.

hydroureterosis (hi'dro-u-re'ter-o'sis) hydroureter.

hydrouria (hi'dro-u're-ah) [*hydro-* + Gr. *ouron* urine + *-ia*] hydruria.

hydrous (hi'drus) containing water.

hydrovarium (hi'dro-va're-um) [*hydro-* + L. *ovarium* ovary] a collection of serous fluid in an ovary.

hydroxide (hi-drok'sid) any compound of hydroxyl radical (OH), or of hydroxide ion, OH^- , with another radical or atom. **ferric h.**, the hydrated oxide of iron, $Fe(OH)_3$, a reddish brown substance, formerly used as an antidote in arsenic poisoning. Called also *iron hydroxide*.

hydroxocobalamin (hi-drok'so-ko-bal'ah-min) [USP] chemical name: cobinamide dihydroxide, dihydrogen phosphate (ester), mono(inner salt), 3'-ester with 5,6-dimethyl-1- α -D-ribofuranosylbenzimidazole. An analogue of cyanocobalamin, $C_{62}H_{89}CoN_{13}O_{15}P$, in which the cyanide ion is replaced with a hydroxyl ion, occurring as dark red crystals or as a red crystalline powder; it possesses exceptionally long-acting hematopoietic activity. Called also *vitamin B_{12b}*.

hydroxy- (hi-drok'se) a chemical prefix indicating presence of the univalent radical OH.

hydroxyacetanilide (hi-drok'se-as'ē-tan'i-lid) acetaminophen.

hydroxyamphetamine hydrobromide (hi-drok'se-amfet'ah-mēn) [USP] chemical name: 4-(2-aminopropyl)phenol hydrobromide. An adrenergic, $C_9H_{13}NO \cdot HBr$, occurring as a white, crystalline powder; used as a mydriatic, applied topically to the conjunctiva. It is also used topically as a nasal decongestant and orally as a pressor agent in the treatment of heart block, carotid sinus syndrome, and postural hypotension.

hydroxyapatite (hi-drok'se-ap'ah-tit) an inorganic compound, $Ca_{10}(PO_4)_6(OH)_2$, found in the matrix of bone and the teeth, which gives rigidity to these structures.

hydroxybenzene (hi-drok'se-ben'zēn) phenol.

hydroxychloroquine sulfate (hi-drok'se-klo'ro-kwin) [USP] chemical name: 7-chloro-4-[4-(ethyl(2-hydroxyethyl)amino)-1-methylbutylamino]-quinoline sulfate. A quinoline derivative, $C_{18}H_{26}ClN_3O \cdot H_2SO_4$, occurring as a white or nearly white, crystalline powder; used as an antimalarial and as a lupus erythematosus suppressant, administered orally. It has also been used in the treatment of rheumatoid arthritis and symptomatic cases of giardiasis.

25-hydroxycholecalciferol (hi-drok'se-ko'le-kal-sif'ē-rol) a metabolically activated form of vitamin D (cholecalciferol), which is synthesized in the liver. It is the precursor of 1,25-dihydroxycholecalciferol. Called also *calcidiol* and *calcifediol*.

17-hydroxycorticosteroid (hi-drok'se-kor'ti-ko-ste'roid) any adrenocorticosteroid with a dihydroxyacetone side chain, including hydrocortisone (cortisol) and 11-deoxycortisone. Called also *Porter-Silber chromogen*.

17-hydroxycorticosterone (hi-drok'se-kor'ti-ko-ster'ōn) hydrocortisone.

hydroxydione sodium succinate (hi-drok'se-di'ōn) chemical name: 21-(3-carboxy-1-oxopropoxy)-5 β -pregnane-3,20-dione sodium succinate. A steroid, $C_{25}H_{40}NaO_6$, used as a general anesthetic, administered intravenously.

25-hydroxyergocalciferol (hi'drok-se-er'go-kal-sif'ē-rol) an activated form of vitamin D (ergocalciferol) synthesized in the liver.

hydroxyestrin benzoate (hi-drok'se-es'trin) estradiol benzoate.

hydroxyl (hi-drok'sil) the univalent radical OH.

hydroxylase (hi-drok'sil-lās) any of a group of enzymes (oxidoreductases) bringing about the coupled oxidation of two donors, with incorporation of oxygen into one of the donors. **aryl 4-h.**, an enzyme catalyzing aniline and reduced NADP to 4-hydroxyaniline and NADP. **cholesterol 20-h.**, an enzyme that catalyzes the change of cholesterol and reduced NADP to 20- β -hydroxycholesterol and NADP. **dopamine h.**, an enzyme that catalyzes the change of 3,4-dihydroxyphenylethylamine and ascorbate to norepinephrine and dehydroascorbate. **estradiol 6- β -h.**, an enzyme that catalyzes the change of estradiol and reduced NADP to 6- β -hydroxyestradiol and NADP. **estriol 2-h.**, an enzyme that catalyzes the change of estriol and reduced NAD(P) to 2-hydroxyestriol and NAD(P). **p-hydroxyphenylpyruvate h.**, an enzyme that catalyzes the change of p-hydroxyphenylpyruvate and ascorbate to homogentisate, dehydroascorbate, and carbon dioxide. **imidazoleacetate h.**, an enzyme that catalyzes the change of imidazoleacetate and reduced NAD to imidazoloneacetate and NAD. **kynurenate h.**, an enzyme catalyzing the change of kynurenate and reduced NADP to kynurenate 7,8-dihydrodiol and NADP. **kynurenine 3-h.**,

an enzyme catalyzing the change of L-kynurenine and reduced NADP to 3-hydroxy-L-kynurenine and NADP. **phenylalanine h.**, an enzyme that catalyzes the change of L-phenylalanine and tetrahydropteridine to L-tyrosine and dihydropteridine; called also *phenylalaninase*. **squalene h.**, an enzyme catalyzing the change of squalene and reduced NADP to lanosterol and NADP; called also *squalene oxydacyclase*. **steroid β -h.**, an enzyme that catalyzes the change of a steroid and reduced NADP to a β -hydroxysteroid and NADP.

hydroxyllysine (hi-'drok-sil'i-sin) one of the alpha amino acids, $\text{NH}_2 \cdot \text{CH}_2 \cdot \text{CHOH}(\text{CH}_2)_2 \cdot \text{CH}(\text{NH}_2) \cdot \text{COOH}$.

hydroxymethyltransferase (hi-'drok''se-meth''il-trans'fer-ās) an enzyme that catalyzes the transfer of a hydroxymethyl group, as from L-serine to tetrahydrofolate.

hydroxynervone (hi-'drok''se-ner'vōn) a cerebroside occurring in brain tissue.

hydroxyphenamate (hi-'drok''se-fen'ah-māt) chemical name: 2-phenyl-1,2-butanediol-1-carbamate; a minor tranquilizer, $\text{C}_{11}\text{H}_{13}\text{NO}_3$, formerly used in the treatment of anxiety and tension.

hydroxyphenylethylamine (hi-'drok''se-phen''il-eth''il-am'in) tyramine.

hydroxyprogesterone capraote (hi-'drok''se-pro-jes'ter-ōn) [USP] chemical name: 17α -(1-oxohexyloxy)pregna-4-ene-3,20-dione. A synthetic progestin, $\text{C}_{27}\text{H}_{46}\text{O}_4$, occurring as a white or creamy white, crystalline powder; used in the treatment of functional uterine bleeding, abnormalities of the menstrual cycle, threatened abortion, and uterine cancer, administered intramuscularly. Called also *h. hexanoate*.

hydroxyproline (hi-'drok''se-pro'lin) an amino acid, gamma-hydroxy-alpha-pyrrolidin-carboxylic acid, produced in the digestion or hydrolytic decomposition of proteins, especially of collagens.

hydroxyprolinemia (hi-'drok''se-pro'len-e'me-ah) a disorder of amino acid metabolism characterized by an excess of free hydroxyproline in the plasma and urine, due to a defect in the enzyme hydroxyproline oxidase; it may be associated with mental retardation.

hydroxypropyl methylcellulose (hi-'drok''sī-pro'pil) chemical name: cellulose 2-hydroxypropyl methyl ether. The propylene glycol ether of methylcellulose, occurring as a white to slightly off-white, fibrous or granular powder, and supplied in differing degrees of viscosity; used as a suspending and viscosity-increasing agent and tablet excipient in pharmaceutical preparations, and applied topically to the conjunctiva to protect the cornea during certain ophthalmic procedures and to lubricate the cornea.

17-hydroxysteroid (hi-'drok''se-ste'roid) an excretion product of adrenocorticosteroids.

hydroxystilbamidine isethionate (hi-'drok''se-stil-bam'i-dēn) [USP] chemical name: 4-[2-[4-(aminoiminomethyl)phenyl]ethenyl]-3-hydroxybenzenecarboximidamide bis(2-hydroxyethanesulfonate) (salt). An antifungal and antiprotozoal, $\text{C}_{16}\text{H}_{18}\text{N}_4\text{O} \cdot 2\text{C}_2\text{H}_5\text{O}_4\text{S}$, occurring as a fine, yellow, crystalline powder; used as an antileishmanial, administered by intramuscular or intravenous infusion. It has also been used in the treatment of some fungal infections, such as North American blastomycosis.

hydroxytetracycline (hi-'drok''se-tet'rah-si'klēn) oxytetracycline.

5-hydroxytryptamine (hi-'drok''se-trip'tah-mēn) serotonin.

hydroxyurea (hi-'drok''se-u-re'ah) [USP] an antineoplastic agent, $\text{CH}_4\text{N}_2\text{O}_2$, occurring as a white to off-white powder; used in the treatment of melanoma, resistant chronic myelocytic leukemia, and recurrent, metastatic, or inoperable ovarian carcinoma, administered orally. It is an inhibitor of ribonucleotide reductase.

hydroxyvaline (hi-'drok''se-val'in) an amino acid obtained by protein hydrolysis.

hydroxyzine (hi-'drok''sī-zēn) chemical name: 2-[2-[4-(4-chlorophenyl)phenylmethyl]-1-piperazinyl]ethoxyethanol. A synthetic drug, $\text{C}_{21}\text{H}_{27}\text{ClN}_2\text{O}_2$, with central nervous system depressant, antispasmodic, antihistaminic, and antifibrillatory actions. **h. hydrochloride** [USP], the dihydrochloride salt of hydroxyzine, $\text{C}_{21}\text{H}_{27}\text{ClN}_2\text{O}_2 \cdot 2\text{HCl}$, occurring as white powder; used in the treatment of anxiety, tension, and agitation in conditions of emotional stress, in acute and chronic urticaria and other manifestations of allergic dermatoses, as an antiemetic, and as pre- and postoperative sedative, administered orally or intramuscularly. **h. pamoate** [USP], the pamoate salt of hydroxyzine, $\text{C}_{21}\text{H}_{27}\text{ClN}_2\text{O}_2 \cdot \text{C}_{22}\text{H}_{16}\text{O}_6$, occurring as light yellow powder, having the actions and uses of the hydrochloride salt; administered orally.

Hydrozoa (hi-'dro-zo'ah) [Gr. *Hydra* a mythical nine-headed monster + *zoon* animal] a class of coelenterates that usually possess colonial branching polyps and small medusae, including the genus *Physalia* (Portuguese man-of-war).

hydrozoan (hi-'dro-zo'an) an individual of the class Hydrozoa.

hydruria (hi-'droo're-ah) [*hydr-* + Gr. *ouron* urine + *-ia*] excretion of urine of low osmolality or specific gravity.

hydruric (hi-'droo'rik) characterized by hydruria.

hyenanchin (hi-'ē-nan'kin) a poisonous substance, $\text{C}_{15}\text{H}_{18}\text{O}_7$,

from the outer envelopes of the fruit of *Hyaenanche globosa*, of South Africa. It somewhat resembles strychnine in its action.

Hygieia (hi-'je'ah) [Gr. *Hygieia*] the goddess of health, one of the daughters of *Æsculapius*, the mythical god of healing, who assisted in the rites at the early temples of healing.

hygeiolatry (hi-'je-ol'ah-tre) [Gr. *Hygieia* + *latreia* servitude] (*obs.*) excessive attention to one's own health.

hygeiophrontis (hi-'je-o-fron'tis) anxious concern about one's own health; hypochondriasis.

hygeiophrontistic (hi-'je-o-fron-tis'tik) pertaining to or characterized by hygeiophrontis.

hygieist (hi-'je'ist) hygienist.

hygiene (hi'jēn) [Gr. *hygieia* health] the science of health and of its preservation. **industrial h.**, that branch of preventive medicine which is concerned with the protection of health of the industrial population. **mental h.**, the science which deals with the development of healthy mental and emotional reactions and habits; psychophylaxis. **oral h.**, the proper care of the mouth and teeth for the maintenance of health and the prevention of disease. **radiation h.**, the science of practices involved in human protection from radiation injury. **sex h.**, that department of hygiene which deals with sex, sexual conduct, and personal sex hygiene as these are related to individual and community health. **social h.**, that department of hygiene which deals with the promotion of sexual health, embracing personal sex hygiene, healthy marriage and family relations, and sex education. The term is sometimes used as a euphemism for venereal disease control.

hygienic (hi-'je-en'ik) pertaining to hygiene, or conducive to health.

hygienics (hi-'je-en'iks) a system of principles for promoting health; hygiene.

hygienism (hi-'je-en-izm) devotion to the observance of hygienic rules.

hygienist (hi-'je'nist, hi-'je-en'ist) a specialist in hygiene. **dental h.**, an auxiliary member of the dental profession who has been trained in the art of removing calcareous deposits and stains from the surfaces of the teeth and in providing additional services and information on the prevention of oral disease; such persons are employed in private dental offices or are active in school or public health programs.

hygienization (hi-'je-en'i-za'shun) the establishment of hygienic conditions.

hygieology (hi-'je-ol'o-je) [Gr. *hygieia* health + *-logy*] the complete science upon which the arts of hygiene and sanitation are based.

hygiogenesis (hi-'je-o-jen'ē-sis) [Gr. *hygiēs* healthy + *gennan* to produce] the mechanism of the processes which lead to maintenance of health.

hygiology (hi-'je-ol'o-je) hygieology.

hygrechema (hi-'grē-ke'mah) an auscultation sound caused by the presence of water.

hygric (hi'grik) [Gr. *hygros* moist] pertaining or relating to moisture.

hygro- [Gr. *hygros* moist] a combining form meaning moist or denoting relationship to moisture.

hygroblepharic (hi-'gro-blē-far'ik) [*hygro-* + Gr. *blepharon* eyelid] denoting an excessive watery condition of the eyelids.

hygroma (hi-'gro'mah), pl. *hygro'mas* or *hygro'mata* [*hygro-* + *-oma*] a sac, cyst, or bursa distended with a fluid. **h. col'li**, a watery tumor of the neck. **cystic h.**, **h. cys'ticum**, cystic lymphangioma. **Fleischmann's h.**, enlargement of a bursa in the floor of the mouth, to the outer side of the genioglossus muscle. **h. praepatella're**, housemaid's knee. **subdural h.**, a collection of fluid in the subdural space resulting from liquefaction of a subdural hematoma; see under *hematoma*.

hygromatous (hi-'gro'mah-tus) pertaining to or of the nature of hygroma.

hygrometer (hi-'grom'ē-ter) [*hygro-* + Gr. *metron* measure] an instrument for measuring the moisture of the atmosphere. **hair h.**, **Saussure's h.**, a hygrometer whose action is determined by the elongation and contraction of a hair under the influence of moisture.

hygrometric (hi-'gro-met'rik) pertaining to hygrometry.

hygrometry (hi-'grom'ē-tre) [*hygro-* + Gr. *metron* measure] the measurement of the proportion of moisture in the air.

hygromycin (hi-'gro-mi'sin) an antibiotic, $\text{C}_{23}\text{H}_{28}\text{NO}_{12}$, produced by *Streptomyces hygroscopicus* and *S. noboritoensis*; called also *hygromycin A*. **h. B.**, an anthelmintic, $\text{C}_{15}\text{H}_{28}\text{O}_{10}$, used in swine.

hygroscopic (hi-'gro-skop'ik) taking up and retaining moisture readily.

Hygroton (hi-'gro-ton) trademark for a preparation of chlor-thalidone.

Hykinone (hi'kin-ōn) trademark for a preparation of menadione sodium bisulfite.

hyl- see *hylo-*.

hyla (hi'lāh) (obs.) a lateral extension of the aqueduct of Sylvius (aqueductus cerebri).

hyle (hi'le) [Gr. *hylē* matter] the theoretical primitive substance from which all matter was once thought to be composed. See *protyl*.

hyle- see *hypo-*.

Hylemyia (hi'lē-mi'ah) a genus of flies, the larvae of which infest vegetables and may be swallowed if the latter are eaten raw. *H. anti'qua*, onion root maggot. *H. bras'sicae*, the cabbage root maggot.

hylergography (hi'ler-gog'rah-fe) [Gr. *hylē* matter + *ergon* work + *graphein* to write] a recording of the effect of environmental materials on a cell.

hylic (hi'lik) [Gr. *hylē* matter] composed of matter; a term applied by Adam to the pulp tissues of the embryo.

hypo-, hyl-, hyle- [Gr. *hylē* matter] combining form denoting relationship to matter (material or substance). Cf. *-yl*.

hylogenesis (hi'lo-jen'ē-sis) [*hypo-* + Gr. *genesis* formation] the formation of matter.

hylogeny (hi-loj'ē-ne) hylogenesis.

hylogy (hi-lol'o-je) [*hypo-* + *-logy*] the study of elementary or crude materials.

hylopathism (hi-lop'ah-thizm) [*hypo-* + Gr. *pathos* disease] the obsolete doctrine that disease is due to changes in the constitution of matter.

hylopathist (hi-lop'ah-thist) (obs.) a believer in the theory of hylopathism.

hylotropic (hi'lo-trop'ik) pertaining to or characterized by hylotropy.

hylotropy (hi-lot'ro-pe) [Gr. *hylē* matter + *tropē* a turn, turning] the ability of a substance to change from one physical form to another (e.g., solid to liquid, liquid to gas) without change in chemical composition; change of phase.

hylozoism (hi-lo'zo-izm) [*hypo-* + Gr. *zōon* animal] the doctrine that all matter in the universe is alive.

hymecromone (hi'mē-kro'mōn) chemical name: 7-hydroxy-4-methyl-2*H*-1-benzopyran-2-one; a choleric and biliary antispasmodic, C₁₀H₈O₃.

hymen (hi'men) [Gr. *hymēn* membrane] [NA] the membranous fold which partially or wholly occludes the external orifice of the vagina. **annular h.**, circular g. **h. bifene'stra'tus**, **h. bifo'ris**, a hymen with two openings side by side and a broad septum between them. **circular h.**, a hymen with a circular opening. **cribriform h.**, a hymen pierced by many small perforations. **denticular h.**, a hymen with an opening which has serrate edges. **falciform h.**, a sickle-shaped hymen. **fenestrated h.**, cribriform h. **imperforate h.**, one which completely closes the vaginal orifice. **infundibuliform h.**, a hymen that has a central opening with sloping sides. **lunar h.**, a moon-shaped hymen. **septate h.**, **h. sep'tus**, a hymen in which the opening is divided by a narrow septum. **h. sub-sep'tus**, a hymen in which the opening is partially filled by a septum growing out of one wall, but not reaching the other.

hymenal (hi'men-al) pertaining to the hymen.

hymenectomy (hi'men-ek'to-me) [Gr. *hymēn* membrane, hymen + *ektomē* excision] excision of the hymen.

hymenitis (hi'men-i'tis) [Gr. *hymēn* membrane + *-itis*] inflammation of the hymen.

hymenium (hi-me'ne-um) [*dim.* of Gr. *hymēn* membrane] the fertile, or spore-forming, surface of a fungus, which is composed of hyphae lining the fruiting body.

hymenolepiasis (hi'mē-no-lep-i'ah-sis) infection with *Hymenolepis*.

Hymenolepididae (hi'men-o-lep'i-di-de) a family of small to medium-sized tapeworms of the order Cyclophyllidae, subclass Cestoda, which parasitizes birds and mammals, including man. *Hymenolepis* is the genus of medical importance.

Hymenolepis (hi'mē-nol'ē-pis) [Gr. *hymēn* membrane + *lepis* rind] a genus of tapeworms of the family Hymenolepididae. **H. diminu'ta**, a tapeworm of rats and mice, occasionally found in man. **H. frater'na**, the rodent form of *H. nana*; often called *H. nana* var. *fraterna*. **H. lanceola'ta**, *Drepanidotaenia lanceolata*. **H. na'na**, the dwarf tapeworm, a species about 7 to 80 mm. long that is parasitic in rats, mice, and man, especially children. Infected persons are usually asymptomatic, but in massive infection symptoms may include dizziness, abdominal pain, diarrhea, insomnia, convulsions, etc. **H. na'na** var. *frater'na*, *H. fraterna*.

hymenology (hi'men-ol'o-je) [Gr. *hymēn* membrane + *-logy*] the sum of what is known regarding the membranes.

Hymenomycetes (hi'mē-no-mi-se'tēz) a series of fungi of the subclass Homobasidiomycetes, class Basidiomycetes, including the orders Polyporales and Agaricales.

Hymenoptera (hi'men-op'ter-ah) [Gr. *hymēn* membrane + *pteron* wing] an order of insects usually having two pairs of well developed membranous wings, as the bees, wasps, ants, etc.

hymenopteran (hi'men-op'ter-an) any insect of the order Hymenoptera.

hymenopterism (hi'men-op'ter-izm) poisoning by the stings or bites of insects of the order Hymenoptera, as of a bee or wasp.

hymenorrhaphy (hi'men-or'ah-fe) [Gr. *hymēn* hymen + *rhaphē* seam] the closure of the vagina by sutures at the hymen.

hymenotomy (hi'men-ot'o-me) [Gr. *hymēn* membrane + *temnein* to cut] surgical incision of the hymen.

hyobasioglossus (hi'o-ba'se-o-glos'us) the basal part of the hyoglossus muscle.

hyodeoxycholaneresis (hi'o-de-ok'se-ko'lah-ner'ē-sis) [*hyodeoxycholic* acid + Gr. *hairesis* a taking] (obs.) increase in the output or elimination of hyodeoxycholic acid in the bile. Cf. *cholaneresis*.

hyoepiglottic (hi'o-ep'i-glot'ik) pertaining to the hyoid bone and the epiglottis.

hyoepiglottidean (hi'o-ep'i-glo-tid'e-an) hyoepiglottic.

hyoglossal (hi'o-glos'al) [hyoid bone + Gr. *glōssa* tongue] pertaining to the hyoid bone and the tongue or to the hyoglossal muscle.

hyoid (hi'oid) [Gr. *hyoieides* U-shaped] 1. shaped like the Greek letter upsilon (υ). 2. pertaining to the hyoid bone.

hyoscine (hi'o-sin) [L. *hyoscina*] scopolamine.

hyoscyamine (hi'o-si'ah-min) [USP] chemical name: [3(S)-endo]-α-(hydroxymethyl)benzeneacetic acid 8-methyl-8-azabicyclo[3.2.1]oct-3-yl ester. An anticholinergic alkaloid, C₁₇H₂₃NO₃, derived from *Hyoscyamus niger*, *Atropa belladonna*, and other solanaceous plants, occurring as a white, crystalline powder; it is the levorotatory component of racemic atropine with actions and uses similar to those of atropine but with more potent central and peripheral effects. It is administered orally or parenterally. **h. hydrobromide** [USP], a salt of hyoscyamine, C₁₇H₂₃NO₃·HBr, occurring as white crystals or as a crystalline powder, having actions and uses similar to those of atropine, administered orally or parenterally. **h. sulfate** [USP], a salt of hyoscyamine, (C₁₇H₂₃NO₃)₂·H₂SO₄·2H₂O, occurring as white crystals or as a crystalline powder, having actions and uses similar to those of atropine, administered orally or parenterally.

Hyoscyamus (hi'o-si'ah-mus) [L.; Gr. *hys* swine + *kyamos* bean] a genus of annual or biennial solanaceous plants; the leaves, seeds, flowers, and tops of *H. ni'ger* L. contain the anticholinergic alkaloids hyoscyamine and scopolamine.

hyoscyamus (hi'o-si'ah-mus) the dried leaf of *Hyoscyamus niger* L., with or without its stem and top, which contains the anticholinergic alkaloids hyoscyamine and scopolamine; formerly used as a smooth muscle relaxant and to produce parasympathetic blockade. Called also *henbane* and *black henbane*.

Hyostrogylus rubidus (hi'o-stron'ji-lus roo'bī-dus) a small red nematode worm found in the stomach of pigs.

hyothyroid (hi'o-thi'roid) pertaining to the hyoid bone and the thyroid cartilage.

hypacidemia (hi-pas'i-de'me-ah) [Gr. *hypo* under + *acid* + *haima* blood] deficiency of an acid in the blood.

hypacusia (hi'pah-ku'ze-ah) hypoacusis.

hypacusis (hi'pah-ku'sis) [Gr. *hypo* under + *akousis* hearing] hypoacusis.

hypadrenia (hi'pah-dre'ne-ah) Addison's disease.

hypalbuminemia (hi'pal-bu'mī-ne'me-ah) hypoalbuminemia.

hypalgesia (hi'pal-je'ze-ah) [Gr. *hypo* under + *algēsis* pain] diminished sensitiveness to pain.

hypalgescic (hi'pal-je'sik) pertaining to, characterized by, or producing hypalgesia.

hypalgetic (hi'pal-jet'ik) hypalgescic.

hypalgia (hi-pal'je-ah) hypalgesia.

hypamnion (hi-pam'ne-on) hypamnios.

hypamnios (hi-pam'ne-os) [Gr. *hypo* under + *amnion*] deficiency of the amniotic fluid.

hypanakinesia (hi-pan'ah-ki-ne'ze-ah) [Gr. *hypo* under + *anakinēsis* exercise + *-ia*] hypokinesia.

hypanakinesis (hi-pan'ah-ki-ne'sis) hypokinesia.

hypaphorine (hi-paf'o-rin) a crystalline alkaloid, C₁₄H₁₈N₂O₂, obtained from *Erythrina americana* Mill., and other members of the leguminosae; it is a convulsive poisonous alkaloid.

Hypaque (hi'pāk) trademark for preparations of diatrizoate meglumine and diatrizoate sodium.

hyparterial (hi'par-te're-al) [Gr. *hypo* under + *artēria* artery] beneath an artery, applied especially to the bronchi which are so situated.

hypaxial (hi-pak'se-al) ventral to the long axis of the body.

hypazoturia (hi-paz'o-tu're-ah) [Gr. *hypo* under + *azoturia*] excretion of urine of low nitrogen concentration.

hypencephalon (hi'pen-sef'ah-lon) [Gr. *hypo* under + *enkephalos* brain] (obs.) the mesencephalon, pons, and medulla.

hypenchyme (hi'pen-kim) the primitive embryonic tissue formed in the cavity of the archenteron.

hyper- [Gr. *hyper* above] a prefix signifying above, beyond, or excessive. See also words beginning *super*.

hyperabsorption (hi'per-ab-sorp'shun) increased intestinal absorption of a substance.

hyperacanthosis (hi'per-ak'an-tho'sis) [*hyper-* + Gr. *akantha* prickly + *-osis*] acanthosis.

hyperacid (hi'per-as'id) [*hyper-* + L. *acidus* sour] abnormally or excessively acid.

hyperacidaminuria (hi'per-as'id-am'i-nu're-ah) excess of amino acids in the urine.

hyperacidity (hi'per-ah-sid'i-te) an excessive degree of acidity. **gastric h.**, hyperchlorhydria.

hyperacusia (hi'per-ah-koo'ze-ah) hyperacusis.

hyperactive (hi'per-ak'tiv) pertaining to or characterized by hyperactivity; hyperkinetic. See also *hyperkinetic syndrome*, under *syndrome*.

hyperactivity (hi'per-ak-tiv'i-te) abnormally increased activity. Developmental hyperactivity of children is characterized by constant motion—exploring, experimenting, etc.—and usually accompanied by distractibility and low tolerance for frustration. It usually abates during adolescence. Hyperactivity may also result from brain damage and psychoses. Called also *hyperkinesia*.

hyperacusia (hi'per-ah-koo'ze-ah) hyperacusis.

hyperacusis (hi'per-ah-ku'sis) [*hyper-* + Gr. *akousis* hearing] an exceptionally acute sense of hearing, the hearing threshold being unusually low. The term has been used to denote a painful sensitiveness to sounds, but there is no necessary relationship between the threshold of hearing and that of discomfort.

hyperacute (hi'per-ah-küt') extremely acute.

hyperadenosis (hi'per-ad'ē-no'sis) [*hyper-* + Gr. *adēn* gland + *-osis*] a condition characterized by enlargement of the glands.

hyperadiposis (hi'per-ad'i-po'sis) [*hyper-* + *adiposis*] extreme adiposity or fatness.

hyperadiposity (hi'per-ad'i-pos'i-te) hyperadiposis.

hyperadrenalemia (hi'per-ah-dre'nal-e'me-ah) the presence of an abnormally increased amount of adrenal secretion in the blood.

hyperadrenalism (hi'per-ah-dre'nal-izm) abnormally increased secretory activity of the adrenal gland.

hyperadrenia (hi'per-ah-dre'ne-ah) hyperadrenalism.

hyperadrenocorticism (hi'per-ah-dre'no-kor'ti-sizm) a condition characterized by abnormally increased functional activity of the cortex of the adrenal gland. See *Cushing's syndrome* (def. 1), under *syndrome*.

hyperaffective (hi'per-af-fek'tiv) pertaining to or characterized by hyperaffectivity.

hyperaffectivity (hi'per-af-fek-tiv'i-te) abnormally increased sensibility to mild superficial stimuli; the quality of abnormally heightened emotional reactivity.

hyperakusis (hi'per-ah-koo'sis) hyperacusis.

hyperalbuminemia (hi'per-al-bu'mi-ne'me-ah) an abnormally high albumin content of the blood.

hyperalbuminosis (hi'per-al-bu'mi-no'sis) a condition characterized by presence of an excess of albuminoids.

hyperaldosteronemia (hi'per-al'do-stēr'ōn-e'me-ah) abnormal increase in the level of aldosterone in the blood.

hyperaldosteronism (hi'per-al'do-stēr'ōn-izm) aldosteronism.

hyperaldosteronuria (hi'per-al'do-stēr'ōn-u're-ah) the presence of excessive amounts of aldosterone in the urine.

hyperalgesia (hi'per-al-je'ze-ah) [*hyper-* + Gr. *algēsis* pain] excessive sensitiveness or sensibility to pain. **auditory h.**, the condition in which slight noises cause pain. **muscular h.**, the condition in which slight exertion causes great pain.

hyperalgesic (hi'per-al-je'sik) pertaining to or characterized by hyperalgesia.

hyperalgetic (hi'per-al-jet'ik) hyperalgesic.

hyperalgia (hi-per-al'je-ah) [*hyper-* + *-algia*] hyperalgesia.

hyperalimentation (hi'per-al'i-men-ta'shun) the ingestion or administration of a greater than optimal amount of nutrients. **parenteral h.**, the intravenous administration of the total nutrient requirements of the patient with gastrointestinal dysfunction, accomplished via a central venous catheter, usually inserted in the superior vena cava. Called also *total parenteral nutrition* and *total parenteral alimentation*.

hyperalimentosis (hi'per-al'i-men-to'sis) disease due to excess in eating.

hyperalkalescence (hi'per-al'kah-les'ens) an excess of alkalinity.

hyperalkalinity (hi'per-al'kah-lin'i-te) excessive alkalinity.

hyperallantoinuria (hi'per-ah-lan'to-in-u're-ah) an excess of allantoin in the urine.

hyperaltonemia (hi'per-al'o-ne'me-ah) [*hyper-* + Gr. *halssalt* + *haima* blood] excess of salts in the blood.

hyperalphalipoproteinemia (hi'per-al'fah-lip'o-pro'te-in-

e'me-ah) the presence of abnormally high levels of α -lipoproteins in the serum.

hyperaminoacidemia (hi'per-am'i-no-as'i-de'me-ah) presence of amino acids in the blood in excess of the normal amount.

hyperammonemia (hi'per-am'mo-ne'me-ah) elevated levels of ammonia or its compounds in the blood. A congenital form occurs in two types: *Type 1*, due to deficiency of carbamoyl phosphate synthetase, is marked by vomiting, lethargy, and flaccidity and by elevated plasma and urinary levels of glycine. *Type 2*, due to deficiency of ornithine transcarbamylase, is marked by vomiting, lethargy, coma, and hepatomegaly. Symptoms are aggravated by protein ingestion. Hyperammonemia may also occur in other nongenetic diseases, as in severe liver disease. Called also *ammonemia*.

hyperammoniemia (hi'per-ah-mo'ne-e'me-ah) hyperammonemia.

hyperammonuria (hi'per-am'mo-nu're-ah) increased excretion of ammonia in the urine.

hyperamylasemia (hi'per-am'il-ās-e'me-ah) abnormally high elevation of amylase in the blood serum.

hyperanacinesia (hi'per-an'ah-si-ne'ze-ah) hyperkinesia.

hyperanakinnesia (hi'per-an'ah-ki-ne'ze-ah) [*hyper-* + Gr. *anakinēsis* exercise + *-ia*] hyperkinesia.

hyperandrogenism (hi'per-an'dro-jen-izm) a state characterized or caused by an excessive secretion of androgens.

hyperaphia (hi'per-a'fe-ah) [*hyper-* + Gr. *haphē* touch] tactile hyperesthesia.

hyperaphic (hi'per-af'ik) pertaining to or characterized by hyperaphia (tactile hyperesthesia).

hyperarousal (hi'per-ah-row'sal) a state of increased psychological and physiological tension marked by such effects as reduced tolerance to pain, insomnia, fatigue, accentuation of personality traits, etc.

hyperazotemia (hi'per-az'o-te'me-ah) [*hyper-* + *azotemia*] an excess of nitrogenous matter, usually urea, in the blood.

hyperazoturia (hi'per-az'o-tu're-ah) presence of an excessive amount of nitrogenous matter in the urine.

hyperbaric (hi'per-bār'ik) [*hyper-* + Gr. *baros* weight] characterized by greater than normal pressure or weight; applied to gases under greater than atmospheric pressure, as hyperbaric oxygen, or to a solution of greater specific gravity than another taken as a standard of reference.

hyperbarism (hi'per-bar'izm) the condition resulting from exposure to ambient gas pressure or atmospheric pressures that exceed the pressure within body tissues, fluids, and cavities.

hyperbasophilic (hi'per-bas'o-fil'ik) staining intensely with basic dyes.

hyperbetalipoproteinemia (hi'per-ba'tah-lip'o-pro'te-in-e'me-ah) increased accumulation of β -lipoproteins in the blood. **familial h.**, familial hyperlipoproteinemia, type IIa.

hyperbicarbonatemia (hi'per-bi-kar'bo-nāt-e'me-ah) the presence of an excessive amount of bicarbonate in the blood.

hyperbilirubinemia (hi'per-bil'i-roo'bi-ne'me-ah) excessive concentrations of bilirubin in the blood, which may lead to jaundice; the hyperbilirubinemias are classified as conjugated or unconjugated, according to the predominant form of bilirubin in the blood. **congenital h.**, Crigler-Najjar syndrome. **conjugated h.**, that due to defective excretion of conjugated bilirubin by the liver cells or to anatomic obstruction to bile flow within the liver or in the extrahepatic bile duct system, it includes Dubin-Johnson syndrome and Rotor's syndrome. **constitutional h.**, Gilbert's disease. **neonatal h.**, a mild, transient, "physiological" hyperbilirubinemia of the unconjugated type occurring in the normal neonate; a transient familial form also occurs, with onset of jaundice within four days after birth, which may lead to kernicterus. **unconjugated h.**, that due to excessive bilirubin production (hemolysis), to defective clearance of bilirubin from the blood by the liver, or to defective conjugation by the liver; it includes hemolytic states, Crigler-Najjar syndrome, Gilbert's syndrome, and neonatal hyperbilirubinemia.

hyperblastosis (hi'per-blas-to'sis) [*hyper-* + Gr. *blastos* germ] an overgrowth of some specific tissue.

hyperbrachycephalic (hi'per-brak'e-sē-fal'ik) having a cephalic index of 85.5 or more.

hyperbrachycephaly (hi'per-brak'e-sef'ah-le) the condition of being hyperbrachycephalic.

hyperbradykininemia (hi'per-brad'ē-ki'nin-e'me-ah) elevated levels of bradykinin in the blood, marked by a feeling of warmth, flushing, wheezing, or nausea.

hyperbradykininism (hi'per-brad'ē-ki'nin-izm) a syndrome characterized by high plasma levels of bradykinin, in which standing produces a fall in systolic blood pressure, an increase in diastolic pressure and heart rate, and a purplish discoloration and ecchymoses over the legs.

hyperbulia (hi'per-bu'le-ah) [*hyper-* + Gr. *boulē* will] morbid development of the will; excessive wilfulness.

hypercalcemia (hi'per-kal-se'me-ah) [*hyper-* + *calcium* + Gr.

haima blood] an excess of calcium in the blood; manifestations include fatigability, muscle weakness, depression, anorexia, nausea, and constipation. **idiopathic h.**, a condition of infants, associated with vitamin D intoxication, and characterized by elevated serum calcium levels and increased density of the skeleton, with mental deterioration progressing to idiocy, and nephrocalcinosis causing chronic uremia.

hypercalcemia (hi''per-kal''sī-ne'me-ah) hypercalcemia.

hypercalciuria (hi''per-kal''sī-nu're-ah) hypercalciuria.

hypercalcipey (hi''per-kal''sī-pek'se) excessive fixation of calcium.

hypercalciuria (hi''per-kal''sī-u're-ah) excess of calcium in the urine.

hypercapnia (hi''per-kap'ne-ah) [*hyper-* + Gr. *kapnos* smoke] excess of carbon dioxide in the blood.

hypercapnic (hi''per-kap'nik) pertaining to or characterized by hypercapnia.

hypercarbia (hi''per-kar'be-ah) hypercapnia.

hypercarotenemia (hi''per-kar''o-tēn-e'me-ah) an excess of carotene in the blood.

hypercarotinemia (hi''per-kar''o-tī-ne'me-ah) hypercarotenemia.

hypercatabolic (hi''per-kat''ah-bol'ik) pertaining to, characterized by, or causing hypercatabolism.

hypercatabolism (hi''per-kah-tab'o-lizm) abnormally increased catabolism.

hypercatharsis (hi''per-kah-thar'sis) [*hyper-* + Gr. *katharsis* purge] excessive purgation.

hypercathartic (hi''per-kah-thar'tik) [*hyper-* + Gr. *kathartikos* purgative] excessively cathartic.

hypercellular (hi''per-sel'u-lar) pertaining to or characterized by hypercellularity.

hypercellularity (hi''per-sel''u-lār'fī-te) a state characterized by an abnormal increase in the number of cells present, as in bone marrow.

hypercementosis (hi''per-se'men-to'sis) excessive development of secondary cementum on the surfaces of tooth roots.

hypercenesthesia (hi''per-se'nes-the'ze-ah) [*hyper-* + *cenesthesia*] (*obs.*) a feeling of exaggerated well being, as seen in general paralysis and sometimes in mania.

hyperchloremia (hi''per-klo-re'me-ah) an excess of chloride in the blood.

hyperchloremic (hi''per-klo-re'mik) pertaining to or characterized by hyperchloremia.

hyperchlorhydria (hi''per-klōr-hi'dre-ah) excessive secretion of hydrochloric acid by the stomach cells.

hyperchloridation (hi''per-klo'ri-da'shun) the administration of an excess of sodium chloride.

hyperchloruration (hi''per-klōr''u-ra'shun) an excess of chlorides in the body.

hyperchloruria (hi''per-klōr-u're-ah) excess of chlorides in the urine.

hypercholesteremia (hi''per-ko-les'ter-e'me-ah) hypercholesterolemia.

hypercholesteremic (hi''per-ko-les'ter-e'mik) hypercholesterolemic.

hypercholesterinemia (hi''per-ko-les'ter-in-e'me-ah) hypercholesterolemia.

hypercholesterolemia (hi''per-ko-les'ter-ol-e'me-ah) [*hyper-* + *cholesterol* + Gr. *haima* blood + *-ia*] excess of cholesterol in the blood. **familial h.**, familial hyperlipoproteinemia, type IIa.

hypercholesterolemic (hi''per-ko-les'ter-ol-e'mik) pertaining to, characterized by, or tending to produce hypercholesterolemia.

hypercholesterolia (hi''per-ko-les'ter-ol'e-ah) abnormally high cholesterol content of the bile.

hypercholia (hi''per-ko'le-ah) [*hyper-* + Gr. *cholē* bile + *-ia*] excessive secretion of bile.

hyperchondroplasia (hi''per-kon'dro-pla'se-ah) excessive development of cartilage.

hyperchromaffinism (hi''per-kro-maf'fī-nizm) a condition caused by excessive secretion of chromaffin in the body, marked by paroxysms of arterial hypertension.

hyperchromasia (hi''per-kro-ma'se-ah) hyperchromatism.

hyperchromatic (hi''per-kro-ma'fik) 1. staining more intensely than is normal. 2. pertaining to or marked by hyperchromatism.

hyperchromatin (hi''per-kro'mah-tin) the part of the chromatin that stains with blue aniline dyes.

hyperchromatism (hi''per-kro'mah-tizm) [*hyper-* + Gr. *chrōma* color] excessive pigmentation, especially a form of degeneration of a cell nucleus in which it becomes filled with particles of pigment, or chromatin.

hyperchromatopsia (hi''per-kro'mah-top'se-ah) [*hyper-* + Gr.

chrōma color + *opsis* vision] a condition in which all objects appear colored.

hyperchromatosis (hi''per-kro'mah-to'sis) 1. increased staining capacity. 2. hyperchromatism.

hyperchromemia (hi''per-kro-me'me-ah) [*hyper-* + Gr. *chrōma* color + *haima* blood + *-ia*] a high color index of the blood.

hyperchromia (hi''per-kro'me-ah) hyperchromatism.

hyperchromic (hi''per-kro'mik) highly or excessively stained or colored.

hyperchylia (hi''per-ki'le-ah) excessive secretion of gastric juice.

hyperchylomicronemia (hi''per-ki'lo-mi''kro-ne'me-ah) the presence in the blood of an excessive number of particles of fat (chylomicrons); see *familial hyperlipoproteinemia, type I*, under *hyperlipoproteinemia*. **familial h.**, familial hyperlipoproteinemia, type I.

hypercoagulability (hi''per-ko-ag''u-lah-bil'fī-te) the state of being more readily coagulated than normal.

hypercoagulable (hi''per-ko-ag''u-lah-bl) characterized by abnormally increased coagulability.

hypercoria (hi''per-ko're-ah) hyperkoria.

hypercorticalism (hi''per-kor'tī-kal-izm) hyperadrenocorticism.

hypercorticism (hi''per-kor'tī-sizm) hyperadrenocorticism.

hypercortisolism (hi''per-kor'tī-sōl'izm) a complex of symptoms and signs due to excessive production or administration of hydrocortisone; hyperadrenocorticism.

hypercreatinemia (hi''per-kre'ah-tī-ne'me-ah) an abnormality of creatine metabolism in skeletal muscle, a common feature of thyrotoxicosis.

hypercrine (hi''per-krin') due to endocrine hyperfunction.

hypercrinemia (hi''per-krin-e'me-ah) hypercrinism.

hypercrinia (hi''per-krin'e-ah) hypercrinism.

hypercrinism (hi''per-krī'nizm) [*hyper-* + Gr. *krinein* to separate] the bodily state caused by excessive secretion of any endocrine gland.

hypercrisia (hi''per-kris'e-ah) hypercrinism.

hypercryalgia (hi''per-krī'al-je'ze-ah) [*hyper-* + Gr. *kryos* cold + *algēs* pain] excessive sensitiveness to cold.

hypercryesthesia (hi''per-krī'es-the'ze-ah) [*hyper-* + Gr. *kryos* cold + *aisthēsis* perception] hypercryalgia.

hypercupremia (hi''per-ku-pre'me-ah) an excess of copper in the blood.

hypercupriuria (hi''per-ku'pre-u're-ah) an excess of copper in the urine.

hypercyanotic (hi''per-si'ah-not'ik) extremely cyanotic.

hypercyesis (hi''per-si-e'sis) [*hyper-* + Gr. *kyēsis* gestation] superfetation.

hypercythemia (hi''per-si-the'me-ah) [*hyper-* + Gr. *kytos* hollow vessel + *haima* blood + *-ia*] abnormal increase in the number of erythrocytes in the blood.

hypercytochromia (hi''per-si'to-kro'me-ah) [*hyper-* + Gr. *kytos* hollow vessel + *chrōma* color] increased staining capacity of a blood cell.

hypercytosis (hi''per-si-to'sis) [*hyper-* + Gr. *kytos* hollow vessel + *-osis*] a condition characterized by an abnormally increased number of cells, especially of leukocytes.

hyperdactylia (hi''per-dak'til'e-ah) hyperdactyly.

hyperdactylism (hi''per-dak'tī-lizm) hyperdactyly.

hyperdactyly (hi''per-dak'tī-le) [*hyper-* + Gr. *daktylos* finger] the presence of more than the normal number of fingers or toes.

hyperdicrotic (hi''per-di-krot'ik) [*hyper-* + *dicrotic*] exhibiting marked dicrotism.

hyperdicrotism (hi''per-dik'ro-tizm) [*hyper-* + *dicrotism*] the quality of being hyperdicrotic; extreme dicrotism.

hyperdiploid (hi''per-dip'loid) polyploid.

hyperdiploidy (hi''per-dip'loi-de) polyploidy.

hyperdipsia (hi''per-dip'se-ah) [*hyper-* + Gr. *dipsa* thirst + *-ia*] intense thirst of relatively brief duration.

hyperdistention (hi''per-dis'ten'shun) excessive distention.

hyperdiuresis (hi''per-di'u-re'sis) [*hyper-* + *diuresis*] excessive excretion of urine.

hyperdontia (hi''per-don'she-ah) a condition characterized by the presence of supernumerary teeth.

hyperdynamia (hi''per-di-na'me-ah) [*hyper-* + Gr. *dynamis* force] excessive muscular activity. **h. u'teri**, excessive uterine contractions in labor.

hyperdynamic (hi''per-di-nam'ik) pertaining to or characterized by hyperdynamia.

hypereccrisia (hi''per-ek-kris'e-ah) [*hyper-* + Gr. *ekkrisis* excretion + *-ia*] a state characterized by abnormally increased excretion.

hypereccrisis (hi''per-ek'krī-sis) hypereccrisia.

- hypereccritic** (hi-per-ek-krit'ik) pertaining to or exhibiting hypereccrisia.
- hypercheema** (hi'per-e-ke'mah) [*hyper-* + Gr. *ēchēma* sound] exaggeration of auditory sensations.
- hyperelectrolytemia** (hi-per-e-lek'tro-li-te'me-ah) an abnormally high concentration of electrolytes in the blood.
- hyperemesis** (hi'per-em'ē-sis) [*hyper-* + Gr. *emesis* vomiting] excessive vomiting. **h. gravida/rum**, pernicious vomiting of pregnancy. **h. lacten'tium**, excessive vomiting of nursing babies.
- hyperemetic** (hi'per-e-met'ik) characterized by excessive vomiting.
- hyperemia** (hi'per-e'me-ah) [*hyper-* + Gr. *haima* blood + *-ia*] an excess of blood in a part; engorgement. **active h.**, excess of blood in a part due to local or general relaxation of the arterioles. **arterial h.**, active h. **Bier's passive h.**, the induction of venous congestion by applying a thin rubber band, for the treatment of joint affections and inflammatory conditions. **collateral h.**, increased flow of blood through collateral vessels when the flow through the main artery is arrested. **constriction h.**, Bier's passive h. **fluxionary h.**, active h. **leptomeningeal h.**, congestion of the pia-arachnoid. **passive h.**, an excess of blood in a part resulting from obstruction to its outflow from the area. **reactive h.**, an excess of blood in a part following restoration of its temporarily arrested flow. **stauungs h.**, Bier's passive h. **venous h.**, passive h.
- hyperemic** (hi'per-e'mik) marked by hyperemia.
- hyperemization** (hi'per-e'mi-za'shun) the production of hyperemia, especially when employed for therapeutic purposes.
- hyperemotivity** (hi'per-e'mo-tiv'i-te) hyperaffectivity.
- hyperencephalus** (hi'per-en-sef'ah-lus) [*hyper-* + Gr. *enkephalos* brain] a monster with the cranial vault absent and the brain exposed.
- hyperendemic** (hi'per-en-dem'ik) present in a community at all times and with a high rate of incidence.
- hyperendocrinia** (hi'per-en'do-krin'e-ah) hyperendocrinism.
- hyperendocrinism** (hi'per-en-dok'ri-nizm) [*hyper-* + Gr. *endon* within + *krinein* to separate] abnormally increased activity of an endocrine organ.
- hyperendocrisia** (hi'per-en'do-kris'e-ah) hyperendocrinism.
- hyperenergia** (hi'per-en-er'je-ah) excessive energy or activity.
- hyper eosinophilia** (hi'per-e'o-sin-o-fil'e-ah) excessive eosinophilia.
- hyperhidrosis** (hi'per-ef'ī-dro'sis) [*hyper-* + Gr. *epi* upon + *hidrōs* sweat] (*obs.*) hyperhidrosis.
- hyperepinephrinemia** (hi'per-ep'ī-nef'ri-ne'me-ah) [*hyper-* + *epinephrine* + Gr. *haima* blood] an excess of epinephrine in the blood.
- hyperepinephry** (hi'per-ep'ī-nef're) excessive secretion of epinephrine by the adrenal gland.
- hyper equilibrium** (hi'per-e'kwī-lib're-um) an excessive tendency to vertigo.
- hypererethism** (hi'per-er'ē-thizm) extreme irritability.
- hyperergasia** (hi'per-er-ga'se-ah) [*hyper-* + Gr. *ergon* work] abnormally increased functional activity.
- hyperergia** (hi'per-er'je-ah) 1. hyperergasia. 2. hyperergy.
- hyperergic** (hi'per-er'jik) 1. more energetic than normal. 2. pertaining to or characterized by hyperergy.
- hyperergy** (hi'per-er'je) [*hyper-* + *allergy*] hypersensitivity to allergens; extreme allergy.
- hypererythrocythemia** (hi'per-ē-rith'ro-si-the'me-ah) hypercythemia.
- hyperesophoria** (hi'per-es'o-fo're-ah) [*hyper-* + Gr. *esō* inward + *phorein* to bear] a tendency of the visual axis to deviate upward and inward.
- hyperesthesia** (hi'per-es-the'ze-ah) [*hyper-* + Gr. *aisthēsis* sensation + *-ia*] increased sensitivity to stimulation. **acoustic h.**, auditory h., hyperacusis. **cerebral h.**, that due to a cerebral lesion. **gustatory h.**, hypergeusesthesia. **muscular h.**, muscular oversensitivity to pain or fatigue. **olfactory h.**, hyperosmia. **oneiric h.**, increase of sensitivity or of pain during sleep and dreams. **optic h.**, abnormal sensitivity of the eye to light. **sexual h.**, abnormal increase of the sexual impulse. **tactile h.**, excessive tactile sensibility; called also *hyperaphia* and *hyperpselaphesia*.
- hyperesthetic** (hi'per-es-thet'ik) pertaining to or characterized by hyperesthesia.
- hyperestrinemia** (hi'per-es-tri-ne'me-ah) hyperestrogenemia.
- hyperestrinism** (hi'per-es-trin-izm) a condition due to excessive secretion of estrin and characterized by functional uterine bleeding (menometrorrhagia).
- hyperestrogenemia** (hi'per-es'tro-jē-ne'me-ah) an excessive amount of estrogens in the blood.
- hyperestrogenism** (hi'per-es'tro-jen-izm) a state characterized or caused by excessive secretion of estrogen.
- hyperestrogenosis** (hi'per-es'tro-jē-no'sis) an abnormally elevated level of estrogens in the body.
- hyper eurypopia** (hi'per-u're-o'pe-ah) [*hyper-* + Gr. *eurys* wide + *ōps* eye + *-ia*] abnormally wide opening of the eyes.
- hyper evolutionism** (hi'per-e-vol'u-tizm) a condition characterized by development in excess of the normal.
- hyperexcretory** (hi'per-eks'kre-to-re) marked by excessive secretion.
- hyperexophoria** (hi'per-ek'so-fo're-ah) [*hyper-* + Gr. *exō* outward + *phorein* to bear + *-ia*] a tendency of the visual axis to deviate upward and outward.
- hyperexplexia** (hi'per-eks-pleks'e-ah) a congenital condition of exaggerated startle reactions with hypertonia, hypokinesia, and brisk cerebral bulbar reflexes at birth.
- hyperextension** (hi'per-ek-sten'shun) extreme or excessive extension of a limb or part.
- hyperferremia** (hi'per-fer-re'me-ah) an excess of iron in the blood.
- hyperferremic** (hi'per-fer-re'mik) pertaining to or characterized by hyperferremia.
- hyperferricemia** (hi'per-fer'ī-se'me-ah) hyperferremia.
- hyperfibrinogenemia** (hi'per-fi-brin'o-jē-ne'me-ah) an excess of fibrinogen in the blood.
- hyperflexion** (hi'per-flek'shun) forcible overflexion of a limb or part.
- hyperfolliculinemia** (hi'per-fo-lik'u-lī-ne'me-ah) the presence of an excessive amount of estrogen in the blood.
- hyperfolliculinism** (hi'per-fo-lik'u-lin-izm) any condition caused by the presence in the body of excessive quantities of estrogen.
- hyperfolliculinuria** (hi'per-fo-lik'u-lī-nu're-ah) the presence of an excessive amount of estrogen in the urine.
- hyperfunctioning** (hi'per-funk'shun-ing) excessive functioning of an organ.
- hypergalactia** (hi'per-gah-lak'she-ah) [*hyper-* + Gr. *gala* milk] excessive secretion of milk.
- hypergalactosis** (hi'per-gal'ak-to'sis) hypergalactia.
- hypergalactous** (hi'per-gah-lak'tus) pertaining to, characterized by, or causing hypergalactia.
- hyper gammaglobulinemia** (hi'per-gam'ah-glob'u-lī-ne'me-ah) an excess of gamma globulins in the blood; it is seen frequently in chronic infectious diseases. **monoclonal h.**, an excess of homogeneous immunoglobulin molecules of a single specificity in the blood following the proliferation of a clone of immunoglobulin-producing cells. **polyclonal h.**, an excess of several classes of immunoglobulin in the blood.
- hypergasia** (hip'er-ga'se-ah) hypoergasia.
- hypergastrinemia** (hi'per-gas'trin-e'me-ah) the presence of an excess of gastrin in the blood.
- hypergenesis** (hi'per-jen'ē-sis) [*hyper-* + Gr. *genesis* development] excessive development, hypertrophy, or redundancy.
- hypergenetic** (hi'per-jē-net'ik) pertaining to or characterized by hypergenesis.
- hypergenitalism** (hi'per-jen'ī-tal-izm) hypergonadism.
- hypergeusesthesia** (hi'per-gūs'es-the'ze-ah) [*hyper-* + Gr. *geusis* taste + *aisthēsis* perception + *-ia*] excessive or abnormal acuteness of the sense of taste.
- hypergeusia** (hi'per-gu'se-ah) hypergeusesthesia.
- hypergia** (hi-per'je-ah) 1. hypoergasia. 2. diminished sensitivity in allergy.
- hypergigantosoma** (hi'per-ji-gan'to-so'mah) [*hyper-* + Gr. *gigas* giant + *sōma* body] excessive tallness, or gigantism.
- hyperglandular** (hi'per-glan'du-lar) marked by abnormally increased glandular activity.
- hyperglobulinemia** (hi'per-glob'u-lī-ne'me-ah) abnormally high globulin content of the blood.
- hyperglucagonemia** (hi'per-gloo'kah-gōn-ē'me-ah) abnormally high levels of glucagon in the blood.
- hyperglycemia** (hi'per-gli-se'me-ah) [*hyper-* + Gr. *glykys* sweet + *haima* blood + *-ia*] abnormally increased content of sugar in the blood.
- hyperglycemic** (hi'per-gli-se'mic) 1. pertaining to, characterized by, or causing hyperglycemia. 2. an agent that causes an increase in the level of glucose in the blood.
- hyperglyceridemia** (hi'per-glis'er-i-de'me-ah) an excess of glycerides, usually triglycerides, in the blood.
- hyperglyceridemic** (hi'per-glis'er-i-de'mik) pertaining to, characterized by, or producing hyperglyceridemia.
- hyperglycinemia** (hi'per-gli'sī-ne'me-ah) a hereditary congenital disorder involving excessive glycine in the blood. One form is accompanied by episodic vomiting, lethargy, dehydration, ketosis, and intolerance of protein in the diet, with hyperglycinuria, hypogammaglobulinemia, neutropenia, increased susceptibility to infection, thrombocytopenia, and periodic purpura; it leads to developmental retardation. A second form is character-

ized by lethargy, weak cry, generalized hypotonia, absence of reflexes, intolerance of glycine in the diet, and periodic myoclonic jerks, in the absence of vomiting, ketosis, neutropenia, and thrombocytopenia. Both forms are transmitted as autosomal recessive traits.

hyperglycinuria (hi'per-gli'si-nu're-ah) an excess of glycine in the urine; see *hyperglycinemia*.

hyperglycistia (hi'per-gli-sis'te-ah) [*hyper-* + Gr. *glykys* sweet + *histos* tissue] excess of sugar in the bodily tissues.

hyperglycodermia (hi'per-gli'ko-de'r-me-ah) [*hyper-* + Gr. *glykys* sweet + *derma* skin + *-ia*] the presence of an excessive amount of sugar in the skin.

hyperglycogenolysis (hi'per-gli'ko-jen-ol'i-sis) excessive splitting up of glycogen, resulting in an excess of dextrose in the body.

hyperglycoplasma (hi'per-gli'ko-plaz'me-ah) the presence of a greater amount than normal of sugar in the blood plasma.

hyperglycorrachia (hi'per-gli'ko-ra'ke-ah) [*hyper-* + Gr. *glykys* sweet + *rhachis* spine] the presence of a greater than normal concentration of glucose in the cerebrospinal fluid.

hyperglycosemia (hi'per-gli'ko-se'me-ah) hyperglycemia.

hyperglycosuria (hi'per-gli'ko-su're-ah) [*hyper-* + *glycosuria*] extreme glycosuria.

hyperglycystia (hi'per-gli-sis'te-ah) hyperglycistia.

hyperglykemia (hi'per-gli-ke'me-ah) hyperglycemia.

hypergnosis (hi'per-no'se-ah) [*hyper-* + Gr. *gnōsis* knowledge] a paranoid condition marked by distortion of perception with a tendency to project psychic conflicts to the environment.

hypergonadism (hi'per-go'nad-izm) a condition resulting from or characterized by abnormally increased functional activity of the gonads, with excessive growth and precocious sexual development.

hyperguanidinemia (hi'per-gwan'i-di-ne'me-ah) the presence of an excess of guanidine in the blood.

hyperhedonia (hi'per-hē-do'ne-ah) [*hyper-* + Gr. *hēdonē* pleasure] morbid increase of the feeling of pleasure in agreeable acts.

hyperhedonism (hi'per-he'do-nizm) hyperhedonia.

hyperhemoglobinemia (hi'per-he'mo-glo'bi-ne'me-ah) the presence of an excessive amount of hemoglobin in the blood.

hyperheparinemia (hi'per-hep'ah-ri-ne'me-ah) the presence of an excessive amount of heparin in the blood.

hyperhepatia (hi'per-he-pat'e-ah) [*hyper-* + Gr. *hēpar* liver] hyperfunction of the liver.

hyperhidrosis (hi'per-hi-dro'sis) [*hyper-* + Gr. *hidrōsis* sweating] excessive perspiration. **h. unilatera'lis**, excessive sweating on one side of the body only.

hyperhidrotic (hi'per-hi-drot'ik) pertaining to, characterized by, or causing hyperhidrosis.

hyperhormonal (hi-per-hōr'mo-nal) excessive in hormone activity; due to hormone excess.

hyperhormonic (hi'per-hōr-mon'ik) hyperhormonal.

hyperhormonism (hi'per-hōr'mōn-izm) endocrine hyperfunction.

hyperhydration (hi'per-hi-dra'shun) a state of excessive water content of the body.

hyperhydrochloria (hi'per-hi-dro-klo're-ah) hyperchlorhydria.

hyperhydrochloridia (hi'per-hi-dro-klo-rid'e-ah) hyperchlorhydria.

hyperhypophysisism (hi'per-hi-pof'i-sizm) hyperpituitarism.

hyperidrosis (hi'per-i-dro'sis) hyperhidrosis.

hyperimmune (hi'per-im-mūn') possessing very large quantities of specific antibodies in the serum.

hyperimmunity (hi'per-i-mu'nī-te) a degree of immunity greater than is usually found under similar circumstances.

hyperimmunization (hi'per-im'u-ni-za'shun) the practice of establishing a heightened state of actively acquired immunity by the administration of repeated (booster) doses of antigen, or of passively acquired immunity by the injection of hyperimmune gamma globulin.

hyperimmunoglobulinemia (hi'per-im'u-no-glob'u-lin-e'me-ah) abnormally high levels of immunoglobulins in the serum. **h. E**, extremely high levels of IgE in the serum, associated with cutaneous anergy and deficient antibody response, as occurs in Job's syndrome.

hyperinflation (hi'per-in-fla'shun) excessive inflation or expansion, as of the lungs; overinflation.

hyperingestion (hi'per-in-jes'chun) ingestion of a greater than optimal amount of nutrients.

hyperinsular (hi'per-in'su-lin-ar) pertaining to or characterized by excessive secretion of insulin.

hyperinsulinemia (hi'per-in'su-lī-ne'me-ah) the presence of an excessive amount of insulin in the blood.

hyperinsulinism (hi'per-in'su-lin-izm') 1. excessive secretion

of insulin by the pancreas, resulting in hypoglycemia. 2. insulin shock.

hyperinterrenal (hi'per-in'ter-re'nal) pertaining to or resulting from overactivity of the adrenal glands.

hyperinterrenopathy (hi'per-in'ter-re-nop'ah-the) [*hyper-* + *interrenal* + Gr. *pathos* disease] any disease due to overactivity of the adrenal glands, as hyperadrenocorticism and Cushing's syndrome.

hyperinvolution (hi'per-in'vo-lu'shun) superinvolution.

hyperiodemia (hi'per-i'o-de'me-ah) the presence of an excessive amount of iodine in the blood.

hyperirritability (hi'per-ir'i-tah-bil'i-te) pathological responsiveness to slight stimuli.

hyperisotonia (hi'per-i'so-to'ne-ah) [*hyper-* + Gr. *isos* equal + *tonos* tension] marked equality of tone or of tonicity.

hyperisotonic (hi'per-i'so-ton'ik) [*hyper-* + Gr. *isos* equal + *tonos* tension, or tone] hypotonic; denoting a solution that contains more than 0.45 per cent sodium chloride, in which erythrocytes become crenated as a consequence of exosmosis.

hyperkalemia (hi'per-kah-le'me-ah) abnormally high potassium concentration in the blood, most often due to defective renal excretion. It is characterized clinically by electrocardiographic abnormalities (elevated T waves and depressed P waves, and eventually by atrial asystole). In severe cases, weakness and flaccid paralysis may occur. Called also *hyperpotassemia*.

hyperkaliemia (hi'per-kal'e-me-ah) hyperkalemia.

hyperkeratinization (hi'per-ker'ah-tin'i-za'shun) [*hyper-* + *keratinization*] the excessive development or retention of keratin by the epidermis.

hyperkeratosis (hi'per-ker'ah-to'sis) [*hyper-* + Gr. *keras* horn] 1. hypertrophy of the corneous layer of the skin, or any disease characterized by it; called also *acanthokeratoderma*. 2. hypertrophy of the cornea. 3. a skin disease of cattle marked by inflammation and thickening of the horny layer, and caused by the ingestion of grease containing high levels of chlorinated hydrocarbons. Once thought to be caused by a virus, it was called *x disease*. Called also *perkeratosis*. **h. congenita'lis palmaris et planta'ris**, keratosis palmaris et plantaris. **epidermolytic h.**, a hereditary disease transmitted as an autosomal dominant trait, characterized by hyperkeratosis, blisters, and erythema. At birth, the skin is completely covered by thick, horny, armor-like scales, which are soon shed, leaving a raw surface on which the scales re-form. Formerly called *bullous congenital ichthyosiform erythroderma*. **h. follicula'ris et parafollicula'ris in cutem pen'etrans**, hyperkeratosis follicularis in cutem pen'etrans. **h. follicula'ris in cutem pen'etrans**, a very rare follicular disease characterized by keratotic pegs, which are usually discrete but may form circinate patches; they develop in the hair follicles and eccrine ducts, penetrating the epidermis and extending down into the corium, where they cause a foreign-body reaction and pain. Called also *hyperkeratosis pen'etrans*, *hyperkeratosis follicularis et parafollicularis in cutem pen'etrans*, and *Kyrle's disease*. **h. follicula'ris veg'etans**, keratosis follicularis. **h. in cutem pen'etrans**, **h. follicula'ris in cutem pen'etrans**. **h. lacuna'ris**, a condition in which the tonsillar crypts contain hard, firmly attached masses. **h. pen'etrans**, hyperkeratosis follicularis in cutem pen'etrans. **h. subungua'lis**, hyperkeratosis affecting the nail beds.

hyperketonemia (hi'per-ke'to-ne'me-ah) an abnormally increased concentration of ketone bodies in the blood.

hyperketonuria (hi'per-ke'to-nu're-ah) the presence of an excessive quantity of ketone in the urine.

hyperketosis (hi'per-ke-to'sis) the formation of an excess of ketone.

hyperkinemia (hi'per-ki-ne'me-ah) [*hyper-* + Gr. *kinein* move + *haima* blood + *-ia*] abnormally high cardiac output (blood circulation) when at rest and supine, as in the hyperkinetic syndrome.

hyperkinemic (hi'per-ki-ne'mik) 1. increasing blood flow through a tissue. 2. an agent which increases the flow of blood through a tissue area.

hyperkinesia (hi'per-ki-ne'ze-ah) [*hyper-* + Gr. *kinēsis* motion + *-ia*] abnormally increased motor function or activity; hyperactivity. See *hyperkinetic syndrome*, under *syndrome*. **professional h.**, occupation neurosis.

hyperkinesis (hi'per-ki-ne'sis) hyperkinesia.

hyperkinetic (hi'per-ki-net'ik) pertaining to or characterized by hyperkinesia; hyperactive. See *hyperkinetic syndrome*, under *syndrome*.

hyperkoria (hi'per-ko're-ah) [*hyper-* + Gr. *koros* satiety + *-ia*] an early sense of satiety.

hyperlactacidemia (hi'per-lakt'as-i-de'me-ah) an excessive amount of lactic acid in the blood.

hyperlactation (hi'per-lak-ta'shun) lactation in greater than normal amount or for a longer than usual period.

hyperlecithinemia (hi'per-les'i-thī-ne'me-ah) excess of lecithin in the blood.

hyperlethal (hi'per-le'thal) more than sufficient to cause death.

hyperleukocytosis (hi'per-lu'ko-si-to'sis) [*hyper-* + *leukocyte* + *-osis*] an abnormally excessive increase in the number of leukocytes in the blood.

hyperleydigism (hi'per-li'dig-izm) overactivity of Leydig's cells.

hyperlipemia (hi'per-li-pe'me-ah) [*hyper-* + Gr. *lipos* fat + *haima* blood + *-ia*] elevated concentration of triglycerides in the plasma. See also *hyperlipoproteinemia*. **carbohydrate-induced h.**, hyperlipoproteinemia, type IV. **fat-induced h.**, hyperlipoproteinemia, type I.

hyperlipidemia (hi'per-lip'i-de'me-ah) [*hyper-* + *lipid* + Gr. *haima* blood + *-ia*] a general term for elevated concentrations of any or all of the lipids in the plasma, including hyperlipoproteinemia, hypercholesterolemia, etc.

hyperlipoidemia (hi'per-li'poi-de'me-ah) hyperlipemia.

hyperlipoproteinemia (hi'per-lip'o-pro'te-in-e'me-ah) an excess of lipoproteins in the blood, due to a disorder of lipoprotein metabolism, and occurring as an acquired or familial condition. **acquired h.**, hyperlipoproteinemia occurring secondarily to some other disorder, such as hypothyroidism, nephrotic syndrome, or hypoadrenocorticism, or as a result of environmental factors, including diet. **familial h.**, any of a group of inherited disorders of lipoprotein metabolism, classified into five major phenotypes based on clinical features, enzymatic abnormalities, and serum lipoprotein electrophoretic patterns. **Type I**, transmitted as a recessive trait, is caused by deficient activity of lipoprotein lipase with resultant inability to dispose of dietary triglycerides (in chylomicrons); it may be manifested by repeated bouts of abdominal pain and vomiting, recurrent acute pancreatitis, eruptive xanthomas, hepatosplenomegaly, and lipemia retinalis. Called also *Bürger-Grütz syndrome*, **fat-induced hyperlipemia**, and **familial hyperchylomicronemia**. **Type II**, in which the nature of the biochemical defect is unknown, is transmitted as a dominant trait with evidence of occurrence of both homozygous and heterozygous forms; it may be characterized by tendinous and tuberous xanthomas, xanthelasmas, early onset of corneal arcus, and accelerated atherosclerosis, especially of the coronary arteries. Two subtypes have been described: **Type IIa** characterized by increased levels of low-density lipoproteins and normal levels of very low-density lipoproteins (called also *familial hyperbetalipoproteinemia* and *familial hypercholesterolemia*); and **Type IIb**, characterized by elevated levels of both low-density and very low-density lipoproteins. **Type III**, in which the mode of inheritance and biochemical abnormality are uncertain, is characterized by accumulation of abnormal β -lipoproteins resembling prebetalipoproteins, and may be manifested by planar xanthomas and less often by tendinous xanthomas and premature coronary and peripheral atherosclerosis; called also *broad-beta disease* and *familial dysbetalipoproteinemia*. **Type IV**, in which the nature of the mode of inheritance and biochemical abnormality are uncertain, is characterized by elevated serum levels of endogenously synthesized triglycerides, and may be manifested by increased incidence of vascular disease, abnormal glucose tolerance, and family history of diabetes mellitus. Called also *carbohydrate-induced hyperlipemia* and *familial hyperprebetalipoproteinemia*. **Type V**, in which the nature of the mode of inheritance and biochemical abnormality are uncertain, is characterized by accumulation of very low-density lipoproteins and chylomicrons in the blood and may be accompanied by diabetes mellitus, eruptive xanthomas, and recurrent acute pancreatitis. Called also *mixed hyperlipemia*. **mixed h.**, familial h., type V.

hyperliposis (hi'per-li-po'sis) an excess of fat in the blood serum or tissues.

hyperlithemia (hi'per-li-the'me-ah) presence in the blood of a high concentration of lithium.

hyperlithic (hi'per-lith'ik) pertaining to or characterized by an excess of lithic (uric) acid.

hyperlithuria (hi'per-lith-u're-ah) excess of lithic (uric) acid in the urine.

hyperlordosis (hi'per-lor-do'sis) extremely marked lordosis.

hyperlucency (hi'per-lu'sen-se) excessive radiolucency.

hyperluteinization (hi'per-lu'te-in-i-za'shun) excessive luteinization of the cystic follicles of the ovary.

hyperlutemia (hi'per-lu-te'me-ah) an increased amount of luteal hormone (progesterone) in the blood.

hyperlysinemia (hi'per-li'sen-e'me-ah) an inborn error of amino acid metabolism characterized by elevated levels of lysine in the blood and marked by vomiting, spasticity, coma, and mental retardation; symptoms are related to protein intake.

hypermagnesemia (hi'per-mag'nē-se'me-ah) an abnormally large magnesium content of the blood plasma; manifestations include lethargy, weakness, electrocardiographic abnormalities and, as levels increase, loss of deep tendon reflexes, somnolence, and coma.

hypermania (hi'per-ma'ne-ah) intense mania with overwhelming tensions and marked disorientation.

hypermastia (hi'per-mas'te-ah) [*hyper-* + Gr. *mastos* breast]

1. the presence of one or more supernumerary mammary glands.
2. hypertrophy of the mammary gland.

hypermaturation (hi'per-mah-tūr) past the stage of maturity.

hypermegasoma (hi'per-meg'ah-so'mah) [*hyper-* + Gr. *megas* great + *sōma* body] excessive tallness and size; gigantism.

hypermelanotic (hi'per-mel'ah-not'ik) characterized by an excessive deposit of melanin.

hypermenorrhea (hi'per-men'o-re'ah) [*hyper-* + Gr. *mēn* month + *rhein* to flow] excessive uterine bleeding occurring at regular intervals, the period of flow being of usual duration.

hypermesosoma (hi'per-mes'o-so'mah) [*hyper-* + Gr. *mesos* middle + *sōma* body] a stature somewhat exceeding the ordinary.

hypermetabolic (hi'per-met'ah-bol'ik) exhibiting an increased metabolic rate.

hypermetabolism (hi'per-mē-tab'o-lizm) abnormally increased utilization of material by the body; increased metabolism. **extrathyroidal h.**, abnormally elevated basal metabolism unassociated with thyroid disease.

hypermetamorphosis (hi'per-met'ah-mor'fo-sis) too rapid drift of thought activity, leading to mental distraction and confusion, and forming a chief element in mania; excessive attentiveness to visual stimuli, as in the Klüver-Bucy syndrome.

hypermetaplasia (hi'per-met'ah-pla'se-ah) abnormally increased metaplasia.

hypermetria (hi'per-me'tre-ah) [Gr. "a passing all measure, overflow"] a condition in which voluntary muscular movement overreaches the intended goal.

hypermetrope (hi'per-mē-trōp') hyperope.

hypermetropia (hi'per-me-trō'pe-ah) [*hyper-* + Gr. *metron* measure + *ōps* eye + *-ia*] hyperopia.

hypermicrosoma (hi'per-mi'kro-so'mah) [*hyper-* + Gr. *mikros* small + *sōma* body] extreme smallness of body; marked dwarfishness.

hypermimia (hi'per-mim'e-ah) [*hyper-* + Gr. *mimia* representation by means of art] excessive use of gestures when speaking.

hypermineralization (hi'per-min'er-al-i-za'shun) the presence of an excess of mineral elements in the body.

hypermnnesia (hi'per-mn'ze-ah) [*hyper-* + Gr. *mnēmē* memory] excessive crowding or unusual clarity of memory images.

hypermnestic (hi'per-mn'e'sik) 1. pertaining to or characterized by hypermnnesia. 2. marked by excessive mental activity.

hypermodal (hi'per-mo'dal) in statistics, relating to the values or items located to the right of the mode in a variations curve.

hypermorph (hi'per-morf) [*hyper-* + Gr. *morphē* form] 1. a person who is tall but of low sitting height, with bony and narrow arms and legs, slender body, narrow nose, shoulders, thorax, and lips. Cf. *hypomorph* (def. 1) and *mesomorph* (def. 2). 2. in genetics, a mutant gene characterized by an increase in the activity it influences. Cf. *hypomorph* (def. 2).

hypermotility (hi'per-mo-til'i-te) excessive or abnormally increased motility, as of the gastrointestinal tract.

hypermyotonia (hi'per-mi'o-to'ne-ah) [*hyper-* + Gr. *mys* muscle + *tonos* tension + *-ia*] excess of muscular tonicity.

hypermyotrophy (hi'per-mi-ot'ro-fe) [*hyper-* + Gr. *mys* muscle + *trophē* nourishment] excessive development of the muscular tissue.

hypernanosoma (hi'per-na'no-so'mah) [*hyper-* + Gr. *nanos* dwarf + *sōma* body] a very short but not absolutely dwarfish stature.

hypernasality (hi'per-na-zal'i-te) a quality of voice in which the emission of air through the nose is excessive due to velopharyngeal incompetence; it causes deterioration of intelligibility of speech.

hypernatremia (hi'per-nah-tre'me-ah) [*hyper-* + L. *natron* sodium + Gr. *haima* blood + *-ia*] excessive amount of sodium in the blood.

hypernatremic (hi'per-na-tre'mik) pertaining to, characterized by, or causing hypernatremia.

hypernatronemia (hi'per-nat'ro-ne'me-ah) hypernatremia.

hypernea (hi'per-ne'ah) hyperpnoea.

hyperneocytosis (hi'per-ne'o-si-to'sis) [*hyper-* + Gr. *neos* new + *kytos* hollow vessel + *-osis*] leukocytosis in which an excessive number of immature forms of leukocytes are present.

hypernephritis (hi'per-nē-fri'tis) inflammation of the adrenal gland.

hypernephroid (hi'per-nēf'roid) resembling the adrenal gland.

hypernephroma (hi'per-nēfro'mah) [*hyper-* + Gr. *nephros* kidney + *-oma*] renal cell carcinoma whose structure resembles that of the cortical tissue of the adrenal gland. See also *Grawitz's tumor*, under *tumor*.

hyperneurotization (hi'per-nu-rot'i-za'shun) [*hyper-* + Gr. *neuron* nerve] the implantation of a foreign motor nerve into a muscle possessing its normal innervation in order to increase the energy force of the muscle.

hypernitremia (hi''per-ni-tre'me-ah) [*hyper-* + *nitrogen* + *Gr. haima* blood] excessive nitrogen in the blood.

hypernoia (hi''per-noi'ah) [*hyper-* + *Gr. nous* mind] excessive mental activity.

hypernomic (hi''per-nom'ik) [*hyper-* + *Gr. nomos* law] above the law; unrestrained; excessive.

hypernormal (hi''per-nor'mal) in excess of what is normal.

hypernutrition (hi''per-nu-trish'un) overfeeding and its ill effects.

hyperontomorph (hi''per-on'to-morf) [*hyper-* + *Gr. ōn* being + *morphē* form] a person with a tendency to hyperthyroidism.

hyperonychchia (hi''per-o-nik'e-ah) [*hyper-* + *Gr. onyx* nail + *-ia*] onychauxis.

hyperonychosis (hi''per-on'e-ko'sis) onychauxis.

hyperope (hi''per-ōp) an individual exhibiting hyperopia.

hyperopia (hi''per-o-pe-ah) [*hyper-* + *Gr. ōps* eye + *-ia*] that error of refraction in which rays of light entering the eye parallel to the optic axis are brought to a focus behind the retina, as a result of the eyeball being too short from front to back. Called also *farsightedness* (because the near point is more distant than it is in emmetropia with an equal amplitude of accommodation) and *hypermetropia*. **absolute h.**, that amount of hyperopia which cannot be corrected by accommodation. **axial h.**, that which is due to shortness of the anteroposterior axis of the eye. **curvature h.**, hyperopia due to insufficient convexity of the refracting surfaces. **facultative h.**, that amount of hyperopia which can be entirely corrected by the ciliary muscle, i.e., by the effort of accommodation; called also *relative h.* **index h.**, hyperopia caused by deficient refractive power in the media of the eye. **latent h.**, that part of the total hyperopia corrected by the physiologic tone of the ciliary muscle and revealed only when that muscle is paralyzed by the use of a drug, such as atropine. **manifest h.**, that part of the total hyperopia not corrected by the physiologic tone of the ciliary muscle and revealed with cycloplegic examination. **relative h.**, facultative h. **total h.**, the sum of manifest and latent hyperopia combined.

hyperopic (hi''per-o-pik) pertaining to or exhibiting hyperopia; farsighted.

hyperorchidism (hi''per-or'ki-dizm) [*hyper-* + *Gr. orchis* testicle] abnormally increased functional activity of the testes.

hyperorexia (hi''per-o-rek'se-ah) [*hyper-* + *Gr. orexis* appetite + *-ia*] an abnormally increased appetite.

hyperorthocytosis (hi''per-or'tho-si-to'sis) [*hyper-* + *Gr. orthos* straight + *kytos* hollow vessel + *-osis*] leukocytosis in which the proportion of the various forms of leukocytes is normal.

hyperosmia (hi''per-oz'me-ah) [*hyper-* + *Gr. osmē* smell] abnormally increased sensitiveness to odors.

hyperosmolality (hi''per-os'mo-lal'i-te) an increase in the osmolality of the body fluids.

hyperosmolarity (hi''per-oz'mo-lar'i-te) abnormally increased osmolar concentration.

hyperosmotic (hi''per-os-mot'ik) 1. producing or caused by abnormally rapid osmosis. 2. containing a higher concentration of osmotically active components than a standard solution.

hyperosphresia (hi''per-os-fre'ze-ah) [*hyper-* + *Gr. osphrēsis* smell + *-ia*] hyperosmia.

hyperosteogeny (hi''per-os'te-oj'ē-ne) [*hyper-* + *Gr. osteon* bone + *gennan* to produce] excessive development of bone.

hyperostosis (hi''per-os-to'sis) [*hyper-* + *Gr. osteon* bone + *-osis*] hypertrophy of bone; exostosis. **h. corticalis generalisata**, a hereditary disorder, transmitted as an autosomal recessive trait, characterized principally by osteosclerosis of the skull, mandible, clavicles, ribs, and diaphyses of long bones, associated with elevated blood alkaline phosphatase; beginning during puberty, it sometimes leads to optic atrophy and perceptive deafness owing to nerve pressure exerted by thickening of the base of the skull. Called also *hyperphosphatasemia tarda* and *van Buchem's syndrome*. **h. cranii**, hyperostosis involving the cranial bones. **flowing h.**, melorheostasis. **h. frontalis interna**, thickening of the inner table of the frontal bone, which may be associated with hypertrichosis and obesity; it most commonly affects women near menopause. Called also *Morel's syndrome*; *Morgagni's disease*, *hyperostosis*, or *syndrome*; *Morgagni-Stewart-Morel syndrome*; and *Stewart-Morel syndrome*. **infantile cortical h.**, a disease of young infants characterized by soft tissue swellings over the affected bones, fever, and irritability, and marked by periods of remission and exacerbation; called also *Caffey's disease*. **Morgagni's h.**, *h. frontalis interna*. **senile ankylosing h. of spine**, a disorder of the elderly characterized by large osteophytes that bridge vertebrae and, in association with calcified ligaments, may resemble ankylosing spondylitis.

hyperostotic (hi''per-os-tot'ik) pertaining to or exhibiting hyperostosis.

hyperovaria (hi''per-o-va're-ah) [*hyper-* + *L. ovarium* ovary] sexual precocity in girls due to excessive ovarian secretion.

hyperovarianism (hi''per-o-va're-an-izm) hyperovaria.

hyperovarism (hi''per-o'vah-rizm) hyperovaria.

hyperoxaluria (hi''per-ok'sah-lu're-ah) the excretion of an excessive amount of oxalate in the urine; high concentrations of oxalates in the urine may lead to the formation of urinary calculi. Called also *oxaluria*. **enteric h.**, a form occurring after extensive resection or disease of the ileum and resulting from excessive absorption of oxalate from the colon, with formation of calcium oxalate calculi in the urinary tract. **primary h.**, a genetic disorder characterized by urinary excretion of large amounts of oxalate, with nephrolithiasis, nephrocalcinosis, early onset of renal failure, and often a generalized deposit of calcium oxalate (oxalosis), resulting from a defect in glyoxalate metabolism. The disorder occurs in two types: Type 1, hyperoxaluria accompanied by glycolic aciduria, is due to a defect of the enzyme soluble α -ketoglutarate: glyoxylate carboxylase. Type 2, hyperoxaluria with D-glyceric aciduria, is due to a defect of the enzyme glyoxalate reductase. Both types are autosomal recessive traits.

hyperoxemia (hi''per-ok-se'me-ah) [*hyper-* + *Gr. oxys* sharp + *haima* blood] excessive acidity of the blood.

hyperoxia (hi''per-ok'se-ah) an excess of oxygen in the system, resulting from exposure to high oxygen concentrations, especially to hyperbaric pressures of oxygen.

hyperoxic (hi''per-ok'sik) pertaining to or characterized by hyperoxia.

hyperoxidation (hi''per-ok'si-da'shun) excessive oxidation.

hyperpallesthesia (hi''per-pal'es-the'ze-ah) [*hyper-* + *pallesthesia*] abnormally increased sensibility to vibrations.

hyperpancreorrhea (hi''per-pan'kre-o-re'ah) excessive secretion from the pancreas.

hyperparasite (hi''per-par'ah-sit) [*hyper-* + *parasite*] a parasite that preys on a parasite. **second degree h.**, a parasite that preys on a hyperparasite.

hyperparasitic (hi''per-par-ah-sit'ik) living parasitically upon a parasite; biparasitic.

hyperparasitism (hi''per-par'ah-si'tizm) infestation with a hyperparasite.

hyperparathyroidism (hi''per-par'ah-thi'roid-izm) abnormally increased activity of the parathyroid glands, which may be primary or secondary. *Primary hyperparathyroidism* is associated with neoplasia (chiefly adenomas) or hyperplasia. The excess of parathyroid hormone leads to alteration in function of cells of bone, renal tubules, and gastrointestinal mucosa. It may result in kidney stones and calcium deposits in the renal tubules; in generalized decalcification of bone (osteoporosis), resulting in pain and tenderness of bones and spontaneous fractures; and in hypercalcemia, leading to muscular weakness and gastrointestinal symptoms such as anorexia, nausea, vomiting, and abdominal pains. *Secondary hyperparathyroidism* occurs when the serum calcium tends to fall below normal, as in chronic renal disease, vitamin-D deficiency, etc. *Tertiary hyperparathyroidism* refers to that due to a parathyroid adenoma arising from secondary hyperplasia caused by chronic renal failure.

hyperparotidism (hi''per-pah-rot'i-dizm) excessive activity of the parotid gland.

hyperpathia (hi''per-path'e-ah) abnormally exaggerated subjective response to painful stimuli.

hyperpepsia (hi''per-pep'se-ah) [*hyper-* + *Gr. pepsis* digestion] impairment of digestion, due to hyperchlorhydria.

hyperpepsinemia (hi''per-pep'si-ne'me-ah) an abnormally high level of pepsin in the blood.

hyperpepsinia (hi''per-pep-sin'e-ah) abnormally profuse secretion of pepsin in the stomach.

hyperpepsinuria (hi''per-pep'si-nu're-ah) an abnormally high level of pepsin in the urine.

hyperperistalsis (hi''per-per'i-stal'sis) excessively active peristalsis.

hyperpermeability (hi''per-per'me-ah-bil'i-te) undue or abnormal permeability, as of a cell membrane or a vessel wall.

hyperpexia (hi''per-pek'se-ah) [*hyper-* + *Gr. pēxis* fixation + *-ia*] fixation of an excessive amount of a substance by a tissue.

hyperpexy (hi''per-pek'se) hyperpexia.

hyperphagia (hi''per-fa'je-ah) [*hyper-* + *Gr. phagein* to eat] ingestion of a greater than optimal quantity of food.

hyperphalangia (hi''per-fah-lan'je-ah) presence of more than the normal number of phalanges in the longitudinal axis of a digit.

hyperphalangism (hi''per-fah-lan'jizm) hyperphalangia.

hyperphasia (hi''per-fa'ze-ah) [*hyper-* + *Gr. phasis* speech] excessive talkativeness.

hyperphenylalaninemia (hi''per-fen'il-al'ah-ni-ne'me-ah) an excess of phenylalanine in the blood, as in phenylketonuria.

hyperphonestis (hi''per-fo-ne'sis) [*hyper-* + *Gr. phōnēsis* sounding] an increase in intensity of the vocal sound in auscultation, or of the percussion note.

hyperphonia (hi''per-fo'ne-ah) [*hyper-* + *Gr. phōnē* voice] excessively energetic phonation, as in stuttering.

hyperphoria (hi''per-to're-ah) [*hyper-* + *Gr. phorein* to bear] a form of heterophoria in which there is permanent upward

deviation of the visual axis of an eye after the visual fusional stimulus has been eliminated.

hyperphosphatasemia (hi''per-fos''fah-ta-se''me-ah) high levels of alkaline phosphatase in the blood; see *hyperphosphatasia*.

h. tar'da, hyperostosis corticalis generalisata.

hyperphosphatasia (hi''per-fos''fah-ta''ze-ah) a hereditary condition marked by abnormally high alkaline phosphatase levels in the serum and by macrocranium, short neck and thorax, lateral bowing of the femurs, and anterior bowing of the tibias; transmitted as an autosomal recessive trait. Called also *juvenile Paget's disease*.

hyperphosphatemia (hi''per-fos''fah-te''me-ah) an excessive amount of phosphates in the blood; it is usually asymptomatic.

hyperphosphaturia (hi''per-fos''fah-tu''re-ah) an excessive amount of phosphates in the urine.

hyperphosphoremia (hi''per-fos''fo-re''me-ah) an excessive amount of phosphorus compounds in the blood.

hyperphrenia (hi''per-fre''ne-ah) [*hyper-* + Gr. *phrēn* mind] 1. great mental excitement. 2. excessive mental activity.

hyperpiesia (hi''per-pi-e''se-ah) (*obs.*) abnormally high blood pressure occurring independently of any discoverable organic disease.

hyperpiesis (hi''per-pi'e''sis) [*hyper-* + Gr. *piesis* pressure] (*obs.*) abnormally high pressure, as elevated blood pressure.

hyperpietic (hi''per-pi-et''ik) pertaining to, characterized by, or causing hyperpiesis.

hyperpigmentation (hi''per-pig''men-ta''shun) abnormally increased pigmentation.

hyperpinealism (hi''per-pi''ne-al-izm) abnormally increased activity of the pineal body.

hyperpituitarism (hi''per-pi''tu''i-tah-rizm'') a condition due to pathologically increased activity of the pituitary gland, either of (1) the basophilic cells (**basophilic h.**) which results in basophil adenoma causing compression of the pituitary (see *hypopituitarism*); or (2) of the eosinophilic cells (**eosinophilic h.**) which produces overgrowth, acromegaly and gigantism, or true hyperpituitarism.

hyperplasia (hi''per-pla''ze-ah) [*hyper-* + Gr. *plasis* formation] the abnormal multiplication or increase in the number of normal cells in normal arrangement in a tissue. Cf. *hypertrophy*.

adrenal cortical h., hyperplasia of adrenal cortical cells, as in adrenogenital syndrome and Cushing's syndrome. **angiolymphoid h.**, solitary or multiple cutaneous tumors consisting of mature and immature vascular structures intermingled with a copious infiltrate of lymphocytes, histiocytes, eosinophils, and mast cells; lymphoid follicles may occur. **cementum h.**, hypercementosis. **chronic perforating h. of pulp**, internal resorption of a tooth. **congenital adrenal h.**, adrenogenital syndrome. **congenital virilizing adrenal h.**, adrenogenital syndrome. **endometrial h.**, **h. endome'trii**, abnormal overgrowth of the endometrium. **giant follicular h.**, a disorder of the lymph nodes, generally confined to the cervical lymph nodes, which may simulate follicular lymphoma, but cytologically the follicles contain both macrophages and lymphoblasts. **gingival h.**, a general term for gross increase in size of gingival tissues, localized or diffuse, and resulting from a number of conditions. See also *gingival fibromatosis*, under *fibromatosis*. **inflammatory h.**, hyperplasia brought about by inflammation. **juxtaglomerular cell h.**, a syndrome in which hypertrophy and hyperplasia of juxtaglomerular cells produces hypokalemic alkalosis and hyperaldosteronism; it is characterized by absence of hypertension in the presence of markedly increased plasma renin concentrations, and by insensitivity to the pressor effects of angiotensin. It usually affects children and is perhaps hereditary, and may be associated with other anomalies, such as mental retardation and short stature. Called also *Barter's syndrome*. **lipoid h.**, increased formation of lipoid-containing cells. **neoplastic h.**, hyperplasia brought about by a new growth. **ovarian stromal h.**, thecomatosis. **polar h.**, excessive development at either extremity of the embryo, producing a monster either with two heads or with three or more lower limbs. **pseudoepitheliomatous h.**, a benign, advanced epithelial hypertrophy. **Swiss-cheese h.**, hyperplasia of a tissue which on section shows openings as in Swiss cheese.

hyperplasmia (hi''per-plaz''me-ah) [*hyper-* + *plasma*] 1. excess in the proportion of blood plasma to corpuscles. 2. abnormally large size of erythrocytes through the absorption of plasma.

hyperplastic (hi''per-plas''tik) pertaining to or characterized by hyperplasia.

hyperploid (hi''per-ploid) [*hyper-* + *-ploid*] 1. having more than the typical number of chromosomes in unbalanced sets, as in Down's syndrome. 2. an individual or cell having more than the typical number of chromosomes in unbalanced sets.

hyperploidy (hi''per-ploi''de) the state of being hyperploid. Cf. *aneuploidy*.

hyperpnea (hi''perp-ne''ah) [*hyper-* + Gr. *pnoia* breath] abnormal increase in the depth and rate of the respiratory movements.

hyperpneic (hi''perp-ne''ik) pertaining to or characterized by hyperpnea.

hyperpolarization (hi''per-po''lar-i-za''shun) any increase in the amount of electrical charge separated by the cell membrane and hence in the strength of the transmembrane potential.

hyperpolypeptidemia (hi''per-pol''e-pep''ti-de''me-ah) excess of polypeptides in the blood.

hyperponesis (hi''per-po-ne''sis) [*hyper-* + Gr. *ponesis* toil, exertion] dysponesis in which there is excessive action-potential output from the motor and premotor areas of the cortex.

hyperponetic (hi''per-po-net''ik) pertaining to or characterized by hyperponesis.

hyperposia (hi''per-po''ze-ah) [*hyper-* + Gr. *posis* drinking + *-ia*] abnormally increased ingestion of fluids for relatively brief periods. Cf. *polyposia*.

hyperpostpituitary (hi''per-pōst''pī-tu''i-ter''e) pertaining to excess of posterior pituitary hormones.

hyperpotassemia (hi''per-pot''ah-se''me-ah) excess of potassium in the blood. See *hyperkalemia*.

hyperpragic (hi''per-praj''ik) characterized by excessive mental activity.

hyperpraxia (hi''per-prak''se-ah) [*hyper-* + Gr. *praxis* exercise] abnormal mental activity.

hyperprebetalipoproteinemia (hi''per-pre-ba''tah-lip''o-pro''te-in-e''me-ah) an excess of prebetalipoproteins (very low-density lipoproteins) in the blood; see *hyperlipoproteinemia*, type IV. Called also *prebetalipoproteinemia*. **familial h.**, familial hyperlipoproteinemia, type IV.

hyperpresbyopia (hi''per-pres''be-o''pe-ah) excessive presbyopia.

hyperproinsulinemia (hi''per-pro-in''su-lin-e''me-ah) elevated levels of proinsulin or proinsulin-like material in the blood.

hyperprolactinemia (hi''per-pro-lak''tin-e''me-ah) increased levels of prolactin in the blood, which, in women, is associated with infertility and may lead to galactorrhea, and, in men, has been reported to cause impotence; often but not invariably associated with microadenoma of the anterior pituitary.

hyperprolactinemic (hi''per-pro-lak''ti-ne''mik) pertaining to, characterized by, or affected by hyperprolactinemia.

hyperprolanemia (hi''per-pro''lah-ne''me-ah) an excessive amount of prolactin in the blood.

hyperprolinemia (hi''per-pro''li-ne''me-ah) a disorder of amino acid metabolism characterized by an excess of proline in the body fluids. It occurs in two types, both of which are probably benign. *Type I* is caused by a defect in the oxidation of proline to pyrroline carboxylate. *Type II* involves a defect in the oxidation of pyrroline carboxylate and is characterized by a greater degree of hyperprolinemia and by urinary excretion of pyrroline carboxylate.

hyperprosexia (hi''per-pro-sek''se-ah) [*hyper-* + Gr. *prosechein* to heed] a condition in which the mind is occupied by one idea to the exclusion of others.

hyperproteinemia (hi''per-pro''te-in-e''me-ah) [*hyper-* + *protein* + Gr. *haima* blood + *-ia*] the presence of an abnormally high amount of protein in the blood; see also *hyperlipoproteinemia*.

hyperproteosis (hi''per-pro''te-o''sis) a condition caused by an excess of protein in the diet.

hyperpselaphesia (hi''perp-sel''ah-fe''ze-ah) [*hyper-* + Gr. *pselaphēs* touch + *-ia*] tactile hyperesthesia.

hyperpsychosis (hi''per-si-ko''sis) [*hyper-* + Gr. *psychē* soul] exaggeration of mental activity with abnormal rapidity of the flow of thought.

hyperptyalism (hi''per-ti''al-izm) [*hyper-* + Gr. *ptyalon* spittle] ptyalism.

hyperpyremia (hi''per-pi-re''me-ah) [*hyper-* + Gr. *pyreia* fuel + *haima* blood + *-ia*] excess of unoxidized carbonaceous matter in the blood.

hyperpyretic (hi''per-pi-ret''ik) pertaining to, exhibiting, or causing hyperpyrexia.

hyperpyrexia (hi''per-pi-rek''se-ah) [*hyper-* + Gr. *pyressein* to be feverish] a highly elevated body temperature. **malignant h.**, see under *hyperthermia*.

hyperpyrexial (hi''per-pi-rek''se-al) pertaining to hyperpyrexia.

hyperreactive (hi''per-re-ak''tiv) pertaining to or characterized by a greater than normal response to stimuli.

hyperreflexia (hi''per-re-flek''se-ah) [*hyper-* + *reflex* + *-ia*] exaggeration of reflexes. **autonomic h.**, paroxysmal hypertension, bradycardia, sweating of the forehead, severe headache, and gooseflesh due to distention of the bladder and rectum; it is associated with lesions above the outflow of the splanchnic nerves.

hyperreninemia (hi''per-re''nin-e''me-ah) a condition of elevated levels of renin in the blood, which may lead to aldosteronism and hypertension.

hyperreninemic (hi''per-re''nin-e''mik) producing or characterized by hyperreninemia.

hyperresonance (hi''per-rez''o-nans) an exaggerated resonance.

hypersalemia (hi''per-sal-e'me-ah) abnormally increased content of salt in the blood.

hypersaline (hi''per-sa'lin) excessively saline: a term applied to treatment by the administration of large doses of sodium chloride.

hypersalivation (hi''per-sal''i-va'shun) ptyalism.

hypersarcosinemia (hi''per-sar''ko-sēn-e'me-ah) an inborn error of metabolism due to a defect of sarcosine dehydrogenase and marked by elevated levels of sarcosine in the blood.

hypersecretion (hi''per-se-kre'shun) excessive secretion. **gastric h.**, hyperchlorhydria.

hypersegmentation (hi''per-seg''men-ta'shun) the appearance of being divided into multiple segments or lobes. **hereditary h. of neutrophils**, a hereditary condition in which the neutrophils are multilobed; called also *Undritz anomaly*.

hypersensibility (hi''per-sen''sī-bil'i-te) excessive sensibility or sensitivity to a substance or stimulus.

hypersensitive (hi''per-sen''sī-tiv) 1. exhibiting abnormally increased sensitivity. 2. having the specific or general ability to react with characteristic signs and symptoms to the application or contact with certain substances (allergens) in amounts innocuous to normal (nonsensitized) individuals. See *hypersensitivity*.

hypersensitivity (hi''per-sen''sī-tiv''i-te) a state of altered reactivity in which the body reacts with an exaggerated response to a foreign agent. Hypersensitivity reactions are pathologic processes induced by immune responses and may be classified as immediate or delayed, or as: *type I*, the immediate hypersensitivity reactions (e.g., anaphylaxis); *type II*, in which injury is produced by antibody against tissue antigens (e.g., nephrotoxic nephritis); *type III*, in which injury is produced by antigen-antibody complex, especially by soluble complexes formed by slight antigen excess (e.g., Arthus reaction and serum sickness); and *type IV*, the delayed hypersensitivity reactions (e.g., contact dermatitis). **contact h.**, a type IV hypersensitive reaction of the skin produced by contact with a chemical substance having the properties of an antigen or hapten; it includes contact dermatitis. **delayed h.**, a slowly developing increase in cell-mediated (T-lymphocyte) immune response to a specific antigen; it is involved in the graft rejection phenomenon, autoimmune disease, and contact dermatitis, as well as in antimicrobial immunity. **immediate h.**, antibody-mediated hypersensitivity characterized by release of mediators (e.g., histamine and eosinophilchemotactic factor) from reagin-sensitized mast cells, causing increased vascular permeability, edema, and smooth muscle contraction. It includes anaphylaxis and atopy. The ability to react in this way can be transferred to another individual by injection of serum.

hypersensitization (hi''per-sen''sī-ti-za'shun) the process of rendering or the condition of being abnormally sensitive. See *hypersensitivity* and *anaphylaxis*.

hyperserotonemia (hi''per-se''ro-to-ne'me-ah) an elevation of the serum serotonin level.

hypersialosis (hi''per-si''ah-lo'sis) ptyalism.

hyperskeocytosis (hi''per-ske''o-si-to'sis) [*hyper-* + Gr. *skaïos* left + *kytos* hollow vessel + *-osis*] hyperneocytosis.

hypersomatotropism (hi''per-so-mat''ah-trop'izm) increased secretion of growth hormone.

hypersomia (hi''per-so'me-ah) [*hyper-* + Gr. *sōma* body] gigantism.

hypersomnia (hi''per-som'e-ah) [*hyper-* + L. *somnus* sleep] uncontrollable drowsiness; pathologically excessive sleep.

hypersphyxia (hi''per-sfik'se-ah) [*hyper-* + Gr. *sphyxis* pulse + *-ia*] increased activity of the circulation with increased blood pressure.

hypersplenism (hi''per-sple'ne-ah) hypersplenism.

hypersplenism (hi''per-splen'izm) a condition characterized by exaggeration of the suggested inhibitory or destructive functions of the spleen, resulting in deficiency of the peripheral blood elements, singly or in combination, hypercellularity of the bone marrow, and usually, but not always, splenomegaly.

hyperspongiosis (hi-per-spon''je-o'sis) proliferation of the substantia spongiosa ossium.

Hyperstat (hi''per-stat) trademark for a preparation of diazoxide.

hypersteatosis (hi''per-ste-ah-to'sis) seborrhea.

hyperstereoröntgenography (hi''per-ste're-o-rent''gen-og'-rah-fe) stereoröntgenography with great distance between the homologous points.

hyperstereoskiagraphy (hi''per-ste're-o-ski-ag'-rah-fe) hyperstereoröntgenography.

hypersthenia (hi''per-sthen'e-ah) [*hyper-* + Gr. *sthenos* strength] great strength or tonicity.

hypersthenic (hi''per-sthen'ik) pertaining to or characterized by hypersthenia.

hypersthenuria (hi''per-sthē-nu're-ah) [*hyper-* + Gr. *sthenos* strength + *ouron* urine + *-ia*] increased osmolality of the urine.

hypersuprarenalemia (hi''per-su''prah-re'nal-e'me-ah) hyperadrenalemia.

hypersuprarenalism (hi''per-su''prah-re'nal-izm) hyperadrenalemia.

hypersusceptibility (hi''per-sū-sep''ti-bil'i-te) a condition of abnormally increased susceptibility to poisons, infective agents, or agents which in the normal individual are entirely innocuous. See also *anaphylaxis*.

hypersympathicotonus (hi''per-sim-path''ē-ko-to'nus) an increased tone of the sympathetic nervous system.

hypertarachia (hi''per-tah-rak'e-ah) [*hyper-* + Gr. *tarachē* confusion] extreme irritability of the nervous system.

hypertelorism (hi''per-te'lor-izm) [*hyper-* + Gr. *tēlourous* distant] 1. abnormally increased distance between two organs or parts. 2. ocular h. **ocular h.**, **orbital h.**, a condition characterized by abnormal increase in the interorbital distance, often associated with cleidocranial or craniofacial dysostosis, and occasionally accompanied by mental deficiency.

Hypertensin (hi''per-ten'sin) trademark for a preparation of angiotensin amide.

hypertensinase (hi''per-ten'sin-ās) angiotensinase.

hypertensinogen (hi''per-ten-sin'o-jen) angiotensinogen.

hypertension (hi''per-ten'shun) [*hyper-* + *tension*] persistently high arterial blood pressure. Various criteria for its threshold have been suggested, ranging from 140 mm. Hg systolic and 90 mm. Hg diastolic to as high as 200 mm. Hg systolic and 110 mm. Hg diastolic. Hypertension may have no known cause (*essential* or *idiopathic h.*) or be associated with other primary diseases (*secondary h.*; see also *blood pressure*, under *pressure*). **accelerated h.**, progressive hypertension marked by the fundoscopic vascular changes of malignant hypertension but without papilledema. **adrenal h.**, hypertension associated with an adrenal tumor that secretes mineral corticosteroids, e.g., hyperaldosteronism. **benign h.**, chronic hypertension of relatively mild degree; it may develop into malignant hypertension. **benign intracranial h.**, pseudotumor cerebri. **borderline h.**, a condition in which the arterial blood pressure is sometimes within the normotensive range and sometimes within the hypertensive range; called also *labile h.* **essential h.**, hypertension occurring without discoverable organic cause; called also *primary h.* and *idiopathic h.* **Goldblatt h.**, see under *kidney*. **idiopathic h.**, essential h. **intracranial h.**, a syndrome of increased intracranial pressure and papilledema with no focal neurologic signs and with normal-sized cerebral ventricles. **labile h.**, borderline h. **low-renin h.**, essential hypertension associated with low levels of plasma-renin concentration or low renin activity. **malignant h.**, a severe hypertensive state with poor prognosis; it is characterized by papilledema of the ocular fundus with vascular exudative and hemorrhagic lesions, medial thickening of small arteries and arterioles, and left ventricular hypertrophy. Diastolic pressures as high as 130 mm. Hg or more are commonly present. **neuromuscular h.**, a condition of hyperexcitability and hyperirritability of reflex response; called also *anxiety tension state*. **ocular h.**, persistently elevated intraocular pressure in the absence of any other signs of glaucoma; it may or may not progress to chronic simple glaucoma. **pale h.**, malignant h. **portal h.**, abnormally increased blood pressure in the portal venous system, a frequent complication of cirrhosis of the liver. **primary h.**, essential h. **pulmonary h.**, increased pressure (above 30 mm. Hg systolic and 12 mm. Hg diastolic) within the pulmonary circulation. **red h.**, benign h. **renal h.**, hypertension due to or associated with renal disease with a factor of parenchymal ischemia. **renovascular h.**, hypertension due to occlusive disease of the renal arteries. **secondary h.**, hypertension due to or associated with a variety of primary diseases, such as renal disorders, disorders of the central nervous system, endocrine diseases, and vascular diseases. **splenoportal h.**, obstruction of the splenic venous system resulting in enlargement of the liver and manifestation of ascites and other evidence of portal cirrhosis. **symptomatic h.**, secondary h. **systemic venous h.**, elevation of systemic venous pressure, usually detected by inspection of the jugular veins. **vascular h.**, hypertension.

hypertensive (hi''per-ten'siv) 1. characterized by or causing increased tension or pressure, as abnormally high blood pressure. 2. a person with abnormally high blood pressure.

hypertensor (hi''per-ten'sor) a pressor agent.

Hyper-Tet (hip-per-tet) trademark for a preparation of tetanus immune human globulin.

hypertetraploid (hi''per-tet'rah-ploid) having more than the tetraploid number of chromosomes in unbalanced sets (4n + x).

hyperthecosis (hi''per-the-ko'sis) hyperplasia with excessive luteinization of the cells of the inner stromal layer, the theca interna, of the ovary; it may be associated with hirsutism and amenorrhea.

hyperthelia (hi''per-the'le-ah) [*hyper-* + Gr. *thelē* nipple] the presence of supernumerary nipples.

hyperthermal (hi''per-ther'mal) marked by abnormally high temperature.

hyperthermalgesia (hi'per-ther'mal-je'ze-ah) [*hyper-* + Gr. *thermē* heat + *algēs* pain] abnormally increased sensitivity to heat.

hyperthermesthesia (hi'per-ther'mes-the'ze-ah) [*hyper-* + Gr. *thermē* heat + *aisthēsis* perception + *-ia*] increased sensibility for heat.

hyperthermia (hi'per-ther'me-ah) [*hyper-* + Gr. *thermē* heat + *-ia*] abnormally high body temperature, especially that induced for therapeutic purposes. **h. of anesthesia**, malignant **h. malignant h.**, an autosomal dominantly inherited condition, occurring in patients undergoing general anesthesia, and causing a sudden, rapid rise in body temperature, associated with signs of increased muscle metabolism, such as tachycardia, tachypnea, sweating, and cyanosis, and, usually, muscle rigidity. Called also **h. of anesthesia** and **malignant hyperpyrexia**.

hyperthermoesthesia (hi'per-ther'mo-es-the'ze-ah) hyperthermesthesia.

hyperthermy (hi'per-ther'me) hyperthermia.

hyperthrombinemia (hi'per-throm'bi-ne'me-ah) abnormally high thrombin content of the blood.

hyperthymergasia (hi'per-thi'mer-ga'ze-ah) [*hyper-* + Gr. *thymos* spirit + *ergon* work] Meyer's term for overactivity of mood, marked by excitement, agitation, elation, and exaggerated self-feeling.

hyperthymergastic (hi'per-thi'mer-gas'tik) pertaining to or characterized by hyperthymergasia.

hyperthymia (hi'per-thi'me-ah) [*hyper-* + Gr. *thymos* spirit + *-ia*] excessive emotionalism.

hyperthymic (hi'per-thi'mik) marked by hyperthymia.

hyperthymism (hi'per-thi'mizm) a condition attributed to excessive activity of the thymus gland.

hyperthyrea (hi'per-thi're-ah) hyperthyroidism.

hyperthyreosis (hi'per-thi're-o'sis) hyperthyroidism.

hyperthyroid (hi'per-thi'roid) marked by or due to hyperthyroidism.

hyperthyroidism (hi'per-thi'roi-dizm) excessive functional activity of the thyroid gland, characterized by increased basal metabolism, goiter, and disturbances in the autonomic nervous system and in creatine metabolism. This term is sometimes used to refer to **Graves' disease**. **masked h.**, hyperactivity of the thyroid gland without the classic symptoms but manifested by symptoms restricted to a single system, as by cardiovascular symptoms.

hyperthyroidosis (hi'per-thi'roi-do'sis) hyperthyroidism.

hyperthyroxinemia (hi'per-thi-rok'si-ne'me-ah) excess of thyroxine in the blood.

hypertonia (hi'per-to'ne-ah) [*hyper-* + Gr. *tonos* tension] a condition of excessive tone of the skeletal muscles; increased resistance of muscle to passive stretching. **h. oc'uli**, high intraocular pressure; see **glaucoma**. **h. polycythaemia**, increased blood pressure associated with polycythemia.

hypertonic (hi'per-ton'ik) a biological term denoting a solution which when bathing body cells causes a net flow of water across the semipermeable cell membrane out of the cell. Also, denoting a solution having a greater tonicity than another solution, e.g., the blood, with which it is compared.

hypertonicity (hi'per-to-nis'i-te) the state or quality of being hypertonic.

hypertonus (hi'per-to'nus) hypertonia.

hypertoxic (hi'per-tok'sik) excessively toxic.

hypertoxicity (hi'per-tok-sis'i-te) the state or quality of being excessively toxic.

hypertrichosis (hi'per-trik-o'sis) [*hyper-* + Gr. *thrix* hair + *-osis*] excessive growth of hair, especially a localized or generalized excessive growth. Cf. **hirsutism**. **h. pin'nae au'ris**, an abnormally excessive growth of hair on the pinna of the ear, a trait which is thought to be transmitted by a gene on the Y chromosome.

hypertriglyceridemia (hi'per-tri-glis'er-i-de'me-ah) an excess of triglycerides in the blood; an inherited form occurs in familial hyperlipoproteinemia, types IIb and IV.

hypertriploid (hi'per-trip'loid) having more than the triploid number of chromosomes in unbalanced sets ($3n + x$).

hypertrophy (hi'per-tro'fe-ah) hypertrophy.

hypertrophic (hi'per-trof'ik) pertaining to or marked by hypertrophy.

hypertrophy (hi-per'tro-fe) [*hyper-* + Gr. *trophē* nutrition] the enlargement or overgrowth of an organ or part due to an increase in size of its constituent cells. Cf. **hyperplasia**. **adaptive h.**, increase in size in response to changed conditions, as, for example, increased thickness of the walls of a hollow organ when the outflow is obstructed. **Billroth h.**, idiopathic benign hypertrophy of the pylorus. **compensatory h.**, that which results from an increased workload due to some physical defect, as of the left ventricle of the heart due to hypertension. **complementary h.**, increase in size of the remaining part of an organ to take the place of a portion which has been lost. **concentric h.**, in-

creased thickness of the walls of an organ, with no enlargement and with diminished capacity. **eccentric h.**, hypertrophy of a hollow organ, with dilatation of its cavity. **false h.**, enlargement due to an increase in only one constituent element of an organ or part, more commonly the stroma. **functional h.**, hypertrophy of an organ or part caused by its increased activity. **hemifacial h.**, overgrowth of one side of the face. **Marie's h.**, enlargement of the soft parts of the joints resulting from periostitis. **numeric h.**, that which is due to an increased number of structural elements. **physiologic h.**, temporary increase in the size of an organ produced by physiologic activity, as in the female breast during pregnancy and lactation. **pseudomuscular h.**, pseudohypertrophic muscular dystrophy. **quantitative h.**, hyperplasia. **simple h.**, that which is due to a simple increase of the number of structural elements. **true h.**, enlargement due to an increase of all the component elements of an organ or part. **unilateral h.**, overgrowth of one side of the entire body or of a portion of one side, as of the face. **ventricular h.**, hypertrophy of the myocardium of a ventricle. **vicarious h.**, hypertrophy of an organ in consequence of the failure of another organ of allied function.

hypertropia (hi'per-tro'pe-ah) [*hyper-* + Gr. *trepein* to turn] strabismus in which there is permanent upward deviation of the visual axis of an eye.

Hypertussis (hi'per-tus'sis) trademark for a preparation of pertussis immune human globulin.

hyperuresis (hi'per-u-re'sis) polyuria.

hyperuricacidemia (hi'per-u'rik-as'i-de'me-ah) hyperuricemia.

hyperuricaciduria (hi'per-u'rik-as'i-du're-ah) hyperuricuria.

hyperuricemia (hi'per-u'ri-se'me-ah) excess of uric acid in the blood; it is a prerequisite for the development of gout and may lead to renal disease.

hyperuricemic (hi'per-u'ri-se'mik) pertaining to or characterized by hyperuricemia.

hyperuricuria (hi'per-u'rik-u're-ah) excess of uric acid in the urine.

hypervaccination (hi'per-vak'si-na'shun) the subsequent inoculation (one or more times) of a previously immunized animal with enough vaccine to enable it to afford a serum protective to other animals.

hypervalinemia (hi'per-val'i-ne'me-ah) an inborn error of metabolism, possibly due to a defect in valine transamination, characterized by elevated levels of valine in the plasma and urine and by failure to thrive; it may occur alone or with elevated levels of other amino acids, as in maple syrup urine disease. Called also **valinemia**.

hypervascular (hi'per-vas'ku-lar) extremely vascular.

hypervegetative (hi'per-vej'ē-ta'tiv) [*hyper-* + L. *vegetativus* plant-fashion] denoting a constitutional body type in which the visceral, nutritional functions predominate.

hyperventilation (hi'per-ven'ti-la'shun) 1. a state in which there is an increased amount of air entering the pulmonary alveoli (increased alveolar ventilation), resulting in reduction of carbon dioxide tension and eventually leading to alkalosis. 2. abnormally prolonged, rapid, and deep breathing, frequently used as a test procedure in epilepsy and tetany.

hyperviscosity (hi'per-vis-kos'i-te) excessive viscosity, as of the blood; see also under **syndrome**.

hypervitaminosis (hi'per-vi'tah-mi-no'sis) a condition due to ingestion of an excess of one or more vitamins; called also **supervitaminosis**. **h. A**, a symptom complex resulting from ingestion of excessive amounts of vitamin A, with skin pigmentation, generalized pruritus, changes in the horny structures of the skin, and loss of hair; serum levels of vitamin A usually are elevated to more than 100 mg. per 100 ml. **h. D**, a symptom complex resulting from ingestion of excessive amounts of vitamin D, with weakness, fatigue, loss of weight, and other symptoms.

hypervitaminotic (hi'per-vi'tah-mi-not'ik) pertaining to or characterized by hypervitaminosis.

hypervolemia (hi'per-vo-le'me-ah) [*hyper-* + *volume* + Gr. *haima* blood + *-ia*] abnormal increase in the volume of circulating fluid (plasma) in the body.

hypervolemic (hi'per-vo-le'mik) pertaining to or characterized by hypervolemia.

hypervolia (hi'per-vo'le-ah) augmented water content or volume of a given compartment, e.g., as of a cell.

hyesthesia (hip'es-the'ze-ah) hyoesthesia.

hypha (hi'fah), pl. **hyphae** [L.] one of the filaments or threads composing the mycelium of a fungus.

hyphae (hi'fe) [L.] plural of **hypha**.

hyphal (hi'ful) pertaining to a hypha.

hyphedonia (hip'hē-do'ne-ah) [*hypo-* + Gr. *hēdonē* pleasure + *-ia*] morbid diminution of the feeling of pleasure in acts that normally give pleasure.

hyphema (hi-fe'mah) [Gr. *hyphaimos* suffused with blood,

blood-shot; especially of the eyes] hemorrhage within the anterior chamber of the eye. Called also *hypemia*.

hypemia (hi-fe'me-ah) [*hypo-* + Gr. *haima* blood + *-ia*] 1. (*obs.*) oligemia. 2. hypHEMA.

hyphephilia (hi'f'e-fil'e-ah) [Gr. *hyphe* web + *philein* to love] sexual gratification by contact with fabrics, such as velvet, silk, etc.

hyhidrosis (hip'hid-ro'sis) [*hypo-* + Gr. *hidrōs* sweat + *-osis*] too scanty perspiration.

Hyphomicrobiaceae (hi'fo-mi-kro'be-a'se-e) a family of Schizomycetes (order Hyphomicrobiales), made up of cells attached to one another by a slender filament, daughter cells arising from such filaments or from one growing out of the pole of a mature cell. It includes two genera, *Hyphomicrobium* and *Rhodomicrobium*.

Hyphomicrobiales (hi'fo-mi-kro'be-a'lēz) an order of Schizomycetes, made up of ovoid, ellipsoidal, spherical, or pyriform cells which commonly occur in aggregates but may occur singly or in pairs, and which multiply by budding or by budding and longitudinal fission. It includes two families, Hyphomicrobiaceae and Pasteuriaceae.

Hyphomicrobium (hi'fo-mi-kro'be-um) a genus of microorganisms of the family Hyphomicrobiaceae, order Hyphomicrobiales, made up of ovoid cells growing in a dense clump from which filaments radiate outward. The type species is *H. vulgare*.

Hyphomyces (hi'fo-mi'sēz) a genus of phicomycetous fungi the members of which do not sporulate; they appear to be related to the genus *Mortierella* (order Mucorales, family Mucoraceae).

H. des'truens, the etiologic agent of hyphomycosis destruens equi.

hyphomycete (hi'fo-mi-sēt) any individual organism of the Hyphomycetes, an imperfect mold in contrast to an imperfect yeast.

Hyphomycetes (hi'fo-mi-se'tēz) [pl., Gr. *hyphe* web + Gr. *mykēs* fungus] the mycelial (hyphal) fungi, i.e., molds, of the Fungi Imperfecti (Deuteromycetes).

hyphomycetic (hi'fo-mi-set'ik) (*obs.*) due to the presence of mold, or mycelial, fungi.

hyphomycetoma (hi'fo-mi'se-to'mah) (*obs.*) a tumor caused by hyphomycetes (imperfect fungi).

hyphomycosis (hi'fo-mi-ko'sis) 1. infection with fungi of the genus *Hyphomyces*. 2. (*obs.*) infection with hyphomycetes (imperfect fungi). **h. des'truens equi**, a disease of horses and mules in India, Indonesia, Europe, and southern United States, caused by *Hyphomyces destruens*; it is marked by the formation of subcutaneous abscesses that enlarge until the skin over and around the lesions is destroyed, leaving large raw surfaces. Because of the clinical similarity between hyphomycosis destruens equi and cutaneous habronemiasis, the disorders are often confused.

hyphylline (hi-fil'in) dyphylline.

hypisotonic (hip'i-so-ton'ik) less than isotonic.

hypnagogic (hip'nah-goj'ik) 1. producing sleep. 2. occurring just before sleep; said of dreams.

hypnagogue (hip'nah-gog) [*hypno-* + Gr. *agōgos* leading] 1. hypnotic; pertaining to drowsiness. 2. an agent that induces sleep or drowsiness.

hypnalgia (hip-nal'je-ah) [*hypno-* + Gr. *algos* pain + *-ia*] pain that occurs during sleep.

hypnesthesia (hip'nes-the'ze-ah) [*hypno-* + Gr. *aisthēsis* perception + *-ia*] (*obs.*) sleepiness.

hypnic (hip'nik) [Gr. *hypnikos*] inducing or pertaining to sleep.

hypno- [Gr. *hypnos* sleep] a combining form denoting relationship to sleep.

hypnoanalysis (hip'no-ah-nal'i-sis) [*hypno-* + *analysis*] a method of psychotherapy in which psychoanalysis is employed in conjunction with hypnosis.

hypnoanesthesia (hip'no-an'es-the'ze-ah) induction of the anesthetic state by hypnosis.

hypnobotia (hip'no-ba'she-ah) [*hypno-* + Gr. *bainein* to walk] (*obs.*) somnambulism, def. 1.

hypnocinematograph (hip'no-sin'ē-mat'o-graf) [*hypno-* + Gr. *kinēma* movement + *graphein* to record] an apparatus for recording the movements made by a sleeping person.

hypnocyst (hip'no-sist) [*hypno-* + *cystē*] a quiescent cyst.

hypnodontia (hip'no-don'she-ah) hypnodontics.

hypnodontics (hip'no-don'tiks) [*hypnosis* + Gr. *odous* tooth] the application of controlled suggestion and hypnosis in the practice of dentistry.

hypnogenetic (hip'no-jē-net'ik) hypnogenic.

hypnogenic (hip'no-jen'ik) [*hypno-* + Gr. *gennan* to produce] inducing sleep or a hypnotic state.

hypnogenous (hip-noj'ē-nus) hypnogenic.

hypnoid (hip'noid) resembling hypnosis or the hypnotic state.

hypnoidal (hip-noi'dal) pertaining to a state resembling hypnosis.

hypnoidization (hip'noi-di-za'shun) the production of light hypnosis or of the hypnoid state.

hypnolepsy (hip'no-lep'se) [*hypno-* + Gr. *lēpsis* seizure] narcolepsy.

hypnology (hip-nol'o-je) [*hypno-* + *-logy*] the sum of what is known regarding sleep and hypnotism.

hypnonarcoanalysis (hip'no-nar'ko-ah-nal'i-sis) psychoanalysis with the patient hypnotized and narcotized with a sedative drug.

hypnonarcosis (hip'no-nar-ko'sis) light hypnosis combined with narcosis.

hypnopedia (hip'no-pe'de-ah) [*hypno-* + *paideia* education] sleep learning; learning during sleep, as by listening to recordings.

hypnopompic (hip'no-pom'pik) [*hypno-* + Gr. *pompē* a sending away, a sending home] persisting after sleep; applied to visions or dreams that persist prior to complete awakening.

hypnosia (hip-no'ze-ah) uncontrollable drowsiness.

hypnosis (hip-no'sis) an artificially induced passive state in which there is increased amenability and responsiveness to suggestions and commands, provided that these do not conflict seriously with the subject's own conscious or unconscious wishes.

hypnosophy (hip-nos'o-fe) [*hypno-* + Gr. *sophia* wisdom] the study of sleep and its phenomena.

hypnotherapy (hip'no-ther'ah-pe) [*hypno-* + Gr. *therapeia* treatment] the use of hypnosis in the treatment of disease.

hypnotic (hip-not'ik) [Gr. *hypnōtikos*] 1. inducing sleep. 2. pertaining to or of the nature of hypnotism. 3. a drug that acts to induce sleep.

hypnotism (hip'no-tizm) 1. the method or practice of inducing hypnosis. 2. hypnosis.

hypnotist (hip'no-tist) one who induces hypnosis.

hypnotization (hip'no-ti-za'shun) the induction of hypnosis.

hypnotize (hip'no-tiz) to put into a state of hypnosis.

hypnotoxin (hip'no-tok'sin) 1. a toxin that is supposed to accumulate during the waking hours, until finally it is sufficient to inhibit the activity of the cortical cells and thus induce sleep. 2. a toxic substance derived from the tentacles of *Physalia*, the Portuguese man-of-war, characteristically causing a central nervous system depression, affecting both motor and sensory elements.

hypo (hi'po) 1. a popular designation for a hypodermic inoculation or syringe. 2. a contraction for sodium thiosulfate, used as a photographic fixing agent.

hypo- [Gr. *hypo* under] a prefix signifying beneath, under, or deficient. In chemistry, it denotes that the principal element in the compound is combined in its lowest state of valence.

hypoacidity (hi'po-ah-sid'i-te) deficiency of acid; lack of normal acidity.

hypoactive (hi'po-ak'tiv) pertaining to or characterized by hypoactivity.

hypoactivity (hi'po-ak-tiv'i-te) abnormally diminished activity, as of peristalsis.

hypoacusis (hi'po-ah-ku'sis) [*hypo-* + Gr. *akousis* hearing] slightly diminished auditory sensitivity, with hearing threshold levels above the normal limit so that the impairment is measurable in decibels.

hypoadenia (hi'po-ah-de'ne-ah) [*hypo-* + Gr. *adēn* gland + *-ia*] abnormally diminished glandular activity.

hypoadrenalemia (hi'po-ah-dre'nal-e'me-ah) the presence of an abnormally decreased amount of adrenal secretion in the blood.

hypoadrenalism (hi'po-ah-dre'nal-izm) abnormally diminished activity of the adrenal gland, as in Addison's disease.

hypoadrenia (hi'po-ah-dre'ne-ah) hypoadrenalism.

hypoadrenocorticism (hi'po-ah-dre'no-kor'ti-sizm) abnormally diminished secretion of the adrenal cortex; see *Addison's disease*.

hypoaffective (hi'po-af-fek'tiv) pertaining to or characterized by hypoaffectivity.

hypoaffectivity (hi'po-af'fek-tiv'i-te) abnormally diminished sensibility to superficial stimuli; the quality of abnormally decreased emotional reactivity.

hypoalbuminemia (hi'po-al-bu'mīn-e'me-ah) an abnormally low albumin content of the blood.

hypoalbuminosis (hi'po-al-bu'mī-no'sis) a condition characterized by an abnormally low level of albumin.

hypoaldosteronemia (hi'po-al'do-stēr'o-ne'me-ah) an abnormally low level of aldosterone in the blood.

hypoaldosteronism (hi'po-al'do-stēr'ōn-izm) a deficiency of aldosterone in the body, usually associated with hypoadrenalism, and characterized by hypotension and a tendency to excrete excessive salt. **isolated h.**, a rare endocrine disorder characterized by reduced or absent aldosterone production, with normal production of all other adrenal steroids.

hypoaldosteronuria (hi'po-al'do-stēr'o-nu're-ah) presence of an abnormally low level of aldosterone in the urine.

hypoalgesia (hi''po-al-je'se-ah) hypalgesia.

hypoalimentation (hi''po-al'i-men-ta'shun) insufficient nourishment.

hypoalkaline (hi''po-al'kah-lin) less alkaline than normal.

hypoalkalinity (hi''po-al'kah-lin'i-te) the state of being less alkaline than normal.

hypoalbumemia (hi''po-al'o-ne'me-ah) [*hypo-* + Gr. *hals* salt + *haima* blood + *-ia*] a deficiency of salts in the blood.

hypoaminoacidemia (hi''po-am'i-no-as'i-de'me-ah) the presence of less than the normal amount of amino acids in the blood.

hypoandrogenism (hi''po-an-dro'jen-izm) deficiency of androgen.

hypoazoturia (hi''po-az'o-tu're-ah) [*hypo-* + L. *azotum* nitrogen + Gr. *ouron* urine + *-ia*] diminished excretion of nitrogenous material in the urine.

hypobaric (hi''po-bär'ik) [*hypo-* + Gr. *baros* weight] characterized by less than normal pressure or weight; applied to gases under less than atmospheric pressure or to a solution of lower specific gravity than another taken as a standard of reference. See under *solution*.

hypobarism (hi''po-bär'izm) the condition resulting from exposure to ambient gas pressure or atmospheric pressures that are below those within body tissues, fluids, cavities.

hypobaropathy (hi''po-bär-op'ah-the) [*hypo-* + Gr. *baros* pressure + *pathos* disease] the disturbances experienced in high altitudes due to reduced air pressure; see *high-altitude sickness* and *mountain sickness*, under *sickness*.

hypobasophilism (hi''po-ba-sof'i-lizm) hypopituitarism.

hypobetalipoproteinemia (hi''po-ba'tah-lip'o-pro'te-in-e'me-ah) the presence of abnormally low levels of β -lipoprotein in the serum, as in debilitating diseases and malabsorption syndromes.

hypobilirubinemia (hi''po-bil'i-ru'bi-ne'me-ah) abnormal diminution of bilirubin in the blood.

hypoblast (hi''po-blast) [*hypo-* + Gr. *blastos* germ] entoderm.

hypoblastic (hi''po-blas'tik) entodermic.

hypobranchial (hi''po-brang'ke-al) [*hypo-* + Gr. *branchia* gills] located beneath the branchial arches.

hypobromite (hi''po-bro'mit) any salt of hypobromous acid.

hypobulia (hi''po-bu'le-ah) [*hypo-* + Gr. *boulē* will + *-ia*] (*obs.*) abnormal feebleness of the will.

hypocalcemia (hi''po-kal-se'me-ah) [*hypo-* + *calcium* + Gr. *haima* blood + *-ia*] reduction of the blood calcium below normal; manifestations include hyperactive deep tendon reflexes, Chvostek's sign, muscle and abdominal cramps, and carpal spasm.

hypocalcia (hi''po-kal'se-ah) deficiency of calcium.

hypocalcification (hi''po-kal'si-fi-ka'shun) diminished calcification. **enamel h.**, a dental defect in which the enamel is soft and undercalcified, although normal in quantity and histological features. See also *amelogenesis imperfecta*.

hypocalcipectic (hi''po-kal'si-pek'tik) pertaining to or characterized by hypocalcipey.

hypocalcipey (hi''po-kal'si-pek'se) deficient calcium fixation.

hypocalciuria (hi''po-kal'se-u're-ah) an abnormally diminished amount of calcium in the urine.

hypocapnia (hi''po-kap'ne-ah) [*hypo-* + Gr. *kapnos* smoke + *-ia*] deficiency of carbon dioxide in the blood, resulting from hyperventilation and eventually leading to alkalosis.

hypocapnic (hi''po-kap'nik) pertaining to or characterized by hypocapnia.

hypocarbica (hi''po-kar'be-ah) hypocapnia.

hypocellular (hi''po-sel'u-lar) pertaining to or characterized by hypocellularity.

hypocellularity (hi''po-sel'u-lār'i-te) a state of abnormal decrease in the number of cells present, as in bone marrow.

hypocelom (hi''po-se'lom) hypocoeleom.

hypocenesthesia (hi''po-sen'es-the'ze-ah) [*hypo-* + *cenesthesia*] (*obs.*) lack of the normal sense of well being, as seen in hypochondria.

hypocenter (hi''po-sen'ter) the spot immediately beneath the exact site of explosion of an atomic bomb.

hypochloremia (hi''po-klo-re'me-ah) an abnormally diminished level of chloride in the blood.

hypochloremic (hi''po-klo-re'mik) pertaining to or characterized by hypochloremia.

hypochlorhydria (hi''po-klor-hi'dre-ah) [*hypo-* + Gr. *chlōros* green + *hydōr* water + *-ia*] deficiency of hydrochloric acid in the gastric juice. Cf. *achlorhydria*.

hypochloridation (hi''po-klo'ri-da'shun) chloride deficiency in the system.

hypochloridemia (hi''po-klo'rid-e'me-ah) hypochloremia.

hypochlorite (hi''po-klo'rīt) [*hypo-* + Gr. *chlōros* green] any salt of hypochlorous acid; used as a medicinal agent, particularly

as a diluted solution of sodium hypochlorite. See *sodium hypochlorite solution*, *diluted*, under *solution*.

hypochlorization (hi''po-klo'ri-za'shun) reduction of the amount of sodium chloride in the diet.

hypochloruria (hi''po-klo-ru're-ah) [*hypo-* + *chloride* + Gr. *ouron* urine + *-ia*] deficiency of chlorides in the urine.

hypocholesteremia (hi''po-ko-les'tē-re'me-ah) hypcholesterolemia.

hypocholesteremic (hi''po-ko-les'tē-re'mik) hypcholesterolemic.

hypcholesterinemia (hi''po-ko-les'ter-i-ne'me-ah) hypcholesterolemia.

hypcholesterolemia (hi''po-ko-les'ter-o-le'me-ah) an abnormally diminished amount of cholesterol in the blood.

hypcholesterolemic (hi''po-ko-les'ter-o-le'mik) pertaining to, characterized by, or producing hypcholesterolemia.

hypocholia (hi-po-ko'le-ah) oligocholia.

hypocholuria (hi''po-ko-lu're-ah) abnormal reduction in the amount of bile in the urine.

hypochondria (hi''po-kon'dre-ah) 1. plural of *hypochondrium*. 2. hypochondriasis.

hypochondriac (hi''po-kon'dre-ak) 1. pertaining to the hypochondrium or to hypochondriasis. 2. a person affected with hypochondriasis.

hypochondriacal (hi''po-kon-dri'ah-kal) affected with hypochondriasis.

hypochondriasis (hi''po-kon-dri'ah-sis) [so called because the hypochondrium, and especially the spleen, was supposed to be the seat of this disorder] morbid anxiety about one's health, often associated with numerous and varying symptoms which cannot be attributed to organic disease; called also *hypochondria*.

hypochondrium (hi''po-kon'dre-um), pl. *hypochon'dria* [*hypo-* + Gr. *chondros* cartilage] regio hypochondriaca [dextra et sinistra].

hypochordal (hi''po-kor'dal) situated ventral to the notochord.

hypochromasia (hi''po-kro-ma'ze-ah) [*hypo-* + Gr. *chrōma* color] 1. the condition of staining less intensely than normal. 2. decrease of hemoglobin in the erythrocytes so that they are abnormally pale in color.

hypochromatic (hi''po-kro-mat'ik) containing an abnormally small number of chromosomes; marked by hypochromatism.

hypochromatism (hi''po-kro'mah-tizm) [*hypo-* + *chromatin*] abnormally deficient pigmentation, especially deficiency of the chromatin in a cell nucleus.

hypochromatosis (hi''po-kro'mah-to'sis) the gradual fading and disappearance of the nucleus (the chromatin) of a cell.

hypochromemia (hi''po-kro-me'me-ah) [*hypo-* + Gr. *chrōma* color + *haima* blood + *-ia*] a condition in which the blood has an abnormally low color index. **idiopathic h.**, idiopathic hypochromic anemia.

hypochromia (hi''po-kro'me-ah) [*hypo-* + Gr. *chrōma* color + *-ia*] 1. abnormal decrease in the hemoglobin content of the erythrocytes. 2. hypochromatism.

hypochromic (hi''po-kro'mik) pertaining to or marked by hypochromia.

hypochromotrichia (hi''po-kro'mo-trik'e-ah) abnormally reduced pigmentation of the hair.

hypochrosis (hi''po-kro'sis) [*hypo-* + Gr. *chrōma* color + *-osis*] anemia in which there is an abnormally small amount of hemoglobin in the blood.

hypochylia (hi''po-ki'le-ah) [*hypo-* + Gr. *chylos* chyle + *-ia*] deficiency of chyle.

hypocinesia (hi''po-si-ne'ze-ah) hypokinesia.

hypocinesis (hi''po-si-ne'sis) hypokinesia.

hypocist (hi''po-sist) hypocistis.

hypocistis (hi''po-sis'tis) the juice and extract of various species of the parasitic herb *Cytinus*, as of *C. hypocistis* of southern Europe; astringent.

hypocitremia (hi''po-si-tre'me-ah) [*hypo-* + *citric acid* + Gr. *haima* blood + *-ia*] abnormally low content of citric acid in the blood.

hypocitruria (hi''po-si-troo're-ah) [*hypo-* + *citric acid* + Gr. *ouron* urine + *-ia*] excretion of urine containing an abnormally small amount of citric acid.

hypocoagulability (hi''po-ko-ag'u-lah-bil'i-te) the state of being less readily coagulated than normal.

hypocoagulable (hi''po-ko-ag'u-lah-bl) characterized by abnormally decreased coagulability.

hypocoelom (hi''po-se'lom) [*hypo-* + Gr. *koilōma* hollow] the ventral portion of the coelom of any embryonic vertebrate.

hypocolasia (hi''po-ko-la'ze-ah) hypokolasia.

hypocomplementemia (hi''po-kom'plē-men-te'me-ah) diminution of complement levels in the blood.

hypocomplementemic (hi''po-kom'plē-men-te'mik) denoting or involving lowered levels of complement in the blood.

hypocondylar (hi''po-kon'dī-lar) below a condyle.

hypocone (hi''po-kōn) [*hypo-* + Gr. *kōnos* cone] the distolingual cusp of an upper molar tooth.

hypoconid (hi''po-ko'nid) the distobuccal cusp of a lower molar tooth.

hypoconulid (hi''po-kon'u-lid) the distal, or fifth, cusp of a lower molar tooth; usually found on the mandibular first molar.

hypocorticalism (hi''po-kor'ti-kal-izm) hypoadrenocorticism.

hypocorticism (hi''po-kor'ti-sizm) hypoadrenocorticism.

hypocotyl (hi''po-kot'il) [*hypo-* + *kotyle* hollow] the part of the axis of a plant embryo or seedling below the point of attachment of the cotyledon and from which the radicle, or primary root, grows.

Hypocreales (hi''po-kre-a'les) a family of ascomycetous fungi.

hypocrine (hi''po-krin) due to endocrine hypofunction.

hypocrinia (hi''po-krin'e-ah) hypocrinism.

hypocrinism (hi''po-krin'izm) [*hypo-* + Gr. *krinein* to secrete] a bodily state due to deficient secretion of any endocrine gland.

hypocupremia (hi''po-ku-pre'me-ah) an abnormally diminished concentration of copper in the blood.

hypocyclosis (hi''po-si-klo'sis) [*hypo-* + Gr. *kyklos* circle + *-osis*] insufficiency of accommodation due either to undue rigidity of the crystalline lens (*lenticular h.*) or to weakness of the ciliary muscle (*ciliary h.*).

hypocystotomy (hi''po-sis-tot'o-me) [*hypo-* + *cystotomy*] the surgical opening of the urinary bladder through the perineum.

hypocythemia (hi''po-si-the'me-ah) [*hypo-* + Gr. *kytos* cell + *haima* blood + *-ia*] deficiency in the number of erythrocytes in the blood.

hypocytosis (hi''po-si-to'sis) [*hypo-* + *-cyte* + *-osis*] defect or scantiness of corpuscles in the blood.

hypodactyly (hi''po-dak'ti-le) the presence of less than the normal number of fingers or toes.

hypoderm (hi''po-derm) [*hypo-* + Gr. *derma* skin] a vague expression used loosely to mean either the panniculus adiposus or the region where the panniculus and the dermis intermingle.

Hypoderma (hi''po-der'mah) [*hypo-* + Gr. *derma* skin] a genus of ox-warble flies or heel flies of the family Oestridae whose larvae cause a creeping eruption in man and cattle. **H. bo'vis**, a species whose larvae infest cattle, seriously damaging the hide and interfering with the nutrition of the animal; it sometimes causes a creeping eruption in man. **H. linea'tum**, an ox-warble fly of cattle in the United States.

hypodermatic (hi''po-der-mat'ik) hypodermic.

hypodermatoclysis (hi''po-der-mah-tok'li-sis) hypodermoclysis.

hypodermatomy (hi''po-der-mat'o-me) [*hypo-* + Gr. *derma* skin + *temnein* to cut] incision of the subcutaneous tissue.

hypodermiasis (hi''po-der-mi'ah-sis) infection by *Hypoderma*; see *larva migrans*.

hypodermic (hi''po-der'mik) [*hypo-* + Gr. *derma* skin] applied or administered beneath the skin.

hypodermis (hi''po-der'mis) [*hypo-* + Gr. *derma* skin] 1. tela subcutanea. 2. the outer cellular layer of the body of invertebrates which secretes the cuticular exoskeleton.

hypodermoclysis (hi''po-der-mok'li-sis) [*hypo-* + Gr. *derma* skin + *klyzein* to wash out] introduction into the subcutaneous tissues of fluids, especially physiologic sodium chloride solution, to replace inadequate intake or loss of water and salt during illness or operation.

hypodermolithiasis (hi''po-der'mo-li-thi'ah-sis) [*hypo-* + Gr. *derma* skin + *lithos* stone + *-iasis*] the formation or presence of subcutaneous calcareous nodes.

hypodiaphragmatic (hi''po-di'ah-frag-mat'ik) below the diaphragm.

hypodiploid (hi''po-dip'loid) 1. pertaining to or characterized by hypodiploidy. 2. an individual or cell with less than the diploid number of chromosomes.

hypodiploidy (hi''po-dip'loi-de) the state of having less than the diploid number of chromosomes (<2n).

hypodipsia (hi''po-dip'se-ah) [*hypo-* + Gr. *dipsa* thirst + *-ia*] abnormally diminished thirst. See *subliminal thirst*, under *thirst*.

hypodontia (hi''po-don'she-ah) partial anodontia.

hypodynamia (hi''po-di-na'me-ah) [*hypo-* + Gr. *dynamis* force] diminished power. **h. cor'dis**, diminished cardiac power.

hypodynamic (hi''po-di-nam'ik) pertaining to poor ventricular contractility.

hypoeccrisia (hi''po-ek-kris'e-ah) [*hypo-* + Gr. *ekkrisis* excretion + *-ia*] a state characterized by abnormally diminished excretion.

hypoeccrisis (hi''po-ek'kri-sis) hypoeccrisia.

hypoeccritic (hi''po-ek-krit'ik) pertaining to or characterized by hypoeccrisia.

hypoechoic (hi''po-ē-ko'ik) in ultrasonography, giving off few

echoes; said of tissues or structures that reflect relatively few of the ultrasound waves directed at them.

hypoelectrolytemia (hi''po-e-lek'tro-li-te'me-ah) abnormally decreased electrolyte content of the blood.

hypoemotivity (hi''po-e'mo-tiv'i-te) hypoaffectivity.

hypoeocrinia (hi''po-en'do-krin'e-ah) hypoeocrinism.

hypoeocrinism (hi''po-en-dok'ri-nizm) [*hypo-* + Gr. *endon* within + *krinein* to secrete] abnormally decreased activity of an endocrine gland.

hypoeocrinia (hi''po-en'do-kris'e-ah) hypoeocrinism.

hypoeosinophilia (hi''po-e'o-sin'o-fil'e-ah) eosinopenia.

hypoepinephrinemia (hi''po-ep'i-nef'ri-ne'me-ah) an abnormally low level of epinephrine in the blood.

hypoequilibrium (hi''po-e'kwī-lib're-um) unusual freedom from tendency to vertigo.

hypoergasia (hi''po-er-ga'se-ah) [*hypo-* + Gr. *ergon* work] abnormally decreased functional activity.

hypoergia (hi''po-er'je-ah) 1. hypoergasia. 2. hyposensitivity to allergens.

hypoergic (hi''po-er'jik) 1. less energetic than normal. 2. pertaining to or characterized by hypoergy.

hypoergy (hi''po-er'je) abnormally diminished reactivity.

hypoesophoria (hi''po-es'o-fo're-ah) a tendency of the visual axis to deviate downward and medially when fusion is prevented.

hypoesthesia (hi''po-es-the'ze-ah) [*hypo-* + Gr. *aisthēsis* sensation + *-ia*] abnormally decreased sensitivity to stimulation. **acoustic h.**, **auditory h.**, hypoacusis. **gustatory h.**, hypogeusesthesia. **olfactory h.**, hyposmia. **tactile h.**, hypopsesthesia.

hypoesthetic (hi''po-es-thet'ik) pertaining to or characterized by hypoesthesia.

hypoestrinemia (hi''po-es'tri-ne'me-ah) hypoestrogenemia.

hypoestrogenemia (hi''po-es'tro-jē-ne'me-ah) an abnormally diminished amount of estrogen in the blood, as in the menopause.

hypoevolutism (hi''po-e-vol'u-tizm) a condition characterized by abnormally retarded development.

hypoezophoria (hi''po-ek'so-fo're-ah) a tendency of the visual axis to deviate downward and laterally when fusion is prevented.

hypoferremia (hi''po-fē-re'me-ah) deficiency of iron in the blood.

hypoferrism (hi''po-fer'izm) [*hypo-* + L. *ferrum* iron] deficiency of iron in the system.

hypofertile (hi''po-fer'til) having a diminished reproductive capacity.

hypofertility (hi''po-fer-til'i-te) diminished reproductive capacity.

hypofibrinogenemia (hi''po-fi-brin'o-jē-ne'me-ah) abnormally low fibrinogen content of the blood.

hypofunction (hi''po-funk'shun) diminished function.

hypogalactia (hi''po-gah-lak'she-ah) deficiency of milk secretion.

hypogalactous (hi''po-gah-lak'tus) [*hypo-* + Gr. *gala* milk] producing a deficient secretion of milk.

hypogammaglobulinemia (hi''po-gam'ah-glob'u-li-ne'me-ah) an immunological deficiency state characterized by an abnormally low level of generally all classes of gamma globulin in the blood. A physiologic temporary form occurs in normal infants at about three months of age. When prolonged to 18 months of age or more, it is called *transient hypogammaglobulinemia*. See also *agammaglobulinemia*. **acquired h.**, that which becomes manifest after early childhood. **Primary acquired h.** is an immunoglobulin deficiency state, without thymus abnormalities, that affects adults of either sex between the ages of 30 and 50 years. All classes of immunoglobulins are lacking, with overall levels of approximately 10–200 mg./100 ml. **Secondary acquired h.** is a form, without thymus abnormalities, in which there occurs profound diminution in normal immunoglobulin production, resulting in complications attributable to antibody deficiency. **common variable i.**, see under *immunodeficiency*. **congenital h.**, a genetic immunodeficiency state without thymus involvement, which occurs as an X-linked recessive (Bruton type), as an autosomal recessive, and as a sporadic form. It is usually recognized at 4 to 6 months of age, when maternal immunoglobulin has virtually disappeared from the circulation. All classes of immunoglobulin are lacking, with overall levels lying below 50 mg./100 ml. Delayed sensitivity responsiveness is usually unimpaired. There is an extraordinary susceptibility to infection with encapsulated pyogenic organisms (*pneumococcus*, *hemophilus*, *streptococcus*, etc.). **physiologic h.**, a temporary form seen in the normal infant at about three months of age; when the condition is prolonged it is called *transient h.* **primary h.**, **secondary h.**, see *acquired h.* **transient h.**, see *physiologic h.*

hypoganglionosis (hi''po-gang'gle-o-no'sis) deficiency in the number of myenteric ganglion cells in the distal segment of the large bowel, resulting in constipation; it is a variant of congenital megacolon.

hypogastric (hi''po-gas'trik) [L. *hypogastricus*] 1. situated below the stomach. 2. pertaining to the hypogastrium. 3. pertaining to the internal iliac artery.

hypogastrium (hi''po-gas'tre-um) [*hypo-* + Gr. *gastēr* stomach] regio pubica.

hypogastropagus (hi''po-gas-trop'ah-gus) [*hypo-* + Gr. *gastēr* belly + *pagos* thing fixed] conjoined twins united at the hypogastric region.

hypogastroschisis (hi''po-gas-tros'kī-sis) [*hypo-* + Gr. *gastēr* belly + *schisis* cleft] a developmental anomaly in which an abdominal fissure is restricted to the hypogastric region.

hypogenesis (hi''po-jen'tē-sis) [*hypo-* + Gr. *genesis* production] defective embryonic growth or development. **polar h.**, defective development at either extremity of the embryo, resulting in deformity.

hypogenetic (hi''po-jē-net'ik) pertaining to or characterized by hypogenesis.

hypogenitalism (hi''po-jen'i-tal-izm'') hypogonadism.

hypogeusesthesia (hi''po-gūs'es-the'ze-ah) [*hypo-* + Gr. *geusis* taste + *aisthēsis* perception + *-ia*] abnormally diminished acuteness of the sense of taste.

hypogeusia (hi''po-gu'ze-ah) hypogeusesthesia.

hypoglandular (hi''po-glan'du-lar) marked by abnormally decreased glandular activity.

hypoglossal (hi''po-glos'al) [*hypo-* + Gr. *glōssa* tongue] situated under the tongue.

hypoglottis (hi''po-glot'is) [*hypo-* + Gr. *glōssa* tongue] 1. the under side or part of the tongue. 2. ranula.

hypogluconemia (hi''po-gloo'kah-gon-e'me-ah) abnormally reduced levels of glucagon in the blood.

hypoglycemia (hi''po-gli-se'me-ah) [*hypo-* + Gr. *glykys* sweet + *haima* blood + *-ia*] an abnormally diminished content of glucose in the blood, which may lead to tremulousness, cold sweat, piloerection, hypothermia, and headache, accompanied by confusion, hallucinations, bizarre behavior, and ultimately, convulsions and coma. **factitial h.**, **factitious h.**, apparently spontaneous hypoglycemia in a diabetic, which is in fact caused by the surreptitious injection of insulin. **fasting h.**, hypoglycemia occurring in the fasting state, i.e., after the glucose contents of the intestine have been absorbed; it occurs in such conditions as in insulinoma, glycogen storage disease, starvation, malabsorption, hypopituitarism, and adrenocortical insufficiency. **leucine-induced h.**, familial infantile hypoglycemia induced by ingestion of leucine, which causes an exaggerated release of insulin in susceptible persons; it is transmitted as an autosomal recessive trait. **mixed h.**, hypoglycemia occurring during the fasting state, and following the ingestion of carbohydrate; it occurs in hypoglycemia of infancy, anterior pituitary and adrenocortical insufficiency, and tumors of the islet cells of the pancreas. **reactive h.**, hypoglycemia occurring after the ingestion of carbohydrate, with an excessive release of insulin.

hypoglycemic (hi''po-gli-se'mik) 1. pertaining to, characterized by, or producing hypoglycemia. 2. an agent that acts to lower the level of glucose in the blood.

hypoglycemosis (hi''po-gli'sē-mō'sis) an abnormally diminished content of glucose in the blood and tissues; see *hypoglycemia*.

hypoglycin, hypoglycine (hi''po-gli'sin; hi''po-gli'sēn) a hypoglycemic principle occurring in two forms (A and B), from the fruit and seed of the akee tree; it inhibits hepatic gluconeogenesis.

hypoglycogenolysis (hi''po-gli'ko-jen-ol'i-sis) depressed glycogenolysis.

hypoglycorrachia (hi''po-gli'ko-ra'ke-ah) [*hypo-* + Gr. *glykys* sweet + *rhachis* spine + *-ia*] less than the normal content of glucose in the cerebrospinal fluid; usually indicative of meningeal infection.

hypognathous (hi-pog'nah-thus) 1. having a protruding lower jaw. 2. of the nature of a hypognathus.

hypognathus (hi-pog'nah-thus) [*hypo-* + Gr. *gnathos* jaw] a parasitic monster attached to the lower jaw of the autosit.

hypogonadia (hi''po-go-nad'e-ah) hypogonadism.

hypogonadism (hi''po-go'nad-izm) a condition resulting from or characterized by abnormally decreased functional activity of the gonads, with retardation of growth and sexual development. **hypogonadotropic h.**, that due to failure to secrete gonadotropins. **primary h.**, that due to defective development or function of the gonads. **secondary h.**, hypogonadotropic h.

hypogonadotropic (hi''po-gon'ah-do-trop'ik) relating to or caused by deficiency of gonadotropin.

hypogranulocytosis (hi''po-gran'u-lo-si-to'sis) reduction in the number of granular leukocytes in the blood. Cf. *agranulocytosis*.

hypohepatia (hi''po-he-pat'e-ah) [*hypo-* + Gr. *hēpar* liver] deficient functioning of the liver.

hypohidrosis (hi''po-hi-dro'sis) [*hypo-* + Gr. *hidrōsis* sweating] abnormally diminished perspiration.

hypohidrotic (hi''po-hī-drot'ik) pertaining to, characterized by, or causing hypohidrosis.

hypohormonal (hi''po-hōr'mo-nal) deficient in hormone; due to hormone deficiency.

hypohormonic (hi''po-hōr-mon'ik) hypohormonal.

hypohormonism (hi-po-hor'mōn-izm) endocrine hypofunction.

hypohydration (hi''po-hi-dra'shun) a state of decreased water content of the body; dehydration.

hypohydrochloria (hi''po-hi'dro-klo're-ah) hypochlorhydria.

hypohypnotic (hi''po-hip-not'ik) marked by light sleep or hypnosis.

hypohypophysis (hi''po-hi-poff'i-sizm) hypopituitarism.

hypoidrosis (hi''po-id-ro'sis) hypohidrosis.

hypoiimmunity (hi''po-i-mu'nī-te) lowered immunity.

hypoinsulinemia (hi''po-in'su-lī-ne'me-ah) a deficiency of insulin in the blood.

hypoinsulinism (hi''po-in'su-lin-izm'') deficient secretion of insulin by the pancreas, resulting in hyperglycemia.

hypiodidism (hi''po-i-o'dī-dizm) [*hypo-* + *iodide* + *-ism*] deficiency of iodide in the body.

hypoisotonic (hi''po-i'so-ton'ik) less than isotonic; said of a solution having a lesser osmotic power than another.

hypokalemia (hi''po-ka-le'me-ah) abnormally low potassium concentration in the blood; it may result from potassium loss by renal secretion or by the gastrointestinal route, as by vomiting or diarrhea. It may be manifested clinically by neuromuscular disorders ranging from weakness to paralysis, by electrocardiographic abnormalities (depression of the T wave and elevation of the U wave), by renal disease, and by gastrointestinal disorders.

hypokalemic (hi''po-ka-le'mik) 1. pertaining to or characterized by hypokalemia. 2. an agent that acts to lower the potassium content of the blood.

hypokaliemia (hi''po-kal'e-e'me-ah) hypokalemia.

hypokinemia (hi''po-ki-ne'me-ah) [*hypo-* + Gr. *kinein* to move + *haima* blood + *-ia*] subnormal cardiac output.

hypokinesia (hi''po-ki-ne'ze-ah) [*hypo-* + Gr. *kinēsis* motion + *-ia*] abnormally decreased mobility; abnormally decreased motor function or activity, having multiple causes.

hypokinesis (hi''po-ki-ne'sis) hypokinesia.

hypokinetic (hi''po-ki-net'ik) pertaining to or characterized by hypokinesia.

hypolactasia (hi''po-lak-ta'ze-ah) deficiency of lactase activity in the intestines.

hypokolasia (hi''po-ko-la'ze-ah) [*hypo-* + Gr. *kolazein* to curtail, to correct + *-ia*] (*obs.*) functional weakness of the inhibiting mechanism.

hypolarynx (hi''po-lar'inks) the infraglottic compartment of the larynx from the true vocal cords to the first tracheal ring.

hypolemmal (hi''po-lem'al) [*hypo-* + Gr. *lemma* sheath] located beneath a sheath, as the end-plates of motor nerves under the sarcolemma of muscle.

hypolethal (hi''po-le'thal) not sufficient to cause death.

hypolethydigism (hi''po-li'dig-izm) abnormally diminished functional activity of Leydig's interstitial cells.

hypolipemia (hi''po-li-pe'me-ah) an abnormally decreased amount of fat in the blood.

hypolipidemic (hi''po-lip'i-de'mik) promoting the reduction of lipid concentrations in the serum.

hypolipoproteinemia (hi''po-lip'o-pro'te-in-e'me-ah) the presence of abnormally low levels of lipoproteins in the serum, as in hypobetalipoproteinemia and Tangier disease.

hypoliposis (hi''po-li-po'sis) a deficiency of lipids in the blood or tissues. Lipids are transported in the blood as lipoproteins; see *hypolipoproteinemia*.

hypolutemia (hi''po-lu-te'me-ah) a decreased amount of luteal hormone (progesterone) in the blood.

hypolymphemia (hi''po-lim-fe'me-ah) [*hypo-* + *lymph* + Gr. *haima* blood + *-ia*] abnormal deficiency in the proportion of lymphocytes in the blood.

hypomagnesemia (hi''po-mag'nē-se'me-ah) an abnormally low magnesium content of the blood plasma, manifested chiefly by neuromuscular hyperirritability. It may result from malabsorption, dehydration, alcoholism, or renal disease.

hypomania (hi''po-ma'ne-ah) [*hypo-* + Gr. *mania* madness] mania of a moderate type.

hypomaniac (hi''po-ma'ne-ak) a person affected with hypomania.

hypomaniac (hi''po-ma'nik) pertaining to or resembling hypomania.

hypomastia (hi-po-mas'te-ah) [*hypo-* + Gr. *mastos* breast + *-ia*] abnormal smallness of the mammary glands.

hypomazia (hi''po-ma'ze-ah) hypomastia.

hypomegasoma (hi''po-meg'ah-so'mah) [*hypo-* + Gr. *megas* great + *sōma* body] tallness; tall stature.

hypomelancholia (hi"po-mel'an-ko'le-ah) [*hypo-* + Gr. *melancholia* melancholia] melancholia with but slight mental disorder.

hypomelanism (hi"po-mel'ah-nizm) a condition in which production of melanin is limited and insufficient for protection against sunlight. **dominant oculocutaneous h.**, a hereditary syndrome transmitted as an autosomal dominant trait, which resembles a partial form of albinism in most respects; it is marked by translucency of the irises on transillumination, and greatly increased sensitivity to ultraviolet radiation in the 290–320 nm. range, with production of erythema and some dyskeratosis.

hypomelanosis (hi"po-mel'ah-no'sis) [*hypo-* + *melanosis*] diminution in supply of melanin in the skin; also sometimes used to denote localized absence of melanin. See also *hypomelanism*. **idiopathic guttate h.**, a common, slowly progressive, symmetrical eruption of sharply defined, depigmented macules of irregular shape up to 6 to 8 mm. in diameter, appearing on the extensor surfaces of the forearms and on the shins of adults.

hypomenorrhea (hi"po-men'o-re'ah) [*hypo-* + Gr. *mēn* month + *rhein* to flow] uterine bleeding of less than the normal amount occurring at regular intervals, the period of flow being of the same or less than usual duration.

hypomere (hi"po-mēr) 1. the ventrolateral portion of a myotome, innervated by an anterior ramus of a spinal nerve. 2. the lateral plate of mesoderm that develops into the walls of the body cavities.

hypomesosoma (hi"po-mes'o-so'mah) [*hypo-* + Gr. *mesos* middle + *sōma* body] a stature somewhat below the medium.

hypometabolic (hi"po-met'ah-bol'ik) pertaining to hypometabolism.

hypometabolism (hi"po-mē-tab'o-lizm) [*hypo-* + *metabolism*] abnormally decreased utilization of any substance by the body in metabolism; low metabolic rate.

hypometria (hi"po-me'tre-ah) ["a deficiency"; by analogy with Gr. *eumetria*, *hypermetria*] a condition in which voluntary muscular movement falls short of reaching the intended goal.

hypomicron (hi"po-mi'kron) submicron.

hypomicrosoma (hi"po-mi-kro-so'mah) [*hypo-* + Gr. *mikros* small + Gr. *sōma* body] the very smallest normal stature.

hypomineralization (hi"po-min'er-al-i-za'shun) deficiency of mineral elements in the body.

hypomnesia (hi"pom-ne'sis) [*hypo-* + Gr. *mnēmē* memory] defective memory.

hypomodal (hi"po-mo'dal) in statistics, relating to the values or items located to the left of the mode in a variations curve.

hypomorph (hi"po-morf) [*hypo-* + Gr. *morphē* form] 1. a person who is short in standing height as compared with his sitting height. Cf. *hypermorph* (def. 1), and *mesomorph* (def. 2). 2. in genetics, a mutant gene that shows only a partial reduction in the activity it influences. Cf. *hypermorph* (def. 2).

hypomorphie (hi"po-mor'fik) pertaining to a hypomorph.

hypomotility (hi"po-mo-til'i-te) deficient movement in any part.

hypomyotonia (hi"po-mi'o-to'ne-ah) [*hypo-* + Gr. *mys* muscle + *tonos* tension + *-ia*] deficient muscular tonicity.

hypomyxia (hi"po-mik'se-ah) [*hypo-* + Gr. *myxa* mucus + *-ia*] decreased secretion of mucus.

hyponanosoma (hi"po-na'no-so'mah) [*hypo-* + Gr. *nanos* dwarf + *sōma* body] the extreme of dwarfishness, or nanism.

hyponasality (hi"po-na-zal'i-te) a quality of voice in which there is a complete lack of nasal emission of air and nasal resonance, so that the speaker sounds as if he has a cold. Called also *denasality*.

hyponatremia (hi"po-nah-tre'me-ah) deficiency of sodium in the blood; salt depletion. **depletional h.**, that in which there is a low level of sodium and of body fluids (dehydration). **dilutional h.**, that in which there is a low level of serum sodium but a high level of body sodium and body fluids (edema). **hyperlipemic h.**, apparent hyponatremia (when expressed per unit of plasma) due to a high concentration of lipids combined with proteins in the blood plasma.

hyponaturia (hi"po-nah-troo're-ah) an abnormally low level of sodium in the urine.

hyponea (hi"po-ne'ah) hyponoia.

hyponeocytosis (hi"po-ne'o-si-to'sis) [*hypo-* + Gr. *neos* new + *-cyte* + *-osis*] leukopenia with immature forms of leukocytes present in the blood.

hyponitremia (hi"po-ni-tre'me-ah) a low level of nitrogen in the blood, sometimes associated with protein malnutrition.

hyponoia (hi"po-noi'ah) [*hypo-* + Gr. *nous* mind + *-ia*] sluggish mental activity.

hyponoic (hi"po-no'ik) arising from early formed but unconscious processes (Kretschmer).

hyponychial (hi"po-nik'e-al) subungual; beneath a nail.

hyponychium (hi"po-nik'e-um) [*hypo-* + Gr. *onyx* nail] [NA] the thickened epidermis underneath the free distal end of the nail.

hyponychon (hi-pon'i-kon) [*hypo-* + Gr. *onyx* nail] ecchymosis beneath the nail.

hypo-orchidia (hi"po-or-kid'e-ah) defective endocrine activity of the testes.

hypo-orchidism (hi"po-or'ki-dizm) defective activity of the testes.

hypo-orthocytosis (hi"po-or'tho-si-to'sis) [*hypo-* + Gr. *orthos* regular + *-cyte* + *-osis*] leukopenia in which the proportion of the various forms of leukocytes is normal.

hypo-osmolality (hi"po-os'mo-lal'i-te) a decrease in the osmolality of the body fluids.

hypo-ovaria (hi"po-o-va're-ah) defective endocrine activity of the ovaries.

hypo-ovarianism (hi"po-o-va're-an-izm) hypo-ovaria.

hypopallesthesia (hi"po-pal'es-the'ze-ah) [*hypo-* + *pallesthesia*] abnormally decreased sensibility to vibrations.

hypopancratis (hi"po-pan'kre-ah-tizm") diminished pancreatic activity.

hypopancrorrhea (hi"po-pan'kre-o-re'ah) abnormally diminished secretion from the pancreas.

hypoparathyreosis (hi"po-par'ah-thi're-o'sis) hypoparathyroidism.

hypoparathyroidism (hi"po-par'ah-thi'roid-izm) the condition produced by greatly reduced function of the parathyroids or by the removal of those bodies. The lack of parathyroid hormone leads to a fall in plasma calcium level—which may result in increased neuromuscular excitability and, ultimately, tetany—followed by a rise in plasma phosphate level, resulting in a decrease in bone resorption and consequent density of bone. There may also be dermatologic, ophthalmologic (cataracts), psychiatric, and dental symptoms.

hypopepsia (hi"po-pep'se-ah) [*hypo-* + Gr. *pepsis* digestion + *-ia*] impairment of digestion, due to hypochlorhydria.

hypopepsinia (hi"po-pep-sin'e-ah) deficiency in the pepsin secretion of the stomach.

hypoperfusion (hi"po-per-fu'zhun) decreased blood flow through an organ, as in circulatory shock; if prolonged it may result in permanent cellular dysfunction and death.

hypoperistalsis (hi"po-per'i-stal'sis) abnormally sluggish peristalsis.

hypopexia (hi"po-pek'se-ah) [*hypo-* + Gr. *pēxis* fixation + *-ia*] the fixation by a tissue of a deficient amount of a substance.

hypopexy (hi"po-pek'se) hypopexia.

hypophalangism (hi"po-fah-lan'jizm) less than the usual number of phalanges of a finger or toe.

hypophamine (hi-po'fah-min) the substance once thought to be the active principle of the posterior lobe of the pituitary gland. **alpha h.**, oxytocin. **beta h.**, vasopressin.

hypopharyngeal (hi"po-fah-rin'je-al) pertaining to the hypopharynx.

hypopharyngoscope (hi"po-fah-ring'go-skōp) an instrument for inspecting the lower part of the pharynx.

hypopharyngoscopy (hi"po-far'in-gos'ko-pe) examination of the lower part of the pharynx.

hypopharynx (hi"po-far'inks) that division of the pharynx which lies below the upper edge of the epiglottis and opens into the larynx and esophagus.

hypophonesis (hi"po-fo-ne'sis) [*hypo-* + Gr. *phōnēsis* sounding] diminished intensity of the sound in auscultation or percussion.

hypophonia (hi"po-fo'ne-ah) [*hypo-* + Gr. *phōnē* voice + *-ia*] defective speech due to lack of phonation and resulting in whispering.

hypophoria (hi"po-fo're-ah) [*hypo-* + Gr. *phorein* to bear + *-ia*] heterophoria in which there is downward deviation of the visual axis of an eye when visual fusional stimuli are eliminated. When both eyes are affected, it is called *cataphoria*.

hypophosphatasia (hi"po-fos'fah-ta'ze-ah) an inborn error of metabolism with a genetic basis, characterized by lowered phosphatase activity of the serum, due, apparently, to lack of alkaline phosphatase in the cells, and resulting in defective rebuilding and mineralization of bone, and always marked by excretion of phosphoethanolamine in the urine. The disorder is most severe when it occurs in the first six months of life, with marked demineralization of bone and, commonly, craniostenosis, exophthalmos, and brain damage, death usually occurring within a year. In older infants and children, the bone disease resembles rickets, and there is early loss of teeth. In adults, it may take the form of osteomalacia or be asymptomatic.

hypophosphate (hi"po-fos'fāt) a salt of hypophosphoric acid.

hypophosphatemia (hi"po-fos'fah-te'me-ah) an abnormally decreased amount of phosphates in the blood; manifestations include hemolysis, lassitude, weakness, and convulsions. It may be found in hyperparathyroidism, rickets, osteomalacia, and several renal tubular abnormalities, including the Fanconi syndrome. **familial h.**, a hereditary disorder of phosphate metabolism, transmitted as a sex-linked trait, which may be associated with vitamin D-resistant rickets (q.v.).

hypophosphatemic (hi''po-phos''fah-te'mik) pertaining to or characterized by hypophosphatemia.

hypophosphaturia (hi''po-fos''fah-tu're-ah) an abnormally decreased amount of phosphate in the urine.

hypophosphite (hi''po-fos'fit) any salt of hypophosphorous acid.

hypophosphoremia (hi''po-fos''fo-re'me-ah) hypophosphatemia.

hypophrenia (hi''po-fre'ne-ah) [*hypo-* + Gr. *phrēn* mind + *-ia*] mental retardation.

hypophrenic (hi''po-fren'ik) [*hypo-* + Gr. *phrēn* diaphragm, mind] 1. below the diaphragm. 2. mentally retarded.

hypophrenium (hi''po-fre'ne-um) a peritoneal space between the diaphragm and the transverse colon.

hypophrenosis (hi''po-fre-no'sis) Southard's term for feeble-mindedness, including idiocy, imbecility, moronity, and subnormality.

hypophyseal (hi''po-fiz'e-al) pertaining to a hypophysis, especially to the hypophysis cerebri, or pituitary gland.

hypophysectomize (hi''po-fiz-ek'to-mīz) to remove the hypophysis, or pituitary gland.

hypophysectomy (hi-pof''i-sek'to-me) [*hypophysis* + Gr. *ektomē* excision] surgical removal of the hypophysis, or pituitary gland.

hypophyseoportal (hi''po-fiz'e-o-por'tal) pertaining to the portal system of the pituitary gland; see under *system*.

hypophyseoprivic (hi''po-fiz'e-o-priv'ik) pertaining to deficiency of hormone secretion by the hypophysis (pituitary gland).

hypophyseotropic (hi''po-fiz'e-o-trop'ik) acting on the hypophysis (pituitary gland), as a hypophyseotropic hormone.

hypophysial (hi''po-fiz'e-al) hypophyseal.

hypophysiectomy (hi''po-fiz'e-ek'to-me) hypophysectomy.

hypophysioprivic (hi''po-fiz'e-o-priv'ik) hypophyseoprivic.

hypophysiotropic (hi''po-fiz'e-o-trop'ik) hypophyseotropic.

hypophysis (hi-pof''i-sis) [*hypo-* + Gr. *phyein* to grow] [NA] the pituitary gland (see under *gland*), an epithelial body of dual origin located at the base of the brain in the sella turcica. **h. cerebri**, see *pituitary gland*, under *gland*. **pharyngeal h.**, a mass in the pharyngeal wall with structure similar to that of the hypophysis. **h. sic'ca**, posterior pituitary.

hypophysitis (hi-pof''i-si'tis) inflammation of the hypophysis.

hypophysoma (hi-pof''i-zo'mah) a tumor of the hypophysis.

hypophysoprivic (hi-pof''i-zo-pri'vik) hypophyseoprivic.

hypopiesia (hi-po-pi'e-se-ah) abnormally low blood pressure occurring independently of any discoverable organic disease.

hypopiesis (hi''po-pi-e'sis) [*hypo-* + Gr. *piesis* pressure] abnormally low pressure, as abnormally low blood pressure.

hypopietic (hi''po-pi-et'ik) pertaining to, characterized by, or causing hypopiesis.

hypopigmentation (hi''po-pig'men-ta'shun) abnormally diminished pigmentation, as distinct from complete loss of pigment.

hypopigmenter (hi''po-pig-men'ter) an agent that reduces pigmentation of the skin; a bleach.

hypopinealism (hi''po-pin'e-al-izm'') defective functional activity of the pineal body.

hypopituitarism (hi''po-pi-tu'i-fah-rizm'') diminution or cessation of the pituitary function due to surgical removal of the pituitary gland, to ablation by irradiation, or to spontaneous causes, as in chromophobe adenoma or postpartum necrosis (Sheehan's syndrome). It leads to hormonal deficiency—varying with the degree of dysfunction—of the following: (a) gonadotropins, with consequent regression of secondary sex characteristics and decrease in libido; (b) somatotropin, which in children results in pituitary dwarfism; (c) thyrotropin (see *hypothyroidism*); (d) corticotropin, resulting in symptoms similar to those in hypoadrenalism.

hypoplasia (hi''po-pla'ze-ah) [*hypo-* + Gr. *plasis* formation + *-ia*] incomplete development or underdevelopment of an organ or tissue; it is less severe in degree than aplasia. **cartilage-hair h.**, a form of dwarfism among Amish people, inherited as an autosomal recessive trait and associated with multiple skeletal abnormalities and sparse, short, fine, brittle, light-colored hair. **enamel h.**, incomplete or defective development of the enamel of the teeth; it occurs in a hereditary form, as in amelogenesis imperfecta, usually affecting both the deciduous and permanent teeth and generally involving only the enamel, or in an environmental form due to various factors, e.g., vitamin deficiency, exanthematous diseases, congenital syphilis, fluorosis, and local injury or trauma. **h. of mesenchyme**, osteogenesis imperfecta. **oligomeganephronic renal h.**, oligomeganephronia. **h. of right ventricle**, a defective development of the right ventricular myocardium, which may be paper-thin (parchment heart); there may be right-sided heart failure. **Turner's h.**, see under *tooth*.

hypoplastic (hi''po-plas'tik) marked by hypoplasia.

hypoplasty (hi''po-plas'te) hypoplasia.

hypoploid (hi''po-ploid) the aneuploid condition in which there is less than the normal diploid number of chromosomes, e.g., 45 chromosomes in man, the 2n-1 state.

hypopnea (hi''po-ne'ah) [*hypo-* + Gr. *pnoia* breath] abnormal decrease in the depth and rate of the respiratory movements.

hypopneic (hi''po-ne'ik) pertaining to or characterized by hypopnea.

hypoponesis (hi''po-po-ne'sis) [*hypo-* + Gr. *ponēs* toil, exertion] dysponesis in which there is insufficient action-potential output from the motor and premotor areas of the cortex.

hypoporesis (hi''po-po-ro'sis) [*hypo-* + Gr. *pōros* callus + *-osis*] deficient formation of callus after fracture.

hypoposia (hi''po-po'ze-ah) [*hypo-* + Gr. *posis* drinking + *-ia*] abnormally diminished ingestion of fluids.

hypopotassemia (hi''po-po'tah-se'me-ah) hypokalemia.

hypopotassemic (hi''po-po'tah-se'mik) hypokalemic.

hypopotentia (hi''po-po-ten'she-ah) [*hypo-* + L. *potentia* power] a condition of diminished power, especially of diminished electrical activity of the cerebral cortex.

hypopraxia (hi''po-prak'se-ah) [*hypo-* + Gr. *praxis* action + *-ia*] abnormally diminished activity.

hypoprolanemia (hi''po-pro'lah-ne'me-ah) (*obs.*) a lessened amount of prolamin A in the blood.

hypoprosody (hi''po-pros'o-de) diminution of the normal variation of stress, pitch, and rhythm of speech.

hypoproteinemia (hi''po-pro'ti-ne'me-ah) abnormal decrease in the amount of protein in the blood, sometimes resulting in edema and fluid accumulation in serous cavities. **prehepatic h.**, hypoproteinemia occurring as a result of prolonged ingestion of faulty low-protein diet.

hypoproteinemia (hi''po-pro'tēn'e-ah) a subnormal protein status of the body.

hypoproteinic (hi''po-pro'tēn'ik) pertaining to or characterized by hypoproteinemia.

hypoproteinosis (hi''po-pro'ti-no'sis) deficiency of proteins or protein foods.

hypoprote thrombinemia (hi''po-pro-throm'bī-ne'me-ah) deficiency of prothrombin (coagulation Factor II) in the blood; called also *Factor II deficiency*.

hypopselaphesia (hi''pop-sel'ah-fe'ze-ah) [*hypo-* + Gr. *psēlaphēs* touch + *-ia*] diminution or dullness of the tactile sense; tactile hypoaesthesia.

hypopsychosis (hi''po-si-ko'sis) [*hypo-* + Gr. *psychē* mind, soul + *-osis*] diminution of the function of thought; blunting of the thought processes.

hypopterionosis cystica (hi''po-ter-on'o-sis sis'ti-kah) [*hypo-* + Gr. *pteron* feather] a condition observed in birds, known commonly as "lumps," in which a cyst forms when the growth of the feather shaft is confined within the follicle.

hypoptyalism (hi''pop-ti'al-izm) [*hypo-* + Gr. *ptyalon* spittle] abnormally decreased secretion of saliva, as in xerostomia.

hypopus (hi-po'pus) a stage in the development of the grain mites (Acaridae) between the first and the second nymph stages.

hypopyon (hi-po'pe-on) [*hypo-* + Gr. *pyon* pus] an accumulation of pus in the anterior chamber of the eye.

hyporeactive (hi''po-re-ak'tiv) pertaining to or characterized by a less than normal response to stimuli.

hyporeflexia (hi''po-re-flek'se-ah) weakening of the reflexes.

hyporeninemia (hi''po-re'nin-e'me-ah) low levels of renin in the blood.

hyporeninemic (hi''po-re'nin-e'mik) characterized by low levels of renin in the blood.

hyporrhoea (hi''po-re'ah) [*hypo-* + Gr. *rhoia* flow] slight hemorrhage.

hyposalemia (hi''po-sah-le'me-ah) [*hypo-* + L. *sal* salt + Gr. *haima* blood + *-ia*] abnormally decreased concentration of salt in the blood.

hyposalivation (hi''po-sal'i-va'shun) hypoptyalism.

hyposarca (hi''po-sar'kah) anasarca.

hyposcheotomy (hi-pos''ke-ot'o-me) [*hypo-* + Gr. *oscheon* scrotum + *tomē* cut] puncture of a testicular hydrocele at the lower portion of the tunica vaginalis.

hyposcleral (hi''po-skler'al) under the sclerotic coat of the eye.

hyposecretion (hi''po-se-kre'shun) diminished secretion as of a gland.

hyposensitive (hi''po-sen'si-tiv) 1. exhibiting abnormally decreased sensitivity. 2. having the specific or general ability to react to a specific allergen reduced by repeated and gradually increasing doses of the offending substance.

hyposensitivity (hi''po-sens'i-tiv'i-te) the condition of being hypersensitive.

hyposensitization (hi''po-sen'si-ti-za'shun) the act or process of making hypersensitive; desensitization.

hyposexuality (hi''po-seks'u-al'i-te) deficiency in sexuality.

hyposiagonarthritis (hi''po-si-ag''on-ar-thri'tis) inflammation of the temporomandibular joint.

hyposialadenitis (hi''po-si''al-ad''ē-ni'tis) [*hypo-* + Gr. *sialon* saliva + *adēn* gland + *-itis*] inflammation of the submaxillary salivary gland.

hyposialosis (hi''po-si''ah-lo'sis) hypopyalism.

hyposkeocytosis (hi''po-ske''o-si-to'sis) [*hypo-* + Gr. *skaios* left + *-cyte* + *-osis*] hyponeocytosis.

hyposmia (hi-poz''me-ah) [*hypo-* + Gr. *osmē* smell + *-ia*] abnormally decreased sensitivity to odors.

hyposmolarity (hi-poz''mo-lar'i-te) abnormally decreased osmolar concentration.

hyposmosis (hi''pos-mo'sis) decreased speed of osmosis.

hyposomatotropism (hi''po-so''mat-o-tro'pizm) a condition of deficient secretion of somatotropin (growth hormone) or of inadequate secretion of somatotropin, resulting in short stature.

hyposomia (hi''po-so''me-ah) [*hypo-* + Gr. *sōma* body + *-ia*] inadequate bodily development.

hyposomnia (hi''po-som''ne-ah) insomnia.

hypospadia (hi''po-spa''de-ah) hypospadias.

hypospadiac (hi''po-spa''de-ak) a person affected with hypospadias.

hypospadias (hi''po-spa''de-as) [*hypo-* + Gr. *spadōn* a rent] a developmental anomaly in the male in which the urethra opens on the underside of the penis or on the perineum. **balanic h.**, **balanitic h.**, the commonest type of hypospadias, in which the urethral orifice opens at the site of the frenum, which may be rudimentary or absent; the normal site of the urinary meatus is represented on the glans penis as a blind pit. Called also **glandular h.** **female h.**, a developmental anomaly in the female in which the urethra opens into the vagina. **glandular h.**, **balanic h.** **penile h.**, hypospadias in which the urethral opening lies between the glandular sulcus and the junction of the penis and scrotum. **penoscrotal h.**, hypospadias in which the urethral orifice is at the junction of the penis and scrotum; it may be associated with congenital chordee. **perineal h.**, hypospadias with anomalous development of the genitalia, the rudimentary penis often being engulfed by an overlying bifid scrotum. The extreme form is called **pseudovaginal h.** **pseudovaginal h.**, see **perineal h.**

Hypospadias with chordee.

hyposphresia (hi''pos-fre''ze-ah) [*hypo-* + Gr. *osphrēsis* smell + *-ia*] hyposmia.

hyposplenism (hi''po-splen'izm) a condition characterized by diminished functioning of the spleen, resulting in an increase in peripheral blood elements.

hypostasis (hi-pos'tah-sis) [*hypo-* + Gr. *stasis* halt] poor or stagnant circulation in a dependent part of the body or organ, as in venous insufficiency.

hypostatic (hi''po-stat'ik) 1. pertaining to, caused by, or associated with hypostasis. 2. abnormally static; said of certain inherited traits which are liable to be suppressed by other traits.

hyposteolysis (hi''po-ste''ah-to'l'i-sis) inadequate hydrolysis of fats during ingestion.

hyposteosis (hi''po-ste''ah-to'sis) deficient secretion of sebum.

hyposthenia (hi''pos-the''ne-ah) [*hypo-* + Gr. *sthenos* strength + *-ia*] an enfeebled state; weakness.

hypostheniant (hi''pos-the''ne-ant) reducing the strength; debilitant.

hyposthenic (hi''pos-then'ik) pertaining to or characterized by hyposthenia.

hyposthenuria (hi''pos-thē-nu're-ah) a condition characterized by inability to form urine of high specific gravity. **tubu-**

lar h., hyposthenuria occurring as a result of injury to the epithelial cells of the renal tubules.

hypostomia (hi''po-sto''me-ah) [*hypo-* + Gr. *stōma* mouth + *-ia*] a developmental anomaly characterized by abnormal smallness of the mouth, the slit being vertical instead of horizontal.

hypostosis (hip''os-to'sis) [*hypo-* + Gr. *osteon* bone + *-osis*] deficient development of bone.

hypostypsis (hi''po-stip'sis) [*hypo-* + Gr. *stypsis* contraction] moderate astringency.

hypostyptic (hi''po-stip'tik) moderately or mildly styptic.

hyposulfite (hi''po-sul'fit) sodium thiosulfate.

hyposuprarenalemia (hi''po-su''prah-re''nal-e'me-ah) hypoadrenalemia.

hyposuprarenalism (hi''po-su''prah-re''nal-izm) hypoadrenalism.

hyposympathicotonus (hi''po-sim-path''i-ko-to'nus) a decreased tone of the sympathetic nervous system.

hyposynergia (hi''po-si-ner''je-ah) [*hypo-* + *synergia*] defective coordination.

hyposystole (hi''po-sis'to-le) [*hypo-* + *systole*] (*obs.*) abnormal diminution of the systole.

hypotaxia (hi''po-tak'se-ah) [*hypo-* + Gr. *taxis* arrangement + *-ia*] a condition of diminished control over the will and actions, such as occurs in the first stage of hypnotism.

hypotelorism (hi''po-tel'o-rizm) [*hypo-* + Gr. *tēlōuros* distant] abnormally decreased distance between two organs or parts. **ocular h.**, **orbital h.**, a condition characterized by abnormal decrease in the intraorbital distance, consistently present in trigonocephaly.

hypotension (hi''po-ten'shun) abnormally low blood pressure; seen in shock but not necessarily indicative of it. See also **blood pressure**, under **pressure**. **chronic orthostatic h.**, **chronic idiopathic orthostatic h.**, **idiopathic orthostatic h.**, **Shy-Drager syndrome**. **orthostatic h.**, a fall in blood pressure associated with dizziness, syncope, and blurred vision occurring upon standing or when standing motionless in a fixed position; it can be acquired or idiopathic, transient or chronic, and occur alone or secondary to a disorder of the central nervous system, such as the Shy-Drager syndrome (see under **syndrome**). Called also **postural o.** and **postural syncope**. **postural h.**, **orthostatic h.**, **vascular h.**, severe hypotension from dilatation of the blood vessels.

hypotensive (hi''po-ten'siv) 1. characterized by or causing diminished tension or pressure, as abnormally low blood pressure. 2. a person with abnormally low blood pressure.

hypotensor (hi''po-ten'sor) a substance that lowers the blood pressure; a hypotensive agent.

hypotetraploid (hi''po-tet'rah-ploid) having fewer than the tetraploid number of chromosomes in unbalanced sets (4n-x).

hypothalamic (hi''po-thah-lam'ik) of or involving the hypothalamus.

hypothalamotomy (hi''po-thal''ah-mot'o-me) [*hypothalamus* + Gr. *temnein* to cut] production of lesions in the posterolateral part of the hypothalamus; done in the treatment of psychotic disorders.

hypothalamus (hi''po-thal''ah-mus) [NA] the portion of the diencephalon which forms the floor and part of the lateral wall of the third ventricle. Anatomically, it includes the optic chiasm, mamillary bodies, tuber cinereum, infundibulum, and hypophysis, but for physiological purposes the hypophysis is considered a distinct structure. The hypothalamic nuclei comprise that part of the corticodiencephalic mechanisms which activates, controls, and integrates the peripheral autonomic mechanisms, endocrine activity, and many somatic functions, e.g., a general regulation of water balance, body temperature, sleep, and food intake, and the development of secondary sex characteristics. The hypothalamus secretes vasopressin and oxytocin, which are stored in the pituitary, as well as many releasing factors (hypophyseotropic hormones) by means of which it exerts control over functions of the adeno-hypophysis portion of the pituitary gland.

hypothernar (hi-poth''ē-nar) [*hypo-* + Gr. *thenar* palm] 1. [NA] the fleshy eminence on the palm along the ulnar margin. 2. relating to this eminence.

hypothermal (hi''po-ther'mal) [*hypo-* + Gr. *thermē* heat] pertaining to or characterized by reduced body temperature.

hypothermia (hi''po-ther'me-ah) [*hypo-* + Gr. *thermē* heat + *-ia*] a low body temperature, as that due to exposure in cold weather or a state of low temperature of the body induced as a means of decreasing metabolism of tissues and thereby the need for oxygen, as used in various surgical procedures, especially on the heart, or in an excised organ being preserved for transplantation. **endogenous h.**, abnormally reduced body temperature resulting from physiologic causes, due to dysfunction of the central nervous system or of the endocrine system.

hypothermic (hi''po-ther'mik) pertaining to or exhibiting reduced body temperature, pertaining to hypothermia.

hypothermy (hi''po-ther'me) hypothermia.

hypothesis (hi-poth'ē-sis) a supposition that appears to explain a group of phenomena and is assumed as a basis of reasoning and experimentation. See also *theory*. **biogenic amine h.**, the hypothesis that certain biogenic amines, especially dopamine, norepinephrine, and serotonin, play a role in the pathogenesis of affective disorders. **cardionector h.**, the hypothesis that there are two pacemakers or cardionectors in the heart; one, the atrionector, controls the atria, and the other, the ventriculonector, controls the ventricles. **Gad's h.**, the arterial and portal venous communications in the portal canal meet at an acute angle, leaving a wedge-shaped valve between them at their junction. **gate h.**, gate theory. **Harrower's h.**, hormone hunger; see under *hunger*. **insular h.**, the hypothesis that diabetes mellitus is due to disordered function of the islands of Langerhans in the pancreas. **jelly roll h.**, a theory explaining the formation of nerve myelin, which states that it consists of successive layers of the plasma membrane of a Schwann cell wrapped spirally around the axon in a jelly roll fashion. **lattice h.**, a theory of the nature of the antigen-antibody reaction which postulates reaction between multivalent antigen and divalent antibody to give an antigen-antibody complex of a lattice-like structure. **Lyon h.**, all X chromosomes in a cell in excess of one are inactivated (in the form of sex chromatin) on a random basis in all mammalian cells at an early stage of embryogenesis. In effect, then, the normal human female is a mosaic for heterozygous X-linked genes, since the paternal X chromosome is inactivated in some cells and the maternal one in the remainder. **Makeham's h.**, the assumption that death is due to two co-existing causes: (1) chance, which is constant; (2) inability to withstand destruction, which progresses geometrically. **one gene—one enzyme h.**, the concept that each gene directly determines a unique enzyme specificity, thereby controlling enzyme synthesis and other chemical reactions. **Semon-Hering h.**, mnemonic theory. **sliding-filament h.**, the stretching of individual muscle fibers raises the number of tension-developing bridges that can be formed between the sliding contractile protein elements (actin and myosin) and thus augments the force of the next muscle contraction. **Starling's h.**, the direction and rate of fluid transfer between blood plasma in the capillary and fluid in the tissue spaces depend on the hydrostatic pressure on each side of the capillary wall, on the osmotic pressure of protein in plasma and in tissue fluid, and on the properties of the capillary wall as a filtering membrane. **unitarian h.**, the theory that antibody is a single species of modified serum globulin regardless of the overt consequences of its reaction with homologous antigen, e.g., agglutination, precipitation, complement fixation, etc. **Woods-Fildes h. (obs.)**, that the sulfonamides tend to replace para-aminobenzoic acid, which is an essential metabolite for certain bacteria.

hypothrepsia (hi'po-threp'se-ah) malnutrition.

hypothrombinemia (hi'po-throm'bi-ne'me-ah) a deficiency of thrombin in the blood.

hypothymergasia (hi'po-thi'mer-ga'se-ah) [*hypo-* + Gr. *thymos* spirit + *ergon* work + *-ia*] Meyer's term for underactivity of mood, marked by depression, stupor, sadness, and anxiety.

hypothymergastic (hi'po-thi'mer-gas'tik) pertaining to or characterized by hypothymergasia.

hypothymia (hi'po-thi'me-ah) [*hypo-* + Gr. *thymos* spirit + *-ia*] abnormal diminution of emotional tone; diminution of feeling tone.

hypothymic (hi'po-thi'mik) marked by hypothymia.

hypothymism (hi'po-thi'mizm) abnormally deficient thymus activity.

hypothyrea (hi'po-thi're-ah) hypothyroidism.

hypothyreosis (hi'po-thi're-o'sis) hypothyroidism.

hypothyroid (hi'po-thi'roid) marked by or due to hypothyroidism.

hypothyroidation (hi'po-thi'roi-da'shun) the induction of hypothyroidism.

hypothyroidia (hi'po-thi'roi-de-ah) hypothyroidism.

hypothyroidism (hi'po-thi'roid-izm) deficiency of thyroid activity. In adults, it is most common in women and is characterized by decrease in basal metabolic rate, tiredness and lethargy, sensitivity to cold, and menstrual disturbances. If untreated, it progresses to full-blown myxedema. In infants, severe hypothyroidism leads to cretinism. In juveniles, the manifestations are intermediate, with less severe mental and developmental retardation and only mild symptoms of the adult form.

hypothyrosis (hi'po-thi-ro'sis) hypothyroidism.

hypotonia (hi'po-to'ne-ah) [*hypo-* + Gr. *tonos* tone + *-ia*] a condition of diminished tone of the skeletal muscles; diminished resistance of muscles to passive stretching. **benign congenital h.**, a condition marked by signs of weakness and floppiness in babies, due to nonprogressive weakness of skeletal muscles from birth. **h. oc'uli**, low intraocular pressure.

hypotonic (hi-po-ton'ik) a biological term denoting a solution which, when bathing body cells, causes a net flow of water across the semipermeable cell membrane into the cell. Also, denoting a

solution having less tonicity than another solution, e.g., the blood, with which it is compared.

hypotonicity (hi'po-to-nis'i-te) the state or quality of being hypotonic.

hypotonus (hi-pot'o-nus) hypotonia.

hypotony (hi-pot'o-ne) hypotonia.

hypotoxicity (hi'po-tok-sis'i-te) [*hypo-* + Gr. *toxikon* poison] the state or quality of possessing mitigated or diminished toxicity.

Hypotricha (hi'po-trik'ah) a suborder of ciliate protozoa of the Spirotricha.

hypotrichiasis (hi'po-tri-ki'ah-sis) congenital alopecia.

hypotrichosis (hi'po-tri-ko'sis) [*hypo-* + Gr. *thrix* hair + *-osis*] presence of less than the normal amount of hair.

hypotrichous (hi-po'trik-us) [*hypo-* + Gr. *thrix* hair] having no cilia on the dorsal surface; said of certain ciliates.

hypotriploid (hi'po-trip'loid) having fewer than the triploid number of chromosomes in unbalanced sets (3n-x).

hypotrophy (hi-pot'ro-fe) [*hypo-* + Gr. *trophē* nutrition] abiotrophy.

hypotropia (hi'po-tro'pe-ah) [*hypo-* + Gr. *tropos* a turning + *-ia*] strabismus in which there is permanent downward deviation of the visual axis of an eye.

hypotryptophanic (hi'po-trip-to-fan'ik) caused by deficiency of tryptophan in the diet.

hypotympanotomy (hi'po-tim'pah-not'o-me) surgical opening of the hypotympanum.

hypotympanum (hi'po-tim'pah-num) a space in the middle ear, below the lower edge of the sulcus tympanicus.

hypouremia (hi'po-u-re'me-ah) an abnormally low level of urea in the blood.

hypouresis (hi'po-u-re'sis) oligourea.

hypouricemia (hi'po-u'rī-se'me-ah) deficiency of uric acid in the blood, along with xanthinuria, due to deficiency of xanthine oxidase, the enzyme required for conversion of hypoxanthine to xanthine and of xanthine to uric acid.

hypouricuria (hi'po-u'rī-ku're-ah) deficiency of uric acid in the urine.

hypourocrinia (hi'po-u'ro-krin'e-ah) [*hypo-* + Gr. *ouron* urine + *krinein* to secrete + *-ia*] deficient secretion of urine.

hypovaria (hi'po-va're-ah) hypo-ovaria.

hypovarianism (hi'po-va're-an-izm) hypo-ovaria.

hypovegetative (hi'po-vej'ē-ta'tiv) [*hypo-* + L. *vegetativus* plant-fashion] denoting a constitutional body type in which somatic systems predominate in contrast to visceral organs.

hypovenosity (hi'po-ve-nos'i-te) incomplete development of the venous system in any area.

hypoventilation (hi'po-ven'tī-la'shun) a state in which there is a reduced amount of air entering the pulmonary alveoli.

hypovitaminosis (hi'po-vi'tah-min-o'sis) a condition due to a deficiency of one or more essential vitamins; see specific vitamins.

hypovolemia (hi'po-vo-le'me-ah) [*hypo-* + *volume* + Gr. *haima* blood + *-ia*] abnormally decreased volume of circulating fluid [plasma] in the body.

hypovolemic (hi'po-vo-le'mik) pertaining to or characterized by hypovolemia.

hypovolvia (hi'po-vo'le-ah) diminished water content or volume, as of extracellular fluid.

hypoxanthine (hi'po-zan'thēn) 6-oxypurine, a purine base, C₅H₄N₄O, being an intermediate product of uric acid synthesis, formed from adenylic acid and itself a precursor of xanthine.

hypoxemia (hi'pok-se'me-ah) [*hypo-* + *oxygen* + Gr. *haima* blood + *-ia*] deficient oxygenation of the blood; hypoxia.

hypoxia (hi-pok'se-ah) reduction of oxygen supply to tissue below physiological levels despite adequate perfusion of the tissue by blood. Cf. *anoxia*. **anemic h.**, hypoxia due to reduction of the oxygen-carrying capacity of the blood as a result of a decrease in the total hemoglobin or an alteration of the hemoglobin constituents. **histotoxic h.**, that due to impaired utilization of oxygen by tissues, as in cyanide poisoning. **hypoxic h.**, that due to insufficient oxygen reaching the blood, as at decreased barometric pressures at high altitudes. **stagnant h.**, that due to failure to transport sufficient oxygen because of inadequate blood flow, as in heart failure.

hypoxic (hi-pok'sik) pertaining to or characterized by hypoxia.

hypoxidosis (hi-pok'si-do'sis) impaired cell function due to reduced supply of oxygen.

HypRho-D (hip'ro) trademark for a preparation of Rh₀(D) immune serum globulin.

hypsarhythmia (hip'sah-rith'me-ah) see *hypsarhythmia*.

hypsarhythmia (hip'sah-rith'me-ah) [Gr. *hypsi* high + *arrhythmos* unrhythmical + *-ia*] Gibbs' term for an electroencephalographic abnormality sometimes observed in infants, with random, high-voltage slow waves and spikes that arise from multiple foci and spread to all cortical areas. The disorder is

usually characterized by spasms or quivering spells (myoclonus), and is commonly associated with mental retardation.

hypsi- (hip/'se) [Gr. *hypsi* high] a combining form meaning high.

hypsi-brachycephalic (hip/'se-brak/'e-sē-fal/'ik) [*hypsi-* + Gr. *brachys* broad + *kephalē* head] having the head broad and high.

hypsi-cephalic (hip/'se-sē-fal/'ik) [*hypsi-* + Gr. *kephalē* head] having a vertical index over 75.

hypsi-cephaly (hip/'se-seff/'ah-le) oxycephaly.

hypsi-conchous (hip/'se-kong/'kus) [*hypsi-* + Gr. *konchē* shell] having an orbital index over 85.

hypsiloid (hip/'si-'loid) [Gr. *hypsiloidēs* in the shape of an T] shaped like the Greek letter T, capital upsilon. Cf. *hyoid*.

hypsi-staphylia (hip/'si-'stah-fil/'e-ah) [*hypsi-* + Gr. *staphylē* uvula + *-ia*] highness and narrowness of the palate.

hypsi-stenocephalic (hip/'se-'sten/'o-sē-fal/'ik) [*hypsi-* + Gr. *stenos* narrow + *kephalē* head] having a high, curved vertex, cheek bones prominent, and jaws prognathic.

hypso- (hip/'so) [Gr. *hypsos* height] a combining form denoting relationship to height.

hypso-cephalous (hip/'so-seff/'ah-lus) [*hypso-* + Gr. *kephalē* head] having a high vertex; having a breadth-height index of the head of over 75.

hypso-chrome (hip/'so-'krōm) [*hypso-* + Gr. *chrōma* color] an atom or group whose introduction into a compound shifts the compound's absorption maximum to a shorter wavelength; cf. *bathochrome*.

hypso-chromy (hip/'so-'kro-'me) a shift of the absorption band toward higher frequencies (shorter wavelengths), with lightening of color.

hypso-dont (hip/'so-'dōnt) [*hypso-* + Gr. *odus* tooth] having prism-shaped teeth with high crowns, as in many herbivorous mammals.

hypso-kinesis (hip/'so-'ki-'ne-'sis) [*hypso-* + Gr. *kinēsis* motion] a backward swaying, retropulsion, or falling when in erect posture, seen in cases of paralysis agitans and other forms of the amyostatic syndrome.

hypso-nosus (hip/'so-'no-'sus) [*hypso-* + Gr. *nosos* disease] mountain sickness; balloon sickness.

hypso-therapy (hip/'so-'ther-'ah-pe) [*hypso-* + *therapy*] the therapeutic use of high altitude.

hypurgia (hi-'pur/'je-ah) [L.; Gr. *hypourgiai* medical services] the sum of the minor or subsidiary factors that make for recovery in any particular case.

hyrtanal (her/'ti-'nal) a terpene aldehyde, (CH₃)₂C:C₆H₇·CHO, from the tropical tree *Hernandia peltata*.

Hyrtl's loop (*anastomosis*), **recess, sphincter** (hēr/'tlz) [Jozsef Hyrtl, eminent anatomist at Prague and Vienna, 1810-1894] see under *loop* and *sphincter*, and see *recessus epitympanicus*.

hysteralgia (his/'tē-'ral/'je-ah) [*hystero-* + *-algia*] metralgia or metrodynia.

hysteratresia (his/'ter-'ah-'tre/'ze-ah) atresia of the uterus.

hysterectomy (his/'tē-'rek/'to-me) [*hystero-* + Gr. *ektomē* excision] the operation of excising the uterus, performed either through the abdominal wall (*abdominal h.*) or through the vagina (*vaginal h.*).

abdominal h., excision of the uterus through an incision in the abdominal wall. **cesarean h.**, cesarean section followed by removal of the uterus. **chemical h.**, destruction of the endometrium by means of caustic chemicals. **complete h.**, total h. **partial h.**, subtotal h. **radical h.**, 1. Wertheim's operation (def. 1). 2. Schauta's operation. **subtotal h.**, hysterectomy in which the cervix is left in place. **supracervical h.**, **supravaginal h.**, subtotal h. **total h.**, hysterectomy in which the uterus and cervix are completely excised; called also *panhysterectomy*. **vaginal h.**, excision of the uterus through the vagina.

hysteresis (his/'tē-'re-'sis) [Gr. *hysterēsis* a lagging behind] a time lag in the occurrence of two associated phenomena, as between cause and effect. **protoplasmic h.**, a postulated cause of cell senescence: the colloidal state of the protoplasm is altered, becoming less dispersed, with loss of water and electrical charge.

hystereurynter (his/'ter-'u-'rin/'ter) [*hystero-* + Gr. *eurynein* to widen] an instrument for dilating the os uteri: a metreurynter.

hystereurynter (his/'ter-'u-'ri-'sis) dilatation of the os uteri.

hysteria (his-'tēr/'e-ah) [Gr. *hystera* uterus + *-ia*] a psychoneurosis, the symptoms of which are based on conversion and which is characterized by lack of control over acts and emotions, by morbid self-consciousness, by anxiety, by exaggeration of the effect of sensory impressions, and by simulation of various disorders. Symptoms may take the form of hyperesthesia; pain and tenderness in the region of the ovaries, spine, and head; anesthesia and other sensory disturbances; choking sensation; dimness of vision; paralysis; tonic spasms; convulsions; retention of urine; vasomotor disturbances; fever, hallucinations, and catalepsy. **anxiety h.**, hysteria showing conversion phenomena with recurring attacks of anxiety. **canine h.**, fright disease. **conver-**

sion h., see *hysterical neurosis*, under *neurosis*. **dissociative h.**, see *hysterical neurosis*, under *neurosis*. **fixation h.**, hysteria in which the symptoms are based on those of an organic disease, as the persistence of a nervous cough after pertussis. **h. ma'jor**, hysteria characterized by the sudden onset of dream states, stupors, and paralyses (described by Charcot). **h. mi'-nor**, hysteria with mild convulsions in which consciousness is not lost. **monosymptomatic h.**, hysteria which manifests itself by one symptom only.

hysteriac (his-'tēr/'e-ak) a person affected with hysteria.

hysterical (his-'ter/'ik) pertaining to or characterized by hysteria.

hysterical (his-'ter/'i-'kal) characterized by hysteria.

hystericism (his-'ter/'i-'sizm) a tendency toward hysteria.

hysterics (his-'ter/'iks) popular term for an uncontrollable emotional outburst.

hysteriform (his-'ter/'i-'form) having the appearance of hysteria.

hysterism (his-'ter/'izm) hysteria.

hystero- [Gr. *hystera* uterus] a combining form denoting relationship to the uterus, or to hysteria; see also *metro-*.

hystero-bubonocoele (his/'ter-'o-'bu-'bon/'o-'sēl) an inguinal hernia containing the uterus.

hystero-carcinoma (his/'ter-'o-'kar/'si-'no-'mah) endometrial carcinoma.

hystero-catalepsy (his/'ter-'o-'kat/'ah-'lep/'se) hysteria with cataleptic symptoms.

hysterocele (his/'ter-'o-'sēl/'o) [*hystero-* + Gr. *kēlē* hernia] hernia of the uterus.

hystero-cleisis (his/'ter-'o-'kli/'sis) [*hystero-* + Gr. *kleisis* closure] surgical closure of the os uteri.

hystero-colpectomy (his/'ter-'o-'kol-'pek/'to-me) [*hystero-* + Gr. *kolpos* vagina + *ektomē* excision] surgical removal of the uterus and vagina.

hystero-colposcope (his/'ter-'o-'kol/'po-'skōp) [*hystero-* + Gr. *kolpos* vagina + *skopein* to examine] an electrically lighted device for viewing the interior of the uterus.

hystero-cystic (his/'ter-'o-'sis/'tik) pertaining to the uterus and the bladder.

hystero-cystocleisis (his/'ter-'o-'sis/'to-'kli/'sis) [*hystero-* + Gr. *kystis* bladder + *kleisis* closure] the operation of turning the cervix uteri into the bladder and suturing it; done for the relief of vesicouterovaginal fistula or for ureterouterine fistula. Called also *Bozeman's operation*.

hystero-cystopexy (his/'ter-'o-'sis/'to-'pek/'se) [*hystero-* + Gr. *kystis* bladder + *pēxis* fixation] ventrovesicofixation.

hystero-dynia (his/'ter-'o-'din/'e-ah) [*hystero-* + Gr. *odynē* pain] metralgia or metrodynia.

hystero-epilepsy (his/'ter-'o-'ep/'i-'lep/'se) a severe type of hysteria with convulsions simulating those of epilepsy. At first there occur loss of consciousness and spasms, followed by a stage of violent spasmodic movements and mental disturbance, and finally a condition marked by delirium, erotic symptoms, etc.

hystero-epileptogenic (his/'ter-'o-'ep/'i-'lep/'to-'jen/'ik) [*hystero-* + Gr. *gennan* to produce] producing hysteroepilepsy.

hystero-erotic (his/'ter-'o-'ē-'rot/'ik) pertaining to eroticism in hysteria.

hystero-genic (his/'ter-'o-'jen/'ik) [*hystero-* + Gr. *gennan* to produce] causing hysterical phenomena or symptoms.

hystero-gram (his/'ter-'o-'gram) a roentgenogram of the uterus.

hystero-graph (his/'ter-'o-'graf) [*hystero-* + Gr. *graphein* to record] an apparatus for measuring the strength of uterine contractions in labor.

hystero-graphy (his/'tē-'rog/'rah-fe) [*hystero-* + Gr. *graphein* to record] 1. graphic recording of the strength of uterine contractions in labor. 2. roentgenography of the uterus after instillation of a contrast medium. Called also *metrography* and *uterography*.

hystero-oid (his/'ter-'oid) [*hystero-* + Gr. *eidōs* form] resembling hysteria.

hystero-laparotomy (his/'ter-'o-'lap/'ah-'rot/'o-me) [*hystero-* + Gr. *lapara* flank + *tomē* a cutting] incision of the uterus through the abdominal wall.

hystero-lith (his/'ter-'o-'lith/'o) [*hystero-* + Gr. *lithos* stone] a uterine calculus.

hystero-logy (his/'tē-'rol/'o-'je) [*hystero-* + *-logy*] the sum of what is known regarding the uterus.

hystero-lysis (his/'tē-'rol/'i-'sis) [*hystero-* + Gr. *lysis* dissolution] the operation of loosening the uterus from its attachments or adhesions.

hystero-mania (his/'ter-'o-'ma-'ne-ah) [*hystero-* + Gr. *mania* madness] 1. hysterical mania. 2. nymphomania.

hystero-meter (his/'tē-'rom/'ē-'ter) [*hystero-* + Gr. *metron* measure] an instrument for measuring the uterus.

hystero-metry (his/'tē-'rom/'ē-'tre) [*hystero-* + Gr. *metron* measure] the measurement of the dimensions of the uterus.

hystero-myoma (his/'ter-'o-'mi-'o-'mah) uterine leiomyoma.

hysteromyomectomy (his''ter-o-mi''o-mek'to-me) [*hystero-* + *myoma* + Gr. *ektomē* excision] excision of a uterine leiomyoma.

hysteromyotomy (his''ter-o-mi-ot'o-me) [*hystero-* + Gr. *mys* muscle + *tomē* a cutting] incision of the uterus for the purpose of removing a solid tumor.

hysteroneurasthenia (his''ter-o-nu''ras-the'ne-ah) neurasthenia occurring in association with hysteria.

hysteropathy (his''tē-rop'ah-the) [*hystero-* + Gr. *pathos* disease] any uterine disease or disorder.

hysterope (his''ter-ōp) a person affected with hysteropia.

hysteropelexia (his''ter-o-pek'se-ah) hysteropelexy.

hysteropexy (his''ter-o-pek-se) [*hystero-* + Gr. *pēxis* fixation] the fixation of a displaced uterus by a surgical operation. It may be done by ventrofixation, shortening of the round ligaments, shortening of the sacrouterine ligaments, shortening of the endopelvic fascia (Manchester type operation). It is distinguished as *abdominal* or *vaginal*, according as the uterus is fastened to the abdominal wall or to the vagina.

hysteropia (his''ter-o'pe-ah) [*hystero-* + Gr. *ōps* eye] hysteric disorder of the vision.

hysteroptosis (his''ter-op-to'ze-ah) metropptosis.

hysteroptosis (his''ter-op-to'sis) metropptosis.

hysterorrhaphy (his-ter-or'ah-fe) [*hystero-* + Gr. *rhaphe* suture] 1. hysteropexy. 2. the operation of suturing of the lacerated uterus.

hysterorrhexis (his''ter-o-rek'sis) metrorrhexis.

hysterosalpingectomy (his''ter-o-sal'pin-jek'to-me) [*hystero-* + Gr. *salpinx* tube + *ektomē* excision] excision of the uterus and uterine tubes.

hysterosalpingography (his''ter-o-sal'ping-gog'rah-fe) [*hystero-* + Gr. *salpinx* tube + *graphein* to record] roentgenography of the uterus and uterine tubes after the injection of opaque material. Called also *uterosalpingography*, *uterotubography*, *hysterotubography*, *metrosalpingography*, *metrotubography*.

hysterosalpingo-oophorectomy (his''ter-o-sal-ping'go-o'of-o-rek'to-me) excision of the uterus, uterine tubes, and ovaries.

hysterosalpingostomy (his''ter-o-sal'ping-gos'to-me) [*hystero-* + Gr. *salpinx* tube + *stomōn* to provide with an opening, or mouth] the operation of forming an anastomosis between the uterus and the distal portion of the uterine tube after excision of a strictured or obstructed portion of the tube.

hysteroscope (his''ter-o-skōp'') [*hystero-* + Gr. *skopein* to examine] an endoscope used in direct visual examination of the canal of the uterine cervix and the cavity of the uterus.

hysteroscopy (his''ter-os'ko-pe) inspection of the uterus.

hysterspasm (his''ter-o-spazm'') spasm of the uterus.

hysterostat (his''ter-o-stat) [*hystero-* + Gr. *statikos* stopping] a

mechanical intrauterine device for holding sealed sources of ionizing radiation (radium, cesium-137, etc.) in order to give planned patterns of irradiation.

hysterostomatocleisis (his''ter-o-sto'mah-to-kli'sis) [*hystero-* + Gr. *stoma* mouth + *kleisis* closure] an operation for vesicovaginal fistula consisting of closure of the cervical canal and conversion of the vesical and uterine cavities into one common cavity by means of an opening between them.

hysterostomatome (his''ter-o-sto'mah-tōm) a knife used in hysterostomatomy.

hysterostomatomy (his''ter-o-sto-mat'o-me) [*hystero-* + Gr. *stoma* mouth + *temnein* to cut] incision of the os or cervix uteri. See *Dührssen's incision*, under *incision*.

hysterosyphilis (his''ter-o-sif'i-lis) a hysterical neurosis due to syphilitic disease.

hysterotabetism (his''ter-o-ta'bē-tizm) combined hysteria and tabes.

hysterothermometry (his''ter-o-ther-mom'ē-tre) uterothermometry.

hysterotome (his''ter-o-tōm) [*hystero-* + Gr. *tomē* a cutting] an instrument for incising the uterus.

hysterotomy (his''ter-ot'o-me) [*hystero-* + Gr. *temnein* to cut] incision of the uterus. **abdominal h.**, incision of the uterus through the wall of the abdomen. **vaginal h.**, incision of the uterus through the vagina.

hysterotrachelectasia (his''ter-o-tra'kel-ek-ta'se-ah) surgical dilation of the cervix and uterus.

hysterotrachelectomy (his''ter-o-tra'kel-ek'to-me) amputation of the cervix uteri; trachelectomy.

hysterotracheloplasty (his''ter-o-tra'kel-o-plas'te) plastic repair of the cervix uteri; tracheloplasty.

hysterotrachelorrhaphy (his''ter-o-tra'kel-or'ah-fe) [*hystero-* + Gr. *trachelos* neck + *rhaphe* suture] the operation of suturing the cervix uteri.

hysterotrachelotomy (his''ter-o-tra'kel-ot'o-me) [*hystero-* + Gr. *trachelos* neck + *tomē* a cutting] incision of the cervix uteri.

hysterotraumatic (his''ter-o-traw-mat'ik) [*hystero-* + Gr. *trauma* wound] pertaining to or associated with hysterotraumatism.

hysterotraumatism (his''ter-o-traw'mah-tizm) hysteric symptoms following traumatism.

hysterotubography (his''ter-o-tu-bog'rah-fe) hysterosalpingography.

hystero-vagino-enterocele (his''ter-o-vaj'i-no-en'ter-o-sēl) [*hystero-* + *vagina* + Gr. *enteron* intestine + *kēlē* hernia] hernia containing the uterus, vagina, and intestine.

Hytaquerol (hi-tak'er-ol) trademark for preparations of dihydroachysterol.

Hyzyd (hiz'id) trademark for a preparation of isoniazid.

Hertz hertz.

I

I chemical symbol for *iodine*.

¹³¹I, I 131 chemical symbol for the radioactive isotope of iodine of atomic mass 131 and a half-life of 8.07 days; formerly written ^{I¹³¹}.

¹³²I, I 132 chemical symbol for the radioactive isotope of iodine of atomic mass 132 and a half-life of 2.4 hours; formerly written ^{I¹³²}.

i. optically inactive; said of chemical substances incapable of rotating the plane of polarized light.

I.A. impedance angle.

-ia a word termination indicating state or condition.

IAEA International Atomic Energy Agency.

I.A.G.P. International Association of Geographic Pathology.

I.A.G.U.S. International Association of Genito-Urinary Surgeons.

iamatology (i'am-ah-tol'o-je) [Gr. *iamā*, *iamatos* remedy + *-logy*] the study or science of remedies.

I.A.M.M. International Association of Medical Museums.

ianthinopsia (i-an'thi-nop'se-ah) [Gr. *ianthinos* violet + *opsis* vision] violet vision; a condition in which objects seem to be violet colored.

I.A.P.B. International Association for Prevention of Blindness.

I.A.P.P. International Association for Preventive Pediatrics.

-iasis (i'ah-sis) a word termination meaning a process or the condition resulting therefrom, particularly a morbid condition. See *-sis*.

iathergy (i-ath'er-je) [Gr. *iathēnai* to have been cured + *ergon*

work] the state of immunity existing in an immunized individual in whom the tuberculin skin sensitivity has been abolished by specific desensitization.

iatraliptic (i'ah-trah-lip'tik) [Gr. *iatreia* cure + *aleiphein* to anoint] pertaining to the application of remedies by inunction and friction.

iatraliptics (i'ah-trah-lip'tiks) treatment by inunction and friction.

iatrarchy (i'ah-trar'ke) [Gr. *iatros* physician + *archē* rule] government by physicians.

iatreusiology (i'ah-troo'se-ol'o-je) [Gr. *iatreusis* treatment + *-logy*] the science of treatment; therapeutics.

iatreusis (i'ah-troo'sis) [Gr.] treatment.

iatric (i-at'rik) [Gr. *iatrikos*] pertaining to medicine or to a physician.

iatro- [Gr. *iatros* physician] a combining form denoting relationship to a physician or to medicine.

Iatrobdella (i'at-ro-del'ah) (*obs.*) *Hirudo*.

iatrochemical (i-at'ro-kem'ē-kal) pertaining to iatrochemistry.

iatrochemist (i-at'ro-kem'ist) a person belonging to the school of iatrochemistry.

iatrochemistry (i-at'ro-kem'is-tre) [*iatro-* + *chemistry*] the name of a school of medicine of the 17th century, which espoused the theory that all the phenomena of life and disease are based on chemical action.

iatrogenesis (i-at'ro-jen'ē-sis) [*iatro-* + Gr. *genesis* production]

the creation of additional problems or complications resulting from treatment by a physician or surgeon.

iatrogenic (i-at''ro-jen''ik) [*iatro-* + Gr. *gennan* to produce] resulting from the activity of physicians. Originally applied to disorders induced in the patient by autosuggestion based on the physician's examination, manner, or discussion, the term is now applied to any adverse condition in a patient occurring as the result of treatment by a physician or surgeon.

iatrology (i''ah-trol''o-je) [*iatro-* + *-logy*] the science of medicine.

iatromathematical (i-at''ro-math''ē-mat''i-kal) iatrophysical.

iatromechanical (i-at''ro-mē-kan''i-kal) iatrophysical.

iatrophysical (i-at''ro-fiz''i-kal) the name of a school of medicine in the 17th century which held that all the phenomena of life and disease are based on the laws of physics.

iatrophysicist (i-at''ro-fiz''i-sist) a person belonging to the iatrophysical school.

iatrophysics (i-at''ro-fiz''iks) [*iatro-* + Gr. *physikos* natural] 1. the physics of medicine or of medical and surgical treatment. 2. the treatment of diseases by physical or mechanical means; physiatrics.

iatrotechnics (i-at''ro-tek''niks) [*iatro-* + Gr. *technē* art] the techniques of medical and surgical practice.

iatrotechnique (i-at''ro-tek''nēk') iatrotechnics.

I.B. inclusion body.

Ibn Rushd see *Averroes*.

Ibn Sinā see *Avicenna*.

Ibn Zuhr see *Avenzoar*.

ibogaine (i-bo''gah-ēn) an alkaloid, $C_{20}H_{26}N_2O$, from the root of *Tabernanthe iboga* Baill. (Apocynaceae) that has antidepressant and euphoric properties; it is isomeric with tabernanthine.

ibufenac (i-bu''fē-nak) chemical name: 4-(2-methylpropyl)benzeneacetic acid; an analgesic and anti-inflammatory, $C_{13}H_{18}O_2$, formerly used in the treatment of rheumatic conditions.

ibuprofen (i-bu''pro-fen) chemical name: α -methyl-4-(2-methylpropyl)benzeneacetic acid. An anti-inflammatory agent, $C_{13}H_{18}O_2$, also having analgesic and antipyretic actions; used in the treatment of rheumatoid arthritis and osteoarthritis, administered orally.

IC inspiratory capacity; irritable colon.

ICD International Classification of Diseases (of the World Health Organization); intrauterine contraceptive device.

ice (īs) any of the six solid forms of water; but usually the common low-density form melting at 0° C. at 1 atmosphere. **Dry I.**, trademark for carbon dioxide snow.

Iceland disease (is''land) benign myalgic encephalomyelitis.

Iceland moss (is''land maws') see under *moss*.

ichnogram (ik''no-gram) [Gr. *ichnos* a footprint + *gramma* mark] a footprint, in ink on paper.

ichor (i''kor) [Gr. *ichōr*] a thin, serous, or sanious fluid from a sore or wound.

ichoremia (i''kor-e''me-ah) [*ichor* + Gr. *haima* blood + *-ia*] septicemia.

ichoroid (i''ko-roid) [*ichor* + Gr. *eidos* form] resembling ichor or pus.

ichorous (i''kor-us) of the nature of a serum or ichor.

ichorrhœa (i-ko-re''ah) [*ichor* + Gr. *rhoia* flow] a copious discharge of ichorous fluid or sanies.

ichorrhemia (i''ko-re''me-ah) [*ichor* + Gr. *haima* blood + *-ia*] septicemia.

ichthammol (ik''tham-mol) [USP] a reddish brown to brownish black viscous fluid, with a strong, characteristic odor, obtained by the destructive distillation of certain bituminous schists, sulfonation of the distillate, and neutralization of the product with ammonia; used as a local skin anti-infective. Called also *ammonium ichthysulfonate* and *ammonium sulfoichthyolate*.

ichthyism (ik''the-izm) ichthyotoxism.

ichthyismus (ik''the-iz''mus) [Gr. *ichthys* fish] ichthyotoxism.

ichthyo- (ik''the-o) [Gr. *ichthys* fish] a combining form denoting relationship to fish.

ichthyocanthotoxin (ik''the-o-ah-kan''tho-tok''sin) [*ichthyo-* + Gr. *akantha* thorn + *toxikon* poison] the venom secreted by venomous fishes, in connection with stings, spines, or "teeth."

ichthyocanthotoxism (ik''the-o-ah-kan''tho-tok''sizm) intoxication resulting from injuries produced by the stings, spines, or "teeth" of venomous fishes.

ichthyocolla (ik''the-o-kol''ah) [*ichthyo-* + Gr. *kolla* glue] a form of gelatin prepared from the swimming-bladders of the Russian sturgeon, *Acipenser huso*; used as an adhesive and clarifying agent. Called also *isinglass*.

ichthyohemotoxin (ik''the-o-he''mo-tok''sin) [*ichthyo-* + Gr. *haima* blood + *toxikon* poison] a toxic substance found in the blood of certain fish.

ichthyohemotoxism (ik''the-o-he''mo-tok''sizm) intoxication

caused by the ingestion of ichthyohemotoxin, characterized by gastrointestinal and neurological disturbances.

ichthyoid (ik''the-oid) [*ichthyo-* + Gr. *eidos* form] resembling a fish; shaped like a fish.

Ichthylol (ik''the-ol) trademark for a preparation of ichthammol.

ichthyology (ik''the-ol''o-je) that branch of zoology specializing in study of fishes.

ichthysulfonate (ik''the-ol-sul''fo-nāt) a salt of ichthysulfonic acid, a derivative of ichthammol.

ichthyotoxin (ik''the-o''o-tok''sin) [*ichthyo-* + Gr. *ōnēgē* + *toxikon* poison] a toxic substance derived from the roe of certain fish; see also *ichthyotoxism*.

ichthyotoxism (ik''the-o''o-tok''sizm) intoxication caused by the ingestion of toxic fish roe, characterized by gastrointestinal and neurological disturbances.

ichthyophagia (ik''the-o-fa''je-ah) [*ichthyo-* + Gr. *phagein* to eat + *-ia*] the practice of subsisting on fish.

ichthyophagous (ik''the-of''ah-gus) eating or subsisting on fish.

Ichthyophthirius multifiliis (ik''the-o-thir''e-us mul''ti-fil''e-is) a ciliate protozoan of the subclass Euciliatia that produces lesions in the skin of fresh-water fish, often resulting in death.

ichthyosarcotoxin (ik''the-o-sar''ko-tok''sin) [*ichthyo-* + Gr. *sarx*, *sarkos* flesh + *toxikon* poison] the poison found in the flesh of poisonous fishes, excluding toxins which may result from bacterial contamination.

ichthyosarcotoxism (ik''the-o-sar''ko-tok''sizm) fish poisoning; intoxication characterized by various gastrointestinal and neurological disturbances, resulting from the ingestion of the flesh of poisonous fishes, excluding ordinary bacterial food poisoning. See, for example, *ciguatera*, *elasmobranch*, *gymnothorax*, and *scombroid poisoning*, under *poisoning*.

ichthyosiform (ik''the-o''si-form) resembling ichthyosis.

ichthyosis (ik''the-o''sis) [*ichthyo-* + *-osis*] any of several generalized skin disorders characterized by dryness, roughness, and scaliness, due to hypertrophy of the horny layer, occurring as a result of excessive production or excessive retention of keratin, or a molecular defect in the keratin. Commonly used alone to refer to *i. vulgaris*. **i. congenita**, lamella exfoliation of the newborn (see under *exfoliation*). **i. fetalis**, lamellar exfoliation of the newborn (see under *exfoliation*). **i. hystrix**, **i. hystrix gra'vior**, a rare form of epidermolytic hyperkeratosis, characterized by generalized, dark brown, linear verrucoid ridges somewhat like *porcupine skin*. The linear verrucous lesions of ichthyosis hystrix must be differentiated from linear verrucous nevi. **lamellar i.**, a hereditary disease transmitted as an autosomal recessive trait, present at birth or soon thereafter, and characterized by diffuse erythema and large, quadrilateral, grayish brown scales; it may be associated with small stature, oligophrenia, spastic paralysis, hypoplasia of the genitals, hypotrichia, and shortened life-span. Formerly called *nonbullous congenital ichthyosiform erythroderma*. **lamellar i. of the newborn**, see under *exfoliation*. **linear i.**, linear verrucous epidermal nevus. **i. lin'guae**, leukoplakia. **nacreous i.** (*obs.*), a form marked by pearly scales. **i. palma'ris**, **i. palma'ris et planta'ris**, **i. planta'ris**, keratosis palmaris et plantaris. **i. sauroder'ma**, lamellar exfoliation of the newborn persisting into childhood, in which the skin is covered with thick plates somewhat like the skin of a crocodile; called also *alligator* or *crocodile skin*. **i. sim'plex**, **i. vulgaris**. **i. u'teri**, a condition marked by the transformation of the columnar epithelium of the endometrium into stratified squamous epithelium. **i. vulga'ris**, a hereditary form of ichthyosis transmitted as an autosomal dominant or sex-linked recessive trait. The *autosomal dominant* form usually appears after three months of age and rarely involves the flexural surfaces. The *sex-linked* form may be present at birth or appear shortly thereafter, and is marked by large, thick, dry scales on the neck, scalp, ears, face, and flexures of the antecubital, popliteal, and axillary fossae. Called also *i. simplex*.

ichthyotic (ik''the-ot''ik) pertaining to or characterized by ichthyosis.

ichthyotoxic (ik''the-o-tok''sik) caused by the toxic principle of fish.

ichthyotoxicology (ik''the-o-tok''si-kol''o-je) [*ichthyo-* + Gr. *toxikon* poison + *-logy*] the science of poisons derived from certain fish, their cause, detection, and effects, and the treatment of conditions produced by them.

ichthyotoxicum (ik''the-o-tok''si-kum) [*ichthyo-* + Gr. *toxikon* poison] an obsolete term proposed (1889) to designate a toxic substance found in eel serum.

ichthyotoxin (ik''the-o-tok''sin) [*ichthyo-* + *toxin*] a general term applied to any type of toxic substance derived from fish.

ichthyotoxism (ik''the-o-tok''sizm) [*ichthyo-* + *toxin* + *-ism*] a general term applied to intoxication caused by any toxic substance derived from fish.

I.C.N. International Council of Nurses.

I.C.R.P. International Commission on Radiological Protection.

I.C.R.U. International Commission on Radiological Units and Measurements.

I.C.S. International College of Surgeons.

ICSH interstitial cell-stimulating hormone (luteinizing hormone).

I.C.T. inflammation of connective tissue; insulin coma therapy.

ictal (ik'tal) [L. *ictus* stroke] pertaining to, characterized by, or caused by a stroke or an acute epileptic seizure.

icterepatitis (ik'ter-ep'ah-ti'tis) icterohepatitis.

icteric (ik-ter'ik) pertaining to or affected with jaundice.

icteritious (ik'ter-ish'us) icteric.

ictero- [L. *icterus*; Gr. *ikteros*] a combining form meaning affected with or pertaining to jaundice.

icteroanemia (ik'ter-o-ah-ne'me-ah) a disease marked by the development of icterus and anemia, with splenic enlargement, urobilinuria, and a hemolysis associated with fragility of the red blood corpuscles. Called also *hemolytic icteroanemia* and *Widal's syndrome*.

icterogenic (ik'ter-o-jen'ik) [*icterus* + Gr. *gennan* to produce] causing icterus.

icterogenicity (ik'ter-o-jē-nis'i-te) ability to cause icterus.

icterohematuria (ik'ter-o-hem'ah-tu're-ah) jaundice associated with hematuria. **i. of sheep**, a form caused by *Babesia ovis*, which is transmitted by *Rhipicephalus bursa*.

icterohematuric (ik'ter-o-hem'ah-tu'rik) pertaining to icterohematuria; marked by jaundice and hematuria.

icterohemoglobinuria (ik'ter-o-he'mo-glo'bi-nu're-ah) combined jaundice and hemoglobinuria.

icterohepatitis (ik'ter-o-hep'ah-ti'tis) inflammation of the liver with marked jaundice.

icteroid (ik'ter-oid) [*icterus* + Gr. *eidos* form] resembling jaundice.

icterus (ik'ter-us) [L.; Gr. *ikteros*] jaundice. **i. castren'sis gra'vis** (obs.), leptospiral jaundice. **chronic familial i.**, hereditary spherocytosis. **congenital familial i.**, hereditary spherocytosis. **congenital hemolytic i.**, hereditary spherocytosis. **epidemic catarrhal i.**, a mild form of leptospiral jaundice. **i. gra'vis**, acute yellow atrophy; see under *atrophy*. **i. gra'vis neonato'rum**, severe jaundice in the newborn, usually a form of isoimmunization with Rh factor; called also *erythroleukoblastosis*. See also *kernicterus*. **-i. infectio'sus**, leptospiral jaundice. **i. me'las** ["black jaundice"] (obs.), Winkler's disease. **i. neonato'rum**, the jaundice sometimes seen in newborn children. **nuclear i.**, kernicterus. **i. prae'cox**, mild jaundice developing within the first 24 hours of life (before physiologic jaundice normally occurs), due to incompatibility of the ABO blood group system between mother and infant; it usually clears rapidly and spontaneously, only occasionally resulting in hemolytic disease. **spirochetal i.**, leptospiral jaundice. **i. typhoi'des**, acute yellow atrophy; see under *atrophy*.

ictus (ik'tus), pl. *ic'tus* [L. "stroke"] a seizure, stroke, blow, or sudden attack; see also *seizure*. **i. cor'dis**, the heart beat. **i. epilep'ticus**, an epileptic attack. **i. immunisato'rius**, the injection of a large quantity of bacteria, toxin, or other antigen for the purpose of inducing the formation of a large quantity of antibody. **i. paraly'ticus**, a paralytic stroke. **i. san'guinis**, stroke due to cerebral hemorrhage. **i. so'lis**, a sun-stroke.

ICU intensive care unit.

ID intradermal; inside diameter.

I.D. infective dose.

ID₅₀ median infective dose, being that amount of pathogenic microorganisms which will produce infection in 50 per cent of the test subjects.

Id. abbreviation for L. *i'dem*, the same.

id (id) [Gr. *idios* own, peculiar] 1. Freud's term for the self-preserved tendencies and the instincts as a totality; the true unconscious. It is the reservoir of instinctive impulses and is dominated by the pleasure principle. 2. a rash associated with but remote from the main lesion of the disease, and considered to be an allergic reaction following cutaneous sensitization to the causative agent of the disease. Often used as a word termination in combination with a root representing the causative factor, as syphilid, dermatophytid, etc. 3. see *biophore*.

-id (id) 1. [Gr. *eidos* form, shape] a word termination meaning having the shape of, or resembling. 2. see *id*, def. 2.

idant (i'dant) see *biophore*.

-ide a suffix signifying a binary chemical compound, such as a chloride, sulfide, or carbide.

Ide test (reaction) [Sobei *Ide*; Tamao *Ide*, physicians in Tokyo] see under *tests*.

idea (i-de'ah) [Gr. "form"] a mental impression or conception. **autochthonous i.**, an idea which comes into the mind in some unaccountable way, independently of trains of thought, and which is strange, but cannot be accounted for by a hallucination. **compulsive i.**, an idea which intrudes, recurs, and persists despite reason and will, and which impels toward some inappropriate

act. **dominant i.**, a morbid or other impression that controls or colors every action and thought. **fixed i.**, a morbid impression or belief which stays in the mind and cannot be changed by reason; called also *idée fixe*. **hyperquantivalent i.** (obs.), an idea which has become of the utmost importance to the patient, absorbing his thought, and excluding anything which might tend to discredit its truth. **imperative i.**, compulsive i. **i. of reference, referential i.**, the assumption by a patient that the words and actions of others refer to himself or the projection of the causes of his own imaginary difficulties upon someone else; called also *delusion of reference*.

ideal (i-de'al) having some relation to ideas, impressions, or imaginations. **ego i.**, the standard of perfection unconsciously created by an individual for himself.

idealization (i-de'al-i-za'shun) a conscious or unconscious mental mechanism in which the individual overestimates an admired aspect or attribute of another person.

ideation (i'de-a'shun) the distinct mental presentation of objects.

ideational (i'de-a'shun-al) relating to ideation or the formation of objects and images in the mind.

idée (e-da') [Fr.] idea. **i. fixe** (e-da'fēks'), fixed idea.

identification (i-den'ti-fi-ka'shun) a mental mechanism of the unconscious by which the ego attaches or transfers to itself qualities or properties belonging to other persons or objects. **cosmic i.**, identification of one's self with the universe, as in schizophrenic delusions of omnipotence.

identity (i-den'ti-te) the aggregate of characteristics by which an individual is recognized by himself and others. **core gender i.**, gender i. **ego i.**, a sense of unity and continuity of one's own personality. **gender i.**, a person's concept of himself as being male and masculine or female and feminine, or ambivalent, usually based on the physical characteristics, parental attitudes and expectations, and psychological and social pressures to which the individual is subjected. It is the private experience of gender role. Cf. *gender role*, under *role*.

ideodynamism (i-de'o-di'nah-mizm) [*idea* + Gr. *dynamis* power] the stimulation, through the cerebral cells, by an idea, of those nerve fibers which are to realize that idea.

ideogenetic (i'de-o-jē-net'ik) induced by or related to vague sense impressions rather than organized images.

ideogenous (i'de-o-jē-nus) ideogenetic.

ideoglandular (i'de-o-glan'du-lar) arousing glandular activity as a result of some recollection or thought.

ideokinetic (i-de'o-ki-net'ik) ideomotor.

ideology (i'de-o-l'o-je, id'e-ol'o-je) [Gr. *idea* + *-logy*] 1. the science of the development of ideas. 2. the body of ideas characteristic of an individual or of a social unit.

ideometabolic (i'de-o-met-ah-bol'ik) ~producing metabolic activity as a result of mental action, normal or other.

ideometabolism (i'de-o-mē-tab'o-lizm) metabolism produced by mental influence.

ideomotion (i'de-o-mo'shun) motion or muscular action which is neither reflex nor volitional, but is induced by some dominant idea.

ideomotor (i'de-o-mo'tor) aroused by an idea or thought; said of involuntary motion so aroused.

ideomuscular (i'de-o-mus'ku-lar) producing involuntary muscular action as a result of some ideation, memory, or hallucination.

ideophrenia (i'de-o-fre'ne-ah) a morbid mental state characterized by marked perversion of ideas.

ideophrenic (i'de-o-fren'ik) pertaining to or exhibiting ideophrenia.

ideoplastia (i'de-o-plas'te-ah) [*idea* + Gr. *plassein* to form] (obs.) the passive inert condition of a patient under complete hypnosis in which he is capable of receiving suggestions of ideas from the hypnotist.

ideovascular (i'de-o-vas'ku-lar) producing vascular change as a result of some ideation, memory, or hallucination.

idio- (id'e-o) [Gr. *idios* own, peculiar] a combining form denoting relationship to self or to one's own, or to something separate and distinct.

idioagglutinin (id'e-o-ah-gloo'ti-nin) [*idio-* + *agglutinin*] an agglutinin that originates independently of any transfer or artificial means in the animal in which it is formed.

idioblapsis (id'e-o-blap'sis) [*idio-* + Gr. *blapsis* a harming, damage] Coca's name for a nonreagin food allergy in which (1) the hereditary influence controlling it is independent of atopic inheritance, (2) allergic antibodies are not demonstrable, (3) many symptoms are not represented in the atopic group, and (4) the allergic reaction practically always causes acceleration of the pulse.

idioblaptic (id'e-o-blap'tik) [*idio-* + Gr. *blastikos* hurtful] pertaining to or characterized by idioblapsis.

idioblast (id'e-o-blast) [*idio-* + Gr. *blastos* germ] any one of the hypothetical ultimate units of a cell; a biophore.

idiochromatin (id'e-o-kro'mah-tin) [*idio-* + *chromatin*] chro-

matin concerned in reproduction; the chromatin bearing the ids (see *biophore*).

idochromidia (id'e-o-kro-mid'e-ah) [*idio-* + *chromidia*] that part of the chromidia or extranuclear chromatin which takes part in the reproduction of the cell. Cf. *trophochromidia*.

idochromosome (id'e-o-kro'mo-sōm) any sex chromosome.

idiocrasy (id'e-ok'rah-se) idiosyncrasy.

idiocratic (id'e-o-krat'ik) idiosyncratic.

idiocy (id'e-o-se) severe mental retardation; a former category of mental retardation, which comprised individuals having an IQ of less than 25. See *mental retardation*, under *retardation*. Cf. *imbecility* and *morosity*. **absolute i.**, profound i. **amaurotic familial i.**, former name for cerebral sphingolipidosis; see under *sphingolipidosis*. **athetotic i.**, athetosis. **Aztec i.**, microcephalic i. **cretinoid i.**, cretinism. **developmental i.**, severe mental retardation due to arrest of brain development. **ecclampsic i.**, severe mental retardation associated with convulsions. **epileptic i.**, severe mental retardation combined with epilepsy. **erethistic i.**, severe mental retardation associated with activity and restlessness. **genetous i.**, severe mental retardation dating from fetal life. **hemiplegic i.**, severe mental retardation combined with hemiplegia. **hydrocephalic i.**, severe mental retardation combined with chronic hydrocephalus. **intrasocial i.**, severe mental retardation in which the patient is capable of performing some regular occupation. **Kalmuk i.**, mongolian i. **microcephalic i.**, severe mental retardation associated with microcephaly; called also *Aztec i.* or *type*, and *bird's head type*. **mongolian i.**, a name formerly applied to the marked mental retardation associated with *Down's syndrome*; called also *Kalmuck (Kalmuk) i.* or *type*. **moral i.**, an absence of moral sense. **paralytic i.**, severe mental retardation combined with paralysis. **paraplegic i.**, severe mental retardation associated with paraplegia. **plagiocephalic i.**, severe mental retardation associated with plagiocephaly. **profound i.**, the severest form of mental retardation, usually associated with small size and physical abnormality; called also *absolute i.* **scaphocephalic i.**, severe mental retardation associated with scaphocephaly. **sensorial i.**, severe mental retardation associated with early loss of any of the special senses. **spastic amaurotic axonal i.**, infantile neuroaxonal dystrophy. **torpid i.**, severe mental retardation associated with inactivity and dullness. **traumatic i.**, severe mental retardation that results from an injury received at birth or in infancy. **xerodermic i.**, DeSanctis-Cacchione syndrome.

idiogamist (id'e-og'ah-mist) [*idio-* + *gamos* marriage] (*obs.*) a person who is capable of coitus with only one particular woman, or with only a few selected ones, being impotent with all others.

idiogenesis (id'e-o-jen'ē-sis) [*idio-* + *genesis* production] the spontaneous origin of disease.

idioglossia (id'e-o-glos'e-ah) [*idio-* + *glōssa* tongue + *-ia*] imperfect articulation, with the utterance of meaningless vocal sounds.

idioglottic (id'e-o-glot'ik) pertaining to idioglossia.

idiogram (id'e-o-gram'') [*idio-* + *-gram*] a diagrammatic representation of a chromosome complement, based on measurement of the chromosomes of a number of cells. Cf. *karyotype*.

idiheteroagglutinin (id'e-o-het'er-o-ah-gloo'ti-nin) [*idio-* + *Gr. heteros* other + *agglutinin*] a heteroagglutinin normally present in the blood.

idiheterolysin (id'e-o-het'er-ol'i-sin) a heterolysin normally present in the blood.

idihypnotism (id'e-o-hip'no-tizm) [*idio-* + *hypnotism*] spontaneous or self-induced hypnotism.

idio-imbecile (id'e-o-im'bē-sil) a grade of mental deficiency between idiot and imbecile.

idioisoagglutinin (id'e-o-i'so-ah-gloo'ti-nin) an isoagglutinin normally present in the blood, and not produced artificially.

idioisolsyn (id'e-o-i-sol'i-sin) a lysin normally present which lyses the cells of other members of the same species as the animal in which it is formed.

idiolalia (id'e-o-la'le-ah) a condition marked by the use of invented language.

idiolog (id'e-o-log) a word that has meaning only to the user.

idiologism (id'e-o-ol'o-jizm) the utterance of words that are meaningless to anyone but the speaker.

idiolysin (id'e-o-ol'i-sin) [*idio-* + *lysin*] a lysin, normally present in the blood and not produced by artificial means, that lyses the cells of the animal in which it is formed.

idiomere (id'e-o-mēr) chromomere (def. 1).

idiomuscular (id'e-o-mus'ku-lar) [*idio-* + *L. musculus* muscle] pertaining to the muscular tissue apart from any nerve stimulus; a term applied to certain muscular contractions which occur in degenerated muscles only.

idioneurosis (id'e-o-nu-ro'sis) [*idio-* + *Gr. neuron* nerve] (*obs.*) any neurosis arising from the nerves themselves; an idiopathic neurosis.

idiopathic (id'e-o-pah-thet'ik) idiopathic.

idiopathic (id'e-o-path'ik) of the nature of an idiopathy; self-originated; of unknown causation.

idiopathy (id'e-op'ah-the) [*idio-* + *Gr. pathos* disease] a morbid state of spontaneous origin; one neither sympathetic nor traumatic. **toxic i.**, any one of a group of diseases due to hypersensitivity to particular proteins, and including asthma, hay fever, urticaria, angioneurotic edema, and some forms of eczema and gastrointestinal disorder.

idiophore (id'e-o-fōr) [*idio-* + *Gr. pherein* to bear] the (theoretical) primary form of living cell substance.

idioplasm (id'e-o-plazm'') [*idio-* + *Gr. plasma* anything formed] germ plasm.

idiopsychologic (id'e-o-si'ko-loj'ik) pertaining to ideas formed within one's own mind.

idioreflex (id'e-o-re'fleks) [*idio-* + *reflex*] a reflex brought about by a cause within the same organ.

idioretinal (id'e-o-ret'i-nal) pertaining to the retina alone; a term applied to a visual sensation occurring without any visual stimulus.

idiosome (id'e-o-sōm'') [*idio-* + *Gr. sōma* body] 1. a supposed ultimate element of living matter. 2. the centrosome of a spermatocyte, together with surrounding Golgi apparatus and mitochondria.

idiospasm (id'e-o-spazm) a spasm of a limited area or region.

idiosyncrasy (id'e-o-sin'krah-se) [*idio-* + *Gr. synkrasis* mixture] 1. a habit or quality of body or mind peculiar to any individual. 2. an abnormal susceptibility to some drug, protein, or other agent which is peculiar to the individual.

idiosyncratic (id'e-o-sin-krat'ik) pertaining to or characterized by idiosyncrasy.

idiot (id'e-ot) [*Gr. idiōtēs* one in private station, ignoramus] a person without intellect and understanding; a former name for a mentally retarded person of the lowest order, i.e., having an IQ of less than 25. See *mental retardation*, under *retardation*. Cf. *imbecile* and *moron*. **erethistic i.**, see under *idiocy*. **mongolian i.**, former name for a person affected with *Down's syndrome*. **profound i.**, see under *idiocy*. **i-savant** (e-joo'-sah-vahnt) [*Fr. "learned idiot"*], a person who is severely mentally retarded in some respects, yet has a particular mental faculty that is developed to an unusually high degree, as memory, mathematics, or music. **torpid i.**, see under *idiocy*.

idiotope (id'i-o-tōp'') a site on the variable portion of an antibody molecule that can be recognized by a combining site of other antibodies.

idiotomy (id'e-o-top'e) [*idio-* + *Gr. topos* place] the position and relation of the parts of an organ among themselves.

idiotoxin (id'e-o-tok'sin) allergen; atopen; an antigen that elicits an allergic reaction.

idiotrophic (id'e-o-trof'ik) [*idio-* + *Gr. trophē* nutrition] capable of selecting its own nourishment.

idiotropic (id'e-o-trop'ik) [*idio-* + *Gr. tropos* a turning] a term applied to the type of personality which is satisfied with its own inner intellectual and emotional experiences.

idiot-savant see under *idiot*.

idiotype (id'e-o-tip) an antigenic determinant present on and characteristic of a certain antibody molecule, usually located in the variable (combining site) region. Idiotypic markers or determinants distinguish among antibody molecules, even those of the same isotype and allotype.

idiovariation (id'e-o-var'e-a'shun) a mutation or change in the germ plasm, the cause of which is unknown.

idioventricular (id'e-o-ven-trik'u-lar) relating to or affecting the cardiac ventricle alone, as idioventricular rhythm.

idizome (id'e-o-zōm) idiosome.

iditol (id'i-tol) a hexahydric alcohol, $\text{CH}_2\text{OH}(\text{CHOH})_4\text{CH}_2\text{OH}$, a reduction product of the hexose known as idose.

idose (id'dōs) an aldohexose.

idoxuridine (i-doks-ur'i-dēn) [USP] chemical name: 2'-deoxy-5-iodouridine. An analog of pyrimidine, $\text{C}_8\text{H}_{11}\text{IN}_2\text{O}_5$, occurring as a white crystalline powder, which inhibits viral DNA synthesis; used as an antiviral agent in the treatment of herpes simplex keratitis, applied topically to the conjunctiva. Abbreviated IDU.

IDU idoxuridine.

IE immunoelectrophoresis.

I.E. abbreviation for *Ger. immunitäts Einheit* (immunizing unit); see *antitoxin unit*, under *unit*.

I-em-hotep Imhotep.

ifosfamide (i-fos'fah-mid) chemical name: *N*,3-bis(2-chloroethyl)tetrahydro-2*H*-1,3,2-oxazaphosphorin-2-amine 2-oxide; an antineoplastic, $\text{C}_7\text{H}_{15}\text{Cl}_2\text{N}_2\text{O}_5\text{P}$.

Ig immunoglobulin of any of the five classes: IgA, IgD, IgE, IgG, or IgM; see *immunoglobulin*.

ignatia (ig-na'she-ah) [L.] the poisonous dried ripe seed of *Strychnos ignatii*; it contains several alkaloids, the principal ones being strychnine and brucine, and has been used as a bitter tonic.

igniextirpation (ig'ne-eks'ter-pa'shun) [L. *ignis* fire + *extirpation* extirpation] the excision of an organ by hot cautery.

ignioperation (ig'ne-op'er-a'shun) [L. *ignis* fire + *operation*] an operation performed by use of hot cautery.

ignipuncture (ig'ne-punk'tūr) [L. *ignis* fire + *punctura* puncture] therapeutic puncture with hot needles.

ignis (ig'nis) [L.] fire. **i. infernalis** ["infernal fire"], ergotism.

ignisation (ig'ni-za'shun) [L. *ignis* fire] hyperthermia produced by exposure to artificial sources of heat.

ignotine (ig'no-tin) carnosine.

IgT a hypothetical antigen receptor on T cell surfaces.

I.H. infectious hepatitis.

II-para secundipara.

III-para tertipara.

I.K. abbreviation for Ger. *immunkörper*, immune bodies. See *tuberculin*, and *Spengler's immune bodies*, under *body*.

Il chemical symbol for *illinium*, former name for promethium.

I.L.A. International Leprosy Association.

Ile isoleucine.

ileac (il'e-ak) 1. of the nature of ileus. 2. pertaining to the ileum.

ileadelphus (il'e-ah-del'fus) iliopagus.

ileal (il'e-al) pertaining to the ileum.

ileectomy (il'e-ek'to-me) [*ileum* + Gr. *ektomē* excision] surgical removal of the ileum.

ileitis (il'e-i'tis) inflammation of the ileum. **distal i.**, Crohn's disease affecting the ileum. **regional i.**, **terminal i.**, Crohn's disease affecting the ileum.

ileo- (il'e-o) [L. *ileum*] a combining form denoting relationship to the ileum.

ileocec (il'e-o-se'kal) pertaining to the ileum and cecum.

ileoecostomy (il'e-o-se-kos'to-me) surgical creation of an opening between the ileum and the cecum; also, the opening so established.

ileoecum (il'e-o-se'kum) the ileum and cecum considered as one organ.

ileocolic (il'e-o-kol'ik) pertaining to the ileum and colon.

ileocolitis (il'e-o-ko-li'tis) inflammation of the ileum and colon.

tuberculous i., tuberculous inflammation of the ileum and colon. **i. ulcero'sa chron'ica**, a chronic form characterized by fever, rapid pulse, anemia, diarrhea and right iliac pain.

ileocolonic (il'e-o-ko-lon'ik) ileocolic.

ileocolostomy (il'e-o-ko-los'to-me) [*ileo-* + *colon* + Gr. *stoma* mouth] surgical creation of an opening between the ileum and colon; also, the opening so established.

ileocolotomy (il'e-o-ko-lot'o-me) [*ileo-* + *colon* + Gr. *temnein* to cut] surgical incision of the ileum and colon.

ileocystoplasty (il'e-o-sis'to-plas'te) [*ileo-* + Gr. *kystis* bladder + *plassein* to form] surgical reconstruction of the bladder, incorporating an isolated loop of the ileum as part of the bladder wall.

ileocystostomy (il'e-o-sis-tos'to-me) surgical creation of an opening between the urinary bladder and ileum.

ileoileostomy (il'e-o-il'e-os'to-me) [*ileo-* + *ileo-* + Gr. *stoma* mouth] surgical creation of an opening between two parts of the ileum; also, the opening so established.

ileoproctostomy (il'e-o-prok-tos'to-me) [*ileo-* + Gr. *prōktos* rectum + *stoma* mouth] anastomosis of the ileum and rectum.

ileorectal (il'e-o-rek'tal) pertaining to or communicating with the ileum and rectum, as an ileorectal fistula.

ileorectostomy (il'e-o-rek-tos'to-me) ileoproctostomy.

ileorrhaphy (il'e-or'ah-fe) [*ileo-* + Gr. *rhaphe* suture] operative repair of the ileum.

ileosigmoid (il'e-o-sig'moid) pertaining to the ileum and the sigmoid.

ileosigmoidostomy (il'e-o-sig'moi-dos'to-me) [*ileo-* + *sigmoid* flexure + Gr. *stoma* mouth] surgical creation of an opening between the ileum and the sigmoid colon; also, the opening so established.

ileostomy (il'e-os'to-me) [*ileo-* + Gr. *stoma* mouth] surgical creation of an opening into the ileum, usually by establishing an ileal stoma on the abdominal wall.

ileotomy (il'e-ot'o-me) [*ileo-* + Gr. *temnein* to cut] incision of the ileum.

ileotransversostomy (il'e-o-trans'vers-os'to-me) surgical creation of an opening between the ileum and the transverse colon.

Iletin (il'ē-tin) trademark for a preparation of insulin for injection. **Lente I.**, trademark for a preparation of insulin zinc suspension; see under *suspension*. **NPH I.**, trademark for a preparation of insulin isophane suspension; see under *suspension*. **Semilente I.**, trademark for a preparation of prompt-acting insulin zinc suspension; see under *suspension*. **Ultralente I.**, trademark for a preparation of extended-action zinc insulin suspension; see under *suspension*.

ileum (il'e-um) [L.] [NA] the distal portion of the small intestine, extending from the jejunum to the cecum; called also *intestinum ileum*. **duplex i.**, congenital duplication of the ileum.

ileus (il'e-us) [L.; Gr. *eileos*, from *eilein* to roll up] obstruction of the intestines. **adynamic i.**, ileus resulting from inhibition of bowel motility, which may be produced by numerous causes, most frequently by peritonitis. **dynamic i.**, **hyperdynamic i.**, spastic i. **mechanical i.**, ileus due to mechanical causes, such as hernia, adhesions, volvulus, etc. **meconium i.**, ileus in the newborn due to blocking of the bowel with thick meconium; a manifestation of fibrocystic disease (mucoviscidosis). **occlusive i.**, mechanical i. **paralytic i.**, **i. paralyticus**, adynamic i. **spastic i.**, ileus due to persistent contracture of a bowel segment; see *Ogilvie's syndrome*, under *syndrome*. **i. subpar'ta**, ileus due to pressure of the gravid uterus on the pelvic colon.

Ilex (i'leks) a genus of aquifoliaceous shrubs and tree, including the hollies. *I. verticillata*. (L.) Gray (*Prinos verticillatus*), the black alder, or winterberry, has a tonic and astringent bark.

ilia (il'e-ah) plural of *ilium*.

iliac (il'e-ak) [L. *iliacus*] pertaining to the ilium.

iliadelphus (il'e-ah-del'fus) iliopagus.

ilicin (il'i-sin) a bitter antiperiodic compound derived from holly, *Ilex aquifolium*.

Ildar (il'i-dar) trademark for a preparation of azapetine phosphate.

ilio- (il'e-o) [L. *ilium*] a combining form denoting relationship to the ilium or flank.

iliococcygeal (il'e-o-kok-sij'e-al) pertaining to the ilium and coccyx.

iliocolotomy (il'e-o-ko-lot'o-me) surgical incision of the colon in the iliac region.

iliocostal (il'e-o-kos'tal) [*ilio-* + L. *costa* rib] connecting or pertaining to the ilium and ribs.

iliofemoral (il'e-o-fem'or-al) pertaining to the ilium and femur.

iliofemoroplasty (il'e-o-fem'or-o-plas'te) operative fusion of a tuberculous hip joint by splitting the great trochanter from the shaft of the femur and inserting into the fissure a flap of bone bent down from the lateral surface of the ilium.

iliohypogastric (il'e-o-hi'po-gas'trik) pertaining to the ilium and hypogastrium.

ilioinguinal (il'e-o-in'gwi-nal) pertaining to the iliac and inguinal regions.

iliolumbar (il'e-o-lum'ber) pertaining to the iliac and lumbar regions, or to the flank and loin.

iliolumbocostoadominal (il'e-o-lum'bo-kos'to-ab-dom'i-nal) pertaining to the iliac, lumbar, costal, and abdominal regions.

iliometer (il'e-om'ē-ter) [*iliac* spines + Gr. *metron* measure] an instrument for determining the relative heights of the iliac spines and their relative distance from the center of the spinal column.

iliopagus (il'e-op'ah-gus) [*ilio-* + Gr. *pagos* thing fixed] symmetrical conjoined twins united in the iliac region.

iliopectineal (il'e-o-pek-tin'e-al) pertaining to the ilium and pubes.

iliopelvic (il'e-o-pel'vik) pertaining to the iliac region or muscle and to the pelvis.

iliopsoas (il'e-o-so'as) see *Table of Musculi*.

iliopubic (il'e-o-pu'bik) iliopectineal.

iliosacral (il'e-o-sa'kral) pertaining to the ilium and the sacrum.

iliosciatic (il'e-o-si-at'ik) pertaining to the ilium and the ischium.

iliospinal (il'e-o-spi'nal) pertaining to the ilium and the spinal column.

iliothoracopagus (il'e-o-tho'rah-kop'ah-gus) [*ilium* + Gr. *thōrax* chest + *pagos* thing fixed] symmetrical conjoined twins fused from the pelvis to the thorax.

iliotibial (il'e-o-tib'e-al) pertaining to or extending between the ilium and tibia.

iliotrochanteric (il'e-o-tro-kan-ter'ik) pertaining to the ilium and a trochanter.

ilioxiphopagus (il'e-o-zi-fop'ah-gus) symmetrical conjoined twins fused from the pelvis to the xiphoid process.

ilium (il'e-um), pl. *ilia* [L.] the expansive superior portion of the hip bone (os coxae); it is a separate bone in early life. See illustration accompanying *skeleton*. Called also *os ilium* [NA].

ill (il) 1. not well; sick. 2. a disease or disorder. **föhn i.**, the headache, weariness, and depression reported to be felt when the föhn (a special wind from the south in Central Europe) blows. **joint i.**, navel i. **leg i.**, foot rot; see under *rot*. **loup'ing i.**, encephalomyelitis primarily affecting sheep in Great Britain and Ireland, caused by a virus which is transmitted by the tick, *Ixodes ricinus*. **navel i.**, generalized septicemia affecting foals, lambs, and calves, usually characterized by omphalophlebitis and

the formation of abscesses in the joints resulting in polyarthritis; it is due to infection through the open navel by various organisms, including species of *Staphylococcus*, *Streptococcus*, *Shigella*, *Escherichia*, and *Pasteurella*, and has a high mortality rate. Called also *joint i.* **quarter i.**, blackleg. **thorster i.**, gid.

illacrimation (il'ak-ri-ma'shun) epiphora.

illaqueation (il'ak-we-a'shun) [L. *illaqueare* to ensnare] the cure of an ingrowing eyelash by drawing it out with a loop.

Illicium (il-is'e-um) [L.] a genus of magnoliaceous trees and shrubs whose fruit, Chinese anise, is the source of anise oil. The leaves of *I. religiosum*, or sikimi, are the source of sikimin.

illinition (il-i-nish'un) [L. *illinitre* to smear] the application of an ointment or liniment with rubbing.

illinium (il-lin'e-um) [University of Illinois] former name of the element *promethium*.

illness (il'ness) a condition marked by pronounced deviation from the normal healthy state; sickness. **compressed-air i.**, decompression sickness. **emotional i.**, mental disorder. **functional i.**, a disorder having no clearly defined physical cause or structural change, i.e., having no detectable organic basis; called also *functional disorder*. **high-altitude i.**, see under *sickness*. **manic-depressive i.**, see under *psychosis*. **mental i.**, see under *disorder*. **psychosomatic i.**, an illness in which the manifestations are mainly physical with at least a partial emotional basis; see also *psychophysiological disorder*, under *disorder*. **radiation i.**, see under *sickness*.

illumination (i-lu'mi-na'shun) [L. *illuminatio*] the lighting up of a part, cavity, organ, or object for inspection. The degree of illumination at any point of a surface is the density of the luminous flux at that point. **axial i.**, the transmission or reflection of light along the axis of a microscope. **central i.**, axial i. **contact i.**, illumination of the eye by means of an instrument which is pressed directly to the cornea and conjunctiva. **critical i.**, the focusing of light precisely upon an object inspected. **darkfield i.**, **dark-ground i.**, the throwing of peripheral rays of light upon a microscopical object from the side, the center rays being blocked out; the object appears bright upon a dark background. See under *microscope*, and see *ultramicroscope*. **direct i.**, the throwing of light upon a microscopical object from above or from the direction of observation. **focal i.**, the throwing of light upon the focus of a lens or mirror. **Köhler i.**, an improved method of illumination by adjustment of the substage Abbe condenser, for obtaining the best image detail in microscopical work. **lateral i.**, **oblique i.**, illumination in which the object is illuminated by oblique light. **through i.**, the transmission of light through an object, or from the direction opposite to that of observation.

illuminator (i-lu'mi-na'tor) the source of light for viewing an object. **Abbe's i.**, see under *condenser*.

illuminism (i-lu'min-izm) a state marked by delusions of communication with supernatural beings.

illusion (i-lu'zhun) [L. *illusio*] a false or misinterpreted sensory impression; a false interpretation of a real sensory image. Cf. *delusion*. **Kuhnt's i.**, similar intervals seem smaller in the temporal field than in the nasal field of a single eye. **passive i.**, an illusion determined by the nature of the sense organs and the environment, as double vision of a single object.

illusional (i-lu'zhun-al) pertaining to or characterized by illusions.

illutiation (il'u-ta'shun) [L. *in in* + *lutum* mud] treatment by mud baths.

Ilopan (il'o-pan) trademark for a preparation of dexpanthenol.

Ilosone (il'o-sōn) trademark for a preparation of erythromycin estolate.

lotycin (i'lo-ti'sin) trademark for preparations of erythromycin.

Ilozyme (il'o-zīm) trademark for a preparation of pancrelipase.

I.M. intramuscularly (by intramuscular injection).

im- 1. a prefix, replacing *in-* before words beginning with *b*, *m*, *p*. 2. a prefix in chemical names indicating the bivalent group >NH.

I.M.A. Industrial Medical Association.

ima (i'mah) [L.] lowest.

imafen hydrochloride (im'ah-fen) chemical name: 2,3,5,6-tetrahydro-5-phenyl-1*H*-imidazo[1,2-*a*]imidazole monohydrochloride; an antidepressant, C₁₁H₁₃N₃·HCl.

image (im'ij) [L. *imago*] a picture or conception with more or less likeness to an objective reality. See also *imaging*. **accidental i.**, after-image. **acoustic i.**, a concept corresponding to something heard. **auditory i.**, acoustic i. **body i.**, a three-dimensional concept of one's self, recorded in the cortex by the perception of ever-changing postures of the body, and constantly changing with them. **direct i.**, **erect i.**, virtual i. **eidetic i.**, an unusually vivid, elaborate, and exact mental image formed in response to a visual stimulus, which may be part of a fantasy or a memory. **false i.**, the one formed by the deviating eye in strabismus. **heteronymous i.**, the two images seen when the eyes are focused on a point beyond the object.

homonymous i., the two images seen when the eyes are focused on a point nearer than the object. **incidental i.**, the impression of an image which remains on the retina after the object has been removed. **inverted i.**, real i. **memory i.**, a sensation or sense perception as it is pictured in the memory. **mental i.**, any concept corresponding to an object appreciated by the senses. **mirror i.**, 1. the image of light made visible by the reflecting surface of the cornea and lens when illuminated through the slit lamp. 2. an identical reproduction of an object except for transposition of right and left relations, as appears in the reflection of an object in a mirror. **motor i.**, the organized cerebral model of the possible movements of the body. **negative i.**, after-image. **ocular i.**, visual i. **optical i.**, one formed by the reflection of refraction of rays of light. **Purkinje's, Purkinje-Sanson mirror i's**, reflected images formed on the anterior surface of the cornea and the anterior and posterior surfaces of the crystalline lens. The images on the two anterior surfaces are virtual and noninverted, and the image on the posterior surface is real and inverted. Useful in the study of the movement of the lens surfaces in accommodation and, formerly, in the evaluation of cataract. **radioisotope i.**, a quasi-pictorial representation of the distribution of radioactive materials in the body. **real i.**, one formed where the emanating rays are collected, in which the object is pictured as being inverted. **retinal i.**, the representation formed upon the retina of an object seen. **Sanson's i's**, Purkinje's. **sensory i.**, a representation formed by means of one or more of the sense organs. **specular i.**, mirror i., def. 1. **tactile i.**, a mental concept corresponding to an object perceived by the sense of touch. **virtual i.**, a picture from projected light rays that are intercepted before focusing, as by a plane mirror. **visual i.**, a mental concept corresponding to an object perceived by the sense of sight.

imagines (i-maj'f-néz) [L.] plural of *imago*.

imaging (im'ah-jing) the production of clarity, contrast, and detail in images, especially in radiological and ultrasound images. **electrostatic i.**, a method of visualizing deep structures of the body, in which an electron beam, rather than x-rays, is passed through the patient and the emerging beam (unabsorbed electrons) strikes an electrostatically charged vacuum-packed plate, dissipating the charge according to the strength of the beam. A record (e.g., a film) is then made from the plate.

imago (i-ma'go), pl. *imagoes*, or *imagines* [L.] 1. the final or adult stage of an insect. Cf. *larva*, *pupa*. 2. in psychoanalysis, a childhood memory or fantasy of a loved person that remains in adult life.

imagocide (i-ma'go-sid) [*imago* + L. *caedere* to kill] an agent that destroys adult insects, especially adult mosquitoes.

imapunga (im-ah-pung'ah) a disease occurring to a limited extent among African cattle; closely related in pathology to African horse sickness.

imbalance (im-bal'ans) lack of balance, especially lack of balance between muscles, as in weakness of ocular muscles. **autonomic i.**, autonomic ataxia; any disturbance of the autonomic nervous system. **sympathetic i.**, vagotonia. **vasomotor i.**, autonomic i.

imbecile (im'bē-sil) 1. defective mentally. 2. a former name for a mentally retarded person of the second lowest order, i.e., having an IQ of 25 to 49. See *mental retardation*, under *retardation*. Cf. *idiot* and *moron*. **moral i.**, one affected with moral imbecility; previously called *amoralis*.

imbecility (im'bē-sil'i-te) [L. *imbecillitas*] mental retardation; a former category of mental retardation comprising individuals having an IQ of 25 to 49. See *mental retardation*, under *retardation*. Cf. *idiocy* and *moronity*. **moral i.**, moral insanity in which the moral sense is stunted; previously called *amoralia*. **phenylpyruvic i.**, phenylketonuria.

imbed (im-bed') embed; see *embedding*.

imbibition (im'bī-bish'un) [L. *imbibere* to drink] 1. the absorption of a liquid. 2. insudation. **hemoglobin i.**, absorption by the tissue of free hemoglobin.

imbricated (im'bri-kāt'ed) [L. *imbricatus*; *imbrex* tile] overlapping like tiles or shingles.

imbrication (im'bri-ka'shun) the overlapping of apposing surfaces, like shingles on a roof.

IMD₅₀ the immunizing dose of vaccine or antigen sufficient to protect 50% of the animals in a particular test group.

Imhoff tank (im'hof) [Karl Imhoff; German sanitarian, born 1876] digestion tank; see under *tank*.

Imhotep (im'ho-tep) (c. 2600 B.C.) an Egyptian physician of the third dynasty (founded by Zoser) who was later worshipped as a healing god. He is the first physician whose name is known.

imidamine (im'id-am'in) antazoline.

imidazole (im'id-az'ol) a base,

found combined with alanine in histidine.

imidazolethylamine (im'id-az'o-lil-eth'il-am'in) histamine.

imide (im'id) any compound containing the bivalent group, >NH, to which are attached only acid radicals.

imido- (i-me'do) a prefix denoting the presence in a compound of the bivalent group >NH attached to two acid radicals.

imidocarb hydrochloride (i-mid'o-karb) chemical name: *N,N'*-bis[3-(4,5-dihydro-1*H*-imidazol-2-yl)phenyl] urea dihydrochloride; an antiprotozoal effective against *Babesia*, $C_{18}H_{20}N_6 \cdot O \cdot 2HCl$.

imidogen (i-me'do-jen) the bivalent radical >NH.

iminazole (im'in-az'öl) imidazole.

imino- (i-me'no) a prefix used to denote the presence of the bivalent group >NH attached to nonacid radicals.

iminoglycinuria (i-me'no-gli'sin-u're-ah) a benign hereditary disorder of renal tubular reabsorption of glycine and imino acids (proline and hydroxyproline), marked by excessive levels of all three substances in the urine.

iminourea (i-me'no-u-re'ah) guanidine.

imipramine hydrochloride (i-mip'rah-mën) [USP] chemical name: 10,11-dihydro-*N,N*-dimethyl-5*H*-dibenz[*b,f*]azepine-5-propanamine monohydrochloride. A tricyclic antidepressant, $C_{19}H_{24}N_2 \cdot HCl$, occurring as a white to off-white, crystalline powder; used especially in the treatment of endogenous depression and in childhood enuresis, administered orally.

Imlach's fat plug (im'laks) [Francis Imlach, Scottish physician, 1819-1891] see under *plug*.

immature (im'ah-tür') [L. *in* not + *maturus* mature] unripe or not fully developed.

immediate (i-me'de-it) [L. *in* not + *mediatus* mediate] direct; with nothing intervening; occurring without delay.

immedicable (i-med'i-kah-b'l) [L. *immedicabilis*] beyond the hope of cure.

immersion (i-mer'shun) [L. *immersio*] 1. the placing or plunging of a body into a liquid. 2. the use of the microscope with the object and object glass both covered with a liquid. **homogeneous i.**, the employment in microscopy of a liquid of nearly the same refractive power as the cover glass. **oil i.**, the covering of the microscopical objective and the object with oil. **water i.**, the covering of the microscopical objective and the object with water.

immiscible (i-mis'i-b'l) not susceptible to being mixed.

immobility (im'mo-bil'i-te) 1. the state of being immovable. 2. chronic hydrocephalus of cattle.

immobilization (im-mo'bil-i-za'shun) the act of rendering immovable, as by a cast or splint.

immobilize (im-mo'bil-iz) [L. *in* not + *mobilis* movable] to render incapable of being moved, as by a cast or splint.

Immu-G (im'u-je) trademark for a preparation of immune globulin.

immune (i-mün') [L. *immunus* free, exempt] 1. being highly resistant to a disease because of the formation of humoral antibodies or the development of cellular immunity, or both, or as a result of some other mechanism, as interferon activity in viral infections. 2. characterized by the development of humoral antibodies or cellular immunity, or both, following antigenic challenge. 3. produced in response to antigenic challenge, as immune serum globulin. 4. an immune individual.

immunifacient (i-mu'ni-fa'shent) producing immunity; said of diseases, such as diphtheria and typhoid, which for a time after infection produce immunity against themselves.

immunification (i-mu'ni-fak'shun) immunization.

immunisin (i-mu'ni-zin) antibody.

immunity (i-mu'ni-te) [L. *immunitas*] 1. the condition of being immune; security against a particular disease; nonsusceptibility to the invasive or pathogenic effects of foreign microorganisms or to the toxic effect of antigenic substances. Called also *functional* or *protective i.* See also *active i.*, *nonspecific i.*, and *passive i.* 2. heightened responsiveness to antigenic challenge that leads to more rapid binding or elimination of antigen than in the nonimmune state; it includes both humoral and cell-mediated immunity. 3. the capacity to distinguish foreign material from self, and to neutralize, eliminate, or metabolize that which is foreign by the physiologic mechanisms of the immune response. **acquired i.**, specific immunity attributable to the presence of antibody and to a heightened reactivity of antibody-forming cells, specifically immune lymphoid cells (responsible for cell-mediated immunity), and of phagocytic cells, following prior exposure to an infectious agent or its antigens, or passive transfer of antibody or immune lymphoid cells; called also *adaptive i.* **active i.**, acquired immunity attributable to the presence of antibody or of immune lymphoid cells formed in response to antigenic stimulus. **actual i.**, active i. **adoptive i.**, passive immunity of the cell-mediated type conferred by the administration of sensitized lymphocytes from an immune donor. **antibacterial i.**, immunity against the action of bacteria, i.e., the ability to resist infection by bacteria. **antiblastic i.**, immunity due to forces antagonistic to the growth of the microorganism in the body of the

host organism. **antitoxic i.**, immunity against toxins, attributable to the presence of specific antitoxin(s) in the immune individual. **antiviral i.**, immunity against viruses. **artificial i.**, acquired (active or passive) immunity produced by deliberate exposure to an antigen, as in vaccination. **athreptic i.**, an obsolete concept attributing immunity to exhaustion of bacterial foodstuffs from the growth medium. **bacteriolytic i.**, antibacterial immunity attributable to the lytic action of sera. **cell-mediated i.**, **cellular i.**, specific acquired immunity in which the role of small lymphocytes of thymic origin (T-lymphocytes) is predominant; it is responsible for resistance to infectious diseases caused by certain bacteria, fungi, and viruses, certain aspects of resistance to cancer, delayed hypersensitivity reactions, certain autoimmune diseases, and allograft rejection, and plays a role in certain allergies. **community i.**, herd i. **congenital i.**, the immunity which an individual possesses at birth. **cross i.**, immunity produced by inoculation with an agent (e.g., a bacterium or virus) that is different from, but closely related to, the agent causing the disease. **familial i.**, genetic i. **genetic i.**, innate i. **herd i.**, the resistance of a group to attack by a disease because of the immunity of a large proportion of the members and the consequent lessening of the likelihood of an affected individual coming into contact with a susceptible individual. **humoral i.**, acquired immunity in which the role of circulating antibodies (immunoglobulins) is predominant; these antibodies are products of B-lymphocytes and plasma cells. **infection i.**, resistance to infection by reason of an already existing infection by the same or an antigenically related microorganism. **inherent i.**, innate i. **inherited i.**, innate i. **innate i.**, immunity based on the genetic constitution of the individual; natural immunity. Called also *genetic i.*, *inherent i.*, and *inherited i.* **intrauterine i.**, passive immunity acquired by the fetus as a consequence of the passage of maternal IgG antibodies from an immune mother through the placenta into the fetal circulation. **local i.**, immunity manifested predominantly in a restricted anatomical region or type of tissue; antibodies of the class termed secretory or exocrine IgA account for many manifestations of local immunity. **maternal i.**, passively transferred humoral immunity from the mother to the offspring, across the placenta before birth in primates, from the colostrum in ungulates via the intestines, and from the egg yolk in birds. **maturation i.**, increase in resistance to disease that comes with development to maturity. **mixed i.**, passive immunity succeeded by active immunity as a consequence of serovaccination. **native i.**, nonspecific immunity due to the genetic endowment of the host. **natural i.**, the capacity of the normal (not specifically immunized) animal to respond immunologically; immunity inherited or acquired passively *in utero* or through the maternal milk, or acquired actively by clinical or subclinical infection. **nonspecific i.**, immunity arising from the sum of immune responses that do not involve antigenic stimulation of antibody formation or cell-mediated immunity; it includes lysozyme and interferon activity, phagocytosis, the inflammatory response, and chemical and physical barriers to infection. **nutritional i.**, immunity postulated to result from the withholding by host cells of an essential nutrient (e.g., iron) from invading pathogens. **opsonic i.**, immunity due to the presence of opsonins. **passive i.**, acquired immunity produced by the administration of preformed antibody or specifically sensitized lymphoid cells. **phagocytic i.**, immunity attributable to the activity of phagocytes in the engulfment and destruction of the agents producing disease. **placental i.**, intrauterine i. **postnecrotic i.**, immunity to tumor development following regression of a previously existing tumor. **preemptive i.**, interference phenomenon, def. 2. **Profeta's i.**, the alleged immunity against syphilitic infection possessed by some children of syphilitic parents. **racial i.**, genetically determined resistance that all or most of the members of a race manifest toward a certain infection. **residual i.**, immunity which remains for varying periods after the complete disappearance of the infection. **species i.**, resistance of members of a particular species to a disease; immunity enjoyed by members of a particular species and determined by their genetic constitution. **specific i.**, immunity against a particular disease, e.g., scarlet fever, or against a particular antigen. **sterile i.**, that in which the immune response results in complete removal of the infectious agent from the host, or in removal to the point that the agent is no longer detectable in the host. **tissue i.**, local i. **toxin-antitoxin i.**, an active antitoxic immunity produced by injecting subcutaneously a nearly neutral mixture of diphtheria toxin and antitoxin.

immunization (im'u-ni-za'shun) the process of rendering a subject immune, or of becoming immune. **active i.**, stimulation with a specific antigen to induce an immune response. **collateral i.**, inoculation with an organism other than the one causing an existing infection. **isopathic i.**, active i. **occult i.**, immunization produced in some unknown, spontaneous way. **passive i.**, the conferral of specific immune reactivity on previously nonimmune individuals by the administration of sensitized lymphoid cells or serum from immune individuals. **Rh i.**, **rhesus i.**, see under *sensitization*. **side-to-side i.**, an immunization method in which the antigen is injected into one side of the body and the corresponding antibody into the other side.

immunizator (im''u-ni-za'tor) that which renders immune.

immunize (im''u-nīz) to render immune.

immunoabsorbent (im''u-no-sor'bent) immunosorbent.

immunoadjuvant (im''u-no-aj'č-vent) a nonspecific stimulator of the immune response, e.g., BCG vaccine or Freund's complete and incomplete adjuvants.

immunoabsorbent (im''u-no-ad-sor'bent) a preparation of antigen attached to an insoluble support, or antigen in an insoluble form, which adsorbs homologous antibodies from a serum sample or other immunoglobulin mixture. Specific antibody may later be collected by elution from the immunoabsorbent material.

immunoassay (im''u-no-as'sa) quantitative determination of antigenic substances (e.g., hormones, drugs, vitamins, etc.) by serological means, as by immunofluorescent techniques, radioimmunoassay, etc.

immunobiology (im''u-no-bi-ol'o-je) that branch of biology dealing with immunologic effects on such phenomena as infectious disease, growth and development, recognition phenomena, hypersensitivity, heredity, aging, cancer, and transplantation.

immunoblast (im''u-no-blast') lymphoblast.

immunoblastic (im''u-no-blas'tik) pertaining to or involving the stem cells (immunoblasts) of lymphoid tissue.

immunocatalysis (im''u-no-kah-tal'i-sis) the concept that enzyme substrate and specifically inhibitive reaction products have their respective counterparts in antigen, their antibody precursors, and specific antibodies.

immunochemistry (im''u-no-kem'is-tre) that branch of biological science concerned with the physical chemical basis of immune phenomena and their interactions.

immunochemotherapy (im''u-no-ke'mo-ther'ah-pe) a combination of immunotherapy and chemotherapy.

immunocompetence (im''u-no-kom'pě-tens) the ability or capacity to develop an immune response (i.e., antibody production and/or cell-mediated immunity) following exposure to antigen; called also *immunologic competence*.

immunocompetent (im''u-no-kom'pě-tent) exhibiting immunocompetence.

immunocomplex (im''u-no-kom'pleks) antibody combined with its specific antigen; deposition of immune complexes that fix complement in tissues may lead to inflammation and tissue injury, as in immune complex glomerulonephritis.

immunocompromised (im''u-no-kom'pro-mizd) having the immune response attenuated by administration of immunosuppressive drugs, by irradiation, by malnutrition, and by some disease processes (e.g., cancer).

immunoconglutinin (im''u-no-kon-gloo'tin) antibody formed against complement components that are part of an antigen-antibody complex, especially C3.

immunocyte (im''u-no-sit') a cell of the lymphoid series which can react with antigen to produce antibody or to become active in cell-mediated immunity or delayed hypersensitivity reactions; called also *immunologically competent cell*.

immunocytoadherence (im''u-no-si'to-ad-hēr'ens) the aggregation of red cells to form rosettes around lymphocytes with surface immunoglobulins.

immunocytochemistry (im''u-no-si'to-kem'is-tre) immunochemistry applied to the study of intracellular activities.

immunodeficiency (im''u-no-dě-fish'en-se) a deficiency in immune response, either in that mediated by humoral antibody or in that mediated by immune lymphoid cells. **combined i.**, deficiency of lymphoid cells that mediate both humoral (B-lymphocytes) and cellular (T-lymphocytes) immunity. **common variable i.**, hypogammaglobulinemia of late onset marked by increased incidence of recurrent pyogenic infections especially pneumococcal pneumonia; cellular immune dysfunction occurs in some individuals. Called also *common variable hypogammaglobulinemia*. **severe combined i.**, see under *disease*.

immunodepression (im''u-no-dě-presh'un) immunosuppression.

immunodepressive (im''u-no-dě-pres'iv) immunosuppressive.

immunodermatology (im''u-no-der'mah-tol'o-je) the study of immunologic phenomena as they affect skin disorders and their treatment or prophylaxis.

immunodiagnosis (im''u-no-di'ag-no'sis) diagnosis based on blood serum reactions to antigens; serodiagnosis.

immunodiffusion (im''u-no-di-fu'zhun) the diffusion of antigen and antibody from separate reservoirs to form decreasing concentration gradients in hydrophilic gels.

immunodominance (im''u-no-dom'i-nans) the degree to which a subunit of an antigenic determinant is involved in binding or reacting with specific antibody.

immunodominant (im''u-no-dom'i-nant) denoting the subunits of the antigenic determinant group that most influence the specificity of the induced antibodies.

immuno-electrophoresis (i-mu''no-e-lek'tro-fo-re'sis) counterimmuno-electrophoresis. **counter i.**, counterimmuno-electrophoresis; see under *C*. **reverse i.**, a procedure identical to

counterimmuno-electrophoresis, with the positions of the antigen and antibody being interchanged. **rocket i.**, that in which antigen is electrophoresed from a well through a layer of agar gel containing antiserum; cone-shaped (rocket) areas of precipitate are formed by each antigen-antibody system in the antibody layer. **two-dimensional i.**, a technique for separation and semiquantitation of a mixture of antigens in which a solution of antigens in gel is separated in one direction on the basis of electrophoretic mobilities and then in a direction at right angles to the first by further electrophoresis into a sheet of agar containing antibodies.

immunoenhancement (im''mu-no-en-hans'ment) the process of increasing of the level of immune response by various specific and nonspecific means.

immunoferritin (im''u-no-fer'i-tin) an antibody labeled with ferritin; when combined with antigen, the antigenic determinant sites are visible under the electron microscope.

immunofiltration (im''u-no-fil-tra'shun) the extraction of antibodies in pure form by subjection of serum to insoluble specific antigen, the antigen then being removed from the antibody by treatment with soluble carriers. Called also *electrosyneresis*. **analytical i.**, a technique for revealing the presence of specific antigens in a solution contaminated with cross-reacting antigens; the cross-reacting antigens are "filtered" out by use of an antiserum reagent (heterologous) that contains antibodies against the cross-reacting antigens but not against the homologous specific antigens. **preparative i.**, an immunochemical technique for the isolation and characterization of cancer-distinctive proteins developed by G. I. Abelev; unwanted antigens are precipitated out or slowed down by antibodies during electrophoresis while the desired antigens continue to move at an uninterrupted rate. The antibodies used are those against normal constituents known by previous immunoanalysis to contaminate the solution of tumor proteins.

immunofluorescence (im''u-no-floo'o-res'ens) a method of determining the location of antigen (or antibody) in tissue by the pattern of fluorescence resulting when the tissue is exposed to the specific antibody (or antigen) labeled with a fluorochrome. **direct i.**, immunofluorescence. **indirect i.**, that in which two sets of antibodies are used, the first set being specific for the target protein and the second, which is labeled with a fluorescent chemical group, being specific for the first antibody.

immunogen (im''u-no-jen) any substance that is capable of eliciting an immune response, as opposed to a tolerogen.

immunogenetic (i-mu''no-jě-net'ik) pertaining to or concerned with the interrelations of immune reactions and genetic constitution, as in the study of blood groups or tissue antigens.

immunogenetics (im''u-no-jě-net'iks) [*immuno-* + *genetics*] originally, the study of genetic variation by immunological methods; now also includes the study of genetic factors that control the immune response of the individual and the transmission of those factors from generation to generation.

immunogenic (im''u-no-jen'ik) producing immunity; evoking an immune response.

immunogenicity (im''u-no-jě-nis'i-te) the property that endows a substance with the capacity to provoke an immune response, or the degree to which a substance possesses this property.

immunoglobulin (im''u-no-glob'u-lin) a protein of animal origin endowed with known antibody activity, synthesized by lymphocytes and plasma cells. Immunoglobulins function as specific antibodies and are responsible for the humoral aspects of immunity. They are found in the serum and in other body fluids and tissues, including the urine, spinal fluid, lymph nodes, spleen, etc. Molecularly, each immunoglobulin is made up of two light chains and two heavy chains, this basic four-chain unit being repeated in the higher molecular weight forms, as in the pentameric IgM molecule. There are five antigenically different kinds of heavy chains, which form the basis of the five classes of immunoglobulins (IgA, IgD, IgE, IgG, IgM; see Table on following page). In addition there are two types of light chains, designated κ and λ , which are common to all five classes, although an individual immunoglobulin molecule has either κ or λ chains, not both. Symbol Ig or γ . **exocrine i's**, secretory i's. **secretory i's**, IgA immunoglobulins in which two IgA molecules are linked by a polypeptide (secretory piece) and by a J chain; they are present in nonvascular fluids, as in intestinal secretions, saliva, bile, respiratory tract secretions, synovial fluid, etc. Called also *exocrine i's*.

immunoglobulinopathy (im''mu-no-glob'u-lin-op'ah-the) gammopathy.

immunohematology (i-mu''no-hem'ah-tol'o-je) that branch of hematology which studies antigen-antibody reactions and analogous phenomena as they relate to the pathogenesis and clinical manifestations of blood disorders.

immunoheterogeneity (im''u-no-het'er-o-jě-ne-i-te) the quality of being immunoheterogeneous.

immunoheterogeneous (im''u-no-het'er-o-je'ne-us) occurring in two or more immunoreactive forms.

immunohistochemical (im''u-no-his'to-kem'i-kal) denoting the application of antigen-antibody interactions to histochemical techniques, as in the use of immunofluorescence.

HUMAN IMMUNOGLOBULIN CLASSES: SOME PHYSICAL AND BIOLOGIC PROPERTIES

CLASS	MEAN SERUM CONCENTRATION (mg/100 ml)	MOLECULAR WEIGHT	S _{20,w}	MEAN SURVIVAL T/2 (days)	BIOLOGIC FUNCTION	HEAVY CHAIN DESIGNATION	NO. OF SUB- CLASSES
γG or IgG	1240	150,000	7	23	1. Fix complement 2. Cross placenta 3. Heterocytotropic antibody	γ	4
γA or IgA	280	170,000	7, 10, 14	6	1. Secretory antibody	α	2
γM or IgM	120	890,000	19	5	1. Fix complement 2. Efficient agglutination	μ	1
γD or IgD	3	150,000	7	2.8	1. Lymphocyte surface receptor	δ	2
γE or IgE	.03	196,000	8	1.5	1. Reaginic antibody 2. Homocytotropic antibody	ε	1

From Bellanti: Immunology.

immunohistofluorescence (im''u-no-his-to-floo''o-res'ens) histofluorescence accomplished by injection of antibody labeled with fluorochrome.

immunoincompetent (im''u-no-in-kom'pē-tent) lacking the ability or capacity to develop an immune response to antigenic challenge.

immunologic, immunological (im''u-no-loj'ik im''u-no-loj'-ē-kal) pertaining to immunology.

immunologist (im''u-nol'o-jist) a person who makes a special study of immunology.

immunology (im''u-nol'o-je) that branch of biomedical science concerned with the response of the organism to antigenic challenge, the recognition of self from not self, and all the biological (*in vivo*), serological (*in vitro*), and physical chemical aspects of immune phenomena.

immunomodulation (im''u-no-mod''u-la'shun) adjustment of the immune response to a desired level, as in immunopotentialization, immunosuppression, or induction of immunologic tolerance.

immunoparasitology (im''u-no-par''ah-si-tol'o-je) immunology as applied to the interaction of animal parasites and their hosts.

immunoparesis (im''u-no-pah-re'sis) inadequate immune response to an infectious agent.

immunopathogenesis (im''u-no-path''o-jen'ē-sis) a process in which the course of a disease is altered or affected by an immune response (either the cellular [T-cell] or humoral [B-cell] response) or by the products of an immune reaction, such as the antigen-antibody-complement complexes deposited in renal glomeruli.

immunopathologic (im''u-no-path''o-loj'ik) pertaining to immunopathology.

immunopathology (im''u-no-pah-thol'o-je) 1. that branch of biomedical science concerned with immune reactions associated with disease, whether the reactions be beneficial, without effect, or harmful. 2. the structural and functional manifestations associated with immune responses to disease.

immunophysiology (im''u-no-fiz''e-ol'o-je) the physiology of immunological processes.

immunopotency (im''u-no-po'ten-se) the immunogenic capacity of an individual antigenic determinant on an antigen molecule to initiate antibody synthesis.

immunopotentialization (im''u-no-po-ten'she-a'shun) 1. the restoration or enhancement of inefficient immune response mechanisms by administration of biologically active substances. 2. accentuation of the response to an immunogen, in a normal individual, by another substance, factor, or specific treatment.

immunopotentiator (im''u-no-po-ten'she-a-tor) an agent, e.g., a vaccine, that on injection induces a generalized immune response.

immunoprecipitation (im''u-no-pre-sip''i-ta'shun) precipitation resulting from interaction of specific antibody and antigen.

immunoproliferative (im''u-no-pro-lif'er-ah-tiv) characterized by the proliferation of lymphoid cells producing immunoglobulins, as in immunoproliferative disorders, including the gammopathies.

immunoprophylaxis (im''u-no-pro''fi-lak'sis) the prevention of disease by the use of vaccines or therapeutic antisera.

immunoprotein (im''u-no-pro'te-in) immunoglobulin.

immunoradiometric (im''u-no-ra''de-o-met'rik) denoting an immunoassay technique in which the substance to be measured combines directly with radioactively labeled antibody.

immunoradiometry (im''u-no-ra''de-om'ē-tre) the use of radiolabeled antibody (in the place of radiolabeled antigen) in radioimmunoassay techniques.

immunoreaction (i-mu''no-re-ak'shun) the reaction that takes place between an antigen and its antibody or between an antigen and an immunocyte sensitized to it.

immunoreactive (im''u-no-re-ak'tiv) exhibiting immunoreaction.

immunoregulation (im''u-no-reg''u-la'shun) the control of specific immune responses and interactions between B- and T-lymphocytes and macrophages.

immunoresponsiveness (im''u-no-re-spon'siv-ness) the capacity to react immunologically.

immunoselection (im''u-no-sē-lek'shun) the survival of certain cell lines attributable to their having the least surface antigenicity and thus the least susceptibility to antibody and/or immune lymphoid cells.

immunosenescence (im''u-no-sē-nes'ens) the weakening and atrophy of the immune system with advancing age.

immunosorbent (im''u-no-sor'bent) an insoluble support for antigen or antibody used to absorb homologous antibodies or antigens, respectively, from a mixture; the antibodies or antigens so removed may then be eluted in pure form. See also *absorption method*, under *method*. Called also *immunoabsorbent*.

immunostimulant (im''u-no-stim'u-lant) 1. stimulating an immune response. 2. an agent that stimulates the immune response.

immunostimulating (im''u-no-stim'u-la'ting) enhancing the immune response.

immunostimulation (im''u-no-stim'u-la'shun) stimulation of an immune response, e.g., by use of BCG vaccine.

immunosuppressant (im''u-no-su-pres-ant) immunosuppressive.

immunosuppression (im''u-no-su-presh'un) the prevention or diminution of the immune response, as by irradiation or by administration of antimetabolites, antilymphocyte serum, or specific antibody; called also *immunodepression*.

immunosuppressive (im''u-no-su-pres'iv) 1. pertaining to or inducing immunosuppression. 2. an agent that induces immunosuppression.

immunosurgery (i-mu''no-ser'jer-e) the employment of specific immune therapy in surgical practice.

immunosurveillance (im''u-no-ser-va'lens) a term used to denote the monitoring function of the immune system in recognizing and reacting against (i.e., rapidly destroying) newly developed aberrant cells arising by somatic mutation and containing new antigens, e.g., malignant cells; thought to be done by the cell-mediated portion of the immune system.

immunosympathectomy (im''u-no-sim''pah-thek'to-me) destruction of the sympathetic ganglia by intravenous injection into newborn animals of an antiserum to a protein essential to the life of sympathetic nerve cells.

immunotherapy (i-mu''no-ther'ah-pe) passive immunization of an individual by administration of preformed antibodies (serum or gamma globulin) actively produced in another individual; by

MOLECULAR STRUCTURE OF IMMUNOGLOBULINS

THE FIVE CLASSES

STRUCTURE OF IMMUNOGLOBULIN G & A SUBCLASSES

Schematic representation of the basic four polypeptide chain, monomeric unit structure of immunoglobulin molecules. Heavy (H) chains determine *class*. Those in IgG are gamma, in IgM are mu, in IgA are alpha, in IgD are delta, and in IgE are epsilon. The two *types* of light (L) chains (kappa and lambda) are shared in common by all five immunoglobulin classes, although only one *type* is present in any individual molecule. Both heavy and light chains have looped structures referred to as domains or regions. Heavy chains possess one variable (VH) (wherein the antigen-binding site resides) and three constant (CH1, CH2, CH3) regions, with the exception of IgM and IgE which contain one variable (VH) and four constant regions (CH1, CH2, CH3, CH4). Light chains contain one variable (VL) and one constant (CL) region each. The heavy and light chains are fastened together by disulfide bonds as well as noncovalent forces. The disulfide bonds differ in number at the *hinge* (inter H chain) region according to immunoglobulin subclass. Antigen-binding sites are located in the variable (amino-terminus) regions of each immunoglobulin monomer. IgM and dimeric or multimeric IgA molecules have J chains which are associated with the ability of these molecules to form polymers. Secretory IgA contains a secretory piece made by epithelial cells and believed to protect the molecule from enzymatic cleavage in the hinge region. Serum IgA2 has no heavy to light chain disulfide bonds, whereas IgA1 has a classic structure.

extension, the term has come to include the use of immunopotentiators, replacement of immunocompetent lymphoid tissue (e.g., bone marrow or thymus), etc.

immunotoxin (im'u-no-tok'sin) any antitoxin.

immunotransfusion (i-mu'no-trans-fu'zhun) transfusion of blood from donors previously immunized by the bacteria infecting the patient, or from the specific infection or of blood from persons recently recovered from the specific infection.

immunotropic (im'u-no-trop'ik) tending to enhance immune response mechanisms.

immunoprotein (i-mūn-pro'te-in) immunoglobulin.

Imodium (i-mo'de-um) trademark for a preparation of loperamide hydrochloride.

IMPA incisal mandibular plane angle.

impact (im'pakt) [*L. impactus*] a sudden and forcible collision.

impacted (im-pakt'ed) [*L. impactus*] driven firmly in; closely or firmly lodged in position, as an impacted tooth.

impaction (im-pak'shun) [*L. impactio*] the condition of being firmly lodged or wedged. In obstetrics, the indentation of any fetal parts of one twin onto the surface of its co-twin, so that the simultaneous partial engagement of both twins is permitted. **ceruminal i.**, an accumulation of cerumen in the external auditory canal. **dental i.**, the condition in which a tooth is embedded in the alveolus so that its eruption is prevented, or is locked in position by bone, restoration, or surfaces of adjacent teeth, preventing either its normal occlusion or its routine removal. **fecal i.**, a collection of putty-like or hardened feces in the rectum or sigmoid.

impalpable (im-pal'pah-b'l) [*L. in not + palpare* to feel] impossible of being detected by touch; extremely fine, or small.

impaludation (im'pal-u-da'shun) the application of malariotherapy.

impar (im'par) [*L. "unequal"*] [*NA*] a general anatomical term meaning unpaired; having no fellow; azygous.

imparidigitate (im-par'i-dij'i-tāt) [*L. impar* unequal + *digitus* finger] perissodactylous.

impatency (im-pa'ten-se) the condition of being closed or obstructed.

impotent (im-pa'tent) not open; closed or obstructed.

impedance (im-pēd'ans) the opposition to the flow of an alternating current, which is the vector sum of ohmic resistance plus additional resistance, if any, due to induction, to capacity, or to both. Its symbol is *Z*. The resistance due to the inductive and condenser characteristics of a circuit is called reactance. In mechanics, the resistance to an applied force. **acoustic i.**, an expression of the opposition to passage of sound waves, being a function of the density and elasticity of a substance.

imperative (im-per'ah-tiv) [*L. imperativus*] dominant; not subject to control by the will.

impercption (im'per-sep'shun) defective power of perception.

imperforate (im-per'fo-rāt) [*L. imperforatus*] not open; abnormally closed, as imperforate anus.

imperforation (im-per'fo-ra'shun) the state of being abnormally closed.

imperialine (im-pe're-al-in) a crystalline alkaloid, $C_{27}H_{43}NO_3$, from the bulbs of the liliaceous plant *Fritillaria imperialis*.

imperious (im-per'e-us) overruling or compulsive; said of acts or motions that are not under control of the will.

impermeable (im-per'me-ah-b'l) [*L. in not + per* through + *meare* to move] not permitting passage, as of fluid.

impervious (im-per've-us) [*L. impervius*] impenetrable; not affording a passage.

impetiginization (im'pe-tij'i-ni-za'shun) the development of impetigo upon an area previously affected with some other skin disease.

impetiginous (im'pe-tij'i-nus) [*L. impetiginosus*] pertaining to or of the nature of impetigo.

impetigo (im'pē-ti'go) [*L.*] a streptococcal or staphylococcal infection of the skin characterized by fragile, grouped, pinhead-sized vesicles or pustules that become confluent and rupture early, forming rapidly enlarging and spreading erosions with bright yellow crusts that are attached in the center and have elevated margins. Called also *i. contagiosa*. **Bockhart's i.**, a superficial folliculitis, usually caused by *Staphylococcus aureus*, marked by the formation of small purulent pustules at the orifices of the pilosebaceous glands, and affecting especially the scalp and the extremities. Called also *superficial pustular perifolliculitis*. **i. bullo'sa, bullous i.**, a staphylococcal skin infection, occurring in infants and children, or rarely in sweaty flexures of adults, and characterized by rapid formation of fragile bullae up to 2 or 3 cm. in diameter, which break early and heal centrally, leaving crusted arcuate or annular erosions. Called also *i. contagiosa bullosa, i. neonatorum*, and *pemphigus neonatorum*. **chronic symmetric i.**, pityriasis alba. **i. circina'ta**, impetigo of bullous (staphylococcal) type, in which several lesions may become confluent or in which a large bulla ruptures, leaving circinate, raw, often crusted lesions. **i. contagio'sa, impetigo. i. contagio'sa**

bullo'sa, i. bullosa. i. herpetifor'mis, a very rare, acute, potentially fatal disorder affecting the skin and mucous membranes, characterized by groups of small, symmetrically ringed pustules that sometimes coalesce, associated with severe constitutional symptoms, including continuous and intermittent fever, chills, vomiting, diarrhea, and sometimes delirium; it is usually seen in women during the last trimester of pregnancy, but men and nonpregnant women have been affected. **i. neonato'rurum, i. bullosa. i. pityroi'des**, pityriasis alba. **i. sic'ca**, pityriasis alba. **staphylococcal i., staphylococcic i.**, bullous *i. i. vulga'ris, i. contagiosa*.

impf-malaria (impf'mah-la're-ah) [*Ger.*] malaria produced by injection of infectious material; see *induced malaria*, under *malaria*, and see *malariotherapy*.

impilation (im'pi-la'shun) rouleau formation; see under *formation*.

Implacentalia (im'plas-en-ta'le-ah) in former classifications, a division of the class Mammalia, comprising the mammals that do not have a placenta, such as the monotremes.

implant¹ (im-plant') to insert or to graft (as tissue, or an inert or radioactive material) into the intact tissues or a body cavity of the recipient.

implant² (im'plant) material (e.g., tissue, inert material, or radioactive material) inserted or grafted into the body. **dental i.**, an alloplastic material placed into or onto a jawbone to support a crown(s). **endometrial i's**, fragments of endometrial mucosa transferred through the oviducts and implanted on the uterus, ovaries, or pelvic peritoneum. **endo-osseous i.**, an artificial tooth of variable form inserted into the alveolar bone and protruding through the mucosa to provide support on which a restoration can be placed. **magnetic i.**, a tissue-tolerated, magnetized metal placed within the bone to aid in denture retention; a similar magnet is placed in the overlying denture to complete the field. **subperiosteal i.**, a metal appliance made to conform to the shape of a bone and placed on its surface beneath the periosteum, with lugs protruding through the mucosa to support an overlying denture.

implantation (im'plan-ta'shun) [*L. in into + plantare* to set] 1. attachment of the blastocyst to the epithelial lining of the uterus, its penetration through the epithelium, and, in humans, its embedding in the compact layer of the endometrium, occurring six or seven days after fertilization of the ovum. 2. the insertion of an organ or tissue, such as skin, nerve, or tendon, in a new site in the body. 3. the insertion or grafting into the body of biological, living, inert, or radioactive material. **central i.**, superficial *i. circumferential i.*, superficial *i. eccentric i.*, embedding of the blastocyst within a recess of the uterine cavity. **filigree i.**, the insertion of a network of silver or other metallic mesh in the abdominal wall for the purpose of closing a large hernial defect. **hypodermic i.**, the placing of a medicine in the subcutaneous tissue. **interstitial i.**, complete embedding of a blastocyst within the endometrium. **nerve i.**, the operation of inserting and attaching a nerve into the sheath of another nerve. **parenchymatous i.**, the introduction of therapeutic material into the substance of a tumor. **periosteal i.**, the operation of inserting a normal tendon into the periosteum of a bone at the insertion of a paralyzed tendon to take the place of the latter. **silk i.**, the operation of restoring a paralyzed tendon by implanting strands of sterile silk so that they will stimulate the formation of fascial sheaths along the line of the paralyzed tendon; called also *Lange's operation*. **superficial i.**, embedding of the blastocyst so that the blastocyst, and later the chorionic sac, comes to occupy the uterine cavity. **teratic i.**, the partial blending of an imperfect with a nearly perfect fetus.

implantodontics (im'plan-to-don'tiks) that branch of dentistry that deals with implanting alloplastic materials into or onto the jaw bones to support overlying dental appliances.

implantodontist (im'plan-to-don'tist) a dentist who specializes in implantodontics.

implantology (im'plan-tol'o-je) the science dealing with implants.

implosion (im-plo'zhun) in behavior therapy, a form of desensitization for the treatment of phobias and related disorders; the patient is repeatedly exposed, in imagination or real life, to emotionally distressing stimuli while the therapist makes verbal interpretation of the psychological meaning of the stimuli in order to intensify the patient's emotional arousal. Cf. *flooding* and *systematic desensitization*. The term *implosion* has also been used synonymously with *flooding*.

impotence (im'po-tens) [*L. in not + potentia* power] lack of power, chiefly of copulative power in the male due to failure to initiate an erection or to maintain an erection until ejaculation. It may be *atonic*, due to paralysis of the motor nerves (*nervi erigentes*) without evidence of lesion of the central nervous system; *paretic*, due to lesion in the central nervous system, particularly in the spinal cord; *psychic*, dependent on mental complex; *symp-tomatic*, due to some other disorder, such as injury to nerves in the perineal region, by virtue of which the sensory portion of the erection reflex arc is interrupted.

impotency (im'po-ten'se) impotence.

impotentia (im-'po-ten/'she-ah) [L. *impotentia*] 1. impotence. **i. coeun/di**, inability of the male to perform the sexual act. **i. erigen/di**, inability to have an erection of the penis. **i. generan/di**, inability to reproduce.

impregnate (im-preg/'nāt) [L. *impregnare*] 1. to render pregnant; to fertilize. 2. to saturate or charge with.

impregnation (im-'preg-na/'shun) [L. *impregnatio*] 1. the act of fecundation or of rendering pregnant. 2. the process or act of saturation; a saturated condition.

impressio (im-pres/'se-o), pl. *impressio'nes* [L.] an impression, indentation, or concavity; [NA] a general term for an indentation produced in the surface of one organ by pressure exerted by another. **i. cardi/aca hep/atis** [NA], cardiac impression of the liver: a depression on the superior part of the diaphragmatic surface of the liver, corresponding to the position of the heart. **i. cardi/aca pulmo/nis** [NA], cardiac impression of the lung: the indentation on the medial surface of either lung produced by the heart and pericardium. **i. col/ica hep/atis** [NA], colic impression of the liver: a variable concavity in the right lobe of the liver, where it is in contact with the right flexure of the colon. **impressio'nes digita'tae** [NA], digitate or digital impressions: poorly defined depressions on the inner surface of the cranium, corresponding to the gyri of the brain. **i. duode-na/les hep/atis** [NA], duodenal impression of the liver: a concavity on the right lobe of the liver where it is in contact with the descending part of the duodenum. **i. esopha/gea hep/atis** [NA], esophageal impression of the liver: a concavity on the left lobe of the liver corresponding to the position of the abdominal part of the esophagus; called also *i. oesophagea hepatis*. **i. gas/trica hep/atis** [NA], gastric impression of the liver: a large concavity in the left lobe of the liver where it is in contact with the anterior surface of the stomach. **i. gas/trica re/nis**, a concavity on the anterior surface of the left kidney where it is in contact with the stomach. **i. hepatica re/nis**, an impression on the anterior surface of the left kidney where it is in contact with the liver. **i. ligamen/ti costoclavicula'ris** [NA], impression of the costoclavicular ligament: the point on the inferior surface of the clavicle where the costoclavicular ligament is attached; called also *tuberositas costalis claviculae* and *costal tuberosity of clavicle*. **i. meningeal/ris**, see *foveolae granulares*. **i. muscula'ris re/nis**, a depression on the posterior surface of the kidney where it is in contact with the psoas muscle. **i. oesopha/gea hep/atis**, *i. esophagea hepatis*. **i. petro/sa pal/lii**, a shallow groove on the base of the brain corresponding to the superior angle of the petrous portion of the temporal bone. **i. rena/lis hep/atis** [NA], renal impression of the liver: the concavity on the right lobe of the liver where it is in contact with the right kidney. **i. suprarena/lis hep/atis** [NA], suprarenal impression of the liver: a small concavity on the right lobe of the liver, superior to the renal impression, caused by contact with the right suprarenal gland. **i. trigem/ini os/sis tempora'lis** [NA], trigeminal impression of the temporal bone: the shallow impression in the floor of the middle cranial fossa on the petrous part of the temporal bone, lodging the semilunar ganglion of the trigeminal nerve.

impression (im-pres'h/'un) [L. *impressio*] 1. a slight indentation or depression; see *impressio*. 2. a negative copy or counterpart of some object made by bringing into contact with the object, with varying degrees of pressure, some plastic material which later becomes solidified, as a dental impression. 3. an effect produced upon the mind, body, or senses by some external stimulus, or agent. **anatomic i.**, an impression of the form of a dental arch or portion thereof that records the structures in a passive or unstrained form, making possible a static relationship of a prosthesis produced from such an impression. **angular i. for gasserian ganglion**, impressio trigemini ossis temporalis. **basilar i.**, a developmental deformity of the occipital bone and upper end of the cervical spine, in which the latter appears to have pushed the floor of the occipital bone upward; called also *platybasia* and *basilar invagination*. **bridge i.**, an impression made for the purpose of constructing or assembling a fixed restoration, fixed partial denture, or bridge. **cardiac i.**, an impression made by the heart on another organ; see *impressio cardiaca hepatis* and *impressio cardiaca pulmonis*. **cardiac i. of liver**, impressio cardiaca hepatis. **cardiac i. of lung**, impressio cardiaca pulmonis. **cleft palate i.**, a negative mold made of a cleft palate, to facilitate construction of a prosthetic appliance. **colic i. of liver**, impressio colica hepatis. **complete denture i.**, 1. one made of the entire edentulous arch of the maxilla or mandible, for the purpose of construction of a complete denture. 2. a negative registration of the entire denture-bearing, stabilizing area of the maxilla or mandible. 3. a negative registration of the entire denture foundation and border seal areas of the edentulous mouth. **i. of costoclavicular ligament**, impressio ligamenti costoclavicularis. **deltoid i. of humerus**, tuberositas deltoidea humeri. **dental i.**, an impression of the jaw and/or teeth made in some plastic substance, such as plaster of Paris, special waxes, modeling compound, zinc oxide paste, reversible colloids, rubber, or alginate materials, which is later filled in with plaster of Paris to produce a facsimile of the oral structures present. **digastric i.**, fossa digastrica. **digital i's**, digitate i's, impressiones digitatae.

direct bone i., one made of the denuded jaw bone, for the purpose of constructing an implant denture. **duodenal i. of liver**, impressio duodenalis hepatis. **esophageal i. of liver**, impressio esophagea hepatis. **final i.**, one used for making the master cast for a dental prosthesis. **gastric i.**, an impression made by the stomach on another organ; see *impressio gastrica hepatis* and *impressio gastrica renis*. **gastric i. of liver**, impressio gastrica hepatis. **hydrocolloid i.**, a denture impression made of a hydrocolloid material. **lower i.**, mandibular i. **mandibular i.**, an impression of the mandibular jaw and related tissues and dental structures. **maxillary i.**, an impression of the maxillary jaw and related tissues and dental structures; called also *upper i.* **meningeal i.**, see *foveolae granulares*. **mercaptan i.**, a dental impression made of mercaptan (polysulfide), a rubber base elastic material. **partial denture i.**, one made of part or all of a partially edentulous arch for the purpose of constructing a partial denture. **preliminary i.**, **primary i.**, one which is made for the purpose of diagnosis or for the construction of a tray. **renal i. of liver**, impressio renalis hepatis. **rhomboid i. of clavicle**, impressio ligamenti costoclavicularis. **sectional i.**, a dental impression that is made in sections. **suprarenal i. of liver**, impressio suprarenalis hepatis. **trigeminal i. of temporal bone**, impressio trigemini ossis temporalis. **upper i.**, maxillary i.

impressionses (im-pres'h/'e-o'nēz) [L.] plural of *impressio*.

imprinting (im-'print-ing) a species-specific, rapid kind of learning during a critical period of early life in which social attachment and identification are established.

improcreant (im-pro/'kre-ant) unable to procreate; infertile.

impuber (im-pu/'ber-al) lacking pubic hairs; not yet having reached puberty.

impuberism (im-pu/'ber-izm) the condition of not having reached puberty.

impulse (im-'puls) 1. a sudden pushing force. 2. a sudden uncontrollable determination to act. 3. a nerve impulse. **apex i.**, **apical i.**, a cardiac impulse usually caused by left ventricular contraction and characterized by a relatively localized outward movement beginning synchronously with the first heart sound. **cardiac i.**, 1. the palpable or recorded movement of the chest wall caused by the heartbeat. 2. excitation wave; see under *wave*. **episternal i.**, an aortic impulse felt at the episternal (suprasternal) notch. **irresistible i.**, an urge to act that is impossible to resist; see also under *tests*. **left parasternal i's**, cardiac impulses categorized according to their location along the upper, mid, or lower left sternal border. An *upper left parasternal impulse* is usually caused by a systolic expansion of a dilated pulmonary artery; a *mid to lower left parasternal impulse* usually occurs as a result of a right ventricular contraction, and is characterized by an outward movement beginning synchronously with the first heart sound, but is sometimes caused by mitral incompetence. **nerve i.**, **neural i.**, the electrochemical process propagated along nerve fibers. **right parasternal i's**, cardiac impulses categorized according to their location along the upper, mid, or lower right sternal border.

impulsion (im-pul/'shun) an abnormal impulse to perform certain acts, usually of a disagreeable nature. **wandering i.**, fugue.

imu (e/'moo) a disorder endemic among the Ainu of Japan, marked by a mental state that renders the patient liable to attacks of psychomotor disorder precipitated by some emotional shock.

Imuran (im-'u-ran) trademark for a preparation of azathioprine.

IMViC, imvic a mnemonic indicating the tests used in classifying coliform bacteria, namely indole, methyl red, Voges-Proskauer, and citrate.

In chemical symbol for *indium*.

in- [L. *in*, into] 1. a prefix signifying in, within, or into. 2. an intensive prefix. 3. [L. *in* not] a negative or privative prefix.

I.N.A. International Neurological Association.

inacidity (in-'ah-sid/'i-te) an acidity.

inaction (in-ak/'shun) [L. *in* not + *actio* act] imperfect response to a normal stimulus.

inactivate (in-ak/'tī-vāt) to render inactive; to destroy the activity of.

inactivation (in-ak/'tī-va'shun) the destruction of biological activity, as of a virus, by the action of heat or other physical or chemical means. **i. of the complement**, the destruction of activity of the complement, usually produced by heating serum to 56° C. for 30 minutes. **heat i.**, the inactivation of C1 and C2 components of complement and of factor B of the alternative pathway by heating in a water bath to 56° C. for 20 minutes.

inactose (in-ak/'tōs) an optically inactive plant sugar.

inadequacy (in-ad/'ē-kwah-se) [L. *in* not + *adaequare* to make equal] inability to perform an allotted function; insufficiency; incompetence.

inagglutinable (in-ah-gloo/'tī-nah-b'l) not agglutinable.

inalimental (in-'al-i-men'tal) [L. *in* not + *alimentum* food] not nutritious; not serviceable as food.

inanimate (in-an'fī-māt) [L. *in* not + *animatus* alive] 1. without life. 2. lacking in animation.

inanition (in'ah-nish'un) [L. *inanis* empty] a condition characterized by marked weakness, extreme weight loss, and a decrease in metabolism resulting from prolonged (usually weeks to months) and severe insufficiency of food.

inappetence (in-ap'ē-tens) [L. *in* not + *appetere* to desire] lack of desire or appetite.

Inapsine (in-ap'sēn) trademark for a preparation of droperidol.

inarticulate (in'ar-tik'u-lāt) [L. *in* not + *articulatus* joined] not having joints; disjointed; not uttered like articulate speech.

in articulo mortis (in ar-tik'u-lo mor'tis) [L.] at the very point of death.

inassimilable (in'ah-sim'fī-lah-b'l) [L. *in* not + *assimilable*] not susceptible of being utilized as nutriment.

inaxon (in-ak'son) [Gr. *is*, *inos* fiber + *axōn* axis] a nerve cell whose axon breaks up into terminal filaments at a considerable distance from the cell. Cf. *dendraxon*.

inborn (in'born) congenitally formed or acquired during intrauterine life; see also *inborn error*, under *metabolism*.

inbreeding (in'brēd-ing) the mating of closely related individuals, or of individuals having closely similar genetic constitutions.

incallosal (in'kah-lo'sal) characterized by absence of the corpus callosum, and usually associated with mental retardation.

incandescent (in'kan-des'ent) [L. *incandescens* glowing] glowing with heat and light; emitting light on being heated.

incarcerated (in-kar'ser-āt'ed) [L. *incarceratus* imprisoned] imprisoned; constricted; subjected to incarceration.

incarceration (in-kar'ser-a'shun) [L. *in* in + *carcer* prison] unnatural retention or confinement of a part, as may occur in hernia.

incarnatio (in'kar-na'she-o) [L. *incarnare* to invest in flesh] ingrowth. **i. unguis**, unguis incarnatus; ingrowth of a toenail; ingrown toenail.

incarnative (in-kar'nah-tiv) [L. *incarnare* to invest in flesh] 1. promoting the formation of granulations. 2. an agent that promotes granulations.

incasement (in-kās'ment) the act of surrounding or state of being surrounded, as with a case. See *preformation*.

incendiarism (in-sen'de-ar-izm) a criminal tendency to set fires. Cf. *pyromania*.

incertae sedis (in-ser'te se'dis) [L.] of uncertain position; said of taxa that are of uncertain classification.

incest (in'sest) sexual intercourse or other sexual activity between persons so closely related that marriage between them is legally or culturally prohibited.

inch (inch) a unit of linear measure, one-twelfth of a foot, or one thirty-sixth of a yard, being the equivalent of 2.54 cm.

inchacao (in-chah-kah'o) [Brazilian] beriberi.

incidence (in'si-dens) [L. *incidere* (in + *cadere*, to occur, to happen) an expression of the rate at which a certain event occurs, as the number of new cases of a specific disease occurring during a certain period. Cf. *prevalence*.

incident (in'si-dent) [L. *incidens* falling upon] 1. falling or striking upon, as incident radiation. 2. (obs.) afferent.

incineration (in-sin'ē-ra'shun) [L. *in* into + *cineres* ashes] the act of burning to ashes; cremation.

incipient (in-sip'e-ent) beginning to exist; coming into existence.

incisal (in-si'zal) cutting.

incised (in-sizd') [L. *incisus*] cut; made by cutting.

incision (in-sizh'un) [L. *incidere* (in + *cadere*), to cut open, to cut through] 1. a cut, or a wound produced by cutting with a sharp instrument. 2. the act of cutting. **Auvray i.**, an incision for splenectomy: the usual incision is made along the outer border of the left rectus muscle up to the costal cartilages, and then extended upward and posteriorly over the lower ribs to the level of the eighth interspace. **Bar's i.** (obs.), an incision for cesarean section made in the midline of the abdomen above the umbilicus, the uterus being incised longitudinally. **Battle's i.**, **Battle-Jalaguier-Kammerer i.**, a procedure consisting of a vertical abdominal incision through the skin and superficial fascia, vertical division of the anterior layer of the rectal sheath, with retraction of the rectus muscle medialward, and vertical division of the posterior layer of the sheath nearer the median line, together with the subserous areolar tissue and peritoneum. **Bergmann's i.**, an incision for exposing the kidney, made from the outer border of the erector spinae at the level of the twelfth rib, toward the junction of the outer and middle third of Poupart's ligament. **Bevan's i.**, one for exposing the gallbladder; see illustration. **celiotomy i.**, an incision made through the abdominal wall to give access to the peritoneal cavity. **Chernez i.**, an abdominal incision in the surgical approach to the female reproductive organs. **confirmatory i.**, an incision into a tumor, an organ, or the peritoneal cavity, made for the purpose of confirming a diagnosis. **crucial i.**, a cross-shaped incision. **Deaver's i.** (for *appendicitis*), incision through the anterior

Various abdominal incisions.

sheath of the right rectus muscle, the muscle then being retracted medially. **Dührssen's i's**, incisions made in the cervix uteri to facilitate delivery; hysterostotomy. **Fergusson's i.**, an incision for excision of the upper jaw; it runs along the junction of the nose with the cheek, around the ala of the nose to the median line, and descends to bisect the upper lip. **Fowler's angular i.**, an incision for anterolateral abdominal section. **hockey stick i.**, one shaped like a hockey stick, often used for operation on the biliary tract; see also *Meyer's hockey stick i.* **Kehr's i.**, an abdominal incision for exposing a wide field; it extends from the xiphoid cartilage to the umbilicus in the median line, then around the umbilicus, and again vertically in a caudad direction, often to the pubis. **Kocher's i.**, an incision for exposure of the gallbladder, 10 cm. long, parallel with and 4 cm. below the right costal margin. **Küstner's i.**, a semilunar abdominal incision convex distalward, through the suprapubic fat, following one of the natural folds of the skin; the upper flap is detached from the aponeurosis of the external oblique, and then the upper incision is made parallel to the rectus muscle. **Langenbeck's i.**, an abdominal incision through the linea semilunaris parallel to the fibers of the rectus abdominis muscle; often done in operations on the spleen, colon, tail of pancreas, and occasionally the kidney. **lateral rectus i.**, see illustration. **Longuet's i.**, see under *operation*. **Maylard i.**, an abdominal incision in the surgical approach to the female reproductive organs. **McArthur's i.**, a vertical upper incision through the rectus muscle, with transverse division of the posterior sheath and peritoneum. **McBurney's i.**, an abdominal incision parallel to the fibers of the external oblique muscle, about one-third the distance along a line from the anterior superior iliac spine to the umbilicus, half the incision being above and the remainder below this point. The skin and subcutaneous fat are incised down to the external oblique, the fibers of which are split; the underlying internal oblique and transversus abdominis are then split and separated. **median i.**, one in the midline of the body; see illustration. **Meyer's hockey stick i.**, one for entering the lower abdomen through the anterior wall, partly by intramuscular separation, partly by transverse division of muscle, forming an incision shaped somewhat like a hockey stick. **Nagamatsu i.**, in renal surgery, an extrapleural retroperitoneal dorsolumbar approach to the kidney that provides an osteoplastic flap of the lower rib cage. **paramedian i.**, see illustration. **paravaginal i.**, incision of the vagina and perineum in order to secure enlargement of the vulvovaginal outlet, and thereby permit easy access to the vagina in cancer operations and, rarely, to facilitate childbirth; called also *Schuchardt's i.* and *vaginoperineotomy*. **Perthes' i.** (for exposure of the gallbladder), a vertical right rectus incision from ensiform to umbilicus, extending laterally at the lower end across the rectus to the costal margin. **Pfannenstiel's i.**, a curved abdominal incision, the convexity being directed downward, just above the symphysis, passing through skin, superficial fascia, and aponeurosis, exposing the pyramidalis and rectus muscles, which are separated from each other in the midline, the peritoneum then being opened vertically. See illustration. **relief i.**, one made to relieve tension in tissue. **Schuchardt's i.**, paravaginal i. **Vischer's lumboiliac i.**, sepa-

ration of the muscular and tendinous fibers of the abdominal muscles of the lumboiliac region, just above the center of the iliac crest, in their cleavage lines, without transverse division of the muscle fibers or injury to the abdominal nerves. **Warren's i.**, an incision following the thoracommammary fold, permitting access to any part of the breast. **Wilde's i.**, (*obs.*) exposure of the mastoid process by an incision behind the auricle, done for postauricular subperiosteal abscess in mastoiditis.

incisive (in-si'siv) [L. *incisivus*] 1. having the power or quality of cutting. 2. pertaining to the incisor teeth.

incislabial (in-si'zo-la-be-al) denoting the incisal and labial surfaces of an anterior tooth.

incislingual (in-si'zo-ling'gwahl) denoting the incisal and lingual surfaces of an anterior tooth.

incisoproximal (in-si'zo-prok'si-mal) denoting the incisal and proximal surfaces of an anterior tooth.

incisor (in-si'zer) [L. *incidere* to cut into] 1. adapted for cutting. 2. any of the four anterior teeth in either jaw; a tooth that is mesial to the canines. See under *tooth*. **central i.**, **first i.**, the two incisor teeth (see under *tooth*) in each jaw which are located closer to the midline of the body. **Hutchinson's i's**, see under *tooth*. **lateral i.**, the second incisor tooth on either side of the midline of either jaw, located distal to the central incisor and mesial to the canine. **medial i.**, **central i.** **second i.**, **lateral i.** **shovel-shaped i's**, large upper medial incisor teeth that are concave on the lingual side; called also *hawk-bill i's*. **winged i.**, a rotation deformity of a maxillary incisor tooth in which the distal edge of the tooth protrudes labially.

incisura (in-si-su'rah, pl. *incisurae* [L.]) a cut, notch, or incision; [NA] a general term for an indentation or depression, chiefly on the edge of a bone or other structure. Called also *incisure* and *notch*. **i. acetabuli** [NA], incisure of acetabulum: a notch in the inferior portion of the lunate surface of the acetabulum. **i. angulae/ris ventriculi** [NA], the lowest point on the lesser curvature of the stomach, marking the junction of the cranial two-thirds and caudal one-third of the stomach; called also *gastric notch*. **i. anterior auris** [NA], anterior incisure of the ear: a depression between the crus of the helix and the tragus; called also *auricular notch*. **i. apicis cordis** [NA], incisure of apex of the heart: a slight notch found at the site where the anterior and posterior interventricular sulci become continuous and cross the right margin of the heart. **i. cardiaca pulmo/nis sinis/tri** [NA], cardiac incisure of left lung: a notch in the anterior border of the left lung; called also *cardiac notch of left lung*. **i. cardiaca ventriculi** [NA], cardiac incisure of the stomach: a notch at the junction of the esophagus and the greater curvature of the stomach; called also *cardiac notch of stomach*. **incisurae cartilag/inis meat/us acus/tici** [NA], two vertical fissures in the anterior part of the cartilage of the external acoustic meatus; called also *Santorini's fissures*. **i. cerebel/li anterior**, a wide notch on the anterior surface of the cerebellum, occupied by the inferior colliculi and superior cerebellar peduncles; called also *anterior cerebellar notch*. **i. cerebel/li posterio/r**, a notch between the cerebellar hemispheres posteriorly, containing the falx cerebelli; called also *posterior cerebellar notch*. **i. clavicula/ris ster/ni** [NA], clavicular incisure of the sternum: an oval surface on each side of the cranial border of the manubrium of the sternum, where it articulates with the clavicle; called also *clavicular notch of sternum*. **incisurae costales ster/ni** [NA], costal incisures of the sternum: the facets on the sternum, seven on each lateral edge, for articulation with the costal cartilages; called also *costal notches of sternum*. **i. ethmoidalis os/sis fronta/lis** [NA], ethmoidal incisure of frontal bone: a space between the orbital parts of the frontal bone, in which the ethmoid bone is lodged; called also *ethmoid notch of frontal bone*. **i. fastig/ii**, a transverse furrow on the ventricular surface of the cerebellar lamina of the developing cerebellum. **i. fibula/ris tib/iae** [NA], fibular incisure of tibia: a depression on the lateral surface of the lower end of the tibia, which articulates with the lower end of the fibula; called also *fibular notch*. **i. fronta/lis** [NA], frontal incisure: a notch located in the supraorbital margin of the frontal bone medial to the supraorbital notch or foramen, for transmission of branches of the supraorbital nerve and vessels; frequently converted into a foramen (foramen frontalis) by a bridge of osseous tissue; called also *frontal notch*. **i. interarytenoid/dea laryngis** [NA], interarytenoid incisure of larynx: the posterior portion of the aditus laryngis between the two arytenoid cartilages; called also *interarytenoid notch*. **i. interloba/ris hep/atis**, *i. ligamenti teretis*. **i. interloba/ris pulmo/nis**, an incisure separating adjacent lobes of a lung; see *fissura obliqua pulmonis* and *fissura horizontalis pulmonis dextri*. **i. intertrag/ica** [NA], the intertragic incisure: the notch at the lower part of the pinna of the ear between the tragus and the antitragus; called also *intertragic notch*. **i. ischiad/ica ma/jor** [NA], greater ischiadic incisure: the large notch on the posterior border of the hip bone, where the posterior borders of the ilium and the ischium become continuous; called also *greater ischiadic or sciatic notch*. **i. ischiad/ica mi/nor** [NA], lesser ischiadic incisure: the notch on the posterior border of the ischium just inferior to the ischiadic spine; called also *lesser ischiadic or sciatic notch*. **i. jugula/ris os/sis occipita/lis** [NA], jugular incisure of occipital bone: a notch on the anterior surface of the jugular process of the occipital bone, forming the posterior wall of the jugular foramen; called also *jugular notch of occipital bone*. **i. jugula/ris os/sis tempora/lis** [NA], jugular incisure of temporal bone: a prominent depression on the inferior surface of the petrous part of the temporal bone. It forms the anterior and lateral wall of the jugular foramen and lodges the superior bulb of the internal jugular vein in its lateral part and the glossopharyngeal, vagus, and accessory nerves in its medial part; called also *jugular notch of temporal bone*. **i. jugula/ris ster/ni** [NA], jugular incisure of sternum: the notch on the upper border of the sternum between the clavicular notches; called also *jugular notch of sternum*. **i. lacrima/lis maxil/lae** [NA], lacrimal incisure of maxilla: an indentation on the posterior border of the frontal process of the maxilla, that lodges the lacrimal sac; called also *lacrimal notch of maxilla*. **i. ligamen/ti te/retis** [NA], a notch in the inferior border of the liver, occupied by the ligamentum teres in the adult; called also *i. umbilicalis, umbilical notch or incisure, and notch of the ligamentum teres*. **i. mandib/ulae** [NA], incisure of mandible: a deep notch on the upper edge of the ramus of the mandible between the condyle and the coronoid process; called also *mandibular notch*. **i. mastoi/dea os/sis tempora/lis** [NA], mastoid incisure of temporal bone: a deep groove on the medial surface of the mastoid process of the temporal bone, which gives origin to the posterior belly of the digastric muscle; called also *mastoid notch*. **i. nasa/lis maxil/lae** [NA], nasal incisure of maxilla: the large notch in the anterior border of the maxilla that forms the lateral and inferior margins of the anterior nasal aperture; called also *nasal notch of maxilla*. **i. pancre/atis** [NA], a notch at the junction of the left half of the head of the pancreas and the neck of the pancreas; called also *pancreatic notch*. **i. parieta/lis os/sis tempora/lis** [NA], parietal incisure of temporal bone: the notch found on the upper margin of the temporal bone where the squamous and parietomastoid sutures meet; called also *parietal notch of temporal bone*. **i. perone/a tib/iae**, *i. fibularis tib/iae*. **i. preoccipita/lis** [NA], preoccipital incisure: a notch near the posterior end of the inferolateral border of the cerebral hemisphere. A line joining it to the parietooccipital sulcus serves to delineate the parietal and temporal lobes from the occipital lobe; called also *preoccipital notch*. **i. radia/lis ul/nae** [NA], radial incisure of ulna: the cavity on the outer side of the coronoid process, articulating with the rim of the head of the radius; called also *radial notch of ulna*. **i. Rivi/ni**, *i. tympanica* [Rivini]. **i. Santori/ni**, 1. *incisura auris*. 2. see *incisurae cartilaginis meatus acustici*. **i. scap/ulae** [NA], incisure of scapula: a notch, converted into a foramen by a ligament, on the upper border of the scapula at the base of the coracoid process; called also *scapular notch*. **i. semiluna/ris tib/iae**, *i. fibularis tib/iae*. **i. semiluna/ris ul/nae**, *i. trochlearis ulnae*. **i. sphenopalati/na os/sis palati/ni** [NA], sphenopalatine incisure of palatine bone: a notch between the orbital and sphenoid processes of the palatine bone; it is converted into a foramen by the under surface of the sphenoid bone; called also *sphenopalatine notch of palatine bone*. **i. supraorbita/lis** [NA], supraorbital incisure: a palpable notch in the frontal bone at the junction of the medial one-third and lateral two-thirds of the supraorbital margin, for transmission of the supraorbital nerve and vessels to the forehead. In life it is bridged by fibrous tissue, which is sometimes ossified, forming a bony aperture (foramen supraorbitalis). Called also *supraorbital notch*. **i. tempora/lis**, a slight fissure between the uncus of the parahippocampal gyrus and the apex of the temporal lobe. **i. tento/rii cerebel/li** [NA], incisure of tentorium of cerebellum: an opening at the anterior part of the cerebellum, formed by the free, internal border of the tentorium and the dorsum sellae of the sphenoid, and occupied chiefly by the mesencephalon; called also *tentorial notch*. **i. termina/lis au/ris** [NA], terminal incisure of the ear: a deep notch separating the lamina tragi and cartilage of the external acoustic meatus from the main auricular cartilage. **i. thyroi/dea infe/rior** [NA], inferior thyroid incisure: a notch at the lower part of the anterior border of the thyroid cartilage; called also *inferior thyroid notch*. **i. thyroi/dea supe/rior** [NA], superior thyroid incisure: a deep notch in the upper portion of the anterior border of the thyroid cartilage; called also *superior thyroid notch*. **i. trag/ica**, *i. intertragica*. **i. trochlea/ris ul/nae** [NA], a large concavity on the anterior surface at the proximal end of the ulna, formed by the olecranon and coronoid processes, for articulation with the trochlea of the humerus; called also *i. semilunaris ulnae and trochlear notch of ulna*. **i. tympan/ica** [Rivi/ni] [NA], tympanic notch: a defect in the upper portion of the tympanic part of the temporal bone, between the greater and lesser tympanic spines, which is filled in by the pars flaccida of the tympanic membrane. **i. ulna/ris ra/dii** [NA], ulnar incisure of radius: a concavity on the medial side of the distal extremity of the radius, articulating with the head of the ulna; called also *ulnar notch (of radius)*. **i. umbilica/lis**, *i. ligamenti teretis*. **i. vertebra/lis infe/rior** [NA], inferior vertebral incisure: the indentation found below each pedicle of a vertebra which, with the indentation located above the pedicle of the vertebra below, forms the intervertebral foramen; called also

inferior vertebral notch. **i. vertebrae superior** [NA], superior vertebral incisure: the indentation found above each pedicle of a vertebra which, with the indentation located below the corresponding pedicle of the vertebra above, forms the intervertebral foramen; called also *superior vertebral notch*.

incisurae (in-'si-su're) [L.] plural of *incisura*.

incisure (in-si'zhūr) a cut, notch, or incision; called also *incisura* [NA]. **i. of acetabulum**, *incisura acetabuli*. **i. of apex of heart**, *incisura apicis cordis*. **i. of calcaneus**, *sulcus tendinis musculi flexoris hallucis longi calcanei*. **cardiac i. of left lung**, *incisura cardiaca pulmonis sinistra*. **cardiac i. of stomach**, *incisura cardiaca ventriculi*. **clavicular i. of sternum**, *incisura claviculae sterni*. **costal i's of sternum**, *incisurae costales sterni*. **cotyloid i.**, *incisura acetabuli*. **digastric i. of temporal bone**, *incisura mastoidea ossis temporalis*. **i. of ear, anterior**, *incisura anterior auris*. **i. of ear, terminal**, *incisura terminalis auris*. **ethmoidal i. of frontal bone**, *incisura ethmoidalis ossis frontalis*. **falciform i. of fascia lata**, *margo falciformis hiatus saphenus*. **fibular i. of tibia**, *incisura fibularis tibiae*. **frontal i.**, *incisura frontalis*. **humeral i. of ulna**, *incisura trochlearis ulnae*. **iliac i., lesser**, *incisura ischiadica minor*. **intertarytenoid i. of larynx**, *incisura interarytenoidea laryngis*. **interclavicular i.**, *incisura jugularis sterni*. **intertragic i.**, *incisura intertragica*. **ischadic i., greater**, *incisura ischiadica major*. **ischadic i., lesser**, *incisura ischiadica minor*. **jugal i. of occipital bone**, *incisura jugularis ossis occipitalis*. **jugal i. of sternum**, *incisura jugularis sterni*. **jugal i. of temporal bone**, *incisura jugularis ossis temporalis*. **lacrimal i. of maxilla**, *incisura lacrimalis maxillae*. **i's of Lantermann**, *i's of Lantermann-Schmidt*, channels of cytoplasm in the myelin sheath of neurons that lead back to the Schwann cell body; they appear as oblique lines or slashes in the sheath. Called also *Lantermann's clefts* and *Schmidt-Lantermann i's*. **lateral i. of sternum**, *incisura claviculae sterni*. **i. of mandible**, *incisura mandibulae*. **mastoid i. of temporal bone**, *incisura mastoidea ossis temporalis*. **maxillary i., inferior**, *margo lacrimalis maxillae*. **nasal i. of frontal bone**, *margo nasalis ossis frontalis*. **nasal i. of maxilla**, *incisura nasalis maxillae*. **oburator i. of pubic bone**, *sulcus obturatorius ossis pubis*. **palatine i.**, *fissura pterygoidea*. **palatine i. of Henle**, *incisura sphenopalatina ossis palatini*. **parietal i. of temporal bone**, *incisura parietalis ossis temporalis*. **patellar i. of femur**, *facies patellaris femoris*. **peroneal i. of tibia**, *incisura fibularis tibiae*. **popliteal i.**, *fossa intercondylaris femoris*. **preoccipital i.**, *incisura preoccipitalis*. **pterygoid i.**, *fissura pterygoidea*. **radial i. of ulna**, *incisura radialis ulnae*. **Rivinus' i.**, *incisura tympanica* [Rivini]. **i. of scapula**, *incisura scapulae*. **Schmidt-Lantermann i's**, *i's of Lantermann*. **semilunar i.**, *incisura scapulae*. **semilunar i., greater, of ulna**, *incisura trochlearis ulnae*. **semilunar i., lesser, of ulna**, *incisura radialis ulnae*. **semilunar i. of mandible**, *incisura mandibulae*. **semilunar i. of radius**, *incisura ulnaris radii*. **semilunar i. of scapula**, *incisura scapulae*. **semilunar i. of sternum**, *incisura claviculae sterni*. **semilunar i. of sternum, superior**, *incisura jugularis sterni*. **semilunar i. of tibia**, *incisura fibularis tibiae*. **semilunar i. of ulna**, *incisura trochlearis ulnae*. **sigmoid i. of mandible**, *incisura mandibulae*. **sigmoid i. of ulna**, *incisura trochlearis ulnae*. **sphenopalatine i. of palatine bone**, *incisura sphenopalatina ossis palatini*. **sternal i.**, *incisura jugularis sterni*. **supraorbital i.**, *incisura supraorbitalis*. **suprascapular i.**, *incisura scapulae*. **i. of talus**, *sulcus tendinis musculi flexoris hallucis longi tali*. **i. of tentorium of cerebellum**, *incisura tentorii cerebelli*. **thoracic i.**, *angulus infrasternalis thoracis*. **thyroid i., inferior**, *incisura thyroidea inferior*. **thyroid i., superior**, *incisura thyroidea superior*. **trochlear i. of ulna**, *incisura trochlearis ulnae*. **ulnar i. of radius**, *incisura ulnaris radii*. **umbilical i.**, *incisura ligamenti teretis*. **vertebral i., greater**, *vertebral i., inferior*, *incisura vertebralis inferior*. **vertebral i., lesser**, *vertebral i., superior*, *incisura vertebralis superior*.

incitant (in-sit'ant) an inciting or causative agent, as one that causes infectious disease or induces an allergic reaction.

incitogram (in-si'to-gram) the neural conditions which organize and initiate efferent impulses.

inclination (in-'kli-na'she-o), pl. *inclinationes* [L.] inclination. **i. pelvis** [NA], pelvic inclination: the angle between the plane of the superior aperture of the minor pelvis and the horizontal plane, when the body is in the erect position; called also *pelvic incline*.

inclination (in-'kli-na'shun) [L. *inclinatio* a leaning] a sloping or leaning; the angle of slope from a particular line or plane of reference. Applied especially in dentistry to the deviation of a tooth from the vertical and also to cusp slopes on the occlusal surfaces or other surfaces of a tooth. **condylar guidance i.**, **condylar guide i.**, the angle of inclination of the condylar guidance to an accepted horizontal plane. **lateral condylar i.**, the direction of the lateral condyle path. **lingual i.**, deviation of a tooth from the vertical, in the direction of the tongue. **pelvic i., i. of pelvis**, *inclinatio pelvis*.

inclinationes (in-'kli-na'she-o'nēz) plural of *inclinatio*.

incline (in'klin) inclination. **pelvic i., i. of pelvis**, *inclinatio pelvis*.

inclinometer (in-'kli-nom'ē-ter) an instrument for determining the ocular diameter.

inclusion (in-'klu'zhun) [L. *inclusio*] 1. the act of enclosing or condition of being enclosed. 2. anything that is enclosed; often used alone to refer to cell inclusions. **cell i.**, a usually lifeless, often temporary, constituent of the cytoplasm of a cell, such as an accumulation of proteins, fats, carbohydrates, pigments, secretory granules, crystals, or other insoluble components. **dental i.**, 1. a tooth so surrounded with bony material that it is unable to erupt. 2. a cyst of oral soft tissue or bone. **fetal i.**, a partially developed embryo enclosed within the body of its twin. **Guarnieri's i's**, see under *body*. **intranuclear i's**, inclusion bodies. **leukocyte i's**, Döhle's inclusion bodies. **Walshard's i's**, see under *islet*.

incoagulability (in-'ko-ag'u-lah-bil'i-te) the state of being incapable of coagulation.

incoagulable (in-'ko-ag'u-lah-b'l) not susceptible to coagulation.

incoherent (in-'ko-hēr'ent) [L. *in* not + *cohaerere* to cling together] without proper sequence; incongruous.

incompatibility (in-'kom-pat'i-bil'i-te) the quality of being incompatible. See also *histoincompatibility*. **chemical i.**, the quality of not being miscible with another given substance without a chemical change. **physiologic i.**, the quality of not being administrable with another given remedy on account of their antagonistic pharmacologic effects. **therapeutic i.**, opposition in therapeutic effect between two or more medicines.

incompatible (in-'kom-pat'i-b'l) [L. *incompatibilis*] not suitable for combination or simultaneous administration; mutually repellent. See also *histoincompatible*.

incompetence (in-'kom'pe-tens) [L. *in* not + *competens* sufficient] 1. physical or mental inadequacy or insufficiency. 2. the legal status of a person determined by the court to be unable to manage his own affairs. **aortic i.**, see under *regurgitation*. **i. of the cardiac valves**, see *valvular regurgitation*, under *regurgitation*. **ileocecal i.**, inability of the ileocecal valve to prevent the flow of material from the colon to the ileum. **relative i.**, inadequate closure of a cardiac valve associated with dilatation of the corresponding ventricle of the heart. **valvular i.**, see *valvular regurgitation*, under *regurgitation*.

incompetency (in-'kom'pe-ten'se) incompetence.

incompetent (in-'kom'pe-ten't) 1. lacking competence; unable to perform the required functions. 2. an individual who is unable to perform the required functions of everyday living. 3. a person determined by the court to be unable to manage his own affairs.

incompressible (in-'kom-pres'i-b'l) not susceptible of being squeezed together.

incontinence (in-'kon'ti-nens) [L. *incontinentia*] 1. inability to control excretory functions, as defecation (fecal i.) or urination (urinary i.). 2. immoderation or excess. **active i.**, incontinence in which the bowels or bladder are emptied involuntarily, but at regular intervals and in the normal way. **fecal i., i. of the feces**, failure of voluntary control of the anal sphincters, with involuntary passage of feces and flatus. **intermittent i.**, loss of control of the urine on a sudden movement or on pressure on the bladder, due to interruption of the voluntary path above the lumbar center. **overflow i.**, urinary incontinence due to pressure of retained urine in the bladder after the bladder has contracted to its limits, with dribbling of urine; called also *paradoxical i.* **paradoxical i.**, overflow i. **paralytic i.**, fecal and urinary incontinence caused by relaxation of the sphincters from destruction of the lumbar centers. **passive i.**, incontinence of urine in which the bladder is full and cannot be emptied in the normal way, but the urine dribbles away from mere pressure. **rectal i.**, fecal i. **stress i.**, involuntary discharge of urine due to anatomic displacement which exerts an opening pull on the bladder orifice, as in straining or coughing. **urinary i., i. of urine**, failure of voluntary control of the vesical and urethral sphincters, with constant or frequent involuntary passage of urine.

incontinent (in-'kon'ti-nent) 1. unable to control excretory functions; see *incontinence*. 2. immoderate.

incontinentia (in-'kon'ti-nen'she-ah) [L.] incontinence. **i. al/vi**, fecal incontinence. **i. pigmenti**, a hereditary disorder occurring almost exclusively in females, in which early vesicular and later verrucous and bizarrely pigmented skin lesions are associated with developmental defects of the eyes, bones, and central nervous system. Called also *Bloch-Sulzberger syndrome*. **i. urinae**, urinary incontinence. **i. vulvae** (obs.), flatus vaginalis.

incoordination (in-'ko-or'di-na'shun) [L. *in* not + *coordinatio*] lack of the normal adjustment of muscular motions; failure of organs to work harmoniously.

incorporation (in-'kor'po-ra'shun) [L. *in* into + *corpus* body] 1. the union of one substance with another, or with others, in a

composite mass. 2. the unconscious mental mechanism in which attitudes of another person are taken into the mind of an individual, following the model of oral ingestion and swallowing.

incostapedial (in/'ko-sta-pe'de-al) pertaining to the incus and stapes.

increment (in/'kre-ment) [L. *incrementum*] addition, or increase; the amount by which a given quantity or value is increased. **absolute i.**, the exact amount by which anything is increased. **relative i.**, the amount by which anything is increased, in relation to the original size or volume.

incretion (in-'kre-'shun) (*obs.*) an internal secretion; a hormone.

incretodiagnosis (in-'kre-'to-di-'ag-no-'sis) diagnosis of disease of internal secretions (endocrine disease).

incretogenous (in/'kre-to-'jē-nus) caused by an internal secretion (hormone).

incretology (in/'kre-to-'lo-'je) [*incretion* + *-logy*] endocrinology.

incretopathy (in/'kre-top/'ah-the) [*incretion* + Gr. *pathos* disease] any disease of internal secretions (endocrine disease).

incretory (in/'kre-to-re) pertaining to internal secretion; endocrine.

incretotherapy (in-'kre-'to-ther/'ah-pe) treatment by the administration of hormones.

incross (in/'kros) the mating of individuals homozygous for the same gene.

incrustation (in/'krus-ta-'shun) [L. *in* on + *crusta* crust] 1. the formation of a crust. 2. a crust, scale, or scab.

incubate (in/'ku-bāt) [L. *incubare* to lie in or on; to watch over jealously] 1. to place in an optimal situation for development, as by provision of the proper temperature and humidity for the growth of living cells, such as ova, microorganisms, or tissue cells. 2. to maintain a culture or a reaction mixture at a fixed temperature. 3. material which has been incubated.

incubation (in/'ku-ba-'shun) [L. *incubatio*] 1. the induction of development, as (a) the development of an infectious disease from the entrance of the pathogen to the appearance of clinical symptoms (see also under *period* and cf. *decubation*); (b) the development of disease-producing microorganisms in an intermediate or in the ultimate host; or (c) the development of microorganisms or other cells in appropriate media. 2. the development of the embryo in the eggs of oviparous animals. 3. in Greek medicine, the rite of sleeping in the Æsculapian temples, medical advice being rendered in a dream, or by the priests, if patients waked.

incubator (in/'ku-ba-ter) 1. an apparatus for maintaining a premature infant in an environment of proper temperature and humidity. 2. an apparatus for maintaining a constant and suitable temperature for the development of eggs, cultures of microorganisms, or other living cells.

incubus (in/'ku-bus) [L.] 1. a nightmare. 2. a heavy mental burden.

incudal (in/'ku-dal) [L. *incus* anvil] pertaining to the incus.

incudectomy (in/'ku-dek/'to-me) [L. *incus* anvil + Gr. *ektome* excision] surgical removal of the incus.

incudiform (in-'ku-'dī-form) anvil-shaped.

incudomalleal (in/'ku-do-mal'e-al) pertaining to the incus and malleus.

incudostapedial (in/'ku-do-sta-pe'de-al) pertaining to the incus and stapes.

incurable (in-'ku-'rah-b'l) not susceptible of being cured.

incurvation (in/'kur-va-'shun) [L. *incurvare* to bend in] a condition of being bent in.

incus (in/'kus) [L. "anvil"] [NA] the middle of the three ossicles of the ear, which, with the stapes and malleus, serves to conduct vibrations from the tympanic membrane to the inner ear. See Plate accompanying *ear*. Called also *anvil*.

incyclophoria (in-si/'klo-'fo-'re-ah) cyclophoria in which the upper pole of the vertical axis of the eye deviates toward the midline of the face, or toward the nose; called also *negative* or *minus cyclophoria*. Cf. *excyclophoria*.

incyclotropia (in-si/'klo-'tro-'pe-ah) cyclotropia in which the upper pole of the vertical axis of the eye deviates toward the midline of the face, or toward the nose; called also *negative* or *minus cyclotropia*.

in d. abbreviation for L. *in di'es*, daily.

indanedione (in/'dān-di/'ōn) any of a group of synthetic anticoagulants derived from 1,3-indanedione, including phenindione, chemically different from the coumarin (q.v.) drugs but similar to them in structure and actions, i.e., they impair the hepatic synthesis of the vitamin K-dependent coagulation factors (prothrombin, Factors VII, IX, and X).

Indecidua (in/'de-sid'u-ah) a division of the class Mammalia, comprising the mammals without a decidua, including whales and ungulates.

indenization (in-den/'i-'za-'shun) innidiation.

indentation (in/'den-ta-'shun) [L. *indentatio*; *dens* tooth] 1. a condition of being notched; a notch, pit, or depression. 2. the act of indenting, as with the finger.

Inderal (in/'der-al) trademark for a preparation of propranolol hydrochloride.

index (in/'deks), pl. *indexes* or *in'dices* [L.] 1. [NA] the second digit of the hand, or forefinger; the finger adjacent to the thumb. 2. an expression of the ratio of one dimension of an object to another dimension, or of one measurable value to another, usually determined by multiplying the smaller value by 100 and dividing by the larger value. 3. a formula based on measurable values to express a value incapable of precise determination. 4. a core or mold used in dentistry to record or maintain the relative position of a tooth or teeth to one another and/or to a cast, to ensure reproduction in the dental prosthesis of their original position. **ACH i.**, an index for nutritional condition of children based on measurements of arm girth, chest depth, and hip width. **air velocity i.** (*obs.*), the ratio between the maximal breathing capacity and the vital capacity. **altitudinal i.**, the relation of the cranial height to the cranial length; called also *height i.* and *length-height i.* **alveolar i.**, gnathic i. **antibacterial i.**, in competitive inhibition, the minimal value of the ratio of inhibitor to metabolite just sufficient to prevent the growth of the organism. **antitryptic i.**, a number representing the increased viscosity of a solution of casein treated with trypsin to which the blood serum of a cancer patient has been added, as compared with the viscosity after the same procedure in which the blood serum is normal. **Arneth i.**, see under *formula*. **auricular i.**, the relation of the width to the height of the auricle of the ear. **auriculoparietal i.**, the ratio of the breadth of the skull between the auricular points to its greatest breadth. **auriculo-vertical i.**, the ratio of the height of the skull above the auricular point to its greatest height. **Ayala i.**, see under *quotient*. **baric i.**, 100 times the body weight divided by the cube of the stature. **basilar i.**, the ratio of the distance between the basion and the alveolar point to the total length of the skull. **Becker-Lennhoff i.**, Lennhoff's i. **biochemical racial i.**, the ratio of the percentage of persons having agglutinin A in their erythrocytes to the percentage having agglutinin B, or the ratio of persons of blood group II to those of blood group III. **body build i.**, body weight divided by the square of the stature. **Bouchard's i.** (of adiposity or emaciation), the weight in kilograms divided by the height in decimeters; in a normal adult male each decimeter of height weighs 4200 gm. **brachial i.**, 100 times the length of the forearm divided by the length of the upper arm. **Broders' i.**, an index of malignancy based on the fact that the more undifferentiated or embryonic the cells of a tumor, the more malignant is the tumor. Grade 1 contains one fourth undifferentiated cells; Grade 2, one half undifferentiated cells; Grade 3, three fourths undifferentiated cells; Grade 4, all cells undifferentiated. **Brugsch i.**, chest circumference $\times$ 100 divided by body length. **calcium i.**, the relative amount of calcium in the blood compared with that in a 1:6000 solution of calcium oxide. **cardiac i.**, the minute cardiac output per square meter of body surface; a normal average is 2.8 liters. **cardiothoracic i.**, the size of the heart in relation to the size of the chest, being the greatest transverse diameter of the heart shadow as compared with the greatest transverse diameter of the chest shadow on radiography. **I-Catalogue**, Index-Catalogue of the Library of the Surgeon General's Office, published from 1880 to 1950; replaced by Current List of Medical Literature published to 1959; in 1960 replaced by Index Medicus. **centromeric i.**, the ratio of the length of the shorter arm of a mitotic chromosome to the total length of the chromosome. **cephalic i.**, 100 times the maximal head breadth divided by the maximal head length. **cephalo-orbital i.**, 100 times the capacity of the cranium divided by the capacity of the two orbits. **cephalorhachidian i.**, cerebrospinal i. **cephalospinal i.**, the ratio of the area of the foramen magnum in square meters and the cranial capacity in cubic centimeters. **cerebral i.**, the ratio of the greatest transverse to the greatest anteroposterior diameter of the cranial cavity. **cerebrospinal i.**, the figure obtained by multiplying the final cerebrospinal pressure by the quantity of fluid withdrawn in spinal puncture and then dividing by the initial pressure. **chemotherapeutic i.**, therapeutic i. **color i.**, an outmoded concept for an expression of the relative amount of hemoglobin contained in a red blood corpuscle compared with that of a normal individual of the patient's age and sex; divide the percentage of hemoglobin by the percentage of erythrocytes. **Colour I.**, a publication of the Society of Dyers and Colourists and the American Association of Textile Chemists and Colorists containing an extensive list of dyes and dye intermediates. Each chemically distinct compound is identified by a specific number, the C.I. number, avoiding the confusion of trivial names used for dyes in the dye industry. **coronofrontal i.**, the ratio of the greatest frontal to the greatest coronal breadth of the head. **cranial i.**, 100 times the maximal breadth of the skull divided by its length. **Cumulated I. Medicus**, an annual publication of the National Library of Medicine, comprising the twelve monthly issues of the Index Medicus. **degenerative i.**, 1. an index indicating the accumulation of granules (possibly toxic) in the cytoplasm. 2. an index introduced by Schilling, reflecting the increased number of neutrophilic leukocytes with narrow, deeply staining nuclei in the peripheral blood. The process of maturation of these cells supposedly is arrested. **dental i.**, the

result obtained by multiplying the dental length by 100 and dividing by the length of the basinasal line. **effective temperature i.**, an index indicating the warmth due to air temperature, air movement, and humidity. **empathic i.**, the degree of empathy felt by one person toward another. **endemic i.**, the percentage of persons in any locality affected with an endemic disease. **facial i.**, the relation of the length of the face to its width, obtained by multiplying by 100 the bizygomatic width and dividing the product by the distance from the ophryon to the alveolar point. **femorohumeral i.**, 100 times the length of the upper arm divided by the length of the thigh. **Flower's i.**, dental i. **forearm-hand i.**, 100 times the length of the hand divided by the length of the forearm. **Fourmentin's thoracic i.**, the number obtained by multiplying the transverse diameter of the thorax by 100 and dividing by the anteroposterior diameter. **generation i.**, the number that shows the rate of increase from generation to generation; in the binary division of bacteria, if all survive the rate will be 2; if some die the rate will be less. **gnathic i.**, the degree of prominence of the jaws; the distance from the basion to the front of the jaw expressed as a percentage of the distance from the basion to the midpoint of the nasal suture. **habitus i.**, 100 times the sum of the chest girth and the abdominal girth divided by the stature. **hair i.**, the figure obtained by dividing the least diameter of the cross section of a hair by its greatest diameter and multiplying by 100; a high index indicates an approximately round shape; a low index indicates an ovoid cross section. **hand i.**, 100 times the breadth of the hand divided by the length of the hand. **hematopoietic i.**, a figure denoting the intensity of blood oxygenation. **hemophagocytic i.**, the relative phagocytic power of leukocytes in the presence of serum; called also *opsonocytaphagic i.* **hemorenal i.**, **hemorenal salt i.**, the ratio of the amount of inorganic salts in the urine to that in the blood, obtained by dividing the electric resistance of the blood by that of the urine. **Hench-Aldrich i.**, see under *test*. **icteric i.**, **icterus i.**, a figure expressing the amount of bilirubin in the blood, determined by comparing the color of the blood serum with an arbitrary standard potassium dichromate solution; indicative of liver function. **intermembral i.**, 100 times the length of the entire arm divided by the length of the entire leg. **juxtaglomerular i.**, semiquantitative estimation of the degree of granulation of juxtaglomerular cells obtained by a counting method and expressed as a ratio to the number of glomeruli. **Kaup i.**, weight divided by the length of the body squared. **length-breadth i.**, the breadth of the skull expressed as a percentage of its length. **length-height i.**, the height of the skull expressed as a percentage of its length. **Lennhoff's i.**, the number obtained by dividing 100 times the distance from the sternal notch to the symphysis pubis by the greatest circumference of the abdomen. **leukopenic i.**, in food allergies, if ingestion of the suspected food is followed within 1½ hours by a significant fall (1000 or more) in the total leukocyte count, allergic hypersensitivity to that food is indicated. Cf. *hemoclastic crisis*, under *crisis*. **Livi's i.**, $100 \times \sqrt[3]{P/6}$, in which P = body weight in grams $\times$ body length in centimeters. **lower leg-foot i.**, 100 times the length of the foot divided by the length of the lower leg. **Macdonald i.**, the proportion of children with enlarged spleen that also show malarial parasites by microscopic examination. **McLean's i.**, see under *formula*. **maxilloalveolar i.**, 100 times the distance between the two most lateral points on the surface of the alveolar margins, usually opposite the middle of the second molar teeth, divided by the maxilloalveolar length. **I. Medicus**, a monthly publication of the National Library of Medicine in which the world's leading biomedical literature is indexed by author and subject; see also *Cumulated I. Medicus*. **metacarpal i.**, the average of the figures obtained by dividing the lengths of the right second, third, fourth, and fifth metacarpal bones by their respective breadths at the exact midpoint; stated to range normally between 5.4 and 7.9. A value above 8.4 is diagnostic of arachnodactyly. **mitotic i.**, the ratio of the number of cells in a population undergoing mitosis to the number not undergoing mitosis. **morphological i.**, the volume of the trunk divided by the length of the limbs. **morphologic face i.**, 100 times the distance from the nasion to the gnathion divided by the bizygomatic breadth. **nasal i.**, 100 times the maximal breadth of the nasal aperture divided by the nasion-nasospinale height. **nucleoplasmic i.**, the relation of the size of the nucleus of a cell to that of the cytoplasm, expressed numerically by the quotient of the nuclear volume divided by the difference between the volume of the cell and the nuclear volume. **obesity i.**, body weight divided by body volume. **opsonic i.**, a measure of opsonic activity determined by the ratio of the number of microorganisms phagocytized by normal leukocytes in the presence of serum from an individual infected by the microorganism, to the number phagocytized in serum from a normal individual. **opsonocytaphagic i.**, hemophagocytic i. **orbital i.** (of Broca), 100 times the height of the opening of the orbit, divided by its width. **palatal i.**, **palatine i.**, **palato-maxillary i.**, 100 times the maximal palatal breadth divided by the maximal palatal length. **parasite i.**, the percentage of individuals in a population whose blood smears show the presence of malarial parasites. **phagocytic i.**, 1. the average number

of bacteria ingested per leukocyte of a patient's blood. 2. (of *Ar-neth*) the proportion in the blood of multinuclear neutrophil leukocytes with nuclei having three or more lobes. **physiognomonic upper face i.**, 100 times the distance from the nasion to the stomion divided by the bizygomatic breadth. **Pignet i.**, see under *formula*. **Pirquet's i.** (of nutritional status), multiply the weight in grams by 10, divide this product by the sitting height in centimeters and extract the cube root of this quotient. A result lower than 0.945 indicates faulty nutrition. See also *pelidisi*. **ponderal i.**, an index of body mass determined by dividing the height in inches by the cube root of the weight in pounds. **Quarterly Cumulative I. Medicus**, a former publication of the American Medical Association, in which was indexed most of the medical literature in the world; replaced by *Cumulated I. Medicus*. **radiohumeral i.**, 100 times the maximal length of the radius divided by the maximal length of the humerus. **refractive i.**, the refractive power of a medium compared with that of air, which is assumed to be 1. Symbol n , or n_p . **refractive i.**, **absolute**, an expression of the ratio of the velocity of light in air to its velocity in a specific substance. **refractive i.**, **relative**, an expression of the ratio of the absolute refractive indexes of two different optically dense substances. **Röhrer's i.** (of the state of nutrition), multiply the weight in grams by 100 and divide the product by the cube of the height in centimeters. **sacral i.**, 100 times the breadth of the sacrum, divided by the length. **salivary urea i.**, see *Hench-Aldrich test*, under *tests*. **short increment sensitivity i.** (SISI), a hearing test in which tones of 1 to 5 dB increments in intensity and lasting 0.5 seconds are superimposed on a continuous (carrier) tone of the same frequency at random intervals, the carrier tone being 20 decibels above the speech reception threshold. **spleen i.**, the percentage of individuals in the population having enlarged spleens; used in malaria surveys. **splenometric i.**, an index of the amount of malarial infection; obtained by multiplying the spleen rate by the average enlarged spleen. **staphylo-opsonic i.**, the opsonic index in staphylococcal infection, estimated by using *Staphylococcus aureus* as the test microorganism. **therapeutic i.**, originally, the ratio of the maximum tolerated dose to the minimum curative dose; now defined, so as to account for variability of individual response, as the ratio of the median lethal dose (LD_{50}) to the median effective dose (ED_{50}). It is used in assessing the safety of a drug. Called also *chemotherapeutic i.* **thoracic i.**, the ratio of the anteroposterior diameter of the thorax to the transverse diameter. **tibiofemoral i.**, 100 times the length of the lower leg divided by the length of the thigh. **tibioradial i.**, 100 times the length of the forearm divided by the length of the lower leg. **trunk i.**, 100 times the bi-acromial breadth divided by the sitting suprasternal height. **tuberculo-opsonic i.**, the opsonic index in tuberculous infection, estimated by using *Mycobacterium tuberculosis* as the test microorganism. **ureosecretory i.**, see *Ambar's formula*, under *formula*. **uricolytic i.**, the percentage of uric acid oxidized to allantoin before being secreted. **vertical i.**, 100 times the height of the skull divided by the length. **vital i.**, the ratio of births to deaths within a given time in a population; called also *birth-death ratio*. **xanthoproteic i.**, see *Mulder's test* (def. 2), under *tests*. **zygomatocauricular i.**, the ratio between the zygomatic and auricular diameters of the skull.

indican (in'di-kan) 1. a yellow indoxyl glycoside, $C_8H_4 \cdot NH \cdot CH_2 \cdot C \cdot O \cdot C_6H_4 \cdot O_8$, from plants that yield indigo. On hydrolysis it yields glucose and indoxyl. 2. potassium indoxyl sulfate, $C_8H_4 \cdot NH \cdot CH \cdot CO \cdot SO_2 \cdot OK$, formed by decomposition of tryptophan in the intestines, absorbed, conjugated, and excreted in the urine.

indicanemia (in'di-kan-e'me-ah) [*indican* + Gr. *haima* blood + *-ia*] the presence of indican in the blood.

indicanmeter (in'di-kan-me'ter) an instrument for estimating the amount of indican in the urine.

indicanorachia (in'di-kan-o-ra'ke-ah) the presence of indican in the spinal fluid.

indicant (in'di-kant) 1. indicating. 2. a symptom which indicates the true diagnosis or treatment.

indicanuria (in'di-kan-u're-ah) [*indican* + Gr. *ouron* urine + *-ia*] the presence in the urine of indican in excessive quantity.

indicarmine (in'di-kar'min) indigotindisulfonate sodium.

indicatio (in'di-ka'she-o) [L.] indication. **i. causa/lis**, an indication as to the treatment of a disease afforded by its cause. **i. curati'va**, **i. mor'bi**, an indication as to treatment afforded by the nature of the morbid processes observed. **i. symptomat'ica**, an indication as to disease afforded by the symptoms that may arise.

indication (in'di-ka'shun) [L. *indicatio*] a sign or circumstance which points to or shows the cause, pathology, treatment, or issue of an attack of disease; that which points out; that which serves as a guide or warning.

indicator (in'di-ka'ter) [L.] 1. the index finger (index [NA]). 2. the extensor muscle of the index finger (musculus extensor indicis [NA]). 3. any substance which, when added in small quantities, shows the appearance or disappearance of a chemical individual by a conspicuous change of color or the attainment of a certain pH. **anaerobic i.**, a dilute solution of methylene blue is decolorized

in the absence of oxygen. **Andrade's i.**, a solution of acid fuchsin in water, decolorized to a yellow color by sodium hydrate solution, and added to sugar bouillon culture medium. An acid-producing organism cultivated on this bouillon turns the medium magenta red. **complex i.**, in psychoanalysis, anything that discloses or indicates the working of a complex. **dew point i.**, an instrument for measuring relative humidity or moisture content of a gas by measuring its dew point. **radioactive i.**, see under *tracer*. **redox i.**, a pigment which indicates by a change of color the change in pH. **Schneider's i.**, an index designed to reflect cardiovascular fitness, based mainly on heart rate during and after mild exercise.

indicophose (in'di-ko'fōz) an indigo-colored phase.

Indiella (in'de-el'ah) former name for the genus *Madurella*.

indifference (ahn-de'fa-rahns') [Fr.] indifference. **belle i.** (bel'ahn-de'fa-rahns') [Fr. "beautiful indifference"], a complacent attitude toward their condition and symptoms shown by hysterical patients.

indifferent (in-dif'er-ent) [L. *indifferens*] not tending one way or another; neutral; having no preponderating affinity.

indigenous (in-dij'ē-nus) [L. *indigenus*] native, or not exotic; native to a particular place or country.

indigestible (in'di-jes'ti-b'l) [in-neg. + *digestible*] not susceptible of being digested.

indigestion (in'di-jes'chun) lack or failure of digestion; commonly used to denote vague abdominal discomfort after meals. **acid i.**, hyperchlorhydria. **fat i.**, inability to digest fat; steatorrhea. **gastric i.**, indigestion taking place in or due to some disorder of the stomach. **intestinal i.**, imperfect performance of the digestive function of the intestine. **nervous i.**, nervous dyspepsia. **sugar i.**, defective ability to digest sugar, resulting in fermentative diarrhea.

indigitation (in-dij'i-ta'shun) [L. *in* into + *digitus* finger] intussusception (def. 1), or invagination.

indiglucin (in'di-gloo'sin) a sweet substance obtained together with indigo on the decomposition of plant indican.

indigo (in'di-go) [Gr. *Indikon* Indian dye] a blue dyeing material from various leguminous and other plants (*Indigofera tinctoria*, etc.), being the aglycone of indican; also made synthetically. It is sometimes found in the sweat and the urine, where it is derived from urinary indican (indoxyl sulfate).

indigogen (in'di-go-jen) a crystalline principle from indigo.

indigopurpurine (in'di-go-pur'pu-rin) a purple pigment occasionally found in the urine.

indigotin (in'di-go'tin) a neutral, tasteless, dark blue powder, $C_{16}H_{10}N_2O_2$, the principal ingredient of commercial indigo; called also *indigo blue*.

indigotindisulfonate sodium (in'di-go'tin-di-sul'fo-nāt) [USP] chemical name: 2-(1,3-dihydro-3-oxo-5-sulfo-2H-indol-2-ylidene)-2,3-dihydro-3-oxo-1H-indole-5-sulfonic acid disodium salt. A dye, $C_{16}H_8N_2Na_2O_6S$, occurring as a dusky, purplish blue powder or blue granules; used as a diagnostic aid for determining renal function, administered intravenously. Called also *indigo carmine*, *indicarmin*, and *soluble indigo blue*.

indirect (in'di-rekt') [L. *indirectus*] 1. not immediate or straight. 2. acting through an intermediary agent.

indirubin (in'di-roo'bin) a red pigment occasionally found in the urine.

indirubinuria (in'di-roo'bin-u're-ah) the presence of indirubin in the urine.

indiscriminate (in'dis-krim'i-nāt) [L. *in* not + *discrimen* distinction] affecting various parts without distinction.

indisposition (in'dis-po-zish'un) the condition of being slightly ill; a slight illness.

indium (in'de-um) [L. *indicum* indigo] a metallic element; atomic number, 49; atomic weight, 114.82; symbol, In; named from its blue line in the spectrum. It is used in semiconductor research and in bearing alloys.

individuation (in'di-vid'u-a'shun) 1. the process of developing individual characteristics. 2. differential regional activity in the embryo occurring in response to organizer influence.

Indocin (in'do-sin) trademark for a preparation of indomethacin.

Indoklon (in-dok'lon) trademark for a preparation of flurothyl. See also under *therapy*.

indolaceturia (in'do-las'ē-tu're-ah) the presence of indolacetic acid in the urine; excessive amounts of 5-OH-indoleacetic acid, the urinary metabolite of serotonin, may be excreted when carcinoid tumors are present.

indole (in'dōl) a compound, $C_8H_7CH:CH.NH$, obtained from

coal tar and indigo, and produced by the decomposition of tryptophan in the intestines. It is also found in cultures of the spirillum of cholera (*Vibrio cholerae*) and other bacteria; a color test for its production is used in classifying enteric bacteria. It is responsible in part for the peculiar odor of the feces. In cases of

intestinal obstruction, it accumulates in the intestine and is found in large quantities in the urine in conjugated form.

indolent (in'do-lent) [L. *in* not + *dolens* painful] causing little pain, as an *indolent* tumor; slow growing, as an *indolent* lesion.

indologeous (in'do-loj'ē-nus) [*indole* + Gr. *gennan* to produce] causing the formation of indole.

indoluria (in'dōl-u're-ah) the presence of indole in the urine.

indomethacin (in'do-meth'ah-sin) [USP] chemical name: 1-(4-chlorobenzoyl)-5-methoxy-2-methyl-1H-indole-3-acetic acid. A nonsteroidal anti-inflammatory agent, $C_{19}H_{15}ClNO_4$, which also has antipyretic and analgesic properties, occurring as a pale yellow to yellow-tan powder; used in the treatment of rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis of the hip, and acute gouty arthritis in selected patients, administered orally.

indophenol (in'do-fe'nol) any one of a series of dyes which are nitrogen derivatives of quinone.

indophenolase (in'do-fe'nōl-ās) (*obs.*) cytochrome oxidase.

indophenol-oxidase (in'do-fe'nol-ok'si-dās) cytochrome oxidase.

indoprofen (in'do-pro'fen) chemical name: 2-(1,3-dihydro-1-oxo-2H-isoindol-2-yl)-α-methylbenzeneacetic acid; an analgesic and anti-inflammatory, $C_{17}H_{15}NO_3$.

indoramin (in-dor'ah-min) chemical name: N-[1-[2-(1H-indol-3-yl)ethyl]-4-piperidyl]benzamide; an antihypertensive, $C_{22}H_{25}N_3O$.

indoxyl (in-dok'sil) [Gr. *indikon* indigo + *oxys* sharp] an oxidation product of indole, $C_8H_4 \cdot C(OH):CH \cdot NH$, formed by decomposi-

tion from tryptophan, and excreted in the urine as indican (potassium indoxyl sulfate).

indoxylemia (in-dok'sil-e'me-ah) [*indoxyl* + Gr. *haima* blood + *-ia*] the presence of indoxyl in the blood.

indoxyl-sulfate (in-dok'sil-sul'fāt) a compound found in the urine in some cases in which great putrefactive changes are occurring in the intestine.

indoxyluria (in'dok-sil-u're-ah) [*indoxyl* + Gr. *ouron* urine + *-ia*] the presence of an excess of indoxyl in the urine.

indiriline hydrochloride (in'dri-lēn) chemical name: N,N-dimethyl-1-phenyl-1H-inden-1-ethylamine hydrochloride; a central nervous system stimulant, $C_{19}H_{21}N \cdot HCl$.

induced (in-düst') [L. *inducere* to lead in] 1. produced artificially. 2. produced by induction.

inducer (in-düs'er) something that induces. In biosynthesis, a compound that induces the synthesis of a specific enzyme or sequence of enzymes, by antagonizing the action of the corresponding repressor, or by some other mechanism.

inductance (in-duk'tans) that property of a circuit by virtue of which a magnetic field is associated with the circuit when the circuit is carrying current. The unit of inductance, or "self-induction," is the henry.

induction (in-duk'shun) [L. *inductio*] 1. the act or process of inducing or causing to occur, especially the production of a specific morphogenetic effect in the developing embryo through the influence of evocators or organizers, or the production of anesthesia or unconsciousness by use of appropriate agents. 2. the appearance of an electric current or of magnetic properties in a body because of the presence of another electric current or magnetic field nearby. **autonomous i.**, induction in which the inductor forms no part of the portion produced. **complementary i.**, induction in which the inductor forms a part of the portion produced. **somatic i.**, the production of new characters through the influence of the soma on the germ cells. **Speermann's i.**, the stimulating and directing effect shown by certain tissues on neighboring tissues or parts in early development of the embryo. **spinal i.**, that process by which one reflex lowers the threshold of another reflex which otherwise cannot be penetrated.

inductogram (in-duk'to-gram) roentgenogram.

inductor (in-duk'ter) a tissue elaborating a chemical substance which acts to determine the growth and differentiation of embryonic parts. Cf. *activator* (def. 2) and *organizer*.

inductorium (in'duk-to're-um) an apparatus for generating currents of induced electricity; as in physiological experiments.

inductotherm (in-duk'to-therm) an apparatus for producing high body temperature by electric induction.

inductothermy (in-duk'to-ther'me) the production of artificial fever by electric induction.

indulin (in'du-lin) a coal tar dye, used as a histologic stain.

indulinophil (in'du-lin'o-fil) 1. an element easily stainable with indulin. 2. indulinophilic.

indulinophilic (in'du-lin-o-fil'ik) [*indulin* + Gr. *philein* to love] stainable with indulin.

indurated (in'du-rāt'ed) [L. *indurare* to harden] hardened; rendered hard.

induration (in'du-ra'shun) [L. *induratio*] 1. the quality of being hard; the process of hardening. 2. an abnormally hard spot or place. **black i.**, the hardening and pigmentation of lung

tissue seen in pneumonia. **brawny i.**, inflammatory hardening and thickening of tissues. **brown i.**, 1. a deposit of altered blood pigment in the lung in pneumonia. 2. marked increase of the connective tissue of the lung and excessive pigmentation, due to long-continued congestion from valvular heart disease or to anthracosis. **cyanotic i.**, a congested, dense, and purple state of the kidney in which the blood current is slowed and the transudation of fluid through the glomeruli is impeded. **fibroid i.**, cirrhosis. **Frobiep's i.**, myositis fibrosa. **granular i.**, cirrhosis. **gray i.**, an induration of lung tissue in or after pneumonia, without pigmentation. **lamine i.**, a thin layer of round-cell infiltration of the corium in chancre. **parchment i.**, lamine i. **penile i.**, Peyronie's disease. **phlebotic i.**, chronic edema of the lower third of the leg with inflammation and thrombosis of the superficial veins, leading to induration of the skin and subcutaneous tissue and a constricting band of fibrosis; called also *indurated cellulitis*. **plastic i.**, sclerosis of the corpora cavernosa of the penis. **red i.**, interstitial pneumonia in which the lung is red and congested.

indurative (in'du-ra'tiv) pertaining to or marked by induration.

indusium griseum (in-du'ze-um gris'e-um) [L.] [NA] a thin layer of gray substance on the dorsal aspect of the corpus callosum; called also *supracallosal gyrus* and *gyrus supracallosus*.

-ine a suffix indicating an alkaloid, an organic base, or a halogen.

inebriant (in-e'bre-ant) [L. *inebriare* to make drunk] 1. an inebriating agent. 2. inebriating.

inebriation (in-e'bre-a'shun) [L. *inebriatio*] the condition of being drunk.

inebriety (in'ë-bri'ë-te) [L. *in* intensive + *ebrietas* drunkenness] habitual drunkenness.

inelastic (in'e-las'tik) lacking elasticity.

Inermicapsifer (in-er'mi-kap'si-fer) a genus of tapeworms, family Linstowiidae, parasitic in hyraxes and rodents in Africa; *I. arvicanthidis* has been found in humans in Cuba and Central America.

inert (in-ert') having no action; not reacting with other elements, as inert gases.

inertia (in-er'she-ah) [L.] inactivity; inability to move spontaneously. **colonic i.**, weak muscular activity of the colon, leading to distention of the organ and constipation. **i. u'teri**, sluggishness of the uterine contractions during labor.

in extremis (in ek-stre'mis) [L. "at the end"] at the point of death.

Inf. abbreviation for *L. infundere*, pour in.

infancy (in'fan-se) the early period of life; see *infant*.

infant (in'fant) [L. *infans*; in neg. + *fans* speaking] a young child; considered to designate the human young from birth or from the termination of the newborn period (the first four weeks of life) to the time of assumption of erect posture (12 to 14 months); it is regarded by some to extend to the end of the first 24 months. **floppy i.**, see under *syndrome*. **immature i.**, one weighing 500 to 999 grams (17 ounces to 2.2 pounds) at birth, usually before the twenty-eighth week of gestation, and having an extremely poor chance of survival. **mature i.**, one weighing 2500 grams (5.5 pounds) or more at birth, usually at or near full term, and having an optimum chance of survival. **newborn i.**, the human young during the first two to four weeks after birth. **postmature i.**, **post-term i.**, an infant born at any time after the beginning of the forty-second week (288 days) of gestation. **premature i.**, one usually born after the twenty-seventh week and before full term, and arbitrarily defined as an infant weighing 1000 to 2499 grams (2.2 to 5.5 lbs.) at birth, having poor to good chance of survival, depending on the weight. In countries where adults are smaller than in the United States, the upper limit is 2250 grams (5 lbs.). Other criteria such as crown-heel length (less than 47 cm.) and occipitofrontal diameter (less than 11.5 cm.) have also been used. **preterm i.**, an infant born at any time before the thirty-seventh completed week (259 days) of gestation. **term i.**, an infant born anytime from the beginning of the thirty-eighth week (260 days) to the end of the forty-first week (287 days) of gestation.

infanticide (in-fan'ti-sid) [L. *infans* infant + *caedere* to kill] the taking of the life of an infant.

infanticulture (in-fan'ti-kul'tür) puericulture.

infantile (in'fan-til) [L. *infantilis*] pertaining to an infant or to infancy.

infantilism (in'fan-ti-lizm', in-fan'ti-lizm) a condition in which the characters of childhood persist into adult life; it is marked by mental retardation, underdevelopment of the sexual organs, and often, but not always, by dwarfism. Cf. *progeria*. **Brissaud's i.**, infantile myxedema. **cachetic i.**, infantilism due to chronic infection or poisoning. **celiac i.**, infantilism resulting from the infantile form of nontropical sprue (celiac disease); see under *sprue*. **dysthyroidal i.**, infantilism due to defective thyroid activity. **hepatic i.**, infantilism associated with hepatic cirrhosis. **Herter's i.**, the infantile form of nontropical sprue; see under *sprue*. **hypophyseal i.**, a type of dwarfism,

with retention of infantile characteristics, due to undersecretion of the growth hormone and the gonadotropic hormones of the anterior pituitary gland (adenohypophysis); called also *pituitary infantilism*, *pituitary dwarfism*, *Levi-Lorain dwarfism*, *Paltau's dwarfism*, *ateleiosis*. **intestinal i.**, the infantile form of nontropical sprue; see under *sprue*. **Levi-Lorain i.**, **Lorain's i.**, hypophyseal i. **lymphatic i.**, infantilism associated with lymphatism. **myxedematous i.**, cretinism. **pancreatic i.**, a form caused by defective pancreatic action. **partial i.**, arrested development of a single part or tissue. **pituitary i.**, hypophyseal i. **regressive i.**, reversion to an infantile state after body growth has been completed. **renal i.**, renal osteodystrophy. **reversible i.**, regressive i. **sex i.**, continuance of the prepuberal sex characters and behavior beyond the usual age of puberty. **sexual i.**, retardation of sexual development, as in adiposogenital dystrophy. **symptomatic i.**, infantilism due to general defective development of tissues. **tardy i.**, regressive i. **toxemic i. (obs.)**, the infantile form of nontropical sprue; see under *sprue*. **universal i.**, general dwarfishness in stature with absence of the secondary sexual characteristics.

infantorium (in'fan-to're-um) a hospital for the newborn and young infants.

infarct (in'farkt) [L. *infarctus*] an area of coagulation necrosis in a tissue due to local ischemia resulting from obstruction of circulation to the area, most commonly by a thrombus or embolus. See also *infarction*. **anemic i.**, an area of necrosis in a tissue produced by sudden arrest of circulation in a vessel; called also *pale i.* and *white i.* **bilirubin i's**, masses of crystals of bilirubin in the pyramids of the kidneys, especially in the newborn. **bland i.**, an uninfected infarct. **bone i.**, an area of bone tissue which has become necrotic as a result of loss of its arterial blood supply. **Brewer's i's**, dark-red, wedge-shaped areas, resembling infarcts, seen on section of a kidney in pyelonephritis. **calcareous i.**, a deposit of calcium salt in the tissues. **cystic i.**, an infarct enclosed in a membrane. **embolic i.**, one caused by an embolus. **hemorrhagic i.**, an infarct that is red in color owing to the oozing of red corpuscles into the dead area; called also *red i.* **pale i.**, anemic i. **red i.**, hemorrhagic i. **septic i.**, one in which the tissues have been invaded by pathogenic organisms. **thrombotic i.**, one caused by a thrombus. **uric acid i.**, a deposit of uric acid crystals in the renal tubules of the newborn. **white i.**, anemic i.

infarctectomy (in'fark-tek'to-me) surgical removal of an infarct.

infarction (in-fark'shun) [L. *infarcire* to stuff in] 1. the formation of an infarct. 2. an infarct. **anterior myocardial i.**, infarction localized to the left ventricular free wall between the interventricular groove and the lateral margin of the anterior papillary muscle; it is characterized electrocardiographically by abnormal Q waves in V₃ or V₄. **anteroinferior myocardial i.**, one involving features of both anterior and inferior myocardial infarction. **anterolateral myocardial i.**, one involving features of both anterior and lateral myocardial infarction. **anteroseptal myocardial i.**, one involving features of both anterior and septal infarction. **atrial i.**, the formation of an infarct in a cardiac atrium, which may be due to coronary artery occlusion, periarthritis nodosa, obliterating endarteritis of the small branches of coronary arteries, or other conditions. **cardiac i.**, myocardial i. **cerebral i.**, an ischemic condition of the brain, producing a persistent focal neurological deficit in the area of distribution of one of the cerebral arteries. **Freiberg's i.**, Köhler's bone disease, def. 2. **inferior myocardial i.**, one localized in the region between the lateral border of the posterior papillary muscle and the posterior septum; it is characterized electrocardiographically by abnormal Q waves in lead II, III, or aV_F. **inferolateral myocardial i.**, one involving features of both inferior and lateral myocardial infarctions. **intestinal i.**, occlusion of an artery or arteriole in the wall of the intestine, resulting in the formation of an area of coagulation necrosis. **lateral myocardial i.**, infarction in the region between the lateral margin of the anterior papillary muscle and the lateral margin of the posterior papillary muscle; it is marked electrocardiographically by abnormal Q waves in V₃ or V₆. **mesenteric i.**, coagulation necrosis of the intestines due to a decrease in blood flow in the mesenteric vasculature; it may be caused by occlusion of the mesenteric arteries or by cardiogenic abnormalities or hypovolemia (*nonocclusive mesenteric i.*). **myocardial i.**, gross necrosis of the myocardium, as a result of interruption of the blood supply to the area, as in coronary thrombosis. **posterior myocardial i.**, one localized in the basal third of the posteroinferior heart wall; it is characterized electrocardiographically by abnormal R waves in V₁ or V₂. **pulmonary i.**, localized necrosis of lung tissue caused by obstruction of the arterial blood supply, most often due to pulmonary embolism. Clinical manifestations range from the nonexistent to pleuritic chest pain, dyspnea, hemoptysis, and tachycardia. **septal myocardial i.**, one localized to the interventricular septum and characterized electrocardiographically by abnormal Q waves in V₁ or V₂. **transmural myocardial i.**, one involving the entire thickness of the heart wall.

infaust (in'fowst) [L. *infaustus* unlucky] unfavorable.

Myocardial infarction shown in cross-section of heart (ventricles only).

infectible (in-fek'tī-b'l) capable of being infected.

infection (in-fek'shun) 1. invasion and multiplication of microorganisms in body tissues, which may be clinically inapparent or result in local cellular injury due to competitive metabolism, toxins, intracellular replication, or antigen-antibody response. The immunological response may be transient or prolonged, and consists of a cellular response (delayed hypersensitivity) or the production of specific (immunoglobulin) antibody to the components of the infecting organism or its toxins. 2. an infectious disease. Cf. *infestation*. **aerial i.**, airborne i. **agonal i.**, terminal i. **airborne i.**, infection by inhalation of organisms suspended in air on water droplets or dust particles. **apical i.**, infection situated at the apex of the root of a tooth. **autochthonous i.**, infection due to organisms present in the environment, as on a hospital ward. **contact i.**, direct i. **cross i.**, infection transmitted between individuals infected with different pathogenic microorganisms. **cryptogenic i.**, infection whose pathogenesis is unclear or undefinable, as salmonella arthritis with no preceding salmonella infection elsewhere. **diaplacental i.**, infection acquired through the placenta. **direct i.**, infection produced by direct contact with another person. **droplet i.**, infection due to inhalation of respiratory pathogens suspended on liquid particles 10 micra in diameter or less exhaled by someone already infected, whether as a carrier or with symptomatic disease. **dustborne i.**, infection by pathogens which have become affixed to particles of dust and are transmitted by that means. **ectogenous i.**, exogenous i. **endogenous i.**, infection due to reactivation of organisms present in a dormant focus, as occurs in tuberculosis, histoplasmosis, coccidioidomycosis, etc. **exogenous i.**, infection caused by organisms not normally present in the body but which have gained entrance from the environment. **focal i.**, infection confined to a single organ or tissue; certain focal infections, as in the tonsillar crypts, periodontal tissues, and the prostatic bed, are a source of systemic disease as a result of blood-stream dissemination of the offending pathogen. **germinal i.**, transmission of infection to the child by means of the ovum or sperm of the parent. **herd i.**, an epidemiological term for an infection in any large group. **inapparent i.**, subclinical i. **indirect i.**, infection transmitted by water, food, or other means of conveyance. **latent i.**, a phase during the course of some established infections during which the pathogenic microorganisms are dormant and manifestations of disease that may have been recognizable earlier are no longer detectable, as in latent syphilis. **mass i.**, infection produced by a large number of pathogenic organisms in the circulation. **mixed i.**, infection of an organ or tissue by more than one microorganism, as in wound infections, abscesses, pneumonia, and rarely meningitis and endocarditis; mixtures of every type occur, e.g., bacterial and viral, bacterial and fungal, and protozoan and viral. **phytogenic i.**, infection caused by plant organisms. **pyogenic i.**, an infection caused by pus-producing organisms. *Staphylococcus aureus* and *Streptococcus pyogenes* are customarily implied, although many other species of bacteria and fungi and some viruses are capable of evoking a polymorphonuclear inflammatory response. **Rachmat i.**, Sumatra jaundice. **retrograde i.**, an infection that ascends a duct or tube against the flow of secretions or excretions, as in the urinary tract. **Salinem i.**, a form of leptospirosis occurring in Salinem and caused by *Leptospira pyrogenes*; called also *Salinem fever*. **secondary i.**, infection by a microorganism following an infection by another kind of microorganism. **silent i.**, subclinical i. **subclinical i.**, infection associated with no detectable symptoms but caused by microorganisms capable of producing easily recognizable diseases, such as poliomyelitis or mumps; it is detected by the production of

antibody, or by delayed hypersensitivity exhibited in skin test reaction to such antigens as tuberculin. **terminal i.**, an acute infection occurring near the end of a disease and frequently causing death. **Vincent's i.**, acute necrotizing ulcerative gingivitis. **water-borne i.**, infection caused by microorganisms which may be transmitted through water and acquired through ingestion, bathing, or other means. **zoogenic i.**, infection caused by animal organisms, such as protozoa and helminths. Cf. *phytogenic i.*

infectiousness (in-fek'she-os'i-te) the degree of infectiousness of a microorganism.

infectious (in-fek'shus) caused by or capable of being communicated by infection; infective.

infectiousness (in-fek'shus-nes) the state or quality of being infectious.

infective (in-fek'tiv) [L. *infectivus*] infectious; capable of producing infection; pertaining to or characterized by the presence of pathogens.

infectivity (in-fek-tiv'i-te) infectiousness.

infecundity (in-fe-kun'di-te) [L. *infecunditas*] sterility or barrenness.

inherent (in-fer-ent) afferent.

inferior (in-fēr'e-or) [L. "lower"; neut. *inferius*] situated below, or directed downward; [NA] a term used in reference to the lower surface of an organ or other structure, or to the lower of two (or more) similar structures.

inferolateral (in-fer-o-lat'er-al) [L. *inferus* low + *latus* side] situated below and to one side.

inferomedian (in-fer-o-me'de-an) [L. *inferus* low + *medius* middle] situated in the middle of the under side.

inferoposterior (in-fer-o-pos-tēr'e-or) situated below and behind.

infertile (in-fer-til) not fertile; exhibiting infertility.

infertilitas (in-fer-til'i-tas) [L.] infertility.

infertility (in-fer-til'i-te) [L. *in* not + *fertilis* fruitful, prolific] diminished or absent capacity to produce offspring; the term does not denote complete inability to produce offspring as does *sterility*. Called also *relative sterility*. **primary i.**, infertility occurring in patients who have never conceived. **secondary i.**, infertility occurring in patients who have previously conceived.

infestation (in-fes-ta'shun) parasitic attack or subsistence on the skin and its appendages, as by insects, mites, or ticks; sometimes used to denote parasitic invasion of the tissues or organs, as by helminths. Cf. *infection*.

infibulation (in-fib-u-la'shun) [L. *infibulare* to buckle together] the act of buckling, or fastening as if with buckles, especially the ancient practice of fastening of the prepuce or labia majora with clasps or stitches to prevent copulation; called also *pharaonic circumcision*.

infiltrate (in-fil'trāt) 1. to penetrate the interstices of a tissue or substance. 2. material deposited by infiltration. **Assmann's tuberculous i.**, see under *focus*.

infiltration (in-fil-tra'shun) [L. *in* into + *filtration*] the diffusion or accumulation in a tissue or cells of substances not normal to it or in amounts in excess of the normal. Also, the material so accumulated. Cf. *degeneration*. **adipose i.**, fatty i. **calcareous i.**, a deposit of lime and magnesium salts in the tissues. **calcium i.**, a deposit of calcium salts within the tissues of the body. **cellular i.**, the migration and accumulation of cells within the tissues. **epituberculous i.**, a collateral hyperemia and inflammatory infiltration surrounding a tuberculous focus. **fatty i.**, 1. a deposit of fat in the tissues, especially between the cells. 2. the presence of fat vacuoles in the cytoplasm of cells, as occurs in fatty change in the liver, myocardium, and kidneys. **gelatinous i.**, gray i. **glycogen i.**, abnormal accumulations of glycogen within the cytoplasm of cells, as occurs in diabetes mellitus and the glycogen storage diseases. **gray i.**, a condition of the lungs in acute tuberculosis in which, after death, they assume a gray appearance; called also *gelatinous i.* **inflammatory i.**, that formed by an inflammatory exudation penetrating the interstices of a tissue. **lymphocytic i. of skin**, an abnormal accumulation of lymphocytes in the skin, characterized by asymptomatic, pink to reddish brown, flat, discoid papules which enlarge to form well-defined, slightly elevated, firm, erythematous plaques with a smooth surface and no follicular plugging; the lesions most frequently occur on the face, neck, and upper back of men, and persist for years. **paraneural i.**, paraneural anesthesia. **sanguineous i.**, infiltration with extravasated blood. **serous i.**, the abnormal presence of lymph in a tissue. **tuberculous i.**, the formation of a group or of groups of tuberculous cells and bacilli in a tissue. **urinous i.**, extravasation of urine into a tissue.

infirm (in-firm') [L. *infirmis*; in not + *firmus* strong] weak; feeble, as from disease or old age.

infirmary (in-fir'mah-re) [L. *infirmarium*] a hospital or place where sick or infirm persons are maintained or treated; commonly used to denote a space or a building set aside for the care of members of a group or community; a dispensary.

infirmity (in-fir'mi-tē) [L. *infirmitas*] 1. a feeble or weak state of the body or mind. 2. a disease or condition producing weakness.

inflammagen (in-flam'ah-jen) an irritant that elicits both edema and the cellular response of inflammation. Cf. *edemagen*.

inflammation (in'flah-ma'shun) [L. *inflammatio*; *inflammare* to set on fire] a localized protective response elicited by injury or destruction of tissues, which serves to destroy, dilute, or wall off (sequester) both the injurious agent and the injured tissue. It is characterized in the acute form by the classical signs of pain (dolor), heat (calor), redness (rubor), swelling (tumor), and loss of function (functio laesa). Histologically, it involves a complex series of events, including dilatation of arterioles, capillaries, and venules, with increased permeability and blood flow; exudation of fluids, including plasma proteins; and leukocytic migration into the inflammatory focus. **acute i.**, inflammation, usually of sudden onset, characterized by the classical signs (see *inflammation*), in which the vascular and exudative processes predominate.

adhesive i., that which promotes the adhesion of contiguous surfaces. **atrophic i.**, a form which results in atrophy and deformity. **catarrhal i.**, a form which affects principally a mucous surface, and which is marked by a copious discharge of mucus and epithelial debris. **chronic i.**, inflammation of slow progress and marked chiefly by the formation of new connective tissue; it may be a continuation of an acute form or a prolonged low-grade form, and usually causes permanent tissue damage. **cirrhotic i.**, atrophic i. **croupous i.**, a fibrinous inflammation leading to the formation of a false membrane. **diffuse i.**, one that is both interstitial and parenchymatous or is spread over a large area. **disseminated i.**, one that has a number of distinct foci. **exudative i.**, one in which the prominent feature is an exudate. **fibrinous i.**, one that is characterized by an exudate of coagulated fibrin. **fibroid i.**, atrophic i. **focal i.**, one that is confined to a single spot or to a few limited spots. **granulomatous i.**, an inflammation, usually chronic, characterized by the formation of granulomas; see also *granuloma*.

hyperplastic i., one which leads to the formation of new connective tissue fibers. **hypertrophic i.**, inflammation marked by increase in the size of the elements composing the affected tissue. **interstitial i.**, one that primarily affects the stroma of an organ. **metastatic i.**, one that is reproduced in a distant part by the conveyance of infectious material through the blood vessels and lymph organs. **necrotic i.**, inflammation attended by death of the affected tissue. **obliterative i.**, inflammation of the lining membrane of a cavity or vessel, producing adhesions between the surfaces and consequent obliteration of the lumen. **parenchymatous i.**, one that primarily affects the essential tissue elements of an organ. **plastic i.**, **productive i.**, **proliferous i.**, hyperplastic i. **pseudomembranous i.**, an acute inflammatory response to a powerful necrotizing toxin, such as the diphtheria toxin, characterized by the formation on a mucosal surface, most often in the pharynx, larynx, respiratory passages, and intestinal tract, of a false membrane composed of precipitated fibrin, necrotic epithelium, and inflammatory white cells. **purulent i.**, suppurative i. **sclerosing i.**, atrophic i. **seroplastic i.**, inflammation accompanied by both serous and plastic exudation. **serous i.**, one which produces an exudation of serum. **simple i.**, that in which there is no flow of pus or other product of inflammation. **specific i.**, one that is due to a particular microorganism. **subacute i.**, a condition intermediate between chronic and acute inflammation, exhibiting some of the characteristics of each. **suppurative i.**, one characterized by the formation of pus. **toxic i.**, one that is caused by a poison, such as a bacterial product. **traumatic i.**, one that is caused by an injury. **ulcerative i.**, that in which necrosis on or near the surface leads to loss of tissue and creation of a local defect (ulcer).

inflammatory (in-flam'ah-to're) pertaining to or characterized by inflammation.

inflation (in-fla'shun) [L. *in* into + *flare* to blow] 1. distention with air, gas, or a fluid. 2. the act of distending with air or with a gas.

inflator (in-fla'tor) an instrument for inflating any organ for therapeutic or diagnostic purposes.

inflection, inflexion (in-flek'shun) [L. *inflexio*; *in* in + *flectere* to bend] the act of bending inward or state of being bent inward, as of a limb.

inflorescence (in'flo-res'ens) the structure or arrangement of the flowers of a plant.

influenza (in'flu-en'zah) [Ital. "influenza"] an acute viral infection involving the respiratory tract, occurring in isolated cases, in epidemics, or in pandemics striking many continents simultaneously or in sequence. It is marked by inflammation of the nasal mucosa, the pharynx, and conjunctiva, and by headache and severe, often generalized myalgia. Fever, chills, and prostration are common. Involvement of the myocardium and of the central nervous system occur infrequently. A necrotizing bronchitis and interstitial pneumonia are prominent features of severe influenza and account for the susceptibility of patients to secondary bacterial pneumonia due to *Streptococcus pneumoniae*, *Haemophilus influenzae*, and *Staphylococcus aureus*. The incubation period

is one to three days and the disease ordinarily lasts for three to ten days. Influenza is caused by a number of serologically distinct strains of virus, designated A (with many subgroups), B, and C. See *influenza virus*, under *virus*. **i. A**, the most common variety of influenza caused by the type A strain of influenza virus; epidemics of this form occur at two- to three-year intervals. The causative strain is subject to wide variations in antigenic type, called antigenic shift, and outbreaks of influenza A caused by such antigenic types have been called *Asian i.*, *Spanish i.*, *Russian i.*, and so on. See *influenza virus*, under *virus*. **Asian i.**, a pandemic of influenza A occurring in 1957, thought to originate in China. **avian i.**, Newcastle disease. **i. B**, a variety of influenza caused by the type B strain of influenza virus; epidemics of this form occur at four- to five-year intervals. See *influenza virus*, under *virus*. **i. C**, a variety of influenza occurring sporadically and caused by the type C strain of influenza virus. See *influenza virus*, under *virus*. **endemic i.**, a disease resembling epidemic influenza, but less severe in character, occurring during the winter season; called also *influenza nostras*. **epidemic i.**, influenza occurring in localized outbreaks. **equine i.**, horse i. **feline i.**, a name loosely applied to any of a group of highly contagious viral infections of the respiratory tract in cats. **Hong Kong i.**, a pandemic of influenza A occurring in 1968, thought to originate in Hong Kong. **horse i.**, a highly contagious respiratory disease in horses which is caused by a virus. **intestinal i.**, popular name for an acute, transient diarrheal disease apparently of infectious origin. **laryngeal i.**, influenza in horses in which pharyngitis is the chief symptom. **i. lymphatica**, infectious mononucleosis. **i. nos'tras**, endemic influenza. **pandemic i.**, influenza occurring in waves that spread widely over the world at irregular intervals. **Russian i.**, a pandemic of influenza A occurring in 1978, thought to originate in the U.S.S.R. **Spanish i.**, a name given to the acute influenza-like disease, a pandemic of which passed over Europe and America during the summer and autumn of 1918. **summer i. of Italy**, phlebotomus fever. **swine i.**, a highly contagious disease of hogs caused by simultaneous infection with *Hemophilus influenzae* and a virus.

influenzal (in'flu-en'zal) pertaining to influenza.

infolding (in-fold'ing) 1. the folding inward of a layer of tissue, as in the formation of the neural tube in the embryo. 2. the enclosing of redundant tissue by suturing together the walls of the organ on either side of it.

informosome (in-for'mo-sōm) a name suggested for the combination of mRNA and protein found in the cytoplasm of eukaryotic cells.

infra- (in'frah) [L. *infra* beneath] a prefix meaning situated, formed, or occurring beneath the element indicated by the word stem to which it is affixed.

infra-axillary (in'frah-ak'sī-lār'e) below the axilla.

infrabulge (in'frah-bulj) the surfaces of a tooth gingival to the height of contour, or sloping cervically; cf. *suprabulge*.

infraclass (in'frah-klas) a taxonomic category sometimes established, subordinate to a subclass and superior to an order.

infraclavicular (in'frah-klah-vik'u-lar) beneath a clavicle.

infracclusion (in'frah-kloo'zhun) the condition in which the occluding surface of a tooth does not reach the normal occlusal plane and is out of contact with the opposing tooth.

infraconstrictor (in'frah-kon-strik'tor) the inferior constrictor of the pharynx.

infracortical (in'frah-kor'tī-kal) beneath the cortex, as of the brain.

infracostal (in'frah-kos'tal) [*infra-* + L. *costa* rib] below a rib or below the ribs.

infracotyloid (in'frah-kot'i-loid) beneath the cotyloid cavity or acetabulum.

infracture (in-frak'shun) [L. *in* into + *frac'tio* break] incomplete fracture of a bone without displacement of the fragments. **Freiberg's i.**, osteochondrosis of the head of the second metatarsal bone.

infradentale (in'frah-den-ta'le) a cephalometric landmark, being the highest anterior point on the gingiva between the mandibular medial (central) incisors.

infradian (in'frah-de'an, in-fra'de-an) [*infra-* + L. *dies* day] pertaining to a period of more than 24 hours; applied to the rhythmic repetition of certain phenomena in living organisms occurring in cycles of more than a day (infradian rhythm). Cf. *circadian* and *ultradian*.

infradiaphragmatic (in'frah-di'ah-frag-mat'ik) below the diaphragm.

infraduction (in'frah-duk'shun) the turning downward of a part, especially of the eye.

infraglenoid (in'frah-gle'noid) below the fossa of the glenoid cavity.

infraglottic (in'frah-glot'ik) below the glottis.

infrahyoid (in'frah-hi'oid) below the hyoid bone.

inframamillary (in'frah-mam'i-lār'e) below the nipple.

inframammary (in''frah-mam'ah-re) below the mammary gland.

inframandibular (in''frah-man-dib'u-lar) beneath the lower jaw.

inframarginal (in''frah-mar'jī-nal) situated below a margin or border.

inframaxillary (in''frah-mak'sī-lār'e) beneath the upper jaw (maxilla).

infranuclear (in''frah-nu'kle-ar) below a nucleus.

infraocclusion (in''frah-ō-kloo'zhun) infraclulsion.

infraorbital (in''frah-or'bi-tal) lying under or on the floor of the orbit.

infrapatellar (in''frah-pah-tel'ar) below the patella.

infraplacement (in''frah-plās'ment) infraclulsion.

infrapsychic (in''frah-si'kik) below the psychic level; automatic.

infrared (in-frah-red') denoting thermal radiation of wavelength greater than that of the red end of the visible spectrum, between the red waves and the radio waves, having wavelengths between 0.75 and 1000 μ m. Infrared rays emanating from tissues are the basis of thermography. **far i., long-wave i.,** infrared radiation of the longest wavelength, i.e., furthest from the visible spectrum (wavelength about 3.0 to 1000 μ m.). **near i., short-wave i.,** infrared radiation of the shortest wavelength, i.e., closest to the visible spectrum (wavelength about 0.75 to 3.0 μ m.).

infrascapular (in''frah-skap'u-lar) beneath the scapula.

infrasonic (in''frah-son'ik) below the frequency range of the waves normally perceived as sound by the human ear.

infraspinous (in''frah-spi'nus) beneath the spine of the scapula.

infrasternal (in''frah-ster'nal) below the sternum.

infratemporal (in''frah-tem'po-ral) below the temporal fossa.

infratentorial (in''frah-ten-to're-al) beneath the tentorium of the cerebellum.

infratonsillar (in''frah-ton'sī-lar) below the faucial tonsil.

infratracheal (in''frah-tra'ke-al) beneath the trachea.

infratrochlear (in''frah-trok'le-ar) beneath the trochlea.

infratubal (in''frah-tu'bal) beneath a tube.

infratubinal (in''frah-tur'bi-nal) the inferior turbinate bone.

infraumbilical (in''frah-um-bil'i-kal) beneath the umbilicus.

infraversion (in''frah-ver'zhun) [*infra-* + *version*] 1. downward deviation of an eye. 2. infraclulsion.

infriction (in-frik'shun) [L. *in* on + *frictio* rubbing] the rubbing of medicaments upon the skin.

infundibula (in''fun-dib'u-lah) [L.] plural of *infundibulum*.

infundibular (in''fun-dib'u-lar) of the nature of or resembling an *infundibulum*.

infundibulectomy (in''fun-dib'u-lek'to-me) excision of the *infundibulum* of the heart. **Brock's i.,** resection of the interior portion of the hypertrophied outflow tract of the right ventricle to assist in relief of pulmonary stenosis in tetralogy of Fallot.

infundibuliform (in''fun-dib'u-lī-form'') [L. *infundibulum* funnel + *forma* form] shaped like a funnel.

infundibuloma (in''fun-dib-u-lo'mah) a tumor of the *infundibulum* hypothalami.

infundibulopelvic (in''fun-dib'u-lo-pel'vik) pertaining to an *infundibulum* and a pelvis, as of the kidney.

infundibulum (in''fun-dib'u-lum), pl. *infundibula* [L. "funnel"] 1. a funnel-shaped passage; [NA] a general term for such a structure. Often used alone to refer to the *infundibulum* hypothalami and to the median eminence (of the hypothalamus). 2. NA alternative for *conus arteriosus*. **crural i., i. crura'le,** canalis femoralis. **ethmoidal i. of cavity of nose,** i. *ethmoidale cavi nasi*. **ethmoidal i. of ethmoid bone,** *infundibulum ethmoidale ossis ethmoidalis*. **i. ethmoida'le ca'vi na'si** [NA], a passage connecting the cavity of the nose with the anterior ethmoidal cells and the frontal sinus. **i. ethmoida'le os'sis ethmoida'lis** [NA], a variable sinuous passage extending upward from the middle nasal meatus through the ethmoidal labyrinth, communicating with the anterior ethmoidal cells and often with the frontal sinus. **i. of fallopian tube,** i. *tubae uterinae*. **i. of heart,** *conus arteriosus*. **i. hypothal'ami** [NA], i. *of hypothalamus*, a hollow, funnel-shaped mass in front of the tuber cinereum, which extends to the posterior lobe of the pituitary gland. Called also *hypophyseal stalk*. **infundibula of kidney,** *calices renales minores*. **i. na'si,** i. *of nose*, 1. *infundibulum ethmoidale cavi nasi*. 2. *infundibulum ethmoidale ossis ethmoidalis*. **i. pulmo'nis,** i. *pulmo'num*, any of the ductuli alveolares. **infundibula re'num,** *calices renales minores*. **i. tu'bae uteri'nae** [NA], *infundibulum of uterine tube*; the funnel-like dilation at the distal end of the uterine tube. **i. of urinary bladder,** *fundus vesicae urinariae*. **i. of uterine tube,** i. *tubae uterinae*.

infusible (in-fu'zi-bl') incapable of being melted.

infusion (in-fu'zhun) 1. [L. *infusio*; from *in* into + *fundere* to

pour] the steeping of a substance in water for obtaining its proximate principles. 2. [L. *infusum*, gen. *infusi*] the product of the process of steeping a drug for the extraction of its medicinal principles. 3. the therapeutic introduction of a fluid other than blood, as saline solution, into a vein. NOTE—An *infusion* flows in by gravity, an *injection* is forced in by a syringe, an *instillation* is dropped in, an *insufflation* is blown in, and an *infection* slips in unnoticed. **amniotic fluid i.,** a complication of labor in which rupture of the uterine venous sinuses permits the entrance of amniotic fluid into the maternal circulation. **cold i.,** the product of steeping a drug in cold water. **meat i.** (for bacteriological use), fresh lean meat free from fat is ground and extracted with water; the mixture is infused overnight in the refrigerator, gradually raised to the boiling point, and filtered. **saline i.,** introduction, either subcutaneously or intravenously, of saline solution.

infusodecoction (in-fu'so-de-kok'shun) a mixture of the infusion and the decoction of a substance.

Infusoria (in-fu-so're-ah) [L. pl., so called because found in *infusions*, after exposure to air] 1. Ciliophora. 2. a group of protozoa found in foul water and infusions of decaying organic matter.

infusoriotoxin (in-fu-so're-o-tok'sin) a toxin destructive to Infusoria (Ciliophora).

infusum (in-fu'sum) [L.] an infusion, def. 2.

ingesta (in-jes'tah) [L. pl., *in* into + *gerere* to carry] food and drink taken into the stomach.

ingestant (in-jes'tant) a substance that is or may be taken into the body by way of the mouth, or through the digestive system.

ingestion (in-jes'chun) the act of taking food, medicines, etc., into the body, by mouth.

ingestive (in-jes'tiv) pertaining to or affecting an ingestion.

ingluvies (in-gloo've-ēz) [L.] 1. the crop or crop of birds. 2. the first stomach (rumen) of ruminant animals.

Ingrassia's process (apophysis), wings (in-grah'se-ahs) [Giovanni Filippo Ingrassia, Italian anatomist, 1510–1580] see *ala minor ossis sphenoidalis*, and see *wings of sphenoid bone*, under *wing*.

ingravescent (in-grah-ves'ent) [L. *in* upon + *gravesco* to grow heavy] gradually increasing in severity.

ingrowth (in-grōth) an inward growth; something that grows inward or into. **epithelial i.,** a complication of intraocular surgery, most often cataract extraction, or of penetrating wounds of the cornea where wound healing is poor, in which epithelium proliferates through the wound into the anterior chamber, causing obstruction of the trabecula, and sometimes pupillary block, resulting in glaucoma. Called also *epithelial downgrowth*.

inguen (ing'gwen), pl. *in'guina* [L.] [NA] the groin; the junctional region between the abdomen and thigh.

inguina (ing'gwī-nah) [L.] plural of *inguen*.

inguinal (ing'gwī-nal) [L. *inguinalis*] pertaining to the inguen, or groin.

inguinoabdominal (ing'gwī-no-ab-dom'i-nal) pertaining to the groin and the abdomen.

inguinocrural (ing'gwī-no-kroo'ral) pertaining to the groin and the thigh.

inguinodinia (ing'gwī-no-din'e-ah) pain in the groin, a common symptom of hysteria.

inguinolabial (ing'gwī-no-la'be-al) pertaining to the groin and labium.

inguinoscrotal (ing'gwī-no-skro'tal) pertaining to the groin and the scrotum.

INH trademark (from *isonicotine hydrazine*) for preparations of isoniazid.

inhalant (in-ha'lant) a substance that is or may be taken into the body by way of the nose and trachea, or through the respiratory system. **antifoaming i.,** an agent inhaled as a vapor to prevent the formation of foam in the respiratory passages of a patient with pulmonary edema.

inhalation (in'hah-la'shun) [L. *inhalatio*] 1. the drawing of air or other substances into the lungs; see also under *anesthesia* and *therapy*. 2. any drug or solution of drugs administered (as by means of nebulizers or aerosols) by the nasal or oral respiratory route for local or system effect. **isoproterenol sulfate i.** [USP], a solution of isoproterenol hydrochloride in purified water made isotonic by the addition of sodium chloride; used as a bronchodilator administered by inhalation as an aerosol.

inhale (in-hāl') [L. *inhalare*] to take into the lungs by breathing.

inhaler (in-ha'ler) 1. an apparatus for administering vapor or volatilized remedies or anesthetics by inhalation. 2. an apparatus to prevent dust, smoke, noxious gases, or the like from entering the lungs, or to enable a person with affected lungs to breathe cold or damp air with less danger and discomfort. **Allis' i.,** an apparatus for administering ether, chloroform, or other highly volatile liquid anesthetics by the drop method. **ether i.,** an apparatus for administering the vapor of ether as an anesthetic. **H. H. i.,** an oxygen inhaler used in treating gassed patients;

named from the inventors, Henderson and Haggard. **Junker i.**, a bottle-like inhaler formerly used for administration of chloroform (1867).

inherent (in-hēr'ent) [L. *inhaerens* sticking fast] implanted by nature; intrinsic; innate.

inheritance (in-her'f-tans) 1. the acquisition of characters or qualities by transmission from parent to offspring. 2. that which is transmitted from parent to offspring. **alternative i.**, inheritance in which the characters are inherited from one parent. **amphigynous i.**, inheritance of characteristics from both parents. **biparental i.**, amphigynous i. **blending i.**, inheritance in which the characters of mother and father seem to blend in the offspring. **complemental i.**, inheritance of characters dependent on the presence of two independent pairs of nonallelic genes (complementary genes), both of which must be present before a given character can be expressed. **crisscross i.**, inheritance by offspring of characters from the parent of the opposite sex. **cytoplasmic i.**, transmission of characters dependent on self-perpetuating elements not nuclear in origin. **dominant i.**, see under *gene*. **duplex i.**, amphigynous i. **holandric i.**, inheritance carried only by males, as by genes on the Y chromosome. **hologynic i.**, inheritance carried only by females, as by genes on the X chromosome. **homochronous i.**, the inheritance of characteristics which appear in the offspring at the same age as they appeared in the parent. **homotropic i.**, the alleged inheritance of acquired characteristics. **intermediate i.**, inheritance in which the phenotype of the heterozygote falls between that of either homozygote. **maternal i.**, the transmission of characters that are dependent on peculiarities of the egg cytoplasm produced, in turn, by nuclear genes. **mendelian i.**, see *Mendel's law*, under *law*. **monofactorial i.**, the acquisition of a characteristic or quality, the transmission of which depends on a single gene. **multifactorial i.**, the acquisition of a characteristic or quality, the manifestation of which is subject to modification by a number of genes. **polygenic i.**, inheritance of quantitative characters, such as skin color, height, and intelligence in humans, which is dependent on the cumulative action of several or many different genes (polygenes or multiple factors), each of which produces a slight effect on the total condition; called also *quantitative i.* **quantitative i.**, polygenic i. **quasidominant i.**, inheritance in which there is direct transmission, generation to generation, of a recessive trait in populations in which the gene is frequent or inbreeding is intense; thus, although it is produced by the mating of a recessive homozygote with a heterozygote, the proportion of affected offspring resembles that in dominant inheritance. **recessive i.**, see under *gene*. **sex-linked i.**, see under *gene*. **supplemental i.**, inheritance of characters dependent on the presence of two independent pairs of nonallelic genes (supplementary genes) that interact in such a way that one gene supplements the action of the second gene. **unit i.**, inheritance in which the characters of the parents, instead of blending in the offspring, may reappear unchanged in a later generation.

inhibin (in-hib'in) a postulated nonsteroid testicular factor, believed to be a peptide, elaborated by the seminiferous tubules and thought to inhibit pituitary production of follicle-stimulating hormone.

inhibit (in-hib'it) to retard, arrest, or restrain.

inhibition (in'hī-bish'un) [L. *inhibere* to restrain; *in* in + *habere* to have] arrest or restraint of a process. In psychiatry, the unconscious restraining of an instinctual drive, as of the sex drive (by impotence or frigidity). **allosteric i.**, a form of enzyme inhibition; see under *site*. **competitive i.**, inhibition of enzyme activity in which the inhibitor (substrate analogue) competes with the substrate for binding sites on the enzymes; such inhibition is reversible, since it can be overcome by increasing the substrate concentration. Called also *selective i.* **contact i.**, the inhibition of cell division and cell motility in normal animal cells when in close contact with each other. **endproduct i.**, inhibition of an activity resulting from the effect of the endproduct of a biosynthetic process on an earlier step in the process. Called also *feedback i.* **enzyme i.**, inhibition of enzyme activity, as in competitive or endproduct inhibition. **false feedback i.**, inhibition of the initial steps of a process by an analogue of the endproduct of the specific process; see *endproduct i.* **feedback i.**, endproduct i. **noncompetitive i.**, inhibition of enzyme activity by inhibitors that combine with the enzyme on a site other than that utilized by the substrate; such inhibition may be irreversible. **proactive i.**, the interference of earlier learning in the retention of new learning; cf. *retroactive i.* **reciprocal i.**, the inhibition of one group of muscles on excitation of their antagonists, a phenomenon resulting from reciprocal innervation (q.v.). **reflex i.**, a condition in which a negative response is evoked by a stimulus. **retroactive i.**, the interference of new learning in the recall of earlier learning; cf. *proactive i.* **selective i.**, competitive i. **uncompetitive i.**, inhibition of enzyme activity in which the inhibitor combines with the enzyme and with the enzyme-substrate complex. **Wedensky i.**, a partial block to conduction in a nerve may transmit impulses at low frequencies but not at higher frequencies.

inhibitive (in-hib'f-tiv) inhibitory.

inhibitor (in-hib'f-tor) 1. any substance that interferes with a chemical reaction, growth, or other biological activity. 2. a chemical substance that acts to inhibit, or hold in check, the action of a tissue organizer or the growth of microorganisms. 3. a mechanical device for curing mouth breathing. **aldosterone i.**, an agent that blocks the action of aldosterone on the renal tubules. **cholesterol i.**, an agent that suppresses the production of cholesterol or decreases the level of cholesterol in the blood. **cholinesterase i.**, an agent that inhibits the action of cholinesterase. **mitotic i.**, a substance that slows or arrests the process of mitosis, e.g., colchicine.

inhibitory (in-hib'f-tor'e) [L. *inhibere* to restrain] restraining or arresting any process; effecting a stay or arrest, partial or complete.

inhibitrope (in-hib'f-trōp) one in whom certain stimuli tend to produce arrest of function.

inhomogeneity (in-ho'mo-jē-ne'f-te) lack of normal homogeneity.

inhomogeneous (in'ho-mo-je'ne-us) lacking homogeneity.

iniac (in'e-ak) pertaining to the inion.

iniad (in'e-ad) toward the inion.

inial (in'e-al) iniac.

iniencephalus (in'e-en-sef'ah-lus) a fetus exhibiting iniencephaly.

iniencephaly (in'e-en-sef'ah-le) [Gr. *inion* occiput + *enkephalos* brain] a developmental anomaly characterized by enlargement of the foramen magnum, and absence of the laminal and spinal processes of the cervical, dorsal, and sometimes lumbar vertebrae, with vertebrae reduced in number and irregularly fused, the brain and much of the cord occupying a single cavity.

inio- (in'e-o) [Gr. *inion* occiput] a combining form denoting relationship to the occiput.

iniodymus (in'e-od'f-mus) [*inio-* + Gr. *didymos* twin] iniopagus.

inion (in'e-on) [Gr. "the back of the head"] [NA] the most prominent point of the external occipital protuberance.

iniopagus (in'e-op'ah-gus) [*inio-* + Gr. *pagos* thing fixed] conjoined symmetrical twins fused at the occiput.

iniops (in'e-ops) [*inio-* + Gr. *ōps* eye] a double-faced monster with the posterior face incomplete.

initial (i-nish'al) [L. *initialis*, from *initium* beginning] pertaining to the very first stage of any process.

initis (in-i'tis) [Gr. *is*, *inos* fiber] inflammation of the substance of a muscle.

injectable (in-jek'tah-b'l) 1. capable of being injected. 2. a substance that may be injected.

injected (in-jekt'ed) 1. introduced by injection. 2. congested.

injectio (in-jek'she-o), pl. *injectio'nes* [L., from *in* into + *jacere* to throw] injection.

injection (in-jek'shun) [L. *injectio*] 1. the act of forcing a liquid into a part, as into the subcutaneous tissues, the vascular tree, or an organ. Cf. *infusion* (def. 3). 2. a substance so forced or administered. Officially, in pharmacy, a solution of a medicament suitable for injection. See also under specific substances. 3. the condition of being injected; congestion. **adrenal cortex i.**, a preparation containing a mixture of the endocrine principles derived from the cortex of adrenal glands; formerly used in treatment of adrenal insufficiency. **anatomical i.**, an injection into the vessels or organs of the cadaver, designed to facilitate dissection or demonstration. **Brown-Séquard i.**, injection of testicular extract. **circumcorneal i.**, dilatation of the ciliary and conjunctival blood vessels close to the limbus, and diminishing toward the periphery. **coarse i.**, an anatomical injection that fills only the larger vessels. **dextrose i.**, a sterile solution of dextrose in water for injection; used as a fluid and nutrient replenisher. **endermic i.**, intracutaneous i. **epifascial i.**, one made upon the surface of a fascia, particularly the fascia lata. **ethiodized oil i.** [USP], see under *oil*. **exciting i.**, sensitizing i. **fine i.**, an anatomical injection that fills even the smallest vessels. **fructose i.**, a sterile solution of fructose in water, used as a fluid and nutrient replenisher. **gaseous i.**, injection of gas or air for therapeutic purposes as in collapse therapy; for diagnostic purposes, as in ventriculography; or for facilitating anatomical demonstrations. **gelatin i.**, a preservative injection of which gelatin is the base. **hypodermic i.**, an injection made into the subcutaneous tissues; called also *subcutaneous i.* **intracutaneous i.**, **intra-dermal i.**, **intra-dermic i.**, one made into the corium or substance of the skin. **intra-muscular i.**, an injection into the substance of a muscle. **intra-thecal i.**, injection of a substance through the theca of the spinal cord into the subarachnoid space. **intravascular i.**, an injection made into a vessel. **intravenous i.**, an injection made into a vein. **iodinated I 125 albumin i.** [USP], a sterile, buffered isotonic solution containing not less than 10 mg. of radioiodinated normal human albumin per liter, and adjusted to provide not more than 1 millicurie of radioactivity per milliliter, used as a diagnostic aid in determining blood volume and cardiac output. **iodinated I 131 albumin i.** [USP], a sterile aque-

ous suspension of albumin human iodinated with ^{131}I and denatured to produce aggregates of controlled particle size; each ml. contains 300 μg of aggregated albumin with specific activity of 200 microcuries to 1.2 millicuries per mg. **iron dextran i.** [USP], a sterile colloidal solution of ferric hydroxide in complex with partially hydrolyzed dextran of low molecular weight, in water for injection; used as a hematinic. **iron sorbitex i.** [USP], a sterile solution of a complex of iron, sorbitol, and citric acid that is stabilized with the aid of dextrin and an excess of sorbitol; used as an hematinic. **jet i.**, injection of a drug in solution through the intact skin by an extremely fine jet of the solution under high pressure. **opacifying i.**, the injection of a radiopaque substance into the vessels or into some body cavity for diagnostic radiological study. **oxytocin i.** [USP], a sterile solution in water of an oxytocic principle prepared by synthesis or obtained from the posterior lobe of the pituitary gland of domestic animals that are used for food by man; used to stimulate contraction of smooth muscle, particularly the pregnant uterus. **paraperiosteal i.**, the production of local anesthesia by deposition of a local anesthetic solution close to the periosteum; the solution is then free to diffuse through the cortical bony plate and anesthetize the larger terminal nerve fibers. **parathyroid i.** [USP], a sterile solution of water-soluble principles of the parathyroid glands, administered intramuscularly to maintain the level of calcium in the blood; called also *parathyroid extract*. **parenchymatous i.**, one made into the substance of an organ. **posterior pituitary i.** [NF], a sterile solution in water of the principles from the posterior lobe of the pituitary of domestic animals that are used for food by man; used as an oxytocic, in the treatment of diabetes insipidus, and to stimulate intestinal peristalsis. **preparatory i.**, sensitizing i. **preservative i.**, an injection that serves to protect a cadaver or specimen from decay. **protamine sulfate i.** [USP], a sterile isotonic solution prepared from the sperm or from the mature testes of fish belonging to the genus *Oncorhynchus*, *Salmo*, or *Trutta*; used to counteract the action of heparin. **protein hydrolysate i.** [USP], a sterile solution of amino acids and short-chain peptides, used as a fluid and nutrient replenisher. **Ringer's i.** [USP], a sterile solution of sodium chloride, potassium chloride, and calcium chloride in water for injection, given as a fluid and electrolyte replenisher by intravenous infusion. **Ringer's i., lactated** [USP], a sterile solution of calcium chloride, potassium chloride, sodium chloride, and sodium lactate in water for injection, given as a fluid and electrolyte replenisher by intravenous infusion. **Schlösser i.**, see under *treatment*. **sclerosing i.**, the injection into a blood vessel of material (e.g., sodium citrate) which will tend to obliterate the vessel; used in varicose veins, angioma, etc. **sensitizing i.**, the first injection of sensitizing antigen. **sodium chloride i.** [USP], a sterile isotonic solution of sodium chloride in water for injection, used as a fluid and electrolyte replenisher and as an irrigating solution. It is also used as a vehicle for the injection of medications. **sodium pertechnetate Tc 99m i.** [USP], a sterile solution containing radioactive technetium (^{99m}Tc) in the form of sodium pertechnetate and sufficient sodium chloride to make the solution isotonic. **sodium radiochromate i.**, sodium chromate Cr 51 i. **subcutaneous i.**, hypodermic i. **technetium Tc 99m albumin aggregated i.** [USP], see under *technetium*. **vasopressin i.** [USP], a sterile solution in water for injection of the water-soluble, pressor principle of the posterior lobe of the pituitary of healthy domestic animals that are used as food by man; used as an antidiuretic.

injector (in-jek'tor) [L. *injicere* to inject] an instrument used in making injections.

injury (in'ju-re) [L. *injuria*; in not + *jus* right] harm or hurt; a wound or maim. Usually applied to damage inflicted to the body by an external force. **birth i.**, impairment of body function or structure due to adverse influences to which the infant has been subjected at birth. **blast i.**, see *blast*, def. 3. **deceleration i.**, an injury sustained by sudden deceleration in the movement of the body, as in a motor vehicle accident; the brain is especially liable to such trauma. **egg-white i.**, biotin deficiency; see *biotin*. **Goyrand's i.**, pulled elbow. **steering-wheel i.**, injury to the chest and sometimes contusion of the heart in motorists, caused by being thrown forward against the steering wheel. **whiplash i.**, a nonspecific term applied to injury to the spine and spinal cord at the junction of the fourth and fifth cervical vertebrae, occurring as the result of rapid acceleration or deceleration of the body. Because of their greater mobility, the four upper vertebrae act as the lash, and the lower three act as the handle of the whip.

inlay (in'la) material laid into a defect in tissue. In dentistry, a filling that is made outside the tooth to correspond with the form of a cavity and then cemented into the tooth. **cast i.**, gold i. **epithelial i.**, a method of securing epithelialization of an unhealed deep wound. A mold of the wound cavity is taken and covered with a Thiersch graft of epidermis, the whole being inserted into the wound cavity, and the edges then approximated with sutures. The mold is removed after ten days, leaving the cavity completely epithelialized. Called also *Esser's operation*. See also under *onlay*. **gold i.**, one made of gold or of a gold alloy. **porcelain i.**, an inlay made of porcelain.

inlet (in'let) an avenue of ingress. **pelvic i.**, the superior aperture of the minor pelvis, bounded by the crest and pecten of the pubic bones, the arcuate lines of the ilia, and the anterior margin of the base of the sacrum; called also *apertura pelvis superior* [NA].

I.N.N. International Nonproprietary Names, the nonproprietary designation recommended by the World Health Organization for any pharmaceutical preparation. Such names are selected according to general principles set forth by the World Health Organization, and lists are published periodically in the *WHO Chronicle*.

innate (in'nāt) [L. *in* in + *nasci* to be born] inborn; hereditary; congenital.

innervation (in'er-va'shun) [L. *in* into + *nervus* nerve] 1. the distribution or supply of nerves to a part. 2. the supply of nervous energy or of nerve stimulus sent to a part. **double i.**, innervation of a structure by two kinds of nerve fibers, e.g., sympathetic and parasympathetic. **reciprocal i.**, the innervation of muscles around the joints, where the motor centers are so connected in pairs that when one is excited the center of the corresponding antagonist is inhibited.

innidiation (i-nid'e-a'shun) [L. *in* into + *nidus* nest] the development of cells in a part to which they have been carried by metastasis; called also *colonization* and *indenzation*.

innocent (in'o-sent) [L. *innocens*; in not + *nocere* to harm] not malignant; benign; not tending of its own nature to a fatal issue.

innocuous (i-nok'u-us) harmless.

innominate (i-nom'i-na'tal) pertaining to the innominate (brachiocephalic) artery or to the innominate (hip) bone.

innominate (i-nom'i-nāt) [L. *innominatus* nameless; in not + *no-men* name] not having a name; nameless. The term has been applied to certain structures better identified by their descriptive names, as the innominate (brachiocephalic) artery and the innominate (hip) bone.

Innovar (in'o-var) a trademark for a preparation of droperidol and fentanyl citrate in a 50:1 ratio; used as a neuroleptanalgesic.

innocuous (i-nok'shus) [L. *in* not + *noxius* harmful] not injurious; not hurtful.

innutrition (in'nu-trish'un) want of nutrition.

ino- (in'o) [Gr. *is*, *inos* fiber] a combining form denoting relationship to a fiber, or fibrous material.

inoblast (in'o-blast) [*ino-* + Gr. *blastos* germ] any connective tissue cell in the formative stage.

inoccipitia (in-ok'si-pit'e-ah) absence or deficiency of the occipital lobe of the brain.

inochondritis (in'o-kon-dri'tis) [*ino-* + Gr. *chondros* cartilage + *-itis*] inflammation of a fibrocartilage.

inocula (in-ok'u-lah) [L.] plural of *inoculum*.

inoculability (i-nok'u-lah-bil'i-te) the quality or state of being inoculable.

inoculable (i-nok'u-lah-b'l) 1. susceptible of being inoculated; transmissible by inoculation. 2. not immune against a disease transmissible by inoculation.

inoculate (i-nok'u-lāt) to communicate a disease by inserting its etiologic agent; to implant microbes or infective materials in or on culture media; to introduce immune serum, vaccines of various kinds, and other antigenic materials for preventive, curative, or experimental purposes.

inoculation (i-nok'u-la'shun) [L. *inoculatio*, from *in* into + *oculus* bud] introduction of microorganisms, infective material, serum, and other substances into tissues of living plants and animals, or culture media; introduction of a disease agent, e.g., vaccine virus, into a healthy individual to produce a mild form of the disease followed by immunity. **curative i.**, the injection of a preparation (e.g., a biological preparation such as antiserum) for curative purposes. **protective i.**, the injection of a biological preparation, e.g., a vaccine or an antiserum, to protect against a disease; vaccination against a disease.

inoculum (i-nok'u-lum), pl. *inoc'ula* [L.] the substance used in inoculation.

inocyte (in'o-sit) [*ino-* + *-cyte*] a cell of fibrous tissue.

inogen (in'o-jen) [*ino-* + Gr. *gennan* to produce] a hypothetical substance of the muscular tissue, the sudden breaking up of which was once supposed to cause muscular contraction.

inogenesis (in'o-jen'ē-sis) the formation of fibrous tissue.

inogenous (in-oj'ē-nus) produced from or producing fibrous tissue.

inoglia (in-og'le-ah) [*ino-* + Gr. *glia* glue] fibrogia.

inohymenitis (in'o-hi'mē-ni'tis) [*ino-* + Gr. *hymēn* membrane + *-itis*] inflammation of any fibrous membrane.

inolith (in'o-lith) [*ino-* + Gr. *lithos* stone] a fibrous concretion.

inomyositis (in'o-mi'o-si'tis) fibromyositis.

inoperable (in-op'er-ah-b'l) not suitable to be operated upon.

inophragma (in'o-frag'mah) [*ino-* + Gr. *phragmos* a fencing in] ground membrane; a name given to the Z band and M band (q.v. under *band*) because they continue uninterruptedly as transverse

membranes through all the adjoining fibrils of a muscle fiber. See *mesophragma* and *telophragma*.

inorganic (in'or-gan'ik) [*in-* not + *organic*] 1. having no organs. 2. not of organic origin. 3. pertaining to substances not of organic origin. 4. in chemistry, denoting substances not derived from hydrocarbons.

inosclerosis (in'o-skle-ro'sis) [*ino-* + Gr. *sklēros* hard] sclerosis or induration by increase of fibrous tissue.

inoscopy (in-os'ko-pe) [*ino-* + Gr. *skopein* to examine] the diagnosis of disease by artificial digestion and examination of the fibers or fibrinous matter of the sputum, blood, effusions, etc.

inosculate (in-os'ku-lāt) [*L. in* into + *osculum* little mouth] to unite or communicate by means of small openings or anastomoses.

inosculation (in-os'ku-la'shun) the establishment of communication, by means of small openings or anastomoses, applied especially to establishment of such communication between already existing blood vessels or other tubular structures that come in contact.

inose (in'ōs) inositol.

inosemia (in'o-se'me-ah) [*ino-* + Gr. *haima* blood + *-ia*] 1. an excess of fibrin in the blood. 2. the presence of inose (inositol) in the blood.

inosinate (in-o'sī-nāt) a salt of inosinic acid.

inosine (in'o-sin) a nucleoside, $C_{10}H_{12}O_5N_4$, resulting from the cleavage of inosinic acid or from deamination of adenosine; it is a compound of hypoxanthine and ribose. **i. monophosphate**, inosinic acid; see under *acid*.

inosite (in'o-sit) inositol.

inositis (in'o-si'tis) [*ino-* + *-itis*] inflammation of fibrous tissue.

inositol (in-o'sī-tol) 1. any of the stereoisomeric forms of inositol, especially *myo*-inositol (see def. 2). 2. chemical name: *myo*-inositol. A sugar-like vitamin of the B complex, $C_6H_{12}O_6$, which is found in many plant and animal tissues and has been synthesized. It is concerned in the growth of yeast, promotes growth of several species of bacteria, and is curative of mouse alopecia, and may have lipotropic activity; called also *antialopecia factor* and *meso-inositol*. **i. niacinate**, a peripheral vasodilator, $C_{42}H_{30}N_6O_{12}$.

inositoluria (in'o-si'tol-u're-ah) inositoria.

inositoria (in'o-si-tu're-ah) [*inosite* + Gr. *ouron* urine + *-ia*] the occurrence of inositol in the urine, as in diabetes inositus; called also *inosuria*.

inostosis (in'os-to'sis) the re-formation of bony tissue to replace such tissue which has been destroyed.

inosuria (in'o-su're-ah) 1. an excess of fibrin in the urine. 2. inositoria.

intagma (in'o-tag'mah) [*ino-* + Gr. *tagma* arrangement] a linear arrangement of the contractile structural elements of a muscle cell.

intropic (in'o-trop'ik) [*ino-* + Gr. *trepein* to turn or influence] affecting the force or energy of muscular contractions. **negatively i.**, weakening the force of muscular contraction. **positively i.**, increasing the strength of muscular contraction.

intropism (in-ot'ro-pizm) the quality of influencing the contractility of muscle fibers.

in ovo (in'o'vo) [*L.*] in the egg; referring specifically to various experimental procedures involving the use of chick embryos.

inquest (in'kwēst) [*L. in* into + *quaerere* to seek] a legal inquiry before a coroner or medical examiner, and usually a jury, into the manner of a death.

inquiline (in'kwī-lin) [*L. inquilinus* a lodger] an organism that lives within the body of another, but does not derive its nourishment from the host.

inructation (in'ruk-ta'shun) abnormal and noisy swallowing of air.

insalivation (in'sal-ī-va'shun) [*L. in* in + *saliva* spittle] the saturation of the food with saliva in mastication.

insalubrious (in'sah-lu'bre-us) not salubrious; not conducive to health.

insane (in-sān') [*L. in* not + *sanus* sound] mentally deranged. See *insanity*.

insanitary (in-san'ī-ter-e) not in a good sanitary condition; not conducive to good health; unclean.

insanity (in-san'ī-te) [*L. insanitas*, from *in* not + *sanus* sound] mental derangement or disorder. The term is a social and legal rather than a medical one, and indicates a condition which renders the affected person unfit to enjoy liberty of action because of the unreliability of his behavior with concomitant danger to himself and others. **affective i.**, affective psychosis. **alcoholic i.**, alcoholic psychosis. **alternating i.**, manic-depressive psychosis. **anticipatory i.**, that which appears in a patient at an earlier age than that at which it attacked the parent. **choreic i.**, Huntington's chorea. **circular i.**, see under *psychosis*. **climacteric i.**, involutional melancholia. **communicated i.**, folie à deux. **compound i.**, the concurrence of two or more forms of insanity. **compulsive i.**, insanity in which the patient is completely dominated by impulse or obsessions.

consecutive i., that which follows some neurosis or other disease. **cyclic i.**, circular psychosis. **doubting i.**, insanity characterized by morbid doubt, suspicion, and indecision. **emotional i.**, affective psychosis. **homicidal i.**, insanity marked by a desire to take human life. **homochronous i.**, that which appears in the patient at the same age at which it appeared in the patient's father or mother. **hysterical i.**, anxiety hysteria. **impulsive i.**, a compelling tendency to acts of violence. **manic-depressive i.**, manic-depressive psychosis. **moral i.**, that which is marked by impairment of the moral sense, as in moral idiocy and moral imbecility; called also *moral oligophrenia*, *pathomania*, and *Ray's mania*. **perceptual i.**, a form marked by hallucinations and illusions. **periodic i.**, that which recurs at regular intervals. **polyneuritic i.**, Korsakoff's psychosis. **primary i.**, any insanity not known to be consequent upon some previous attack or disease. **puerperal i.**, see under *psychosis*. **recurrent i.**, mental aberration with lucid intervals. **senile i.**, senile psychosis. **simultaneous i.**, folie à deux. **toxic i.**, toxic psychosis.

inscriptio (in-skríp'she-o), pl. *inscriptio'nes* [*L.*, from *in* upon + *scribere* to write] inscription. **i. tendin'ea**, intersectio tendinea. **inscriptio'nes tendin'ea mus'culi recti abdom'inis**, intersectiones tendineae musculi recti abdominis.

inscription (in-skríp'shun) [*L. inscriptio*] 1. a mark, or line. 2. that part of a prescription which contains the names and amounts of the ingredients. **tendinous i.**, intersectio tendinea. **tendinous i's of rectus abdominis muscle**, intersectiones tendineae musculi recti abdominis.

inscriptiones (in-skríp'she-o'nēs) [*L.*] plural of *inscriptio*.

insect (in'sekt) any individual of the class Insecta.

Insecta (in-sek'tah) [*L.* from *in* + *sectum* cut] a class of the Arthropoda whose members are characterized by division into three parts: head, thorax, and abdomen; there are three orders of medical interest, Hemiptera, Diptera, and Siphonaptera.

insectarium (in'sek-ta're-um) a place for breeding and raising insects.

insecticide (in-sek'ti-sid) [*L. insectum* insect + *caedere* to kill] any substance selectively poisonous to insects.

insectifuge (in-sek'ti-fūj) [*insect* + *L. fugare* to put to flight] a preparation that repels insects.

Insectivora (in'sek-tiv'o-rah) [*insect* + *L. vorare* to devour] an order of small, terrestrial mammals, including moles, shrews, etc., which feed primarily on invertebrates, especially on insects.

insectivore (in-sek'ti-vōr) an individual of the order Insectivora.

insectivorous (in'sek-tiv'o-rus) subsisting on insects.

insemination (in-sem'ī-na'shun) [*L. inseminatus* sown, from *in* into + *semen* seed] the deposit of seminal fluid within the vagina or cervix. **artificial i.**, introduction of semen into the vagina or cervix by artificial means. **donor i.**, heterologous **i.**, artificial insemination in which the semen used is that of a man other than the woman's husband; called also A.I.D. **homologous i.**, artificial insemination in which the husband's semen is used; called also A.I.H.

insenescence (in'sē-nes'ens) the process of growing old.

insensible (in-sen'sī-b'l) [*L. in* not + *sensibilis* appreciable] 1. not appreciable by or perceptible to the senses. 2. devoid of consciousness or of sensibility.

insert (in'sert) 1. to implant. 2. something that is implanted. **intramucosal i.**, a nonreactive metal device affixed to the tissue-borne surface of a denture that offers added retentive qualities to the denture; it consists of a base, a cervix, and a head.

insertio (in-ser'she-o) [*L.*] insertion. **i. velamento'sa**, velamentous insertion.

insertion (in-ser'shun) [*L. insertio*, from *in* into + *serere* to join] 1. the act of implanting, or the condition of being implanted. 2. the place of attachment, as of a muscle to the bone which it moves. **parasol i.**, insertion of the umbilical cord in the placenta, in which the vessels of the cord separate before they join the placenta and resemble the ribs of a parasol. **velamentous i.**, attachment of the umbilical cord to the membranes, with the vessels coursing for a long or short distance between the amnion and the chorion to the body of the placenta.

insheathed (in-shēthd') enclosed within a sheath.

insidious (in-sid'e-us) [*L. insidiosus* deceitful, treacherous] coming on in a stealthy manner; of gradual and subtle development.

insight (in'sīt) 1. in psychiatry, the patient's awareness of his illness, ranging from partial recognition that his symptoms are abnormal to more thorough understanding of the origin, nature, and mechanisms of his attitudes and behavior; self-understanding. 2. in problem solving, the sudden perception of the appropriate relationships of things that results in a solution.

in situ (in si'tu) [*L.*] in the natural or normal place; confined to the site of origin without invasion of neighboring tissues.

insolation (in'so-la'shun) [*L. insolare* to expose to the sun; *in* in + *sol* sun] 1. treatment by exposure to the sun's rays; the sun bath. 2. sunstroke. **asphyxial i.**, sunstroke with low tem-

perature, cold skin, and feeble pulse. **hyperpyrexial i.**, thermic fever with very high temperature, coma, and congested skin.

insoluble (in-sol'u-b'l) [L. *insolubilis*, from *in* not + *solvere* to dissolve] not susceptible of being dissolved.

insomnia (in-som'ne-ah) [L. *in* not + *somnus* sleep + *-ia*] inability to sleep; abnormal wakefulness.

insomniac (in-som'ne-ak) an individual exhibiting insomnia.

insomnic (in-som'nik) characterized by insomnia; unable to sleep.

insonate (in-so'nāt) to expose to ultrasound waves.

insorption (in-sorp'shun) the movement of a substance into the blood; said of such movement from the contents of the gastrointestinal tract into the circulating blood.

inspection (in-spek'shun) [L. *inspectio*, *inspicere* to behold] examination by the eye.

inspectionism (in-spek'shun-izm) voyeurism.

inspersion (in-sper'zhun) [L. *inspersio*; *in* upon + *spargere* to sprinkle] the act of sprinkling, as with a powder.

inspire (in'spī-rāt) inhaled gas (or air).

inspiration (in'spī-ra'shun) [L. *inspirare*, from *in* in + *spirare* to breathe] the act of drawing air into the lungs.

inspirator (in'spī-ra'tor) [L.] (*obs.*) a form of inhaler or respirator.

inspiratory (in-spi'rah-to're) pertaining to or subserving inspiration.

inspirium (in-spi're-um) [L.] an inspiration.

inspirometer (in'spi-rom'ē-ter) [*inspire* + Gr. *metron* measure] an apparatus for measuring the amount of air inspired.

inspissated (in-spis'āt-ed) [L. *inspissatus*, from *in* intensive + *spissare* to thicken] being thickened, dried, or rendered less fluid.

inspissation (in'spis-sa'shun) [L. *inspissatio*] 1. the act or process of rendering dry or thick by the evaporation of readily vaporizable parts. 2. the condition of being rendered less thin by evaporation.

inspissator (in-spis'a-tor) an apparatus for inspissating fluids, such as blood serum.

instar (in'stahr) [L. "a form"] any stage of an arthropod between molts.

instep (in'step) the dorsal part of the arch of the foot.

instillation (in'stil-la'shun) [L. *instillatio*, from *in* into + *stillare* to drop] administration of a liquid drop by drop.

instillator (in'stil-la'tor) an instrument for performing instillations.

instinct (in'stinkt) [L. *instinctus*; *in* on + *stingere* to prick] a complex of unlearned responses that is characteristic of species.

death i., in psychoanalysis, the latent instinctive impulse toward death, a controversial concept in Freud's later work. **ego i.**, any instinct that is not sexual, particularly the self-preservative instincts. **herd i.**, the instinct or urge to be one of a group and to conform to the standards of that group in conduct and opinion. **mother i.**, the complex behavior in a mother which accomplishes the care of the young; whether such an instinct exists at the human level is uncertain.

instinctive (in-stink'tiv) of the nature of an instinct; performed apparently without the exercise of the reason.

institutes (in'stī-tūts) [L. *institutum* established regulation] established or fundamental principles. **i. of medicine**, the fundamental principles of medical science; especially physiology, pathology, and the kindred branches of medical education.

instrument (in'stroo-ment) [L. *instrumentum*; *instruere* to furnish] any tool, appliance, or apparatus. **Feleky's i.**, one used for massaging the prostate.

instrumental (in'stroo-men'tal) pertaining to or performed by instruments.

instrumentarium (in'stroo-men-ta're-um) the instruments or equipment required for any particular operation or purpose; the physical adjuncts with which a physician combats disease.

instrumentation (in'stroo-men-ta'shun) the use of instruments; work performed with instruments.

insuccation (in'sū-ka'shun) [L. *insuccare* to soak in; *in* into + *succus* juice] the thorough soaking of a drug before preparing an extract from it.

insudation (in'su-da'shun) [*in* + L. *sudare* to sweat] 1. the accumulation, as in the kidney or the arterial (intimal) wall, of substances derived from the blood. 2. the substance so accumulated.

insufficiency (in'sū-fish'en-se) [L. *insufficiencia*, from *in* not + *sufficiens* sufficient] the condition of being insufficient or inadequate to the performance of the allotted duty. **active i.**, the inability of a muscle to act owing to the abnormal (or other) approximation of its insertion to its origin. **adrenal i.**, hypoadrenalism. **aortic i.**, see under *regurgitation*. **capsular i.**, hypoadrenalism. **cardiac i.**, insufficiency of the heart muscle; see also *heart failure*. **coronary i.**, decrease in flow of blood

through the coronary blood vessels. **i. of the externi**, insufficient power in the externi muscles of the eye, so that they are overbalanced by the interni, producing esophoria. **i. of the eyelids**, a condition in which the eyes are closed only by a consciousness effort. **gastric i.**, **gastromotor i.**, inability of the stomach to empty itself; myasthenia gastrica. **hepatic i.**, inability of the liver properly to perform its functions. **ileocele i.**, inability of the ileocecal valve to prevent backflow of contents from the cecum into the ileum. **i. of the interni**, insufficient power in the interni muscles of the eye, so that they are overbalanced by the externi, producing exophoria. **mitral i.**, see under *regurgitation*. **muscular i.**, the inability of a muscle to do its normal work by a normal contraction. **myocardial i.**, insufficiency of the heart muscle; see also *heart failure*. **parathyroid i.**, hypoparathyroidism. **placental i.**, inability of the placenta to properly perform its functions, which compromises the fetal environment so that the fetus is in jeopardy. **pulmonary i.**, see *pulmonic regurgitation*, under *regurgitation*. **renal i.**, a state of disordered function of the kidneys verifiable by quantitative tests. See also *renal failure*, under *failure*. **thyroid i.**, hypothyroidism. **tricuspid i.**, see under *regurgitation*. **uterine i.**, weakness of the contractile power of the uterus, due to muscular atony. **i. of the valves**, **valvular i.**, see under *regurgitation*. **velopharyngeal i.**, failure of closure of the velopharyngeal portal, due to cleft palate, muscular dysfunction, etc., resulting in defective speech. **venous i.**, inadequacy of the venous valves and impairment of venous return (venous stasis) from the legs, often with edema and sometimes with stasis ulcers at the ankle. **vertebrobasilar i.**, transient ischemia of the brain stem and cerebellum due to stenosis of the vertebral or basilar artery, resulting in attacks of such symptoms as vertigo, diplopia, nystagmus, muscle weakness, and dysarthria.

insufficiencia (in'sū-fish'en-she-ah) [L.] insufficiency.

insufflation (in'sū-fla'shun) [L. *in* into + *sufflatio* a blowing up] 1. the act of blowing a powder, vapor, gas, or air into a body cavity. Cf. *infusion* (def. 3). 2. finely powdered or liquid drugs carried into the respiratory passages by such devices as aerosols. **cranial i.**, the forcing of air into the subdural space and the cerebral ventricles. **endotracheal i.**, introduction of air into the trachea through a tube passed into the larynx; employed to inflate the lungs during intrathoracic operations. **i. of the lungs**, the act of blowing air into the lungs for the purpose of artificial respiration. **perirenal i.**, the injection of air around the kidneys for the purpose of roentgen visualization of the adrenal glands. **presacral i.**, the injection of gas, usually carbon dioxide, around the kidneys through a needle inserted into the retrorectal space for the purpose of roentgen visualization of the entire retroperitoneal space, with delineation of renal and adrenal areas. **tubal i.**, see *Rubin's test*, under *test*.

insufflator (in'sū-fla'tor) an instrument used in performing insufflation.

insula (in'su-lah), pl. *insulae* [L. "island"] [NA] a triangular area of the cerebral cortex which forms the floor of the lateral cerebral fossa; it is covered over and hidden from view by the juxtaposition of the opercula, which thus forms the lateral sulcus. Called also *insula* or *island of Reil*. **insulae of Peyer**, folliculi lymphatici aggregati. **i. of Reil**, **i. Rei'lii**, *insula*.

insulae (in'su-le) [L.] plural of *insula*.

insular (in'su-lar) pertaining to an island, especially to the insula or to the islands of Langerhans.

insularine (in'su-lar-in) a yellow amorphous alkaloid, C₃₇H₃₈O₆N₂, from *Cissampelos insularis*.

insular-pancreatotropic (in'su-lar-pan'kre-ah-to-trop'ik) having affinity for or a stimulating action on the islands of Langerhans in the pancreas.

insulation (in'sū-la'shun) [L. *insulare* to make an island of] 1. the surrounding of a space or body with material designed to prevent the entrance or escape of radiant or electrical energy. 2. the material so used.

insulator (in'su-la'tor) any substance or appliance of such non-conducting properties that it can be used to secure insulation.

insulin (in'su-lin) [L. *insula* island (of the pancreas) + *-in*] a double-chain protein hormone formed from proinsulin in the beta cells of the pancreatic islets of Langerhans. The major fuel-regulating hormone in humans, it is secreted into the blood in response to a rise in concentration of glucose in the blood and also to a rise in amino acid concentration. Insulin promotes the storage of glucose in the liver, skeletal muscle, and adipose tissue, promotes the uptake of amino acids by skeletal muscle, increases protein synthesis, accelerates lipid synthesis, and inhibits lipolysis and gluconeogenesis. A sterile solution of this hypoglycemic principle of the pancreas (regular insulin), prepared in accordance with USP standards, containing 40, 80, 100, and 500 USP insulin units per milliliter, and suitable for intravenous and intramuscular injection, is used in the treatment of diabetes mellitus. **dalanated i.**, an insulin derivative prepared by the removal of the C-terminal alanine from the B chain of insulin. **globin i.**, a combination of insulin with the globin of erythrocytes; in rapidity of onset and duration of action it seems to be midway between insulin and protamine zinc insulin. **globin zinc i.**,

an intermediate-acting insulin consisting of insulin modified by the addition of zinc chloride and globin, the latter obtained from beef blood. The USP preparation, suitable for injection, contains 40, 80, or 100 USP insulin units per ml; administered subcutaneously in the treatment of diabetes mellitus. **isophane i.**, see under *suspension*. **i. lente**, insulin zinc suspension; see under *suspension*. **neutral i.**, a neutral, buffered solution of insulin obtained from pigs. **NPH i.**, isophane insulin suspension; see under *suspension*. **plant i.**, glucokinase. **protamine i., i. protaminated**, insulin precipitated from a solution of insulin hydrochloride with a monoprotonated compound and suitably buffered; it is more slowly absorbed than ordinary insulin and its action is correspondingly prolonged. **protamine zinc i.**, see under *suspension*. **regular i.**, the active principle of the pancreas of slaughterhouse animals (cattle or swine), used in sterile acidified solution. See *insulin*. **semilente i.**, prompt-acting insulin suspension. **i. tannate**, a salt of insulin claimed to have certain advantages over regular insulin. **three-to-one i.**, a combination of regular insulin and protamine zinc insulin, having the activity of three parts of the former and one part of the latter. **ultralente i.**, extended-action insulin suspension. **vegetable i.**, glucokinase. **zinc-protamine i.**, protamine zinc insulin suspension; see under *suspension*.

insulinase (in'su-lin-ās) an enzyme previously reported in body tissues that destroys or inactivates insulin; this effect is probably due to several nonspecific proteases.

insuline (in'su-lin) insulin.

insulinemia (in'su-lī-ne'me-ah) [*insulin* + Gr. *haima* blood + *-ia*] the presence of insulin in the blood.

insulinlipodystrophy (in'su-lin-lī'po-dis'tro-fe) the local disappearance of fat in diabetic patients on insulin treatment.

insulinogenesis (in'su-lin-o-jen'ē-sis) the formation and release of insulin by the islands of Langerhans.

insulinogenic (in'su-lin'o-jen'ik) pertaining to, characterized by, or promoting insulinogenesis.

insulinoid (in'su-lin-oid") 1. resembling insulin. 2. any substance with hypoglycemic properties like those of insulin.

insulinoma (in'su-lin-o'mah) a tumor of the beta cells of the islets of Langerhans; although usually benign, such tumors are among the most important causes of hypoglycemia.

insulinopenic (in'su-lin-o-pe'nik) diminishing, or pertaining to a decrease in, the level of circulating insulin; said of most forms of diabetes mellitus characterized by clear-cut deficiency of insulin production.

insulism (in'su-lizm) hyperinsulinism.

insulitis (in'su-lī'tis) cellular infiltration of the islands of Langerhans, possibly in response to invasion by an infectious agent.

insulogenic (in'su-lo-jen'ik) insulinogenic.

insuloma (in'su-lo'mah) [L. *insula* island (of Langerhans) + *-oma*] insulinoma.

insulopathic (in'su-lo-path'ik) pertaining to, or due to, abnormal insulin secretion.

insultus (in-sul'tus) [L.] an attack.

insusceptibility (in'sū-sep'tī-bil'ī-te) the quality of not being susceptible; immunity.

intake (in-tāk') the substances, or the quantities thereof, taken in and utilized by the body. **caloric i.**, the food ingested or otherwise taken into the body. **fluid i.**, the fluid taken into the body by drinking or parenterally.

Intal (in'tal) trademark for a preparation of cromolyn sodium.

integration (in'tē-gra'shun) 1. assimilation; anabolic action or activity. 2. the combining of different acts so that they cooperate toward a common end; coordination. 3. assimilation into the personality, as of knowledge and experience, as reflected in distinctive behavior patterns. 4. in bacterial genetics, assimilation of genetic material from one bacterium (donor) into the chromosome of another (recipient). **biological i.**, the acquisition of functional coordination during embryonic development through humoral and nervous influences. **primary i.**, the recognition by a child that his body is a unit apart from the environment; it is probably not achieved before the second half of the first year of life. **secondary i.**, the sublimation of the separate elements of the early sexual instinct into the mature psychosexual personality.

integrator (in'tē-gra'tor) an instrument for measuring body surfaces.

integument (in-teg'u-ment) [L. *integumentum*] a covering or investment; the skin. **common i.**, the covering of the body, or skin; see *integumentum commune*.

integumentary (in-teg-u-men'tar-e) 1. pertaining to or composed of skin. 2. serving as a covering, like the skin.

integumentum (in-teg'u-men'tum) [L., from *in* on + *tegere* to cover] [NA] a general term denoting a covering, or investment. **i. commu'ne** [NA], common integument: the covering of the body, or skin, including its various layers and the accessory structures (hair, nails, and skin glands, including the breast, or mammary gland).

in tela (in te'lah) [L.] in tissue; relating especially to stained histological preparations.

intellect (in'te-lekt) [L. *intellectus*, from *intelligere* to understand] the mind, thinking faculty, or understanding.

intellelection (in'te-lek'shun) the objectively appreciable evaluation of relationships by the mind.

intellectualization (in'tē-lek'chu-al-i-za'shun) the mental process in which reasoning is used as a defense against confronting unconscious conflict and its stressful emotions.

intelligence (in-tel'i-jens) [L. *intelligere* to understand] the ability to comprehend or understand; see also under *quotient*.

intemperance (in-tem'per-ans) [L. *in* not + *temperare* to moderate] excess or lack of self-control in respect of food and drink; immoderate indulgence in the use of alcoholic drinks.

intensification (in-ten'si-fi-ka'shun) [L. *intensus* intense + *facere* to make] 1. the act of making anything intense. 2. the process of becoming intense.

intensimeter (in'ten-sim'ē-ter) Fürstenau's device for measuring the intensity of roentgen rays; it is based on the variation of electric resistance of a selenium cell under influence of irradiation at different intensities.

intensionometer (in-ten'se-o-nom'ē-ter) an ionometric instrument for measuring the intensity of roentgen rays. Two series of plates, separated by an air gap that serves as the dielectric, are connected to opposite terminals in a closed chamber. An electric circuit is completed when the air becomes ionized by the roentgen rays, and the difference in electric potential is registered by deflection of a galvanometer needle.

intensity (in-ten'si-te) [L. *intensus* intense; *in* on + *tendere* to stretch] the condition or quality of being intense; a high degree of tension, activity, or energy. **i. of electric field**, the force exerted on a unit charge in an electric field. **luminous i.**, the light-giving power of a source of light. Cf. *candle power*. **i. of roentgen rays**, the roentgen-ray energy passing per unit time through unit area normal to the direction of propagation.

intensive (in-ten'siv) [L. *in* on + *tendere* to stretch] of great force or intensity; see also *intensive care unit*, under *unit*.

intention (in-ten'shun) [L. *intentio*, from *in* upon + *tendere* to stretch] a manner of healing; see under *healing*.

inter- (in'ter) [L. *inter* between] a prefix meaning situated, formed, or occurring between elements indicated by the word stem to which it is affixed.

interaccessory (in'ter-ak-ses'o-re) connecting the accessory processes of the vertebrae.

interacinar (in'ter-as'i-nar) situated between acini.

interacinous (in'ter-as'i-nus) interacinar.

interaction (in'ter-ak'shun) the quality, state, or process of (two or more things) acting on each other. **drug i.**, the action of one drug upon the effectiveness or toxicity of another (or others).

interagglutination (in'ter-ah-gloo-ti-na'shun) agglutination of one kind of cell by agglutinins against a nearly related kind (i.e., by crossreacting agglutinins).

interalveolar (in'ter-al-ve'o-lar) between alveoli.

interangular (in'ter-ang'gu-lar) situated or occurring between two or more angles.

interannular (in'ter-an'u-lar) [*inter* + L. *annulus* ring] situated between two rings or constrictions.

interarticular (in'ter-ar-tik'u-lar) [*inter* + L. *artculus* joint] situated between articular surfaces.

interarytenoid (in'ter-ar'e-te'noid) between the arytenoid cartilages.

interatrial (in'ter-a'tre-al) situated between the atria of the heart.

interaauricular (in'ter-aw-rik'u-lar) interatrial.

interbrain (in'ter-brān) 1. thalamencephalon. 2. diencephalon.

intercalary (in-ter'kah-ler'e) [L. *intercalarius*; *inter* + *calare* to call] inserted or placed between; interposed.

intercalate (in-ter'kah-lāt) [L. *intercalatus*] to insert between.

intercalation (in-ter'kah-la'shun) a speech neurosis in which a word or sound is interposed between words or phrases.

intercalatum (in'ter-ka-la'tum) (*obs.*) substantia nigra.

intercanalicular (in'ter-kan'ah-lik'u-lar) between canaliculi.

intercapillary (in'ter-kap'i-lār-e) among or between capillaries.

intercarotic (in'ter-ka-rot'ik) between the carotid arteries.

intercarotid (in'ter-ka-rot'id) intercarotic.

intercarpal (in'ter-kar'pal) between the carpal bones.

intercartilaginous (in'ter-kar'tī-laj'i-nus) connecting or situated between two or more cartilages.

intercavernous (in'ter-kav'er-nus) between two cavities.

intercellular (in'ter-sel'u-lar) situated between the cells of any structure.

intercentral (in'ter-sen'tral) situated between or connecting two or more nerve centers.

intercerebral (in'ter-ser'ē-bral) connecting or situated between the two cerebral hemispheres.

interchondral (in'ter-kon'dral) intercartilaginous.

intercilium (in'ter-sil'e-um) [*inter-* + *L. cilium* eyelash] the space between the eyebrows.

interclavicular (in'ter-klah-vik'u-lar) [*inter-* + *L. clavicula* clavicle] situated between the clavicles.

interclinoid (in'ter-kli'noid) pertaining to or passing between the clinoid processes.

intercoccygeal (in'ter-kok-sij'e-al) situated between the segments of the coccyx.

intercolumnar (in'ter-ko-lum'nar) [*inter-* + *L. columna* column] situated between columns or pillars.

intercondylar (in'ter-kon'di-lar) situated between two condyles.

intercondyloid (in'ter-kon'di-loid) intercondylar.

intercondylous (in'ter-kon'di-lus) intercondylar.

intercostal (in'ter-kos'tal) [*inter-* + *L. costa* rib] situated between the ribs.

intercostohumeral (in'ter-kos-to-hu'mer-al) pertaining to an intercostal space and the humerus.

intercourse (in'ter-kōrs) [*L. intercursus* running between] mutual exchange. **sexual i.**, coitus.

intercricothyrotomy (in'ter-kri'ko-thi-rot'o-me) [*inter-* + *cricothyroid* + *Gr. temnein* to cut] incision of the larynx through the cricothyroid membrane; inferior laryngotomy.

intercristal (in'ter-kris'tal) between two crests.

intercritical (in'ter-krit'i-kal) denoting the period between attacks, as of gout.

intercross (in'ter-kros) the mating of individuals heterozygous for the same gene.

intercruial (in'ter-kru'al) between two crura.

intercurrent (in'ter-kur'ent) [*L. intercurrents*, from *inter-* + *currere* to run] breaking into and modifying the course of an already existing disease.

intercuspal (in'ter-kus-pa'shun) the fitting together of the cusps of opposing teeth in occlusion.

intercusping (in'ter-kusp'ing) the occlusion of the cusps of the teeth of one jaw with the depressions in the teeth of the other jaw.

intercutaneomucous (in'ter-ku-ta'ne-o-mu'kus) mucocutaneous.

interdeferential (in'ter-def'er-en'shal) between the two ducts deferentes.

interdental (in'ter-den'tal) [*inter-* + *L. dens* tooth] situated between the proximal surfaces of adjacent teeth in the same dental arch. Cf. *interocclusal*.

interdentium (in'ter-den'she-um) the interproximal space; see under *space*.

interdigit (in'ter-dij'it) the space between any two contiguous fingers or toes.

interdigital (in'ter-dij'i-tal) [*inter-* + *L. digitus* finger] situated between two adjacent fingers or toes.

interdigitate (in'ter-dij'i-tāt) [*inter-* + *L. digitus* finger] to interlock and interrelate, as the fingers of clasped hands.

interdigitation (in'ter-dij'i-ta'shun) [*inter-* + *L. digitus* digit] 1. an interlocking of parts by finger-like processes. 2. any one of a set of finger-like processes. 3. in density, intercuspal.

interface (in'ter-fās) in chemistry, the surface of separation or boundary between two phases of a heterogeneous system. **di-neric i.**, the interface between two immiscible liquids.

interfacial (in'ter-fa'shal) pertaining to an interface.

interfascicular (in'ter-fah-sik'u-lar) [*inter-* + *L. fasciculus* bundle] situated between fasciculi.

interfeminium (in'ter-fē-min'e-um) [*L.*] (obs.) the space between the thighs, or the inside of the thighs.

interfemoral (in'ter-fem'o-ral) between the thighs.

interfemur (in'ter-fē'mus) [*L.*] interfeminium.

interference (in'ter-fēr'ens) [*inter-* + *L. ferire* to strike] 1. a merging of two waves of light or of sound, producing in the first instance darkness, in the other, silence. 2. an interplay of two intrinsic pacemakers in the heart, one or the other dominating the rhythm; see also *interference dissociation*, under *dissociation*. 3. in dentistry, any premature contact point along the occlusal surface of the teeth that prevents maximum contact, function, and proper alignment in full occlusion.

interfering (in'ter-fēr'ing) brushing; the striking or rubbing of the fetlock of a horse by the opposite foot.

interferometer (in'ter-fēr-om'ē-ter) an instrument for measuring lengths or movements by means of the phenomena caused by the interference of two rays of light, or of sound (acoustic i.).

interferometry (in'ter-fēr-om'ē-tre) the use of the interferometer for measuring distances or movements.

interferon (in'ter-fēr'on) a class of small soluble proteins produced and released by cells invaded by virus, which induce in noninfected cells the formation of an antiviral protein that

inhibits viral multiplication; although not virus-specific, interferons are more effective in animal cells of the same species that produced them. Type I, or classical, interferon is produced by leukocytes, as well as nonlymphoid cells, in response to virus infection. Interferon production may also be induced by certain bacteria, rickettsiae, etc., and by specifically sensitized lymphocytes following interaction with specific antigen or antigen-antibody complex. The latter form, known as *Type II* or *immune interferon*, is capable of affecting antibody production and cell-mediated immunity.

interfibrillar (in'ter-fi'bril-ar) [*inter-* + *L. fibrilla* small fiber] between or among fibrils.

interfibrillary (in'ter-fi'brī-lār'e) interfibrillar.

interfibrous (in'ter-fi'brus) between fibers.

interfilamentous (in'ter-fil'ah-men'tus) between filaments.

interfilar (in'ter-fi'lar) [*inter-* + *L. filum* thread] between or among the fibrils of a reticulum.

interfrontal (in'ter-fron'tal) between the halves of the frontal bone.

interfurca (in'ter-fur'kah), pl. *interfurcae* [*inter-* + *L. furca* fork] the area lying between and at the base of divided tooth roots.

interfurcae (in'ter-fur'se) [*L.*] plural of *interfurca*.

interganglionic (in'ter-gang'gle-on'ik) [*inter-* + *ganglion*] between ganglia.

intergemmal (in'ter-jem'al) [*inter-* + *L. gemma* bud] between taste buds or other buds.

intergenic (in'ter-jen'ik) occurring between two genes.

interglobular (in'ter-glob'u-lar) [*inter-* + *L. globulus* globule.] between or among globules, as of the dentin.

intergluteal (in'ter-gloo'te-al) between the buttocks.

intergonial (in'ter-go'ne-al) between the tips of the two angles of the mandible.

intergrade (in'ter-grād) [*inter-* + *L. gradus* a step] a step or stage between two other stages. **sex i.**, an individual showing characteristics between the typical male and female condition. See *intersex* and *hermaphroditism*.

intergranular (in'ter-gran'u-lar) between the granule cells of the brain.

intergyral (in'ter-ji'ral) between cerebral gyri or convolutions.

interhemispheric (in'ter-hem'i-ser'ē-bral) intercerebral.

interhemispheric (in'ter-hem'i-sfer'ik) intercerebral.

interictal (in'ter-ik'tal) occurring between attacks or paroxysms.

interior (in-tēr'e-or) [*L.* "inner"; neut. *interius*] 1. situated inside; inward. 2. an inner part or cavity.

interischadic (in'ter-is'ke-ad'ik) between the two ischia.

interkinesis (in'ter-ki-ne'sis) [*inter-* + *Gr. kinēsis* motion] a period intervening between the first and second divisions in meiosis, similar to the interphase in mitosis.

interlabial (in'ter-la'be-al) [*inter-* + *L. labium* lip] between the lips, or between any two labia.

interlamellar (in'ter-lah-mel'ar) [*inter-* + *L. lamella* layer] situated between lamellae.

interligamentary (in'ter-lig'ah-men'tah-re) between or among ligaments.

interligamentous (in'ter-lig'ah-men'tus) interligamentary.

interlobar (in'ter-lo'bar) [*inter-* + *L. lobus* lobe] situated or occurring between lobes.

interlobitis (in'ter-lo-bi'tis) interlobular pleurisy.

interlobular (in'ter-lob'u-lar) [*inter-* + *L. lobulus* lobule] situated or occurring between lobules.

interlocking (in'ter-lok'ing) a complication of labor in twin births in which the inferior surface of the chin of one twin is hooked to that of its co-twin above or below the pelvic inlet. When this condition occurs in the true pelvis, it is called *compaction*.

intermalleolar (in'ter-mah-le'o-lar) between the malleoli.

intermamillary (in'ter-mam'i-lār'e) between the nipples.

intermammary (in'ter-mam'ah-re) between the breasts.

intermarriage (in'ter-mar'ij) [*inter-* + *L. maritare* to wed] 1. the marriage of persons related by blood or consanguinity. 2. the marriage of persons of different races.

intermaxilla (in'ter-mak-sil'ah) the intermaxillary bone.

intermaxillary (in'ter-mak'si-lār'e) situated between the two maxillae.

intermediary (in'ter-me'de-ār'e) [*inter-* + *L. medius* middle] 1. performed or occurring in a median stage; neither early nor late; intermediate. 2. an intermediate stage.

intermediate (in'ter-me'de-it) [*inter-* + *L. medius* middle] 1. placed between; intervening; resembling, in part, each of two extremes. 2. a substance formed in a chemical process that is essential to the formation of the end product of the process.

intermedin (in'ter-me'din) melanocyte-stimulating hormone; so called because in amphibia, reptiles, and fish, it is secreted by the pars intermedia of the pituitary gland.

intermediolateral (in'ter-me'de-o-lat'er-al) both intermediate and lateral.

intermedius (in'ter-me'de-us) intermediate; [NA] a term denoting the middle of three structures, one of which is situated closer to and the other farther from the midline of the body or part.

intermembranous (in'ter-mem'brah-nus) situated or occurring between membranes.

intermeningeal (in'ter-mē-nin'je-al) situated or occurring between the meninges.

intermenstrual (in'ter-men'stroo-al) [*inter-* + *menstrual*] occurring between the menstrual periods.

intermenstruum (in'ter-men'stroo-um) the interval between two menstrual periods.

intermetacarpal (in'ter-met'ah-kar'pal) [*inter-* + *metacarpal*] situated between the metacarpal bones.

intermetameric (in'ter-met'ah-mer'ik) between two metameres.

intermetatarsal (in'ter-met'ah-tar'sal) situated or occurring between the metatarsal bones.

intermission (in'ter-mish'un) [*L. intermissio*; *inter* between + *mittere* to send] an interval; a period of temporary cessation, as between two occurrences or paroxysms.

intermitotic (in'ter-mi-tot'ik) pertaining to or occurring during the interval between successive mitoses.

intermittent (in'ter-mit'tent) [*L. intermittens*; *inter* between + *mittere* to send] occurring at separated intervals; having periods of cessation of activity.

intermolecular (in'ter-mo-lek'u-lar) between molecules.

intermural (in-ter-mu'ral) [*inter-* + *L. murus* wall] situated between the walls of an organ or organs.

intermuscular (in'ter-mus'ku-lar) situated between muscles.

intern (in'tern) 1. [Fr. *interne*] a graduate of a medical or dental school serving and residing in a hospital preparatory to being licensed to practice medicine or dentistry. Cf. *resident*. 2. [Fr. *interner*] to confine within certain geographical or physical boundaries.

internal (in-ter'nal) [*L. internus*] situated or occurring within or on the inside; many anatomical structures formerly called internal are now correctly termed medial.

internalization (in-ter'nal-i-za'shun) the mental process whereby certain attributes, attitudes, or standards of others are unconsciously taken as one's own.

internarial (in'ter-na're-al) [*inter-* + *L. nares* nostrils] situated between the nares.

internasal (in'ter-na'zal) situated between the nasal bones.

internatal (in'ter-na'tal) [*inter-* + *L. nates* buttocks] between the buttocks or gluteal prominences.

internation (in'ter-na'shun) the act of confining within certain physical boundaries, as the confinement of a mental patient.

International Nonproprietary Names see *I.N.N.*

interne (in-tern') [Fr.] intern.

interneuron (in'ter-nu'ron) any neuron, in a chain of neurons, which is situated between the primary afferent (sensory) neuron and the final motoneuron. Also, any neuron whose processes are entirely confined within a specific area, as within the olfactory lobe, and which synapse with neurons extending into that area.

internist (in-tern'ist) a physician who specializes in the diagnosis and medical, as opposed to surgical and obstetrical, treatment of diseases of adults.

internodal (in'ter-no'dal) between two nodes.

internode (in'ter-nōd) [*inter-* + *L. nodus* knot] a space between two nodes. **i. of Ranvier**, the segment of a nerve fiber between two nodes of Ranvier.

internodular (in'ter-nod'u-lar) between two nodules.

internship (in'tern-ship) the position or term of service of an intern in a hospital.

internuclear (in'ter-nu'kle-ar) 1. pertaining to or affecting structures between nuclei, as internuclear ophthalmoplegia. 2. between the nuclear layers of the retina.

internuncial (in'ter-nun'she-al) [*L. internuncius* a go-between] serving as a medium of communication between nerve cells or centers; see *interneuron*.

internus (in-ter'nus) internal; [NA] a term denoting something situated nearer to the center of an organ or a cavity.

interocclusal (in'ter-ō-kloo'zal) situated between the occlusal surfaces of opposing teeth in the two dental arches, as the interocclusal rest space. Cf. *interdental*.

interoceptive (in'ter-o-sep'tiv) Sherrington's term for the internal surface field of distribution of receptor organs; see *receptor* (def. 3), *exteroceptive*, and *proprioceptive*.

interoceptor (in'ter-o-sep'tor) any one of the sensory nerve terminals which are located in and transmit impulses from the viscera; see *receptor* (def. 3), *exteroceptor*, and *proprioceptor*.

interofection (in'ter-o-fek'shun) the responses of the body to

changes in the internal environment of the body effected by the sympathetic system.

interofective (in'ter-o-fek'tiv) affecting the interior of the organism; a term applied by Cannon to the autonomic nervous system.

interogestate (in'ter-o-jes'tāt) 1. developing within the uterus. 2. the fetus during gestation.

interoinferiorly (in'ter-o-in-fēr'e-or'le) inwardly and in a downward position or direction.

interolivary (in'ter-ol'i-vār'e) situated between the olivary bodies of the brain.

interorbital (in'ter-or'bī-tal) [*inter-* + *L. orbita* orbit] situated between the orbits.

interosseal (in'ter-os'e-al) [*inter-* + *L. os* bone] 1. situated between bones. 2. pertaining to the interossei muscles.

interosseous (in'ter-os'e-us) [*L. interosseus*; *inter* between + *os* bone] between bones.

interpallebral (in'ter-pal'pe-bral) between the eyelids.

interpandemic (in'ter-pan-dem'ik) denoting outbreaks of an infectious disease (e.g., influenza) occurring between major pandemics of the same disease.

interparietal (in'ter-pah-ri'ē-tal) [*inter-* + *L. paries* wall] 1. intermural. 2. situated between the parietal bones.

interparoxysmal (in'ter-par'ok-siz'mal) occurring between paroxysms.

interpediculate (in'ter-pē-dik'u-lāt) between the pedicles of a vertebra, as interpediculate distance.

interpeduncular (in'ter-pē-dunk'u-lar) [*inter-* + *L. pedunculus* peduncle] situated between two peduncles, as between two cerebellar peduncles.

interphalangeal (in'ter-fah-lan'je-al) [*inter-* + *phalangeal*] situated between two contiguous phalanges.

interphase (in'ter-fāz) the interval between two successive cell divisions, during which the chromosomes are not individually distinguishable and the normal physiological processes proceed. Formerly called *resting phase*.

interphyletic (in'ter-fi-let'ik) [*inter-* + *phyletic*] intermediate in form between two types of cell.

interpial (in'ter-pi'al) situated between the two layers of the pia mater.

interplant (in'ter-plant) [*inter-* + *L. plantare* to set] an embryonic part isolated by transference to an indifferent environment provided by another embryo.

interpleural (in'ter-ploor'al) between two layers of the pleura, as between the visceral and the parietal pleura.

interpolat (in'ter-po'lar) [*inter-* + *L. polus* pole] situated between two poles.

interpolation (in-ter'po-la'shun) 1. surgical implantation of tissue. 2. the determination of intermediate values in a series on the basis of observed values.

interposition (in'ter-po-zish'un) the act of placing between; the condition of being interposed.

interpositum (in'ter-poz'i-tum) [*L.*] interposed; see under *velum*.

interpretation (in-ter'prē-ta'shun) in psychotherapy, the therapist's explanation of the latent or hidden meanings of what the patient says, does, or experiences, in terms which are understandable to him.

interprotometamere (in'ter-pro'to-met'ah-mēr) [*inter-* + *Gr. prōtos* first + *meta* across + *meros* part] the structure between the primary segments of the embryo.

interproximal (in'ter-prok'si-mal) between adjoining surfaces, as the space between adjacent teeth.

interpubic (in'ter-pu'bik) [*inter-* + *L. pubes*] between the pubic bones.

interpupillary (in'ter-pu'pī-lar'e) between the pupils.

interradial (in'ter-ra'de-al) situated between rays.

interrenal (in'ter-re'nal) [*inter-* + *renal*] between the kidneys.

interrupted (in'ter-rup'ted) [*L. interruptus*; *inter* between + *ruptus* broken] not continuous; marked by intermissions or breaches of continuity.

interscapilium (in'ter-skah-pil'e-um) [*L.*] the space between the scapulae.

interscapular (in'ter-skap'u-lar) [*inter-* + *L. scapula* shoulder blade] situated between the scapulae.

interscapulum (in'ter-skap'u-lum) the interscapilium.

intersciatic (in'ter-si-at'ik) between the two ischia.

intersectio (in'ter-sek'she-o), pl. *intersectio'nes* [*L.*, from *inter* between + *secare* to cut] [NA] a general term denoting a cutting across, or between; a site at which one structure cuts across another. **i. tendin'ea**, tendinous intersection: a fibrous band that crosses the belly of a muscle and more or less completely divides it into two parts; called also *inscriptio tendinea*. **intersectio'nes tendin'ae musculi recti abdominis** [NA], tendinous intersections of rectus abdominis muscle: three or more

fibrous bands that cross the front of the rectus abdominis muscle, fusing with the anterior layer of its sheath; called also *inscriptions tendineae musculi recti abdominis*.

intersection (in'ter-sek'shun) a site at which one structure cuts across another. **tendinous i.**, *intersectio tendinea*.

intersectiones (in'ter-sek'she-o'nēz) [L.] plural of *intersectio*.

intersegment (in'ter-seg'ment) 1. any one of a series of segments, like the angiotomes, etc. 2. a metamere.

intersegmental (in'ter-seg-men'tal) between segments.

interseptal (in'ter-sep'tal) between two septa.

interseptum (in'ter-sep'tum) [L.] the diaphragm.

intersex (in'ter-seks) 1. intersexuality. 2. an individual who shows intermingling, in varying degrees, of the characters of each sex, including physical form, reproductive organs, and sexual behavior. See also *hermaphrodite* and *pseudohermaphrodite*. **female i.**, a female pseudohermaphrodite: an individual who shows one or more contradictions of the morphological criteria of sex but who has only female gonadal tissue and shows sex chromatin in the somatic cells. **male i.**, a male pseudohermaphrodite: an individual who shows one or more contradictions of the morphological criteria of sex but who has only male gonadal tissue and shows no sex chromatin in the somatic cells. **true i.**, a true hermaphrodite: an individual who shows one or more contradictions of the morphological criteria of sex and possesses both male and female gonadal tissue; the chromatin test may be either positive or negative.

intersexual (in'ter-seks'u-al) pertaining to or characterized by intersexuality.

intersexuality (in'ter-seks'u-al'i-te) the intermingling, in varying degrees, of the characters of each sex, including physical form, reproductive organs, and sexual behavior, in one individual, as a result of some flaw in embryonic development. See also *intersex*, *hermaphroditism*, and *pseudohermaphroditism*.

interspace (in'ter-spās) a space between two similar structures. **dimeric i.**, the surface between two liquid phases.

interspinal (in-ter-spi'nal) between two spinous processes.

interspinous (in'ter-spi'nus) interspinal.

intersternal (in'ter-ster'nal) between parts of the sternum.

interstice (in-ter'stis) [L. *interstitium*] a small interval, space, or gap in a tissue or structure.

interstitial (in'ter-stish'al) [L. *interstitialis*; *inter* between + *stere* to set] pertaining to or situated between parts or in the interspaces of a tissue.

interstitium (in'ter-stish'i-um) [L.] 1. interstice. 2. interstitial tissue.

intertarsal (in'ter-tar'sal) situated between the tarsal bones.

intertransverse (in'ter-trans-vers') [*inter* + L. *transversus* turned across] situated between or connecting the transverse processes of the vertebrae.

intertriginous (in'ter-trij'i-nus) affected with or of the nature of intertrigo.

intertrigo (in'ter-tri'go) [*inter* + L. *terere* to rub] superficial dermatitis occurring on apposed surfaces of the skin, as the creases of the neck, folds of the groin and armpit, and beneath pendulous breasts; it is characterized by erythema, maceration, burning, itching, and sometimes erosions, fissures, and exudations. It is caused by moisture, warmth, friction, sweat retention, and infectious agents; obesity is a predisposing factor. **i. labia'lis**, perleche.

intertrochanteric (in'ter-tro'kan-ter'ik) [*inter* + *trochanter*] situated in or pertaining to the space between the greater and the lesser trochanter.

intertubercular (in'ter-tu-ber'ku-lar) between tubercles.

intertubular (in'ter-tu'bu-lar) [*inter* + L. *tubulus* tubule] situated between or among tubules.

interureteral (in'ter-u-re'ter-al) interureteric.

interureteric (in'ter-u-rē'ter'ik) [*inter* + *ureter*] situated between the ureters.

intravaginal (in'ter-vaj'i-nal) situated between sheaths.

interval (in'ter-val) [*inter* + L. *vallum* rampart] the space between two objects or parts; the lapse of time between two recurrences or paroxysms. **atrioventricular i.**, the P-R interval; the time between atrial and ventricular systole. **auriculoventricular i.**, atrioventricular i. **cardioarterial i.**, the time between the apex beat and arterial pulsation; abbreviated c.-a. i. **focal i.**, the distance from the anterior to the posterior focal point; called also *Sturm's i.* **lucid i.**, a brief period of remission of symptoms in a psychosis. **postsphygmie i.**, see under *period*. **P-R i.**, the portion of the electrocardiogram between the onset of the P wave (atrial activity) and the QRS complex (ventricular activity). **presphygmie i.**, see under *period*. **QRST i.**, **Q-T i.**, the duration of ventricular electrical activity. **Sturm's i.**, focal i.

intervalvular (in'ter-val'vu-lar) between valves.

intervascular (in'ter-vas'ku-lar) between blood vessels.

intervention (in'ter-ven'shun) the act or fact of interfering so

as to modify. **crisis i.**, 1. an immediate, short-term, psychotherapeutic approach, the goal of which is to help resolve a personal crisis within the individual's immediate environment. 2. the procedures involved in responding to an emergency.

interventricular (in'ter-ven-trik'u-lar) [*inter* + L. *ventriculum* ventricle] situated between ventricles.

intervertebral (in'ter-ver'tē-bral) [*inter* + *vertebra*] situated between two contiguous vertebrae; see under *disk*.

intervillous (in'ter-vil'us) [*inter* + L. *villus* tuft] situated between or among villi.

intestinal (in-tes'ti-nal) [L. *intestinalis*] pertaining to the intestine.

intestine (in-tes'tin) [L. *intestinus* inward, internal; Gr. *enteron*] the portion of the alimentary canal extending from the pyloric opening of the stomach to the anus; called also *bowel* and *gut*. See *intestinum*. **blind i.**, cecum, def. 1. **empty i.**, jejunum. **iced i.**, peritonitis chronica fibrosa encapsulans. **jejunoileal i.**, *intestinum tenue mesenteriale*. **large i.**, the distal portion of the intestine; see *intestinum crassum* [NA]. **mesenterial i.**, *intestinum tenue mesenteriale*. **segmented i.**, colon. **small i.**, the proximal portion of the intestine; see *intestinum tenue* [NA]. **straight i.**, rectum.

intestino-intestinal (in-tes'ti-no-in-tes'ti-nal) pertaining to two different portions of the intestine, as the intestino-intestinal reflex.

intestinum (in'tes-ti-num), pl. *intestina* [L., from *intestinus* inward, internal] intestine: the portion of the alimentary canal extending from the pyloric opening of the stomach to the anus: it is a membranous tube, comprising the *intestinum tenue* and the *intestinum crassum*, whose function is to complete the processes of digestion, to provide the body (through absorption) with water, electrolytes, and nutrients, and to move along and store fecal wastes until they are expelled. **i. cae'cum**, cecum, def. 1. **i. cras'sum** [NA], the large intestine: the distal portion of the intestine, about five feet long, extending from its junction with the small intestine to the anus; it comprises the cecum, colon, rectum, and anal canal. **i. il'eum**, ileum. **i. jeju'num**, jejunum. **i. rec'tum**, rectum. **i. ten'ue** [NA], the small intestine: the proximal portion of the intestine, smaller in caliber than the large intestine, and about twenty feet long, extending from the pylorus to the cecum; it comprises the duodenum, jejunum, and ileum. **i. ten'ue mesenteria'le** the portion of the small intestine which has a mesentery, comprising the jejunum and ileum.

intima (in'ti-mah) [L.] [NA] a general term denoting an innermost structure; see *tunica intima vasorum*.

intimal (in'ti-mal) pertaining to the inner layer of the blood vessels (*tunica intima vasorum*).

intimitis (in'ti-mi'tis) inflammation of the tunica intima of an artery or vein.

Intocrostrin (in'to-kos'trin) trademark for a preparation of tubocurarine chloride.

intolerance (in-tol'er-ans) [L. *in* not + *tolerare* to bear] inability to withstand or consume. **alcoholic i.**, 1. the inability to take alcohol without going on to excess. 2. an excessive response to a small amount of alcohol. **drug i.**, the state of reacting to the normal pharmacologic doses of a drug with the symptoms of overdosage. **hereditary fructose i.**, a hereditary disorder of metabolism transmitted as an autosomal recessive trait, involving deficient activity of the hepatic enzyme fructose-1-phosphate aldolase; it occurs in infants soon after the introduction of fructose in the diet, and is characterized by hypoglycemia and its clinical manifestations, associated with various other symptoms, including fructosuria, fructosemia, anorexia, vomiting, failure to thrive, jaundice, splenomegaly, and an aversion to fructose-containing foods. If the condition is left untreated, death may occur. See also *essential fructosuria*, under *fructosuria*.

intorsion (in-tor'shun) [L. *in* toward + *torsio* twisting] tilting of the upper part of the vertical meridian of the eye toward the midline of the face.

intorter (in'tor-ter) an internal rotator.

intoxication (in-tok'si-ka'shun) [L. *in* intensive + Gr. *toxikon* poison] 1. poisoning; the state of being poisoned. 2. the condition produced by excessive use of an alcohol, especially ethanol. **acid i.**, acidosis of a severe grade. **alkaline i.**, alkalosis of a severe grade. **anaphylactic i.**, anaphylactic shock. **bongkrek i.**, poisoning from bongkrek, a native Javanese dish, prepared by means of molds from copra press cake. When the fermentation process is faulty, severe poisoning occurs, with vomiting, profuse perspiration, muscle cramps, and coma. Called also *tempeh poisoning*. **intestinal i.**, autointoxication. **roentgen i.**, radiation sickness. **serum i.**, a condition of temporary intoxication which sometimes follows the injection of serum; see *serum sickness*, under *sickness*. **water i.**, the condition induced by the undue retention of water with sodium depletion; it is marked by lethargy, nausea, vomiting, and mild mental aberrations, and in severe cases by convulsions and coma.

intra- (in'trah) [L. *intra* within] a prefix meaning situated, formed, or occurring within the element indicated by the word stem to which it is affixed.

intra-abdominal (in'trah-ab-dom'i-nal) within the abdomen.
intra-acinous (in'trah-as'i-nus) within an acinus.
intra-appendicular (in'trah-ap'en-dik'u-lar) within the appendix.
intra-arachnoid (in'trah-ah-rak'noid) within or underneath the arachnoid.
intra-arterial (in'trah-ar-te're-al) within an artery or arteries.
intra-articular (in'trah-ar-tik'u-lar) [*intra-* + *L. articularis* joint] within a joint.
intra-atomic (in'trah-ah-tom'ik) within an atom.
intra-atrial (in'trah-a'tre-al) within an atrium.
intra-aural (in'trah-aw'ral) within the ear.
intra-auricular (in'trah-aw-rik'u-lar) intra-atrial.
intra-bronchial (in'trah-brong'ke-al) situated or occurring within a bronchus.
intra-buccal (in'trah-buk'al) within the mouth or within the cheek.
intra-canalicular (in'trah-kan'ah-lik'u-lar) within canaliculi.
intracapsular (in'trah-kap'su-lar) within a capsule.
intracardiac (in'trah-kar'de-ak) within the heart.
intracarpal (in'trah-kar'pal) within the wrist.
intracartilaginous (in'trah-kar'ti-laj'i-nus) within a cartilage; endochondral.
intracavity (in'trah-kav'i-tār'e) within a cavity, as that of the cervix or of the uterus.
intracelical (in'trah-se'le-al) within one of the body cavities.
intracellular (in'trah-sel'u-lar) [*intra-* + *L. cellula* cell] situated or occurring within a cell or cells.
intracephalic (in'trah-sē-fal'ik) within the brain.
intracerebellar (in'trah-ser'ē-bel'ar) situated within the cerebellum.
intracerebral (in'trah-ser'ē-bral) situated within the cerebrum.
intracervical (in'trah-ser'vē-kal) situated within the canal of the cervix uteri.
intra-chondral (in'trah-kon'dral) endochondral.
intra-chondrial (in'trah-kon'dre-al) endochondral.
intra-chordal (in'trah-kor'dal) within the notochord.
intracisternal (in'trah-sis-ter'nal) within a cistern, especially the cisterna cerebellomedullaris.
intracolic (in'trah-kol'ik) within the colon.
intracordal (in'trah-kor'dal) [*intra-* + *L. cor* heart] within the heart.
intracorporeal (in'trah-kor'po-ral) intracorporeal.
intracorporeal (in'trah-kor-po're-al) situated or occurring within the body.
intracorpuseular (in'trah-kor-pus'ku-lar) occurring within corpuscles.
intracostal (in'trah-kos'tal) on the inner surface of the rib.
intracranial (in'trah-kra'ne-al) situated within the cranium.
intracrusureus (in'trah-kroo-re'us) the internal part of the musculus vastus intermedius.
intractable (in-trak'tah-b'l) resistant to cure, relief, or control.
intracutaneous (in'trah-ku-ta'ne-us) within the skin.
intracystic (in'trah-sis'tik) within a cyst.
intracytoplasmic (in'trah-si'to-plaz'mik) within the cytoplasm of a cell.
intrad (in'trad) [*intra-* + *-ad*] (*obs.*) within; inward in situation or direction.
intra-dermal (in'trah-der'mal) within the dermis.
intra-dermoreaction (in'trah-der'mo-re-ak'shun) intra-dermal reaction.
intraductal (in'trah-duk'tal) situated or occurring within the duct of a gland.
intra-duodenal (in'trah-du'o-de'nal) within the duodenum.
intradural (in'trah-du'ral) within or beneath the dura.
intraepidermal (in'trah-ep'i-der'mal) within the epidermis.
intraepiphyseal (in'trah-ep'i-fiz'e-al) within an epiphysis.
intraepithelial (in'trah-ep'i-the'le-al) situated among the cells of the epithelium.
intraerythrocytic (in'trah-ē-rith'ro-sit'ik) located or occurring within the erythrocyte.
intrafascicular (in'trah-fah-sik'u-lar) within a fascicle.
intrafat (in'trah-fat') situated in or introduced into fatty tissue, as the subcutaneous tissue.
intrafetation (in'trah-fe-ta'shun) the development of a fetus within another fetus.
intrafililar (in'trah-fi'lilar) [*intra-* + *L. filum* thread] situated within a reticulum.
intrafissural (in'trah-fish'u-lar) within a cerebral fissure.
intrafistular (in'trah-fis'tu-lar) within a fistula.

intrafollicular (in'trah-fol-lik'u-lar) within a follicle.
intrafusil (in'trah-fu'zal) [*intra-* + *L. fusus* spindle] pertaining to the striated fibers within a muscle spindle.
intragalvanization (in'trah-gal'van-i-za'shun) the galvanization of the inner surface of any organ.
intra-gastric (in'trah-gas'trik) situated or occurring within the stomach.
intra-gemmal (in'trah-jem'al) [*intra-* + *L. gemma* bud] situated within a bud, as a taste bud.
intra-genic (in'trah-jen'ik) within a gene.
intra-glandular (in'trah-glan'du-lar) within a gland.
intra-globular (in'trah-glob'u-lar) within a globe or globule, as within an erythrocyte.
intra-gyral (in'trah-ji'ral) within a cerebral gyrus.
intra-hepatic (in'trah-hē-pat'ik) within the liver.
intra-hyoid (in'trah-hi'oid) within the hyoid bone.
intra-ictal (in'trah-ik'tal) occurring during an attack or seizure.
intra-intestinal (in'trah-in-tes'ti-nal) within the intestine.
intra-jugular (in'trah-jug'u-lar) within the jugular foramen, process, or vein.
intra-lamellar (in'trah-lah-mel'ar) within lamellae.
intra-laryngeal (in'trah-lah-rin'je-al) within the larynx.
intralesional (in'trah-le'zhun-al) occurring in or introduced directly into a localized lesion.
intra-leukocytic (in'trah-lu'ko-si'tik) within a leukocyte.
intra-ligamentous (in'trah-lig'ah-men'tus) within a ligament.
intra-lingual (in'trah-ling'gwal) within the tongue.
Intralipid (in'trah-lip'id) trademar for an intravenous fat emulsion containing 10 per cent soybean oil stabilized with egg-yolk phospholipids; used to prevent or correct deficiency of essential fatty acids and to provide calories in high density form during total parenteral nutrition.
intra-lobar (in'trah-lo'bar) within a lobe.
intra-lobular (in'trah-lob'u-lar) within a lobule.
intra-ocular (in'trah-lok'u-lar) within the loculi of a structure.
intra-luminal (in'trah-lu'mi-nal) within the lumen of a tube, as of a blood vessel.
intra-mammary (in'trah-mam'ah-re) within the breast.
intra-marginal (in'trah-mar'ji-nal) within a margin.
intra-mastoiditis (in'trah-mas'toi-di'tis) inflammation of the mastoid antrum and cells of the mastoid process.
intra-matrical (in'trah-mat're-kal) within a matrix.
intra-medullary (in'trah-med'u-lār'e) 1. within the spinal cord. 2. within the medulla oblongata. 3. within the marrow cavity of a bone.
intra-membranous (in'trah-mem'brah-nus) within a membrane.
intra-meningeal (in'trah-mē-nin'je-al) within the meninges.
intra-molecular (in'trah-mo-lek'u-lar) within the molecule.
intra-mural (in'trah-mu'ral) [*intra-* + *L. murus* wall] within the wall of an organ.
intra-muscular (in'trah-mus'ku-lar) [*intra-* + *L. musculus* muscle] within the substance of a muscle.
intra-myocardial (in'trah-mi'o-kar'de-al) within the myocardium.
intra-narial (in'trah-na're-al) within the nares.
intra-nasal (in'trah-na'zal) [*intra-* + *L. nasus* nose] within the nose.
intra-natal (in'trah-na'tal) occurring during birth.
intra-neural (in'trah-nu'ral) within or into a nerve.
intra-nuclear (in'trah-nu'kle-ar) within a nucleus, as a cell nucleus.
intra-ocular (in'trah-ok'u-lar) [*intra-* + *L. oculus* eye] within the eye.
intra-operative (in'trah-op'er-a'tiv) occurring during the course of a surgical operation.
intra-oral (in'trah-o'ral) within the mouth.
intra-orbital (in'trah-or'bi-tal) [*intra-* + *L. orbita* orbit] within the orbit.
intra-osseous (in'trah-os'e-us) within a bone.
intra-ossteal (in'trah-os'te-al) intraosseous.
intra-ovarian (in'trah-o-va're-an) within the ovary.
intra-ovular (in'trah-o'vu-lar) within an ovum.
intra-parenchymatous (in'trah-par'en-kim'ah-tus) within the parenchyma of an organ.
intra-parietal (in'trah-pah-ri'ē-tal) [*intra-* + *L. paries* wall] 1. intramural. 2. situated in the parietal region of the brain.
intra-partum (in'trah-par'tum) occurring during childbirth, or during delivery.
intra-pelvic (in'trah-pel'vik) within the pelvis.

intrapericardial (in'trah-per/'i-kar'de-al) within the pericardium.

intraperineal (in'trah-per/'i-ne'al) within the tissues of the perineum.

intrapertitoneal (in'trah-per/'i-to-ne'al) within the peritoneal cavity.

intrapial (in'trah-pe'al) within or beneath the pia mater.

intraplacentar (in'trah-plah-sen'tal) within the placenta.

intrapleural (in'trah-ploor'al) within the pleura.

intrapontine (in'trah-pon'tin) [*intra-* + *L. pons*] within the substance of the pons.

intraprostatic (in'trah-pros-tat'ik) within the prostate gland.

intraprotoplasmic (in'trah-pro'to-plaz'mik) within the protoplasm.

intrapsychic (in-trah-si/'kik) occurring inside the mind; taking place within the mind.

intrapsychical (in'trah-si/'ke-kal) intrapsychic.

intrapulmonary (in'trah-pul'mo-ner'e) situated in the substance of the lung.

intrapyrethic (in'trah-pi-ret'ik) [*intra-* + *Gr. pyretos* fever] during the stage of fever.

intrarachidian (in'trah-rah-kid'e-an) intraspinal.

intrarectal (in'trah-rek'tal) within the rectum.

intrarenal (in'trah-re'nal) within the kidney.

intraretinal (in'trah-ret'i-nal) within the retina.

intrasceral (in'trah-skler'al) within the sclera.

intrascrotal (in'trah-skro'tal) within the scrotum.

intrasellar (in'trah-sel'ar) within the sella turcica.

intraserous (in'trah-se'rus) within the blood serum.

intraspinal (in'trah-spi'nal) situated or occurring within the vertebral column.

intrasplenic (in'trah-sple'nik) within the spleen.

intrasternal (in'trah-ster'nal) within the sternum.

intrastitial (in'trah-stish'al) within the cells or fibers of a tissue.

intrastromal (in'trah-stro'mal) within the stroma of an organ.

intrasynovial (in'trah-si-no've-al) within the synovial cavity of a joint.

intratarsal (in'trah-tar'sal) within or on the inner side of the tarsus.

intratesticular (in'trah-tes-tik'u-lar) within the testis.

intrathecal (in'trah-the'kal) within a sheath; see also under *injection*.

inrathenar (in'trah-the'nar) situated between the thenar and hypothenar eminences.

intrathoracic (in'trah-tho-ras'ik) endothoracic.

intratonsillar (in'trah-ton'si-lar) within a tonsil.

intratrabecular (in'trah-trah-bek'u-lar) within a trabecula.

intratracheal (in'trah-tra'ke-al) endotracheal.

intratubal (in'trah-tu'bal) situated or occurring within a tube, especially within a uterine tube.

intratubular (in'trah-tu'bu-lar) within the tubules of an organ.

intratympanic (in'trah-tim-pan'ik) within the tympanic cavity.

intraureteral (in'trah-u-re'ter-al) within the ureter.

intraurethral (in'trah-u-re'thral) within the urethra.

intrauterine (in'trah-u'ter-in) within the uterus.

intravaginal (in'trah-vaj'i-nal) within the vagina.

intravasation (in-trav'ah-za'shun) the entrance of foreign material into a blood vessel.

intravascular (in'trah-vas'ku-lar) [*intra-* + *L. vasculum* vessel] within a vessel or vessels.

intravention (in'trah-ve-na'shun) the entrance or injection of foreign matter into a vein.

intravenous (in'trah-ve'nus) within a vein or veins.

intraventricular (in'trah-ven-trik'u-lar) within a ventricle.

intraversion (in'trah-ver'zhun) (*obs.*) unusual narrowness of the dental arch.

intravertebral (in'trah-ver'te-bral) intraspinal.

intravesical (in'trah-ves'e-kal) [*intra-* + *L. vesica* bladder] situated within the bladder.

intravillous (in'trah-vil'us) situated within a villus.

intravital (in'trah-vi'tal) occurring during life.

intra vitam (in'trah vi'tam) [*L.*] during life.

intravitelline (in'trah-vi-tel'in) within the vitellus or yolk.

intravitreous (in'trah-vit're-us) into or within the vitreous.

inrazole (in'trah-zöl) chemical name: 1-(4 chlorobenzoyl)-3-(1*H*-tetrazol-5-ylmethyl)-1*H*-indole; an anti-inflammatory, $C_{17}H_{12}ClN_5O$.

intrinsic (in-trin'sik) [*L. intrinsecus* situated on the inside] situated entirely within or pertaining exclusively to a part.

intriptyline hydrochloride (in-trip'ti-lën) chemical name: 4-(5*H*-dibenzo[*a,d*]cyclohepten-5-ylidene)-*N,N*-dimethyl-2-butynylamine hydrochloride; an antidepressant, $C_{21}H_{19}N \cdot HCl$.

intro- (in'tro) [*L. intro* within] a prefix meaning into or within.

introducer (in'tro-du'ser) an intubator.

introfier (in'tro-fi'er) a liquid which has the property of lowering the interfacial tension of emulsions.

introflection (in'tro-flek'shun) a bending inward.

introgastic (in'tro-gas'trik) [*intro-* + *Gr. gastër* stomach] conveyed or leading into the stomach.

introitus (in'tro'i-tus), pl. *intro'itus* [*L.*, from *intro* within + *ire* to go] [*NA*] a general term for the entrance to a cavity or space.

i. oesoph'agi, the entrance into the esophagus. **i. pel'vis**, apertura pelvis superior. **i. vagi'nae**, ostium vaginae.

introyection (in'tro-jek'shun) [*intro-* + *L. jacere* to throw] a mental operation by which a person appropriates an occurrence or characteristic and makes it a part of himself, or turns against himself the hostility felt toward another.

intromission (in'tro-mish'un) [*intro-* + *L. mittere* to send] the insertion of one part or instrument into another.

Intropin (in'tro-pin) trademark for a preparation of dopamine hydrochloride.

introrsus (in-tror'sus) [*L.*] turned in.

introspection (in'tro-spek'shun) [*intro-* + *L. spicere* to look] the contemplation or observation of one's own thoughts and feelings; self-analysis.

introssusception (in'tro-sus-sep'shun) [*intro-* + *L. suscipere* to receive] intussusception.

introversion (in'tro-ver'shun) [*intro-* + *L. versio* a turning] 1. the turning outside in, more or less completely, of an organ. 2. a turning inward of the libido, so that interest does not move toward an object, but turns inward to the self.

introvert (in'tro-vert) 1. a person whose libido is turned inward upon himself. 2. to turn one's interest toward one's self.

intubate (in'tu-bät) to treat by intubation.

intubation (in'tu-ba'shun) [*L. in* into + *tuba* tube] the insertion of a tube into a body canal or hollow organ, as into the trachea or stomach. **endotracheal i.**, insertion of a tube into the trachea for administration of anesthesia, maintenance of an airway, aspiration of secretions, ventilation of the lungs, or prevention of entrance of foreign material into the tracheobronchial tree. **nasal i.**, insertion of a tube into the respiratory or gastrointestinal tract through the nose. **nasotracheal i.**, insertion of a tube through the nose into the trachea to serve as an airway. **oral i.**, insertion of a tube into the respiratory or gastrointestinal tract through the mouth. **orotracheal i.**, insertion of a tube through the mouth into the trachea to serve as an airway.

intubationist (in-tu-ba'shun-ist) one who performs an intubation.

intubator (in'tu-ba-tor) an instrument used in intubation.

intumesce (in-tu-mes') to swell up.

intumescence (in-tu-mes'ens) [*L. intumescencia*] 1. a swelling, normal or abnormal. 2. the process of swelling.

intumescent (in-tu-mes'ent) [*L. intumescens*] swelling or becoming swollen.

intumescencia (in-tu-më-sen'she-ah), pl. *intumescen'tiae* [*L.*] [*NA*] a general term for an enlargement or swelling. **i. cer-vica'lis** [*NA*], the enlargement of the cervical spinal cord, at the level of attachment of the nerves to the upper limbs. **i. lum-ba'lis** [*NA*], the enlargement of the lumbar spinal cord, at the level of attachment of the nerves to the lower limbs. **i. tym-pan'ica**, an enlargement on the tympanic branch of the glossopharyngeal nerve.

intussusception (in'tus-sus-sep'shun) [*L. intus* within + *sus-cipere* to receive] a receiving within; specifically: (1) the prolapse of one part of the intestine into the lumen of an immediately adjoining part (Treves, 1899). There are four varieties: *colic*, involving segments of the large intestine; *enteric*, involving only the small intestine; *ileocec*al, in which the ileocecal valve prolapses into the cecum, drawing the ileum along with it; and *ileocolic*, in which the ileum prolapses through the ileocecal valve

Schema for an intussusception: A, intussusciptiens;
B, entering layer, C, intussusceptum (Stevens).

to the colon. (2) In physiology, the reception into an organism of matter, such as food, and its transformation into new protoplasm. **agonic i.**, **postmortem i.**, intussusception occurring in the

death agony. **retrograde i.**, the invagination of a distal part of the bowel into a proximal part.

intussusceptum (in'tus-sus-sep'tum) [L.] the portion of intestine that has been invaginated within another part in intussusception.

intussusciens (in'tus-sus-sip'e-ens) [L.] the portion of intestine into which another portion has invaginated in intussusception.

Inula (in'u-lah) [L.] a genus of composite flowers. *I. helenium* L. yields alantid acid. Its rhizome contains inulin. The root has numerous uses in folk medicine.

inulase (in'u-lās) β -2,1-fructan fructanohydrolase, an enzyme occurring in *Aspergillus niger*, *Penicillium glaucum*, *Saccharomyces fragilis*, and other fungi, and in higher plants, which changes inulin into fructose with one D-glucose molecule per molecule of inulin.

inulin (in'u-lin) a vegetable starch, $(C_6H_{10}O_5)_n$, an indigestible polysaccharide occurring in the rhizome of certain plants (Compositae). It is a polymer of fructofuranose, yields fructose on hydrolysis, and is used in a test for determining renal function.

inulinase (in'u-lin-ās) inulase.

inuloid (in'u-loid) a colorless compound, $C_6H_{10}O_5$, resembling inulin, but more soluble.

inunction (in-ungk'shun) [L. *in* into + *ungere* to anoint] 1. the act of anointing or of applying an ointment with friction. 2. an ointment made with lanolin as a menstruum.

inunctum (in-ungk'tum) inunction, def. 2. **i. men'tholis compos'itum**, compound menthol ointment.

in utero (in u'ter-o) [L.] within the uterus.

InV [abbreviation of a patient's name] an allotypic antigenic site on the constant region of κ chains of human immunoglobulins; three allotypes are known.

invaccination (in-vak'si-na'shun) inadvertent inoculation during vaccination with organisms other than those prepared for the vaccine.

in vacuo (in vak'u-o) [L.] in a vacuum.

invaginate (in-vaj'i-nāt) to infold one portion of a structure within another portion.

invagination (in-vaj'i-na'shun) [L. *invaginatio*, from *in* within + *vagina* sheath] 1. the state of being or the process of becoming invaginated. 2. in embryology, a process by which (a) one region of a hollow, single-walled, spherical blastula caves in to form and line a new cavity in the now cup-shaped, double-walled gastrula, or (b) an ever-deepening pit develops into a diverticulum or tube from the surface into the tissues below. 3. intussusception. **basilar i.**, basilar impression.

invalid (in'vah-lid) [L. *invalidus*; *in* not + *validus* strong] 1. not well and strong. 2. a person who is disabled by illness or infirmity.

invasin (in-va'zin) hyaluronidase.

invasion (in-va'zhun) [L. *invasio*; *in* into + *vadere* to go] 1. the attack or onset of a disease. 2. the simple harmless entrance of bacteria into the body or their deposition in the tissues, as distinguished from infection. 3. the infiltration and active destruction of surrounding tissue, a characteristic of malignant tumors.

invasive (in-va'siv) 1. having the quality of invasiveness. 2. involving puncture or incision of the skin or insertion of an instrument or foreign material into the body; said of diagnostic techniques.

invasiveness (in-va'siv-nes) 1. the ability of a microorganism to enter the body and to spread more or less widely throughout the tissues; the organism may or may not cause an infection or a disease. See *hyaluronidase*. 2. the ability to infiltrate and actively destroy surrounding tissue; said of malignant tumors.

invagination (in-ver'mi-na'shun) infestation of the body by vermin.

Inversine (in-ver'sēn) trademark for a preparation of mecamylamine hydrochloride.

inversion (in-ver'zhun) [L. *inversio*; *in* into + *vertere* to turn] a turning inward, inside out, upside down, or other reversal of the normal relation of a part. In psychiatry, the condition of being a sexual invert; homosexuality. In genetics, a chromosomal aberration caused by the inverted reunion of the middle segment after breakage of a chromosome at two points, resulting in a change in sequence of genes or nucleotides; e.g., the sequence *abcdefg* may be inverted to *abfedcg*. **carbohydrate i.**, hydrolysis of disaccharides or polysaccharides to monosaccharides. **chromosome i.**, see under *aberration*. **sexual i.**, homosexuality. **thermic i.**, the state in which the body temperature is highest in the morning. **i. of uterus**, a turning of the uterus inside out, whereby the fundus is forced through the cervix and protrudes into or outside of the vagina. **visceral i.**, the more or less complete right and left transposition of the viscera; see *situs inversus viscerum*.

inversus (in-ver'sus) [L.; *in* into + *vertere* to turn] opposite to, or inverted from, the normal; see *situs inversus viscerum*.

invert (in'vert) a person whose sexual interests and impulses are directed toward a person of the same sex; a homosexual.

invertase (in-ver'tās) β -fructofuranosidase.

Invertebrata (in-ver'tē-bra'tah) a former division of the animal kingdom, including all forms that have no spinal column.

invertebrate (in-ver'tē-brāt) 1. any animal that has no spinal column; a nonvertebrate animal. 2. having no spinal column.

invertin (in-ver'tin) β -fructofuranosidase.

inverter (in-ver'tor) a muscle that turns a part inward.

invertose (in-ver'tōs) invert sugar, a levorotatory mixture of glucose and fructose obtained by the hydrolysis of dextrorotatory sucrose.

invest (in'vest) to surround, envelop, or embed in an investment material.

investing (in-vest'ing) the process of entirely or partly covering or enveloping an object, such as a denture, tooth, wax form, crown, etc., with a refractory investment material before curing, soldering, or casting. **vacuum i.**, making a mold around a pattern in a vacuum, done to avoid trapping air in the investing material; the investing of a pattern within a vacuum.

investment (in-vest'ment) the material in which a denture, tooth, crown, or pattern for a dental restoration is enclosed before curing, soldering, or casting, or the process of enclosing it in such material.

inveterate (in-vet'er-āt) [L. *inverteratus*; *in* intensive + *vetus* old] chronic and confirmed; long established and of difficult cure.

invivication (in'vis-ka'shun) [L. *in* among + *viscum* slime] the mixing of the food with the mucous secretion of the mouth in mastication.

in vitro (in ve'tro) [L.] within a glass; observable in a test tube; in an artificial environment.

in vivo (in ve'vo) [L.] within the living body.

involute (in'vo-lu'ker) an involucre.

involucrum (in'vo-lu'krum), pl. *involu'cra* [L.; *in* in + *volvere* to wrap] a covering or sheath, such as contains the sequestrum of a necrosed bone.

involuntary (in-vol'un-ter'e) [L. *involuntarius*; *in* against + *voluntas* will] performed independently of the will; contravolitional.

involuntomotory (in-vol'un-to-mo'tor-e) pertaining to motion that is not voluntary.

involute (in'vo-lūt) [L. *in* into + *volvere* to roll] 1. to return to normal size after enlargement. 2. to regress; to change to an earlier or to a more primitive condition. See *involution*.

involution (in'vo-lu'shun) [L. *involutio*; *in* into + *volvere* to roll] 1. a rolling or turning inward. 2. one of the movements involved in the gastrulation of many animals. 3. a retrograde change of the entire body or in a particular organ, as the retrograde changes in the female genital organs that result in normal size after delivery. 4. the progressive degeneration occurring naturally with advancing age, resulting in shriveling of organs or tissues. **senile i.**, the progressive degeneration that occurs naturally with advancing age, resulting in the shriveling of organs or tissues.

involutional (in'vo-lu'shun-al) pertaining to, due to, or occurring in involution.

Io chemical symbol for *ionium*.

iocarmate meglumine (i'o-kar'māt) chemical name: 3,3'-[(1,6-dioxo-1,6-hexanediyldiimino)bis[2,4,6-triido-5-[(methylamino)carbonyl]benzoic acid compound with 1-deoxy-1-(methylamino)-D-glucitol (1:2). The meglumine salt of iocarmate, $C_{24}H_{20}I_2N_4O_8 \cdot 2C_7H_{17}NO_5$, used as a radiopaque medium in lumbar radiculography, cerebral ventriculography, and knee arthrography.

iodamide (i-o'dah-mid) chemical name: 3-(acetyl-amino)-5-[(acetyl-amino)methyl]-2,4,6-triiodobenzoic acid; a diagnostic radiopaque medium, $C_{12}H_{11}I_3N_2O_4$.

Iodamoeba (i'o-dah-me'bah) a genus of amebas of the order Amoebozoa, class Rhizopoda, having a large vesicular nucleus that contains a large endosome surrounded by globular granules; found in the intestine of man and other mammals. The cysts, which are usually uninucleate, contain a conspicuous glycogen vacuole.

I. bütschlii, a species of nonpathogenic amebas found in the human intestinal tract; the cysts (formerly called iodine cysts) usually contain a large glycogen mass which stains intensely with iodine. Called also *I. williamsi*. **I. su'is**, a species morphologically indistinguishable from *I. bütschlii*, but found in pigs. **I. williamsi**, *I. bütschlii*.

iodate (i'o-dāt) any salt of iodic acid.

iod-Basedow (i-ōd-bas'ē-dow) jodbasedow.

iodemia (i'o-de'me-ah) [*iodine* + Gr. *haima* blood + *-ia*] the presence of iodides in the blood.

iodide (i'o-did) any binary compound of iodine: a compound of iodine with an element or radical. Iodide inhibits the release of thyroid hormone from the thyroid gland. **ferrous i.**, reddish to grayish-black masses, FeI_2 , formerly used in chronic tuberculosis and now used as a catalyst; called also *iron iodide*.

iodimetry (i'o-dim'ē-tre) [*iodine* + Gr. *metron* measure] 1. the estimation of the quantity of iodine in a mixture or compound. 2. in quantitative analysis, the procedure used to determine an oxidizing agent consisting of the quantitative oxidation of potassium iodide to free iodine, and then titration with sodium thiosulfate.

iodinate (i-o'di-nāt) to combine or compound with iodine.

iodination (i'o-din-a'shun) the incorporation or addition of iodine in a compound.

iodine (i'o-din) [Gr. *ioeides* violet-like, from the color of its vapor] 1. a halogen element of a peculiar odor and acrid taste; symbol, I; atomic number, 53; atomic weight, 126.904. It is a nonmetallic element, occurring in heavy, grayish black plates or granules. Iodine is essential in nutrition, being especially necessary for the synthesis of thyroid hormones (thyroxine and triiodothyronine), which regulate the metabolic rate in all cells. 2. [USP] a preparation of iodine used as a topical anti-infective (see also under *solution*). Iodine, usually in the form of iodides, is used in the treatment of hyperthyroidism. **butanol-extractable i.**, iodine that can be separated from the plasma proteins by extraction with certain organic solvents, such as butanol; it serves as a measure of thyroid hormone levels in the blood. Abbreviated BEI. **imidecyl i.**, a topical anti-infective compound, consisting of a mixture of 2-alkyl-(C₇H₁₅ to C₁₇H₃₅)-1-(carboxymethyl)-1-(2-hydroxyethyl)-2-imidazolium chloride; 3,6,9,12,15,18,21,24,27,30-, 33,36,39-tridecaoxadopentacontan-1-ol; and iodine. **povidone i.**, see *povidone-iodine*. **protein-bound i.**, iodine firmly bound to protein in the body serum, determination of which constitutes one test of thyroid function. **radioactive i.**, radioiodine.

iodinophil (i'o-din'o-fil) [*iodine* + Gr. *philein* to love] 1. any cell or other element readily stainable with iodine. 2. iodophilous.

iodophilous (i'o-din-off'i-lus) readily stainable with iodine.

iodipamide (i'o-dip'ah-mīd) [USP] chemical name: 3,3'-(1,6-dioxo-1,6-hexanediyl)diimino[bis(2,4,6-triiodobenzoic acid)]; a radiopaque medium, C₂₀H₁₄I₆N₂O₆, used as the meglumine and sodium salts. **i. meglumine, i. methylglucamine** [USP], the meglumine salt of iodipamide, (C₇H₁₇NO₅)₂·C₂₀H₁₄I₆N₂O₆, used as a radiopaque medium in cholangiography and cholecystography, administered intravenously. **i. sodium**, the sodium salt of iodipamide, C₂₀H₁₂I₆N₂Na₂O₆, used as a radiopaque medium in cholangiography and cholecystography, administered intravenously.

iodism (i'o-dizm) chronic poisoning by iodine or iodine compounds; it is marked by coryza, ptialism, frontal headache, emaciation, weakness, and eruptions on the skin.

iodize (i'o-diz) to impregnate with iodine or to put under its influence; to incorporate iodine or one of its compounds.

iodobrassid (i-o'do-bras'sid) chemical name: ethyl diiodobrassidate; used in iodide therapy and as a radiopaque medium.

iodochlorhydroxyquin (i-o'do-klōr'hi-drok'se-kwin) [USP] chemical name: 5-chloro-7-iodo-8-quinolinol. An antiamebic, antibacterial, and antifungal agent with antieczematic and antipruritic properties, C₈H₅ClINO, occurring as a voluminous, spongy, yellowish white to brownish yellow powder. It is used in the treatment of amebic dysentery, and as a local anti-infective in a wide range of dermatoses, including all types of eczema, and in vaginitis due to *Trichomonas vaginalis*, *Candida albicans*, *Trichophyton*, or mixed bacteria; administered orally, topically, or intravaginally. Called also *clinoquinol*.

iodocholesterol (i-o'do-ko-les'ter-ol) a radioisotope, ¹³¹I-19-iodocholesterol, used in visualization of the adrenal glands by the photoscintillation scanner.

iododerma (i-o'do-der'mah) [*iodine* + Gr. *derma* skin] any skin eruption or lesion resulting from iodism.

iodoform (i-o'do-form) [*iodine* + *formyl*] chemical name: triiodomethane. A greenish yellow powder or crystals, CHI₃, having a strong, penetrating odor, containing about 96 per cent of iodine, and soluble in chloroform and ether and somewhat in alcohol and water; used as a topical anti-infective, applied to the skin.

iodoformism (i'o-do-form'izm) poisoning by iodoform.

iodoformum (i'o-do-for'mum) iodoform.

iodogenic (i'o-do-jen'ik) [*iodine* + Gr. *gennan* to produce] yielding or producing iodine.

iodoglobulin (i'o-do-glob'u-lin) an iodine-containing globulin (protein).

iodhippurate sodium (i-o'do-hip'u-rāt) chemical name: o-iodhippurate sodium. An iodine-containing compound, C₉H₇·INNaO₃, administered orally, intravenously, or by retrograde injection as a radiopaque medium in pyelography. When labeled with radioactive iodine 131, it may be used as a diagnostic aid in determination of renal function.

iodology (i'o-do-log'rah-fe) roentgenologic visualization of an organ or part after the injection into it of iodized oil.

iodomethamate sodium (i-o'do-meth'ah-māt) chemical name: 1,4-dihydro-3,5-diiodo-1-methyl-4-oxo-2,6-pyridinedicar-

boxylic acid disodium salt. A radiopaque medium, C₈H₃I₂NNaO₅, used in urography.

iodometric (i'o-do-met'rik) pertaining to iodometry.

iodometry (i'o-dom'ē-tre) [*iodine* + Gr. *metron* measure] estimation of the quantity of a chemical by titration with iodine.

iodophenol (i'o-do-fe'nol) 1. a mono-iodophenol, OH·C₆H₄I. 2. a preparation of iodine, phenol, and glycerin: antiseptic.

iodophil (i'o-do-fil) iodophil.

iodophilia (i'o-do-fil'e-ah) [*iodine* + Gr. *philein* to love + *-ia*] the reaction shown by leukocytes in certain conditions when treated with iodine or iodides. Normal leukocytes are colored bright yellow, but in certain pathologic conditions, as toxemia and severe anemia, the polymorphonuclears show diffuse brownish coloration. When the staining affects the leukocytes themselves, it is termed *intracellular*; when only the particles around the leukocytes are affected, it is *extracellular*.

iodophor (i-o'do-fōr) a compound consisting of iodine combined with a carrier, such as polyvinylpyrrolidone, used in veterinary medicine as a preoperative skin disinfectant.

iodophthalein sodium (i-o'do-thal'e-in) chemical name: disodium salt of tetraiodophenolphthalein; used as a radiopaque medium in cholecystography.

iodopsin (i'o-dop'sin) [Gr. *iodēs* violet colored + *opsis* vision] a photosensitive violet retinal pigment found in the retinal cones of some animals and important for color vision; called also *visual violet*.

iodopyracet (i-o'do-pi'rah-set) chemical name: 3,5-diiodo-4-oxo-1(4*H*)-pyridineacetic acid compound with 2,2'-iminodiethanol (1:1). A radiopaque medium, C₁₁H₁₀I₂N₂O₆, used especially in urography; administered intravenously or intramuscularly.

iodoquinol (i-o'do-kwin'ol) [USP] chemical name: 5,7-diiodo-8-quinolinol. An amebicide, C₁₅H₁₃I₂NO₄, occurring as a light yellowish to tan, microcrystalline powder; used in the treatment of intestinal amebiasis, administered orally, and in *Trichomonas vaginalis* vaginitis, administered intravaginally. It has also been used topically in fungal and bacterial skin infections and in seborrheic dermatitis. Called also *diiodohydroxyquin*.

iodosulfate (i'o-do-sul'fāt) a combination of a base with iodine and sulfuric acid.

iodotherapy (i'o-do-ther'ah-pe) [*iodine* + Gr. *therapeia* treatment] treatment with iodine or the iodides.

iodothyroglobulin (i'o-do-thi'ro-glob'u-lin) thyroglobulin.

iodothyronine (i'o-do-thi'ro-nēn) a nonspecific term for iodinated thyronines, including the thyroid hormones triiodothyronine and tetraiodothyronine (thyroxine).

iodotyrosine (i'o-do-ti'ro-sēn) any iodinated derivative of tyrosine.

iodoventriculography (i'o-do-ven-trik'u-log'rah-fe) ventriculography with iodine contrast medium.

iodovolatilization (i'o-do-vol'ah-til-i-za'shun) the liberation of free iodine by living epidermal cells in the iodogenic layer of certain brown algae or kelp. It accumulates in the algae as potassium iodide and has been used as a commercial source of iodine.

iodum (i-o'dum), gen. *io'di* [L.] iodine.

ioduria (i'o-du're-ah) the presence of iodides in the urine.

ion (i'on) [Gr. *ion* going] an atom or radical having a charge of positive (cation) or negative (anion) electricity owing to the loss (positive) or gain (negative) of one or more electrons. Substances that form ions are called electrolytes. See *ionic theory*, under *theory*. **dipolar i.**, zwitterion. **gram i.**, the weight in grams of an ion numerically equal to the atomic or molecular weight of the ion. **hydrogen i.**, the nucleus of the hydrogen atom or a hydrogen atom that has lost its electron, H⁺; it bears a positive charge equivalent to the negative charge of the electron and is called a proton. **hydronium i.**, the hydrated form, H₃O⁺, in which the proton (hydrogen ion, H⁺) exists in aqueous solution; a combination of H⁺ and H₂O.

Ionamin (i-o'nah-min) trademark for a preparation of phentermine.

ionic (i-on'ik) pertaining to an ion or to ions.

ionium (i-o'ne-um) [*ion*] a radioactive isotope of thorium, of atomic weight 230.5; it emits both alpha and gamma rays.

ionization (i'on-i-za'shun) 1. the dissociation of a substance in solution into ions. 2. iontophoresis. **avalanche i.**, the multiplicative process in which a single charged particle, accelerated by a strong electric field, produces additional charged particles through collision with neutral gas molecules; called also *Townsend i.* **Townsend i.**, avalanche i.

ionize (i'on-iz) to separate into ions.

ionocolorimeter (i'o-no-kol'or-im'ē-ter) an apparatus for measuring the ionic acidity of a solution.

ionogen (i-on'o-jen) [*ion* + Gr. *gennan* to form] a substance that can be ionized.

ionogenic (i-on'o-jen'ik) forming or supplying ions.

ionometer (i'o-nom'ē-ter) an instrument for the measurement of the intensity or quantity of radiation from an ionizing radiation source.

ionometry (i'o-nom'ē-tre) roentgenometry.

ionone (i'on-ōn) [Gr. *ion*-violet] an odoriferous derivative of orris root, $C_{15}H_{26}O$, prepared commercially from citral and used as a perfume.

ionophore (i'on-o-fōr') any molecule, as of a drug, that increases the permeability of cell membranes to a specific ion.

ionophore (i'o-no-fōz) [Gr. *ion* violet + *phos*] a violet phos.

ionoscope (i-on'o-skōp) an instrument for detecting alkaline or acid impurity in nitrous oxide.

ionosphere (i-on'o-sfēr) the region of the atmosphere characterized by the formation of ions by the action of solar radiations upon the atmospheric constituents.

ionotherapy (i'o-no-ther'ah-pe) 1. [*ion* + *therapy*] iontophoresis. 2. [Gr. *ion* violet + *therapy*] treatment by means of ultraviolet rays.

ion-protein (i-on-pro'te-in) a protein molecule combined with an inorganic ion.

iontherapy (i'on-ther'ah-pe) iontophoresis.

iontophoresis (i-on'to-fō-re'sis) the introduction by means of the electric current, of ions of soluble salts into the tissues of the body, often for therapeutic purposes; a form of electro-osmosis. Called also *iontherapy*.

iontophoretic (i-on'to-fō-ret'ik) pertaining to iontophoresis.

iontoquantimeter (i-on'to-quan-tim'ē-ter) [*ion* + *quantimeter*] ionometer.

iontoradeometer (i-on'to-ra'de-om'ē-ter) ionometer.

IOP intraocular pressure.

iophendylate (i'o-fen'dī-lāt) [USP] chemical name: iodo-*methylbenzene decanoic acid*. A radiopaque medium, $C_{19}H_{29}IO_2$, occurring as a colorless to pale yellow, viscous liquid; used in myelography, administered intrathecally or by special injection.

iopydol (i-o-pi'dōl) chemical name: 1-(2,3-dihydroxypropyl)-3,5-diiodo-4(1*H*)-pyridinone; a radiopaque medium for bronchography, $C_8H_9I_2NO_3$.

iopydone (i-o-pi'dōn) chemical name: 3,5-diiodo-4(1*H*)-pyridinone; a radiopaque medium for bronchography, $C_8H_9I_2NO$.

iosulamide meglumine (i'o-sul'ah-mid) chemical name: 3,3'-(sulfonylbis[(1-oxo-3,1-propanediyl)imino])bis[5-(acetyethylamino)-2,4,6-triiodobenzoic acid] compound with 1-deoxy-1-(methylamino)-D-glucitol(1:1); a radiopaque medium, $C_{28}H_{28}I_6N_4O_{10}$, $S \cdot C \cdot H_{11}NO_5$.

iotacism (i-o'tah-sizm) [Gr. *iōta* letter I] excessive use of the sound of the Greek letter *iota* (English *e*, as in *be*) in speaking.

iothalamate (i-o-thal'ah-māt) any salt of iothalamic acid.

i. meglumine, a radiopaque medium, $C_{18}H_{26}I_3N_2O_8$, available in solution, consisting of iothalamic acid in water for injection, prepared with the aid of meglumine; used intra-arterially in cerebral angiography and peripheral arteriography and intra-venously in excretory urography and peripheral pyelography.

i. sodium, a radiopaque medium, $(C_{11}H_8I_3N_2NaO_4)$, available in solution, consisting of iothalamic acid in water for injection, prepared with the aid of sodium hydroxide; used intra-arterially or intravenously in angiocardiology and aortography.

iothiouracil (i'o-thi'o-u'rah-sil) chemical name: 5-iodo-2-thiouracil; a thyroid inhibitor.

I.P. intraperitoneally; isoelectric point.

I.P.A.A. International Psychoanalytical Association.

I-para primipara.

ipecac (ip'ē-kak) [USP] the dried rhizome and roots of *Cephaelis ipecacuanha* (Brotero) Rich. (Rubiaceae) (Rio or Brazilian i.) or of *C. acuminata* Karsten (Cartagena, Nicaragua, or Panama i.). Originally introduced as a remedy for dysentery, it has been replaced by its alkaloid emetine for that purpose, and is now used in syrup as an emetic, particularly in cases of poisoning. It also has expectorant properties. **powdered i.** [USP], ipecac reduced to a very fine powder; used in the preparation of ipecac syrup.

ipodate (i'po-dāt) 3-[[[dimethylamino)methylene]amino]-2,4,6-triiodobenzenepropanoic acid, $C_{12}H_{13}I_3N_2O_4$. **i. calcium** [USP], the calcium salt of ipodate, $C_{24}H_{24}CaI_3N_4O_4$, occurring as a white to off-white, fine, crystalline powder; used as a radiopaque medium in cholecystography, administered orally. **i. sodium** [USP], the sodium salt of ipodate, $C_{12}H_{12}I_3N_2NaO_4$, occurring as a white to off-white fine, crystalline powder; used as a radiopaque medium in cholecystography, administered orally.

ipomea (i'po-me'ah) the dried root of *Ipomoea orizabensis*, used as a cathartic; called also *Mexican scammony* and *orizaba jalap root*.

Ipomoea (i'po-me'ah) a genus of herbs and shrubs of the family Convolvulaceae, comprising some 300 species. Some species, e.g., *I. orizabensis* Ledenois, contain cathartic resins; others, e.g., *I. violacea* L., possess psychotomimetic indole alkaloids, such as lysergic acid amide.

IPPB intermittent positive pressure breathing; see under *breathing*.

Ipral (ip'ral) trademark for preparations of probarbital.

ipratropium bromide (i-prah-tro'pe-um) chemical name: (+)-(*endo*,*syn*)-3-(3-hydroxy-1-oxo-2-phenylpropoxy)-8-methyl-8-(1-methylethyl)-8-azoniabicyclo[3,2,1]octane bromide; a bronchodilator, $C_{20}H_{30}BrNO_3$.

iprindole (i-prin'dōl) chemical name: 6,7,8,9,10,11-hexahydro-*N,N*-dimethyl-5-*H*-cycooct[*b*]indole-5-propanamine; an antidepressant, $C_{18}H_{28}N_2$.

iproniazid (i'pro-ni'ah-zid) chemical name: 4-pyridinecarboxylic acid 2-(1-methylethyl)hydrazine; a monoamine oxidase inhibitor, antidepressant, and antitubercular, $C_9H_{13}N_3O$.

ipronidazole (i-pro-nid'ah-zōl) chemical name: 1-methyl-2-(1-methylethyl)-5-nitro-1*H*-imidazole; an antiprotozoal, $C_7H_{11}N_3O_2$, effective against *Histomonas*.

iproxamine hydrochloride (i-proks'ah-mēn) chemical name: 4-[2-(dimethylamino)ethoxy]-2-methyl-5-(1-methylethyl)-phenyl 1-methylethyl ester hydrochloride; a vasodilator, $C_{18}H_{20}NO_4 \cdot HCl$.

ipsation (ip-sa'shun) [L. *ipse* himself] masturbation.

ipsi- [L. *ipse* self] a combining form meaning the same.

ipsilateral (ip'si-lat'er-al) [L. *ipse* self + *latus* side] situated on, pertaining to, or affecting the same side, as opposed to contralateral.

ipsism (ip'sizm) masturbation.

IPSP inhibitory postsynaptic potential.

I.Q. intelligence quotient; see under *quotient*.

Ir chemical symbol for iridium.

irascibility (i-ras'fī-bil'i-te) [L. *irascibilis* ill tempered] morbid irritability and quickness of temper.

IRC inspiratory reserve capacity.

Ircon (ir'kon) trademark for a preparation of ferrous fumarate.

irid- see *irido-*.

iridal (i'rī-dal) iridic.

iridalgia (i'rī-dal'je-ah) pain in the iris.

iridauxesis (ir'id-awk-se'sis) [*irid-* + Gr. *auxēsis* increase] thickening of the iris.

iridectasis (ir'fī-dek'tah-sis) [*irid-* + Gr. *iktasis* dilatation] dilatation of the iris, or pupil of the eye.

iridectome (ir'fī-dek'tōm) [*irid-* + Gr. *ektemnein* to cut out] a cutting instrument for use in iridectomy.

iridectomesodialysis (ir'fī-dek'to-me'so-di-al'fī-sis) [*irid-* + Gr. *ektomē* excision + *mesos* middle + *dialysis* loosening] excision and separation of adhesions around the inner edge of the iris.

iridectomize (ir'fī-dek'to-mīz) to remove part of the iris by excision.

iridectomy (ir'fī-dek'to-me) [*irid-* + Gr. *ektomē* excision] surgical excision of part of the iris; called also *corectomy*. **optic i.**, **optical i.**, excision of part of the iris as a means of enlarging an abnormally small pupil and improving vision. **peripheral i.**, surgical excision of a peripheral portion of the iris. **preliminary i.**, **preparatory i.**, iridectomy performed prior to removal of the lens in cataract surgery. **sector i.**, surgical excision of a portion of the iris extending from the pupil through the peripheral iris. **stenopeic i.**, excision of a small part of the iris, with preservation of the sphincter. **therapeutic i.**, iridectomy performed for the cure of disease of the eye.

iridectopia (ir'fī-dek'to-pe-ah) [*irid-* + Gr. *ektos* displaced + *-ia*] displacement of the iris of the eye.

iridectropium (ir'fī-dek-tro'pe-um) ectropion uveae.

iridemia (ir'fī-de-me-ah) [*irid-* + Gr. *haima* blood + *-ia*] hemorrhage from the iris.

iridencleisis (ir'fī-den-kli'sis) [*irid-* + Gr. *enklein* to lock in] the surgical creation of a permanent drain by incarceration of a slip of the iris within a corneal or limbal incision to act as a wick through which the aqueous is filtered from the anterior chamber to the subconjunctival tissues; done to reduce intraocular pressure.

iridentropium (ir'fī-den-tro'pe-um) entropion uveae.

irideremia (ir'fī-der-e-me-ah) [*irid-* + Gr. *erēmia* want of, absence] congenital absence of the iris.

irides (ir'fī-dēz) [Gr.] plural of *iris*.

iridescence (ir'fī-des'ens) [L. *iridescere* to gleam like a rainbow] the condition of gleaming with bright and changing colors.

iridescent (ir'fī-des'ent) [L. *iridescens*] gleaming with bright colors like those of the rainbow.

iridesis (i-rid'ē-sis) [*iris* + Gr. *desis* a binding] the operation of repositioning the pupil by bringing a sector of the iris through a corneal or limbal incision and fixing the sector with a suture.

iridiagnosis (i'rī-di-ag-no'sis) iridodiagnosis.

iridial (i-rid'e-al) iridic.

iridian (i-rid'e-an) iridic.

iridic (i-rid'ik) pertaining to the iris.

iridium (i-rid'e-um, i-rid'e-um) [L. *iris* rainbow, from the tints of its salts] a very hard white metal; symbol, Ir; atomic number, 77; atomic weight, 192.2.

iridization (ir'ī-di-za'shun) the subjective perception of iridescent halos about lights, occurring in glaucoma.

irido-, irid- [Gr. *iris*, *iridos* rainbow, colored circle] combining form denoting relationship to the iris of the eye, or to a colored circle.

iridoavulsion (ir'ī-do-ah-vul'shun) complete tearing away of the iris from its periphery.

iridocapsulitis (ir'ī-do-kap-su-li'tis) inflammation of the iris and the capsule of the lens.

iridocele (i-rid'o-sēl) [irido- + Gr. *kēlē* hernia] hernial protrusion of a part of the iris through the cornea.

iridochoroiditis (ir'ī-do-ko'roi-di'tis) inflammation of the iris and the choroid.

iridocoloboma (ir'ī-do-kol'o-bo'mah) [irido- + Gr. *kolobōma* mutilation] congenital fissure or coloboma of the iris.

iridoconstrictor (ir'ī-do-kon-strik'tor) a muscle element or an agent which acts to constrict the pupil of the eye.

iridocorneosclerectomy (ir'ī-do-kor''ne-o-skle-rek'to-me) surgical excision of a portion of the iris, cornea, and sclera for glaucoma.

iridocyclectomy (ir'ī-do-si-klek'to-me) [irido- + Gr. *kyklos* circle + *ektomē* excision] surgical removal of a portion of the iris and of the ciliary body.

iridocyclitis (ir'ī-do-si-ki'tis) [irido- + Gr. *kyklos* circle + *-itis*] inflammation of the iris and of the ciliary body; anterior uveitis.

heterochromic i., unilateral low-grade iridocyclitis, leading to depigmentation of the iris of the affected eye; called also *heterochromic uveitis*.

iridocyclochoroiditis (ir'ī-do-si''klo-ko'roi-di'tis) [irido- + Gr. *kyklos* circle + *choroiditis*] inflammation of the iris, ciliary body, and choroid coat.

iridocystectomy (ir'ī-do-sis-tek'to-me) an operation to establish an artificial pupil in an eye in which the iris adheres to the residual lens capsule, accomplished by excising a portion of the iris and lens capsule through a corneal incision.

iridocyte (i-rid'o-sit) [irido- + *-cyte*] one of the cells in the scales of fishes that contains crystals of guanine capable of producing iridescence.

iridodesis (ir'ī-dod'ē-sis) iridesis.

iridodiagnosis (ir'ī-do-di'ag-no'sis) diagnosis of disease by the appearance of the iris, its color, markings, changes, etc.

iridodialysis (ir'ī-do-di-al'i-sis) [irido- + Gr. *dialysis* loosening] 1. cordialysis. 2. the separation or loosening of the iris from its attachment. 3. division or splitting of the iris (traumatic, or surgical), producing more than one pupil.

iridodiastasis (ir'ī-do-di-as'tah-sis) a defect of the peripheral border of the iris, but not affecting the pupillary margin, producing the clinical appearance of more than one pupil.

iridodilator (ir'ī-do-di-la'tor) 1. the dilator muscle of the pupil. 2. an agent which acts to dilate the pupil of the eye.

iridodonesis (ir'ī-do-do-ne'sis) [irido- + Gr. *donēsis* tremor] abnormal tremulousness of the iris on movements of the eye, occurring in subluxation of the lens, depriving the iris of this support.

iridokeratitis (ir'ī-do-ker''ah-ti'tis) [irido- + Gr. *keras* horn, cornea + *-itis*] inflammation of the iris and cornea.

iridokinesia (ir'ī-do-ki-ne'ze-ah) iridokinesis.

iridokinesis (ir'ī-do-ki-ne'sis) [irido- + Gr. *kinēsis* movement] the contraction and expansion of the iris.

iridokinetic (ir'ī-do-ki-net'ik) pertaining to iridokinesis.

iridoleptynsis (ir'ī-do-lep-tin'sis) [iris + Gr. *leptynsis* attenuation] thinning or atrophy of the iris.

iridology (ir'ī-dol'o-je) [irido- + *-logy*] the study of the iris, particularly of its color, markings, changes, etc., as associated with disease.

iridolysis (ir'ī-dol'i-sis) [irido- + Gr. *lysis* a loosening] the surgical release of adhesions of the iris.

iridomalacia (ir'ī-do-mah-la'she-ah) [irido- + Gr. *malakia* softness] softening of the iris.

iridomesodialis (ir'ī-do-me''so-di-al'i-sis) [irido- + Gr. *mesos* middle + *dialysis* loosening] surgical loosening of adhesions around the inner edge of the iris.

iridomotor (ir'ī-do-mo'tor) pertaining to movements of the iris; affecting contraction or dilation of the pupil of the eye.

iriduncus (ir'ī-dong'kus) [irid- + Gr. *onkos* bulk] tumor or swelling of the iris.

iridoparalysis (ir'ī-do-pah-ral'i-sis) iridoplegia.

iridopathy (ir'ī-dop'ah-the) [irido- + Gr. *pathos* disease] disease of the iris.

iridoperiphakitis (ir'ī-do-per''e-fa-ki'tis) [irido- + Gr. *peri* around + *phakos* lens] inflammation of the capsule of the crystalline lens.

iridoplegia (ir'ī-do-ple'je-ah) [iris + Gr. *plēgē* stroke + *-ia*] paralysis of the sphincter of the iris, with lack of contraction or dilation of the pupil. **accommodation i.**, failure of the pupil to contract when an accommodative effort is made. **complete**

i., paralysis of the sphincter of the pupil, with failure to react to any stimulus. — **reflex i.**, failure of the pupil to contract under the influence of light or when skin is stimulated. **sympathetic i.**, failure of the pupil to dilate when the skin is stimulated.

iridoptosis (ir'ī-dop-to'sis) [irido- + Gr. *ptōsis* falling] prolapse of the iris.

iridopupillary (ir'ī-do-pu'pī-ler'e) pertaining to the iris and the pupil.

iridorhexis (ir'ī-do-rek'sis) [irido- + Gr. *rhēxis* rupture] 1. rupture of the iris. 2. the tearing away of the iris.

iridoschisis (ir'ī-dos'kī-sis) splitting of the mesodermal stroma of the iris into two layers so that the anterior section separates and disintegrates into fibrils, the unattached ends of which float freely in the anterior chamber.

iridosclerotomy (ir'ī-do-skle-rot'o-me) [irido- + *sclera* + Gr. *tomē* a cutting] incision of the sclera and of the edge of the iris in treatment of glaucoma.

iridosteresis (ir'ī-do-ste-re'sis) [irido- + Gr. *sterēsis* loss] the removal of part or all of the iris.

iridotasis (ir'ī-dot'ah-sis) [irido- + Gr. *tasis* stretching] the operation of stretching the iris in treatment of glaucoma.

iridotomy (ir'ī-dot'o-me) [irido- + Gr. *tomē* a cutting] incision of the iris, as in creating an artificial pupil.

iridovirus (ir'ī-do-vi'rus) any of a group of large, morphologically similar DNA viruses, which infect the larvae of various insects, giving an iridescent appearance to the infected insect; called also *iridescent virus*.

I.R.I.S. International Research Information Service.

Iris (i'ris) a genus of perennial iridaceous herbs. The roots of several species, *I. florentina* L., *I. germanica* L., and *I. pallida* L., are the source of orris. *I. versicolor* L. (blue flag), a plant indigenous to America, is the source of a substance formerly used as a purgative, emetic, and diuretic. Some species, e.g., *I. missouriensis* Nutt., have been reported to be poisonous to livestock due to an irritant principle in the leaves and rootstalks that causes gastroenteritis.

iris (i'ris), pl. *irides* [Gr. "rainbow," "halo"] 1. [NA] the circular pigmented membrane behind the cornea, perforated by the pupil; the most anterior portion of the vascular tunic of the eye, it is made up of a flat bar of circular muscular fibers surrounding the pupil, a thin layer of smooth muscle fibers by which the pupil is dilated, thus regulating the amount of light entering the eye, and posteriorly two layers of pigmented epithelial cells. 2. the rhizome of *Iris versicolor*, formerly used as a purgative, emetic, and diuretic. **i. bombé**, a condition in which the iris is bowed forward by the collection of aqueous humor between the iris and lens

Normal iris contrasted with iris bombé.

in total posterior synechia. **Florentine i.**, 1. *Iris florentina* L. 2. orris. **tremulous i.**, one characterized by abnormal tremulousness; see *iridodonesis*. **umbrella i.**, *i. bombé*.

irisin (i'ri-sin) a fructose polysaccharide, (C₆H₁₀O₅)_n, from *Iris pseudo-acorus*; it is an aperient and cholagogue.

irisopsia (i'ris-op'se-ah) [Gr. *iris* rainbow + *opsis* vision] a visual defect in which objects appear surrounded by rings of colored light.

iritic (i-rit'ik) pertaining to or of the nature of iritis.

iritis (i-ri'tis) [iris + *-itis*] inflammation of the iris, usually marked by pain, congestion in the ciliary region, photophobia, contraction of the pupil, and discoloration of the iris. **i. catamenia/lis**, iritis recurring before each menstrual period. **diabetic i.**, iritis marked by the deposit of glycogen in diabetic patients. **follicular i.**, iritis marked by multiple small nodules the size of a pinhead. **gouty i.**, painful iritis occurring in gouty patients; uratic iritis. **i. papulo'sa**, iritis with papules in the iris; usually syphilitic. **plastic i.**, a variety in which

the exudate consists of fibrinous matter which forms new tissue. **purulent i.**, iritis in which the exudate is purulent. **serous i.**, iritis in which the exudate consists of serum. **spongy i.**, iritis with a fibrinous exudate, forming a spongy mass in the anterior chamber. **sympathetic i.**, iritis occurring in sympathetic ophthalmoplegia. **uratic i.**, gouty i.

iritoectomy (i'ri-to-ek'to-me) [*iris* + Gr. *ektomē* excision] surgical excision of deposits of after-cataract on the iris, together with iridectomy, to form an artificial pupil.

iritomy (i-rit'o-me) iridotomy.

irium (ir'e-um) sodium lauryl sulfate.

iron (i'ern) [A. S. *iren*; L. *ferrum*] a metallic element found in certain minerals, in nearly all soils, and in mineral waters: atomic number 26; atomic weight, 55.847; specific gravity, 7.85-7.88; symbol, Fe. Iron is an essential constituent of hemoglobin, cytochrome, and other components of respiratory enzyme systems. Its chief functions are in the transport of oxygen to tissues (hemoglobin) and in cellular oxidation mechanisms. Depletion of iron stores may result in iron-deficiency anemia (see under *anemia*). Iron is used to build up the blood in anemia. The compounds of iron are astringent and styptic. **i. acetate**, a compound, $\text{Fe}(\text{C}_2\text{H}_3\text{O}_2)_3$, used as an astringent. **alcoholized i.**, pulverized i. **i. and ammonium citrate**, see *ferric ammonium citrate*, under *ammonium*. **i. and ammonium sulfate**, see *ferric and ferrous ammonium sulfates*, under *ammonium*. **i. and ammonium tartrate**, see *ferric ammonium tartrate*, under *ammonium*. **i. arsenate**, ferrous arsenate. **i. arsenite**, ferric arsenite. **available i.**, that portion of iron in the food which can be separated from the total iron content by digestive processes. **i. carbonate**, ferrous carbonate. **i. chloride**, either of the binary compounds FeCl_2 or FeCl_3 . **i. choline citrate**, ferrocholine. **i. citrate**, ferric citrate. **i. citrate green**, a complex ferric ammonium citrate used for intramuscular and subcutaneous injection. **dialyzed i.**, an aqueous solution of ferric oxychloride prepared by dialysis. **i. gluconate**, ferrous gluconate. **i. glycerophosphate**, ferric glycerophosphate. **i. hydroxide**, ferric hydroxide. **i. iodide**, ferrous iodide. **i. iodobehenate**, an amorphous, reddish brown powder, formerly used in scrofula, chlorosis, rickets, etc. **i. magnesium sulfate**, a greenish white powder, $\text{FeSO}_4 \cdot \text{MgSO}_4 + 7\text{H}_2\text{O}$, used in anemia. **i. protosulfate**, ferrous sulfate. **Quevenne's i.**, reduced iron. **radioactive i.**, radioiron. **reduced i.**, finely powdered metallic iron obtained by precipitation with hydrogen from a solution of any soluble salt of iron. **i. sorbitex**, a hematinic preparation consisting of a sterile colloidal solution of a complex of trivalent iron, sorbitol, and citric acid, stabilized with dextrin and sorbitol. **i. subcarbonate**, an amorphous, brownish powder, consisting mainly of iron hydroxide. **i. subsulfate**, ferric subsulfate. **i. succinate**, a green-gray substance said to be useful in cholelithiasis. **i. sulfate**, ferrous sulfate.

irotoomy (i-rot'o-me) iridotomy.

irradiate (i-ra'de-āt) 1. to treat with roentgen rays or other form of radioactivity. 2. to apply ionizing radiation for therapeutic or diagnostic purposes.

irradiation (i-ra'de-a'shun) [L. *in* into + *radiare* to emit rays] 1. treatment by photons, electrons, neutrons, or other ionizing radiations. 2. the dispersion of nervous impulse beyond the normal path of conduction. 3. the application of rays, such as ultraviolet rays, to a substance to increase its vitamin efficiency. 4. a phenomenon in which, owing to the difference in the illumination of the field of vision, objects appear to be much larger than they really are. **interstitial i.**, therapeutic irradiation by the insertion into tissues of radioactive sources in fluid form, e.g., colloidal radioactive gold (^{198}Au), or in solid form, e.g., metallic needles or seeds. **Medinger-Craver i.** (*obs.*), whole-body i. **ultraviolet blood i.**, a treatment involving removal of blood from a patient, exposing it to ultraviolet light, and returning it to the patient's circulation; abbreviated UBI. **whole-body i.**, exposure of the entire body to ionizing radiation from external radiation sources.

irreducible (ir're-dūs'i-b'l) not susceptible to reduction, as a fracture, dislocation, or chemical substance.

irregular (ir-reg'u-lar) [L. *in* not + *regula* rule] not in conformity with the rule of nature; not recurring at regular intervals.

irregularity (ir-reg'u-lar'i-te) the quality of not conforming with the rule of nature, or of not occurring at regular intervals. **i. of pulse**, arrhythmia.

irreinoculability (ir're-in-ok'u-lah-bil'i-te) immunity due to the effects of a previous inoculation beyond the possibility of successful reinoculation.

irrespirable (ir're-spi'r-ah-b'l) not possible of being breathed, or not possible of being breathed with safety.

irreversibility (ir're-ver'si-bil'i-te) the quality of being incapable of being reversed. **i. of conduction**, the principle that the pathway for every reflex permits passage of the nerve impulse in one direction only.

irreversible (ir're-ver'si-b'l) incapable of being reversed.

irrigate (ir'i-gāt) to wash out, as a wound; lavage.

irrigation (ir'i-ga'shun) [L. *irrigatio*; *in* into + *rigare* to carry water] 1. washing by a stream of water or other fluid; see also *lavage*. 2. a liquid used for irrigation. **acetic acid i.** [USP], a sterile aqueous solution, containing, in each 100 ml., 237.5 to 262.5 mg. of glacial acetic acid; used to irrigate the bladder in the treatment of urinary infections with cystitis. **aminoacetic acid i.** [USP], a sterile aqueous solution, containing 95 to 105 per cent of the labeled amount of aminoacetic acid; used to irrigate body cavities. **continuous i.**, the maintenance of a constant stream of water over an inflamed surface. **mediate i.**, the passing of a stream of hot or cold water through a flexible tube coiled around a part. **Ringer's i.** [USP], a sterile solution containing, in each 100 ml., 820-900 mg. of sodium chloride, 25-35 mg. of potassium chloride, and 30-36 mg. of calcium chloride in water for injection; used as a topical physiological salt solution. Called also *Ringer's mixture* and *Ringer's solution*. **sodium chloride i.** [USP], a sterile aqueous solution, containing 0.85 to 0.95 per cent of sodium chloride; used to irrigate wounds and body cavities and as an enema to flush the colon and promote evacuation. Called also *sodium chloride solution*.

irrigator (ir'i-ga'tor) [L. "waterer"] an apparatus for performing irrigation.

irrigoradiology (ir'i-ga-ra'de-os'ko-pe) roentgenoscopy of the intestines during the introduction of a contrast enema.

irrigoscopy (ir'i-gos'ko-pe) irrigoradiology.

irritability (ir'i-tah-bil'i-te) [L. *irritabilitas*, from *irritare* to tease] 1. the quality of being irritable, or of responding to stimuli. 2. abnormal responsiveness to slight stimuli. **i. of the bladder**, a condition in which the presence of a small amount of urine in the bladder produces a desire to urinate. **chemical i.**, responsiveness to a stimulus that acts by producing a chemical change in the tissues. **electric i.**, responsiveness of nerve or muscle to the stimulus of an electric current passed through it. **faradic i.**, the property of responding by muscular contraction to faradic current. **galvanic i.**, the property of muscle by which it responds to a galvanic current. **mechanical i.**, responsiveness to a mechanical stimulus. **muscular i.**, the normal contractile quality of muscular tissue. **myotatic i.**, the power of a muscle to contract in response to stretching. **nervous i.**, 1. the ability of a nerve to transmit impulses. 2. morbid excitability of the nervous system. **specific i.**, see under *law*. **i. of the stomach**, a condition of the stomach in which vomiting is caused by normal amounts of digestible food. **tactile i.**, a condition of cells that repels foreign particles; negative chemotaxis.

irritable (ir'i-tah-b'l) [L. *irritabilis*; *irritare* to tease] 1. capable of reacting to a stimulus. 2. abnormally sensitive to a stimulus.

irritant (ir'i-tant) [L. *irritans*] 1. giving rise to irritation. 2. an agent that produces irritation. **primary i.**, an agent that produces irritation, especially of the skin, on the first exposure to it.

irritation (ir'i-ta'shun) [L. *irritatio*] 1. the act of stimulating. 2. a state of overexcitation and undue sensitivity. **cerebral i.**, the second stage of brain concussion. **direct i.**, irritation due to direct stimulation of a part. **functional i.**, that which is attended with functional derangement without organic lesion; also overexcitability due to excessive functional activity.

irritative (ir'i-ta'tiv) dependent on or caused by irritation.

Irukandji sting (ir'u-kan'je) [*Irukandji*, an aboriginal tribe in the vicinity of Cairns, Queensland, Australia] see under *sting*.

IRV inspiratory reserve volume.

I.S. intercostal space.

I.S.A. Instrument Society of America.

Isambert's disease (e-zahm-bärz') [Emile Isambert, French physician, 1827-1876] see under *disease*.

isamoxole (i'sah-moks'öl) chemical name: *N*-butyl-2-methyl-*N*-(4-methyl-2-oxazoly)propanamide; an antiasthmatic, $\text{C}_{12}\text{H}_{20}\text{N}_2\text{O}_2$.

isatin (i'sah-tin) a crystalline compound, $\text{C}_8\text{H}_5\text{O}_2\text{N}$, in the form of yellowish red crystals, soluble in alcohol and ether, slightly soluble in water; used as a reagent.

isauexsis (is'aw-ke'sis) [Gr. *isos* equal + *auxēsis* increase] growth of a part or parts at the same rate as the growth of the whole.

ischemia (is-ke'me-ah) [Gr. *ischein* to suppress + *haima* blood + *-ia*] deficiency of blood in a part, due to functional constriction or actual obstruction of a blood vessel. **myocardial i.**, deficiency of blood supply to the heart muscle, due to obstruction or constriction of the coronary arteries. **i. ret'inae**, anemia of the retina (Graefe).

ischemic (is-kem'ik) pertaining to, or affected with, ischemia.

ischesis (is-ke'sis) [Gr. *ischein* to suppress] retention or suppression of a discharge.

ischia (is'ke-ah) [L.] plural of *ischium*.

ischiac (is'ke-ak) ischiatic.

ischiadelpus (is'ke-ah-del'fus) [*ischio-* + Gr. *adelphos* brother] ischioididymus.

ischiadic (is'ke-ad'ik) ischiatic.

ischial (is'ke-al) ischiatic.

- ischialgia** (is'ke-al'je-ah) [*ischio-* + *-algia*] pain in the pelvis (ischium).
- ischias** (is'ke-as) ischialgia.
- ischiatric** (is'ke-at'ik) [*L. ischiaticus*] pertaining to the ischium or to the haunch.
- ischidrosis** (is'kid-ro'sis) [*Gr. ischein* to suppress + *hidrōs* sweat + *-osis*] anhidrosis.
- ischiectomy** (is'ke-ek'to-me) surgical removal or excision of part of the hip.
- ischio-** (is'ke-o) [*Gr. ischion* hip] a combining form denoting relationship to the ischium, or to the hip.
- ischioanal** (is'ke-o-a'nal) [*ischio-* + *anus*] pertaining to ischium and anus.
- ischibulbar** (is'ke-o-bul'bar) [*ischio-* + *L. bulbus* bulb] pertaining to the ischium and the bulb of the urethra.
- ischiocapsular** (is'ke-o-kap'su-lar) [*ischio-* + *L. capsula* capsule] pertaining to the ischium and the capsular ligament of the hip joint.
- ischiocele** (is'ke-o-sēl') [*ischio-* + *Gr. kēlē* hernia] hernia through the sacrosciatic notch.
- ischiococcygeal** (is'ke-o-kok-sij'e-al) pertaining to the ischium and coccyx.
- ischiococcygeus** (is'ke-o-kok-sij'e-us) [*ischio-* + *Gr. kokyx* coccyx] 1. *musculus coccygeus*. 2. the posterior part of the levator ani.
- ischiodidymus** (is'ke-o-did'i-mus) [*ischio-* + *Gr. didymos* twin] symmetrical conjoined twins united at the pelvis.
- ischiodymia** (is'ke-o-dim'e-ah) [*ischio-* + *Gr. didymos* twin + *-ia*] the condition of symmetrical conjoined twins united at the pelvis.
- ischiodynia** (is'ke-o-din'e-ah) [*ischio-* + *Gr. odyne* pain] ischi-algia.
- ischiofemoral** (is'ke-o-fem'o-ral) [*ischio-* + *femur*] pertaining to the ischium and femur.
- ischiofibular** (is'ke-o-fib'u-lar) pertaining to the ischium and the fibula.
- ischiohebotomy** (is'ke-o-he-bot'o-me) [*ischio-* + *Gr. hēbē* pubes + *temnein* to cut] the operation of dividing the ischiopubic ramus and the ascending ramus of the pubes.
- ischiomelus** (is'ke-om'ē-lus) [*ischio-* + *Gr. melos* limb] a monster with an extra limb attached at the base of the spine.
- ischionitis** (is'ke-o-ni'tis) inflammation of the tuberosity of the ischium.
- ischiopagia** (is'ke-o-pa'je-ah) the condition exhibited by an ischiopagus.
- ischiopagus** (is-ke-op'ah-gus) [*ischio-* + *Gr. pagos* thing fixed] conjoined twins fused at the ischia, the axes of the two bodies extending in a straight line but in opposite directions.

Ischiopagus.

- ischiopagy** (is'ke-op'ah-je) ischiopagia.
- ischiopubic** (is'ke-o-pu'bik) pertaining to the ischium and pubis.
- ischiorectal** (is'ke-o-rek'tal) pertaining to the ischium and rectum.
- ischiosacral** (is'ke-o-sa'kral) pertaining to the ischium and sacrum.
- ischiothoracopagus** (is'ke-o-tho'rah-kop'ah-gus) iliothoracopagus.
- ischiovaginal** (is'ke-o-vaj'i-nal) pertaining to the ischium and vagina.
- ischiovertebral** (is'ke-o-ver'te-bral) pertaining to the ischium and the vertebral column.
- ischium** (is'ke-um), pl. *ischia* [*L.*; *Gr. ischion* hip] the inferior dorsal part of the hip bone; it is a separate bone in early life. See illustration accompanying *skeleton*. Called also *os ischii* [NA].
- ischo-** (is'ko) [*Gr. ischein* to suppress] a combining form meaning suppressed, or denoting relationship to suppression.
- ischogyria** (is'ko-ji're-ah) [*ischo-* + *gyrus*] a condition in which the cerebral convolutions have a jagged appearance, as in bulbar sclerosis.
- ischuretic** (is'ku-ret'ik) pertaining to ischuria.
- ischuria** (is-ku're-ah) [*ischo-* + *Gr. ouron* urine + *-ia*] suppression or retention of the urine. **i. paradox'a**, a condition in which the bladder is overdistended with urine, although the patient continues to urinate. **i. spas'tica**, ischuria caused by spasm of the sphincter urinae.

- I.S.C.P.** International Society of Comparative Pathology.
- iseiconia** (is'i-ko'ne-ah) iso-iconia.
- iseiconic** (is'i-kon'ik) iso-iconic.
- iseikonion** (is'i-ko'ne-ah) iso-iconia.
- isethionate** (is'eth-i'o-nāt) USAN contraction for 2-hydroxyethanesulfonate.
- I.S.G.E.** International Society of Gastro-Enterology.
- I.S.H.** International Society of Hematology.
- Ishihara's test** (ish'i-hah'rahz) [Shinobu *Ishihara*, Japanese ophthalmologist, born 1879] see under *tests*.
- isinglass** (i'sin-glas) ichthyocolla. **Japanese i.**, agar.
- island** (i'land) a cluster of cells or an isolated piece of tissue. See also *islet*. **blood i's**, aggregations of mesenchyme cells in the angioblast of the early embryo, which develop into vascular endothelium and blood corpuscles. **i's of Calleja**, discrete collections of pyramidal and polymorphic cells in the caudal part of the anterior perforated substance (olfactory tubercle). **car-tilage i's**, see *intrachondrial bone*, under *bone*. **i's of Langerhans**, islets of Langerhans. **olfactory i's**, i's of Calleja. **i's of pancreas**, islets of Langerhans. **Pander's i's**, reddish yellow cords of corpuscular matter in the splanchnopleure of the embryo which develop into blood and blood vessels. **i. of Reil**, insula.
- islet** (i'let) a cluster of cells or an isolated piece of tissue; see also *island*. **blood i's**, see under *island*. **Calleja's i's**, see under *island*. **i's of Langerhans**, irregular microscopic structures scattered throughout the pancreas and comprising its endocrine portion. In man, they are composed of at least three types of cells: the *alpha cells*, which secrete the hyperglycemic factor glucagon; the *beta cells*, which are the most abundant and secrete insulin, and the *delta cells*, which secrete somatostatin. Degeneration of the beta cells, whose secretion (insulin) is important in carbohydrate metabolism, is one of the causes of diabetes mellitus. Called also *islands of Langerhans* and *islets or islands of pancreas*. **i's of pancreas**, i's of Langerhans. **Walthard's i's**, microscopic inclusions of the germinal epithelium of the ovary, found either in contact with the serosal covering or just below it; they have been implicated in the development of Brenner tumors. Called also *Walthard's cell rests* or *inclusions*.
- ism** (iz'm) [*Gr. -izō* + *-mos*] a word termination meaning state, condition, or fact of being, or the process or result of an action.
- I.S.M.** International Society of Microbiologists.
- Ismelin** (is'me-lin) trademark for a preparation of guanethidine sulfate.
- iso-** (i'so) [*Gr. isos* equal] a prefix or combining form meaning equal, alike, or the same. In immunology, it indicates *from* a genetically identical individual (as an isograft) or existing in alternate forms in the same species (as an isoantigen).
- I.S.O.** International Standards Organization.
- isoadrenocorticism** (i'so-ah-dre'no-kōr'ti-sizm) the normal state of secretion of the cells of the adrenal cortex, as distinguished from hypo- or hyperadrenocorticism.
- isoagglutination** (i'so-ah-gloo'ti-na'shun) agglutination of cells from members of a species by agglutinins originating in genetically dissimilar members of the same species.
- isoagglutinin** (i'so-ah-gloo'ti-nin) an agglutinin from members of a species that agglutinates cells of genetically different members of the same species.
- isoallele** (i'so-ah-lē'l') an allelic gene that is considered as being normal but can be distinguished from another allele by its differing phenotypic expression when in combination with a dominant mutant allele.
- isoalloxazine** (i'so-ah-lok'sah-zēn) an isomer of alloxazine from which riboflavins and other flavins are derived.
- isoamyl nitrite** (i'so-am'il ni-trit) amyl nitrite.
- isoamylamine** (i'so-am'il-am'in) a liquid ptomaine, (CH₃)₂-CHCH₂CH₂NH₂, obtainable from stale yeast, cod liver oil, and other sources, especially the distillation of horn with potassium hydroxide. Leucine by the loss of CO₂ becomes isoamylamine.
- isoamylase** (i'so-am'i-lās) 1. any of the several isoenzymes of α-amylase. 2. a hydrolase that catalyzes the hydrolysis of 1,6-α-glucosidic branch linkages in glycogen and amylopectin, and their β-limit dextrins.
- isoanaphylaxis** (i'so-an'ah-fi-lak'sis) anaphylaxis produced by the administration of serum from the same species, as in man by the administration of human serum.
- isoandrosterone** (i'so-an-dro'stēr-ōn) epiandrosterone.
- isoantibody** (i-so-an'ti-bod'ē) an antibody produced by one individual that reacts with antigens (isoantigens) of another individual of the same species; called also *alloantibody*.
- isoantigen** (i'so-an'ti-jen) an antigen that exists in alternative (allelic) forms in a species, and thus induces an immune response when one form is transferred (as by blood transfusion or tissue graft) to members of the species who lack it. Typical isoantigens are the blood group antigens. Called also *alloantigen*. **H i.**, an antigen of the ABO blood group system.
- isobar** (i'so-bar) [*iso-* + *Gr. baros* weight] 1. one of two or more

chemical species with the same atomic weight but different atomic numbers. 2. a line on a map or chart depicting the boundaries of an area of constant atmospheric pressure.

isobaric (i'so-bār'ik) [*iso-* + Gr. *baros* weight] see under *solution*.

isobody (i'so-bod'e) isoantibody.

isobolism (i-sob'o-lizm) [*iso-* + Gr. *ballein* to throw] the tendency of motor nerve fibers to undergo maximal excitation on stimulation.

isobornyl thiocyanacetate (i'so-bor'nil thi'o-si'ah-no-as'e-tāt) chemical name: terpinyl thiocyanacetate; used as a pediculicide.

isobucaine hydrochloride (i'so-bu'kān) [USP] chemical name: 2-methyl-2-[(2-methylpropyl)amino]-1-propanol benzoate (ester) hydrochloride. A local anesthetic, $C_{15}H_{23}NO_2 \cdot HCl$, occurring as a white, crystalline solid; used in combination with epinephrine in dentistry.

isobutamben (i'so-bu-tam'ben) chemical name: 4-aminobenzoic acid 2-methylpropyl ester; a topical anesthetic, $C_{11}H_{13}NO_2$.

isobutanol (i'so-bu'tah-nol') isobutyl alcohol.

isocaloric (i'so-kah-lo'rik) containing or providing the same number of calories; equicaloric.

isocarboxazid (i'so-kar-bok'sah-zid) [USP] chemical name: 5-methyl-3-isoxazolecarboxylic acid 2-(phenylmethyl)hydrazide. A monoamine oxidase inhibitor, $C_{12}H_{13}N_3O_2$, occurring as a white or nearly white, crystalline powder; used as an antidepressant, administered orally.

isocarveol (i'so-kar've-ol) pinocarveol.

isocellobiose (i'so-sel'o-bi'ōs) a disaccharide once considered to be formed in the degradation of cellulose; now recognized as a mixture of cellobiose with oligosaccharides.

isocellular (i'so-sel'u-lar) [*iso-* + L. *cellula* cell] composed of cells of the same kind and size.

ischolesterin (i'so-ko-les'ter-in) ischolesterol.

ischolesterol (i'so-ko-les'ter-ol) a compound found with cholesterol in wool; apparently a mixture of C_{30} trimethyl cholestanes.

isochromatic (i'so-kro-mat'ik) [*iso-* + Gr. *chrōma* color] of the same color throughout.

isochromatophil (i'so-kro-mat'o-fil) [*iso-* + Gr. *chrōma* color + *philein* to love] staining equally with the same dye.

isochromosome (i'so-kro'mo-sōm) an abnormal chromosome having a median centromere and two identical arms, formed by the transverse, rather than the normal longitudinal, splitting of a replicating chromosome.

Isochromosomes. Formation by division of the submedian centromere in plane C-D instead of plane A-B, as normally occurs, resulting in formation of two abnormal metacentric chromosomes, each containing duplication of the chromosomal material of one arm and no material of the other arm of the original chromosome. (Thompson and Thompson.)

isochron (i'so-kron) having equal chronaxy.

isochronal (i-sok'ro-nal) isochronous.

isochronia (i-sok'ro-ne-ah) 1. a condition of correspondence between processes with respect to their time, rate, or frequency. 2. the condition of having the same chronaxy as between a muscle and its nerve.

isochronic (i'so-kron'ik) isochronous.

isochronism (i-sok'ro-nizm) isochronia.

isochronous (i-sok'ro-nus) [*iso-* + Gr. *chronos* time] performed in equal times; said of motions and vibrations occurring at the same time and being equal in duration.

isochroous (i-sok'ro-us) [*iso-* + Gr. *chroa* color] isochromatic.

isocitrate (i'so-sit'rāt) a salt of isocitric acid; in biochemistry, the term is often used interchangeably with isocitric acid (see under *acid*).

isocoagulase (i'so-ko-ag'u-lās) a term designating collectively the antigenic types of coagulase.

isocolloid (i-sok-kol'oid) a colloid having the same composition in both phases—the disperse phase and the dispersion medium.

isocomplement (i'so-kom'plē-ment) complement from the same individual (or from one of the same species) who supplies the antibody.

isocomplementophilic (i'so-kom'plē-men-to-fil'ik) having affinity for isocomplements.

isoconazole (i'so-ko'nah-zōl) chemical name: 1-[2-(2,4-dichloro-

phenyl)-2-[(2,6-dichlorophenyl)methoxyethyl]-1*H*-imidazole; an antibacterial and antifungal, $C_{18}H_{14}Cl_4N_2O$.

isocoria (i'so-ko're-ah) [*iso-* + Gr. *korē* pupil] equality in size of the two pupils.

isocortex (i'so-kor'teks) neopallium.

isocreatinine (i'so-kre-at'i-nin) a base similar to creatinine reported to have been found in the muscle of fish.

Isocrin (i'so-krin) trademark for a preparation of oxyphenisatin acetate.

isocyanide (i'so-si'ah-nid) one of a class of organic cyanides characterized by their disagreeable odor and formed by heating silver cyanide with alkyl iodides; called also *carbylamine*.

isocyclic (i'so-si'klik) [*iso-* + Gr. *kyklos* circle] homocyclic.

isocytolysine (i'so-si-tol'i-sin) [*iso-* + *cytolysine*] a cytolysine that acts on the cells of animals of the same species as that from which it is derived.

isocytosis (i'so-si-to'sis) [*iso-* + *-cyte* + *-osis*] equality of the size of cells, especially red blood corpuscles.

isocytotoxin (i'so-si'to-tok'sin) a cytotoxin that is toxic for homologous cells of the same species.

isodactylism (i-so-dak'til-izm) [*iso-* + Gr. *daktylos* finger + *-ism*] a condition in which the fingers are of relatively even length.

isodesmosine (i'so-des'mo-sēn) one of two unusual amino acids found in elastin, the other being desmosine.

isodiagnosis (i'so-di'ag-no'sis) diagnosis of a condition by inoculation of a susceptible animal with blood from a patient suspected of having an inapparent infection.

isodiametric (i'so-di'ah-met'rik) [*iso-* + Gr. *dia* through + *metron* measure] having the same diameter in all directions.

isodispersoid (i'so-dis-per'soid) isocolloid.

isodontic (i'so-don'tik) [*iso-* + Gr. *odous* tooth] having all the teeth of the same size and shape.

isodose (i'so-dōs) a radiation dose of equal intensity to more than one body area; see also under *curve*.

isodulcite (i'so-dul'sit) rhamnose.

isodynamic (i'so-di-nam'ik) [*iso-* + Gr. *dynamis* power] exhibiting equal force or power.

isodynamogenic (i'so-di-nam'o-jen'ik) [*iso-* + Gr. *dynamis* power + *gennan* to produce] producing equal force or power.

isoeffect (i'so-ē-fekt') an effect midway between two reference points; see under *line*.

isoelectric (i'so-e-lek'trik) [*iso-* + *electric*] showing no variation in electric potential.

isoenergetic (i'so-en'er-jet'ik) exhibiting equal energy.

isoenzyme (i'so-en'zīm) isozyme. **Regan i.**, a tumor-associated antigen identical to placental alkaline phosphatase.

isoetharine (i-so-eth'ah-rēn) chemical name: 4-[(1-hydroxy-2-[(1-methylethyl)amino]-butyl)-1,2-benzenediol. An adrenergic, $C_{13}H_{21}NO_3$, used as a bronchodilator in the treatment of bronchial asthma and bronchospasm, administered by inhalation. Its hydrochloride and mesylate salts are prepared in conformance with USP standards.

isoflupredone acetate (i'so-floo'pre-dōn) chemical name: 21-(acetyloxy)-9-fluoro-11β,17-dihydroxypregna-1,4-diene-3,20-dione; an anti-inflammatory, $C_{23}H_{29}FO_6$.

isoflurane (i'se-flur'ān) chemical name: 2-chloro-2-(difluoromethoxy)-1,1,1-trifluoroethane; an inhalation anesthetic, $C_3H_2ClF_5O$.

isofluorophate (i'so-floo'ro-fāt) [USP] chemical name: bis(1-methylethyl)ester phosphorofluoridic acid. A cholinergic, $C_8H_{14}FO_3P$, occurring as a clear, colorless to faintly yellow liquid with an extremely irritating vapor; used as a miotic, applied topically to the conjunctiva in the treatment of glaucoma.

isogame (i-sog'ah-me) isogamy.

isogamete (i'so-gam'ēt) a gamete of the same size as the gamete with which it unites.

isogametic (i'so-gah-met'ik) characterized by the production of gametes of the same size.

isogamety (i'so-gam'e-te) production by an individual of one sex of gametes identical with respect to the sex chromosome.

isogamous (i-sog'ah-mus) having the conjugating elements (gametes) similar.

isogamy (i-sog'ah-me) [*iso-* + Gr. *gamos* marriage] reproduction resulting from the union of two cells (gametes) that are identical in size and structure, as occurs in protozoa.

isogeneic (i'so-jē-ne'ik) syngeneic.

isogenic (i'so-jē-ner'ik) of the same kind; pertaining to or obtained from individuals of the same genus.

isogenesis (i'so-jen'ē-sis) [*iso-* + Gr. *genesis* production] similarity in the processes of development.

isogenous (i-soj'ē-nus) developed from the same cell.

isograft (i'so-graft) a graft between genetically identical individuals. Typically, isografts are grafts between identical twins, between animals of a single highly inbred strain, or between the

F₁ hybrid produced by crossing inbred strains. Called also *isogeneic graft*, and *syngraft*.

isohemagglutination (i''so-hem''ah-gloo''tī-na'shun) agglutination of erythrocytes caused by a hemagglutinin from another individual of the same species.

isohemagglutinin (i''so-hem''ah-gloo''tī-nin) a hemagglutinin that agglutinates the erythrocytes of other individuals of the same species.

isohemolysin (i''so-he-mol''ī-sin) [*iso* + *hemolysin*] a hemolysin that acts on the blood of animals of the same species as that from which it is derived.

isohemolysis (i''so-he-mol''ī-sis) hemolysis of the blood corpuscles of an animal by the lysins in serum from another animal of the same species.

isohemolytic (i''so-he''mo-lit''ik) pertaining to or characterized by isohemolysis.

isohydric (i''so-hi''drik) a term applied to the series or cycle of chemical reactions in the erythrocyte in which carbon dioxide is taken up and oxygen released without the production of an excess of hydrogen.

iso-iconia (i''so-i-ko''ne-ah) [*iso* + Gr. *eikōn* image] a condition in which the image of an object is the same in both eyes.

iso-iconic (i''so-i-ko''nik) marked by iso-iconia.

isoimmunization (i''so-im''u-ni-za'shun) development of antibodies against an antigen derived from a genetically dissimilar individual of the same species; see also *isoantigen*. **Rh i.**, the development of agglutinins against Rhesus (Rh) blood group antigens in an Rh-negative person in response to transfusion of Rh-positive blood, which may lead to transfusion reactions, or in an Rh-negative woman pregnant with an Rh-positive fetus, which may lead to development of erythroblastosis fetalis in a subsequent pregnancy. The D antigen of erythrocytes stimulates an immune response that leads to these two reactions more commonly than do other Rh blood group antigens.

isokreatinin (i''so-kre-at''ī-nin) a ptomaine from decaying fish, crystallizable in a yellow powder, C₄H₇N₃O.

isolactose (i''so-lak''tōs) a disaccharide formed by the action of lactase on glucose and galactose.

isolate (i''so-lāt) 1. to separate from other persons, materials, or objects. 2. a population that has been obtained by isolation, such as living organisms (bacteria or other cells) obtained in pure culture, or (higher organisms) separated by geographical, genetic, ecological, or social barriers which prevent their interbreeding with other individuals beyond those barriers, and are thus differentiated from others of their kind by the accumulation of new characteristics.

isolation (i''so-la'shun) the process of isolating, or the state of being isolated, such as (a) the physiologic separation of a part, as by tissue culture or by interposition of inert material; (b) the chemical extraction of an unknown substance in pure form from a tissue; (c) the separation from contact with others of patients having a communicable disease; (d) the successive propagation of a growth of microorganisms until a pure culture is obtained; or (e) an unconscious mental mechanism in which there is defensive failure to connect behavior with motives, or contradictory attitudes and behavior with each other.

isolator (i''so-la'tor) anything that isolates. **surgical i.**, a large, clear, plastic bag with man-sized pockets that is attached to the patient's body during surgical procedures to prevent contamination by infective agents; the pockets, in which the nurses and surgeons stand, have plastic helmets, earphones and microphones for communication, and closed sleeves leading into the bag through which the surgeons work.

isolecithal (i''so-les''ī-thal) [*iso* + *lekithos* yolk] having yolk evenly distributed throughout the cytoplasm of the ovum.

isoleucine (i''so-lu'sin) an amino acid, ethylmethyl- α -aminopropionic acid, CH₃(C₂H₅)·CHCH(NH₂)·COOH, produced by the hydrolysis of fibrin and other proteins; essential for optimal growth in infants and for nitrogen equilibrium in human adults.

isoleukoagglutinin (i''so-lu''ko-ah-glu''tī-nin) see *leukoagglutinin*.

isologous (i-sol'o-gus) characterized by an identical genotype; see *isograft*.

isolysin (i-sol''ī-sin) a lysin that acts on the cells of animals of the same species as that from which it is derived.

isolysis (i-sol''ī-sis) lysis of cells by isolysins.

isolytic (i''so-lit''ik) pertaining to isolysis.

isomaltase (i''so-mawl'tās) an enzyme of the intestinal mucosa that catalyzes the splitting of isomaltose.

isomaltose (i''so-mawl'tōs) an isomeric form of maltose formed by treating glucose with strong acids or by the action of maltase on glucose; it occurs in beer, urine, blood, honey, liver, and other natural substances. Called also *brachiose* and *dextrinose*.

isomastigote (i''so-mas'ti-gōt) [*iso* + Gr. *mastix* lash] having two equal and similar flagella at the anterior pole.

isomer (i''so-mer) [*iso* + Gr. *meros* part] any compound exhibit-

ing, or capable of exhibiting, isomerism. An isomer may be structural or stereochemical; see *isomerism*.

isomerase (i-som'er-ās) a major class of enzymes comprising those that catalyze the process of isomerization, such as the interconversion of aldoses and ketoses, or the shift of a double bond, e.g., 3-ketosteroid- Δ^4, Δ^5 -isomerase. **arabinose i.**, an enzyme that catalyzes the aldose-ketose interconversion of arabinose to ribulose. **arabinosephosphate i.**, an enzyme that catalyzes the aldose-ketose interconversion of D-arabinose-5-phosphate to D-ribulose-5-phosphate. **acetylglucosaminophosphate i.**, an enzyme that catalyzes the aldose-ketose interconversion of 2-acetamido-2-deoxy-D-glucose-6-phosphate and 2H₂O to D-fructose-6-phosphate, ammonia, and acetate. **erythrose i.**, an enzyme which catalyzes the aldose-ketose interconversion of D-erythrose to D-erythrulose. **glucosaminophosphate i.**, an enzyme that catalyzes the aldose-ketose interconversion of 2-amino-2-deoxy-D-glucose-6-phosphate and water to D-fructose-6-phosphate and ammonia. **glucosephosphate i.**, an enzyme found in muscle extract which catalyzes an equilibrium between glucose 6-phosphate and fructose 6-phosphate; called also *phosphohexoisomerase*. **glucuronate i.**, an enzyme that catalyzes the aldose-ketose interconversion of D-glucuronate to D-fructuronate; called also *uronic i.* **isopentenylpyrophosphate i.**, an enzyme that catalyzes the migration of a double bond in the conversion of dimethylallyl pyrophosphate to isopentenyl pyrophosphate. **L-rhamnose i.**, an enzyme that catalyzes the aldose-ketose interconversion of L-rhamnose to L-rhamnulose. **maleate i.**, an enzyme that catalyzes the *cis-trans* conversion of maleate to fumarate. **maleylacetoacetate i.**, an enzyme of the liver that catalyzes the *cis-trans* conversion of 4-maleylacetoacetate to 4-fumarylacetoacetate. **maleylpyruvate i.**, an enzyme that catalyzes the *cis-trans* conversion of 3-maleylpyruvate to 3-fumarylpyruvate. **mannose i.**, an enzyme that catalyzes the aldose-ketose interconversion of D-mannose to D-fructose. **mannosephosphate i.**, an enzyme that catalyzes the aldose-ketose interconversion of D-mannose-6-phosphate to D-fructose-6-phosphate. **retinal i.**, **retinene i.**, an enzyme of the retina that catalyzes the *cis-trans* conversion of all-*trans*-retinal to 11-*cis*-retinal. **ribosephosphate i.**, an enzyme of the liver that catalyzes the aldose-ketose interconversion of D-ribose-5-phosphate to D-ribulose-5-phosphate. **triosephosphate i.**, an enzyme that catalyzes the aldose-ketose interconversion of D-glyceraldehyde 3-phosphate to dihydroxyacetone phosphate. **uronic i.**, **glucuronate i.** **vinylacetyl-CoA i.**, an enzyme that catalyzes the migration of a double bond in the conversion of vinylacetyl-CoA to crotonyl-CoA. **xylose i.**, an enzyme that catalyzes the aldose-ketose interconversion of D-xylose to D-xylulose.

isomeric (i''so-mer''ik) pertaining to or exhibiting isomerism.

isomeride (i-som'er-id) isomer.

isomerism (i-som'ē-rizm) [*iso* + Gr. *meros* part] the possession by two or more distinct compounds of the same molecular formula, each molecule possessing an identical number of atoms of each element, but in different arrangement. Isomerism is divided into two broad classifications: *structural isomerism* and *stereochemical isomerism*, or *stereoisomerism*. **chain i.**, a type of structural isomerism in which the compounds differ in regard to the linkages

Chain isomerism (Luder, Vernon, and Zuffanti).

in the basic chain of carbon atoms; see illustration. **dynamic i.**, tautomerism. **functional group i.**, a type of structural isomerism dependent upon the presence of different functional groups, such compounds being of distinct chemical types, e.g., ethyl alcohol, C₂H₅OH, and dimethyl ether, CH₃OCH₃. **geo-**

metric i., a type of stereoisomerism usually described as being dependent upon some form of restricted rotation, enabling the component parts of the molecule to occupy different spatial positions. Thus, *cis*- and *trans*-dichloroethylene are said to be geometric isomers, the isomerism resulting from the lack of freedom of rotation about the double bond. In the case of *cis*- and *trans*-decalin, however, the rigidity of the fused ring structure is responsible for the isomerism. **nuclear i.**, chain i. **optical i.**, a type of stereoisomerism in which an appreciable number of molecules exhibit any of the following effects on polarized light: the isomers (a) rotate the plane of polarization to the same degree in opposite directions (enantiomorphism), (b) rotate the plane of polarization to a different degree in either the same direction or in opposite directions, or (c) have no effect on the plane because of so-called internal compensation (diastereoisomerism). **position i.**, a type of structural isomerism in which the position occupied by an atom or group differs with reference to the same fundamental carbon chain; for example, *n*-propyl chloride, $\text{CH}_3\text{-CH}_2\text{CH}_2\text{Cl}$, and isopropyl chloride, $\text{CH}_3\text{CHClCH}_3$. **spatial i.**, stereoisomerism. **stereochemical i.**, stereoisomerism. **structural i.**, the possession by two or more compounds of the same molecular formula but of different structural formulas, the linkages of the atoms being different, in contrast to stereoisomerism, in which the structural arrangements of the atoms are the same. **substitution i.**, position i.

isomerization (i'so-'mer-i-za'shun) the process whereby any isomer, whether structural or stereochemical, is converted into another, usually requiring special conditions of temperature, pressure, or catalysts.

isomethепene hydrochloride (i'so-meth'ep-tēn) chemical name: *N*,1,5-trimethyl-4-hexenylamine hydrochloride. An adrenergic, $\text{C}_6\text{H}_{12}\text{ClN}$, used as an antispasmodic for the urinary and gastrointestinal tracts and as a vasodilator in the treatment of migraine; administered intramuscularly.

isometric (i'so-met'rik) [*iso* + Gr. *metron* measure] 1. maintaining, or pertaining to, the same measure or length; of equal dimensions. 2. not isotonic.

isometropia (i'so-mē-tro'pe-ah) [*iso* + Gr. *metron* measure + *ōps* eye] equality in the refraction of the two eyes.

isometry (i-som'ē-tre) equality of dimension.

isomicrogamete (i'so-mi'kro-gam'ēt) [*iso* + *microgamete*] a protozoan sexual cell or gamete of a small size, but equal in size to the gamete with which it conjugates.

isomorph (i'so-mor'fik) isomorphous.

isomorphism (i'so-mor'fizim) [*iso* + Gr. *morphē* form] the quality of being isomorphous.

isomorphous (i'so-mor'fus) [*iso* + Gr. *morphē* form] having the same form. In genetics, denoting genotypes of polyploid organisms which produce similar gametes even though containing genes in different combinations on homologous chromosomes.

isomuscaine (i'so-mus'kah-rin) a basic substance formed by oxidizing choline; it is isomeric with muscarine, but has different physiologic properties.

isomylamine hydrochloride (i'so-mil'ah-mēn) chemical name: 1-(3-methylbutyl)-cyclohexanecarboxylic acid 2-(diethylamino)ethyl ester hydrochloride; a smooth muscle relaxant, $\text{C}_{18}\text{-H}_{38}\text{NO}_2\text{-HCl}$.

isonaphthol (i'so-naf'thol) betanaphthol.

isonephrotoxin (i'so-neff'ro-tok'sin) [*iso* + *nephrotoxin*] a nephrotoxin which acts on cells of the animals of the same species from which it is derived.

isoniazid (i'so-ni'ah-zid) [USP] chemical name: 4-pyridinecarboxylic acid hydrazide. An antibacterial, $\text{C}_5\text{H}_7\text{N}_3\text{O}$, occurring as colorless or white crystals or white, crystalline powder; used as a tuberculostatic, administered orally and intramuscularly.

isonicotinoylhydrazine (i'so-nik'o-tin'o-il-hi'drah-zēn) isoniazid.

isonicotinylhydrazine (i'so-nik'o-tin'il-hi'drah-zēn) isoniazid.

isonipicaine (i'so-nip'e-kān) meperidine hydrochloride.

isonitril (i'so-ni'tril) isocyanide.

iso-oncotic (i'so-on-kot'ik) having the same oncotic pressure.

iso-osmotic (i'so-oz-mot'ik) isosmotic.

Isopaque (i'so-pāk') trademark for preparations of metrizoate sodium.

Isoparorchis trisimilitubis (i'so-par-or'kis tri-sim'f'i-lu'tu'bis) a fluke, commonly parasitic in the air bladder of fish in India and China and sometimes found in man.

isopathy (i-sop'ah-the) [*iso* + Gr. *pathos* disease] the treatment of disease by means of products of the disease or with material from the organ affected, e.g., smallpox by giving minute doses of variolous matter, disease of the liver by giving extract of liver, etc.

isopatin (i-sop'ah-tin) an immunizing agent of animal origin which gives no biuret reaction and yet is active in small amounts.

isophagy (i-sop'ah-je) [*iso* + Gr. *phagein* to eat] autolysis.

isophan (i'so-fan) [*iso* + Gr. *phainein* to show] a hybrid which

looks like other hybrids, but yet has a different germinal constitution.

isophenolization (i'so-fe'no-l-i-za'shun) the injection of isophenol to produce paralysis or destruction of a sympathetic nerve.

isophoria (i'so-fō're-ah) [*iso* + Gr. *phoros* bearing + *-ia*] equality in the tension of the vertical muscles of each eye; absence of hyperphoria and of hypophoria.

isophotometer (i'so-fō-tom'ē-ter) a device for analysis of radiographs and other filmed images.

Isophrin (i'so-frin) trademark for a preparation of phenylephrine hydrochloride.

isopia (i-sō'pe-ah) [*iso* + Gr. *ōps* vision] equality of vision in the two eyes.

isoplassont (i'so-plas'ont) [*iso* + Gr. *plassein* to form] either of two things which have certain features in common.

isoplastic (i'so-plas'tik) [*iso* + *plastic*] taken from another animal of the same species or from another inbred strain within the same species; said of tissue transplants or grafts.

isoprecipitin (i'so-pre-sip'i-tin) a precipitin that is active against antigens of animals of the same species (but of dissimilar genetic makeup) as the animal in which it is formed.

isopregnenone (i'so-preg'ne-nōn) dydrogesterone.

isoprenaline (i'so-pren'ah-lēn) isoproterenol.

isoprene (i'so-prēn) the basic building unit of terpenes, C_5H_8 .

isopropamide iodide (i'so-pro'pah-mid) [USP] chemical name: γ -(aminocarbonyl)-*N*-methyl-*N*,*N*-bis(1-methylethyl)- γ -phenylbenzenepropanaminium iodide. A long-acting quaternary anticholinergic, $\text{C}_{23}\text{H}_{33}\text{IN}_2\text{O}$, used in the treatment of peptic ulcer and other gastrointestinal disorders marked by hyperacidity and hypermotility, administered orally.

isopropanol (i'so-pro'pah-nol) isopropyl alcohol.

isopropyl (i'so-pro'pil) the univalent radical, $(\text{CH}_3)_2\text{CH}$. **i. alcohol**, **i. rubbing alcohol**, see under *alcohol*. **i. meprobamate**, carisoprodol. **i. myristate** [NF], a compound of isopropyl alcohol and saturated high molecular weight fatty acids, principally myristic acid, occurring as a clear, oily liquid; used as an emollient in pharmaceutical preparations.

isopropylarterenol (i'so-pro'pil-ar'tē-re'no) isoproterenol.

isopropyl-benzanthracene (i'so-pro'pil-benz-an'thras-ēn) a carcinogenic hydrocarbon, 6-isopropyl 1:2-benzanthracene.

isoproterenol (i'so-pro'tē-re'no) chemical name: 4-[1-hydroxy-2-[(1-methylethyl)amino]ethyl]-1,2-benzenediol. A synthetic adrenergic, $\text{C}_{11}\text{H}_{17}\text{NO}_3$, derived from norepinephrine, having powerful bronchodilator and cardiac stimulant actions. **i. hydrochloride** [USP], the hydrochloride salt of isoproterenol, $\text{C}_{11}\text{H}_{17}\text{NO}_3\text{-HCl}$, occurring as a white to practically white, crystalline powder; used chiefly as a bronchodilator in the treatment of bronchial asthma, administered by oral inhalation, sublingually, and parenterally. It may also be used in the management of shock, treatment and prevention of cardiac standstill and arrhythmias, and treatment of bronchospasm during anesthesia. **i. sulfate** [USP], the sulfate salt of isoproterenol, $(\text{C}_{11}\text{H}_{17}\text{NO}_3)_2\text{-H}_2\text{SO}_4\text{-2H}_2\text{O}$, having the appearance, actions, and uses as the hydrochloride salt; administered by oral inhalation.

isopter (i-sop'ter) [*iso* + Gr. *optēr* observer] a line depicting the area in the field of vision in which the visual acuity is the same.

isopyknic (i'so-pik'nik) [*iso* + Gr. *pyknos* thick] of equal density or thickness; see under *centrifugation*.

isopyknosis (i'so-pik-no'sis) [*iso* + Gr. *pyknōsis* condensation] the state of being of uniform density; applied especially to a state of uniform condensation observed in comparison of different chromosomes, or of different regions of the same chromosome.

isopyknotic (i'so-pik-not'ik) pertaining to or characterized by isopyknosis.

Isordil (i'sor-dil) trademark for preparations of isosorbide dinitrate.

isorhodoose (i'so-ro'de-ōs) a sugar, *d*-glucomethylose or 6-deoxy-D-glucose, $\text{CH}_2(\text{CHOH})_4\text{CHO}$, from cinchona bark.

isoriboflavin (i'so-ri'bo-fla'vin) a compound, dichlororibityl isalloxazine, which can produce riboflavin deficiency.

isorrhea (i'so-re'ah) [*iso* + Gr. *rhein* to flow] the maintenance of a relatively constant body fluid volume and composition; water and solute intake is balanced by an equivalent output of the substances from the body.

isorrhic (i'so-re'ik) pertaining to or characterized by isorrhea.

isorrhopic (i'so-rop'ik) [*iso* + Gr. *rhōpē* momentum] of equal value.

isorubin (i'so-ru'bin) new fuchsin.

isoscope (i'so-skōp) [*iso* + Gr. *skopein* to examine] an apparatus for observing the changes of position of the horizontal and vertical lines in the movements of the eyeball.

isosensitization (i'so-sen'si-ti-za'shun) allosensitization.

isoserine (i'so-se'rin) a compound, $\text{CH}_2\text{NH}_2\text{-CHOH-COOH}$, isomeric with serine.

isoserotherapy (i'so-se'ro-ther'ah-pe) treatment by use of an isoserum.

isoserum (i'so-se'rum) [*iso-* + *serum*] a serum obtained from a person who has had the same disease as the patient who is being treated.

isosexual (i'so-seks'u-al) [*iso-* + *sexual*] pertaining to or characteristic of the same sex.

isosmotic (i'sos-mot'ik) having the same osmotic pressure.

isosmoticity (i'sos-mot-i'si-te) the state or quality of being isosmotic.

isosorbide (i'so-sor'bid) chemical name: 1,4:3,6-dianhydro-D-glucitol. An osmotic diuretic, $C_6H_{10}O_4$, used to rapidly reduce intraocular pressure in glaucoma. **i. dinitrate**, the dinitric acid ester of isosorbide, $C_6H_8N_2O_6$, occurring as a white, crystalline powder, having coronary and peripheral vasodilating properties; used in the treatment of coronary insufficiency and angina pectoris, administered sublingually and orally.

isospermotoxin (i'so-sper'mo-tok'sin) a cytotoxic antibody that destroys spermatozoa; it is developed in the blood after the injection of spermatozoa of the same species as that in which it is formed.

Isospora (i-sos'po-rah) [*iso-* + Gr. *sporos* spore] a genus of sporozoan parasites, order Coccidia, characterized by two sporoblasts, each containing four sporozoites in the oocyst, and found in birds, amphibians, reptiles, and mammals, including man. **I. bel'li**, a species that parasitizes the small intestine of man; infection (coccidiosis) is usually asymptomatic but may result in a severe watery mucous diarrhea. **I. bigem'ina**, a form found in dogs and cats, closely resembling *I. hominis*; called also *Coccidium bigeminum*. **I. fel'is**, a species causing intestinal coccidiosis in cats. **I. hom'inis**, a species causing coccidiosis in man; called also *Coccidium hominis*. **I. laca'zei**, a species causing intestinal coccidiosis in passerine birds. **I. rivol'ta**, a species causing intestinal coccidiosis in dogs and cats.

isospore (i'so-spōr) [*iso-* + Gr. *sporos* spore] 1. an isogamete of organisms that reproduce by spores. 2. an asexual spore produced by a homosporous organism.

isosporiasis (i-sos'po-ri'ah-sis) infection with *Isospora*.

isosporous (i-sos'po-rus) having isospores.

isostere (i'so-stēr) a substance which stands in the same place as or in place of another compound owing to similarity in structure, configuration, or other molecular parameters. See *competitive inhibition*, under *inhibition*.

isosthenuria (i'sos-thē-nū're-ah) [*iso-* + Gr. *sthenos* strength + *ouron* urine + *-ia*] the excretion of urine with the same osmolality as that of plasma.

isostimulation (i'so-stim'u-la'shun) stimulation of an animal with antigenic material originating from other animals of the same species.

isothebaine (i'so-the'ba-in) chemical name: 1-hydroxy-2-11-dimethoxyaporphine. An alkaloid, $C_{18}H_{21}O_3N$, from *Papaver orientale*.

isotherapy (i'so-ther'ah-pe) [*iso-* + Gr. *therapeia* treatment] isopathy.

isotherm (i'so-therm) a line on a map or chart depicting the boundaries of an area in which the temperature is the same.

isothermal (i'so-ther'mal) [*iso-* + Gr. *thermē* heat] isothermic.

isothermic (i'so-ther'mik) having the same temperature.

isothermognosis (i'so-ther'mo-no'sis) [*iso-* + Gr. *thermē* heat + *gnōsis* recognition] disordered sense perception in which pain, cold, and heat stimuli are all perceived as heat.

isothiazine hydrochloride (i'so-thi'ah-zēn) ethopropazine hydrochloride.

isothiocyanate (i'so-thi'o-si'ah-nāt) a salt of isothiocyanic acid. **allyl i.**, a compound, $C_3H_5 \cdot NCS$, found in oil of mustard. **butyl i.**, a compound, $CH_3 \cdot CH(CH_3)CH_2NCS$, found in horseradish and used as an intermediate pesticide, herbicide, and pharmaceutical. **phenyl-ethyl i.**, a compound, $CH_3 \cdot CH(C_6H_5)NCS$, found in oil of mignonette.

isothipendyl (i'so-thi'pen-dil) chemical name: 10-(2-dimethylamino-2-methylethyl)-10H-pyrido[3,2-b][1,4]benzothiazine. A compound, $C_{18}H_{19}N_3S$, used as an antihistaminic.

isotone (i'so-tōn) one of several nuclides having the same number of neutrons, but differing in the number of protons in their nuclei.

isotonia (i'so-to'ne-ah) [*iso-* + Gr. *tonos* tone] 1. a condition of equal tone, tension, or activity. 2. equality of osmotic pressure between two elements of a solution or between two different solutions.

isotonic (i'so-ton'ik) [*iso-* + Gr. *tonos* tone] a biological term denoting a solution in which body cells can be bathed without a net flow of water across the semipermeable cell membrane. Also, denoting a solution having the same tonicity as some other solution with which it is compared, such as physiologic salt solution and the blood serum.

isotonicity (i'so-to-nis'i-te) the quality of being isotonic.

isotope (i'so-tōp) [*iso-* + Gr. *topos* place] a chemical element having the same atomic number as another (i.e., the same number of nuclear protons) but possessing a different atomic mass (i.e., a

different number of nuclear neutrons). **radioactive i.**, radioisotope. **stable i.**, an isotope that does not transmute into another element with emission of corpuscular or electromagnetic radiations.

isotopology (i'so-to-pol'o-je) the scientific study of isotopes, and of their uses and applications.

isotoxic (i'so-tok'sik) pertaining to an isotoxin.

isotoxin (i'so-tok'sin) [*iso-* + *toxin*] a toxin that is poisonous to other animals of the same species.

isotransplant (i'so-trans'plant) [*iso-* + *transplant*] isograft.

isotransplantation (i'so-trans'plan-ta'shun) the transplanting of an isograft.

isotretinoin (i'so-tret'i-noin) a synthetic form of retinoic acid (13-*cis*-retinoic acid) used orally to clear cystic and conglobate acne.

Isotricha (i-sot'rī-kah) a genus of ciliate parasites. *I. intestinalis* and *I. prostoma* are found in the stomachs of cattle.

isotrimorphism (i'so-tri-mor'fizim) [*iso-* + Gr. *treis* three + *morphē* form] isomorphism between the three forms of two trimorphic substances.

isotrimorphous (i'so-tri-mor'fus) pertaining to or characterized by isotrimorphism.

isotron (i'so-tron) an apparatus for separating isotopes electromagnetically.

isotropic (i'so-trop'ik) [*iso-* + Gr. *tropos* a turning] 1. similar in all directions with respect to a property, as in a cubic crystal or a piece of glass. 2. being singly refractive.

isotropy (i-sot'ro-pe) the quality or condition of being isotropic.

isotypical (i'so-tip'i-kal) [*iso-* + *typical*] of the same type.

isouretin (i'so-u-re'tin) formamidoxim, $NH_2CH:NOH$, a compound isomeric with urea.

isovalericacidemia (i'so-vah-ler'ik-as'i-de'me-ah) isovaleric acidemia.

isoxepac (i-soks'ē-pak) chemical name: 6,11-dihydro-11-oxodibenz[*b,e*]oxepin-2-acetic acid; an anti-inflammatory, $C_{16}H_{12}O_4$.

isoxicam (i-soks'i-kam) chemical name: 4-hydroxy-2-methyl-N-(5-methyl-3-isoxazolyl)-2H-1,2-benzothiazine-3-carboxamide 1,1-dioxide; an anti-inflammatory, $C_{14}H_{13}N_3O_5S$.

isoxsuprine hydrochloride (i-sok'su-prēn) [USP] chemical name: 4-hydroxy- α -1-[(1-methyl-2-phenoxyethyl)amino]ethylbenzenemethanol hydrochloride. An adrenergic $C_{18}H_{23}NO_3 \cdot HCl$, occurring as a white, crystalline powder; used as a vasodilator in the treatment of cerebral vascular insufficiency and of peripheral vascular diseases such as arteriosclerosis obliterans, thromboangiitis obliterans, and Raynaud's disease. It is administered orally or intramuscularly.

isozyme (i'so-zim) one of the multiple forms in which an enzyme may exist in a different species, the various forms differing chemically, physically, and/or immunologically, but catalyzing the same reaction although with different affinities for the substrate. For example, lactate dehydrogenase may exist in five different forms arising from different tetramer combinations of its two subunits. Called also *isoenzyme*.

issue (is'u) a discharge of pus, blood, or other matter; a suppurating lesion emitting such a discharge.

isthmectomy (is-mek'to-me) [*isthmus* + Gr. *ektomē* excision] excision of an isthmus, particularly the isthmus of the thyroid gland affected with goiter.

isthmi (is'mi) plural of *isthmus*.

isthmian (is'me-an) isthmic.

isthmie (is-mik) pertaining to an isthmus.

isthmitis (is-mi'tis) inflammation of the isthmus of the fauces.

isthmoparalysis (is'mo-pah-ral'i-sis) isthmoplegia.

isthmoplegia (is'mo-ple'je-ah) [*isthmus* + Gr. *plēgē* stroke] paralysis of the isthmus faucium.

isthmospasm (is'mo-spazm") spasm of an isthmus, as of the isthmus of a uterine tube or of the fauces.

isthmus (is'mus), pl. *isth'mi* [Gr. *isthmos*] a narrow connection between two larger bodies or parts; [NA] a general term for such a connecting structure or region. **anterior i. of fauces**, i. faucium. **i. of aorta**, i. aor'tae [NA], **aortic i.**, a narrowed portion of the aorta, especially noticeable in the fetus, at the point where the ductus arteriosus is attached. **i. of auditory tube**, i. tubae auditivae. **i. of cartilage of auricle**, i. **cartilag'inis au'ris** [NA], a bridge of cartilage connecting the cartilage of the external acoustic meatus with the main part of the cartilage of the auricle of the external ear. **i. of cingulate gyrus**, i. gyri cinguli. **i. of eustachian tube**, i. tubae auditivae. **i. of fallopian tube**, i. tubae uterinae. **i. of fauces**, i. **fau'cium** [NA], the constricted aperture between the cavity of the mouth and the pharynx. **i. glan'dulae thyroi'deae** [NA], isthmus of thyroid gland; the band of tissue connecting the lobes of the thyroid gland. **i. gy'ri cin'guli** [NA], i. **gy'ri fornic'a'ti**, isthmus of cingulate gyrus; the constricted portion of the cingulate gyrus, connecting with the parahippocampal gyrus in the region of the splenium of the corpus callosum. **Haller's i.**, fretum halleri. **i. of His**, i. rhomben-

cephali. **Krönig's i.**, a narrow, ribbon-like area of resonance extending over the shoulder and connecting the larger areas of resonance on the chest and back, overlying the apex of the lung (Krönig's fields). **i. of limbic lobe**, i. gyri cinguli. **oropharyngeal i.**, **pharyngo-oral i.**, i. faucium. **i. prosta'tae** [NA], **i. of prostate**, the commissure on the base of the prostate, between the right and the left lateral lobe. **i. rhombenceph'ali** [NA], **i. of rhombencephalon**, a narrow segment of the brain in the fetus, forming the plane of separation between the rhombencephalon and the cerebrum; called also **i. of His**. **i. of thyroid gland**, i. glandulae thyroideae. **i. tu/bae auditi/vae** [NA], isthmus of auditory tube: the narrowest part of the auditory tube, at the junction of the pars ossea and the pars cartilaginea of the tube. **i. tu/bae uteri/nae** [NA], the narrow part of the uterine tube at its junction with the uterus. **i. ure/thrae**, a constricted part of the urethra, at the junction of the cavernous with the membranous urethra. **i. u'teri** [NA], **i. of uterus**, the constricted part of the uterus between the cervix and the body. **i. of Vieussens**, limbus fossae ovalis.

I.S.U. International Society of Urology.

Isuprel (i'su-prel) trademark for a preparation of isoproterenol.

isuria (i-su're-ah) [Gr. *isos* equal + *ouron* urine + *-ia*] excretion of urine at a uniform rate.

I.T.A. International Tuberculosis Association.

Itard's catheter (e-tarz') [Jean Marie Gaspard Itard, French otologist, 1774-1838] see under *catheter*.

Itard-Cholewa sign (e-tar' ko-la'vah) [J. M. G. Itard; Erasmus Rudolph Cholewa, German physician, born 1845] see under *sign*.

itate (i'tāt) a substance in milk which oxidizes nitrite to nitrate.

itch (ich) 1. a skin disorder marked by itching. 2. (*obs.*) scabies.

Aujesky's i., pseudorabies. **bakers' i.**, any of several inflammatory dermatoses of the hands, especially chronic monilial paronychia, occurring with special frequency in bakers. **barbers' i.**, 1. tinea barbae. 2. syphilis vulgaris. **barley i.**, grain i. **Caripito i.**, a condition accompanied by rash and itching, developing in seamen visiting the harbor of Caripito (on the San Juan river, in Venezuela), caused by dust or hairs from the wings of moths. **clam diggers' i.**, swimmers' i. **copra i.**, a dermatitis affecting those who unload coconuts, caused by the mite *Tyrophagus castellani*. **Cuban i.**, variola minor. **dew i.**, ground i. **dhobie i.**, allergic contact dermatitis caused by catechols in the marking fluid (bhilawanol oil) used on laundry by the native washermen (dhobie) of India. **grain i.**, a dermatitis accompanied by itching, caused by a mite, *Pyemotes ventricosus*, which preys on the larvae of a certain insect which lives on straw, grain, and other plants. The dermatitis affects chiefly persons (grain harvesters, threshers, packers, etc.) who work with the host plants, and sometimes those who handle packaged cereals infested with weevils. Called also *acarodermatitis urticarioides* and *straw-mattress dermatitis*. **grocers' i.**, a vesicular dermatitis caused by *Glycyphagus domesticus*, found in stored hides, dried fruits, and grain, or *Tyrophagus castellani* or *T. longior*, found in copra and cheese, respectively. **ground i.**, the itching eruption caused by the entrance into the skin of the larvae of *Necator americanus* or *Ancylostoma duodenale* (see *hookworm disease*, under *disease*). Called also *uncinariar dermatitis*. **jock i.**, tinea cruris. **mad i.**, pseudorabies. **Malabar i.**, tinea imbricata. **mattress i.**, **millers' i.**, grain i. **miners' i.**, ground i. **Philippine i.**, variola minor. **seven-year i.**, scabies. **straw i.**, grain i. **swimmers' i.**, an itching dermatitis caused by penetration of the skin by larval forms (cercaria) of schistosomes; it occurs in bathers in waters infested with these organisms. Called also *clam diggers' i.*, *cutaneous schistosomiasis*, and *schistosome or swimmer's dermatitis*. **winter i.**, an itching of the skin occurring in cold weather, unassociated with structural lesions; called also *pruritus hiemalis*.

itching (ich'ing) an unpleasant cutaneous sensation that provokes the desire to scratch or rub the skin. A symptom in various skin diseases, it may also occur idiopathically. Called also *pruritus*.

iter (i'ter) [L.] a way or tubular passage. **i. ad infundib'ulum**, the passage from the third ventricle of the brain to the infundibulum. **i. chordae anterioris**, an opening in the anterior part of the middle ear for exit of the chorda tympani nerve from the tympanic cavity; called also *Huguier's canal*. **i. chordae posterioris**, an opening in the posterior part of the middle ear for entrance of the chorda tympani nerve into the tympanic cavity. **i. den'tium**, the area through which a permanent tooth makes its appearance. **i. e ter'tio ad quar'tum ventric'ulum**, aqueductus cerebri. **i. of Sylvius**, aqueductus cerebri.

iteral (i'ter-al) pertaining to an iter.

iteroparity (it'er-o-par'i-te) [L. *iterare* to repeat + *parere* to bear] the state, in an individual organism, of reproducing repeatedly, or more than once in a lifetime.

iteroparous (it'er-op'ah-rus) reproducing more than once in a lifetime.

-ites [Gr. *-itēs*, a masculine termination agreeing with *hydrōps* dropsy (understood)—e.g., tympanites, the windy dropsy] a word termination indicating dropsy of the part denoted by the word stem to which it is attached.

ithycyphos (ith'e-si'fōs) ithyokypnosis.

ithylordosis (ith'e-lor-do'sis) [Gr. *ithys* straight + *lordōsis* bending forward] lordosis without any lateral curvature.

ithyokypnosis (ith'e-o-ki-to'sis) [Gr. *ithys* straight + *kypnos* humped + *-osis*] backward projection of the spinal column.

-itides plural form of *-itis*.

-itis, pl. *-itides* [*-itis*, a feminine adjectival termination agreeing with Gr. *nosos* (understood)—e.g., neuritis = Gr. *hē neuritis nosos*, the disease of the nerves, which soon becomes the inflammatory disease] a word termination denoting inflammation of the part indicated by the word stem to which it is attached.

Ito-Reenstierna test (e'to rēn-stēr'nah) [Hayazo Ito, Japanese pathologist, born 1865; John Reenstierna, Swedish dermatologist, born 1882] see under *tests*.

ITP idiopathic thrombocytopenic purpura.

Itrumil (it'roo-mil) trademark for a preparation of iothiouracil.

I.U. immunizing unit; international unit.

IUCD intrauterine contraceptive device.

IUD intrauterine contraceptive device.

I.V. intravenously (by intravenous injection).

ivory (i'vo-re) [L. *ebur*, *eburneus*] 1. the bonelike substance (modified dentin) of the tusks of elephants or of such large mammals as the walrus. 2. dentin (dentinum [NA]).

I.V.T. intravenous transfusion.

Ivy's method (i'vēz) [Andrew Conway Ivy, Chicago, physiologist, born 1893] see *bleeding time*, under *time*.

Iwanoff's (Iwanow's) cysts (e-wan'ofs) [Wladimir P. Iwanoff (Iwanow), Russian ophthalmologist, born 1861] see *Blessig's cysts*, under *cyst*.

Ixodes (iks-o'dēz) [Gr. *ixōdes* like bird-lime] a genus of ticks that are parasitic on man and other animals. **I. bicor'nis**, *Rhipicephor bicornis*. **I. canisu'ga**, the British dog tick, a species commonly infesting dogs in Britain; also found in Western Europe and North America. **I. cavipal'pus**, an African tick that infests monkeys and children. **I. fre'quens**, a species that infests cattle, horses, and man in Japan. **I. hexag'onus**, a species that infests wild and domestic carnivores in Europe and Africa. **I. holocy'clus**, a tick, particularly of marsupials, but which causes a tick paralysis in young cattle in New South Wales, and may be the vector of North Queensland tick typhus. **I. pacif'icus**, a common deer and cattle tick of California, which may bite man, and is thought to be a possible vector of tularemia. **I. persulca'tus**, the taiga tick, vector of Russian spring-summer encephalitis. **I. pilo'sus**, a species infesting many animals in South Africa; formerly thought to cause paralysis in sheep. **I. pu'tus**, a species that infests the nests of many marine birds. **I. ra'sus**, a species that attacks a variety of insectivores, rodents, ungulates, carnivores, and occasionally man and other primates in Africa. **I. rici'nus**, the castor bean tick, which is parasitic on cattle, sheep, and wild animals, and transmits the agents of gallsickness, malignant jaundice in dogs, tularemia, louping ill, and Russian spring-summer encephalitis. **I. rubicun'dus**, a species that may cause a tick paralysis in sheep, goats, and cattle in West Africa. A single human case has been reported. **I. scapula'ris**, the black-legged tick of the Eastern United States, which may inflict a painful bite in man. **I. spinipal'pus**, a species that infests rabbits and squirrels in British Columbia, and may transmit Powassan virus.

ixodiasis (iks'o-di'ah-sis) any disease or lesion due to the bite of ticks; infestation with ticks.

ixodic (ik-sod'ik) caused by ticks.

Ixodidae (iks-od'i-de) a family of the superfamily Ixodoidea, comprising the hard ticks, distinguished from the soft-bodied ticks (Argasidae) by the presence of a scutum. It includes the following genera: *Amblyomma*, *Anocenter*, *Aponomma*, *Boophilus*, *Demacentor*, *Haemaphysalis*, *Hyalomma*, *Ixodes*, *Margaropus*, *Rhipicephalus*, and *Rhipicephalus*.

Ixodides (iks-od'i-dēz) the ticks, a suborder of Acarina, including the superfamily Ixodoidea, which comprises the families Ixodidae, or hard ticks, and Argasidae, or soft ticks.

Ixodiphagus (iks'o-dif'ah-gus) a genus of hymenopterans. **I. caucur'tei**, a hymenopteran parasite of ticks of the family Ixodidae.

ixodism (iks'o-dizm) ixodiasis.

Ixodoidea (iks'o-doi'de-ah) a superfamily of the suborder Ixodides, which embraces the families Argasidae, or soft ticks, and Ixodidae, or hard ticks.

Izar's reagent (i'zarz) [Guido Izar, Italian pathologist, born 1883] see under *reagent*.

-ize [Gr. *-izō*] a word termination denoting subjection to the specific action or treatment indicated by the stem to which it is affixed, as *adrenalectomize*, *thyroidectomize*, etc.

J

J symbol for *Joule's equivalent*.

jaagsiekte, jaagziekte (yahg-sék'tē; yahg-zék'tē) [Afrikaans *jag* hunt + *siekte* sickness] a chronic progressive pneumonia of sheep marked by adenomatosis of the alveolar epithelium. Spelled also *jagsiekte* and *jagziekte*.

Jaboulay's amputation (operation), button (zhah'boo-lāz') [Mathieu *Jaboulay*, French surgeon, 1860–1913] see *interpelvi-abdominal amputation*, and see under *button*.

Jaccoud's fever, sign (zhah-kōōz') [Sigismond *Jaccoud*, French physician, 1830–1913] see under *fever* and *sign*.

jacket (jak'et) an enveloping structure or garment, especially a covering for the trunk or for the upper part of the body; see also under *crown*. **Minerva j.**, a plaster-of-Paris jacket reaching from the crest of the ilia to the chin, for fracture of the vertebrae. **plaster-of-Paris j.**, a casing of plaster of Paris enveloping the body for the purpose of correcting deformities. **porcelain j.**, a jacket crown of porcelain. **Sayre's j.**, a plaster-of-Paris jacket used as a support for the spinal column. **strait j.**, see *straitjacket*. **Willock's respiratory j.**, a sort of jacket once used to strengthen the movements of respiration in emphysema of the lungs.

jackscrew (jak'skroo) a device operated by means of a screw in a threaded socket, used in orthodontics to expand the dental arch and move individual teeth.

Jackson's law, etc. (jak'sunz) [John Hughlings *Jackson*, London neurologist, 1835–1911] see under *law*, *rule*, *sign*, and *syndrome*.

Jackson's membrane (veil) [Jabez North *Jackson*, surgeon in Kansas City, 1868–1935] see under *membrane*.

Jackson's safety triangle, sign [Chevalier *Jackson*, American laryngologist, 1865–1958] see under *triangle*, and see *asthma-toid wheeze*, under *wheeze*.

Jackson's sign [James *Jackson*, Jr., Boston physician, 1810–1834] see under *sign*, def. 3.

jacksonian epilepsy (jak-so'ne-an) [John Hughlings *Jackson*] see under *epilepsy*.

Jacob (zhah-kob'), François. French biologist, born 1920; co-winner with André Michael Lwoff and Jacques Lucien Monod, of the Nobel prize in medicine and physiology for 1965, for discoveries concerning the genetic control of enzymes and virus synthesis.

Jacob's membrane, ulcer (ja'kubz) [Arthur *Jacob*, Irish ophthalmologist, 1790–1874] see *layer of rods and cones*, under *layer*, and see under *ulcer*.

Jacobaeus operation (yah'ko-ba'us) [Hans Christian *Jacobaeus*, Swedish surgeon, 1879–1937] see under *operation*.

jacobine (ja'ko-bin) a poisonous alkaloid, C₁₈H₂₅O₆N, from the composite-flowered plant *Senecio jacobaea*; it may cause necrosis of the liver.

Jacobson's anastomosis, etc. (ja'kub-sunz) [Ludwig Levin *Jacobson*, Danish anatomist, 1783–1843] see under *anastomosis*, *canal*, *cartilage*, *nerve*, *organ*, *plexus*, and *sulcus*.

Jacobson's retinitis [Julius *Jacobson*, German ophthalmologist, 1828–1889] syphilitic retinitis.

Jacobsthal's test (yak'obz-talz) [Erwin Wolfgang Jakob *Jacobsthal*, Hamburg bacteriologist, born 1879] see under *tests*.

Jacquet's dermatitis (erythema) (zhak-āz') [Leonard Marie Lucien *Jacquet*, French dermatologist, 1860–1914] diaper dermatitis.

jactatio (jak-ta'she-o) [L.] jactitation. **j. cap'itis noctur'na**, rhythmic rolling of the head of a child just before falling asleep.

jactation (jak-ta'shun) jactitation.

jactitation (jak'ti-ta'shun) [L. *jactitatio*; *jactitare* to toss] the tossing to and fro of a patient in acute disease.

jaculiferous (jak'u-li'fer-us) [L. *jaculum* dart + *ferre* to bear] bearing prickles.

Jadassohn's macular atrophy, sebaceous nevus, test (yah'das-ōnz) [Josef *Jadassohn*, German dermatologist in Bern, 1863–1936] see *anetoderma*, see under *nevus*, and see *irrigation test*, under *tests*.

Jadelot's lines (furrows) (zhad-lōz') [Jean François Nicolas *Jadelot*, physician in Paris, 1791–1830] see under *line*.

Jaeger's test types (ya'gerz) [Edward *Jaeger* von Jastthal, Austrian oculist, 1818–1884] see under *test types*.

Jaffé's reaction, test (zhah-fāz') [Max *Jaffé*, German physiologic chemist, 1841–1911] see under *reaction* and *tests*.

jagsiekte, jagziekte (yahg-sék'tē; yahg-zék'tē) jaagsiekte.

Jakob's disease (yak'obz) [Alfons Maria *Jakob*, German psychiatrist, 1884–1931] Creutzfeldt-Jakob syndrome.

Jakob-Creutzfeldt disease (yak'ob-kroitz'felt) [Alfons Maria

Jakob; Hans Gerhard *Creutzfeldt*, German psychiatrist, 1885–1964] Creutzfeldt-Jakob disease.

Jaksch's anemia (disease), test (yaksh) [Rudolf von *Jaksch*, physician in Prague, 1855–1947] see *anemia pseudoleukemica infantum*, and see under *tests*.

jalap (jal'ap) [Sp. *jalapa*, from *Jalapa*, a city of Mexico] the dried tuberous root of *Exogonium purga* (Hayne) Lindl. Convolvulaceae; its resins possess cathartic properties.

Janet's disease, test (zhah-nāz') [Pierre Marie Felix *Janet*, French physician, 1859–1947] see *psychasthenia*, and see under *tests*.

Janeway's pills (jān'wāz) [Edward Gamaliel *Janeway*, American physician, 1841–1911] see under *pill*.

Janeway's sphymomanometer, spots (jān'wāz) [Theodore Caldwell *Janeway*, American physician, 1872–1917] see under *sphymomanometer* and *spot*.

janiceps (jan'i-seps) [L. *Janus* a two-faced god + *caput* head] a double monster with one head and two opposite faces. **j. asym'metros**, a janiceps with one imperfect and one more complete face. **j. parasit'icus**, a double monster in which there is partial duplication of the head in the frontal plane.

Janin's tetanus (zhah-naz') [Joseph *Janin*, French physician, born 1864] kopf-tetanus.

Janošik's embryo (yan'o-siks) [Jan *Janošik*, Prague anatomist, 1856–1927] see under *embryo*.

Jansen's disease, test [W. Murk *Jansen*, Dutch orthopedic surgeon, 1867–1935] see *metaphyseal dysostosis*, under *dysostosis*, and see under *tests*.

Jansen's operation (yan'senz) [Albert *Jansen*, German otologist, 1859–1933] see under *operation*.

Jansky's classification (jan'skēz) [Jan *Jansky*, Czech psychiatrist, 1873–1921] see under *classification*.

Janthinosoma (jan'thī-no-so'mah) a genus of mosquitoes; it is often considered to be a subgenus of the genus *Psorophora*. **J. lut'zi**, a species which transports the eggs of botflies (*Dermatobia*) glued to its abdomen. **J. postica'ta**, a species which also transports the eggs of the botfly.

Jaquet's apparatus (zhah-kāz') [Alfred *Jaquet*, Swiss pharmacologist, 1865–1937] see under *apparatus*.

jar (jar) a wide-mouthed, glass or earthenware container. **bell j.**, a glass vessel, closed at top, open at bottom, used in laboratory vacuum experiments. **Leyden j.**, a glass jar partially covered inside and out with tinfoil or other metal, used as a condenser or collector of electricity.

jararaca (jah'rah-rak'ah) a venomous pit viper, *Bothrops jararaca*, of tropical and southern South America.

Jarcho's pressometer (jahr'kōz) [Julius *Jarcho*, New York obstetrician, born 1882] see under *pressometer*.

jargon (jar'gon) the technical or specialized language used in a profession or other field of activity.

jargonaphasia (jar'gon-ah-fa'ze-ah) a speech defect in which several words are run into one.

Jarisch-Herxheimer reaction (yah'rish-herks'hīm-er) [Adolf *Jarisch*, Austrian dermatologist, 1850–1902; Karl *Herxheimer*, German dermatologist, 1861–1944] see under *reaction*.

Jarjavay's muscle (zhar'zah-vaz) [Jean François *Jarjavay*, French physician, 1815–1868] see under *muscle*.

Jarotzky's (Jarotsky's) treatment (yar-ot'skēz) [Alexander *Jarotzky*, Moscow physician, born 1866] see under *treatment*.

Jarvis' operation (jahr'vis) [William Chapman *Jarvis*, New York laryngologist, 1855–1895] see under *operation*.

Jatropha (jat'ro-fah) [Gr. *iatros* physician + *trophē* nourishment] a genus of tropical euphorbiaceous plants. Various species possess purgative, stomachic, febrifuge, and astringent properties. Common to Mexico and South America. *J. curcas* L. and *J. multifida* L. (physic nut) produce seeds containing a purgative oil and a potentially toxic phytotoxin.

jaundice (jawn'dis) [Fr. *jaunisse*, from *jaune* yellow] a syndrome characterized by hyperbilirubinemia and deposition of bile pigment in the skin, mucous membranes and sclera with resulting yellow appearance of the patient; called also *icterus*. **acholuric j.**, jaundice without bilirubinuria, associated with elevated unconjugated bilirubin that is not excreted by the kidney; seen in hemolytic disease and other forms of unconjugated hyperbilirubinemia. **acholuric familial j.**, hereditary spherocytosis. **anhepatic j., anhepatogenous j.**, yellow appearance of the skin and mucous membranes not caused by liver disease. **black j.**, Winckel's disease. **breast milk j.**, elevated unconjugated bilirubin in some breast-fed infants due to the presence of 5-β-pregnane-3-α-20-β-dial, which inhibits glucuronyl transferase conjugating activity. **Budd's j.**, acute yellow atrophy of the liver; see under *atrophy*. **catarrhal j. (obs.)**, infectious

hepatitis. **cholestatic j.**, jaundice resulting from an abnormality in the flow of bile, usually accompanied by elevation of serum alkaline phosphatase, retention of bile salts (with resulting pruritus) and varying hypercholesterolemia. The cholestasis may be *extrahepatic*, due to obstruction caused by a stone, stricture, or neoplasm, or *intrahepatic*, which may be due to liver cell disease (e.g., hepatitis), or altered permeability and/or obstruction of the intrahepatic biliary system (as in drug reactions or hepatic infiltrative disease). **chronic acholuric j.**, hereditary spherocytosis. **Crigler-Najjar j.**, see under *syndrome*. **epidemic j.**, viral hepatitis type A. **familial acholuric j.**, hereditary spherocytosis. **febrile j.**, leptospiral j. **hemolytic j.**, hemolytic anemia. **hemorrhagic j.**, leptospiral j. **hepatocellular j.**, jaundice caused by injury to or disease of the liver cells. **hepatogenic j.**, **hepatogenous j.**, that which is due to some disease or disorder of the liver. **homologous serum j.**, **human serum j.**, viral hepatitis type B. **infectious j.**, **infective j.**, 1. infectious hepatitis. 2. leptospiral j. **latent j.**, hyperbilirubinemia without yellow staining of the tissues. **leptospiral j.**, a severe form of leptospirosis characterized by fever, jaundice, myalgia, and occasionally by meningitis and nephritis. Called also *Weil's disease*, *infectious spirochetal jaundice*, *icterogenic spirochetosis*, *spirochetosis icterohaemorrhagica*, *leptospirosis icterohaemorrhagica*, and *Fiedler's disease*. **malignant j.**, acute yellow atrophy of the liver; see under *atrophy*. **malignant j. of dogs**, canine piropilosis. **mechanical j.**, obstructive j. **j. of the newborn**, icterus neonatorum. **nonhemolytic j.**, jaundice caused by an abnormality in the metabolism of bilirubin, and resulting in an excessive accumulation of unconjugated bilirubin in the blood. The various forms include *Crigler-Najjar syndrome*, *Dubin-Johnson syndrome*, *Gilbert's disease*, *physiologic jaundice of newborn*, *hyperbilirubinemia of premature infant*, and *Rotor's syndrome*. **nonhemolytic j.**, **congenital**, Crigler-Najjar syndrome. **nonhemolytic j.**, **congenital familial**, Crigler-Najjar syndrome. **nuclear j.**, kernicterus. **obstructive j.**, that which is due to an impediment to the flow of the bile from the liver cells to the duodenum. **occult j.** (obs.), latent j. **physiologic j.**, mild icterus neonatorum lasting the first few days after birth. **picric acid j.**, jaundice due to picric acid poisoning; seen in munition workers and in malingering soldiers who deliberately ingest picric acid. **post-arsphenamine j.**, jaundice following the administration of arsphenamine. **regurgitation j.**, jaundice attributed to escape of bile from the bile canaliculi into the blood stream and marked by urobilinogen in the urine. **retention j.**, a form of jaundice due to inability of the liver to dispose of the bilirubin provided by the circulating blood. **Schmorl's j.**, kernicterus. **spirochetal j.**, leptospiral j. **Sumatra j.**, a form of leptospirosis endemic in Sumatra, caused by *Leptospira* serotypes and presumed to be similar to Hasami fever and nanukayami. Called also *Rachmat infection*. **toxemic j.**, **toxic j.**, jaundice produced by poisons, such as phosphorus, arseniuretted hydrogen, picric acid, snake venom, etc.

Javal's ophthalmometer (zhah-valz') [Louis Emile Javal, French oculist, 1839-1907] see *ophthalmometer*.

jaw (jaw) either of the two bony structures (mandible and maxilla) in the head of vertebrates, bearing the teeth (in dentate species) and enabling carnivores to seize their prey and others to bite and chew food. **bird-beak j.**, the condition produced by protrusion of the upper jaw; called also *parrot j.* **big j.**, actinomycosis in cattle. **cleft j.**, a deformity of the jaw due to unilateral or bilateral failure of union of the median nasal and maxillary processes in the anterior palatal region, leaving a cleft or clefts through the alveolus. **crackling j.**, noise (crepitation) in the normal or diseased joint associated with jaw movement. **drop j.**, the paralytic stage of rabies in a dog, in which the jaw drops. **Hapsburg j.**, a mandibular prognathous jaw, often accompanied by a thick overdeveloped lower lip (Hapsburg lip), as seen in many members of the Hapsburg family. **lower j.**, mandibula. **lumpy j.**, actinomycosis in cattle. **parrot j.**, bird-beak j. **phossy j.**, phosphonerosis. **pig j.**, an abnormal protrusion of the upper jaw of the horse, with hypertrophy of the teeth. **pipe j.**, a painful condition of the jaws caused by carrying a tobacco pipe in the mouth. **rubber j.**, a softened condition of the jaw in animals, caused by resorption and replacement of the bone by fibrous tissue, occurring in association with renal osteodystrophy; osteoporosis. **upper j.**, maxilla.

Jaworski's corpuscles (bodies), test (yah-wor'skēz) [Walery Jaworski, Polish physician, 1849-1924] see under *corpuscle* and *tests*.

Jeanselme's nodules (zhah-selmz') [Antoine Edouard Jeanselme, French dermatologist, 1858-1935] see under *nodule*.

jecorize (jek'o-rīz) [L. *jecur* liver] to impart to a food the therapeutical qualities of cod liver oil, as by treating milk with ultraviolet ray.

Jectofer (jek'to-fer) trademark for a preparation of iron sorbitex.

jecur (je'kur) [L.] liver.

Jeddah ulcer (jed'ah) [*Jeddah*, a town of Arabia] cutaneous leishmaniasis.

Jeffersonia (jef'er-so'ne-ah) [named for T. Jefferson, 1743-1826] a genus of berberidaceous herbs. The root of *J. diphylla* (L.) Pers., of North America, is tonic, diuretic, and expectorant; emetic in large doses.

Jefron (jef'ron) trademark for a preparation of polyferoxe.

jejunal (jē-joo'nal) pertaining to the jejunum.

jejunectomy (jē'joo-nek'to-me) [*jejuno-* + Gr. *ektomē* excision] excision of the jejunum.

jejunitis (jē'joo-ni'tis) inflammation of the jejunum.

jejuno- [L. *jejunum* empty] a combining form denoting relationship to the jejunum.

jejunocecostomy (jē-joo'no-se-kos'to-me) [*jejuno-* + *cecum* + Gr. *stoma* opening] the operation of forming an anastomosis between the jejunum and cecum; also, the anastomosis so established.

jejunocolostomy (jē-joo'no-ko-los'to-me) [*jejuno-* + *colon* + Gr. *stoma* mouth] the formation of an anastomosis between the jejunum and the colon; also, the anastomosis so formed.

jejunoileal (jē-joo'no-il'e-al) pertaining to the jejunum and ileum; connecting the proximal jejunum with the distal ileum.

jejunoileitis (jē-joo'no-il'e-i'tis) inflammation of the jejunum and ileum together.

jejunoileostomy (jē-joo'no-il'e-os'to-me) [*jejuno-* + *ileum* + Gr. *stoma* mouth] the formation of an anastomosis between the proximal jejunum and the terminal ileum; also, the stoma so created.

jejunajejunostomy (jē-joo'no-jē'joo-nos'to-me) the operative formation of an anastomosis between two portions of the jejunum; also, the union so established.

jejunorrhaphy (jē'joo-nor'ah-fe) [*jejuno-* + Gr. *rhaphe* suture] operative repair of the jejunum.

jejunostomy (jē'joo-nos'to-me) [*jejuno-* + Gr. *stomoun* to provide with an opening, or mouth] the surgical creation of a permanent opening between the jejunum and the surface of the abdominal wall; also, the opening so established.

jejunotomy (jē'joo-not'o-me) [*jejuno-* + Gr. *temnein* to cut] surgical incision of the jejunum.

jejunum (jē-joo'num) [L. "empty"] [NA] that portion of the small intestine which extends from the duodenum to the ileum; called also *intestinum jejunum*.

Jellinek's sign (symptom) (yel'i-neks) [Stefan Jellinek, physician in Vienna, born 1871] see under *sign*.

jelly (jel'e) [L. *gelatina*] a soft substance which is coherent, tremulous, and more or less translucent; generally, a colloidal semisolid mass. **cardiac j.**, a gelatinous substance present between the endothelium and myocardium of the embryonic heart, that transforms into the connective tissue of the endocardium.

contraceptive j., a nongreasy jelly for introduction into the vagina to prevent conception. **cyclomethycaine sulfate j.** [USP], a preparation containing 90 to 110 per cent of the labeled amount of cyclomethycaine sulfate in a water-soluble, viscous base; used as a local anesthetic, applied topically.

enamel j., stellate reticulum. **glycerin j.** [NF], a compound of gelatin, arsenic trioxide, and glycerin, used as a reagent; called also *glycerogelatin*. **lidocaine hydrochloride j.** [USP], a preparation containing 95 to 105 per cent of the labeled amount of lidocaine hydrochloride in a suitable, water-soluble, sterile, viscous base; used as a local anesthetic, applied topically to the mucous membranes.

mineral j., petrolatum. **petroleum j.**, petrolatum. **pramoxine hydrochloride j.** [USP], a preparation containing 94 to 106 per cent of the labeled amount of pramoxine hydrochloride; used as a local anesthetic, applied topically.

Wharton's j., the soft, jelly-like, homogeneous intercellular substance of the umbilical cord; it gives the reaction for mucin and contains thin collagenous fibers which increase in number with the age of the fetus.

Jendrassik's maneuver (yen-drah'siks) [Ernst Jendrassik, physician in Budapest, 1858-1921] see under *maneuver*.

Jenner (jen'er), Edward. An English physician (1749-1823), who developed the process of producing immunity to smallpox by inoculation (vaccination) with cowpox (vaccinia) vaccine.

Jenner's stain (jen'erz) [Louis Leopold Jenner, London physician, 1866-1904] see *Table of Stains and Staining Methods*.

jennerian (jen-ne're-an) named for Edward Jenner.

jennerization (jen'er-i-za'shun) production of immunity to a disease by inoculation of an attenuated form of the virus producing the disease.

Jensen's classification (yen'senz) [Orla Jensen, Danish physiologic chemist] see under *classification*.

Jensen's sarcoma (tumor), (yen'senz) [Carl Oluf Jensen, Danish veterinary pathologist, 1864-1934] see under *sarcoma*.

jerk (jerk) a sudden reflex or involuntary movement. **Achilles j.**, ankle j., triceps surae j. **biceps j.**, biceps reflex. **crossed j.**, adduction of the leg when attempt is made to elicit the quadriceps jerk on the opposite side. **elbow j.**, involuntary flexion of the elbow on striking the tendon of the biceps or triceps muscle. **jaw j.**, jaw reflex. **knee j.**, quadriceps j.

quadriceps j., a twitchlike contraction of the quadriceps muscle, elicited by sharply tapping the patellar ligament; called also *knee j.* **tendon j.**, see under *reflex*. **triceps surae j.**, a twitchlike contraction of the triceps surae muscle, elicited by sharply tapping the muscle or the Achilles tendon; called also *ankle j.*

Jesionek lamp (yes-e'o-nek) [Albert Jesionek, Giessen dermatologist, 1870–1935] see under *lamp*.

jessur (jes'er) native Bengal name for Russell's viper.

Jesu Haly see *Ali ben Iza*.

Jewett nail (joo'et) [Eugene Lyon Jewett, American surgeon, born 1900] see under *nail*.

jhin jhinia (jin jin'e-ah) an epidemic condition, perhaps a neuromimesis, first noticed in 1935 in Calcutta. It is characterized by a tingling sensation in the sole of one or both feet, especially in the great toe, and often by a feeling of pressure in the head and by trembling of the whole body.

jigger (jig'ger) chigoe.

Jobert's fossa, (zho-bärz') [Antoine Joseph Jobert de Lamballe, French surgeon, 1799–1867] see under *fossa*.

Jocasta complex (jo-kas'tah) see under *complex*.

Jochmann's test (yök'manz) [Georg Jochmann, Berlin internist, 1874–1915] 1. Müller-Jochmann test. 2. antitrypsin test. See under *tests*.

jodbasedow (i'od-bas'e-do) iodine-induced hyperthyroidism.

Joest's bodies (yests) [Ernst Joest, Dresden veterinary pathologist, 1873–1926] see under *body*.

Joffroy's reflex, sign (zhof-rwhahz') [Alexis Joffroy, French physician, 1844–1908] see under *reflex* and *sign*.

Johne's bacillus, disease (yo'nez) [Heinrich Albert Johne, German pathologist, 1839–1910] see *Mycobacterium paratuberculosis* and under *disease*.

johnin (yo'nin) a filtrate of cultures of Johne's bacillus (*Mycobacterium paratuberculosis*), similar to tuberculin, used to produce a skin reaction (johnin reaction) in testing cattle for Johne's disease.

Johnson's test (john'sonz) [Sir George Johnson, English physician, 1818–1896] see under *tests*.

Johnson-Stevens disease (john'son-ste'venz) [Frank Chambliss Johnson, 1894–1934; Albert Mason Stevens, 1884–1945, American pediatricians] Stevens-Johnson syndrome.

joint (joint) [L. *junctio* a joining, connection] an articulation: the place of union or junction between two or more bones of the skeleton, especially a junction that admits of more or less motion of one or more bones. See also *articulatio* and *juntura*. For English names of specific joints not included here, see under *articulation*. **amphidiarthrodial j.**, amphidiarthrosis. **ankle j.**, articulatio talocruralis. **arthrodial j.**, plane j. **ball-and-socket j.**, spheroidal j. **biaxial j.**, one permitting movement in two of the assumed three mutually perpendicular axes, or having two degrees of freedom, as the ellipsoidal joint. **bilocular j.**, a joint in which the synovial cavity is divided into two compartments by an interarticular cartilage, as the temporomandibular joint. **bleeders' j.**, hemorrhage into a joint in persons of a hemorrhagic diathesis. **Brodie's j.**, hysteric j. **Budin's j.**, a band of cartilage seen at birth between the squamous and the two condylar portions of the occipital bone. **cartilaginous j.**, one in which the components are connected by cartilage; called also *juntura cartilaginea* [NA]. **Charcot's j.**, neuropathic arthropathy. **Chopard's j.**, articulatio tarsi transversa. **Clutton's j.**, painless symmetrical hydrarthrosis, especially of the knee joints, seen in hereditary syphilis. **cochlear j.**, a form of hinge joint which permits of some rotation or lateral motion, as the knee joint. **coffin j.**, the second interphalangeal joint of the foot of a horse. **composite j., compound j.**, a joint in which several bones articulate; articulatio composita [NA]. **condyloid j.**, one in which an ovoid head of one bone moves in an elliptical cavity of another, permitting all movements except axial rotation, as the metacarpophalangeal joints; articulatio condylaris [NA]. **Cruveilhier's j.**, articulatio atlantooccipitalis. **diarthrodial j.**, synovial j. **dry j.**, one affected with chronic villous arthritis. **elbow j.**, the joint between the arm and forearm; see *articulatio cubiti* [NA]. **ellipsoidal j.**, a biaxial joint resembling a ball-and-socket joint, but with the articulating surfaces much longer in one direction than in the direction at right angles, the circumference of the joint thus resembling an ellipse, as the radiocarpal joint; articulatio ellipsoidea [NA]. **enarthrodial j.**, spheroidal j. **facet j's**, the articulations of the vertebral column. **false j.**, pseudarthrosis. **fibrocartilaginous j.**, one in which the participating elements are united by fibrocartilage, usually separated from the bones by thin plates of hyaline cartilage; called also *symphysis*. **fibrous j.**, one in which the components are connected by fibrous tissue; see *juntura fibrosa* [NA]. **flail j.**, one showing abnormal mobility. **freely movable j.**, synovial j. **fringe j.**,

Various kinds of joints: *Fibrous*—1. syndesmosis (tibiofibular). 2. suture (skull). *Cartilaginous*—3. symphysis (vertebral bodies). 4. synchondrosis (1st rib and sternum). *Synovial*—5. condylar (wrist). 6. gliding (radioulnar). 7. Hinge or ginglymus (elbow). 8. Ball and socket (hip). 9. Pivot (atlanto-odontoid). 10. Saddle (carpometacarpal of thumb).

one affected with chronic villous arthritis. **ginglymoid j.**, ginglymus. **gliding j.**, plane j. **hemophilic j.**, bleeders' j. **hinge j.**, ginglymus. **hip j.**, the joint formed at the head of the femur and the acetabulum of the hip bone; called also *articulatio coxae* [NA] and *articulation of the hip*. Loosely called **hip**. **hysteric j.**, a condition which resembles arthritis but is of psychic origin. **immovable j.**, fibrous j. **intercarpal j.'s**, the articulations between the carpal bones; called also *articulationes intercarpeae* [NA]. **irritable j.**, a joint subject to attacks of inflammation without discoverable cause. **knee j.**, the compound joint between the femur, patella, and tibia; see *articulatio genus* [NA]. **ligamentous j.**, syndesmosis. **Lisfranc's j.**, see *articulationes tarsometatarsae*, under *articulatio*. **j's of Luschka**, a series of jointlike structures at the lateral edges of the vertebral bodies from vertebra C3 to T1, forming small spurlike lips at the upper surface, covered with cartilage, and containing a capsule filled with fluid. They are considered by some to be true diarthrodial joints, and by others to be degenerative spaces of the intervertebral disks filled with extracellular fluid and lined by a membrane formed by fibrocytes. They are frequent sites of spur formation. **midcarpal j.**, the joint between the scaphoid, lunate, and cuneiform bones and the second row of the carpal bones; called also *articulatio mediocarpea* [NA]. **mixed j.**, one combining features of different types of joints. **multi-axial j.**, spheroidal j. **open j.**, a veterinary term for a joint in which the surface of the bones is exposed, as a result of inflammation and sloughing of the tissues. **peg-and-socket j.**, gomphosis. **pivot j.**, a uniaxial joint in which one bone pivots within a bony or an osseoligamentous ring; *articulatio trochoidea* [NA]. **plane j.**, a type of synovial joint in which the opposed surfaces are flat or only slightly curved; called also *articulatio plana* [NA], *gliding j.*, and *arthrodial j.* **polyaxial j.**, spheroidal j. **rotary j.**, pivot j. **sacrococcygeal j.**, *junctura sacrococcygea*. **saddle j.**, a joint having two saddle-shaped surfaces at right angles to each other; *articulatio sellaris* [NA]. **scapuloclavicular j.**, *articulatio acromioclavicularis*. **seller j.**, saddle j. **shoulder j.**, *articulatio humeri*. **simple j.**, a joint in which only two bones articulate; *articulatio simplex* [NA]. **socket j. of tooth**, gomphosis. **spheroidal j.**, a type of synovial joint in which a spheroidal surface on one bone ("ball") moves within a concavity ("socket") on the other bone, as in the hip joint. Called also *articulatio spherioidea* [NA] and *ball-and-socket j.* **spiral j.**, cochlear j. **stifle j.**, the articulation in quadrupeds corresponding with the knee joint of man, consisting actually of two joints, that between the femur and tibia, and that between the femur and patella. **synarthrodial j.**, fibrous j. **synovial j.**, a special form of articulation permitting more or less free movement; see *junctura*

Section of synovial joint (King and Showers).

synovialis [NA]. See illustration. **tarsal j.**, transverse, *articulatio tarsi transversa*. **through j.**, synovial j. **trochoid j.**, pivot j. **uniaxial j.**, one permitting movement in only one of the assumed three mutually perpendicular axes, or having only one degree of freedom, as a hinge joint and the interphalangeal joints. **unilocular j.**, a synovial joint having only one cavity. **von Gies j.**, a chronic syphilitic chondro-osteoarthritis.

Jolles' test (jol'ez) [Adolf Jolles, Austrian chemist, born 1863] see under *tests*.

Jolly's bodies (zho-léz') [Justin Marie Jules Jolly, French histologist, 1870–1953] Howell-Jolly bodies; see under *body*.

Jolly's reaction (yo'léz) [Friedrich Jolly, German neurologist, 1844–1904] see under *reaction*.

Jonas' symptom (yo'nas) [Siegfried Jonas, Austrian physician, born 1874] see under *symptom*.

Jones' albumosuria, cylinder, protein (jonz) see Bence Jones.

Jones' nasal splint (jonz) [John Jones, American surgeon, 1729–1791] see under *splint*.

Jones' position (jonz) [Sir Robert Jones, English surgeon, 1858–1933] see under *position*.

Jonnesco's fold, fossa, operation (jo-nēs'kōz) [Thoma Jonnesco, Rumanian surgeon, 1860–1926] see *parietoperitoneal fold*, under *fold*, see *recessus duodenalis superior*, and see *sympathectomy*.

Jonston's arc [Johns Jonston, Polish physician, 1603–1675] *alopecia areata*.

josamycin (jo'sah-mi'sin) an antibiotic of unspecified action, $C_{42}H_{69}NO_{15}$.

joule (jōl) [James Prescott Joule, English physicist, 1818–1889] the SI unit of energy and heat, being the work done by a force of 1 newton acting over a distance of 1 meter.

Joule's equivalent (jōl'z) [James Prescott Joule, English physicist, 1818–1889] see under *equivalent*.

Jourdain's disease (zhoor-daz') [Anselme Louis Bernard Berdrillet Jourdain, French surgeon, 1734–1816] see under *disease*.

juccuya (ü-koo'yah) the ulcerative type of cutaneous leishmaniasis.

juga (joo'gah) [L.] plural of *jugum*.

jugal (joo'gal) [L. *jugalis*; *jugum* yoke] 1. connecting like a yoke. 2. pertaining to the cheek.

jugale (joo-ga'le) the jugal point; see under *point*.

jugate (joo'gāt) 1. locked together. 2. marked by ridges.

Juglans (joo'glans) [L. "Jove's nut," walnut] a genus of juglandaceous trees; the walnuts. Certain species yield juglone, and *J. cinerea* L. (butternut tree) yields juglans and juglandic acid. The dried inner bark of *J. cinerea* was formerly used as a mild laxative.

juglans (joo'glans) the root bark of *Juglans cinerea*, the butternut tree, formerly used as a mild laxative.

juglone (jug'lōn) chemical name: 5-hydroxy-1,4-naphthoquinone. An antibiotic substance, $C_{10}H_6O_3$, derived from the leaves of certain species of *Juglans* and from walnut shells, which has antihemorrhagic properties and is active against certain fungi.

jugomaxillary (joo'go-mak'si-lār'e) pertaining to the zygomatic bone and the maxilla.

jugal (jug'u-lar) [L. *jugalris*; *jugulum* neck] 1. pertaining to the neck. 2. a jugular vein.

jugulation (jug'u-la'shun) [L. *jugulare* to cut the throat of] the sudden and rapid arrest of disease by therapeutical measures.

jugum (joo'gum), pl. *ju'ga* [L. "a yoke"] [NA] a general term for a depression or ridge connecting two structures. **alveola'ria mandib'ulae** [NA], depressions on the anterior surface of the alveolar process of the mandible, between the ridges caused by the roots of the incisor teeth. **ju'ga alveola'ria maxil'lae** [NA], the depressions on the anterior surface of the alveolar process of the maxilla, between the ridges caused by the roots of the incisor teeth. **ju'ga cerebra'lia os'sium cra'nii**, cerebral ridges of cranial bones; variable ridges on the inner surface of the cranium, corresponding to the sulci of the brain. **j. pe'nis**, a forceps for compressing the penis. **j. sphenoida'le** [NA], the portion of the body of the sphenoid bone that connects the lesser wings.

juice (jōos') [L. *jus* broth] any fluid from an animal or plant tissue; see also *succus*. **appetite j.**, gastric juice secreted during eating and varying in character with the appetite for the food which is being eaten. **cancer j.**, a milky juice obtained from cancerous tissue, and containing cancer cells. **cherry j.**, liquid expressed from the fresh ripe fruit of *Prunus cerasus* L. (Rosaceae) used as an ingredient in preparing flavored vehicles for pharmaceuticals and liqueurs. **gastric j.**, *succus gastricus*. **intestinal j.**, *succus entericus*. **pancreatic j.**, *succus pancreaticus*. **press j.**, liquid obtained by submitting finely ground tissue to great pressure. **raspberry j.**, the liquid expressed from the fresh ripe fruit of varieties of *Rubus idaeus* L. (European red raspberry) or *Rubus strigosus* Michx. (American red raspberry); used in a syrup as a flavored vehicle for drugs.

Jukes family (jooks) see under *family*.

julep (joo'lep) [L. *julapium*] a sweetened alcoholic drink or cordial of various kinds.

jumentous (joo-men'tus) [L. *jumentum*, a beast of burden] having a strong animal odor.

jumping (jump'ing) Gilles de la Tourette's syndrome.

jumping the bite correction of cross-bite.

junction (junk'shun) the place of meeting or of coming together, as of two different organs or types of tissue; see also *joint* and *junctura*. **adherent j.**, zonula adherens. **amelodontinal j.**, dentinoenamel j. **cardioesophageal j.**, esophagogastric j. **cementodontinal j.**, dentinocemental j. **cementoenamel j.**, the line at which the cementum covering the root of a tooth and the enamel covering its crown meet, designated anatomically as the cervical line. **dentinocemental j.**, the plane of meeting between the dentin and cementum on the root of a tooth. **dentinoenamel j.**, the plane of meeting between the dentin and enamel on the crown of a tooth. **dermoepidermal j.**, the plane of meeting between the dermis and epidermis. **esophagogastric j.**, the site of transition from the stratified squamous epithelium of the esophagus to the simple columnar epithelium of the cardia of the stomach; called also

cardioesophageal j. and **gastroesophageal j.** **fibromuscular j.**, a junction between the muscular elements of the wall of the corpus uteri and the fibrous tissue of the cervix. **gap j.**, a narrowed portion (about 3µm.) of the intercellular space which contains channels (about 2µm. in diameter) linking adjacent cells and through which pass ions, most sugars, amino acids, nucleotides, vitamins, hormones, and cyclic AMP. In electrically excitable tissues, these gap junctions serve to transmit electrical impulses via ionic currents and are known as *electronic synapses*; they are present in such tissues as myocardial tissue. Called also *nexus*. **gastroesophageal j.**, esophagogastric j. **ileocecocolic j.**, the junction of the ileum and cecum, located at the lower right side of the abdomen and fixed to the posterior abdominal wall. **intermediate j.**, zonula adherens. **manubriogladiolar j.**, synchondrosis sternalis. **mucocutaneous j.**, the site of transition between skin and mucous membrane. **mucogingival j.**, a variable, grossly indistinct but histologically distinct, line marking the separation of the gingival tissue from that of the oral mucosa. **myoneural j.**, the site of apposition (a chemical synapse) between a nerve fiber and the motor endplate of the skeletal muscle which it innervates; the axon terminals of the excited fiber release acetylcholine, which diffuses across the synaptic cleft and becomes transiently bound to receptors of the motor endplate, where it causes electrical changes that result in propagation of an action potential, which in turn induces contraction of the muscle fiber. Called also *neuromuscular j.* **neuromuscular j.**, myoneural j. **occluding j.**, zonula occludens. **osseous j's**, the sites of union of different bones; called also *articulationes* [NA]. **sclerocorneal j.**, the junction between the sclera and the cornea, marked on the outer surface of the eyeball by a slight furrow. **tendinous j's**, *conexus intertendineus*. **tight j.**, an intercellular junction at which adjacent plasma membranes are joined tightly together by interlinked rows of integral membrane proteins, which create a seal impermeable to intercellular passage of molecules. **ureteropelvic j.**, junction of the ureter and the kidney at the pelvis of the kidney. **ureterovesical j.**, the junction of the bladder and ureter; called also *ureterotrigonal complex*.

junctional (junkt/shun-al) pertaining to a junction.

junctura (junkt-tu'rah), pl. *juncturae* [L. "a joining"] a general term used in anatomical nomenclature to designate the site of union between different structures; see also *articulatio* and *joint*. **j. cartilagin/ea** [NA], cartilaginous joint: a form of articulation in which the union of the bony elements is by intervening cartilage; it includes synchondrosis and symphysis. Called also *amphiarthrosis*. **juncturae cin/guli mem/bri inferioris** [NA], the articulations of the girdle of the inferior member, i.e., the sacroiliac articulation and the symphysis pubica. **juncturae cin/guli mem/bri superioris** [NA], the articulations of the girdle of the superior member, i.e., the acromioclavicular and sternoclavicular articulations. **juncturae colum/nae vertebra/lis, thora/cis, et cra'nii** [NA], the articulations of the vertebral column, thorax, and cranium. **j. fibro/sa** [NA], fibrous joint: a form of articulation in which the union of the bony elements is by continuous intervening fibrous connective tissue; it includes suture, syndesmosis, and gomphosis. Called also *synarthrosis*. **j. lumbosacra/lis** [NA], the articulation between the sacrum and lumbar vertebrae. **juncturae mem/bri inferioris li/beri** [NA], the articulations of the free inferior member, i.e., of the thigh, leg, and foot. **juncturae mem/bri superioris li/beri** [NA], the articulations of the free superior member, i.e., of the arm, forearm, and hand. **j. os/sium**, a joint; see also *articulatio*. **juncturae os/sium**, NA alternative for *articulationes*; see *articulatio*. **juncturae os/sium cin/guli extremita/tis pelvi/nae**, *juncturae cinguli membri inferioris*. **juncturae os/sium cin/guli extremita/tis thora/cicae**, *juncturae cinguli membri superioris*. **j. sacrococcyg/ea** [NA], sacrococcygeal joint: the articulation between the coccyx and the sacrum; called also *symphysis sacrococcygea*. **j. synovia/lis** [NA], synovial joint: a specialized form of articulation permitting more or less free movement, the union of the bony elements being surrounded by an articular capsule enclosing a cavity lined by synovial membrane; called also *diarthrosis*. See illustration under *joint*. **juncturae ten/dinum**, *conexus intertendineus*. **juncturae zygapophyseal/les** [NA], the articulations between the articular processes of the vertebrae.

juncturae (junkt-tu're) [L.] plural of *junctura*.

Jung (yoong), Carl Gustav. Swiss psychiatrist (1875-1961), founder of the school of analytic psychology, which postulates a collective unconscious of mankind.

Jung's method (yoongz) [Carl Gustav Jung, Swiss psychiatrist, 1875-1961] analytic psychology.

Jung's muscle (yoongz) [Karl Gustav Jung, Swiss anatomist, 1794-1864] musculus pyramidalis auriculae.

Jungbluth's vasa propria (vessels) (yoong'blöots) [Hermann Jungbluth, German physician] see *vasa propria of Jungbluth*, under *vas*.

Jüngling's disease (yeng'lingz) [Otto Jüngling, German surgeon, 1884-1944] sarcoidosis.

juniper (joo'nī-per) 1. any of the trees or shrubs of the genus *Juniperus*. 2. the dried ripe fruit of *Juniperus communis* L., or common juniper tree, formerly used as a diuretic; the fruit is used for flavoring certain alcoholic beverages. Called also *juniper berries*.

Juniperus (joo-nip'er-us) a genus of coniferous trees and shrubs of the family Cupressaceae, including *J. communis* L., the juniper tree, and *J. sabina* L., the evergreen shrub or savin.

junk (junkt) oakum, formerly used in surgical dressings.

Junker inhaler (apparatus, bottle) (junkt'er) [Ferdinand Ethelbert Junker, English physician of 19th century] see under *inhaler*.

Junod's boot (zhoo-nōz') [Victor Theodor Junod, French physician, 1809-1881] see under *boot*.

jurisprudence (joor'is-proo'dens) [L. *juris prudentia* knowledge of law] the scientific study or application of the principles of law and justice. **dental j.**, the application of the principles of law and justice as they relate to the practice of dentistry. **medical j.**, the application of the principles of law and justice as they relate to the practice of medicine and the relations of physicians to each other and to society in general; called also *forensic medicine*.

jury-mast (joor'e-mast) an upright bar used in supporting the head in cases of tuberculosis of the spine (Pott's disease).

juscul. abbreviation for L. *jus'culum*, soup or broth.

jusculum (jus'ku-lum) [L.] soup or broth.

justo major (jus'to ma'jor) see *pelvis aequabiliter justo major*.

justo minor (jus'to mi'nor) see *pelvis aequabiliter justo minor*.

Justus' test (joos'toos) [J. Justus, Hungarian dermatologist] see under *tests*.

jute (jōot) the fibers of tropical herbs or undershrubs of *Corchorus capsularis* L. (Tiliaceae), formerly used in surgical dressings.

juvantia (joo-van'she-ah) [L. pl.] adjuvant and palliative medicines or appliances.

juvenile (joo've-nīl) 1. pertaining to youth or childhood; young or immature. 2. a youth or child; a young animal.

juxta- [L. *juxta* near, close by] a combining form meaning situated near or adjoining.

juxta-articular (juks'tah-ar-tik'u-lar) [L. *juxta* near + *articulus* joint] situated near a joint or in the region of a joint.

juxtaepiphyseal (juks'tah-ep-i-fiz'e-al) [*juxta* + *epiphysis*] near to or adjoining an epiphysis.

juxtaglomerular (juks'tah-glo-mer'u-lar) [*juxta* + *glomerulus*] near to or adjoining a glomerulus of the kidney, as juxtaglomerular cells.

juxtangina (juks-tan'jī-nah) [L. "almost quinsy"] inflammation involving the muscles of the pharynx.

juxtaposition (juks'tah-po-zish'un) [*juxta* + L. *positio* place] apposition.

juxtapyloric (juks'tah-pi-lor'ik) [*juxta* + *pylorus*] situated near the pylorus or the pyloric part of the stomach (see *pars pylorica ventriculi*).

juxtaspinal (juks-tah-spi'nal) [*juxta* + *spine*] close to the spinal column.

juxtavesical (juks'tah-ves'i-kal) [*juxta* + *vesical*] situated near or adjoining the urinary bladder.

K

K chemical symbol for *potassium* [L. *kaliūm*].

K. cathode; Kelvin.

k symbol for *constant*.

κ symbol for *magnetic susceptibility*.

Ka. kathode (cathode).

kabure (kah-boo're) a skin disease in Japan, probably caused by the burrowing of the cercariae of *Schistosoma japonica* in the skin.

Kabyle leprosy (kah-bil) [named for a tribe of Berbers of Algeria and Tunisia] see under *leprosy*.

Kader's operation (kah'ders) [Bronislaw Kader, Polish surgeon, 1863–1937] see under *operation*.

Kaes' feltwork, line (kiz) [Theodor Kaes, German neurologist, 1852–1913] see under *feltwork* and *line*.

Kaes-Bekhterev layer [Theodor Kaes; Vladimir Mikhailovich Bekhterev, Russian neurologist, 1857–1927] Bekhterev's layer.

Kafka's test (reaction) (ka/'kaz) [Victor Kafka, German physician, 1881–1955] see under *tests*.

Kafocin (ka-fo'sin) trademark for a preparation of cephaloglycine.

Kahlbaum's disease (kahl'bowmz) [Karl Ludwig Kahlbaum, German physician, 1828–1899] catatonic schizophrenia.

Kahler's disease, law (kah'lerz) [Otto Kahler, Austrian physician, 1849–1893] see *multiple myeloma*, and see under *law*.

Kahn's test (kahnz) [Reuben Leon Kahn, American bacteriologist, born 1887] see under *tests*, def. 1.

kahweol (kah'we-ol) [Turkish *galweh* coffee] a white crystalline lipid which forms the principal part of the unsaponifiable fraction of coffee.

kaif (kif) [Arabic] dreamy tranquillity from the use of drugs.

kaino- see *ceno-* (def. 1).

kaiserling (ki'zer-ling) 1. Kaiserling's solution. 2. a specimen preserved in Kaiserling's solution.

Kaiserling's method, solution (fixative) (ki'zer-lingz) [Karl Kaiserling, German pathologist, 1869–1942] see under *method* and *solution*.

kak- for words beginning thus, see also those beginning *cac-*.

kakergasia (kak-er-ga'se-ah) cacergasia.

kakesthesia (kak-es-the'ze-ah) cacesthesia.

kakidrosis (kak-i-dro'sis) [Gr. *kakos* bad + *hidrōs* perspiration + *-osis*] an extremely disagreeable odor of the sweat.

kakke (kakh'ka) [Japanese] beriberi.

kakodyl (kak'o-dil) cacodyl.

kakosmia (kak-oz'me-ah) [Gr. *kakos* bad + *osmē* smell + *-ia*] cacosmia.

kakotrophy (kak-ot'ro-fe) cacotrophy.

kala-azar (kah'lah ah-zar') [Hindi, "black fever"] an infectious disease with a high fatality rate, occurring along the Mediterranean shore, in West Africa, Mesopotamia, southern Russia, India, North China, South and Central America, and Mexico. It is marked by fever, progressive anemia, wasting, enlargement of the spleen and liver, and dropsy, and is caused by the parasite *Leishmania donovani*, which infects the reticuloendothelial cells, especially of the spleen and liver. It is transmitted to man by the bites of various sandflies of the genus *Phlebotomus*, except in the New World where the main vector is believed to be *Lutzomyia longipalpis*. Called also *febrile tropical splenomegaly*, *visceral leishmaniasis*, *Leishman's anemia*, *Assam fever*, *Dumdum fever*, *cachectic fever*, and *black fever* or *sickness*. **canine k.-a.**, Mediterranean k. **infantile k.-a.**, Mediterranean k. **Mediterranean k.-a.**, a form affecting infants, chiefly in countries bordering on the Mediterranean, formerly ascribed to *Leishmania infantum*, which is now regarded as identical with *L. donovani*; called also *canine* or *infantile k.-a.*

kaladana (kal-ah-da'nah) the dried seeds of *Ipomoea nil* L.; used in India and China for its purgative and anthelmintic properties.

kalafungin (kah-lah-fun'jin) an antifungal antibiotic substance produced by *Streptomyces tanashiensis* strain *kala*.

kalagua (kah-lah'gwah) a drug used in South America in the treatment of tuberculosis.

kalemia (kah-le'me-ah) [L. *kaliūm* potassium + Gr. *haima* blood + *-ia*] the presence of potassium in the blood; see *hyperkalemia*.

kali (ka'li, kah'le) [Ger.] potash. **k. arsenico'sum**, potassium arsenite solution; see under *solution*.

kaliemia (ka-le-e'me-ah) kalemia.

kaligenous (ka-lij'e-nus) [*kaliūm* + Gr. *gennan* to produce] producing potash.

kalimeter (kah-lim'ē-ter) alkalimeter.

kaliopenia (ka'le-o-pe'ne-ah) [L. *kaliūm* potassium + Gr. *penia* poverty] hypokalemia.

kaliopenic (ka'le-o-pe'nik) pertaining to, characterized by, or producing kaliopenia.

kaliūm (ka'le-um) [L.] potassium.

kaliuresis (ka'le-u-re'sis) [L. *kaliūm* potassium + Gr. *ourēsis* a making water] the excretion of potassium in the urine.

kaliuretic (ka'le-u-ret'ik) 1. pertaining to, characterized by, or promoting kaliuresis. 2. an agent that promotes kaliuresis.

kallak (kal'ak) [Eskimo for disease of the skin] a pustular dermatitis occurring in the Eskimos.

kallidin (kal'li-din) a type of kinin liberated by the action of kallikrein on a globulin of blood plasma. Two forms have been identified: *kallidin I* is the same as bradykinin; *kallidin II* is a decapeptide composed of bradykinin with an N-terminal lysine added.

Kallikak family (kal'i-kak) [Gr. *kallos* beauty + *kakos* bad] see under *family*.

kallikrein (kal'li-kre'in) any of a group of peptide hydrolases of the subgroup serine proteinases present in blood plasma and in various glands, such as the pancreas and salivary glands, as well as in urine and lymph. Their major action is the liberation of polypeptides called kinins (bradykinin and kallidin) from kininogens of the plasma α -2-globulins. Called also *kininogenin* and *kininogenase*.

kallikreinogen (kal'li-kri'no-jin) the inactive precursor of kallikrein, which is normally present in blood; its conversion into kallikrein may be triggered by a variety of physical or chemical changes. For example, the Hageman factor activates plasma kallikreinogen.

Kalmia (kal'me-ah) a genus of ericaceous shrubs, the leaves of which have been used in syphilis, diarrhea, and chronic inflammatory disorders, and are thought to possess cardiac and sedative properties; *K. latifolia* L. (mountain laurel) and other related species yield the poisonous principle andromedotoxin.

Kalmuk idiocy (kal'mook) [*Kalmuk*, a Mongolian people in Asia and Russia] severe mental retardation associated with Down's syndrome.

kaluresis (kal'u-re'sis) kaliuresis.

kaluretic (kal'u-ret'ik) kaliuretic.

kalymana-bacterium (kal'i-ma'na bak-te're-um) a Brazilian term for *Donovania granulomatis*, the organism causing granuloma inguinale.

kamala (kam'ah-lah) the glands and hairs of the capsules of *Mallotus philippinensis* Muell.-Arg. (Euphorbiaceae), an East Indian shrub; it has been used as a purgative and is used in veterinary medicine as a teniacide. Called also *rottlera*.

Kaminer's reaction (kam'i-ner) [Gisa Kaminer, Vienna physician, 1883–1941] Freund's reaction.

kanamycin (kan'ah-mi'sin) chemical name: *O*-3-amino-3-deoxy- α -D-glucopyranosyl-(1 $\rightarrow$ 6)-*O*-[6-amino-6-deoxy- α -D-glucopyranosyl-(1 $\rightarrow$ 4)]-2-deoxy-D-streptamine. A water-soluble antibiotic derived from *Streptomyces kanamyceticus*, first isolated in Japan in 1957; it is effective against some gram-positive, many gram-negative, and some acid-fast bacteria. **k. sulfate** [USP], the sulfate salt of kanamycin, $C_{18}H_{38}N_4O_{11} \cdot H_2SO_4$, occurring as a white, crystalline powder; used especially in the treatment of infections due to gram-negative bacteria, such as *Klebsiella*, *Aerobacter*, some *Proteus* species, *Serratia*, an *Escherichia coli*, and has been used in the treatment of pulmonary tuberculosis, administered orally, intramuscularly, and intravenously.

Kanavel's sign (kan-a'velz) [Allen Buchner Kanavel, Chicago surgeon, 1874–1938] see under *sign*.

kangaroo (kang'gah-roo') a marsupial mammal of Australasia; a tendon is derived from its tail that is valued as a ligature.

kansasiin (kan-sas'e-in) a product prepared from *Mycobacterium kansasii*, comparable to tuberculin, used in a cutaneous test of hypersensitivity.

Kantrex (kan'treks) trademark for preparations of kanamycin.

kanyemba (kan'e-em'bah) an acute rectitis of unknown cause, reported from South America and Northern Rhodesia.

Kaochlor (ka'o-klōr) trademark for a preparation of potassium chloride.

kaodzera (kah'od-ze'rah) Rhodesian trypanosomiasis.

kaolin (ka'o-lin) [USP] a native hydrated aluminum silicate, powdered and freed from gritty particles by elutriation. A soft white or yellowish white powder with a claylike taste, used as an adsorbent and in kaolin mixture with pectin. Called also *argilla*, *bolus alba*, and *China clay*.

kaolinosiis (ka'o-lin-o'sis) pneumoconiosis caused by inhaling particles of kaolin.

Kaon (ka'on) trademark for preparations of potassium gluconate.

Kaplan's test (kap'lanz) [David M. Kaplan, New York physician, born 1870] see under *tests*.

Kaposi's sarcoma, varicelliform eruption (kap'o-sēz) [Moritz Kaposi (Moritz Kaposi Kohn), Austrian dermatologist, 1837-1902] see under *eruption* and *sarcoma*.

Kappadione (kap'pah-di'ōn) trademark for a preparation of menadiol sodium diphosphate.

Kappeler's maneuver (kap'ē-lerz) [Otto Kappeler, German surgeon, 1841-1909] see under *maneuver*.

kaps- for words beginning thus, see those beginning *caps-*.

kara-kurt (kah'rah-koort') the venomous Russian spider *Latrodectus lugubris*.

karaya (kar'a-ah) see under *gum*.

Karell's diet, treatment (cure) (kah'relz) [Philip Karell, Russian physician, 1806-1886] see under *diet* and *treatment*.

Karoo syndrome (kah-roo') [Karoo, region of South Africa] see under *syndrome*.

Kartagener's syndrome (triad) (kar-tag'ē-nerz) [Manes Kartagener, German physician] see under *syndrome*.

Karyamoebina falcata (kar'e-am-ē-bi'nah fal-ka'tah) *Entamoeba histolytica*.

karyapsis (kar'e-ap'sis) [karyo- + Gr. *hapsis* joining] union of nuclei in a conjugating cell.

karyenchyma (kar'e-en'ki-mah) [karyo- + Gr. *enchymos* juicy] karyolymph.

karyo- (kar'e-o) [Gr. *karyon* nucleus, or nut] a combining form denoting relationship to a nucleus; see also words beginning *caryo-*.

karyochromatophil (kar'e-o-kro-mat'o-fil) [karyo- + Gr. *chrōma* color + *philein* to love] having a stainable nucleus.

karyochrome (kar'e-o-krōm') [karyo- + Gr. *chrōma* color] a nerve cell the nucleus of which is deeply stainable, while the body is not; its nucleus is larger than that of a cytochrome, and there are varieties designated by Greek letters.

karyochylema (kar'e-o-ki-le'mah) karyolymph.

karyoclasia (kar'e-ok'lah-sis) karyoklasia.

karyoclastic (kar'e-o-klas'tik) karyoklastic.

karyocyte (kar'e-o-sit) [karyo- + -cyte] a nucleated cell.

karyogamic (kar'e-o-gam'ik) [karyo- + Gr. *gamos* marriage] pertaining to or characterized by union of nuclei.

karyogamy (kar'e-o-g'ah-me) [karyo- + Gr. *gamos* marriage] cell conjugation with union of nuclei.

karyogen (kar'e-o-jen') [karyo- + Gr. *gennan* to produce] an organic iron compound found in certain cell nuclei, especially the head of the spermatozoon.

karyogenesis (kar'e-o-jen'ē-sis) [karyo- + Gr. *genesis* production] the development of the nucleus of a cell.

karyogenic (kar'e-o-jen'ik) forming the nucleus of a cell; pertaining to karyogenesis.

karyogonad (kar'e-o-go'nad) [karyo- + Gr. *gonē* seed] micro-nucleus, def. 1.

karyokinesis (kar'e-o-ki-nē'sis) [karyo- + Gr. *kinesis* motion] the phenomena involved in division of the nucleus, usually an early stage in the process of cell division, or mitosis. **asymmetrical k.**, mitosis in which the chromosomes divide unequally and into dissimilar masses. **hyperchromatic k.**, mitosis in which the number of chromosomes is abnormally large. **hypochromatic k.**, mitosis in which the number of chromosomes is abnormally small.

karyokinetic (kar'e-o-ki-net'ik) pertaining to or of the nature of karyokinesis.

karyoklasia (kar'e-ok'lah-sis) [karyo- + Gr. *klasis* breaking] the breaking down of the cell nucleus or nuclear membrane.

karyoklastic (kar'e-o-klas'tik) 1. breaking down cell nuclei. 2. arresting mitosis.

karyolobic (kar'e-o-lo'bik) having a lobe-shaped nucleus.

karyology (kar'e-ol'o-je) [karyo- + -logy] the branch of cytology which deals with the cell nucleus.

karyolymph (kar'e-o-lim'f) [karyo- + *lymph*] the liquid part of a cell nucleus, as contrasted with the chromatin and linin.

karyolysis (kar'e-ol'i-sis) [karyo- + Gr. *lysis* dissolution] a form of necrobiosis in which the nucleus of a cell swells and gradually loses its chromatin.

Karyolysus lacertarum (kar-e-ol'i-sus las-er-ta'rum) [karyo- + Gr. *lyein* to loose] a coccidian parasite from the blood of lizards.

karyolytic (kar'e-o-lit'ik) producing or pertaining to karyolysis; destroying cell nuclei.

karyomegaly (kar'e-o-meg'ah-le) [karyo- + Gr. *megalē* great] abnormal enlargement of the nucleus of a cell, not caused by polyploidy.

karyomere (kar'e-o-mēr') 1. chromomere (def. 1). 2. a vesicle containing only a small portion of the typical nucleus, usually following abnormal mitosis.

karyometry (kar'e-om'ē-tre) [karyo- + Gr. *metron* measure] measurement of a cell nucleus.

karyomicrosome (kar'e-o-mi'kro-sōm) [karyo- + *microsome*] nucleomicrosome.

karyomit (kar'e-o-mit) [karyo- + Gr. *mitos* thread] a chromatin thread of the nuclear network.

karyomitome (kar'e-om'i-tōm) the nuclear chromatin network.

karyomitosis (kar'e-o-mi-to'sis) division of the nucleus of a cell preceding mitosis.

karyomitotic (kar'e-o-mi-to'tik) pertaining to karyomitosis.

karyomorphism (kar'e-o-mor'fiz'm) [karyo- + Gr. *morphē* form] the shape of a cell nucleus.

karyon (kar'e-on) [Gr. *karyon* nucleus] the nucleus of a cell.

karyophage (kar'e-o-fāj') [karyo- + Gr. *phagein* to eat] a protozoon that exercises phagocytic action on the nucleus of the cell it infects.

karyoplasm (kar'e-o-plaz'm') [karyo- + Gr. *plasma* plasm] the nucleoplasm, or protoplasm of the nucleus of a cell.

karyoplasmic (kar'e-o-plaz'mik) pertaining to karyoplasm.

karyoplast (kar'e-o-plast) the nucleus of a cell.

karyoplastin (kar'e-o-plas'tin) the substance of a mitotic spindle; the parachromatin.

karyopyknosis (kar'e-o-pik-no'sis) shrinkage of a cell nucleus, with condensation of the chromatin into a solid, structureless mass or masses.

karyopyknotic (kar'e-o-pik-not'ik) pertaining to, characterized by, or causing karyopyknosis.

karyoreticulum (kar'e-o-re-tik'u-lum) [karyo- + *reticulum*] the fibrillar part of the karyoplasm as distinguished from the fluid part of karyolymph.

karyorrhctic (kar'e-o-rek'tik) pertaining to, characterized by, or causing karyorrhesis.

karyorrhesis (kar'e-o-rek'sis) [karyo- + Gr. *rhēxis* a breaking] rupture of the cell nucleus in which the chromatin disintegrates into formless granules which are extruded from the cell.

karyosome (kar'e-ō-sōm') [karyo- + Gr. *sōma* body] any of the condensed irregular clumps of chromatin dispersed in the chromatin network of a cell; called also *net knot*, *false nucleolus*, *chromatin nucleolus*, *chromatin reservoir*, and *chromocenter*.

karyospherical (kar'e-o-sfer'ē-kal) possessing a spherical nucleus.

karyostasis (kar'e-os'tah-sis) [karyo- + Gr. *stasis* halt] the so-called resting stage of the nucleus between mitotic divisions.

karyota (kar'e-o'tah) nucleated cells.

karyotheca (kar'e-o-the'kah) [karyo- + Gr. *thēkē* sheath] nuclear membrane.

karyotin (kar'e-o-tin) chromatin.

karyotype (kar'e-o-tip) [karyo- + *type*] the chromosomal constitution of the nucleus of a cell; by extension, the photomicrograph of chromosomes arranged according to the Denver classification. Cf. *idiogram*, and see illustration accompanying *chromosome*.

karyotypic (kar'e-o-tip'ik) pertaining to or representative of the karyotype.

karyozoic (kar'e-o-zo'ik) [karyo- + Gr. *zōon* animal] existing in or inhabiting the nuclei of cells, as do certain protozoa.

kasai (kah-si') a syndrome occurring in the Congo, characterized by anemia, depigmentation of the skin, and edema, all of which may be secondary to iron deficiency.

kasal (ka'sal) chemical name: basic sodium aluminum phosphate; a food additive, $\text{Na}_3\text{Al}_2(\text{OH})_2(\text{PO}_4)_4$, with about 30 per cent dibasic sodium phosphate.

kat symbol for katal.

kat-, kata- [Gr. *kata* down] prefix meaning down, against. For words beginning thus, see also those beginning *cat-, cata-*.

katachromasis (kat'ah-kro'mah-sis) the process by which the daughter chromosomes reconstruct the daughter nuclei.

katadidymus (kat'ah-did'i-mus) [kata- + Gr. *didymos* twin] a twin monster divided above, but single toward the podalic pole (monstra duplicia katadidyma—Förster).

katal (kat'al) a unit of measurement proposed to express activities of all catalysts, including enzymes, being that amount of a catalyst, such as an enzyme, which catalyzes a reaction rate of 1 mole of substrate per second. Symbol kat.

katalase (kat'ah-lās) catalase.

kataphylaxis (kat'ah-fi-lak'sis) the transport of phylactic agents to the site of infection.

katathermometer (kat'ah-ther-mom'ē-ter) a pair of alcoholic thermometers, one with a dry bulb and one with a wet bulb. They are heated to 110° F., exposed to the air, and the time noted that it takes each bulb to fall from 100° to 90° F. From this the temperature as it affects the body can be deduced.

Katayama (kat'ah-yah'mah) *Oncomelania*.

Katayama disease (kat'ah-yah'mah) [*Katayama*, a genus of snails] schistosomiasis japonica.

Katayama's test (kat'ah-yah'mahz) [Kunika *Katayama*, Japanese physician, 1856-1931] see under *tests*.

katechin (kat'e-chin) Blum's term for a blood constituent which has an antithyroid effect; called also *Blum substance*.

katharometer (kath'ah-rom'ê-ter) an instrument for electro-metric determination of basal metabolic rates.

kathepsin (kah-thep'sin) cathepsin.

kathisophobia (kath'is-o-fo'be-ah) akathisia.

katholysis (kah-thol'i-sis) electrolysis with the cathode needle.

katine (ka'tin) an alkaloid, d-norpseudoephedrine, $C_9H_{13}NO$, from *Catha edulis* Forsk. (Celastraceae); it acts on the nervous system like cocaine, but has no local anesthetic properties, and is used as an appetite depressant and mild euphoriant. The leaves are used as tea and masticatory in Ethiopia, East and South Africa, and Yemen.

kation (kat'e-on) cation.

katolysis (kah-tol'i-sis) [Gr. *katō* below + *lysis* dissolution] the incomplete or intermediate conversion of complex chemical bodies into simpler compounds; applied especially to digestive processes.

katophoria (kat'o-for're-ah) katotropia.

katotropia (kat'o-tro'pe-ah) [Gr. *katō* below + *trepein* to turn] deviation of the visual axes below the object looked at; called also *katophoria*.

Katz formula [Johann Rudolf *Katz*, German colloid chemist, 1880-1938] see under *formula*.

katzenjammer (kats'en-yam'er) [Ger.] the symptoms of headache, nausea, possibly cerebral edema, and functional neuritis, following ingestion of alcohol; hangover.

Kay Ciel (ka'sel) trademark for preparations of potassium chloride.

Kayexalate (ka-ek'sah-lāt) trademark for a preparation of sodium polystyrene sulfonate.

Kayser's disease (ki'zers) [Bernhard *Kayser*, German ophthalmologist, 1869-1954] hepatolenticular degeneration.

Kayser-Fleischer ring (ki'zer flish'er) [Bernhard *Kayser*; Bruno *Fleischer*, Munich physician, 1848-1904] see under *ring*.

KBr Potassium bromide.

kc. kilocycle.

KC₂H₃O₂ potassium acetate.

KCl potassium chloride.

KClO₃ potassium chlorate.

K₂CO₃ potassium carbonate.

kc.p.s. kilocycles per second.

KCT kathodal (cathodal) closing tetanus.

Keating-Hart's fulguration (method, treatment) (ke'-ting-harts) [Walter Valentine de *Keating-Hart*, French physician, 1870-1922] see *fulguration*.

kebocephaly (keb'o-sef'ah-le) cebocephaly.

ked (ked) the sheep tick, *Melophagus ovinus*.

Keegan's operation (ke'gan) [Denis Francis *Keegan*, English surgeon, 1840-1920] see under *operation*.

keel (kēl) a septicemic enteritis of ducklings caused by *Salmonella anatum*.

Keeley cure (ke'le) [Leslie E. *Keeley*, American physician, 1834-1900] see under *cure*.

Keen's operation, sign (kēnz) [William Williams *Keen*, Philadelphia surgeon, 1837-1932] see *omphalectomy*, and see under *sign*.

Keflex (kef'leks) trademark for a preparation of cephalixin.

Keflin (kef'lin) trademark for a preparation of cephalothin sodium.

Kefzol (kef'zōl) trademark for a preparation of cefazolin sodium.

Kehr's incision, operation (kärz) [Hans *Kehr*, German surgeon, 1862-1916] see under *incision* and *operation*.

Kehrer's reflex (kär'erz) [Ferdinand *Kehrer*, German neurologist, born 1883] see under *reflex*.

keiropasm (ki'ro-spazm) [Gr. *keirein* to shear + *spasm*] an occupational neurosis affecting barbers, characterized by spasmodic contraction of the muscles of the fingers, hand, and forearm.

Keith's bundle, node (kēths) [Sir Arthur *Keith*, London anatomist, 1866-1955] see under *bundle*, and see *sinoatrial node*, under *node*.

Keith's low ionic diet [Norman M. *Keith*, American physician, born 1885] see under *diet*.

Keith-Flack node [Sir Arthur *Keith*; Martin William *Flack*, physiologist in London, 1882-1931] sinoatrial node.

kelectome (ke'lek-tōm) [Gr. *kēlē* tumor + *ektomē* excision] a device used in removing specimens of tissue from tumors.

Kelene (kel'en) trademark for a preparation of ethyl chloride.

Kelling's test (kel'ings) [Georg *Kelling*, German physician, born 1866] see under *tests*.

Kelly's operation (kel'ēz) [Joseph Dominic *Kelly*, otolaryngologist in New York, born 1888] arytenoidoepexy.

Kelly's operation, sign, speculum (kel'ēz) [Howard Atwood *Kelly*, American surgeon, 1858-1943] see under *operation* (def. 1), *sign*, and *speculum*.

keloid (ke'lōid) [Gr. *kēlē* tumor + *eidos* form] a sharply elevated, irregularly-shaped, progressively enlarging scar due to the formation of excessive amounts of collagen in the corium during connective tissue repair. **acne k.**, keloidal folliculitis. **Addison's k.**, morphea. **Alibert's k.**, cicatricial k., false k. (*obs.*), a growth resembling a true keloid, but resulting from hypertrophy of a cicatrix. **k. of gums**, fibromatosis gingivae.

kelosomus (ke-lo-so'mus) celosomus.

kelotomy (ke-lot'o-me) [Gr. *kēlē* a rupture + *temnein* to cut] herniotomy.

kelp (kelp) any of various large brown marine algae of the genus *Laminaria*, which are widely used as food in the Orient, and are the source of alginates.

kelvin (kel'vin) [after Lord *Kelvin*] the SI unit of thermodynamic temperature equal to 1/273.15 of the absolute temperature of the triple point of water. See also *absolute temperature*, under *temperature*, and *Kelvin scale*, under *scale*. Abbreviated K.

Kelvin scale (kel'vin) [Lord *Kelvin* (William Thompson), British physicist, 1824-1907] see under *scale*.

Kemadrin (kem'ah-drin) trademark for a preparation of procyclidine hydrochloride.

Kempner diet (kemp'ner) [Walter *Kempner*, American physician, born 1903] see under *diet*.

Kenacort (ken'ah-kort) trademark for preparations of triamcinolone.

Kenalog (ken'ah-log) trademark for preparations of triamcinolone acetate.

Kendall's method (ken'dahlz) [Edward Calvin *Kendall*, American chemist, 1886-1972, noted for his work on hormones, especially the adrenal steroids; co-winner, with P. S. Hench and T. Reichstein, of the Nobel prize for physiology and medicine in 1950] see under *method*.

Kennedy's syndrome (ken'ē-dēz) [Foster *Kennedy*, New York neurologist, 1884-1952] see under *syndrome*.

Kenny's treatment (method) (ken'e) [Sister Elizabeth *Kenny* of Brisbane, Australia, later in U.S.A., 1886-1952] see under *treatment*.

keno- [Gr. *kenos* empty] a combining form denoting empty; see also words beginning *ceno-*.

kenotoxin (ke'no-tok-sin) [*keno-* + *toxin*] the toxin of fatigue; produced in muscle by muscular contractions.

Kent's bundle (kents) [Albert Frank Stanley *Kent*, English physiologist, 1863-1958] see under *bundle*.

Kent-His bundle [A. F. S. *Kent*; Wilhelm *His*, Jr.] bundle of His.

kentrokinesis (ken'tro-ki-ne'sis) centrokinesia.

kentroknetic (ken'tro-ki-net'ik) centrokinetic.

kephal- for words beginning thus, see those beginning *cephal-*.

Kepone (ke'pōn) trademark for a polychlorinated ketone, $C_{10}Cl_{10}O$, used as an insecticide; workers exposed to this nonbiodegradable compound have suffered neurologic symptoms, such as tremors and slurred speech.

Kerandel's sign (symptom) (ker'an-delz') [Jean François *Kerandel*, French colonial physician, 1873-1934] see under *sign*.

keraphyllocele (ker'ah-fil'o-sēl) [Gr. *keras* horn + *phyllon* leaf + *kēlē* tumor] keratoma, def. 2.

kerasin (ker'ah-sin) a cerebroside, $C_{48}H_{83}O_8N$, obtained from brain tissue; it yields galactose, sphingosine, and lignoceric acid on hydrolysis.

keratalgia (ker'ah-tal'je-ah) [*kerato-* + *-algia*] pain in the cornea.

keratan sulfate (ker'ah-tan) a sulfated mucopolysaccharide, including *keratan sulfate I* and *keratan sulfate II*, which contain *N*-acetyl glucosamine and galactose instead of uronic acid; II also contains *D*-acetylgalactosamine. Keratan sulfate is an important component of the proteoglycan of cartilage and occurs in the cornea and the nucleus pulposus. It is also an accumulation product in Morquio's syndrome. Called also *keratosulfate*.

keratectasia (ker'ah-tek-ta'ze-ah) [*kerato-* + Gr. *ektasis* extension] protrusion of a thinned, scarred cornea; called also *corneal ectasia*.

keratectomy (ker'ah-tek'to-me) [*kerato-* + Gr. *ektomē* excision] excision of a portion of the cornea, usually done for anterior staphyloma.

keratic (ker-at'ik) 1. pertaining to keratin. 2. pertaining to the cornea.

keratin (ker'ah-tin) a scleroprotein which is the principal constituent of epidermis, hair, nails, horny tissues, and the organic matrix of the enamel of the teeth. It is a very insoluble protein, contains high amounts of sulfur as cystine, and also yields tyrosine and leucine on decomposition. Its solution in glacial acetic acid or

ammonia is sometimes used in coating pills when the latter are desired to pass through the stomach unchanged. **false k.**, pseudokeratin.

keratinase (ker'ah-tī-nās) a proteolytic enzyme that hydrolyzes keratin; one form occurs in the intestinal secretion of larva of the clothes moth and aids in the breakdown of wool keratin.

keratinization (ker'ah-tin'ī-za'shun) the development of or conversion into keratin.

keratinize (ker'ah-tin-īz) to make, or become, keratinous.

keratinocyte (kē-rat'ī-no-sīt) the epidermal cell which synthesizes keratin; constituting 95 per cent of the epidermal cells and, with the melanocyte, forming the binary cell system of the epidermis. In its various successive stages it is known as basal cell, prickly cell, and granular cell. Called also **malpighian cell**.

keratinoid (ker'ah-tin-oid) a form of keratin-coated tablet not soluble in the stomach, but readily soluble in the intestine.

keratinosome (kē-rat'ī-no-sōm'') a cellular membrane-coating granule.

keratinous (ke-rat'ī-nus) containing or of the nature of keratin.

keratitis (ker'ah-ti'tis) [*kerato-* + *-itis*] inflammation of the cornea. **acne rosacea k.**, a severe keratitis associated with acne rosacea of the cornea and eyelids. **actinic k.**, a form due to the action of ultraviolet light. **aerosol k.**, keratitis following direct exposure of the eye to chemical sprays from aerosol cans, including hair spray, insecticides, etc. **alphabet k.**, striate k. **k. arborescens**, dendriform k. **artificial silk k.**, keratitis occurring among workers in artificial silk manufacture; it is marked by blurring of vision with the appearance of haloes around lights. **band k.**, **band-shaped k.**, **k. bandelette**, ribbon-like k. **k. bullo'sa**, the formation of large or small bullae or blebs upon the cornea. **deep k.**, interstitial k. **dendriform k.**, **dendritic k.**, herpetic keratitis resulting in a branching ulceration of the cornea. **desiccation k.**, lagophthalmic k. **Dimmer's k.**, k. nummularis. **disciform k.**, **k. discifor'mis**, keratitis with the formation of a round or oval, disk-like opacity of the cornea. **exposure k.**, lagophthalmic k. **fascicular k.**, keratitis attended by the formation of a band of blood vessels. **k. filamentosa**, keratitis with twisted filaments of mucoid material on the surface of the cornea. **furrow k.**, dendriform k. **herpetic k.**, 1. keratitis, commonly with dendritic ulceration (*dendriform* or *dendritic k.*), due to infection with herpes simplex virus. 2. keratitis occurring in herpes zoster ophthalmicus. **hypopyon k.**, suppurative keratitis associated with purulent infiltration and hypopyon; see *ulcus serpens corneae*. **interstitial k.**, a chronic variety of keratitis with deep deposits in the substance of the cornea, which becomes hazy throughout and has a ground-glass appearance (Sichel, 1837). The disease is associated with congenital syphilis, and occurs in children before the fifteenth year. Called also *parenchymatous k.*, *deep k.*, and *k. profunda*. **lagophthalmic k.**, that which accompanies lagophthalmos; it is due to exposure of the eyeball to the air. **lattice k.**, bilateral hereditary dystrophy of the cornea with the formation of interwoven filamentous lesions. **marginal k.**, phlyctenular keratitis in which the papules are arranged around the margin of the cornea. **metaherpetic k.**, keratitis occurring as a result of recurrent herpesvirus infection of the cornea, characterized by shallow ulceration of an anesthetic cornea, accompanied by parenchymatous infiltration and often by persistent iridocyclitis and secondary glaucoma; called also *metaherpes*. **mycotic k.**, keratomycosis. **neuroparalytic k.**, keratitis characterized by dryness and fissuring of the corneal epithelium as a result of an injury to the trifacial nerve which prevents proper closing of the eyelids; called also *trophic k.* **neurotrophic k.**, keratitis due to loss of corneal sensation. **k. nummularis**, a slowly developing benign type of keratitis marked by corneal deposits forming circular areas with sharply defined edges surrounded by a halo of less dense character; called also *Dimmer's k.* **parenchymatous k.**, interstitial k. **k. petrificans**, keratitis with calcareous changes. **phlyctenular k.**, see under *keratoconjunctivitis*. **k. profun'da**, interstitial k. **k. puncta'ta**, **punctate k.**, an old term for the formation of cellular and fibrinous deposits (keratic precipitates) on the posterior surface of the cornea, occurring after injury or iridocyclitis and giving an appearance of fine drops of dew. **k. puncta'ta subepithelia'lis**, a form with gray areas on the cornea under Bowman's membrane, with an intact superficial epithelium. **k. pustulifor'mis profun'da**, a painful keratitis marked by deep-seated yellow intracorneal spots, hypopyon, and purulent iritis. **k. ramifica'ta superficial'is**, a disease of the tropics marked by superficial loss of the epithelium of the cornea. **reaper's k.**, suppurative keratitis due to the wounding of the cornea by the awn of some grain, as barley. **reticular k.**, familial degeneration of the cornea with reticular areas. **ribbon-like k.**, the formation of a transverse film on the cornea. **rosacea k.**, acne rosacea k. **sclerosing k.**, keratitis associated with scleritis, leading to hyperplasia. **scrofulus k.**, phlyctenular keratitis. **secondary k.**, keratitis due to disease of some other part of the eye. **serpiginous k.**, *ulcus serpens corneae*. **k. sic'ca**, keratoconjunctivitis sicca. **striate k.**, keratitis marked by parallel and intersect-

ing lines on the corneal epithelium; called also *alphabet k.* **suppurative k.**, keratitis attended with, or associated with, supuration. **trachomatous k.**, pannus trachomatosis. **trophic k.**, neuroparalytic k. **vascular k.**, keratitis accompanied by the formation of blood vessels beneath the conjunctiva and outer layers of the cornea. **vesicular k.**, keratitis with the development of small vesicles on the surface. **xerotic k.**, dryness of the cornea; a condition that precedes keratomalacia. **zonular k.**, ribbon-like k.

kerato- (ker'ah-to) [Gr. *keras* horn, cornea] a combining form denoting relationship to the cornea, or to horny tissue.

keratoacanthoma (ker'ah-to-ak'an-tho'mah) [*kerato-* + *acanthoma*] a rapidly growing papular lesion, with a crater filled with a keratin plug, which reaches maximum size and then resolves spontaneously within four to six months from onset. Prior to involution it is often difficult and sometimes impossible to distinguish sharply from shallowly invasive squamous cell carcinoma. **multiple k.**, the occurrence of several to many keratoacanthomas, identical to the solitary type, usually affecting the face, trunk, or genitalia; a familial type has been reported. Called also *multiple self-healing squamous epithelioma*.

keratoangioma (ker'ah-to-an'je-o'mah) (*obs.*) angiokeratoma.

keratocele (ker'ah-to-sēl') [*kerato-* + Gr. *kēlē* hernia] hernia of the innermost layer of the cornea (Descemet's membrane).

keratocentesis (ker'ah-to-sen-te'sis) [*kerato-* + Gr. *kentēsis* puncture] aqueous paracentesis.

keratoconjunctivitis (ker'ah-to-kon-junk'ti-vi'tis) inflammation of the cornea and conjunctiva. **epidemic k.**, a highly infectious disease characterized by relatively little ocular exudate, development of round subepithelial corneal opacities in association with the keratitis, and often swelling of regional lymph nodes; systemic symptoms, especially headache, may also be present. Adenovirus type 8 has been repeatedly isolated from patients with the disease. **epizootic k.**, a keratoconjunctivitis of cattle, caused by *Moraxella bovis* and characterized by discharge and clouding or destruction of the cornea. **flash k.**, keratoconjunctivitis caused by exposure to a welding arc or other source of ultraviolet rays. **phlyctenular k.**, a form marked by the formation of a small, gray, circumscribed lesion, or phlyctenule, at the corneal limbus; it has been associated with malnutrition, tuberculosis, and staphylococcus sensitivity. Called also *phlyctenular keratitis*, *phlyctenular ophthalmia*, and *strumous ophthalmia*. See also *phlyctenulosis*. **shipyard k.**, epidemic k. **k. sic'ca**, a condition marked by hyperemia of the conjunctiva, lacrimal deficiency, thickening of the corneal epithelium, itching and burning of the eye, and often reduced visual acuity. **viral k.**, epidemic k.

keratoconus (ker'ah-to-ko'nus) [*kerato-* + Gr. *kōnos* cone] a noninflammatory, usually bilateral protrusion of the cornea, the apex being displaced downward and nasally. It occurs most commonly in females at about puberty. The cause is unknown, but hereditary factors may play a role. Called also *conical cornea*.

Keratoconus.

keratocyte (ker'ah-to-sit') [*kerato-* + Gr. *kytos* cell] one of the flattened connective tissue cells between the lamellae of fibrous tissue composing the cornea, with branching processes that intercommunicate with those of other cells.

keratoderma (ker'ah-to-der'mah) [*kerato-* + Gr. *derma* skin] 1. a horny skin or covering. 2. the cornea. 3. hypertrophy of the horny layer of the skin. **k. blennorrhagicum**, pustular psoriasis associated with gonorrhea, as in Reiter's disease. **k. climactericum**, **endocrine k.**, circumscribed hyperkeratosis of the palms and soles, occurring in menopausal women. **k. palma're et planta're**, **symmetric k.**, keratosis palmaris et plantaris.

keratodermatocele (ker'ah-to-der'mah-to-sēl') [*kerato-* + *dermato-* + Gr. *kēlē* hernia] keratocele.

keratoderma (ker'ah-to-der'me-ah) [*kerato-* + Gr. *derma* skin + *-ia*] keratoderma. **k. blennorrhagica**, keratoderma blen-

norrhagicum. **k. excen'trica** (*obs.*), porokeratosis. **k. palma'ris et planta'ris**, keratosis palmaris et plantaris. **k. planta'ris sulca'ta**, pitted keratolysis.

keratoectasia (ker''ah-to-ek-ta'ze-ah) kerectasis.

keratogenesis (ker''ah-to-jen'tē-sis) the formation or production of horny material.

keratogenetic (ker''ah-to-jē-net'ik) pertaining to keratogenesis.

keratogenous (ker''ah-toj'ē-nus) [*kerato-* + Gr. *gennan* to produce] giving rise to a growth of horny material.

keratoglobus (ker''ah-to-glo'bus) [*kerato-* + L. *globus* globe] a rare bilateral condition in which the cornea is enlarged and globular in shape.

keratohelcosis (ker''ah-to-hel-ko'sis) [*kerato-* + Gr. *helkōsis* ulceration] ulceration of the cornea.

keratohemia (ker''ah-to-he'me-ah) [*kerato-* + Gr. *haima* blood + *-ia*] the presence of deposits of blood in the cornea.

keratohyalin (ker''ah-to-hi'ah-lin) 1. a substance in the granules in the granular layer of the epidermis, the origin and chemistry of which are unclear, but which may be involved in the process of keratinization. See also *keratohyaline granules*, under *granule*. 2. a substance found in granules in the Hassall corpuscles of the thymus.

keratohyaline (ker''ah-to-hi'ah-lin) 1. both horny and hyaline. 2. pertaining to keratohyalin or to the keratohyalin granules or the keratohyaline layer (stratum granulosum epidermidis). 3. keratohyalin.

keratoid (ker''ah-toid) [*kerato-* + Gr. *eidos* form] resembling horn or corneal tissue.

keratoiditis (ker''ah-toi-di'tis) keratitis.

keratoidocyclitis (ker''ah-to-ir'ī-do-sik-li'tis) inflammation of the cornea, iris, and ciliary body.

keratoidoscope (ker''ah-to-irid'o-skōp) [*kerato-* + Gr. *iris* iris + *skopein* to examine] a form of compound microscope for examining the eye.

keratiritis (ker''ah-to-ir-i'tis) [*kerato-* + Gr. *iris* iris + *-itis*] inflammation of the cornea and iris. **hypopyon k.**, hypopyon keratitis.

keratoleptynsis (ker''ah-to-lep-tin'sis) [*kerato-* + Gr. *leptynsis* attenuation] removal of the anterior portion of the cornea and covering of the denuded area with bulbar conjunctiva.

keratoleukoma (ker''ah-to-lu-ko'mah) [*kerato-* + *leukoma*] a white opacity of the cornea.

keratolysis (ker''ah-to-li'i-sis) [*kerato-* + Gr. *lysis* dissolution] softening and dissolution or peeling of the horny layer of the epidermis. **k. neonato'rum** (*obs.*), dermatitis exfoliativa neonatorum. **pitted k.**, **k. planta're sulca'tum**, a tropical disease marked by thickening and deep fissuring of the skin of the soles, particularly the anterior region of the heels, which occurs during the rainy season and clears up during the dry season; called also *chaluni*, *cracked heels*, *keratoderma plantare sulcatum*, and *keratoma plantare sulcatum*.

keratolytic (ker''ah-to-li'tik) 1. pertaining to, characterized by, or producing keratolysis. 2. an agent that promotes keratolysis.

keratoma (ker''ah-to'mah), pl. *keratomas* or *kerato'mata* [*kerato-* + *-oma*] 1. keratosis. 2. a horny tumor on the inner surface of the wall of a horse's hoof; called also *keryphyllocele*. **k. dif-fu'sum** (*obs.*), ichthyosis congenita. **k. palma're et plan-ta're**, keratosis palmaris et plantaris. **k. planta're sul-ca'tum**, pitted keratolysis. **k. seni'le**, actinic keratosis.

keratomalacia (ker''ah-to-mah-la'she-ah) [*kerato-* + Gr. *malakia* softness] a usually bilateral condition associated with vitamin A deficiency. It begins with xerotic spots (Bitôt's spots) on the conjunctiva, while the cornea becomes xerotic and insensitive (xerotic keratitis); the haze increases until finally the entire cornea becomes soft, and colliquative necrosis occurs.

keratomata (ker''ah-to'mah-tah) plural of *keratoma*.

keratome (ker''ah-tōm) [*kerato-* + Gr. *temnein* to cut] a knife for incising the cornea.

keratometer (ker''ah-tom'ē-ter) [*kerato-* + Gr. *metron* measure] an instrument for measuring the curves of the cornea.

keratometric (ker''ah-to-met'rik) pertaining to keratometry, or to measurements made with a keratometer.

keratometry (ker''ah-tom'ē-tre) the measurement of the cornea.

keratomileusis (ker''ah-to-mī-loo'sis) keratoplasty in which a slice of the patient's cornea is removed, shaped to the desired curvature on a lathe after freezing, and then sutured back on the remaining cornea to correct optical error.

keratomycosis (ker''ah-to-mi-ko'sis) [*kerato-* + Gr. *mykēs* fungus + *-osis*] fungous infection of the cornea. **k. lin'guae**, black tongue.

keratonosis (ker''ah-to-no'sis) (*obs.*) any anomaly in the horny structure of the epidermis.

keratonosus (ker''ah-ton'o-sus) [*kerato-* + Gr. *nosos* disease] any disease of the cornea.

keratonyxis (ker''ah-to-nik'sis) [*kerato-* + Gr. *nyssēin* to puncture] aqueous paracentesis.

keratopathy (ker''ah-top'ah-the) a noninflammatory disease of the cornea. **band k.**, **band-shaped k.**, a degenerative condition in which a gray band develops axially from the limbus at the level of Bowman's membrane into the exposed part of the cornea in the palpebral aperture.

keratophakia (ker''ah-to-fa'ke-ah) [*kerato-* + Gr. *phakos* lentil, lens] a form of keratoplasty in which a slice of donor's cornea is shaped to a desired curvature and inserted between layers of the recipient's cornea to change its curvature.

keratoplasty (ker''ah-to-plas'te) [*kerato-* + Gr. *plassein* to form] plastic surgery of the cornea; corneal grafting. **optic k.**, transplantation of corneal material to replace scar tissue which interferes with vision. **refractive k.**, that in which a section of cornea is removed from the patient or a donor, shaped to the desired curvature, and inserted either between (keratophakia) layers of or on (keratomileusis) the patient's cornea to change its curvature and correct optical errors. **tectonic k.**, transplantation of corneal material to replace tissue which has been lost.

keratoprotein (ker''ah-to-pro'te-in) [*kerato-* + *protein*] the protein of the horny tissues of the body, such as the hair, nails, and epidermis.

keratorhexis, keratorrhexis (ker''ah-to-rek'sis) [*kerato-* + Gr. *rhēxis* rupture] rupture of the cornea.

keratoscleritis (ker''ah-to-skle-ri'tis) inflammation of the cornea and sclera.

keratoscope (ker''ah-to-skōp) [*kerato-* + Gr. *skopein* to examine] an instrument for examining the cornea.

keratoscopy (ker''ah-tos'ko-pe) the examination of the cornea; more especially the study of the reflections of light from its anterior surface.

keratosis (ker''ah-to'sis), pl. *kerato'ses* [*kerato-* + *-osis*] any horny growth, such as a wart or callosity, usually either an actinic keratosis or a seborrheic keratosis. **actinic k.**, a sharply outlined, red or skin-colored, flat or elevated, verrucous or keratotic growth, which may develop into a cutaneous horn, and may give rise to a squamous cell carcinoma; it usually affects the middle-aged or elderly, especially those of fair complexion, and is caused by excessive exposure to the sun. Called also *solar k.*; formerly called *keratoma senile* and *senile k.* **arsenic k.**, **arsenical k.**, a precancerous condition manifested by multiple horny growths, usually on the palms and soles and occasionally on other areas; it is caused by the ingestion of arsenic for medicinal purposes. **k. blennorrhagica**, keratoderma blennorrhagicum. **k. dif-fu'sa feta'lis** (*obs.*), lamellar exfoliation of the newborn (see under *exfoliation*). **k. follicula'ris**, a rare hereditary condition manifested by areas of crusting, itching, verrucous papular growths, usually occurring symmetrically on the trunk, axillae, neck, face, scalp, and retroauricular areas; called also *Darier's disease*. **k. follicula'ris conta'giosa** (*obs.*), a rare form of cornification of the skin, thought to be of a contagious nature. **gonorrhoeal k.**, keratoderma blennorrhagicum. **k. labia'lis** (*obs.*), a condition marked by indurated keratinized patches on the mucosa of the lips. **k. lin'guae**, leukoplakia. **k. obtu'rans**, a condition characterized by a mass of epidermic scales and cerumen obstructing the external auditory meatus. **k. palma'ris et planta'ris**, a congenital, hereditary condition characterized by thickening of the stratum corneum of the skin of the palms and soles, sometimes with painful lesions resulting from the formation of fissures. It is often associated with other anomalies, including alopecia, vitiligo, acanthosis nigricans, ichthyosis, clubbed fingers, and mental retardation; some cases have been associated with cancer of the esophagus. Most varieties are transmitted as an autosomal dominant trait. **k. pharyngea**, a condition characterized by projection of numerous white horny masses from the tonsils and from the orifices of the lymph follicles in the wall of the pharynx. **k. pila'ris**, a condition in which hyperkeratosis is limited to the hair follicles, usually on the extensor surfaces of the thighs and arms, but occurring anywhere, with discrete follicular papules which re-form after removal. **k. puncta'ta**, a form of hyperkeratosis in which the lesions are localized in multiple points on the palms and soles; it is transmitted as an autosomal dominant. **roentgen k.**, premalignant keratotic lesions occurring at the site of severe chronic radiodermatitis. **seborrheic k.**, **k. seborrheica**, a benign, noninvasive tumor of epidermal origin, characterized by hyperplasia of the keratinocytes, ordinarily developing in middle life in the form of numerous yellow or brown, sharply marginated, oval, raised lesions; called also *seborrheic wart*, *verruca senilis*, *basal cell acanthoma*, and *basal cell papilloma*. **senile k.**, **k. seni'lis**, actinic k. **solar k.**, actinic k. **stucco k.**, a condition marked by multiple focal keratin-accumulating lesions, usually on the ankles and feet of elderly men who have dry skin; it is thought by many to be a form of seborrheic keratosis notably lacking in cysts or pseudocysts, but others believe it to be a distinctive keratosis very similar to tar keratosis. **k. suprafollicula'ris** (*obs.*), **k. pilaris**. **tar k.**, a keratosis caused by exposure to tar, in which keratotic foci develop, sometimes followed by the formation of keratoacanthomas or intraepidermal, squamous, or basal cell carcinoma.

keratosulfate (ker'ah-to-sul'fāt) keratan sulfate.

keratotic (ker'ah-tot'ik) pertaining to, characterized by, or promoting keratosis.

keratotome (ker-at'o-tōm) keratome.

keratotomy (ker'ah-tot'o-me) [Gr. *keras* cornea + *temnein* to cut] surgical incision of the cornea. **delimiting k.**, incision of the cornea in ulcer serpens by a cut tangential to the advancing border of the ulcer and made to emerge at a corresponding point in the other side. **radial k.**, an operation in which a series of incisions is made in the cornea from its outer edge toward its center in spoke-like fashion; done to flatten the cornea and thus to correct myopia.

keratotorus (ker'ah-to-to'rus) [*kerato-* + L. *torus* a protuberance] a vaultlike protrusion of the cornea.

keraunoneurosis (kě-raw'no-nu-ro'sis) [Gr. *keraunos* lightning + *neurosis*] a neurosis due to electric shock.

Kerkring's folds (valves), ossicles (kerk'ringz) [Theodorus Kerkring, Dutch anatomist, 1640-1693] see under *plicae circulares*, and see under *ossicle*.

kerectasis (ke-rek'tah-sis) [Gr. *keras* cornea + *ektasis* distention] a uniform bulging or protrusion of the cornea.

kerectomy (ke-rek'to-me) [Gr. *keras* cornea + *ektomē* excision] surgical removal of a part of the cornea.

kerion (ke're-on) [Gr. *kērion* honeycomb] a nodular, boggy, exudative, circumscribed tumefaction which is covered with pustules, occurring in association with tinea infections, usually tinea barbae and tinea capitis. **k. cel'si, Celsus' k. (obs.)**, kerion.

kerithery (ker'i-ther'ah-pe) [Gr. *kēros* wax + *therapeia* treatment] 1. treatment by baths of liquid paraffin. 2. treatment of extensive burns with paraffin solutions.

kerma (ker'mah) [kinetic energy released in material + a] a unit of quantity that represents the kinetic energy transferred to charged particles by the uncharged particles per unit mass of the irradiated medium.

kermes (ker'mēz) [Arabic, Persian] the *Coccus ilicis*, an insect found on the leaves of various oaks, chiefly on *Quercus coccifera* (kermes-oak). It furnishes a red pigment which is used as a dyestuff.

kernel (ker'nel) that part of an atom left after removal of the valence electrons.

kernicterus (ker-nik'ter-us) [Ger. "nuclear jaundice"] a condition with severe neural symptoms, associated with high levels of bilirubin in the blood. It is characterized by deep yellow staining of the basal nuclei, globus pallidus, putamen, and caudate nucleus, as well as the cerebellar and subbar nuclei, and gray substance of the cerebrum, and is accompanied by widespread destructive changes. It is commonly a sequela of icterus gravis neonatorum. Called also *bilirubin encephalopathy*.

Kernig's sign (ker'nigz) [Vladimir Mikhailovich Kernig, Russian physician, 1840-1917] see under *sign*.

keroid (ker'oid) [Gr. *keroidēs* hornlike] 1. resembling horn. 2. resembling the cornea.

Kerona pediculus (kě-ro'nah pe-dik'u-lus) a ciliate protozoan of the suborder Hypotricha that lives as a commensal.

kerosene, kerosine (ker'o-sēn) a colorless volatile liquid distilled from petroleum; it is used as a reagent and in insecticides.

kerotherapy (ker'o-ther'ah-pe) kerithery.

kerril (ker'il) a venomous sea snake, *Kerilia jerdoni*, of the Indian Ocean.

Ketaject (ket'ah-jekt) trademark for a preparation of ketamine hydrochloride.

ketal (ke'tal) a derivative formed by a combination of a ketone with an alcohol.

Ketalar (ket'ah-lar) trademark for a preparation of ketamine hydrochloride.

ketamine hydrochloride (kēt'ah-mēn) [USP] chemical name: 2-(2-chlorophenyl)-2-(methylamino)cyclohexanone hydrochloride. A rapid-acting general anesthetic, C₁₃H₁₆ClNO·HCl, occurring as a white, crystalline powder; administered intramuscularly and intravenously.

ketazocine (ke-ta'zo-sēn) chemical name: (2α,6α,11S*)-3-(cyclopropylmethyl)-3,4,5,6-tetrahydro-8-hydroxy-6,11-dimethyl-2,6-methano-3-benzazocin-1(2H)-one; an analgesic, C₁₈H₂₃NO₂.

ketazolam (ke-ta'zo-lam) chemical name: 11-chloro-8,12b-dihydro-2,8-dimethyl-12b-phenyl-4H[1,3]oxazino[3,2-d]-[1,4]benzodiazepine; a minor tranquilizer, C₂₀H₁₇ClN₂O₃.

keten (ke'ten) ketene.

ketene (ke'tēn) a colorless gas of penetrating odor, carbomethane, H₂C:CO; also any one of several derivatives from it. It combines with water to form acetic acid.

kethoxal (ke-thoks'al) chemical name: 3-ethoxy-1,1-dihydroxy-2-butanone; an antiviral agent, C₆H₁₂O₄.

ketimine (ke'ti-min) a compound in which the oxygen of a ketone is replaced by the imino group.

ketipramine fumarate (ke-tip'rah-mēn) chemical name: 5-

[3-(dimethylamino)propyl]-5,11-dihydro-10H-dibenz[*b,f*]azepin-10-one fumarate (1:1); an antidepressant, C₁₅H₂₂N₂O·C₄H₄O₄.

keto- a prefix which denotes possession of the carbonyl group, :C=O, in a structure in which the other two bonds to carbon are attached to hydrocarbon moieties.

keto-acid (ke'to-as'id) see under *acid*.

ketoacid-lyase (ke'to-as'id-li'ās) a lyase that catalyzes the removal of keto acid, as from citrate to form acetate and oxaloacetate.

ketoacidosis (ke'to-ah'si-do'sis) acidosis accompanied by the accumulation of ketone bodies (ketosis) in the body tissues and fluids, as in diabetic acidosis.

ketoaciduria (ke'to-as'i-du're-ah) the presence of keto acids in the urine. **branched-chain k.**, maple syrup urine disease.

keto-aldehyde (ke'to-al'de-hid) see under *aldehyde*.

ketoaminoacidemia (ke'to-ah-me'no-as'i-de'me-ah) maple syrup urine disease.

ketoconazole (ke'to-kon'ah-zōl) a broad-spectrum antifungal agent, given orally, that has been reported effective in the treatment of a variety of extensive, chronic cutaneous fungal infections.

Keto-Diastix (ke'to-di'ah-stiks) trademark for a reagent strip designed for the determination of ketones and glucose in urine.

ketogenesis (ke'to-jen'ē-sis) [*ketone* + Gr. *genesis* production] the production of ketone (acetone) bodies.

ketogenetic (ke'to-je-net'ik) forming ketone bodies.

ketogenic (ke'to-jen'ik) forming or capable of being converted into ketone bodies. Metabolic sources are fatty acids and some of the amino acids of protein.

α-ketoglutarate (ke'to-gloo'tah-rāt) a salt of α-ketoglutaric acid; in biochemistry, the term is often used interchangeably with α-ketoglutaric acid (see under *acid*).

ketoheptose (ke'to-hep'tōs) a ketone sugar containing seven carbon atoms: C₇H₁₄O₇.

ketohexose (ke'to-hek'sōs) a hexose which contains a ketone group. Cf. *aldohexose*.

ketohydroxyestratriene (ke'to-hi-drok'se-es'trah-tri'ēn) estrone.

ketohydroxyestrin (ke'to-hi-drok'se-es'trin) estrone.

ketol (ke'tol) a ketonic alcohol.

ketolysis (ke-to'lī-sis) [*ketone* + Gr. *lysis* dissolution] the cleavage of ketone bodies.

ketolytic (ke'to-lit'ik) pertaining to, characterized by, or promoting ketolysis.

ketone (ke'tōn) any of a large class of organic compounds containing the carbonyl group, C=O, whose carbon atom is joined to two other carbon atoms, that is, with the carbonyl group occurring within the carbon chain. See also under *body*. **dimethyl k.**, acetone.

ketonemia (ke'to-ne'me-ah) [*ketone* + Gr. *haima* blood + *-ia*] an excess of ketone bodies in the blood, as in starvation and diabetes mellitus.

ketonic (ke-to'nik) pertaining to or developed from a ketone.

ketonization (ke'to-ni-za'shun) conversion into a ketone.

ketonuria (ke'to-nu're-ah) [*ketone* + Gr. *ouron* urine + *-ia*] ketone bodies in the urine, as in diabetes mellitus.

ketonurine (ke'tōn-u'rin) the urine excreted after administration of a ketogenic diet.

ketoplasia (ke'to-pla'se-ah) the formation of ketone bodies.

ketoplastic (ke'to-plas'tik) [*ketone* + Gr. *plassein* to form] pertaining to, characterized by, or promoting the formation of ketone bodies.

ketopregnene (ke'to-preg'nēn) a progestational agent isolated from human placenta and corpora lutea in two forms, Δ⁴-3-ketopregnene-20(α)-ol and Δ⁴-3-ketopregnene-20(β)-ol.

ketoprofen (ke'to pro'fen) chemical name: *m*-benzoylhydrotropic acid. An anti-inflammatory, antipyretic, and analgesic, C₁₆H₁₄O₃, used in the treatment of rheumatoid arthritis, osteoarthritis, and ankylosing spondylitis.

β-ketoreductase (ke'to-re-duk'tās) L-3-hydroxyacyl-CoA:NAD oxidoreductase: an enzyme in liver, muscle, kidney, heart, and other tissues which, with NADH as coenzyme, reduces acetoacetyl-CoA (reversibly) to β-hydroxybutyryl-CoA.

ketose (ke'tōs) a ketone derivative of a polyatomic alcohol (any sugar which contains a ketone group).

ketoside (ke'to-sid) any glycoside which yields a ketose on hydrolysis.

ketosis (ke-to'sis) a condition characterized by an abnormally elevated concentration of ketone bodies in the body tissues and fluids; it is a complication of diabetes mellitus and starvation.

ketosteroid (ke'to-ste-roid) a steroid that possesses ketone groups on functional carbon atoms. The 17-ketosteroids have a ketone group on the 17th carbon atom. They are found in the urine of normal men and women and in excess in certain adrenal cortex

and ovarian tumors. The principal ketosteroids are androsterone, epandrosterone, etiocholanolone, dehydroisoandrosterone, and estrone.

ketosuria (ke'to-su're-ah) the presence of ketose in the urine.

keto-tetrahydrophenanthrene (ke'to-tet'rah-hi'dro-fen-an'thrēn) 1-keto-1,2,3,4-tetrahydrophenanthrene, a carcinogenic substance.

ketotetrose (ke'to-tet'rōs) a ketose that contains 4 carbon atoms.

ketotic (ke-tot'ik) pertaining to, characterized by, or causing ketosis.

ketourine (ke'to-u'rīn) ketonurine.

ketoxime (ke-tok'sim) the oxime derivative of a ketone.

kev. abbreviation for *kilo* (1000) *electron volts*; the equivalent of 3.82×10^{-17} gram calories, or 1.6×10^{-9} ergs.

key (ke) 1. an instrument for opening a lock, or a device for making or breaking an electric circuit; by extension, any tool for revealing specific information. **torquing k.**, an orthodontic instrument used to facilitate the engaging of rectangular arch wires into the edgewise brackets.

keynote (ke'nōt) in homeopathy, the characteristic property of a drug which indicates its use in treating a similar symptom of disease.

Key-Retzius connective tissue sheath, foramen (ke' ret'ze-us) [Ernst Axel Henrik Key, Swedish physician, 1832-1901; Magnus Gustaf Retzius, Swedish histologist, 1842-1919] see *connective tissue sheath of Key and Retzius*, under *sheath*, and see *apertura lateralis ventriculi quarti*.

kg. kilogram.

kg.-cal. kilogram-calorie; see *large calorie*, under *calorie*.

kg.-m. kilogram-meter.

KHCO₃ potassium bicarbonate.

khellin (kel'in) chemical name: 4,9-dimethoxy-7-methyl-5H-furo[3,2-g[1]benzopyran-5-one. An active principle, C₁₄H₁₂O₆, from the fruit of *Ammi visnaga* Lam., an umbelliferous plant of Eastern Mediterranean regions; an antihypertensive and vasodilator.

KI potassium iodide.

kibe (kīb) (*obs.*) chilblain.

kibisotome (ki-bis'i-tōm) [Gr. *kibisis* pouch + *tome* a cut] cystisotome.

kidinga pepo (kid-in'gah pe'po) ["cramplike pains"] a disease of Zanzibar, probably the same as dengue.

kidney (kid'ne) [L. *ren*; Gr. *nephros*] either of the two organs in the lumbar region that filter the blood, excreting the end-products of body metabolism in the form of urine, and regulating the concentrations of hydrogen, sodium, potassium, phosphate, and other ions in the extracellular fluid. Called also *ren* [NA]. Each kidney is about four inches long, two inches wide, and one inch thick, and weighs from four to six ounces. The kidney is of characteristic shape, and presents a notch on the inner, concave, border, known as the *hilus*, which communicates with the cavity or sinus of the kidney and through which the vessels, nerves, and ureter pass. The kidney consists of a *cortex* and a *medulla*. The medullary substance forms pyramids, whose bases are in the cortex and whose apices, which are called *papillae*, project into the calices of the kidney. The renal pyramids number from 10 to 15. The parenchyma of each kidney is composed of about one million *renal tubules* (nephrons, the functional unit of the kidney), held together by a little connective tissue. Each tubule begins blindly in a renal corpuscle, consisting of a glomerulus and its capsule, situated within the cortex. After a neck or constriction below the capsule, it becomes the proximal convoluted tubule, Henle's loop, distal convoluted tubule, arched collecting tubule, and then the straight collecting tubule, which opens at the apex of a renal papilla. The straight collecting tubules converge as they descend, forming groups in the center, known as *medullary rays*. See Plate XXIII. **abdominal k.**, an ectopic kidney situated above the iliac crest with the hilus adjacent to the second lumbar vertebra. **amyloid k.**, one marked by deposition of amyloid, usually concentrated in small blood vessels and capillaries; called also *Rokitansky's k.* **arteriosclerotic k.**, one characterized by sclerotic changes of intrarenal arteries and large arterioles. **artificial k.**, a popular name for an extracorporeal device employed to remove from the blood, while being circulated outside the body, elements which are usually excreted in the urine; see *hemodialyzer*. Intracorporeal artificial kidneys are under development, in which intestinal or pulmonary tissue is used as the filtration membrane. **atrophic k.**, one is diminished in size because of inadequate circulation and/or loss of nephrons. **cake k.**, a solid, irregularly lobed organ of bizarre shape, usually situated in the pelvis toward the midline, developed as result of fusion of the two renal anlagen. **cicatricial k.**, a shriveled, irregular, and scarred kidney, resulting from suppurative pyelonephritis. **clump k.**, cake k. **congested k.**, large red k. **contracted k.**, an atrophic kidney which may be scarred and granular. **crush k.**, lower nephron nephrosis. **cyanotic k.**, passive congestion of the kidney. **cystic k.**, a kidney contain-

ing one or more cysts. **definite k.**, metanephros. **disk k.**, a disk-shaped organ produced by fusion of both poles of the contralateral kidney anlagen. **doughnut k.**, an anomalous organ resulting from bipolar fusion of the renal anlagen before rotation begins, both kidneys being on the same level. **fatty k.**, a kidney affected with fatty degeneration. **flea-bitten k.**, a kidney which has small, randomly scattered petechiae on its surface, sometimes seen in bacterial endocarditis. **floating k.**, hypermobile k. **Formad's k.**, an enlarged and deformed kidney, sometimes seen in chronic alcoholism. **fused k.**, a single anomalous organ developed as a result of fusion of the renal anlagen. **Goldblatt k.**, one in which the blood flow is obstructed, resulting in renal hypertension. **head k.**, pronephros. **hind k.**, metanephros. **horseshoe k.**, an anomalous organ developed as a result of fusion of the corresponding poles of the renal anlagen. **hypermobile k.**, one that is freely movable. **lardaceous k.**, amyloid k. **large red k.**, a congested, edematous kidney which may result from inflammation, impaired venous circulation, or urinary obstruction; called also *congested k.* **lumbar k.**, an ectopic kidney situated opposite the sacral promontory in the iliac fossa, anterior to the iliac vessels. **lump k.**, cake k. **medullary sponge k.**, sponge k. **middle k.**, mesonephros. **mortar k.**, putty k. **movable k.**, hypermobile k. **mural k.**, a kidney located in a pocket of peritoneum in the abdominal wall. **myelin k.**, a kidney infiltrated with myelin, producing minute whitish specks or streaks on its surface. **pelvic k.**, an ectopic kidney situated opposite the sacrum and below the aortic bifurcation. **polycystic k.**, see *polycystic disease of the kidneys*, under *disease*. **primordial k.**, pronephros. **putty k.**, one containing caseous material trapped by stricture of the ureter by tuberculous granulations in renal tuberculosis. **Rokitansky's k.**, amyloid k. **Rose-Bradford k.**, a form of fibrotic kidney of inflammatory origin found in young subjects. **sacciform k.**, a distended kidney; nephrectasia. **sigmoid k.**, a deformed and fused kidney, the upper pole of one kidney being fused with the lower pole of the other. **sponge k.**, a rare congenital condition, anatomically characterized by multiple small cystic dilations of the collecting tubules of the medullary portion of the renal pyramids, giving the organ a spongy, porous feeling and appearance. It is usually asymptomatic, but there may be calculus formation within the cysts, hematuria, renal colic, or recurrent renal infection. **supernumerary k.**, a kidney in addition to the two usually present, developed as the result of splitting of the nephrogenic blastema, or from separate metanephric blastemas into which partially or completely reduplicated uterine stalks enter to form separate capsulated kidneys. In some cases the separation of the reduplicated organ is incomplete (*fused supernumerary k.*). **thoracic k.**, an ectopic kidney that partially or completely protrudes above the diaphragm into the posterior mediastinum. **wandering k.**, hypermobile k. **waxy k.**, amyloid k.

Kielland's (Kjelland) forceps (kel'andz) [Christian Kielland, Norwegian obstetrician and gynecologist, 1871-1941] see under *forceps*.

Kienböck atrophy, etc. (kēn'bek) [Robert Kienböck, Austrian roentgenologist, 1871-1953] see under *atrophy*, *disease*, *dislocation*, and *phenomenon*.

Kienböck-Adamson points (kēn'bek-ad'am-son) [Robert Kienböck; Horatio George Adamson, London dermatologist, 1865-1955] see under *point*.

Kiernan's spaces (kēr'nanz) [Francis Kiernan, English physician, 1800-1874] see under *space*.

Kiesselbach's area (space) (ke'sel-bahks) [Wilhelm Kiesselbach, German laryngologist, 1839-1902] see under *area*.

kiestein (ki-es'te-in) kyestein.

kil (kil) a white, sticky, soapy clay from the Black Sea region; when sterilized, it is employed as an ointment base for use in skin diseases.

Kilian's line (kil'e-anz) [Hermann Friedrich Kilian, German gynecologist, 1800-1863] see under *line*.

killen (kil'lēn) chondrus.

Killian's operation (kil'e-anz) [Gustav Killian, German laryngologist, 1860-1921] see under *operation*.

Killian's test (kil'e-anz) [John Allen Killian, biochemist in New York, born 1891] see under *tests*.

kilo- [Fr., from Gr. *chilioi* thousand] a combining form used in naming units of measurement to indicate a quantity one thousand (10³) times the unit designated by the root with which it is combined.

kilocalorie (kil'o-kal'o-re) large calorie; see under *calorie*.

kilocycle (kil'o-si'kl) a unit of 1000 (10³) cycles, e.g., 1000 cycles per second, applied to the frequency of electromagnetic waves. Abbreviated kc.

kilogram (kil'o-gram) a unit of mass (weight) of the metric system, being 1000 (10³) grams, or the equivalent of 2.204623 pounds avoirdupois and of 2.679229 pounds apothecaries' weight. Abbreviated kg.

kilogram-meter (kil'o-gram-me'ter) a unit of work, represent-

- ing the energy required to raise 1 kg. of weight 1 meter vertically against gravitational force, equivalent to about 7.2 foot-pounds and equal to 1000 gram-meters. Abbreviated kg.-m.
- kilohertz** (kil'o-her-tz) one thousand (10^3) hertz (cycles per second). Abbreviated kHz.
- kiloliter** (kil'o-le'h-tz) [Fr. *kilolitre*] a unit of capacity of the metric system, being 1000 (10^3) liters, or the equivalent of 264.18 gallons. Abbreviated kl.
- kilomegacycle** (kil'o-meg'ah-si'kl) a unit of 1000 (10^3) megacycles (10^6 cycles), e.g., 1000 megacycles per second, applied to the frequency of electromagnetic waves. Abbreviated kMc.
- kilometer** (kil'o-me'ter, kī-lom'ē-ter) [Fr. *kilomètre*] a unit of linear measurement of the metric system, being 1000 (10^3) meters, or the equivalent of 3280.83 feet, or about five-eighths of a mile. Abbreviated km.
- kilonem** (kil'o-nem) [*kilo-* + *nem*] a unit of nutritive value, the equivalent of 667 calories; see also *nem*.
- kilounit** (kil'o-u'nit) a quantity equivalent to one thousand (10^3) units.
- kilovolt** (kil'o-vōlt) a unit of electrical pressure or electromotive force, being 1000 (10^3) volts. Abbreviated kv.
- kilurane** (kil'u-rān) a unit of radioactivity, being 1000 (10^3) uranium units.
- Kimberley horse disease** (kim'ber-le) [Kimberley, a district in northeastern Western Australia] see under *disease*.
- Kimmelstiel-Wilson syndrome** (kim'el-stēl wil'son) [Paul Kimmelstiel, German pathologist in the United States, born 1900; Clifford Wilson, English physician, born 1906] intercapillary glomerulosclerosis.
- Kimpton-Brown tube** (kimp'ton brown') [Arthur Ronald Kimp-ton, Boston surgeon] see under *tube*.
- kimputu** (kēm-poo'too) [African] relapsing fever.
- kinanesthesia** (kin'an-es-the'ze-ah) [Gr. *kinēsis* motion + *anesthesia*] loss of power of perceiving the sensation of movement, due to derangement of deep sensibility.
- kinase** (ki'nās) 1. a subclass of the transferases, comprising the enzymes that catalyze the transfer of a high-energy group of a donor, usually adenosine triphosphate, to some acceptor, and variously named, according to the acceptor, as *creatine kinase*, *fructokinase*, *galactokinase*, *hexokinase*, etc. Called also *phosphokinase*, *phosphotransferase*, and *transphosphorylase*. 2. an enzyme that activates a zymogen, variously named, according to its source, as *enterokinase*, *staphylokinase*, and *streptokinase*. **acetate k.**, ATP:acetate phosphotransferase: an enzyme that catalyzes the transfer of a phosphate group from ATP to acetate; called also *acetokinase*. **acetyl k.**, an enzyme that transfers a phosphate group from ATP to hydroxyacetone. **adenosine k.**, an enzyme of the liver and kidney that catalyzes the transfer of a phosphate group from ATP to form adenosine phosphate. **adenylate k.**, ATP:AMP phosphotransferase: a heat-stable enzyme of skeletal muscle, heart, brain, and liver that activates the yeast hexokinase system, thus making possible the transfer of phosphate from ADP to fructose or glucose. Called also *myokinase*. **aspartate k.**, an enzyme that catalyzes the transfer of a phosphate group from ATP to aspartate to form phosphoaspartate. **bacterial k.**, 1. a kinase of bacterial origin. 2. an enzyme of bacterial origin that activates a precursor (plasminogen) of a plasma protease (plasmin). **carbamate k.**, an enzyme of the liver that catalyzes the transfer of a phosphate group from ATP associated with ammonia and carbon dioxide, to form ADP and carbamoylphosphate. **creatine k.**, ATP:creatine phosphotransferase. An enzyme that catalyzes the transfer of a high-energy phosphate group from ATP to creatine, producing phosphocreatine and ADP; widely distributed in tissues, including muscle and brain. **glycerol k.**, an enzyme of the liver and kidney that catalyzes the transfer of a phosphate group from ATP to form ADP and L-glycerol-3-phosphate. **insulin k.**, an enzyme assumed to exist in the liver which activates insulin; possibly equatable with the peptidase which catalyzes pro-insulin to insulin conversion. **mevalonate k.**, an enzyme occurring in the liver and in yeast that catalyzes the transfer of a phosphate group from ATP to form ADP and 5-phosphomevalonate. **nucleoside monophosphate k.**, an enzyme of the liver that catalyzes the transfer of a phosphate group from ATP to form ADP and a nucleoside diphosphate. **phosphoglycerate k.**, ATP:3-phospho-D-glycerate 1-phosphotransferase. An enzyme that reversibly catalyzes the transfer of a high-energy phosphate group from ATP to D-3-phosphoglycerate, producing D-1,3-diphosphoglycerate, one of the enzymatic steps in glycolysis. **phosphomevalonate k.**, an enzyme occurring in yeast that catalyzes the transfer of a phosphate group from ATP to form ADP and 5-pyrophosphomevalonate. **protein k.**, any protein that catalyzes the transfer of a phosphate group from ATP to form a phosphoprotein. **pyruvate k.**, an enzyme occurring in all tissues of the body that catalyzes the transfer of a phosphate group from ATP to form ADP and phosphoenolpyruvate. **tissue k.**, fibrinokinase.
- kine-** see *kinesio-*. For words beginning thus, see also words beginning *cine-*.
- kinematics** (kin''ē-mat'iks) [Gr. *kinēma* motion] that phase of mechanics which deals with the possible motions of a material body.
- kinematograph** (kin''ē-mat'o-graf) [Gr. *kinēma* motion + *graphein* to record] an instrument for exhibiting pictures of objects in motion; it is of considerable service in diagnosis.
- kinemia** (ki-ne'me-ah) cardiac output; see under *output*.
- kinemic** (ki-ne'mik) [*kine-* + Gr. *haima* blood] pertaining to kinemia.
- kineplastics** (kin''ē-plas'tiks) kineplasty.
- kineplasty** (kin''ē-plas'te) [Gr. *kinein* to move + *plassein* to form] plastic amputation; amputation in which the stump is so formed as to be utilized for motor purposes.
- kinesalgia** (kin''ē-sal'je-ah) [*kinesio-* + *-algia*] pain on muscular exertion.
- kinescope** (kin''ē-skōp) [*kine-* + Gr. *skopein* to examine] an instrument for measuring ocular refraction, in which the patient observes a fixed object through a slit in a moving disk.
- kinesia** (ki-ne'se-ah) kinetosis.
- kinesialgia** (ki-ne'se-al'je-ah) kinesalgia.
- kinesiatics** (ki-ne'se-at'riks) [*kinesio-* + Gr. *iatrikē* surgery, medicine] kinesitherapy.
- kinesics** (ki-ne'siks) the study of body movement as a part of the process of communication.
- kinesi-esthesiometer** (ki-ne'se-es-the'ze-om'ē-ter) [*kinesio-* + Gr. *aisthēsis* perception + *metron* measure] an instrument for estimating or measuring the sense of motion.
- kinesimeter** (kin''ē-sim'ē-ter) [*kinesio-* + Gr. *metron* measure] 1. an instrument for the quantitative measurement of movements. 2. an instrument for exploring the surface of the body to test cutaneous sensibility.
- kinesio, kine-** [Gr. *kinēsis* movement] a combining form denoting relationship to movement.
- kinesiodic** (ki-ne'se-od'ik) kinesodic.
- kinesiology** (ki-ne'se-ol'o-je) [*kinesio-* + *-logy*] the sum of what is known regarding human motion; the study of motion of the human body.
- kinesiometer** (ki-ne'se-om'ē-ter) kinesimeter.
- kinesioneurosis** (ki-ne'se-o-nu-ro'sis) [*kinesio-* + *neurosis*] a functional nervous disorder characterized by motor disturbances, such as spasms or tics.
- kinesiotherapy** (ki-ne'se-o-ther'ah-pe) kinesitherapy.
- kinesis** (ki-ne'sis) [Gr.] 1. movement, e.g., the activity of an organism in response to a stimulus; the direction of the response is not controlled by the direction of the stimulus (in contrast to a taxis). 2. a word termination denoting movement or motion, e.g., cytokinesis.
- kinesitherapy** (ki-ne'sē-ther'ah-pe) [*kinesio-* + Gr. *therapeia* cure] the treatment of disease by movements or exercise.
- kinesodic** (kin''ē-sod'ik) [*kinesio-* + Gr. *hodos* way] conducting or pertaining to the conduction of motor impulses.
- kinesthesia** (kin''es-the'ze-ah) [*kine-* + Gr. *aisthēsis* perception + *-ia*] the sense by which movement, weight, position, etc., are perceived; commonly used to refer specifically to the perception of changes in the angles of joints.
- kinesthesiometer** (kin''es-the'ze-om'ē-ter) [*kinesthesia* + Gr. *metron* measure] an instrument for testing kinesthesia.
- kinesthesia** (kin''es-the'sis) kinesthesia.
- kinesthetic** (kin''es-thet'ik) pertaining to kinesthesia or the muscular sense.
- kinetia** (ki-ne'te-ah) kinetosis.
- kinetic** (ki-net'ik) [Gr. *kinētikos*] pertaining to or producing motion.
- kineticist** (ki-net'ī-sist) a specialist in kinetics.
- kinetics** (ki-net'iks, ki-net'iks) [Gr. *kinētikos* of or for putting in motion] the branch of dynamics that pertains to the turnover, or rate of change, of a specific factor (e.g., erythrocytes—erythrokinetics, leukocytes—leukokinetics, or iron—ferrokinetics), commonly expressed as units of amount per unit time. **chemical k.**, the study of the rates and mechanisms of chemical reactions.
- kinetin** (ki-ne'tin) a highly potent plant-growth factor, 6-furfurylamino-purine, which promotes cytokinesis in tobacco callus tissue.
- kinetism** (kin''ē-tizm) the ability to perform or initiate muscular action.
- kineto-** [Gr. *kinētos* movable] a combining form meaning movable.
- kinetocardiogram** (ki-ne'to-kar'de-o-gram) the graphic record obtained by kinetocardiography; called also *precordial cardiogram*.
- kinetocardiography** (ki-ne'to-kar'de-og'rah-fe) the technique of graphically recording the slow vibrations of the anterior chest wall in the region of the heart, the vibrations representing the absolute motion of the heart at a given point on the chest.

KIDNEY
(partly in hemisection)

URINIFEROUS TUBULE

FUNCTIONAL UNITS →

kinetochore (ki-ne/'to-kōr) [*kineto-* + Gr. *chora* space] centromere.

kinetocyte (ki-ne/'to-sīt) [*kineto-* + *-cyte*] a term once applied to one of the round or oval bodies about the size of a blood platelet, as forming a fourth element in the blood, where they move actively among the corpuscles; called also *Edelmann's cell*.

kinetogenic (ki-ne/'to-jen/'ik) [*kineto-* + Gr. *gennan* to produce] causing or producing movement.

kinetographic (ki-ne/'to-graf/'ik) [*kineto-* + Gr. *graphein* to record] recording graphically the movements of parts and features.

kinetonucleus (ki-ne/'to-nu/'kle-us) [*kineto-* + *nucleus*] kinetoplast.

kinetoplasm (ki-ne/'to-plazm) [*kineto-* + Gr. *plasma* something formed] the most highly contractile portion of the cytoplasm of a cell; the energy plasma: the term is applied to the chromatophilic elements in the nervous tissue.

kinetoplast (ki-ne/'to-plast) [*kineto-* + Gr. *plassein* to form] a structure associated with the basal body in many protozoa, primarily the Mastigophora; it is rich in DNA, and, like the basal body, it replicates independently.

kinetoscope (ki-ne/'to-skōp) [*kineto-* + Gr. *skochein* to examine] an apparatus designed to make serial photographs depicting body motions.

kinetoscropy (ki/'nē-tos/'ko-pe) serial photography which exhibits the motions of the limbs or features; used in diagnosis of disorders of gait and in the study of muscle action.

kinetoses (ki/'ne-to/'sēz) [Gr.] plural of *kinetosis*.

kinetosis (ki/'ne-to/'sis), pl. *kinetoses* [*kineto-* + *-osis*] any disorder caused by unaccustomed motion; see *motion sickness*.

kinetosome (ki-ne/'to-sōm) [*kineto-* + Gr. *sōma* body] basal corpuscle.

kinetherapy (ki-ne/'to-ther/'ah-pe) kinesitherapy.

King unit (king) [Earl J. King, Toronto biochemist, born 1901] see under *unit*.

kingdom (king'dum) [Anglosaxon *cyningdom*] classically, one of the three categories into which natural objects are usually classified: the *animal kingdom*, including all animals; the *plant kingdom*, including all plants; and the *mineral kingdom*, including all objects and substance without life. A fourth kingdom, the *Protista*, includes all single-celled organisms.

kinin (ki/'nin) any of a group of endogenous peptides that cause vasodilation, increase vascular permeability, cause hypotension, and induce contraction of smooth muscle. **venom k.**, a peptide found in the venom of insects. **wasp k.**, a potent, pain-provoking peptide present in wasp venom.

kininase II (ki/'nin-ās) an enzyme that catalyzes the cleavage of C-terminal peptides from substrates, including bradykinin and angiotensin I (converting it to angiotensin II).

kininogen (ki/'nin-o-jen/'n) an α_2 -globulin of plasma that is a precursor of the kinins.

kink (kink') a bend or twist. **ileal k.**, **Lane's k.**, the term once applied to sharp twists in the distal ileum caused by Lane's bands; such twists were thought to result in chronic partial obstruction of the ileum.

kino (ki/'no) the dried juice of *Pterocarpus marsupium* Roxb. (Leguminosae), of southern Asia, and of various other trees; it has been used as an astringent because of its high content of kinotannic acid.

kino- [Gr. *kinein* to move] a combining form denoting relationship to movement.

kinocentrum (ki/'no-sen/'trum) centrosome.

kinocilia (ki/'no-sil/'e-ah) [L.] plural of *kinocilium*.

kinocilium (ki/'no-sil/'e-um), pl. *kinocilia*. A motile, protoplasmic filament on the free surface of a cell. Cf. *stereocilium*.

kinohapt (ki/'no-hapt) [*kino-* + Gr. *haptēin* to touch] an esthesiometer for making several tactile stimulations at definite intervals of time or space.

kinology (ki-nol/'o-je) kinesiology.

kinometer (ki/'no-mom/'ē-ter) [*kino-* + Gr. *metron* measure] an instrument for estimating the degree of motion in fingers and wrist.

kinoplasm (ki/'no-plazm) [*kino-* + Gr. *plasma* plasm] (*obs.*) Strasburger's name for a distinct type of protoplasm that tends to form fibrillar structures and is mechanically active.

kinoplastic (ki/'no-plas/'tik) pertaining to kinoplasm.

Kinorhyncha (kin/'o-rin/'kah) [*kino-* + Gr. *rhynchos* snout] a class of small marine animals of the phylum Aschelminthes, which have a cuticle divided into segments and a retractile spiny head. In some systems of classification, they are considered to be a separate phylum.

kinosphere (ki/'no-sfēr) [*kino-* + *sphere*] aster.

kinotoxin (ki/'no-tok/'sin) [*kino-* + *toxin*] a fatigue toxin.

kinovin (kin-o/'vin) quiovin.

kinship (kin/'ship) a group of individuals of varying degrees of descent from a common ancestor.

kiono- (ki/'on-o) for words beginning thus, see those beginning *ciono-*.

kiotome (ki/'o-tōm) [Gr. *kiōn* column + *temnein* to cut] a knife for amputating the uvula.

kiotomy (ki-ot/'o-me) the use of the kiotome; amputation of the uvula.

Kirchner's diverticulum (kēr/'nerz) [Wilhelm Kirchner, Würzburg otologist, 1849–1936] see under *diverticulum*.

Kirk's amputation (kirks) [Major General Norman Thomas Kirk, former Surgeon General of U.S. Army, 1888–1960] see under *amputation*.

Kirmisson's operation (kēr/'me-sawz') [Edouard Kirmisson, French surgeon, 1848–1927] see under *operation*.

Kirschner wire (kērsh/'ner) [Martin Kirschner, German surgeon, 1879–1942] see under *wire*.

Kirstein's method (ker/'stin) [Alfred Kirstein, German physician, 1863–1922] see under *method*.

Kisch's reflex (kish/'ez) [Bruno Kisch, Austrian physiologist, born 1891] Kehr's reflex.

kitasamycin (kit/'ah-sah-mi/'sin) an antibiotic substance produced by *Streptomyces kitasatoensis*, active against most gram-positive and some gram-negative bacteria, as well as certain other pathogenic microorganisms. Called also *leucomycin*.

Kitasato's filter (ke-tah-sah/'tōz) [Shibasaburo Kitasato, Japanese bacteriologist, 1852–1931] see under *filter*.

kitol (ki/'tol) [Gr. *kētos* sea monster, big fish] a substance from whale oil which yields vitamin A on heating.

Kittel's treatment (kit/'elz) [M. J. Kittel, German physician] see under *treatment*.

k.j. knee jerk.

Kjeldahl's method (test) (kel/'dahlz) [Johan Gustav Christoffer Kjeldahl, Danish chemist, 1849–1900] see under *method*.

Kjelland (kel/'land) see *Kielland*.

kl. klang; kiloliter.

Clapp's creeping treatment (klaps) [Rudolf Klapp, surgeon in Berlin, 1873–1949] see under *treatment*.

Klebs-Löffler bacillus (klebz/'lef'ler) [T.A.E. Klebs, Friederich A. J. Löffler, German bacteriologist, 1852–1915] *Corynebacterium diphtheriae*.

Klebsiella (kleb/'se-el/'lah) [T.A.E. Klebs] a genus of microorganisms of the tribe Escherichieae, family Enterobacteriaceae, order Eubacteriales, made up of plump short rods with rounded ends, usually occurring singly, and frequently found in the respiratory or intestinal tract in man. **K. friedländeri**, **K. pneumoniae**. **K. ozae'nae**, an organism isolated from patients with ozena and also from patients with atrophic rhinitis. **K. pneumo'niae**, an organism closely similar to *Aerobacter aerogenes*; it is the etiologic agent of Friedländer pneumonia and other infections of the respiratory tract. Called also *Friedländer's bacillus* or *pneumobacillus*, *K. friedländeri*, and formerly *Bacillus pneumoniae*. **K. rhinoscleroma'tis**, an organism isolated

Klebsiella pneumoniae.

from the nasal secretions of patients with rhinoscleroma.

kleblattschädel (kla/'blat-sha/'del) [Ger.] cloverleaf skull; a congenital anomaly in which there is intrauterine synostosis of multiple or all cranial sutures. See under *syndrome*.

Klemm's tetanus (klemz) [Paul Klemm, surgeon in Riga, 1861–1921] Kopf-tetanus.

Klemperer's tuberculin (klem/'per-erz) [Felix (1866–1932) and Georg (1865–1946) Klemperer, Berlin physicians] see under *tuberculin*.

klepto- (klep/'to) [Gr. *kleptein* to steal] combining form denoting relationship to theft or stealing.

kleptolagnia (klep/'to-lag/'ne-ah) [*klepto-* + *lagneia* lust] sexual gratification produced by theft.

kleptomania (klep/'to-ma/'ne-ah) [*klepto-* + Gr. *mania* madness] an uncontrollable impulse to steal, the objects taken usually having a symbolic value of which the subject is unconscious, rather than an intrinsic value.

kleptomaniac (klep/'to-ma/'ne-ak) an individual exhibiting kleptomania.

Klieg eye (klēg) [named from Kliegl, the manufacturer of electric lamps used in moving picture making] see under *eye*.

Klimow's test (klim/'ofs) [Ivan Alex. Klimow, Russian physician, born 1865] see under *tests*.

Kline's test (klin) [Benjamin S. *Kline*, American pathologist, born 1886] see under *tests*.

Klinefelter's syndrome (klīn'fel-terz) [Harry Fitch *Klinefelter*, Jr., American physician, born 1912] see under *syndrome*.

Klippel's disease (klī-pelz') [Maurice *Klippel*, French neurologist, 1858-1942] arthritic general pseudoparalysis.

Klippel-Feil sign, syndrome (klī-pel'fil) [Maurice *Klippel*; André *Feil*, French physician, born 1884] see under *sign* and *syndrome*.

kliseometer (klis'e-om'ē-ter) cliseometer.

Kloeckera (kle'ker-ah) a genus of ascomycetous yeasts of the family Saccharomycetaceae. **K. apicula'tus**, a species from fermenting fruit; its oval cells are joined at the ends. Called also *Saccharomyces apiculatus*.

Klumpke's paralysis (kloomp'kez) [Madame A. *Klumpke* Dejerine, Parisian neurologist, 1859-1927, wife of Joseph Jules Dejerine] see under *paralysis*.

Klumpke-Dejerine paralysis, syndrome (kloomp'kē-dezh'er-ēn') [Madame A. *Klumpke* Dejerine; Joseph Jules *Dejerine*, French neurologist, 1849-1917] Klumpke's paralysis.

km. kilometer.

kMc. kilomegacycle.

kMc.p.s. kilomegacycles per second.

KMnO₄ potassium permanganate.

Knapp's forceps, operation, streaks (striae) (naps) [Herman Jakob *Knapp*, New York ophthalmologist, 1832-1911] see under *forceps*, *operation*, and *streak*.

Knapp's test (knaps) [Karl *Knapp*, German chemist] see under *tests*.

kneading (nēd'ing) a movement in massage consisting of grasping and pressing of muscles.

knee (ne) 1. the site of articulation between the thigh (femur) and leg; called also *genu* [NA]. 2. any structure bent like the knee. **k. of aquaeductus fallop'ii**, geniculum canalis facialis. **back k.**, genu recurvatum. **beat k.**, a subcutaneous cellulitis over the kneecap. **big k.**, 1. bursitis over the knee in cattle. 2. a tumor of the bony parts of the knee joint in horses. **Brodie's k.**, a chronic synovitis of the knee joint in which the affected parts acquire a soft and pulpy consistency. **capped k.**, distention of the synovial bursa over the knee joint of horses or cattle. **football k.**, a swollen, relaxed, somewhat tender condition of the knee seen in football players. **hooped k.**, the presence of exostoses in the knee of a horse. **housemaid's k.**, inflammation of the bursa in front of the patella, with fluid accumulating within it. **in k.**, genu valgum. **k. of internal capsule**, genu capsulae internae. **knock k.**, genu valgum. **locked k.**, inability to extend the leg fully as a result of tear of the medial semilunar cartilage. **out k.**, genu varum, or bowleg. **rugby k.**, Schlatter's disease. **septic k.**, a suppurating knee joint. **sprung k.**, forward bending of the knee of a horse, due to shortening of the flexor tendons. **trick k.**, popular term for a knee joint susceptible to locking in position, most often due to longitudinal splitting of the medial meniscus.

knee-gall (ne'gawl) distension of the carpal sheath at the back of the knee joint in the horse.

kneippism (nip'izm) [Rev. Father Sebastian *Kneipp*, 1821-1897, who introduced the practice] a system of hydrotherapy involving applications of cold water, as cold bathing, walking barefoot in the morning dew, etc.

Knemidokoptes (ne'mī-do-kop'tēz) a genus of mites. *K. gal'inae*, the depluming mite, causes depluming of fowls. *K. mu'tans* causes scaly legs in fowl and cage birds.

knife (nif) a cutting instrument of various shapes and sizes.

Beer's k., a knife with a triangle-shaped blade, formerly used in operations for cataract and for excising staphyloma of the cornea.

Blair k., a knife with a long sharp blade used to cut skin grafts.

buck k., a knife with spear-shaped cutting points, used for interdental incision during gingivectomy.

button k., a small knife used for the cutting of cartilage.

cataract k., a knife for cutting the cornea in operations for cataract.

cautery k., a knife connected with an electric battery, so that the tissues may be seared while being cut, in order to prevent bleeding.

electric k., **endotherm k.**, a knife-shaped electrode or steel needle which cuts by causing dissolution of tissue when activated by a high-frequency current.

Goldman-Fox k., any of various surgical instruments designed for the incision and contouring of gingival tissue.

Graefe's k., a slender knife used in linear extraction of cataract.

hernia k., **herniotome.** **Humby k.**, a knife with a roller attached, used for cutting skin grafts of varying thickness; the distance between the roller and the blade of the knife can be varied by means of a calibration device.

Kirkland k., a heart-shaped knife, sharp on all edges, used for primary gingivectomy incision.

Liston's knives, long-bladed amputation knives.

Merrifield's k., a knife with a long narrow triangular blade in a shank, used for gingivectomy incisions.

Ramsbotham's sickle k., a sickle-shaped knife used for intrauterine decapitation of a fetus.

knismogenic (nis'mo-jen'ik) [Gr. *knismos* tickling + *gennan* to produce] producing a tickling sensation.

knitting (nit'ing) the physiological process of repair of a fractured bone.

KNO₃ potassium nitrate.

knob (nob) a bulbous mass or protuberance. **surfers' k's**, see under *nodule*. **synaptic k's**, end-feet.

knock (nok) a sound as of a blow against a firm surface. **pericardial k.**, a clear, metallic clicking sound heard over the precordium in certain cases of penetrating chest wounds in the neighborhood of the pericardium; ascribed to emphysema of the mediastinal connective tissue or to free air in the interstitial connective tissue of the lung. Cf. *clicking pneumothorax*, under *pneumothorax*.

knock-knee (nok'ne) genu valgum.

Knoepfelmacher's butter meal (knep'fel-mahk'erz) [Wilhelm *Knoepfelmacher*, pediatricist in Vienna, born 1866] see under *meal*.

knokkelkoorts (nok'el-koorts) [Dutch "knuckle fever"] dengue in the Netherlands East Indies.

knot (not) 1. an intertwining of the ends or parts of one or more threads, sutures, or strips of cloth so they cannot easily be

separated. 2. in anatomy, a knoblike swelling or protuberance, as a node. **clove-hitch k.**, a knot consisting of two contiguous loops that are applied around an object, the ends of the cord being toward each other; used for making traction on a part for the reduction of dislocations. **double k.**, friction k. **enamel k.**, a small dense group of epithelial cells in the stellate reticulum of a developing tooth, which disappears before enamel formation begins. **false k.**, 1. a local bulge on the umbilical cord caused by protuberant vessels. Cf. *true k.* 2. granny k. **friction k.**, a knot in which the ends of the cord are twisted twice around each other before being tied. **granny k.**, a double knot in the second loop of which the end of one cord is over, and the other under, its fellow, so that the loops do not lie in the same line. **Hensen's k.**, primitive k. **net k.**, karyosome. **primitive k.**, a mass of cells at the cranial end of the primitive streak, related to the organization of an embryo. **protochordal k.**, primitive k. **reef k.**, a double knot in which the free ends of the second knot lie in the same plane as the ends of the first knot; called also *square k.* **sailor's k.**, **square k.**, reef k. **stay k.**, a knot made with two or more ligatures, each being tied with the first half of a reef knot; then all the ends of one side are taken in one hand, and all the ends on the other side in the other hand, and tied as if they formed one single thread. **surfers' k's**, see under *nodule*. **surgeons' k.**, **surgical k.**, a knot in which the thread is passed twice through the first loop. **syncytial k's**, protuberances of syncytium along the chorionic villi. **true k.**, a simple knot produced in the looped umbilical cord during pregnancy. Cf. *false k.*

knuckle (nuk'l) the dorsal aspect of any phalangeal joint, especially of the metacarpophalangeal joints of the flexed fingers. By extension sometimes applied to any anatomical structure of similar appearance, such as an extruded loop of intestine in

- hernia. **aortic k.**, the hump or knuckle formed by the aortic arch as seen in radiographs in anteroposterior projections.
- knuckling** (nuk'ling) a condition in which the fetlock joint of a horse is pushed upward and forward, due to shortening of the tendons behind.
- Kobelt's tubes, tubules** (ko'belts) [George Ludwig Kobelt, German physician, 1804-1857] see under *tube* and *tubule*.
- Kober's test** (ko'berz) [Philip Adolph Kober, American chemist, born 1884] see under *tests*.
- Kobert's test** (ko'bärts) [Eduard Rudolf Kobert, German chemist, 1854-1918] see under *tests*.
- KOC** kathodal (cathodal) opening contraction.
- Koch's bacillus**, etc. (kōks) [Robert Koch, German bacteriologist, 1843-1910, the discoverer of the tubercle bacillus; winner of the Nobel prize for medicine in 1905] see under *bacillus*, *phenomenon*, *postulate*, *reaction*, and *tuberculin*.
- Koch's node** (kōks) [Walter Koch, German surgeon, born 1880] atrioventricular node.
- Koch-Weeks bacillus (hemophilus)** (kōk-wēks) [Robert Koch; John Elmer Weeks, New York ophthalmologist, 1853-1949] *Hemophilus aegyptius*.
- Kocher's forceps, operation, reflex** (kōk'erz) [Emil Theodor Kocher, Swiss surgeon, 1841-1917, the first surgeon to excise the thyroid gland; winner of the Nobel prize for medicine in 1909] see under *forceps*, *operation*, and *reflex*.
- kocherization** (kōk'er-i-za'shun) operative reflexion of a flap of the duodenum for exposure of the ampulla of the common bile duct.
- Kocks' operation** (kōks) [Joseph Kocks, German surgeon, 1846-1916] see under *operation*.
- Koeberlé's forceps** (ke'ber-lāz') [Eugène Koeberlé, French surgeon, 1828-1915] hemostatic forceps.
- Koenecke's reaction, test** (ke-nek'ez) see under *tests*.
- Kogoj's pustule** (ko-goiz) [Franjo Kogoj, Yugoslavian physician, born 1894] see *spongiform pustule of Kogoj*, under *pustule*.
- KOH** potassium hydroxide.
- koha** (ko'hah) a Japanese drug derived from cyanine; given intravenously it is said to stimulate the formation of leukocytes and of new tissue and thus hasten wound healing.
- Köhler's bone disease** (ka'lerz) [Alban Köhler, German physician, 1874-1947] see under *disease*.
- Kohlrausch's folds (valves)** (kōl'rowsh-ez) [Otto Ludwig Bernhard Kohlrausch, German physician, 1811-1854] plicae transversales recti.
- Kohn's pores** (kōnz) [Hans Kohn, German pathologist, born 1866] interalveolar pores; see under *pore*.
- Kohnstamm's phenomenon** (kōn'stahmz) [Oscar Felix Kohnstamm, German physician, 1871-1917] after-movement.
- koilo-** [Gr. *koilos* hollow] a combining form meaning hollow or concave.
- koilonychia** (koi'lo-nik'e-ah) [*koilo-* + *onyx* nail + *-ia*] dystrophy of the fingernails, sometimes associated with iron deficiency anemia, in which they are thin and concave, with the edges raised; called also *spoon nail*.
- koilorrhachic** (koi'lo-rak'ik) [*koilo-* + Gr. *rhachis* spine] having a vertebral column in which the lumbar curvature is concave anteriorly. Cf. *kyphosis*, *kytorrhachic*, and *orthorrhachic*.
- koilosternia** (koi'lo-ster'ne-ah) [*koilo-* + *sternum* + *-ia*] funnel chest.
- koino-** see *ceno-*.
- koinonia** (koi-no'ne-ah) [Gr. *koinōnia* community] associated or common action, as of like cells in the same tissue.
- koinotropy** (koi-not'ro-pe) interest in social or public relationships; identification with the public interest.
- koktigen** (kok'ti-jen) [L. *coctus* cooked + Gr. *gennan* to produce] a vaccine made by boiling salt solution emulsion of an organism.
- Kolantyl** (ko-lan'til) trademark for a preparation of alumina and magnesia.
- Kölliker's column**, etc. (kel'i-kerz) [Rudolf Abert von Kölliker, eminent Swiss anatomist, histologist, and zoologist, professor at Zurich and Würzburg, 1817-1905] see under *column*, *granule*, *membrane*, and *nucleus*.
- Kollmann's dilator** (kol'manz) [Arthur Kollmann, Leipzig urologist, born 1858] see under *dilator*.
- Kolmer's test** (kōl'merz) [John A. Kolmer, American pathologist, 1886-1962] see under *tests*.
- kolp-** for words beginning thus, see those beginning *colp-*.
- kolypeptic** (ko'le-pep'tik) [Gr. *kōlyein* to hinder + *peptikos* peptic] hindering or checking digestion.
- kolytic** (ko-lit'ik) Hunt's term for the inhibitory temperament, marked by calmness, self-control, with a tendency to passivity of mind and body. Cf. *erethitic*.
- Konakion** (kon'ah-ki'on) trademark for a preparation of phytonadione (vitamin K₁).
- Kondoleon's operation** (kon-do'le-onz) [Emmerich (Emmanuel) Kondoleon, surgeon in Athens, 1879-1939] see under *operation*.
- König's operation, syndrome** (ken'igz) [Franz König, German surgeon, 1832-1910] see under *operation* and *syndrome*.
- König's rods** (ken'igz) [Charles Joseph König, German otologist, born 1868] see under *rod*.
- konimeter** (ko-nim'ē-ter) konometer.
- koniocortex** (ko'ne-o-kor'teks) [Gr. *konis* dust + *cortex*] the granular cortex of sensory areas of the brain.
- koniology** (ko'ne-o'l'o-je) coniology.
- konometer** (ko-nom'ē-ter) [Gr. *konis* dust + *metron* measure] an apparatus for counting the number of dust particles in the air.
- Konsyl** (kon'sil) a brand of psyllium hydrophilic muciloid.
- koomis** (koo'mis) koumiss.
- kopf-tetanus** (kopf-tet'ah-nus) [Ger. *Kopf* head + *tetanus*] cerebral tetanus.
- kophemia** (ko-fe'me-ah) [Gr. *kōphos* deaf] word deafness.
- kopiopia** (ko'pe-o'pe-ah) copiopia.
- Koplik's spots (sign)** (kop'liks) [Henry Koplik, New York pediatrician, 1858-1927] see under *spot*.
- Kopp's asthma** (kops) [Johann Heinrich Kopp, German physician, 1777-1858] thymic asthma.
- kopr-, kopro-** for words beginning thus, see also those beginning *copr-, copro-*.
- kopratin** (kop'rah-tin) [Gr. *kopros* dung] the chemical substance which produces the so-called pyridine-hemochromogen spectrum in the pyridine test for blood. It is produced from alpha-hematin by putrefaction.
- koprosterin** (kop'ro-ste'rin) coprostanol.
- Korányi's auscultation (percussion), sign** (ko-ran'yēz) [Baron Korányi, Hungarian physician, 1828-1913] see under *auscultation* and *sign*.
- Korányi's treatment** (ko-ran'yēz) [Baron Alexander von Korányi (Sandor), Hungarian physician, 1866-1944] see under *treatment*.
- Korányi-Grocco triangle** (ko-ran'ye-grok'o) [Baron F. von Korányi; Pietro Grocco, physician in Florence, 1857-1916] see *Grocco's sign* (def. 1), under *sign*.
- Kornberg** (korn'berg), Arthur. United States physician and biochemist, born 1918; co-winner, with Severo Ochoa, of the Nobel prize in medicine and physiology for 1959, for work in the discovery of enzymes for producing nucleic acids artificially.
- koro** (ko'ro) a phobia seen chiefly in the Far East and Southeast Asia consisting of anxiety and the fear that the penis will retract into the abdomen and cause death. Called also *coro*.
- koronion** (ko-ro'ne-on), pl. *koro'nia* [Gr. *korōnē* crow, crown] coronion.
- koroscopy** (ko-ros'ko-pe) retinoscopy.
- Korotkoff's method, sounds, test** (ko-rot'kofz) [Nicolai Sergeevich Korotkoff, Russian physician, born 1874] see under the nouns.
- Korsakoff's (Korsakov's) psychosis (disease, syndrome)** (kor-sak'ofs) [Sergei Sergeevich Korsakoff, Russian neurologist, 1854-1900] see under *psychosis*.
- Körte-Ballance operation** (kēr'te-bal'ans) [Werner Körte, Berlin surgeon, 1853-1937; Sir Charles Alfred Ballance, British surgeon, 1856-1936] see under *operation*.
- kosam** (ko'sam) a small evergreen shrub, *Brucea sumatrana* Roxb. (Simaroubaceae), of southeastern Asia and Australia, whose seeds are sometimes used locally in the treatment of diarrhea, dysentery, and uterine hemorrhage.
- Koshevnikoff's (Koschewnikow's, Kozhevnikov's) disease, epilepsy** (ko-shev'ne-kofs) [Alexei Jakovlevich Koshevnikoff, Russian neurologist, 1836-1902] epilepsy partialis continua.
- Kossel's test** (kos'elz) [Albrecht Kossel, German physiologist, 1853-1927; winner of the Nobel prize for physiology and medicine in 1910, for his contributions to the chemistry of the cell through works on proteins, including the nucleic substances] see under *tests*.
- Köster's nodule** (kes'terz) [Karl Köster, German pathologist, 1843-1904] see under *nodule*.
- Kottmann's test (reaction)** (kot'manz) [K. Kottmann, German physician, 1877-1952] see under *tests*.
- koumiss** (koo'mis) [Tartarian] a fermented alcoholic drink prepared from cow's milk; originally from mare's milk by the Tartars. **kefir k.**, milk fermented with kefir fungi.
- Kovalevsky's canal** (ko'val-ev'skēz) [Alexander Onufrievich Kovalevsky, Russian embryologist, 1840-1901] neurenteric canal.
- Kowarsky's test** (ko-var'skēz) [Albert Kowarsky, physician in Berlin] see under *tests*.
- Koyter's muscle** (koi'terz) [Volcherus Koyter, Dutch anatomist, 1534-1600] musculus corrugator supercilii.
- K.P.** keratitic precipitates; see *keratitis punctata*, under *keratitis*.

K₃PO₄ normal ortho- or tribasic potassium phosphate.

Kr chemical symbol for *krypton*.

Krabbe's disease (leukodystrophy) (krab'ēz) [Knud H. *Krabbe*, Danish neurologist, 1885–1961] see under *disease*.

Kraepelin's classification (kra'pa-linz) [Emil *Kraepelin*, Munich psychiatrist, 1856–1926] see under *classification*.

krait (krāt) an extremely venomous elapid snake of the genus *Bungarus*; see table accompanying *snake*.

Krameria (krah-me're-ah) [J. G. H. and W. H. *Kramer*, German botanists] a genus of leguminous shrubs and herbs. The dried roots of *K. triandra* R. et P., or Peruvian rhatany, and of *K. argentea* Mart., or Brazilian rhatany, were formerly used as an astringent because of their high content of krameric acid.

Kraske's operation (kras'kēz) [Paul *Kraske*, German surgeon, 1851–1930] see under *operation*.

kratom (krah'tom) a masticatory containing the leaves of *Mitragyna speciosa* Korth. (Rubiaceae), which is chewed in Thailand.

kratometer (kra-tom'ē-ter) a prism-refracting instrument for use in orthoptic training.

krauomania (kraw'o-ma'ne-ah) a tic marked by rhythmic movements, such as balancing, head rotation, etc.

kraurosis (kraw-ro'sis) [Gr. *krauros* brittle] a dry, shriveled condition of a part, especially of the vulva (see *k. vulvae*). **k. pe'nis**, balanitis xerotica obliterans. **k. vul'vae**, an atrophic disease affecting the female external genitalia, most often of older women, resulting in drying and shriveling of the parts, and marked by leukoplakic patches on the mucosa, itching, dyspareunia, dysuria, and soreness. It occurs most commonly as a result of lichen sclerosus et atrophicus of the vulva, but may be associated with other types of genital atrophy. Called also *leukokraurosis*, *leukoplakic vulvitis*, and *Breitsky's disease*.

Krause's bulbs, etc. (krow'zēz) [Wilhelm Johann Friedrich *Krause*, German anatomist, 1833–1910] see under *bulb*, *corpuscle*, *line*, *membrane*, and *suture*.

Krause's ligament, valve (krow'zēz) [Karl Friedrich Theodor *Krause*, German anatomist, 1797–1868] see *ligamentum transversum perinei*, and see *Béraud's valve*, under *valve*.

Krause's operation (krow'zēz) [Fedor Victor *Krause*, German surgeon, 1857–1937] see under *operation*.

Krause-Wolfe graft (krowz-wolf) [Fedor *Krause*; John Reissberg *Wolfe*, Scotch ophthalmologist, 1824–1904] see under *graft*.

kreatin (kre'ah-tin) creatine.

krebiozen (krē-bi'o-zen) a substance identified as creatine by the Food and Drug Administration, isolated from the blood of horses injected with *Actinomyces bovis*, claimed to be effective in the treatment of cancer; its sale is banned in the United States.

Krebs cycle (krebz) [Sir Hans Adolf *Krebs*, German biochemist in England, born 1900; co-winner, with F. A. Lipmann, of the Nobel prize for medicine and physiology in 1953 for discovery of the tricarboxylic acid cycle] tricarboxylic acid cycle; see under *cycle*.

Krebs' leukocyte index (krebz) [Carl *Krebs*, Copenhagen pathologist, born 1892] see under *index*.

kreo- for words beginning thus, see also those beginning *creo-*.

kreotoxicon (kre'o-tok'si-kon) the substance in poisonous meat that produces the toxic symptoms; see *meat poisoning*, under *poisoning*.

kreotoxin (kre'o-tok'sin) any basic poison generated in a flesh food by a plant microorganism; see *meat poisoning*, under *poisoning*.

kreotoxism (kre'o-tok'sizm) [Gr. *kreas* meat + *toxikon* poison] meat poisoning; see under *poisoning*.

kresofuchsin (kres'o-fōk'sin) a blue-gray powder used as a stain in histology; its aqueous solution is red, the alcoholic solution blue.

kresol (kres'ol) cresol.

Kretschmann's space (krech'mahnz) [Friedrich *Kretschmann*, German otologist, 1858–1934] see under *space*.

Kretschmer types (krech'mer) [Ernst *Kretschmer*, German psychiatrist, 1888–1964] see under *type*.

Kretz's granules, paradox (krets'ēz) [Richard *Kretz*, German pathologist, 1865–1920] see under *granule* and *paradox*.

Kreysig's sign (kri'zigs) [Friedrich Ludwig *Kreysig*, physician in Dresden, 1770–1839] Heim-Kreysig sign; see under *sign*.

krimpsiekte (krimp-zēk'te) a disease of cattle in South Africa caused by poisoning with the plant *Cotyledon wallachii*.

krinin (krin'in) crinin.

Krishaber's disease (krēs'hāb-ārz') [Maurice *Krishaber*, Hungarian physician in France, 1836–1883] see under *disease*.

Kristeller's method (expression, technique) (kris'tel-er) [Samuel *Kristeller*, Berlin gynecologist, 1820–1900] see under *method*.

Krogh (krōg), August. Danish physiologist, 1874–1949, noted for his research on the capillaries; winner of the Nobel prize for medicine and physiology in 1920.

Kromayer's burn, lamp (kro'mi-erz) [Ernst Ludwig Franz *Kromayer*, German dermatologist, 1862–1933] see under *burn* and *lamp*.

Krompecher's carcinoma, tumor (krōm'pek-erz) [Edmund *Krompecher*, pathologist in Budapest, 1870–1926] rodent ulcer; see under *ulcer*.

kromoskop (krōm'skōp) [German, from Gr. *chrōma* color + *skopein* to examine] an apparatus used for color photography of pathological specimens.

Kronecker's center, puncture (kro'nek-erz) [Karl Hugo *Kronecker*, Swiss pathologist, 1839–1914] see under *center* and *puncture*.

Krönig's field (area), isthmus (kra'nigz) [Georg *Krönig*, physician in Berlin, 1856–1911] see under *field* and *isthmus*.

Krönlein's hernia, operation (krān'linz) [Rudolf Ulrich *Krönlein*, surgeon in Zurich, 1847–1910] see *inguinoproperitoneal hernia*, under *hernia*, and see under *operation*.

Krukenberg's hand (arm) (kroo'ken-bergz) [Hermann *Krukenberg*, German surgeon, born 1863] see under *hand*.

Krukenberg's spindle, tumor (kroo'ken-bergz) [Friedrich Ernst *Krukenberg*, German pathologist, born 1871] see under *spindle* and *tumor*.

Krukenberg's veins (kroo'ken-bergz) [Adolph *Krukenberg*, German anatomist, 1816–1877] *venae centrales hepatis*.

Kruse's brush (kroo'zēz) [Walther *Kruse*, German bacteriologist, 1864–1943] see under *brush*.

kryoscopy (kri-os'ko-pe) cryoscopy.

krypto- (krip'to) for words beginning thus, see also these beginning *crypto-*.

krypton (krip'ton) [Gr. *kryptos* hidden] an inert gaseous chemical element found in the atmosphere; atomic number, 36; atomic weight, 83.80; symbol, Kr.

KSC kathodal (cathodal) closing contraction.

K₂SO₄ potassium sulfate.

KST kathodal (cathodal) closing tetanus.

K.U.B. kidney, ureter, and bladder.

kubisagari, kubisgari (koo-bis'ah-gah're, koo'bis-gah're) a form of Gerlier's disease (paralytic vertigo) endemic in Japan (Gerlier-Nakano, 1884).

Kuhlmann's test (kool'manz) [Frederick *Kuhlmann*, American psychologist, 1876–1941] see under *tests*.

Kuhn's mask (kōōnz) [Ernst *Kuhn*, Prussian physician, 1873–1920] see under *mask*.

Kuhn's tube (kōōnz) [Franz *Kuhn*, Berlin surgeon, 1866–1929] see under *tube*.

Kühne's methylene blue (ke'nez) [Heinrich *Kühne*, German histologist] see *methylene blue*.

Kühne's muscular phenomenon, terminal plates, spindle (ke'nez) [Wilhelm Friedrich (Willy) *Kühne*, German physiologist, 1837–1900] see *Porret's phenomenon*, under *phenomenon*, see under *plate*, and see *muscle spindle*, under *spindle*.

Kuhnt's illusion (kōōnts) [Hermann *Kuhnt*, German ophthalmologist, 1850–1925] see under *illusion*.

kukuruku (koo'koo-roo'koo) a disease of the Kukuruka division of Nigeria of unknown etiology, marked by fever and jaundice; clinically and pathologically it resembles yellow fever.

Kulchitsky's cells (kool-chits'kēz) [Nicolai K. *Kulchitsky*, Russian histologist, 1856–1925] see under *cell*.

Kulenkampff's anesthesia (koo'len-kahmpfs) [Dietrich *Kulenkampff*, German surgeon, born 1880] see under *anesthesia*.

Külz's cast (cylinder), test (kiltsez) [Rudolph Eduard *Külz*, German physician, 1845–1895] see *coma casts*, under *cast*, and see under *tests*.

kumiss (koo'mis) koumiss.

Kümmell's disease (spondylitis) (kim'elz) [Hermann *Kümmell*, surgeon in Hamburg, 1852–1937] see under *disease*.

Kümmell-Verneuil disease (kim'el-ver'na'e) [Hermann *Kümmell*; Aristide August Stanislas *Verneuil*, French surgeon, 1823–1895] Kümmell's disease.

kumyss (koo'mis) koumiss.

Küntscher nail (kint'sher) [Gerhard *Küntscher*, German surgeon, born 1902] see under *nail*.

Kupffer's cells (koop'ferz) [Karl Wilhelm von *Kupffer*, German anatomist, 1829–1902] see under *cell*.

kupramite (ku'prah-mīt) a gas mask adsorbent for ammonia fumes.

Kupressoff's center (koo-pres'ofs) [Ivan *Kupressoff*, Russian physician of the 19th century] micturition center; see under *center*.

Kurloff's (Kurlov's) bodies (koo'rlofs) [Mikhail Georgievich *Kurloff*, Russian physician, 1859–1932] see under *body*.

Kurthia (kur'the-ah) [Heinrich *Kurth*, German bacteriologist, 1860–1901] a genus of microorganisms of the family Brevibacteriaceae, order Eubacteriales, made up of long rods with rounded

- ends, found in decomposing material. It includes three species, *K. besson'ii*, *K. varia'bilis*, and *K. zop'fii*.
- kuru** (koo'roo) a chronic, progressive, uniformly fatal nervous system disorder caused by a slow virus and transmissible to subhuman primates. It is found only among the Fore and neighboring peoples of New Guinea and is thought to be associated with cannibalism. The chief symptoms are truncal and limb ataxia, a shivering-like tremor, and dysarthria, but strabismus and extrapyramidal symptoms may also be found. Pathologically, the brain shows the changes of the spongiform encephalopathies: neuronal loss, astrogliosis, and status spongiosus; amyloid plaques are also present in about two thirds of the cases.
- Kurunegala ulcer** (koo'roo-na-gah'lah) [the name of a district in Ceylon] pyosis tropica.
- Küss' experiment** (kes) [Emil Küss, German physiologist, 1815–1871] see under *experiment*.
- Kussmaul's aphasia**, etc. (koo'smowlz) [Adolph Kussmaul, German physician, 1822–1902] see under *aphasia*, *disease*, *paralysis*, *pulse*, *respiration*, and *sign*.
- Kussmaul-Kien respiration** (koo'smowl-kēn) [Adolf Kussmaul; Alphonse M. J. Kien, German physician] air hunger; see under *hunger*.
- Kussmaul-Landry paralysis** (koo'smowl-lan'dre) [Adolf Kussmaul; Jean Baptiste Octave Landry, French physician, 1826–1865] acute febrile polyneuritis.
- Kussmaul-Maier disease** (koo'smowl-mi'er) [Adolf Kussmaul; Rudolf Maier, German physician, 1824–1888] periarteritis nodosa.
- Küstner's law, sign** (kist'nerz) [Otto Ernst Küstner, gynecologist in Breslau, 1850–1931] see under *law* and *sign*.
- Kutrol** (ku'trol) trademark for a preparation of urogastrone.
- kuttarosome** (kut-tar'o-sōm) [Gr. *kyttaros* cell of a honeycomb + *soma* body] a structure at the neck of a retinal cone composed of a series of parallel bars.
- kv.** kilovolt.
- kvp.** kilovolt peak.
- kw.** kilowatt.
- kwashiorkor** (kwash-e-or'kor) [local name in Gold Coast, Africa, "displaced child"] a syndrome produced by severe protein deficiency, characterized by retarded growth, changes in skin and hair pigment, edema, and pathologic changes in the liver, including fatty infiltration, necrosis, and fibrosis. Other findings are peevish mental apathy, atrophy of the pancreas, gastrointestinal disorders, anemia, low serum albumin, and dermatoses. The skin may exhibit darkened, thickened patches on limbs and back which may desquamate, leaving pink, almost raw surfaces of a pellagroid appearance. First reported from Africa, kwashiorkor is now known to occur throughout the world, but mainly in the tropics and subtropics, and is now considered to be related to marasmus.
- marasmic k.**, a condition in which there is deficiency of both calories and protein, with severe tissue wasting, loss of subcutaneous fat, and usually dehydration.
- kwaski** see under *shakes*.
- Kwell** (kwel) trademark for preparations of lindane.
- kw.-hr.** kilowatt-hour.
- kyano-** for words beginning thus, see also those beginning *cyano-*.
- kyanophane** (ki'ah-no-fān) [Gr. *kyanos* blue + *phainein* to ap-

pear] a supposed bluish pigment from the oil globules of the retinal cones.

- kyestein** (ki-es'te-in) a film sometimes seen on stale urine, formerly thought a sign of pregnancy.
- kyllosis** (kil-lo'sis) [Gr. *kyllosis* a crippling] clubfoot, or other deformity of the foot.
- kymatism** (ki'mah-tizm) myokymia.
- kymocyclograph** (ki'mo-si'klo-graf) an apparatus for recording movement.
- kymogram** (ki'mo-gram) a tracing or other graphic record made by a kymograph.
- kymograph** (ki'mo-graf) [Gr. *kyma* wave + *graphein* to record] an instrument for recording variations or undulations, arterial or other.
- kymography** (ki-mog'rah-fe) the use of the kymograph.
- roentgen k.**, roentgenkymography.
- kymotrichous** (ki'mo-trik'us) [Gr. *kyma* wave + *thrūx* hair] having wavy hair.
- Kynex** (ki'neks) trademark for preparations of sulfamethoxypyridazine.
- kynocephalus** (ki'no-seff'ah-lus) [Gr. *kyōn* dog + *kephalē* head] a human fetus with a head resembling that of a dog.
- kynurenin** (kin'u-re'nin) kynurenine.
- kynurenine** (ki'nu-ren'in) [Gr. *kyon* dog + L. *ren* kidney] a crystalline nitrogenous base, first isolated from dog urine; $\text{NH}_2\text{C}_6\text{H}_4\text{CO}\cdot\text{CH}_2\text{CH}(\text{NH}_2)\text{COOH}$ (3-anthraniloylalanine), a metabolite of tryptophan found in microorganisms and in the urine of normal animals, and a precursor of kynurenic acid. It is also an intermediate in the conversion of tryptophan to niacin, a member of the vitamin B complex.
- kyogenic** (ki'o-jen'ik) [Gr. *kyēsis* pregnancy + *gennan* to produce] pregnancy producing: a term used by Wiesner to describe the anterior pituitary hormone which stimulates the corpora lutea to secrete progesterin.
- kyphos** (ki'fos) [Gr. "a hump"] the convex prominence of the spine in kyphosis.
- kyphoscoliosis** (ki'fo-sko'lle-o'sis) [*kyphosis* + *scoliosis*] backward and lateral curvature of the spinal column, as in vertebral osteochondrosis (Scheuermann's disease).
- kyphosis** (ki'fo'sis) [Gr. *kyphōsis* humpback] abnormally increased convexity in the curvature of the thoracic spine as viewed from the side; hunchback. Cf. *lordosis* and *scoliosis*.
- k. dorsa'lis juveni'lis**, **juvenile k.**, **Scheuermann's k.**, see *osteochondrosis*.
- kyphotic** (ki-fo'tik) affected with or pertaining to kyphosis.
- kyphotone** (ki'fo-tōn) [Gr. *kyphos* a hump + *tonos* brace] an apparatus for reducing deformity in Pott's disease.
- kyrin** (ki'rin) a peptide obtained by Siegfried by the partial hydrolysis of proteins and assumed to be a fundamental protein unit.
- kyrtorrhachic** (ker'to-rak'ik) [Gr. *kyrtos* curved, convex + *rachis* spine] having a vertebral column in which the lumbar curvature is convex anteriorly. Cf. *koilorrhachic* and *orthorrhachic*.
- kysth-**, **kystho-** [Gr. *kysthos* vagina] a combining form formerly used to designate reference to the vagina; for words beginning thus, see those beginning *colpo-*.
- kyto-** [Gr. *kytos* hollow vessel] for words beginning thus, see those beginning *cyto-*.

L

- L.** 1. an abbreviation for *Latin*, *Lactobacillus*, *left*, *light sense*, *libra* (pound, balance), *liter*, *length*, *limes* (boundary), *lumbar* (in vertebral formulas), and *coefficient of induction*. 2. Ehrlich's symbol for *lethal* (fatal).
- L_o** Ehrlich's symbol for *limes nul*, i.e., a toxin-antitoxin mixture which is completely neutralized and therefore will not kill an animal.
- L+** Ehrlich's symbol for *limes tod*, i.e., a toxin-antitoxin mixture which contains one fatal dose in excess and which will kill the experimental animal.
- L-** (el-) chemical prefix (small capital) which specifies that the substance corresponds in configuration to the standard substance L-glyceraldehyde, i.e., belongs to the same configurational family. In carbohydrate nomenclature, the symbol refers to the configurational family of the *highest numbered* asymmetric carbon atom, as in L-rhamnose. In amino acid nomenclature, under rules adopted in 1947, the symbol refers to the configurational family to which the *lowest numbered* asymmetric carbon atom, i.e., the 2-carbon atom or α -carbon atom, belongs, as in L-threonine. This prefix does not indicate direction of rotation, as does *l*. Opposed to D-.
- L_e-** (el-sub-je) see L-; this chemical prefix (with the subscript *g*) is occasionally used to emphasize that the rules of carbohydrate

nomenclature are being employed. The subscript refers to the standard monosaccharide, glyceraldehyde. Opposed to D_g-.

- L_e-** (el-sub-es) see L-; this chemical prefix (with the subscript *s*) is used where needed in amino acid nomenclature to avoid possible confusion with carbohydrate nomenclature, as in L_e-threonine. The subscript refers to the standard amino acid, serine. Opposed to D_s-.

1. liter.

- l-** (el) 1. chemical abbreviation for *levo-* (i.e., left or counterclockwise) with reference to the direction in which the plane of polarized light is rotated when passed through a solution of the substance or through the substance itself if a liquid; opposed to *d-* (*dextro*). Cf. L-. 2. when used with one of the additional symbols (+) or (-), especially in amino acid nomenclature in the literature from 1923 until 1947 or a little later, the prefix refers to the configurational family to which the 2-carbon atom or α -carbon atom of the amino acid belongs, and the actual direction of the rotation in a specified solvent is indicated by the plus or minus sign, as in *l*(+)-alanine; opposed to *d*(-) or *d*(+)-, as in *d*(-)-alanine or *d*(+)-cystine.

- λ** lambda, the eleventh letter of the Greek alphabet; symbol for *decay constant*.

La chemical symbol for *lanthanum*.

L. & A. light and accommodation (reaction of pupils).

lab [Ger.] rennin.

Labarraque's solution (lab'ah-raks') [Antoine Germain Labarraque, French chemist, 1777-1850] see under *solution*.

Labbé's triangle, vein (lab-āz') [Léon Labbé, French surgeon, 1832-1916] see under *triangle*, and see *vena anastomatica superior*.

label (la'b'l) something that identifies; an identifying mark, tag, etc. **radioactive l.**, radioactive isotopes introduced into tissue to identify the role of the normal element in metabolism.

labetalol hydrochloride (lah-bet'ah-löl) chemical name: 2-hydroxy-5-[1-hydroxy-2-[(1-methyl-3-phenylpropyl)amino] ethyl]-benzamide monohydrochloride; a beta-adrenergic blocking agent with some alpha-adrenergic blocking activity, C₁₉H₂₄N₂O₃·HCl.

labia (la'be-ah) [L.] plural of *labium*.

labial (la'be-al) [L. *labialis*] pertaining to a lip, or labium.

labialism (la'be-ah-lizm") defective speech, with use of labial sounds.

labially (la'be-al-e) toward the lips.

labichorea (la'be-ko-re'ah) labiochorea.

Labidognatha (lab'i-dog'nah-thah) a suborder of spiders (order Araneae), including the medically important families, Theridiidae and Loxoscelidae.

labile (la'b'il) [L. *labilis* unstable, from *labi* to glide] 1. gliding; moving from point to point over the surface; unstable; fluctuating. 2. chemically unstable. **heat l.**, thermolabile.

lability (lah-bil'i-te) the quality of being labile. In psychiatry, emotional instability; a tendency to show alternating states of gaiety and somberness.

labio- (la'be-o) [L. *labium* lip] a combining form denoting relationship to a lip, especially to the lips of the mouth.

labioalveolar (la'be-o-al-ve'o-lar) 1. pertaining to the lip and dental alveoli. 2. pertaining to the labial side of a dental alveolus.

labiocervical (la'be-o-ser'vi-kal) 1. pertaining to the labial surface of the neck of an anterior tooth. 2. labiogingival.

labiochorea (la'be-o-ko-re'ah) [L. *labium* lip + *chorea*] a choreic stiffening of the lips in speech, with stammering.

labioclination (la'be-o-kli-na'shun) deviation of an anterior tooth from the vertical, in the direction of the lips.

labiodental (la'be-o-den'tal) pertaining to the lips and teeth.

labiogingival (la'be-o-jin'ji-val) pertaining to or formed by the labial and gingival walls of a tooth cavity.

labioglossolaryngeal (la'be-o-glos'o-lah-rin'je-al) [L. *labium* lip + Gr. *glōssa* tongue + *larynx*] pertaining to the lips, tongue, and larynx.

labioglossopharyngeal (la'be-o-glos'o-fah-rin'je-al) pertaining to the lips, tongue, and pharynx.

labiograph (la'be-o-graf'i) [L. *labium* lip + Gr. *graphein* to record] an instrument for recording the motions of the lips in speaking.

labioincisal (la'be-o-in-si'zal) pertaining to or formed by the labial and incisal surfaces of a tooth.

labiolingual (la'be-o-ling'gwal) 1. pertaining to the lips and the tongue. 2. pertaining to the labial and lingual surfaces of an anterior tooth.

labiologic (la'be-o-loj'ik) pertaining to labiology.

labiology (la'be-o-l'o-je) the study of the movements of the lips in speaking and singing.

labiomental (la'be-o-men'tal) pertaining to the lip and chin.

labiomycosis (la'be-o-mi-ko'sis) [L. *labium* lip + Gr. *mykēs* fungus] any disease of the lips due to a fungus, such as perlèche and thrush.

labionasal (la'be-o-na'zal) pertaining to the lip and nose.

labiopalatine (la'be-o-pal'ah-tin) pertaining to the lip and palate.

labioplacement (la'be-o-plās'ment) displacement of a tooth toward the lip.

labioplasty (la'be-o-plas'te) [L. *labium* lip + Gr. *plassein* to mold] cheiloplasty.

labiotenaculum (la'be-o-te-nak'u-lum) [L. *labium* lip + *tenaculum*] an instrument for holding the lip.

labioversion (la'be-o-ver'zhun) displacement of a tooth labially from the line of occlusion.

labium (la'be-um), pl. *la'bia* [L.] a fleshy border or edge; used in anatomical nomenclature as a general term to designate such a structure. In the plural, often used alone to designate the *labia majora* and *minora pudendi*. Called also *lip*. See also *limbus* and *margo*. 1. **ante'rius orific'i'i exter'ni u'teri**, 1. anterior ostii uteri. 1. **ante'rius os'tii pharyn'gei tu'bae auditi'vae**, the anterior lip of the pharyngeal opening of the auditory tube. 1. **ante'rius os'tii u'teri** [NA], anterior lip of ostium of uterus: the anterior projection of the cervix into the vagina; it is shorter and thicker than the posterior lip. Called also 1. **anterior orificii externi uteri**. 1. **cer'ebri**, an edge of a deep

sulcus, e.g., the lips of the calcarine sulcus. 1. **exter'num criss'tae ili'acae** [NA], the outer margin or external lip of the iliac crest. 1. **infer'ius o'ris** [NA], the lower lip: the fleshy margin of the inferior border of the mouth. 1. **infer'ius val'vulae co'li**, the inferior lip of the valve between the ileum and cecum. 1. **inter'num criss'tae ili'acae** [NA], the inner margin or internal lip of the iliac crest. 1. **latera'le lin'ee as'perae fem'oris** [NA], lateral lip of linea aspera of femur: the outer part of the linea aspera, which becomes continuous with the gluteal tuberosity, and ends at the greater trochanter. 1. **lim'bi tympan'icum lam'inae spira'lis** [NA], the tympanic lip of the limb of the spiral lamina: the lower border of the internal spiral sulcus, formed by the lower extremity of the limbus laminae spiralis; called also 1. **tympanicum laminae spiralis**. 1. **lim'bi vestibula're lam'inae spira'lis** [NA], the vestibular lip of the limb of the spiral lamina: the upper border of the internal spiral sulcus, formed by the upper extremity of the limbus laminae spiralis; called also 1. **vestibulare laminae spiralis**. 1. **ma'jus puden'di** [NA], pl. *la'bia majo'ra puden'di*, the greater lip of the pudendum: an elongated fold running downward and backward from the mons pubis in the female, one on either side of the median pudendal cleft. 1. **mandibula're**, 1. inferior oris. 1. **maxilla're**, 1. superius oris. 1. **media'le lin'ee as'perae fem'oris** [NA], medial lip of linea aspera of the femur: the inner part of the linea aspera, which becomes continuous with the intertrochanteric line. 1. **mi'nus puden'di** [NA], pl. *la'bia mino'ra puden'di*, lesser lip of the pudendum: a small fold of skin located on either side, between the labium majus and the opening of the vagina. 1. **la'bia o'ris** [NA], the lips: the fleshy upper and lower margins of the mouth. 1. **poste'rius orific'i'i exter'ni u'teri**, 1. posterior ostii uteri. 1. **poste'rius os'tii pharyn'gei tu'bae auditi'vae**, the posterior lip of the pharyngeal opening of the auditory tube. 1. **poste'rius os'tii u'teri** [NA], posterior lip of ostium of the uterus: the posterior projection of the cervix into the vagina; called also 1. **posterior orificii externi uteri**. 1. **supe'rius o'ris** [NA], the upper lip: the fleshy margin of the superior border of the mouth. 1. **supe'rius val'vulae co'li**, the superior lip of the valve between the ileum and cecum. 1. **tympan'icum lam'inae spira'lis**, 1. limbi tympanicum laminae spiralis. 1. **ure'thrae**, either lateral margin of the external urinary meatus. 1. **vestibula're lam'inae spira'lis**, 1. limbi vestibulare laminae spiralis. 1. **voca'le**, a projection at each side of the rima glottidis.

labor (la'bor) [L. "work"] the function of the female organism by which the product of conception is expelled from the uterus through the vagina to the outside world. Labor may be divided into three stages: The first (the stage of dilatation) begins with the onset of regular uterine contractions and ends when the os is completely dilated and flush with the vagina, thus completing the birth canal. The second stage (stage of expulsion) extends from the end of the first stage until the expulsion of the infant is completed. The third stage (placental stage) extends from the expulsion of the child until the placenta and membranes are expelled and contraction of the uterus is completed. Called also *accouchement*, *child-birth*, *confinement*, *delivery*, *parturition*, and *travail*. See also *labor pains*, under *pain*. **artificial l.**, induced 1. **atonic l.**, labor protracted because of atony of the uterus. **complicated l.**, labor in which cephalopelvic disproportion, hemorrhage, or some other untoward event occurs. **delayed l.**, postponed 1. **dry l.**, labor in which the amniotic fluid escapes before the onset of uterine contractions. **false l.**, see *false pains*. **immature l.**, labor taking place between the sixteenth and the twenty-eighth week of pregnancy. **induced l.**, labor brought on by mechanical or other extraneous means, usually by the intravenous injection of oxytocin. **instrumental l.**, labor in which birth of the baby is facilitated by the use of instruments. **mimetic l.**, see *false pains*. **missed l.**, retention of a dead fetus in the uterus beyond the period of normal gestation. **multiple l.**, labor in which two or more infants are born. **obstructed l.**, labor hindered by some mechanical obstruction, such as a contraction in some region of the parturient canal or a tumor. **post-mature l.**, **postponed l.**, labor occurring two weeks or more after the expected date of confinement. **precipitate l.**, labor which occurs with undue rapidity. **premature l.**, expulsion of a viable infant before the normal end of gestation, usually applied to interruption of pregnancy between the twenty-eighth and the thirty-seventh week. **premature l.**, **habitual**, delivery occurring in at least three successive pregnancies at about the same stage of development and prior to completion of the full gestation period. **prolonged l.**, **protracted l.**, labor prolonged beyond the ordinary 18 hour limit. **spontaneous l.**, labor in which no artificial aid is required.

laboratorian (lab'o-rah-to're-an) a person who devotes himself to laboratory work, as distinguished from a clinician.

laboratory (lab'o-rah-to're) [L. *laboratorium*] a place equipped for performing experimental work or investigative procedures, for the preparation of drugs, chemicals, etc. **clinical l.**, a laboratory for examination of materials derived from the human body for the purpose of providing information on diagnosis, prevention, or treatment of disease.

Laborde's forceps, method, sign (test) (lah-bordz') [Jean Baptiste Vincent Laborde, French physician, 1830-1903] see under *forceps* and *method*, and see *Cloquet's needle sign*, under *sign*.

labra (la'brah) [L.] plural of *labrum*.

labrale (lah-bra'le) an anthropometric landmark on the border of the lip. **1. inferius**, the lowest point, in the midsagittal plane, on the vermilion border of the lower lip. **1. superius**, the highest point, in the midsagittal plane, on the vermilion border of the upper lip.

labrocyte (lab'ro-sit) [Gr. *labros* greedy + *-cyte*] a mast cell.

labrum (la'brum), pl. *la'bra* [L.] [NA] a general term for an edge, brim, or lip. **1. acetabula're** [NA], acetabular lip: a ring of fibrocartilage attached to the rim of the acetabulum of the hip bone, increasing the depth of the cavity; called also *1. glenoidale articulationis coxae*. **1. glenoida'le** [NA], glenoid lip: a ring of fibrocartilage attached to the rim of the glenoid cavity of the scapula, increasing the depth of the cavity; called also *1. glenoidale articulationis humeri*. **1. glenoida'le articulationis coxae**, *1. acetabulare*. **1. glenoida'le articulationis humeri**, *1. glenoidale*.

laburinine (lah-bu'rī-nēn) cytosine.

labyrinth (lab'i-rin-th) [Gr. *labyrinthos*] a system of intercommunicating cavities or canals, especially that constituting the internal ear (auris internus [NA]). **1. acoustic l.**, cochlea, def. 2. **bony l.**, the bony part of the internal ear; called also *labyrinthus osseus* [NA] or *osseus l.* **cortical l.**, a network of tubules and blood vessels in the cortex of the kidney. **endolymphatic l.**, *labyrinthus membranaceus*. **1. of ethmoid, ethmoidal l.**, *labyrinthus ethmoidalis*. **Ludwig's l's**, spaces between Bertin's columns and the cortical arches. **membranous l.**, a system of communicating epithelial sacs and ducts within the bony labyrinth; see *labyrinthus membranaceus* [NA]. **nonacoustic l.**, statokinetic *1.* **olfactory l.**, *labyrinthus ethmoidalis*. **osseous l.**, bony *1.* **perilymphatic l.**, spatium perilymphaticum. **statokinetic l.**, the vestibule and semicircular canals; called also *nonacoustic l.*

labyrinthectomy (lab'i-rin-thek'to-me) [*labyrinth* + Gr. *ektomē* excision] excision of the labyrinth of the ear.

labyrinthi (lab'i-rin'thi) [L.] plural of *labyrinthus*.

labyrinthine (lab'i-rin'thin) pertaining to a labyrinth.

labyrinthitis (lab'i-rin-thi'tis) inflammation of the labyrinth; otitis interna. **circumscribed l.**, that due to erosion of the bony wall of a semicircular canal with exposure of the membranous labyrinth.

labyrinthodont (lab'i-rin'tho-dont) [Gr. *labyrinthos* labyrinth + *odontos* tooth] an extinct amphibian in which the enamel of the tooth was completely invaginated into the dentin; labyrinthodonts were the first terrestrial vertebrates and the ancestors of modern amphibian and reptiles.

labyrinthotomy (lab'i-rin-thot'o-me) [*labyrinth* + Gr. *temnein* to cut] surgical incision into the labyrinth.

labyrinthus (lab'i-rin'thus), pl. *labyrin'thi* [L.; Gr. *labyrinthos*] **1.** [NA] a general term for a system of intercommunicating cavities or canals. **2.** the internal or inner ear (auris interna [NA]). Called also *labyrinth*. **1. ethmoida'lis** [NA], the ethmoidal labyrinth: either of the paired lateral masses of the ethmoid bone, consisting of numerous thin-walled cellular cavities, the ethmoidal cells. **1. membrana'ceus** [NA], the membranous labyrinth: a system of communicating epithelial sacs and ducts, including the endolymphatic duct, utricle, saccule, and semicircular ducts, lodged within the bony labyrinth and containing endolymph. **1. os'seus** [NA], the bony part of the internal ear; the bony or osseous labyrinth.

lac (lak), pl. *lac'ta*, gen. *lac'tis* [L.] **1.** milk. **2.** any milklike medicinal preparation. **3.** a resinous material collected from various tropical trees, secreted by an insect, *Laccifer lacca* Kerr (Coccidae), and used in the preparation of shellac. **1. femini'num**, the secretion of the human mammary gland. **1. fer-men'tum**, koumiss. **1. sulfu'ris**, precipitated sulfur. **1. vacci'num**, cow's milk. **1. virgina'le** ["virgin's milk"], a strained liquor of litharge; an ancient remedial wash, variously prepared, but not entirely obsolete.

laccase (lak'ās) *p*-diphenol oxidase.

Laccifer (lak'si-fer) a genus of insects, including *L. lacca* Kerr (Coccidae), which is the source of lac and shellac.

lacerable (las'er-ah-b'l) capable of becoming lacerated.

lacerated (las'er-āt'ed) [*L. lacerare* to tear] torn; mangled; wounded by a jagged instrument.

laceration (las'er-a'shun) [*L. laceratio*] **1.** the act of tearing. **2.** a torn, ragged, mangled wound.

lactertofulvin (lah-ser'to-ful'vin) [*L. lacertus* lizard + *fulvus* yellow] a yellow coloring matter from the skin of certain reptiles.

lacertus (lah-ser'tus) [L., "lizard," because of a fancied resemblance] [NA] a general term for certain fibrous attachments of muscles. **1. cor'dis**, see *trabeculae carnae cordis*. **1. fibro'sus mus'culi bicip'itis bra'chii**, aponeurosis musculi bicipitalis brachii. **1. me'dius Weitbrech'tii**, *1. me'di-*

us **Wrisber'gii**, ligamentum longitudinale anterius. **1. mus'culi rec'ti latera'lis bul'bi** [NA], the check ligament of the lateral rectus muscle, which is attached to the lateral palpebral ligament.

Lachesis (lak'ē-sis) [L.; Gr. *Lachesis* one of the three Fates] a genus of venomous snakes of Central and South America. *L. mu'ta* is the bushmaster, or surucucu.

lachry- (lak're) for words beginning thus, see those beginning *lacri-*.

lacinia (lah-sin'e-ah) [L. "fringe"] (obs.) fimbria, def. 1.

lacmus (lak'mus) [Ger. *Lackmus*] litmus.

lacrima (lak'rī-mah), pl. *lacrimae* [L.] see *tears*.

lacrimae (lak'rī-me) [L.] plural of *lacrima*; the watery secretion of the lacrimal glands. See *tears*.

lacrimal (lak'rī-mal) [*L. lacrimalis*; *lacrima* tear] pertaining to the tears.

lacrimalin (lak-rim'ah-lin) a substance obtained from the secretion of the lacrimal gland, said to have induced a flow of tears.

lacrimase (lak'rī-mās) an enzyme obtained from the secretion of the lacrimal gland; possibly identical to lysozyme.

lacrimation (lak'rī-ma'shun) [*L. lacrimatio*] the secretion and discharge of tears.

lacrimator (lak'rī-ma'tor) a substance which increases the flow of tears, such as certain gases.

lacrimatory (lak'rī-mah-to're) causing a flow of tears.

lacrimonasal (lak'rī-mo-na'zal) pertaining to the lacrimal sac and the nose.

lacrimotome (lak'rī-mo-tōm) a knife for incising the lacrimal sac or duct.

lacrimotomy (lak'rī-mot'o-me) [*L. lacrima* tear + Gr. *tomē* a cutting] incision of the lacrimal sac or duct.

lactacidemia (lak-tas'i-de'me-ah) [*lactic acid* + Gr. *haima* blood + *-ia*] an excess of lactic acid in the blood, as after violent exercise.

lactacidin (lak-tas'i-din) a food preservative composed of lactic and salicylic acids.

lactacidogen (lak'tah-sid'o-jen) [*lactic acid* + Gr. *gennan* to produce] a term used by Embden to designate the hexose phosphate precursor of lactic acid in muscle contraction.

lactaciduria (lak-tas'i-du're-ah) [*lactic acid* + Gr. *ouron* urine + *-ia*] the presence of lactic acid in the urine.

lactagogue (lak'tah-gog) [*L. lac* milk + Gr. *agōgos* leading] galactagogue.

lactalbumin (lak'tal-bu'min) an albumin found in milk and resembling serum albumin.

lactam (lak'tam) a cyclic amide formed from aminocarboxylic acids by the elimination of water. They are isomeric with lactims, which are enol forms of lactams.

β-lactamase (ba'tah-lak'tah-mās) either of two enzymes: β-lactamase I is penicillinase; β-lactamase II is cephalosporinase.

lactamide (lak-tam'id) the amide of lactic acid, CH₃CHOH·CONH₂.

Lactarius (lak-ta're-us) a genus of fungi of the order Agaricales, series Homobasidiomycetidae, having white spores, and including both edible and poisonous species. When they are cut or broken, a white or milk-like substance is discharged. *L. deliciosus*, an edible species, is the source of lactarviolins.

lactarviolin (lak'tah-ro-vi'o-lin) chemical name: 1-formyl-4-methyl-7-isopropenylazalone. A pigment, C₁₅H₁₄O, isolated from the fungus *Lactarius deliciosus*.

lactase (lak'tās) β-galactosidase.

lactate (lak'tāt) **1.** any salt of lactic acid. In biochemistry, the terms lactate and lactic acid are used interchangeably, even though lactate technically refers to the negatively charged ion. **2.** to secrete milk. **ferrous l.**, greenish white crystals or powder, Fe(C₂H₃O₂)₂, used orally as a hematinic. **lactic acid l.**, a substance formed by concentration by the boiling of lactic acid; used in the preparation of sodium lactate (def. 2).

lactation (lak-ta'shun) [*L. lactatio*, from *lactare* to suckle] **1.** the secretion of milk. **2.** the period of the secretion of milk. **3.** suckling.

lactational (lak-ta'shun-al) pertaining to lactation.

lacteal (lak'te-al) [*L. lacteus* milky] **1.** pertaining to milk. **2.** any of the intestinal lymphatics that transport chyle; so called because during absorption they are white from absorbed fat. Called also *chyliferous vessels* and *lacteal vessels*.

lactenin (lak'tē-nin) a bacteriostatic substance in milk.

lactescence (lak-tes'ens) [*L. lactescere* to become milky] resemblance to milk; milkiness.

lactic (lak'tik) pertaining to milk; see also under *acid*.
lacticemia (lak'ti-se'me-ah) the presence of lactic acid in the blood.
lactiferous (lak-tif'er-us) [L. *lac* milk + *ferre* to bear] producing or conveying milk.
lactifuge (lak'ti-fūj) [L. *lac* milk + *fugare* to expel] 1. checking or stopping the secretion of milk. 2. an agent that checks the secretion of milk.
lactigenous (lak-tij'ē-nus) [L. *lac* milk + Gr. *gennan* to produce] producing or secreting milk.
lactigerous (lak-tij'er-us) [L. *lac* milk + *gerere* to carry] lactiferous.
lactim (lak'tim) see under *lactam*.
lactimorbus (lak'ti-mor'bus) [L. *lac* milk + *morbus* disease] milk sickness.
lactin (lak'tin) lactose, or milk sugar.
lactinated (lak'ti-nāt'ed) prepared with lactose.
lactivorous (lak-tiv'o-rus) [L. *lac* milk + *vorare* to devour] feeding or subsisting upon milk.
lacto- (lak'to) [L. *lac*, *lactis* milk] a combining form denoting relationship to milk.
Lactobacillaceae (lak'to-bas'il-la'se-e) a family of Schizomycetes (order Eubacteriales), made up of long or short rods or cocci which divide in one plane only, producing chains or tetrads. It includes two tribes, *Lactobacillae* and *Streptococcae*. Formerly called *Lactobacteriaceae*.
Lactobacillae (lak'to-bah-sil'e-e) a tribe of microorganisms of the family Lactobacillaceae, order Eubacteriales, made up of straight or curved rods occurring usually singly or in chains, but sometimes in filaments. It includes five genera, *Catenabacterium*, *Cillobacterium*, *Eubacterium*, *Lactobacillus*, and *Ramibacterium*.
lactobacilli (lak'to-bah-sil'i) plural of *lactobacillus*.
lactobacillin (lak'to-bah-sil'in) a preparation of lactic acid bacteria to be added to milk to cause lactic acid fermentation.
Lactobacillus (lak'to-bah-sil'us) a genus of microorganisms of the tribe Lactobacillae, family Lactobacillaceae, order Eubacteriales, occurring as large gram-positive, anaerobic or microaerophilic bacilli, some of which are considered to be etiologically related to dental caries but are otherwise nonpathogenic. They are separable into 15 species falling into two groups, the homofermentative group producing only lactic acid, and the heterofermentative group producing other end-products of fermentation. **L. acidophilus**, a homofermentative lactobacillus producing the fermented product, acidophilus milk. **L. bifidus**, a homofermentative lactobacillus predominating in the intestinal flora of breast-fed infants. **L. bulgaricus**, a homofermentative lactobacillus producing the fermented product known as Bulgarian or bulgaricus milk.
lactobacillus (lak'to-bah-sil'us), pl. *lactobacilli*. An organism of the genus *Lactobacillus*. **I. of Boas-Oppler**, see under *bacillus*.
Lactobacteriaceae (lak'to-bak-te're-a'se-e) a former name of a family of Schizomycetes now called *Lactobacillaceae*.
lactobutyrometer (lak'to-bu'ti-rom'ē-ter) [*lacto-* + *butyrometer*] an instrument for measuring the proportion of cream in milk.
lactocele (lak'to-sēl) galactocele.
lactochrome (lak'to-krōm) [*lacto-* + Gr. *chrōma* color] riboflavin.
lactoconium (lak-to-ko'ne-um) [*lacto-* + Gr. *kōnis* dust] one of the small particles, of unknown nature, seen with the ultramicroscope in the milk of animals.
lactocrit (lak'to-krit) [*lacto-* + Gr. *kritēs* judge] an instrument for estimating the amount of fat in milk.
lactodensimeter (lak'to-den-sim'ē-ter) lactometer.
lactofarinaceous (lak'to-far'i-na'shus) composed of milk and farinaceous foods; said of a diet.
lactoferrin (lak'to-fer'in) an iron-binding protein found in neutrophils and secretions (milk, tears, saliva, bile, etc.), having bactericidal activity and acting as an inhibitor of colony formation by granulocytes and macrophages.
lactoflavin (lak'to-fla'vin) [*lacto-* + L. *flavus* yellow] riboflavin.
lactogen (lak'to-jen) any substance that enhances lactation, the principal one being prolactin. **human placental I.**, a polypeptide hormone secreted by the placenta that disappears from the circulation immediately after delivery. It has lactogenic, luteotropic, and growth-promoting activity, is immunologically similar to human growth hormone, and inhibits maternal insulin activity during pregnancy. Called also *human somatomammotropin* and *placental growth hormone*. Abbreviated HPL.
lactogenesis (lak'to-jen'ē-sis) the establishment of milk secretion in the mammary glands.
lactogenic (lak'to-jen'ik) stimulating the production of milk.
lactoglobulin (lak'to-glob'u-lin) a globulin occurring in milk.

immune I's, antibodies (immunoglobulins) occurring in the colostrum of animals.

lactometer (lak-tom'ē-ter) [*lacto-* + Gr. *metron* measure] an instrument for ascertaining the specific gravity of milk.

lactone (lak'tōn) 1. an aromatic liquid, $C_{10}H_8O_4$, prepared by distillation from lactic acid. 2. tablets containing lactic acid bacteria; used in preparing buttermilk. 3. a cyclic organic compound in which the chain is closed by ester formation between a carboxyl and a hydroxyl group in the same molecule.

lacto-ovovegetarian (lak'to-o'vo-vej'ē-ta're-an) a vegetarian who includes eggs and dairy products in his diet.

lactophenin (lak'to-fe'nin) a bitter, crystalline powder, $C_6H_4(OC_2H_5) \cdot NH \cdot CO \cdot CH(OH)CH_3$, derived from phenetidin and lactic acid, soluble in 500 parts of cold and in 55 parts of boiling water; formerly used as an analgesic and antipyretic.

lactophosphate (lak'to-fos'fāt) [*lacto-* + L. *phosphas* phosphate] any salt of lactic and phosphoric acids.

lactoprecipitin (lak'to-pre-sip'i-tin) a precipitin which will precipitate the casein of milk.

lactoprotein (lak'to-pro'te-in) a protein derived from milk.

lactorrhea (lak'to-re'ah) galactorrhea.

lactosazone (lak'to-sa'zōn) the phenylsazone of lactose. It is a yellow crystalline substance made by treating lactose with phenylhydrazine and acetic acid. The crystals melt at 200° C. and may be used in identifying lactose.

lactoscope (lak'to-skōp) [*lacto-* + Gr. *skochein* to examine] a device showing the proportion of cream in milk.

lactose (lak'tōs) [L. *saccharum lactis*] [USP] 4-O-β-D-galactopyranosyl-D-glucose. A white crystalline sugar (disaccharide), $C_{12}H_{22}O_{11}$, obtained from milk which on hydrolysis with acids or certain enzymes yields glucose and galactose; used as a tablet and capsule diluent. It is also used as an osmotic laxative and diuretic, and in infant feeding formulas. Lactose, a constituent of milk, is not tolerated in many persons after weaning, owing to reduced lactase activity. Called also *lactin* and *milk sugar*. **beta I.**, a disaccharide obtained by allowing a solution of lactose to crystallize above 93.5° C.; it is sweeter and more soluble than lactose.

lactoserum (lak'to-se'rum) the serum of an animal into which has been injected milk from another animal. Lactoprecipitins in the serum precipitate the casein of milk from an animal of the same species as that from which the milk was taken.

lactoside (lak'to-sid) a compound of glucose and galactose.

lactosidosis (lak'to-si-do'sis), pl. *lactosidoses*. The accumulation of lactoside in tissues. **ceramide I.**, a sphingolipidosis in which ceramide lactoside accumulates in neural and visceral tissues owing to a deficiency of a β-galactosidase; it is characterized by psychomotor deterioration and visceromegaly and by macrocytic anemia, leukopenia, and thrombocytopenia. Called also *ceramide lactoside lipidosis* and *lactosyl ceramidosis*.

lactosum (lak-to'sum) lactose.

lactosuria (lak'to-su're-ah) [*lactose* + Gr. *ouron* urine + *-ia*] the presence of lactose in the urine, observed frequently during lactation.

lactotherapy (lak'to-ther'ah-pe) [*lacto-* + *therapy*] treatment by milk diet.

lactotoxin (lak'to-tok'sin) a toxic substance formed in milk.

lactotrope (lak'to-trōp) an acidophilic cell of the anterior pituitary that secretes prolactin; called also *mammotrope*.

lactotroph (lak'to-trōf) lactotrope.

lactotrophin, lactotropin (lak'to-tro'fin; lak'to-tro'pin) prolactin.

lactovegetarian (lak'to-vej'ē-ta're-an) 1. pertaining to, consisting of, or subsisting on milk (or other dairy products) and vegetables. 2. a vegetarian who uses dairy products in addition to vegetables in his diet.

Lactuca (lak-tu'kah) [L.] a genus of composite-flowered plants, including *L. sativa* L., common lettuce, and *L. virosa* L., the inspissated juice of which was formerly used as a sedative and hypnotic.

lactulose (lak'tū-lōs) chemical name: 4-O-β-D-galactopyranosyl-D-fructose. A synthetic disaccharide, $C_{12}H_{22}O_{11}$, used as a cathartic and to enhance excretion or formation of ammonia in the treatment of portosystemic encephalopathy, including the stages of hepatic precoma and coma.

lacuna (lah-ku'nah), pl. *lacunae* [L.] 1. a small pit or hollow cavity; [NA] a general term for such a compartment within or between other body structures. Called also *lake*. 2. a defect or gap, as in the field of vision (scotoma). **absorption I.**, a pit or groove in developing bone that is undergoing resorption, frequently found to contain osteoclasts; called also *Houwship's I.* **air I.**, a cavity filled with air, such as those occurring in the hairs. **Blessig's I.**, see *Blessig's cysts*. **blood I.**, any one of the blood-filled spaces in the trophoblast of the embryo that serve hemotrophic nutrition. **bone I.**, a small cavity within the bone matrix containing an osteocyte and from which slender canaliculi radiate and penetrate the adjacent lamellae to anastomose with the canaliculi of neighboring lacunae, thus forming a

system of cavities interconnected by minute canals. Called also *osseous l.* **cartilage l.**, any of the small cavities within the cartilage matrix, containing a chondrocyte, or cartilage cell. **cerebral lacunae**, small areas of cerebral ischemic infarction resulting from occlusion of branches of the middle cerebral, posterior cerebral, and basilar arteries; seen in association with hypertension and arteriosclerosis. **great l. of urethra**, fossa navicularis urethrae. **Howship's l.**, absorption l. **intervillous l.**, one of the blood spaces of the placenta in which the fetal villi are found; called also *trophoblastic l.* **lateral lacunae**, **lacu'nae latera'les** [NA], venous meshworks within the dura mater on either side of the superior sagittal sinus; arachnoidal granulations project into them. **l. mag'na**, fossa navicularis urethrae. **lacunae of Morgagni**, lacunae urethrales in the male urethra. **lacu'nae Morga'gnii ure'thrae mulie'bris**, glandulae urethrales urethrae feminae. **l. of muscles**, **l. musculo'rum** [NA], a compartment beneath the inguinal ligament for the passage of the iliopectineal arch and femoral nerve, separated from the lacuna vasorum by the iliopectineal arch. **osseous l.**, bone l. **parasino'id l's**, lacunae laterales. **l. pharyn'gis**, a depression at the pharyngeal end of the auditory tube. **trophoblastic l.**, intervillous l. **lacunae of urethra**, **urethral lacunae**, lacunae urethrales. **urethral lacunae of Morgagni**, lacunae urethrales in the male urethra. **lacu'nae urethra'les** [NA], urethral lacunae; numerous small depressions or pits in the mucous membrane of the urethra, with their openings usually directed distally. Some contain openings of ducts of the urethral glands. **l. vaso'rum** [NA], **l. of vessels**, a space for the passage of the femoral vessels into the thigh, separated from the lacuna musculorum by the iliopectineal arch.

lacunae (lah-ku'ne) [L.] plural of *lacuna*.

lacunar (lah-ku'nar) pertaining to or containing lacunae; of the nature of a lacuna.

lacune (lah-kūn') lacuna.

lacunule (lah-ku'nūl) [L. *lacunula*] a small lacuna.

lacus (la'kus), pl. *la'cus* [L.] lake. **l. lacrima'lis** [NA], lacrimal lake: the triangular space at the medial angle of the eye, where the tears collect.

Ladd-Franklin theory (lad-frangk'lin) {Christine Ladd-Franklin, Baltimore physician, 1847-1930} see under *theory*.

Ladendorff's test (lah'den-dorfs) [August Ladendorff, German physician of the 19th century] see under *tests*.

Ladin's sign (la'dinz) [Louis Julius Ladin, American gynecologist, born 1862] see under *sign*.

lae- for words beginning thus, see also those beginning *le-*.

Laelaps (le'laps) *Echinolaelaps*.

Laennec's catarrh, etc. (la'en-neks') [René Théophile Hyacinthe Laennec, distinguished French physician and inventor of the stethoscope, 1781-1826] see under *catarrh*, *cirrhosis*, *disease*, *pearl*, *sign*, and *thrombus*.

Laetrile (la'ē-tril) trademark for *l*-mandelonitrile-β-glucuronic acid, derived by hydrolysis of amygdalin and oxidation of the resulting *l*-mandelonitrile-β-glucoside; it is alleged to have antineoplastic properties. The term is sometimes used interchangeably with *amygdalin*.

laeve (le'vē) [L. *levis* smooth] nonvillous, as the *chorion laeve*.

laevo- (le'vo) for words beginning thus, see those beginning *levo-*.

Lafora's bodies, disease, sign (lah-fo'rahz) [Gonzalo Rodríguez Lafora, Spanish physician, born 1887] see under *body* and *sign*, and see *myoclonus epilepsii*, under *epilepsy*.

Lag. abbreviation for *L. lage'na*, a flask.

lag (lag) 1. the period of time elapsing between the application of a stimulus and the resulting reaction. 2. the early period following a bacterial inoculation into a culture medium, in which growth or cell division is slow; called also *lag phase*. **nitrogen l.**, the time that elapses after the administration of a protein before there appears in the urine an amount of nitrogen equivalent to that administered.

lagna (lah-je'nah) [L. "flask"] 1. a part of the upper extremity of the ductus cochlearis. 2. the curved, flask-shaped organ of hearing in vertebrates lower than mammals.

lageniform (lah-jen'i-form) [L. *lagna* flask + *form*] flask-shaped.

lagnesis (lag-ne'sis) [Gr. *lagneia* salaciousness] (*obs.*) erotomania.

lagnosis (lag-no'sis) [Gr. *lagnos* salacious, lustful] (*obs.*) excessive sexual desire, especially in the male; satyriasis.

Lagochilascaris minor (lag'o-ki-las'kah-ris mi'nor) a nematode worm found in subcutaneous abscesses of man in Trinidad and Surinam.

lagophthalmos (lag'of-thal'mos) [Gr. *lagōs* hare + *ophthalmos* eye] a condition in which the eye cannot be completely closed.

lagophthalmus (lag'of-thal'mus) lagophthalmos.

Lagrange's operation (lah-grah'zez) [Pierre Félix Lagrange, French ophthalmologist, 1857-1928] sclerectomiridectomy.

la grippe (lah grip') [Fr.] influenza.

laiose (li'ōs) a pale yellow substance, $C_6H_{12}O_6$, found in the urine in diabetes mellitus; it is nonfermentable and levorotatory.

lake (lāk) [L. *lacus*] 1. to undergo separation of hemoglobin from the erythrocytes, a phenomenon sometimes occurring in blood. 2. a circumscribed collection of fluid in a hollow or depressed area. See also *lacuna*. **lacrimal l.**, lacus lacrimalis. **marginal l's**, discontinuous venous lacunae, relatively free of villi, near the edge of the placenta, formed by merging of the marginal portions of the intervillous space with the subchorial lake. Called also *marginal sinus*, because it was thought to be circumferentially continuous and important for placental drainage. **subchorial l.**, the portion of the placenta, relatively free of villi, just beneath the chorionic plate; at the edge of the placenta it becomes continuous with irregular channels to form the marginal lakes. Called also *subchorial space*.

Lake's pigment (lāks') [Richard Lake, English otorhinolaryngologist, 1861-1949] see under *pigment*.

laliatry (lah-li'ah-tre) [Gr. *lalia* talking + *iatry* therapy] the study and treatment of disorders of speech.

lallation (lah-la'shun) [L. *lallatio*] a babbling, infantile form of speech.

Lallemand's bodies (lal-mahz') [Claude François Lallemand, French surgeon, 1790-1854] Bence Jones cylinders.

lalo- (la'lō) [Gr. *lalein* to babble, speak] a combining form denoting relationship to speech, or babbling.

alognosis (la'lōg-no'sis) [lalo- + Gr. *gnōsis* knowledge] the understanding of speech.

laloneurosis (la'lō-nu-ro'sis) [lalo- + *neurosis*] (*obs.*) any nervous speech disorder.

lalopathology (la'lō-pah-thol'o-je) [lalo- + *pathology*] the branch of medicine which deals with disorders of speech.

lalopathy (lah-lop'ah-the) [lalo- + Gr. *pathos* illness] any disorder of speech.

laloplegia (la'lō-ple'je-ah) [lalo- + Gr. *plēgē* stroke] paralysis of the organs of speech.

lalorrhea (la'lō-re'ah) [lalo- + Gr. *rhoia* flow] an abnormal or excessive flow of words.

Lalouette's pyramid (la'lō-oo-ets') [Pierre Lalouette, French physician, 1711-1792] see under *pyramid*.

Lamarck's theory (lah-marks') [Jean Baptiste Pierre Antoine Monet de Lamarck, French naturalist, 1744-1829] see under *theory*.

lambda (lam'dah) [the eleventh letter of the Greek alphabet, Λ or λ] the point at the site of the posterior fontanel where the lambdoid and sagittal sutures meet.

lambdacism, lambdacismus (lam'dah-sizm; lam-dah-siz'mus) [Gr. *lambdakismos*] 1. the substitution of *l* for *r* in speaking. 2. inability to utter correctly the sound of *l*.

lambdoid (lam'doid) [Gr. *lambda* + *eidos* form] shaped like the Greek letter Λ or λ.

lambert (lam'bert) [Johann Heinrich Lambert, German mathematician and physicist, 1728-1777] a unit of brightness, being the brightness of a perfect diffuser emitting one lumen per square centimeter. The unit generally used is one one-thousandth of this and is called a *millilambert*. When the area chosen is one square foot the unit is called a *foot lambert*.

Lambert's cosine law (lam'berts) [Johann Heinrich Lambert] see under *law*.

Lambert's treatment (lam'berts) [Alexander Lambert, American physician, 1861-1939] see under *treatment*.

Lambliia (lam'ble-ah) [Vilem Dusan Lambi, Bohemian physician, 1824-1895] *Giardia*. **L. intestina'lis**, *Giardia lamblia*.

lamblia, lambliosis (lam-bli'ah-sis; lam-ble-o'sis) infection with *Giardia lamblia*.

Lambotte's treatment (lam-bots') [Albin Lambotte, Belgian surgeon] see under *treatment*.

lame (lām) incapable of normal locomotion; deviation from the normal gait.

lame foliacee (lam'fol-yā-sā') [Fr. *lame* plate, lamina; *foliacee* foliaceous] the whorled or concentrically laminated connective tissue structures contained in some nevi; called also *foliate lamina*.

lamel (lam'el) lamella, def. 2.

lamella (lah-mel'ah), pl. *lamel'lae* [L., dim. of *lamina*] 1. a thin leaf or plate, as of bone. 2. a medicated disk or wafer prepared from gelatin, glycerin, and distilled water, and containing a small quantity of an alkaloid, to be inserted under the eyelid. **annulate lamel'lae**, cytoplasmic organelles which consist of parallel arrays of cisternae exhibiting small annuli or circular fenestrae at very regular intervals along their length. **articular l.**, the layer of bone to which an articular cartilage is attached. **basal l.**, circumferential l. **circumferential l.**, one of the layers of bone that underlie the periosteum (*external circumferential l.*) and endosteum (*internal circumferential l.*); called also *basal l.* **concentric l.**, haversian l. **cornoid l.**, a horny plug of parakeratotic tissue penetrating the epidermis; seen in porokeratosis.

tosis of Mibelli. **enamel lamellae**, imperfectly calcified areas of enamel which usually extend from the outer surface through the entire thickness of the enamel and which are visible only in thin sections under the microscope. **endosteal l.**, one of the bony plates lying beneath the endosteum. **ground l.**, interstitial l. **haversian l.**, one of the concentric bony plates surrounding a haversian canal. **intermediate l.**, interstitial l. **interstitial l.**, one of the bony plates that fill in between the haversian systems; called also *ground l.* or *intermediate l.* **osseous l.**, any one of the thin plates into which bone can be divided. **periosteal l.**, **peripheral l.**, the layer of bone lying next to the periosteum. **posterior border l. of Fuchs**, the fibrillar layer of the dilator muscle of the iris; called also *Henle's membrane*. **triangular l.**, the area above the roof of the third ventricle of the brain occupied by the velum interpositum. **vitreous l.**, lamina basalis.

lamellae (lah-mel'e) [L.] plural of *lamella*.

lamellar (lah-mel'ar) pertaining to or resembling lamellae.

lamellasome (lah-mel'ah-sōm) [*lamella* + Gr. *sōma* body] an intracytoplasmic membranous inclusion consisting of a series of invaginated lamellae enclosed by a common membrane. Such structures appear to be confined to unicellular blue-green algae.

lamelliform (lah-mel'i-form) resembling lamellae.

lamellipodia (lah-mel'i-po-de-ah), sing. *lamellipodium* [*lamella* + Gr. *pous* foot + *-ia*] delicate sheetlike extensions of cytoplasm which form transient adhesions with the cell substrate and wave gently, enabling the cell to move along the substrate.

lamellipodium (lah-mel'i-po-de-um) singular of lamellipodia.

lamina (lam'i-nah), pl. *lam'inae* [L.] a thin flat plate, or layer; [NA] a general term for such a structure, or a layer of a composite structure. The term is often used alone to mean the lamina arcus vertebrae. **l. affix'a** [NA], the narrow strip of ependyma overlying the thalamostriate vein and stria terminalis in the central part of the lateral ventricle. **alar l.**, **l. ala'ris** [NA], either of the pair of longitudinal zones of the embryonic neural tube dorsal to the sulcus limitans, from which are developed the dorsal gray columns of the spinal cord and the sensory centers of the brain; called also *alar plate*. **lam'inae al'bae cerebel'li** [NA], white laminae of the cerebellum: the core of white substance that supports a folium of the cerebellar cortex; called also *laminae medullares cerebelli*. **anterior limiting l.**, l. limitans anterior corneae. **l. ante'rior vagi'nae mus'culi rec'ti abdo'minis** [NA], the portion of its sheath lying anterior to the rectus abdominis muscle, formed by aponeuroses of the internal and external oblique above the arcuate line and by the aponeuroses of the internal oblique and transversus, below the arcuate line. **l. ar'cus ver'tebrae** [NA], lamina of the vertebral arch: either of the pair of broad plates of bone flaring out from the pedicles of the vertebral arches and fusing together at the midline to complete the dorsal part of the arch and provide a base for the spinous process. **basal l.**, l. basalis. **basal l. of choroid**, l. basalis choroideae. **basal l. of ciliary body**, l. basalis corporis ciliaris. **l. basa'lis** [NA], the basal lamina: either of the pair of longitudinal zones of the embryonic neural tube ventral to the sulcus limitans, from which are developed the ventral gray columns of the spinal cord and the motor centers of the brain; called also *basal plate*. **l. basa'lis chorioi'deae**, basalis choroideae. **l. basa'lis chorioi'deae** [NA], basal lamina of the choroid: the transparent inner layer of the choroid, in contact with the pigmented layer of the retina. Called also *Bruch's layer* or *membrane*, and *l. vitrea*. **l. basa'lis cor'poris cilia'ris** [NA], basal lamina of the ciliary body: the innermost layer of the ciliary body, continuous with the basal lamina of the choroid. **l. basila'ris duc'tus cochlea'ris** [NA], the wall of the cochlear duct, which separates it from the scala tympani; the spiral organ lies against it. Called also *basilar membrane of cochlear duct*. **Bowman's l.**, l. limitans anterior corneae. **l. cartilag'inis cricoi'deae** [NA], lamina of cricoid cartilage: the broad posterior part of the cricoid cartilage. **l. cartilag'inis latera'lis tu'bae auditi'vae** [NA], lateral lamina of cartilage of auditory tube: the smaller of the two laminae that compose the tubal cartilage; it lies in the lateral wall of the auditory tube. **l. cartilag'inis media'lis tu'bae auditi'vae** [NA], medial lamina of cartilage of auditory tube: the larger of the two laminae that compose the tubal cartilage; it lies in the medial wall of the auditory tube. **l. cartilag'inis thyo'i'deae** [dex'tra et sinis'tra] [NA], lamina of thyroid cartilage: either of the broad plates that form the sides (right and left) of the thyroid cartilage, converging anteriorly to meet at the midline. **l. choriocapilla'ris**, l. choriocapillaris. **l. chorioi'deae epithelia'lis thal'ami**, the ependyma lining the superior surface of the thalamus. **l. chorioi'deae epithelia'lis ventric'uli latera'lis**, the ependyma lining the lateral ventricle of the cerebrum. **l. chorioi'deae epithelia'lis ventric'uli quar'ti**, the ependyma lining the roof of the fourth ventricle of the cerebrum. **l. choriocapilla'ris** [NA], the inner layer of the choroid, composed of a single-layered network of small capillaries; called also *choriocapillaris l.* **l. cine'rea termina'lis** (obs.), l. terminalis hypothalami. **cribriform l.**, fascia cribrosa. **cribriform l. of ethmoid bone**, lamina cribrosa ossis ethmoidalis. **cribriform l. of transverse fascia**, septum femorale. **l.**

cribro'sa os'sis ethmoida'lis [NA], cribriform lamina of ethmoid bone: the horizontal plate of the ethmoid bone that forms the roof of the nasal cavity; it is perforated by many foramina for the passage of the olfactory nerves. Called also *cribriform plate of ethmoid bone*. **l. cribro'sa scle'rae**, the perforated portion of the sclera through which pass the axons of the ganglion cells of the retina; called also *optic foramen of sclera*. **l. of cricoid cartilage**, l. cartilaginis cricoideae. **dental l.**, a thickened epithelial band along the margin of the gum, in the embryo, from which the enamel organs are developed. **dental l., lateral**, a perpendicular layer of cells connecting the developing tooth germ to the dental lamina. **l. deta'lis**, dental l. **l. deta'ta**, labium limbi vestibulare laminae spiralis. **dentogingival l.**, dental l. **descending l. of sphenoid bone**, processus pterygoideus ossis sphenoidalis. **l. du'ra**, a thin layer of compact bone that covers the alveolar bone of the jaws and lines the sockets of the teeth. In dental radiographs, it appears as a thin radiopaque line, and in the tooth sockets it is separated from the images of teeth by the radiolucent image of the periodontal membrane. **elastic l., external**, external elastic membrane. **elastic l. internal**, internal elastic membrane. **l. elas'tica ante'rior** [Bow'mani], l. limitans anterior corneae. **l. elas'tica poste'rior** [Demour'si, Descem'eti], l. limitans posterior corneae. **episcleral l.**, **l. episclera'lis** [NA], loose connective and elastic tissue covering the sclera and anteriorly connecting it with the conjunctiva. **epithelial l.**, **l. epithelia'lis** [NA], the layer of ependymal cells covering the choroid plexus. **l. exter'na os'sium cra'nii** [NA], outer plate of cranial bone: the outer compact layer of bone of the flat bones of the head; called also *outer table of bones of skull*. **external l. of peritoneum**, peritoneum parietale. **external l. of pterygoid process**, l. lateralis processus pterygoidei. **l. fibrocartilag'in ea interpu'bica**, discus interpubicus. **foliate l.**, lame foliacee. **l. fus'ca scle'rae** [NA], a thin layer of loose, pigmented connective tissue on the inner surface of the sclera, connecting it with the choroid. **l. horizonta'lis os'sis palati'ni** [NA], horizontal plate of palatine bone: the horizontal part of the palatine bone, forming the posterior part of the hard palate. **inferior l. of sphenoid bone**, processus pterygoideus ossis sphenoidalis. **l. inter'na os'sium cra'nii** [NA], inner plate of cranial bone: the inner compact layer of bone of the flat bones of the head; called also *inner table of bones of skull*. **internal l. of pterygoid process**, l. medialis processus pterygoidei. **interpubic l.**, fibrocartilaginous, discus interpubicus. **labial l.**, the ectodermal plate that on splitting separates lip from gum, thus forming the labial groove. **labiodental l.**, the thickened ectodermal band from which the dental and labial laminae develop. **labiogingival l.**, labial l. **lateral l. of cartilage of auditory tube**, l. cartilaginis lateralis tubae auditivae. **lateral l. of pterygoid process**, l. lateralis processus pterygoidei. **l. latera'lis cartilag'inus tu'bae auditi'vae**, l. cartilaginis lateralis tubae auditivae. **l. latera'lis proces'sus pterygoi'dei** [NA], lateral lamina of the pterygoid process: either of a pair of bony plates projecting downward from the roots of the greater wings of the sphenoid bone and forming the medial wall of the ipsilateral infratemporal fossa; called also *lateral plate of pterygoid process*. **l. lim'itans ante'rior cor'neae** [NA], anterior limiting lamina: a thin layer of the cornea beneath the outer layer of stratified epithelium, composed of condensed stroma, between it and the substantia propria; called also *l. elastica anterior* [Bowmani] and *Bowman's membrane*. **l. lim'itans poste'rior cor'neae** [NA], posterior limiting lamina: a thin hyaline membrane between the substantia propria and the endothelial layer of the cornea; called also *l. elastica posterior* [Demoursi, Descemeti] and *Descemet's membrane*. **limiting l., anterior**, l. limitans anterior corneae. **limiting l., posterior**, l. limitans posterior corneae. **medial l. of cartilage of auditory tube**, l. cartilaginis medialis tubae auditivae. **medial l. of pterygoid process**, l. medialis processus pterygoidei. **l. media'lis cartilag'inis tu'bae auditi'vae**, l. cartilaginis medialis tubae auditivae. **l. media'lis proces'sus pterygoi'dei** [NA], medial lamina of pterygoid process: either of a pair of bony plates projecting downward from the roots of the greater wings of the sphenoid bone and forming the lateral boundary of the ipsilateral posterior aperture of the nasal cavity and the most posterior part of the lateral wall of the nasal cavity. Called also *medial plate of pterygoid process*. **lami'nae mediastina'les**, the mediastinal layers of the pleura. **lam'inae medulla' res cerebel'li**, laminae albae cerebelli. **l. medulla'ris latera'lis cor'poris stria'ti** [NA], lateral medullary lamina: a layer of fibers running through the globus pallidus and dividing it into a lateral and a medial part. **l. medulla'ris media'lis cor'poris stria'ti** [NA], medial medullary lamina: a layer of fibers separating the putamen from the globus pallidus. **lam'inae medulla' res thal'ami** [NA], medullary layers of the thalamus: bands of white matter in the thalami. Two such bands occur in each thalamus; the lateral medullary lamina covers the lateral aspect of the thalamus, and the medial medullary lamina, with its associated intralaminar nuclei, separates the medial and lateral thalamic nuclei. **l. medulla'ris trans-ver'sa cor'poris quadrigem'ini**, stratum album profundum

corporis quadrigemini. **medullary l., lateral**, l. medullaris lateralis. **medullary l., medial**, l. medullaris medialis. **medullary laminae of thalamus**, laminae medullares thalami. **l. membranae cea tu/bae auditi/vae** [NA], **membranous l. of auditory tube**, the connective tissue lamina that supports the inferior and lateral parts of the auditory tube. **l. mesenterii propria**, the proper layer of the mesentery. **l. modi/oli** [NA], a bony plate extending upward toward the cupula as a continuation of the modiolus and of the bony spiral lamina of the cochlea. **l. muscula/ris muco/sae** [NA], the thin layer of smooth muscle fibers usually found as a part of the tunica mucosa deep to the lamina propria mucosae. **l. muscula/ris muco/sae co/li** [NA], the muscular layer of the tunica mucosa of the colon. **l. muscula/ris muco/sae esoph/agi** [NA], the muscular layer of the tunica mucosa of the esophagus. **l. muscula/ris muco/sae intesti/ni cras/si** [NA], the muscular layer of the tunica mucosa of the large intestine. **l. muscula/ris muco/sae intesti/ni rec/ti**, l. muscularis mucosae recti. **l. muscula/ris muco/sae intesti/ni ten/uis** [NA], the muscular layer of the tunica mucosa of the small intestine. **l. muscula/ris muco/sae rec/ti** [NA], the muscular layer of the tunica mucosa of the rectum. **l. muscula/ris muco/sae ventric/uli** [NA], the muscular layer of the tunica mucosa of the stomach. **orbital l., l. orbita/lis os/sis ethmoida/lis** [NA], a thin plate of bone laterally bounding the ethmoid labyrinth on either side and forming part of the medial wall of the orbit; called also *l. papyracea*. **palatine l. of maxilla**, process palatinus maxillae. **l. papyra/cea**, l. orbitalis ossis ethmoidalis. **l. parietalis pericar/dii** [NA], the parietal layer of the serous pericardium; it lines the fibrous pericardium. **l. parietalis tu/nicae vagina/lis pro/priae tes/tis**, l. parietalis tu/nicae vagina/lis tes/tis [NA], parietal layer of tunica vaginalis of testis: the outer layer of the tunica vaginalis of the testis, separated from the visceral layer by a cavity. **periclaustral l.**, capsula extrema. **perpendicular l. of ethmoid bone**, l. perpendicularis ossis ethmoidalis. **l. perpendicularis os/sis ethmoida/lis** [NA], perpendicular lamina of ethmoid bone: a thin bony plate that descends from the inferior surface of the cribriform plate of the ethmoid bone and participates in forming the nasal septum; called also *perpendicular plate of ethmoid bone*. **l. perpendicularis os/sis palati/ni** [NA], the flat, vertical, bony plate that extends superiorly on either side from the palatine bone; it is surmounted by the orbital and sphenoidal processes. Called also *pars perpendicularis ossis palatini* and *perpendicular plate of palatine bone*. **posterior limiting l.**, l. limitans posterior corneae. **l. posterior vagi/nae mus/culi rec/ti abdo/minis** [NA], the portion of its sheath lying posterior to the rectus abdominis muscle, formed by the transversus abdominis and its aponeurosis at the level of the xiphoid process; below the xiphoid process, to the arcuate line, it is formed by the aponeuroses of the internal oblique and the transversus. **l. pretrachea/lis fas/ciae cervica/lis** [NA], the layer of the cervical fascia that is anterior to the trachea. **l. prevertebra/lis fas/ciae cervica/lis** [NA], the prevertebral fascia: the layer of the cervical fascia that is anterior to the vertebrae; called also *fascia praevertebralis*. **l. profun/da fas/ciae tempora/lis** [NA], the deep portion of the fascia investing the temporal muscle. **l. profun/da mus/culi levato/ris palpebrae superio/ris** [NA], the deeper of the two layers of the levator palpebrae superioris muscle. **proper l. of mesentery**, lamina mesenterii propria. **l. pro/pria membra/nae tym/pani**, the middle fibrous basis of the tympanic membrane, attached, except anterosuperiorly, to the tympanic plate of the temporal bone. **l. pro/pria muco/sae** [NA], proper mucous membrane: the connective tissue coat of a mucous membrane just deep to the epithelium and basement membrane. **l. quadrigem/ina**, l. tecti mesencephali. **l. reticula/ris**, the perforated hyaline membrane which covers the organ of Corti. **rostral l., l. rostra/lis**, the thin terminal part of the rostrum of the corpus callosum passing down in front of the anterior commissure to the anterior perforated substance and the paraterminal gyrus. **l. sep/ti pellu/cidi** [NA], l. of **septum pellucidum**, either of the thin, vertical sheets, separated by a cleftlike space, which constitute the septum pellucidum. **spiral l., bony**, l. spiralis ossea. **spiral l., secondary**, l. spiralis secundaria. **l. spira/lis os/sea** [NA], bony spiral lamina: a double plate of bone winding spirally around the modiolus and dividing the spiral canal of the cochlea incompletely into two parts, the scala tympani and the scala vestibuli; called also *spiral plate*. **l. spira/lis secunda/ria** [NA], secondary spiral lamina: a bony projection on the outer wall of the osseous spiral lamina in the lower part of the first turn of the cochlea. **submucous l. of stomach**, tela submucosa ventriculi. **l. superficialis fas/ciae cervica/lis** [NA], the layer of the cervical fascia that lies deep to the skin. **l. superficialis fas/ciae tempora/lis** [NA], the superficial portion of the fascia investing the temporal muscle. **l. superficialis mus/culi levato/ris palpebrae superio/ris** [NA], the superficial of the two layers of the levator palpebrae superioris muscle. **l. suprachorioi/dea, suprachoroid l., l. suprachoroi/dea** [NA], the outermost layer of the choroid, which connects it with the sclera; called also *suprachoroid layer*. **l. supra-**

neuropor/ica, the part of lamina terminalis caudal to the anterior neuropore of the embryo; it cannot be delimited accurately in human embryos. **tectal l. of mesencephalon**, l. tecti mesenceph/ali [NA], the layer of mingled gray and white substance, in the tectum of the mesencephalon, from which arise the superior and inferior colliculi; called also *quadrigeminal plate*. **terminal l. of hypothalamus**, l. termina/lis hypothal/ami [NA], a thin plate derived from the telencephalon extending upward from the optic chiasm and preoptic recess, and forming the anterior wall of the third ventricle of the cerebrum; called also *terminal plate*. **l. of thyroid cartilage**, l. cartilaginis thyroideae [dextra et sinistra]. **l. tra/gi** [NA], l. tra/gica, the longitudinal curved lamina of cartilage in the tragus of the auricle, at the beginning of the cartilaginous portion of the external acoustic meatus. **ungual laminae**, cristae matricis unguis. **vascular l. of choroid**, l. vasculosa chorioideae. **vascular l. of stomach**, tela submucosa ventriculi. **l. vasculo/sa chorioi/deae, l. vasculo/sa choro/i/deae** [NA], vascular lamina of choroid: the layer of the choroid between the suprachoroid and choriocapillary layers, containing the largest blood vessels; called also *Haller's membrane*. **l. of vertebra**, l. of vertebral arch, l. arcus vertebrae. **l. viscera/lis pericar/dii** [NA], visceral layer of pericardium: the inner layer of the serous pericardium; it is in contact with the heart and the roots of the great vessels; called also *epicardium* [NA alternative], and *visceral pericardium*. **l. viscera/lis tu/nicae vagina/lis pro/priae tes/tis**, l. viscera/lis tu/nicae vagina/lis tes/tis [NA], visceral layer of tunica vaginalis of testis: the inner part of the tunica vaginalis of the testis, firmly attached to the testis and epididymis. **l. vit/rea**, l. basalis chorioideae. **vitreal l., vitreous l.**, Bruch's membrane. **white laminae of cerebellum**, laminae albae cerebelli.

laminae (lam/i-ne) [L.] plural of *lamina*.

laminagram (lam/i-nah-gram) a roentgenogram of a selected layer of the body made by body-section roentgenography.

laminagraph (lam/i-nah-graf) an x-ray machine for making roentgenograms of a layer of tissue at a selected depth.

laminagraphy (lam/i-nag/rah-fe) [L. *lamina* layer + Gr. *graphein* to record] see *body section roentgenography*, under *roentgenography*.

laminar (lam/i-nar) [L. *laminaris*] made up of, or arranged in, laminae.

Laminaria (lam/i-na-re-ah) a genus of seaweeds, the kelps, various species of which are used as sources of alginates; see *laminarin*. The dried stems of *L. digitata* are used to dilate the uterine cervix in induced abortion.

laminarin (lam/i-na/rin) a polysaccharide from seaweed (*Laminaria*) consisting essentially of β -D-glucose residues. **l. sulfate**, the sulfated form, having antilipemic and anticoagulant properties.

laminarinase (lah/mi-na/ri-nās) β -1,3(4)-glucan glucanohydrolase. An enzyme that catalyzes the hydrolysis of laminarin and lichenin to glucose; called also *lichenase*.

laminated (lam/i-nāt/ed) made up of thin layers or laminae; disposed in laminae or layers.

lamination (lam/i-na/shun) a laminated structure or arrangement.

laminectomy (lam/i-nek/to-me) [L. *lamina* layer + Gr. *ektomē* excision] excision of the posterior arch of a vertebra.

laminitis (lam/i-ni/tis) inflammation of a lamina, and especially of the laminae of a horse's foot; see *founder*.

laminogram (lam/i-no-gram) laminagram.

laminography (lam/i-nog/rah-fe) laminagraphy; see *body section roentgenography*, under *roentgenography*.

laminotomy (lam/i-not/o-me) [*lamina* + Gr. *tomē* a cutting] the operation of dividing the lamina of a vertebra.

lamp (lamp) an apparatus for furnishing heat or light. **annealing l.**, an alcohol lamp for heating and purifying gold leaf to be used for filling tooth cavities. **arc l.**, a source of light consisting of gaseous particles from the electrodes of an electric arc which are raised to a temperature of incandescence by an electric current. **Birch-Hirschfeld l.**, a lamp for light treatment in eye diseases. **carbon arc l.**, a lamp that produces an intense white light from an electric arc between carbon rods; used in artificial light therapy. **cold quartz mercury vapor l.**, an ultraviolet radiation lamp having a low vapor pressure, low amperage, high voltage, and a glow discharge; more than 95 per cent of its emission is in the resonance emission line of mercury vapor at 254 m μ . **diagnostic l.**, a light used for observing subtle shadings in weak fluorescence, for external body examinations, observations of tissue fluorescence, identification of vulvar fluorescence, chromatography, etc. **Eldridge-Green l.**, an arrangement of lights for testing color vision. **Finsen l.**, a carbon arc lamp operating at 50 volts and 50 amperes so constructed that radiation is concentrated on an area 1 inch square; a water-cooled quartz system is used to remove caloric radiation and a compression quartz piece to dehemitize the skin. **Finsen-Reya l.**, a modification of the Finsen lamp in which the electrodes are placed at right angles to each other. **Gull-**

strand's slit l., one embodying a diaphragm containing a slitlike opening, by means of which a narrow flat beam of intense light may be projected into the eye. It gives intense illumination so that microscopic study may be made of the conjunctiva, cornea, iris, lens, and vitreous, the special feature being that it illuminates a section through the substance of these structures. Called also *slit-lamp biomicroscope*. **Jesionek l.**, a light for giving artificial sunlight baths. **Kromayer's l.**, a small water-cooled mercury vapor lamp with a quartz window that produces ultraviolet radiation. **Lortet l.**, an electric lamp used in Finsen light treatment. **mercury vapor l.**, a lamp in which the arc is struck in mercury and is enclosed in a quartz burner; used in light therapy. There are two types, the air-cooled and water-cooled (*Kromayer's l.*). **mignon l.** (min'yun), a minute electric light used in cystoscopy, etc. **quartz l.**, a mercury vacuum lamp made of melted quartz glass embedded in a running water-bath, used for applying ultraviolet light treatment. **Simpson l.**, see under *light*. **slit l.**, Gullstrand's slit l. **tungsten arc l.**, an electric arc lamp having tungsten electrodes; it has been used in the treatment of acne, alopecia, etc. **ultraviolet l.**, one which produces ultraviolet rays. **Wood's l.**, see under *light*.

lampas (lam'pas) a swelling and hardening of the mucosa of the hard palate, immediately behind the upper incisors in horses; called also *palatitis*.

Lamprocystis (lam'pro-sis'tis) a genus of microorganisms of the family Thiorhodaceae, suborder Rhodobacteriineae, order Pseudomonadales, made up of spherical to ovoid cells embedded in a common gelatinous capsule. The type species is *L. roseopersicina*.

lamprophonia (lam'pro-fo'ne-ah) [Gr. *lampros* clear + *phōnē* voice + *-ia*] clearness of voice.

lamprophonic (lam'pro-fon'ik) pertaining to or characterized by lamprophonia.

Lamus (la'mus) a former genus name of predatory insects of the family Reduviidae now placed under the genera *Panstrongylus* and *Triatoma*.

lamziekte (lam'zēk-te) [Dutch "lame-sickness"] a disease of cattle in South Africa secondary to bovine osteophagia; the cattle chew putrefying bones and thus absorb the toxin of *Clostridium botulinum*.

lana (lan'ah), pl. and gen. *lan'ae* [L.] wool.

lanatoside C (lah-nat'o-sid) [NF] an easily absorbed and stable glycoside, $C_{40}H_{76}O_{20}$, obtained from the leaves of *Digitalis lanata*. It occurs as colorless or white, odorless crystals or powder, and is used as a cardiotonic where digitalis is recommended.

lanaurin (lan'aw-rin) a pyrrole pigment found in the sweat and urine of sheep which may color the wool yellow.

lance (lans) [L. *lancea*] 1. lancet. 2. to cut or incise with a lancet.

Lancefield classification (lans'fēld) [Rebecca Craighill *Lancefield*, New York bacteriologist, born 1895] see under *classification*.

lanceolate (lan'se-o-lāt) shaped like a lance.

Lancereaux's diabetes (lahn'ser-ōz') [Étienne *Lancereaux*, physician in Paris, 1829–1910] see under *diabetes*.

lancet (lan'set) [L. *lancea lance*] a small pointed and two-edged surgical knife. **abscess l.**, a wide-bladed lancet with one convex and one concave edge. **acne l.**, a form with a narrow blade for puncturing the papules of acne. **gingival l.**, a knife for incising the gingivae. **gum l.**, gingival l. **laryngeal l.**, a delicate knife for operations within the larynx; it is operated through a cannula. **spring l.**, one the blade of which is held by a spring.

Lancet coefficient (lan'set) [*The Lancet*, a British medical periodical] see under *coefficient*.

lancinating (lan'si-nāt'ing) [L. *lancinas*] tearing, darting, or sharply cutting; see under *pain*.

Lancisi's nerves, stria (lan-che'sēz) [Giovanni Maria *Lancisi*, Italian physician, 1654–1720] see *stria longitudinalis lateralis corporis callosi* and *stria longitudinalis medialis corporis callosi*.

Landau's color test (reaction) (lahn'dowz) [Leopold *Landau*, German surgeon, 1848–1920] see under *tests*.

landmark (land'mark) a readily recognizable anatomical structure used as a point of reference in establishing the location of another structure or in determining certain measurements.

Landolt's bodies (lahn-dolts') [Edmond *Landolt*, ophthalmologist in Paris, 1846–1926] see under *body*.

Landouzy's disease, dystrophy (type) (lan-doo'zēz) [Louis Théophile Joseph *Landouzy*, French physician, 1845–1917] see *leptospiral jaundice*, under *jaundice*, and see *Landouzy-Dejerine dystrophy*, under *dystrophy*.

Landouzy-Dejerine dystrophy (atrophy, type) (lan-doo'ze-deh'zher-ēn') [L. T. J. *Landouzy*; Joseph Jules *Dejerine*, French neurologist, 1849–1917] see under *dystrophy*.

Landouzy-Grasset law (lan-doo'ze-gras-sa') [L. T. J. *Landouzy*; Joseph *Grasset*, French physician, 1849–1918] see under *law*.

Landry's paralysis (disease, palsy, syndrome) (lan-drēz') [Jean Baptiste Octave *Landry*, French physician, 1826–1865] acute febrile polyneuritis.

Landsteiner (land'sti-ner) Karl. Austrian pathologist and immunologist in the United States, 1868–1943, winner of the Nobel prize for physiology and medicine in 1930 for his discovery of the human blood groups.

Landström's muscle (lahnd'stremz) [John *Landström*, Swedish surgeon, 1869–1910] see under *muscle*.

Lane's band, disease, kink, operation, plates (lānz) [Sir William Arbuthnot *Lane*, English surgeon, 1856–1943] see under the *nouns*.

Langdon Down's disease (lang'don downz) [John *Langdon Haydon Down*, British physician, 1828–1896] Down's syndrome.

Lange's operation (lahng'ez) [Fritz *Lange*, German orthopedist, born 1864] silk implantation; see under *implantation*.

Lange's solution, test (reaction) (lahng'ez) [Carl *Lange*, German physician, born 1883] see under *solution*, and see *colloidal gold test*, under *tests*.

Langenbeck's amputation, incision, etc. (lahng'en-beks) [Bernhard Rudolf Konrad von *Langenbeck*, German surgeon, 1810–1887] see under *amputation*, *flap*, *incision*, and *triangle*.

Langer's axillary arch, lines, muscle (lang'erz) [Carl Ritter von Edenberg von *Langer*, Austrian anatomist, 1819–1887] see under *arch* and *muscle*, and see *cleavage lines*, under *line*.

Langerhans' cells (corpuscles), islets (islands), layer (lahng'er-hanz) [Paul *Langerhans*, German pathologist, 1847–1888] see under *cell* and *islet*, and see *stratum granulosum epidermidis*.

Langhans' cells, layer, stria (lahng'hahnz) [Theodor *Langhans*, German pathologist, 1839–1915] see under *cell*, and see *cytotrophoblast*.

Langley's ganglion, granules, nerves (lang'lēz) [John Newport *Langley*, English physiologist, 1852–1925] see under *ganglion* and *granule*, and see *pilonidal nerves*, under *nerve*.

laniary (lan'e-a're) [L. *laniare* to tear to pieces] suitable for lacerating, or tearing to pieces; said of canine teeth.

Lankesterella ranarum (lan-kes'ter-el'ah rah-na'rum) [Sir Edwin Ray *Lankester*, British zoologist, 1847–1930] a coccidian parasite of the red blood cells of the frog.

Lankesteria culicis (lan'kes-te're-ah ku'li-sis) a gregarine sporozoan parasitic in the gut of the mosquito *Aedes aegypti*.

lanolin (lan'o-lin) [L. *lanolinum*; *lana* wool + *oleum* oil] [USP] the purified fatlike substance from the wool of sheep, *Ovis aries*, occurring as a yellowish white mass and mixed with 25 to 30 per cent of water; used as a water-in-oil ointment base. **anhydrous l.** [USP], lanolin that contains not more than 0.25 per cent of water, used as an absorbent ointment base.

lanosterol (lah-nos'ter-ol) a triterpene steroid, $C_{30}H_{50}O$, formed from squalene; it is the parent steroid in animals, being itself converted in several steps to cholesterol.

Lanoxin (lah-nok'sin) trademark for preparations of digoxin.

Lantermann's incisures (clefts) (lahn'ter-mahnz') [A. J. *Lantermann*, American anatomist in Strassburg, 19th century] see under *incisure*.

Lantermann-Schmidt incisures (lahn'ter-mahn'-schmit') [A. J. *Lantermann*; Henry D. *Schmidt*, American anatomist, 1823–1888] incisures of *Lantermann*.

lanthanic (lan'than-ik) [Gr. *lanthanein* to escape notice, to be concealed] symptom-free; said of a symptomless disease that is undetected, or detected by accident.

lanthanin (lan'thah-nin) oxochromatin.

lanthanum (lan'thah-num) [Gr. *lanthanein* to be concealed] a rare metallic element; symbol, La; atomic number, 57; atomic weight, 138.91.

lanuginous (lah-nu'ji-nus) [L. *lanuginosus*] covered with lanugo.

lanugo (lah-nu'go) [L.] [NA] the fine hair on the body of the fetus; called also *down* and *wooly hair*.

lanum (la'num) [L. *lana* wool] lanolin.

Lanz's operation, point (lahnts) [Otto *Lanz*, surgeon in Amsterdam, 1865–1935] see under *operation* and *point*.

L.A.O. Licentiate in Obstetric Science.

LAP lyophilized anterior pituitary (tissue).

lapactic (lah-pak'tik) [Gr. *lapaktikos*, *lapsein* to discharge] pertaining to or effecting a removal; purgative; laxative.

laparectomy (lap'ah-rek'to-me) [*laparo-* + Gr. *ektomē* excision] excision of a portion or of portions of the abdominal wall; performed for the purpose of overcoming laxity of the walls and to gain support.

laparo- (lap'ah-ro) [Gr. *lapara* flank] a combining form denoting relationship to the loin or flank. Sometimes used loosely in reference to the abdomen.

laparocele (lap'ah-ro-sēl) ventral hernia.

laparocholecystotomy (lap'ah-ro-ko'le-sis-tot'o-me) [*laparo-*

+ Gr. *cholē* bile + *kystis* bladder + *tomē* a cutting] incision of the gallbladder through an abdominal section; cholecystotomy.

laparocolecotomy (lap'ah-ro-ko-lek'to-me) [*laparo-* + Gr. *kolon* colon + *ektomē* excision] colectomy.

laparocolostomy (lap'ah-ro-ko-los'to-me) [*laparo-* + Gr. *kolon* colon + *stomoun* to provide with an opening, or mouth] surgical creation of a permanent opening into the colon by an incision in the anterolateral wall of the abdomen; colostomy.

laparocolotomy (lap'ah-ro-ko-lot'o-me) [*laparo-* + Gr. *kolon* colon + *tomē* a cutting] colotomy through the abdominal wall.

laparocystectomy (lap'ah-ro-sis-tek'to-me) [*laparo-* + Gr. *kystis* cyst + *ektomē* excision] removal of a cyst by an abdominal incision.

laparocystidotomy (lap'ah-ro-sis'ti-tō'o-me) [*laparo-* + Gr. *kystis* bladder + *tomē* a cutting] incision into the bladder through the abdominal wall just above the pubes.

laparocystotomy (lap'ah-ro-sis-tot'o-me) [*laparo-* + Gr. *kystis* bladder + *tomē* a cutting] 1. the removal of an extrauterine fetus, the sac being allowed to remain. 2. laparotomy with removal of the contents of a cyst.

laparoenterostomy (lap'ah-ro-en'ter-os'to-me) [*laparo-* + Gr. *enteron* intestine + *stomoun* to provide with an opening, or mouth] surgical creation of an artificial opening into the intestine through the abdominal wall.

laparoenterotomy (lap'ah-ro-en'ter-ot'o-me) [*laparo-* + Gr. *enteron* intestine + *tomē* a cutting] laparotomy with incision into the intestine.

laparogastroscopy (lap'ah-ro-gas-tros'ko-pe) [*laparo-* + *gastroscopy*] examination of the interior of the stomach through an abdominal incision.

laparogastrostomy (lap'ah-ro-gas-tros'to-me) [*laparo-* + Gr. *gastēr* stomach + *stomoun* to provide with an opening, or mouth] surgical creation of a permanent gastric fistula through the abdominal wall.

laparogastrotomy (lap'ah-ro-gas-trot'o-me) [*laparo-* + Gr. *gastēr* stomach + *tomē* a cutting] incision into the stomach through the abdominal wall.

laparohepatotomy (lap'ah-ro-hep'ah-tot'o-me) [*laparo-* + *hepatotomy*] incision of the liver through the abdominal wall.

laparohysterectomy (lap'ah-ro-his'ter-ek'to-me) [*laparo-* + Gr. *hystera* uterus + *ektomē* excision] removal of the uterus through an opening in the abdominal wall.

laparohystero-oophorectomy (lap'ah-ro-his'ter-o-o'of-ō-rek'to-me) [*laparo-* + Gr. *hystera* uterus + *oophorectomy*] laparotomy with removal of the uterus and ovaries.

laparohysterosalpingo-oophorectomy (lap'ah-ro-his'ter-o-sal-ping'go-o'of-ō-rek'to-me) removal of the uterus, uterine tubes, and ovaries through an abdominal incision.

laparohysterotomy (lap'ah-ro-his'ter-ot'o-me) [*laparo-* + Gr. *hystera* uterus + *tomē* a cutting] laparotomy with incision of the uterus.

laparoileotomy (lap'ah-ro-il'e-ot'o-me) [*laparo-* + *ileum* + Gr. *tomē* a cutting] laparotomy with incision of the ileum.

laparomonodidymus (lap'ah-ro-mon'o-did'i-mus) [*laparo-* + Gr. *monos* single + *didymos* twin] a monster, double above but single below the pelvis.

laparomyitis (lap'ah-ro-mi-i'tis) [*laparo-* + Gr. *mys* muscle + *-itis*] inflammation of the abdominal or lumbar muscles.

laparomyomectomy (lap'ah-ro-mi'o-mek'to-me) [*laparo-* + Gr. *mys* muscle + *ektomē* excision] the removal of a myoma by an abdominal incision.

laparonephrectomy (lap'ah-ro-nē-frek'to-me) [*laparo-* + Gr. *nephros* kidney + *ektomē* excision] removal of a kidney by an incision in the loin.

laparorrhaphy (lap-ah-ror'ah-fe) [*laparo-* + Gr. *rhaphe* suture] suture of the abdominal wall.

laparosalingectomy (lap'ah-ro-sal'pin-jek'to-me) [*laparo-* + Gr. *salpinx* tube + *ektomē* excision] removal of a uterine tube through an abdominal incision.

laparosalingo-oophorectomy (lap'ah-ro-sal-ping'go-o'of-ō-rek'to-me) removal of a uterine tube and ovary through an abdominal incision.

laparosalingotomy (lap'ah-ro-sal'pin-got'o-me) [*laparo-* + Gr. *salpinx* tube + *tomē* a cutting] incision of a uterine tube through an abdominal incision.

laparoscope (lap'ah-ro-skōp'') an instrument comparable to an endoscope by means of which the peritoneal cavity can be inspected; peritoneoscope.

laparoscopy (lap'ah-ro-skō-pe) [*laparo-* + Gr. *skopein* to examine] examination of the interior of the abdomen by means of a laparoscope.

laparosplenectomy (lap'ah-ro-sple-nek'to-me) [*laparo-* + Gr. *splēn* spleen + *ektomē* excision] laparotomy with excision of the spleen.

laparosplenotomy (lap'ah-ro-sple-not'o-me) [*laparo-* + Gr. *splēn* spleen + *tomē* a cutting] the operation of making an in-

cision in the flank to gain access to the spleen, usually for the purpose of draining a cyst or abscess of the spleen.

laparotomaphilia (lap'ah-rot'o-mah-fil'e-ah) [*laparotomy* + Gr. *philein* to love + *-ia*] Munchausen's syndrome (q.v.) in which the patient desires abdominal surgery.

laparotome (lap'ah-ro-tōm) a knife used in laparotomy.

laparotomy (lap-ah-rot'o-me) [*laparo-* + Gr. *tomē* a cutting] surgical incision through the flank; less correctly, but more generally, abdominal section at any point.

laparotyphlotomy (lap'ah-ro-tif-lot'o-me) [*laparo-* + Gr. *typhlon* cecum + *tomē* a cutting] incision into the cecum through the flank.

Lapicque's constant, law (lah-pēks') [Louis *Lapicque*, French physiologist, 1866–1952] see under *constant* and *law*.

lapinization (lap'in-i-za'shun) [Fr. *lapin* rabbit] passage of a virus through rabbits as a means of modifying its characteristics.

lapinize (lap'in-iz) to attenuate (as a virus or vaccine) by serial passage through rabbits.

lapis (la'pis, lap'is) [L.] stone. 1. *al'bus*, the native silicofluoride of calcium. 1. *calamina'ris*, calamine. 1. *imperialis*, 1. *infernalis*, 1. *luna'ris*, silver nitrate.

lapsus (lap'sus) [L., from *labi* to slip or fall] 1. an error, or slip, thought to be revealing of an unconscious wish or association. 2. falling or dropping of a part; ptosis. 1. *cal'ami*, an unconsciously motivated slip of the pen. 1. *lin'guae*, an unconsciously motivated slip of the tongue. 1. *memo'riae*, an unconsciously motivated lapse of memory.

lapyrium chloride (lah-pēr'e-um) chemical name: 1-[2-oxo-2-[(2-[(1-oxododecyl)oxy]ethyl]amino]ethyl]pyridinium chloride. A surfactant, C₂₁H₃₅ClN₂O₃, used in pharmaceutical preparations.

Larat's treatment (lah-raz') [Jules Louis François Adrien *Larat*, French physician, born 1857] see under *treatment*.

lard (lard) [L. *lardum*] the purified internal fat of the abdomen of the hog. **benzoinated l.**, a preparation of lard containing 1 per cent benzoin; used as a vehicle for medicinal agents and in ointments. Called also *adepts benzoïnatus*.

lardacein (lar-da'se-in) a protein found in tissues affected with amyloid degeneration. It is characterized by being insoluble in nearly all reagents, not acted upon by the gastric juice, and not readily subject to putrefaction. It gives a brown color with iodine and sulfuric acid.

lardaceous (lar-da'shus) 1. resembling lard. 2. containing lardacein.

Lardennois' button (lar'den-wahz') [Henri *Lardennois*, French surgeon, born 1872] see under *button*.

Largon (lar'gon) trademark for a preparation of propiomazine hydrochloride.

larithmics (lah-rith'miks) [Gr. *laos* people + *arithmos* number] the study which deals with population in its quantitative aspects.

Larix (la'riks) [L.] a genus of coniferous trees, the larches. The astringent bark of *L. europaea* D.C. (Pinaceae) has been used in skin diseases and in pectoral complaints.

larixin (la-rik'sin) azaric acid.

larkspur (lark'spur) the dried ripe seeds of *Delphinium ajacis* L. (Ranunculaceae), used medicinally as a pediculicide. Listed as poisonous plant due to its content of alkaloids, including delphinine. Called also *staggerweed*.

Larodopa (lar'o-do'pah) trademark for preparations of levodopa.

Larotid (lar'o-tid) trademark for preparations of amoxicillin.

Larrey's amputation (operation), bandage, cleft, spaces (lar-rāz') [Dominique Jean (Baron de) *Larrey*, French surgeon, 1766–1842; the greatest military surgeon of his time, serving in the Napoleonic wars] see under *amputation*, *bandage*, and *space*, and see *trigonum sternocostale*.

Larsen's disease, Larsen-Johansson disease (lar'senz; lar'sen-yo-han'son) [Christian Magnus Falsen Sinding *Larsen*; Sven *Johansson*, Swedish surgeon, born 1880] see under *disease*.

larva (lar'vah), pl. *lar'vae* [L.] an independent, motile, sometimes feeding, developmental stage in the life history of an animal. Cf. *imago* (def. 1) and *pupa*. 1. *cur'rens*, a variant of larva migrans caused by *Strongyloides stercoralis*, in which progression of the linear lesion is as rapid as 10 cm. in an hour, instead of a few centimeters a day, as is usual with lesions due to *Ancylostoma brasiliense*. 1. *mi'grans*, a disease marked by a thin, red, bizarrely convoluted, papular or vesicular line of eruption that gradually extends at one end while fading at the other. It is most often due to the presence of larvae of the cat and dog hookworm, *Ancylostoma braziliense*, which burrow beneath the skin, but cannot complete their migration to the gut; called also *creeping eruption*. The term is also applied to similar lesions caused by larvae of botflies of the genus *Gasterophilus* (cutaneous or dermal myiasis), nematodes of the genus *Gnathostoma* (creeping disease), larvae of filaria of the genus *Dirofilaria* (dirofilariasis), larvae of *Hypoderma linearis* (hypodermiasis or ox-warble disease), and larvae of other species. 1. *mi'grans*, ocular, infection of the

eye with larvae of roundworms (*Toxocara canis* or *T. cati*), which may lodge in the choroid or retina or migrate to the vitreous; on the death of the larvae, a granulomatous inflammation occurs, the lesion varying from a translucent elevation of the retina, to massive retinal detachment and pseudoglioma. Called also *human toxocariasis*. **l. migrans, visceral**, a condition caused by prolonged migration of larvae of nematodes in human tissues other than skin, characterized by persistent hypereosinophilia, hepatomegaly, and frequently by pneumonitis; commonly caused by *Toxocara canis* or *T. cati*, which do not complete their life cycle in man. See also *l. migrans, ocular*. **rat-tailed l.**, see *Eristalis tenax*.

larvaceous (lar-va'shus) larvate.

larvae (lar've) [L.] plural of *larva*.

larval (lar'val) 1. pertaining to larvae. 2. larvate.

larvate (lar'vāt) [L. *larva* mask] masked; concealed: said of a disease or a symptom of disease.

larvicide (lar'vi-sid) [*larva* + L. *caedere* to kill] an agent destructive to insect larvae. **Panama l.**, a mixture of crude carbolic acid, rosin, and caustic soda, heated to a uniform dark colored soap; formerly used in Panama to kill *Anopheles* larvae.

larviphagic (lar'vi-fa'jik) larvivorous.

larviposition (lar'vi-po-zish'un) the act of depositing larvae (living maggots) in the tissues of a host.

larvivorous (lar-viv'o-rus) [*larva* + L. *vorare* to eat] feeding on or consuming larvae; said especially of fish which ingest mosquito larvae.

laryngalgia (lar'in-gal'je-ah) [*laryngo-* + *-algia*] pain in the larynx.

laryngeal (lah-rin'je-al) of or pertaining to the larynx.

laryngect (lar'in-jek't) laryngectomee.

laryngectomee (lar'in-jek'to-me) a person whose larynx has been removed.

laryngectomy (lar'in-jek'to-me) [*laryngo-* + Gr. *ektomē* excision] extirpation of the larynx.

laryngendoscope (lar'in-jen'do-skōp) [*laryngo-* + Gr. *endon* within + *skopein* to examine] an instrument for viewing the interior of the larynx.

laryngismal (lar'in-jiz'mal) pertaining to laryngismus.

laryngismus (lar'in-jiz'mus) [L.; Gr. *laryngismos* a whooping] spasm of the larynx. **l. paralyticus**, roaring. **l. stridulus**, a condition marked by sudden laryngeal spasm, with a crowing inspiration and the development of cyanosis. It occurs in laryngeal inflammations and as an independent disease, especially in connection with rickets. Called also *Miller's* or *Wichmann's asthma*.

laryngitic (lar'in-jit'ik) pertaining to laryngitis.

laryngitis (lar'in-jit'is) inflammation of the larynx, a condition attended with dryness and soreness of the throat, hoarseness, cough, and dysphagia. **acute catarrhal l.**, a form characterized by aphonia or hoarseness, pain and dryness of the throat, dyspnea, a wheezy cough, and more or less fever. **atrophic l.**, an extreme form of chronic catarrhal laryngitis. **chronic catarrhal l.**, a form of laryngitis due to recurring inflammation or more frequently a sequela of acute catarrhal laryngitis, characterized by atrophy of the glands of the mucous membrane. See also *l. sicca*. **croupous l.**, a condition occurring chiefly in infants or small children and characterized by a resonant barking cough, hoarseness, and stridor. Infection, allergy, a foreign body, or new growths may be the cause. Laryngeal diphtheria was once a common cause but is now relatively rare. **diphtheritic l.**, laryngitis caused by diphtheria; diphtheritic croup. **membranous l.**, laryngitis attended with the formation of a false membrane. **necrotic l.**, calf diphtheria. **phlegmonous l.**, a usually fatal complication of erysipelas, smallpox, etc. attended with submucous suppuration and edema. **l. sicca**, chronic laryngitis in which the usual secretions are glue-like; it often accompanies atrophic rhinitis. **l. stridulosa**, laryngismus stridulus. **subglottic l.**, inflammation of the under surface of the vocal cords. **syphilitic l.**, a chronic form due to syphilitic involvement of the larynx. **tuberculous l.**, a chronic form due to tuberculous ulceration of the larynx. **vestibular l.**, viral laryngitis in which edema forms a ring outlining the vestibule of the larynx.

laryngo- (lah-ring'go) [Gr. *larynx* larynx] a combining form denoting relationship to the larynx.

laryngocele (lah-ring'go-sēl) [*laryngo-* + Gr. *kēlē* hernia] a congenital anomalous air sac communicating with the cavity of the larynx, which may become manifest as an enlargement seen as a tumor-like lesion on the outside of the neck; the enlargement is increased by intralaryngeal pressure, as from coughing. **ventricular l.**, **l. ventricula'ris**, congenital dilatation or herniation of the sacculus or appendix of the laryngeal ventricle.

laryngocentesis (lah-ring'go-sen-te'sis) [*laryngo-* + Gr. *kentēsis* puncture] surgical puncture of the larynx.

laryngofission (lah-ring'go-fish'un) laryngofissure.

laryngofissure (lah-ring'go-fish'ūr) the operation of opening

the larynx by a median incision through the thyroid cartilage, for the removal of cancer of the larynx; median laryngotomy.

laryngogram (lah-ring'go-gram) a roentgenogram of the larynx.

laryngography (lar'ing-gog'rah-fe) [*laryngo-* + Gr. *graphein* to record] 1. the description of the larynx. 2. roentgenography of the larynx after instillation of a radiopaque substance into it.

laryngohypopharynx (lah-ring'go-hi'po-far'inks) the posterior wall of the hypopharynx, the piriform sinus, and areas adjacent to the larynx, considered together.

laryngology (lar'ing-gol'o-je) [*laryngo-* + *-logy*] that branch of medicine which has to do with the throat, pharynx, larynx, nasopharynx, and tracheobronchial tree.

laryngomalacia (lah-ring'go-mah-la'she-ah) [*laryngo-* + Gr. *malakia* softness] flaccidity of the epiglottis and aryepiglottic folds, as in congenital laryngeal stridor.

laryngometry (lar'ing-gom'ē-tre) [*laryngo-* + Gr. *metron* measure] measurement of the larynx.

laryngoparalysis (lah-ring'go-pah-ral'i-sis) [*laryngo-* + *paralysis*] paralysis of the larynx.

laryngopathy (lar'ing-gop'ah-the) [*laryngo-* + Gr. *pathos* disease] any disorder of the larynx.

laryngopharyngeal (lah-ring'go-fah-rin'je-al) pertaining to the larynx and pharynx.

laryngopharyngectomy (lah-ring'go-far'in-jek'to-me) excision of the larynx and pharynx.

laryngopharyngeus (lah-ring'go-fah-rin'je-us) the inferior constrictor of the pharynx.

laryngopharyngitis (lah-ring'go-far'in-jit'is) inflammation of the larynx and pharynx.

laryngopharynx (lah-ring'go-far'inks) [*laryngo-* + *pharynx*] the portion of the pharynx which lies below the upper edge of the epiglottis and opens into the larynx and esophagus (pars laryngea pharyngis [NA]).

laryngophony (lar'ing-gof'o-ne) [*laryngo-* + Gr. *phōnē* voice] the vocal sound as heard in auscultation of the larynx.

laryngophthisis (lar'ing-gof'thī-sis) [*laryngo-* + Gr. *phthisis* phthisis] tuberculosis of the larynx.

laryngoplasty (lah-ring'go-plas'te) [*laryngo-* + Gr. *plassein* to mold] plastic surgery of the larynx.

laryngoplegia (lar'ing-go-ple'je-ah) [*laryngo-* + Gr. *plēgē* stroke + *-ia*] paralysis of the larynx.

laryngoptosis (lah-ring'go-to'sis) [*laryngo-* + Gr. *ptōsis* fall] a lowering and mobilization of the larynx as sometimes seen in the aged.

laryngopyoceale (lah-ring'go-pi'o-sēl) a laryngocele containing pus.

laryngorhinology (lah-ring'go-ri-nol'o-je) [*laryngo-* + Gr. *rhis* nose + *-logy*] the sum of what is known regarding the larynx and nose and their diseases.

laryngorrhagia (lar'ing-go-ra'je-ah) [*laryngo-* + Gr. *rhēgnynai* to break] hemorrhage from the larynx.

laryngorrhaphy (lar'ing-gor'ah-fe) [*laryngo-* + Gr. *raphē* suture] the operation of suturing the larynx.

laryngorrhea (lar'ing-go-re'ah) [*laryngo-* + Gr. *rhoia* flow] excessive secretion of mucus whenever the voice is used.

laryngoscleroma (lah-ring'go-skile-ro'mah) [*laryngo-* + *scleroma*] scleroma of the larynx.

laryngoscope (lah-ring'go-skōp) [*laryngo-* + Gr. *skopein* to examine] an endoscope for use in direct visual examination of the larynx.

laryngoscopic (lar'ing-go-skop'ik) pertaining to laryngoscopy.

laryngoscopist (lar'ing-gos'ko-pist) an expert in laryngoscopy.

laryngoscopy (lar'ing-gos'ko-pe) [*laryngo-* + Gr. *skopein* to examine] examination of the interior of the larynx, especially that performed with the laryngoscope (*direct laryngoscopy*). **direct l.**, direct visual examination of the interior of the larynx performed with a speculum or with a laryngoscope. **indirect l.**, examination of the interior of the larynx by observation of the reflection of it in a laryngeal mirror. **mirror l.**, indirect l. **suspension l.**, examination of the larynx performed with a direct laryngoscope suspended so as to leave both hands of the examiner free.

laryngospasm (lah-ring'go-spazm) [*laryngo-* + Gr. *spasmos* spasm] spasmodic closure of the larynx.

laryngostasis (lar'ing-gos'tah-sis) [*laryngo-* + Gr. *stasis* stoppage] croup.

laryngostat (lah-ring'go-stat) an appliance for holding a source of radioactive material within the larynx.

laryngostenosis (lah-ring'go-stē-no'sis) [*laryngo-* + Gr. *stenōsis* contracture] narrowing or stricture of the larynx.

laryngostomy (lar'ing-gos'to-me) [*laryngo-* + Gr. *stomoun* to provide with an opening, or mouth] surgical creation of an artificial opening into the larynx.

laryngostroboscope (lar'ing-go-strob'o-sköp) [*laryngo-* + Gr. *strophos* whirl + *skopein* to examine] an apparatus for observing the intralaryngeal phenomena with a stroboscopic light.

laryngotome (lah-ring'go-tôm) an instrument used in incising the larynx.

laryngotomy (lar'ing-got'o-me) [*laryngo-* + Gr. *tomē* a cutting] surgical incision of the larynx. **complete l.**, the longitudinal slitting of the entire larynx. **inferior l.**, incision of the larynx through the cricothyroid membrane. **median l.**, incision of the larynx through the thyroid cartilage; laryngofissure. **superior l.**, **subhyoid l.**, incision of the larynx through the thyrohyoid membrane. **thyrohyoid l.**, subhyoid l.

laryngotracheal (lah-ring'go-tra'ke-al) pertaining to the larynx and trachea.

laryngotracheitis (lah-ring'go-tra'ke-i'tis) inflammation of the larynx and trachea. **avian l.**, **infectious l.**, a viral disease of poultry characterized by respiratory distress, gasping, and expectoration of bloody exudate.

laryngotracheobronchitis (lah-ring'go-tra'ke-o-brong-ki'tis) inflammation of the larynx, trachea, and bronchi; the acute form is the most common cause of croup.

laryngotracheobronchoscopy (lah-ring'go-tra'ke-o-bronkos'ko-pe) endoscopic examination of the larynx, trachea, and bronchi.

laryngotracheoscopy (lah-ring'go-tra'ke-os'ko-pe) peroral laryngoscopy and tracheoscopy.

laryngotracheotomy (lah-ring'go-tra'ke-ot'o-me) [*laryngo-* + *tracheotomy*] incision of the larynx and trachea.

laryngovestibulitis (lah-ring'go-ves-tib'u-li'tis) inflammation of the vestibule of the larynx.

laryngoxerosis (lah-ring'go-ze-ro'sis) [*laryngo-* + Gr. *xērōsis* a drying up] dryness of the larynx.

larynx (lar'yinks), pl. *larynges* [Gr. "the upper part of the windpipe"] [NA] the musclocartilaginous structure, lined with mucous membrane, connected to the superior part of the trachea and to the pharynx inferior to the tongue and the hyoid bone; the essential sphincter guarding the entrance into the trachea and functioning secondarily as the organ of voice. It is formed by nine cartilages—the thyroid, cricoid, epiglottis, two arytenoid, two corniculate, and two cuneiform cartilages, connected by ligaments. **artificial l.**, an electromechanical device which, when activated, produces sounds used in speech, by simulating laryngeal activity, and thus enables a laryngectomized person to converse.

lasalocid (lah-sal'o-sid) chemical name: 6-[7R-[5S-ethyl-5-(5R-ethyltetrahydro-5-hydroxy-6S-methyl-2H-pyran-2R-yl) tetrahydro-3S-methyl-2S-furanyl]-4S-hydroxy-3R,5S-dimethyl-6-oxononyl]-2-hydroxy-3-methylbenzoic acid; a coccidiostat for use in poultry, C₃₄H₅₄O₈.

lasanum (las'ah-num) [L. "a night commode"] an obstetric chair.

lascivia (lah-siv'e-ah) [L. "wantonness"] (*obs.*) satyriasis.

Lasègue's disease, sign (syndrome) (lah-säg'z') [Ernest Charles Lasègue, French physician, 1816–1883] see under *disease* and *sign*.

laser (la'zer) [light amplification by stimulated emission of radiation] a device which transforms light of various frequencies into an extremely intense, small, and nearly nondivergent beam of monochromatic radiation in the visible region with all the waves in phase. Capable of mobilizing immense heat and power when focused at close range, it is used as a tool in surgical procedures, in diagnosis, and in physiologic studies.

Lasiohelea (las'e-o-he'le-ah) a genus of blood-sucking flies of the family Heleidae.

Lasix (la'siks) trademark for preparations of furosemide.

Lassar's paste, betanaphthol paste, plain zinc paste (las'arz) [Oskar Lassar, German dermatologist, 1849–1907] see under *paste*.

lassitude (las'y-tüd) [L. *lassitudo* weariness] weakness; exhaustion.

latah (lah'tah) a mental disorder seen chiefly among the Malays and other people of Southeast Asia, characterized by hyper-suggestibility, echolalia, echopraxis, coprolalia, disorganization, and automatic obedience.

Lat. dol. abbreviation for *Lat'eri dolent'i*, to the painful side.

latebra (lat'ē-brah) [L. "hiding place"] a flask-shaped mass of white yolk extending from the blastodisk to the center of eggs such as those of birds.

latency (la'ten-se) a state of seeming inactivity, as that occurring between the instant of stimulation and the beginning of response; see also under *period*.

latent (la'tent) [L. *latens* hidden] concealed; not manifest; potential.

latentiation (la-ten'she-a'shun) the process of making latent; in pharmacology, the chemical modification of a biologically active compound to affect its absorption, distribution, etc., the modified compound being transformed after administration to the active compound by biological processes.

laterad (lat'er-ad) toward a side or a lateral aspect.

lateral (lat'er-al) [L. *lateralis*] 1. denoting a position farther from the median plane or midline of the body or of a structure. 2. pertaining to a side.

lateralis (lat'er-a'lis) lateral; [NA] a term denoting a structure situated farther from the midplane of the body.

laterality (lat'er-al'i-te) a relationship to one side, such as a tendency, in voluntary motor acts, to use preferentially the organs (hand, foot, ear, eye) of the same side. **crossed l.**, the preferential use, in voluntary motor acts, of contralateral members of the different pairs of organs, as the right eye and the left hand. **dominant l.**, the preferential use, in voluntary motor acts, of ipsilateral members of the different pairs of organs, as the right ear, eye, hand, and leg (dextrality) or of the left ear, eye, hand, and leg (sinistrality).

latericeous (lat'er-ish'us) lateritious.

lateritious (lat'er-ish'us) [L. *lateritius*; *later* brick] resembling brick dust.

latero- (lat'er-o) [L. *latus* side] a combining form denoting relationship to the side.

lateroabdominal (lat'er-o-ab-dom'i-nal) pertaining to the side and the abdomen.

laterodeviation (lat'er-o-de've-a'shun) deviation or slight displacement to one side.

lateroduction (lat'er-o-duk'shun) [*latero-* + L. *ducere* to draw] movement of an eye to either side.

lateroflexion (lat'er-o-flek'shun) flexion to either side.

lateroposition (lat'er-o-po-zish'un) displacement to one side.

lateropulsion (lat'er-o-pul'shun) [*latero-* + L. *pellere* to drive] an involuntary tendency to go to one side while walking.

laterotorsion (lat'er-o-tor'shun) [*latero-* + L. *torquere* to turn] twisting of the vertical meridian of the eye to the right or to the left.

lateroversion (lat'er-o-ver'shun) [*latero-* + *version*] a turning to one side, as of the uterus.

latex (la'teks) [L. "fluid"] a viscid, milky juice secreted by some seed plants.

latexed (lat-eksd') (*obs.*) bent to one side.

latexion (la-tek'shun) (*obs.*) lateral flexion.

Latham's circle (la'thamz) [Peter Mere Latham, English physician, 1789–1875] see under *circle*.

lathyrism (lath'i-rizm) a morbid condition resulting from ingestion of the seeds of leguminous plants of the genus *Lathyrus*, which includes many kinds of peas; it is characterized by spastic paraplegia, pain, hyperesthesia, and paresthesia. Cf. *lupinosis* and *osteolathyrism*.

lathyritic (lath'i-rit'ik) pertaining to or characterized by lathyrism.

lathyrigen (lath'i-ro-jen) any agent that causes lathyrism.

lathyrigenic (lath'i-ro-jen'ik) capable of producing the symptoms characteristic of lathyrism.

latissimus (lah-tis'i-mus) [L.] widest; [NA] a general term denoting a broad structure, as a muscle.

latroductism (lat'ro-dek'tizm) [*Latroductus* + *-ism*] intoxication caused by venom of spiders of the genus *Latroductus*.

Latroductus (lat'ro-dek'tus) [L. *latro* robber + Gr. *daknein* to bite] a genus of poisonous spiders. *L. mac'tans*, a species found in the United States, is commonly known as the "black widow." Its bite may cause severe symptoms or even death. *L. bisho'pi* is found in southern Florida; *L. curariensis* in Brazil and Argentina; *L. geomet'ricus* in California and southern Florida; *L. hassel'tii* in New Zealand; *L. lugu'bris*, (kara-kurt) in Russia; *L. macula'tus* in South Africa; *L. malmigniat'us* in Europe; and *L. tredecimgut-tus* in Southern Europe and Asiatic Russia.

LATS long-acting thyroid stimulator.

lattice (lat'is) a framework of regularly placed, intersecting narrow strips, such as the geometrical arrangement of the atoms in a crystal as shown by x-ray analysis.

latus (la'tus) [L.] 1. broad, wide 2. [NA] the side; flank.

laudable (law'dah-bl) [L. *laudabilis*] commendable; healthy; see under *pus*.

laudanum (law'dah-num) opium tincture.

laugh (laf) 1. an act or paroxysm of laughter. 2. to indulge in laughter. **canine l.**, **sardonic l.**, risus sardonicus.

laughter (laf'ter) a series of spasmodic and partly involuntary expirations with inarticulate vocalization, normally indicative of merriment, often a hysteric manifestation or a reflex result of tickling. **compulsive l.**, **forced l.**, **obsessive l.**, hearty laughter for which there is no occasion; a symptom in schizophrenia.

Laugier's hernia, sign (lo'zhe-äz') [Stanislas Laugier, French surgeon, 1799–1872] see under *hernia* and *sign*.

Laumonier's ganglion (lo-mon'e-äz') [Jean Baptiste Philippe Nicolas René Laumonier, French surgeon, 1749–1818] 1. carotid ganglion. 2. inferior carotid ganglion.

Launois-Cléret syndrome (lo-nwah'kla-rah') [Pierre-Emile Launois, French physician, 1856-1914; M. Cléret] Fröhlich's syndrome.

Laurence-Biedl syndrome (law'rens-be'del) [John Zachariah Laurence, British ophthalmologist, 1830-1874; Arthur Biedl, Prague endocrinologist, 1869-1933] see under *syndrome*.

Laurence-Moon-Biedl syndrome [J. Z. Laurence; R. C. Moon; A. Biedl] Laurence-Biedl syndrome.

laureth 9 (law'reth) a spermatide and surfactant consisting of a mixture of polyethylene glycol monododecyl ethers averaging about 9 ethylene oxide groups per molecule.

laurocerasus (law'ro-ser'ah-sus) [*L. laurus* laurel + *cerasus* cherry] the European cherry laurel, an evergreen cherry tree, *Prunus laurocerasus*.

Lauth's canal, sinus (lowts) [Ernst Alexander Lauth, Strasbourg physiologist, 1803-1837] sinus venosus sclerae.

Lauth's ligament (lowts) [Thomas Lauth, Strasbourg anatomist and surgeon, 1758-1826] ligamentum transversum atlantis.

Lauth's violet (lawths) [Charles Lauth, English chemist, 1836-1913] thionine hydrochloride.

lavage (lah-vahzh') [Fr.] 1. the irrigation or washing out of an organ, such as the stomach or bowel. 2. to wash out, or irrigate.

l. of the blood, blood l., the washing out of toxic matters from the blood by injecting serum into the veins. **ether l.**, see *Souligoux-Morestin method*, under *method*. **gastric l.**, lavage of the stomach. **intestinal l.**, dialysis by instillation and withdrawal of a rinsing fluid in the intestine for the removal, through the intestinal mucosa, of elements which are not being excreted by the kidneys. **peritoneal l.**, dialysis by instillation and withdrawal of a rinsing fluid in the peritoneal cavity. **pleural l.**, irrigation of the pleural cavity. **systemic l.**, lavage of the blood.

Lavandula (lah-van'du-lah) [*L.*] a genus of labiate plants; lavender. The flowers of *L. officinalis* Chaix (*L. vera* DC.), Labiatae, contain a volatile oil used in fumigation, perfumery, moth repellent, and occasionally as a carminative.

lavation (la-va'shun) [*L. lavatio*] lavage.

Lavdovski's nucleoid (lav-dov'skēz) [Mikhail Dormidontovich Lavdovski, Russian histologist, 1846-1903] centrosome.

Lavema (lah-ve'mah) trademark for preparations of oxyphenisatin.

lavement (lāv'ment) lavage.

Laveran's bodies, corpuscles (lav-ranz') [Charles Louis Alphonse Laveran, French physician, 1845-1922, noted for discovery of the parasite causing malaria; winner of the Nobel prize for medicine in 1907] see *Plasmodium*.

Laverania (lav'er-a'ne-ah) [C. L. A. Laveran] a name formerly applied to the malarial parasite, *Plasmodium falciparum*.

laveur (lah-vur') [Fr.] an instrument for performing lavage or irrigation.

law (law) a uniform or constant fact or principle. **Allen's paradoxical l.**, whereas in normal individuals the more sugar is given the more is utilized, the reverse is true in diabetics. **all-or-none l.**, see *all or none*. **Ambard's l's** (*obs.*), 1. with the urinary urea concentration constant, the output of urea varies directly as the square of the concentration of the blood urea. 2. with the blood urea concentration constant, the output of urea varies inversely as the square root of the urinary concentration. **Angström's l.**, the wavelengths of the light absorbed by a substance are the same as those given off by it when luminous. **l. of anticipation**, Mott's l. of anticipation. **Aran's l.**, fractures of the base of the skull (except those by contrecoup) result from injuries to the vault, the fractures extending by radiation along the line of shortest circle. **Arndt's l.**, **Arndt-Schulz l.**, weak stimuli increase physiologic activity and very strong stimuli inhibit or abolish activity. **l's of articulation**, a set of rules to be followed in arranging teeth to produce a balanced articulation. **l. of avalanche**, hypothetical law assumed by Ramón y Cajal, that multiple sensations may be aroused in the brain by a simple sensation at the periphery. **l. of average localization**, visceral pain is most accurately localized in the least mobile viscus. **Avogadro's l.**, equal volumes of all perfect gases at the same temperature and pressure contain the same number of molecules or, in the case of monatomic gases, of atoms. **Babinski's l.**, the law of voltaic vertigo that a normal subject inclines to the side of the positive pole; one with disease of the labyrinth falls to the side to which he tends to incline spontaneously. If the labyrinth is destroyed, then there is no reaction. **Baer's l.**, those more general features that are common to all the members of a group of animals are developed in the embryo earlier than the more special features that distinguish the various members of the group. This concept is the predecessor of the recapitulation theory. **Barfurth's l.**, the axis of the tissue in a regenerating structure is at first perpendicular to the cut. **Baruch's l.**, when the temperature of the water used in a bath is above or below that of the skin the effect is stimulating; when both temperatures are the same the effect is sedative. **Bastian's l.**, **Bastian-Bruns l.**, if there is a complete transverse lesion in the spinal cord cephalad to the lumbar enlargement, the

tendon reflexes of the lower extremities are abolished.

Baumès's l., Colles' l. **Beer's l.**, the absorption of light by a solution is a function of the concentration of the solute and the absorption depth of the solution. **Behring's l.**, the blood and serum of an immunized person, when transferred to another subject, will render the latter immune. **Bell's l.**, **Bell-Magendie l.**, the anterior roots of the spinal nerves are motor roots, and the posterior are sensory. **Bergonié-Tribondeau l.**, the sensitivity of cells to radiation varies directly with the reproductive capacity of the cells and inversely with their degree of differentiation. **biogenetic l.**, ontogeny recapitulates phylogeny; see *recapitulation theory*, under *theory*. **Boudin's l.**, there is antagonism between malaria and tuberculosis. **Bowditch's l.**, 1. see *all-or-none* 2. nerves cannot be tired out by stimulation. **Boyle's l.**, at a constant temperature the volume of a perfect gas varies inversely as the pressure, and the pressure varies inversely as the volume. **Breton's l.**, there is a parabolic relation between stimulus and just noticeable difference, expressed by the formula $S = (R/C)^{1/2}$. **Buhl-Dittrich l.**, the supposed principle that in every case of acute miliary tuberculosis there exists within the body at least one old focus of caseation. **Bunge's l.**, the secreting cells of the mammary gland in the dog, cat, and rabbit take from the blood plasma mineral salts in the exact proportion in which they are needed for developing and building up the offspring. **Bunsen-Roscoe l.**, the photochemical effect produced is equal to the product of the intensity of the illumination and the duration of exposure. **Camerer's l.**, children of the same weight have the same food requirements regardless of their ages. **Charles' l.**, at a constant pressure the volume of a given mass of perfect gas varies directly with the absolute temperature. **Colles' l.**, a child that is affected with congenital syphilis, its mother showing no signs of the disease, will not infect its mother (1837). **Colles-Baumès l.**, Colles' l. **Collin's l.**, in infants and children, if after removal of a neoplasm, metastasis or recurrence does not occur for a period equivalent to the age of the patient plus nine months, the possibility of such occurrence is slight. **l. of conservation of energy**, in any given system the amount of energy is constant; energy is neither created nor destroyed, but only transformed from one form to another. **l. of conservation of matter**, in any chemical reaction atoms are neither created nor destroyed but simply change partners. **l. of contrary innervation**, Meltzer's l. **Cope's l.**, genera with little specialization originate many types of organisms; highly specialized genera produce but few biological variations. **Coulomb's l.**, the force of attraction or repulsion between two electrified bodies is proportional directly to the quantities of electric charge, and inversely as the square of their distance apart. **Courvoisier's l.**, when the common bile duct is obstructed by a stone, dilatation of the gallbladder is rare; when the duct is obstructed in some other way, dilatation is common. **Coutard's l.**, in radiotherapy, the point of origin of a mucous membrane tumor is the last site to heal following irradiation. **Curie's l.**, all substances may be rendered radioactive by the influence of the emanations of radium, and substances thus influenced hold their radioactivity longer when inclosed in some material through which the emanations cannot pass. **Cushing's l.**, increase of intracranial tension causes increase of blood pressure to a point slightly above the pressure exerted against the medulla. **Dalton's l.**, the pressure exerted by a mixture of nonreacting gases is equal to the sum of the partial pressures of the separate components. **Dalton-Henry l.**, when a fluid absorbs a mixture of gases, it will absorb as much of each gas as it would have absorbed of either gas separately. **l. of definite proportions**, any compound always contains the same kind of elements in the same proportions; called also *Proust's l.* **l. of denervation**, denervation of a structure increases its sensitivity to chemical stimulation. **Descartes' l.**, the sine of the angle of incidence bears a constant relation to the sine of the angle of refraction for two given media. **Desmarres' l.**, when the visual axes are crossed the images are uncrossed; when the axes are uncrossed (diverging) the images are crossed. Useful in determining presence of esophoria and exophoria, and esotropia and exotropia. **l. of diffusion**, any process set up in the nerve centers affects the organism throughout by a process of diffused motion. **Dollo's l.**, phyletic development is irreversible, i.e., reversion to an ancestral peculiarity (atavism) is impossible. **Donders' l.**, the rotation of the eye around the line of sight is not voluntary; when attention is fixed upon a remote object, the amount of rotation is determined entirely by the angular distance of the object from the median plane and from the horizon. **Draper's l.**, only the rays that are absorbed by a photochemical substance will produce a chemical change in it. **DuBois-Reymond's l.**, it is the variation of current density, and not the absolute value of current density at any given moment, that acts as a stimulus to a muscle or motor nerve. **Dulong and Petit's l.**, the atoms of all elements have exactly the same capacity for heat. **Edinger's l.**, a gradual increase in the function of the neuron causes at first increased growth, but if irregular and excessive, then it leads to atrophy and degeneration. **Einstein-Starck l.** (of photochemical equivalence), according to the quantum theory, quanta of light are absorbed at random during irradiation; the absorption

of one quantum of light by a molecule (or atom) produces only one activated molecule (or atom). **Einthoven's l.**, if electrocardiograms are taken simultaneously with the three leads, at any given instant the potential in lead II is equal to the sum of the potentials in leads I and III. **Elliott's l.**, the activity of epinephrine is due to a stimulation of the endings of the sympathetic nerve. **Ewald's l.**, nystagmus resulting from endolymph currents in a semicircular canal is in a direction parallel with the plane of that canal and opposite to the current, and in the horizontal canals the amount of ocular motor impulse derived from the canals whose hair cells are bent toward the utricle is twice as great as from the other (short end); but in the vertical canals the reverse is true. **l. of excitation**, a motor nerve responds by the contraction of its muscle to the alterations of the strength of an electric current and not to its absolute strength. **l. of facilitation**, when an impulse has passed once through a certain set of neurons to the exclusion of others, it will tend to take the same course on a future occasion, and each time it traverses this path the resistance in the path will be smaller. See also *facilitation* (def. 2). **Faget's l.**, in yellow fever, contrary to the normal relationship, a falling pulse rate is associated with a constant temperature, or a constant pulse rate with a rising temperature. **Fajans' l.**, the product left after the emission of alpha rays has a valence less by two than that of the parent radioactive substance; the product left after the emission of beta rays has a valence greater by one than that of the parent radioactive substance. **Faraday's l.**, in electrolysis the amount of an ion liberated in any given time is proportional to the strength of the current. **Farr's l.**, "subsidence is a property of all zymotic diseases"; the gradually diminishing increase of incidence in an epidemic disease, by virtue of which the epidemic curve first ascends rapidly, then more slowly to a maximum, with a descent more rapid than the ascent. **l. of fatigue** (Houghton's), when the same muscle or group of muscles is kept in constant action until fatigue sets in, the total work done, multiplied by the rate of work, is constant. **Fechner's l.**, the intensity of a sensation produced by a varying stimulus varies directly as the logarithm of that stimulus. **Ferry-Porter l.**, critical fusion frequency is directly proportional to the logarithm of the light intensity. **Fick's first l. of diffusion**, a substance will diffuse through an area at a rate which is dependent upon the difference in concentration of the substance at two given points. **Fildes' l.**, the presence of syphilitic reagent in the blood of the newborn is diagnostic, not of syphilis in the infant but of syphilis in the mother. **first l. of thermodynamics**, see *l's of thermodynamics*. **Fitz's l.** (obs.), acute pancreatitis is to be suspected when a previously healthy person is suddenly affected with violent epigastric pain, vomiting, and collapse, followed inside of twenty-four hours by epigastric swelling, tympanites, or resistance, with slight elevation of temperature. **Flatau's l.**, the greater the length of the fibers of the spinal cord, the closer are they situated to the periphery. **Flechsigs myelogenetic l.**, myelogenetic l. **Flint's l.**, the ontogeny of an organ is the phylogeny of its blood supply. **Flourens' l.**, stimulation of the semicircular canal causes nystagmus in the plane of that canal. **Froriep's l.**, the skull is developed by the annexation of true vertebrae, the head growing at the expense of the neck. **Galton's l.**, each parent contributes, on an average, one fourth, or $(0.5)^2$, of an individual's heritage, each grandparent one sixteenth, or $(0.5)^4$, each great-grandparent one sixty-fourth, or $(0.5)^6$, etc., the occupier of each ancestral place in the n th degree, whatever the value of n , contributing $(0.5)^{2n}$ of the heritage. **Galton's l. of regression**, average parents tend to produce average children; minus parents tend to produce minus children; plus parents tend to produce plus children; but the offspring of extreme parents, whether plus or minus, inherit the parental peculiarities in a less marked degree than the latter were manifested in the parents themselves. **Gay-Lussac's l.**, Charles' l. **Gerhardt-Semon l.**, various peripheral and central lesions affecting the recurrent laryngeal nerve cause the vocal cord to assume a position between abduction and adduction, the paralysis of the parts being incomplete. **Giraud-Teulon l.**, binocular retinal images are formed at the intersection of the primary and secondary axes of projection. **Godélier's l.**, tuberculosis of the peritoneum is invariably associated with tuberculosis of the pleura. **Golgi's l.**, the severity of a malarial attack depends upon the number of parasites in the blood. **Gompertz's l.**, there is a quantitative relation between the probability of death from a given disease and age. **Goodell's l.**, see under *sign*. **Graham's l.**, the rate of diffusion of a gas through porous membranes is in inverse ratio to the square root of their density. **Grasset's l.**, Landouzy-Grasset l. **l. of gravitation**, all bodies attract each other with a force that is directly proportional to their masses and inversely proportional to the square of their distance apart; called also *Newton's l.* **Grotthus' l.**, only those rays of ultraviolet light that are absorbed produce a chemical effect. **Gudden's l.**, the degeneration of the proximal end of a divided nerve is cellulipetal. **Guldberg and Waage's l.**, the velocity of a chemical reaction is proportional to the active masses of the reacting substances; called also *l. of mass action* and *mass l.* **Gull-Toynbee l.**, in otitis media, the lateral sinus and cerebellum are liable to involvement in mastoid disease, and the cerebrum may be

attacked when the roof of the tympanum becomes carious. **Gullstrand's l.**, in strabismus, if the patient is made to turn his head while fixing a distant object and the corneal reflex of either eye moves in the direction in which the head is turning, then the movement is toward the weaker muscle. **Gunn's l.**, in treating a dislocation, the limb must be placed in the same position as at the time of injury and force exerted on the displaced bone in the reverse direction to that which caused the dislocation. **Haecckel's l.**, ontogeny recapitulates phylogeny; see *recapitulation theory*, under *theory*. **Hanau's l's of articulation**, a set of purely physical laws that must be observed in the formation of the masticatory surfaces of natural dentition or dentures, to assure establishment or production of balanced articulation. **Hardy-Weinberg l.**, the proportions of the three genotypes determined by two alleles (A and a) occurring with a frequency of p and q , respectively, in a randomly mating population will remain constant from one generation to the next: $AA = p^2$, $Aa = 2pq$, $aa = q^2$. Mutation, selection, migration, and genetic drift can disturb this equilibrium. **l. of the heart**, the energy set free at each contraction of the heart is a simple function of the length of the fibers composing its muscular walls (Starling). **Heidenhain's l.**, glandular secretion always involves change in the structure of the gland. **Hellin's l.**, **Hellin-Zeleny l.**, one in about 89 pregnancies ends in the birth of twins; one in 89×89 , or 7921, of triplets; one in $89 \times 89 \times 89$, or 704,969, of quadruplets. **Henry's l.**, the solubility of a gas in a liquid solution is proportional to the partial pressure of the gas. **Hering's l.**, 1. the principle of bilateral ocular innervation; equal innervation is sent to the muscles of the two eyes so that one eye is never moved independently of the other. 2. the clearness or purity of any conception or sensation depends on the proportion existing between its intensity and the sum total of the intensities of all the simultaneous conceptions and sensations. **Heyman's l.**, the threshold value of a visual stimulus is increased in proportion to the strength of the inhibitory stimulus. **Hilton's l.**, a nerve trunk which supplies the muscles of any given joint also supplies the muscles which move the joint and the skin over the insertions of such muscles. **Hoff's l.**, van't Hoff's l. **Hoorweg's l.**, there is a duration of electric discharge above which time is not a factor, and a duration of discharge below which the time is a factor, in the provocation of neuromuscular response. **Horner's l.**, ordinary color blindness is transmitted from males to males through normal females. **l. of independent assortment**, the members of gene pairs segregate independently during meiosis. **l. of initial value**, Wilder's l. of initial value. **l. of the intestines** (obs.), the presence of a bolus in the intestine induces contraction above and inhibition below the stimulus, thereby producing a progression of the intestinal contents (Starling). **l. of inverse square**, the intensity of radiation is inversely proportional to the square of the distance between the point of source and the irradiated surface. **l. of isochronism**, a nerve and its innervated muscle have identical chronaxie values. **isodynamic l.**, in the production of heat in the body the different foodstuffs are interchangeable in accordance with their heat-producing values. **l. of isolated conduction**, the wave of change or nervous impulse which passes through a neuron is never communicated to other neurons except at the terminals. **Jackson's l.**, the nerve functions that are latest developed are the earliest to be destroyed. **Kahler's l.**, the ascending branches of the posterior roots of the spinal nerves pass within the cord in succession from the root zone toward the mesial plane. **Knapp's l.**, there should be no difference in retinal image size in the correction of spherical axial anisometropia, provided that the lenses are placed at the anterior focal point of the eye. **Koch's l.**, see *Koch's postulates*, under *postulate*. **Küstner's l.**, if an ovarian tumor is left-sided, torsion of its pedicle takes place toward the right; if right-sided, toward the left. **Lambert's cosine l.**, the intensity of radiation on an absorbing surface varies as the cosine of the angle of incidence for parallel rays. **Landouzy-Grasset l.**, in lesion of one cerebral hemisphere the head is turned to the side of the brain lesion if there is paralysis, and to that of the affected muscles if there is spasticity. **Lapicque's l.**, the chronaxy is inversely proportional to the diameter of the nerve fiber. **Laplace's l.**, in hemodynamics, the pressure produced in the ventricles depends not only on the tension developed by the cardiac ventricular muscle in contraction but also on the size and shape of the heart. **Leopold's l.**, when the placenta is inserted upon the posterior wall of the uterus, the oviducts assume directions converging upon the anterior wall; but when the insertion is on the anterior wall during recumbency, the tubes turn backward and become parallel to the axis of the body. **Levret's l.**, the insertion of the cord is marginal in placenta previa. **Listing's l.**, when the eyeball is moved from a resting position, the rotational angle in the second position is the same as if the eye were turned about a fixed axis perpendicular to the first and second position of the visual line. **Lossen's l.**, hemophilic males do not transmit the condition to their offspring. **Louis' l.**, 1. pulmonary tuberculosis generally begins in the left lung. 2. tuberculosis of any part is attended by localization in the lungs. **Magendie's l.**, Bell's l. **malthusian l.**, the hypothesis that population tends to outrun the means available to sustain it. **Marey's l.**, as the blood

pressure rises, the pulse rate slows. **Mariotte's l.**, Boyle's l. **l. of mass action**, mass l., Guldberg and Waage's l. **Maxwell-Boltzmann distribution l.**, a method for calculating the relative number of molecules in a given population which possess a given amount of energy. **Meltzer's l.** (*of contrary innervation*), all living functions are continually controlled by two opposing forces: augmentation or action on the one hand, and inhibition on the other. **Mendel's l.**, **mendelian l.**, in the inheritance of certain traits or characters, the offspring are not intermediate in character between the parents but inherit from one or the other parent in this respect. For example, if a pea plant with the factor tallness (TT) is mated with one with the factor shortness (SS) then some of the offspring will inherit TT, some TS, and some SS in the ratio: TT, 2TS, SS. The TT's are homozygous (pure) tall, the SS's are homozygous short, and the TS's are heterozygous. Which parent the TS ones resemble will depend on whether T or S is dominant. The TT's mated with TT's breed pure as do the SS's with SS's. The TS's mated with TS's again produce TT's, TS's and SS's in the same ratio as above. TS's mated with TT's or SS's give the same combinations but in a different ratio. Today, Mendel's law is usually expressed as the *law of independent assortment* (q.v.) and the *law of segregation* (q.v.). **Mendeléeff's l.**, periodic l. **Metchnikoff's (Mechnikov's) l.**, whenever the body is attacked by bacteria, the polymorphonuclear leukocytes and the large mononuclear leukocytes quickly become protective phagocytes. **Meyer's l.**, the internal structure of fully developed normal bone represents the lines of greatest pressure or traction and affords the greatest possible resistance with the least possible amount of material. **Michaelis-Menten l.**, a method for determining the rate of enzymatic reaction in relation to the concentration of the substrate. **Minot's l.**, organisms age fastest when young. **Mott's l. of anticipation**, when the children of the insane become insane they do so at a much earlier age than did their parents. Contemporary evidence indicates that this law does not hold true. **Müller's l.**, l. of specific irritability. **Müller-Haeckel l.**, biogenetic l. **l. of multiple variants**, any variation from the normal in the bones of the hand or foot is always multiple. **myelogenetic l.** (*of Flechsig*), the myelination of the nerve fibers of the developing brain takes place in a definite sequence so that fibers belonging to particular functional systems mature at the same time. **Naegeli's l.**, a disease in which eosinophils are present in one-half normal, normal, or increased numbers cannot be typhoid; and the appearance of even a few of such cells must incite caution in the diagnosis. **Nernst's l.**, the current required to stimulate muscle action varies as the square root of its frequency. **Neumann's l.**, the molecular heat in compounds of analogous constitution is always the same. **Newland's l.**, a forerunner of the periodic law, in which the chemical elements, arranged in order of their atomic weights, showed a repetition of properties in octaves. **Newton's l.**, l. of gravitation. **Nysten's l.**, rigor mortis affects first the muscles of mastication, next those of the face and neck, then those of the upper trunk and arms, and last of all those of the legs and feet. **Ohm's l.**, the strength of an electric current varies directly as the electromotive force, and inversely as the resistance. **Ollier's l.**, in the case of two parallel bones which are joined at their extremities by ligaments, arrest of growth in one of them involves growth disturbance in the other. **Pajot's l.**, a solid body contained within another body having smooth walls will tend to conform to the shape of those walls; this law governs the rotating movements of the fetus during labor. **Pascal's l.**, pressure applied to a liquid at any point is transmitted equally in all directions. **periodic l.**, if the elements are arranged in the sequence of their atomic numbers, they fall into distinctive periods of 2, 8, 8, 18, 18, and 32 elements; see also *periodic table*, under *table*. Called also *Mendeléeff's l.* **Petit's l.**, Dulong and Petit's l. **Pfeiffer's l.**, the blood serum of an animal immunized against a disease will, when introduced into the body of another (susceptible) animal, protect the recipient by destroying the bacteria causing that disease. See also under *phenomenon*. **Pflüger's l.**, a nerve tract is stimulated when catelectrotonus develops or anelectrotonus disappears, but not under the reverse conditions. **Poiseuille's l.**, the volume flow in a tube is (a) directly proportional to the pressure drop along the length of the tube and to the fourth power of the radius of the tube, and (b) is inversely proportional to the length of the tube and to the viscosity of the fluid. **Prévost's l.**, in a lateral cerebral lesion the head is turned toward the side involved. **Profeta's l.**, the apparently nonsyphilitic child born of syphilitic parents is immune. **Proust's l.**, l. of definite proportions. **psychophysical l.**, Weber-Fechner l. **Raoult's l.**, 1. (*for freezing points*) the depression of the freezing point for the same type of electrolyte dissolved in a given solvent is proportional to the molecular concentration of the solute. 2. (*for vapor pressures*) (a) the vapor pressure of a volatile substance from a liquid solution is equal to the mole fraction of that substance times its vapor pressure in the pure state. (b) when a nonvolatile nonelectrolyte is dissolved in a solvent the decrease in vapor pressure of that solvent is equal to the mole fraction of the solute times the vapor pressure of the pure solvent. **l. of reciprocal proportions**, two chemical elements that unite with a third element do so in proportions that are multiples of those in which they unite

with each other. **l. of referred pain**, referred pain only arises from irritation of nerves which are sensitive to those stimuli that produce pain when applied to the surface of the body. **l. of refraction**, rays of light passing from a rarer to a denser medium are deflected toward a perpendicular to the surface of incidence, whereas rays passing from a denser to a rarer medium are deflected away from the perpendicular. **l. of refreshment**, the refreshment of a laboring muscle depends on the rate of supply of arterial blood. **l. of regression**, Galton's l. of regression. **l. of relativity**, simultaneous and successive sensations modify each other. **Ricco's l.**, the relation between intensity and area of illumination: intensity times area equals constant. **Ritter's l.**, both the opening and the closing of an electric current produce stimulation in a nerve. **Ritter-Valli l.**, the primary increase and secondary loss of irritability in a nerve, produced by a section which separates from the nerve center, travel in a peripheral direction. **Rosa's l.**, the possibilities of phyletic variation in an organism decrease in proportion to the extent of its development. **Rubner's l.**, 1. (*law of constant energy consumption*) the rapidity of growth is proportional to the intensity of the metabolic process. 2. (*law of constant growth quotient*) the same fractional part of the entire energy is utilized for growth; this fractional part is called the "growth quotient." **Schroeder van der Kolk's l.**, the sensory fibers of a mixed nerve are distributed to the parts moved by muscles which are stimulated by the motor fibers of the same nerve. **Schütz's l.**, **Schütz-Borisov l.**, the velocity of enzyme action is directly proportional to the square root of its concentration: an empirical observation applied to crude preparations of pepsin and a few other proteases, and explained by the presence of an inhibitor in equilibrium with the enzyme. **second l. of thermodynamics**, see *l's of thermodynamics*. **l. of segregation**, in each generation the ratio of (a) pure dominants, (b) dominants giving descendants in the proportion of three dominants to one recessive, and (c) pure recessives is 1 : 2 : 1. This ratio follows from the fact that the two alleles of a gene cannot be a part of a single gamete, but must segregate to different gametes (see *meiosis*). **Semon's l.**, **Semon-Rosenbach l.**, in progressive organic diseases of the motor laryngeal nerves, the abductors of the vocal cords (posterior cricoarytenoids) are the first, and occasionally the only, muscles affected. **Sherrington's l.**, 1. every posterior spinal nerve root supplies a special region of the skin, although fibers from adjacent spinal segments may invade such a region. 2. when a muscle receives a nerve impulse to contract, its antagonist receives simultaneously an impulse to relax (see *reciprocal innervation*). **l. of similars**, see *homeopathy*. **l. of sines**, the sine of the angle of incidence is equal to the sine of the angle of reflection multiplied by a constant quantity. **Snell's l.**, Descartes' l. **Spallanzani's l.**, the law that regeneration is more complete in younger individuals than in older ones. **l. of specific irritability**, every sensory nerve reacts to one form of stimulus and gives rise to one form of sensation only, though if under abnormal conditions it be excited by other forms of stimuli, the sensation evoked will be the same. Called also *Müller's l.* **Starling's l.**, 1. the heart output per beat is directly proportional to the diastolic filling. 2. see *l. of the heart*. 3. see *l. of the intestines*. **Stokes' l.**, a muscle situated above an inflamed membrane is often affected with paralysis. **surface l.**, at constant temperature, the heat production, heat loss, and oxygen consumption in an animal are inversely proportional to the free surface or to the square of a linear dimension. **Talbot's l.**, when complete fusion occurs and the sensation is uniform, the intensity is the same as would occur were the same amount of light spread uniformly over the disk. **Teevan's l.**, fractures of bones occur in the line of extension, and not in the line of compression. **l's of thermodynamics**, *Zeroth law*: two systems in thermal equilibrium with a third system are in thermal equilibrium with each other. *First law*: energy is conserved in any process; i.e., the energy gained (or lost) by a system is exactly equal to the energy lost (or gained) by the surroundings. *Second law*: there is always an increase in entropy in any naturally occurring (spontaneous) process. *Third law*: absolute zero is unattainable. **third l. of thermodynamics**, see *l's of thermodynamics*. **Toynbee's l.**, in cases of brain disease due to otitis, the cerebellum and lateral sinuses are affected from the mastoid, and the cerebrum from the tympanic roof. **Valli-Ritter l.**, see *Ritter-Valli l.* **van der Kolk's l.**, **Schroeder van der Kolk's l.** **van't Hoff's l.**, 1. many substances in solution exert an osmotic pressure equal to the gas pressure that they would exert if their molecules were in a gaseous state and occupied a volume equal to that of the solution under the same conditions of temperature and pressure. 2. van't Hoff's rule; see under *rule*. **Virchow's l.**, the cell elements of tumors are derived from normal and preexisting tissue cells. **Vulpian's l.**, when a portion of the brain is destroyed, the functions of that part are carried on by the remaining parts. **Waller's l.**, **wallerian l.**, if the sensory fibers of the root of a spinal nerve be divided on the central side of the ganglion, the fibers on the peripheral side of the cut do not degenerate; while those that remain connected with the cord degenerate. **Walton's l.**, l. of reciprocal proportions. **Weber's l.**, the variation of stimulus which causes the smallest appreciable change in sensation maintains an approximately fixed

ratio to the whole stimulus. **Weber-Fechner l.**, for a sensation to increase by equal amounts (arithmetical progression), the stimulus must increase by geometrical progression; called also *psychophysical l.* **Weigert's l.**, loss or destruction of elements in the organic world is apt to be followed by overproduction of such elements in the reparative process. **Wilder's l. of initial value**, the more intense the function of a vegetative organ, the weaker its capacity for being excited by stimuli and the stronger its reaction to depressing factors; with extremely high or low initial value, there is marked tendency to paradoxical reactions (reversal of direction of reaction). **Wolff's l.**, a bone, normal or abnormal, develops the structure most suited to resist the forces acting upon it. **Wundt-Lamansky l.**, the line of vision in moving through a vertical plane parallel to the frontal plane moves in straight lines in the vertical and horizontal directions, but in curved paths in all other movements. **zeroth l. of thermodynamics**, see *l's of thermodynamics*. **Zeune's l.**, the proportion of cases of blindness is less in the Temperate than in the Frigid Zone, and increases in the Torrid Zone as the equator is approached.

lawrencium (law-ren'se-um) [Ernest Orlando Lawrence, American physicist, 1901-1958; builder of the first cyclotron for the production of high-energy particles, and winner of the Nobel prize for physics in 1939] the chemical element of atomic number 103, atomic weight 257, symbol *Lw*; produced in 1961 by bombardment of californium isotopes of mass 250, 251, and 252.

Lawson Tait see *Tait*.

lawsone (law'sōn) 2-hydroxy-1,4-naphthoquinone, $C_{10}H_6O_3$, a principle isolated from the leaves of *Lawsonia inermis* L. (Lythraceae), used as a topical sunscreen agent.

Lawsonia (law-so'ne-ah) a genus of tropical Old World shrubs, including *L. inermis*, the source of lawsone and of henna.

laxation (lak-sa'shun) defecation.

laxative (lak'sah-tiv) [*L. laxativus*] 1. aperient; mildly cathartic. 2. an agent that acts to promote evacuation of the bowel; a cathartic or purgative. **bulk l.**, an agent that acts to promote evacuation of the bowel by increasing the volume of the feces.

laxator (lak-sa'tor) [*L. laxare* to unloose or relax] that which slackens or relaxes. 1. **tym'pani ma'jor**, ligamentum mallei anterius. 2. **tym'pani mi'nor**, ligamentum mallei laterale.

layer (la'er) a sheetlike mass of tissue of nearly uniform thickness, several of which may be superimposed, one above another, as in the epidermis; called also *lamina* and *stratum*. **abscission l.**, a special layer or zone of thin-walled cells, loosely joined together, extending across the base of the petiole, thus weakening the base of the leaf, permitting the leaf to fall. **adamantine l.**, enamelum. **ambiguous l.**, the second layer of the cerebral cortex, counting from without; named from the indefinite shapes of many of its cells. **ameloblastic l.**, the inner layer of cells of the enamel organ, created by its invagination, which forms the enamel prisms. **bacillary l.**, l. of rods and cones. **Baillarger's l.**, see under *line*. **basal l.**, 1. lamina basalis choroideae. 2. stratum basale epidermidis. **basal l. of epidermis**, stratum basale epidermidis. **basement l.**, see under *membrane*. **Bekhterev's l.**, a layer of fibers in the external granular layer of the cerebral cortex. **Bernard's glandular l.**, a layer of cells which line the acini of the pancreas. **blastodermic l.**, germ l. **Bowman's l.**, lamina limitans anterior corneae. **Bruch's l.**, lamina basalis choroideae. **cerebral l.**, a term applied to the fifth to ninth layers of the retina. **Chievitz l.**, a transient fiber layer separating the inner and outer neuroblastic layers of the optic cup. **choriocapillary l.**, lamina choroïdocapillaris. **circular l. of drumhead**, stratum circulare membranae tympani. **circular l. of muscular tunic of colon**, stratum circulare tunicae muscularis coli. **circular l. of muscular tunic of rectum**, stratum circulare tunicae muscularis recti. **circular l. of muscular tunic of small intestine**, stratum circulare tunicae muscularis intestini tenuis. **circular l. of muscular tunic of stomach**, stratum circulare tunicae muscularis ventriculi. **circular l. of tympanic membrane**, stratum circulare membranae tympani. **claustral l. (obs.)**, claustrum. **clear l. of epidermis**, stratum lucidum epidermidis. **columnar l.**, 1. layer of rods and cones. 2. mantle layer. **compact l.**, stratum compactum. **cortical l.**, the cortex of an organ, as of the brain or kidney. **cutaneous l. of tympanic membrane**, stratum cutaneum membranae tympani. **cuticular l.**, a striate border of modified cytoplasm at the free end of some columnar cells. **deep l. of triangular ligament**, fascia diaphragmatis urogenitalis superior. **Dobie's l.**, Z band; see under *band*. **enamel l.**, the outermost layer of cells of the enamel organ. **ependymal l.**, the innermost layer of the wall of the primitive neural tube, bounding the central canal, which differentiates regionally into the roof plate and the floor plate. **epitrichial l.**, the most superficial layer of the epidermis of the embryo. **fibrous l. of articular capsule**, membrana fibrosa capsulae articularis. **Floegel's l.**, a granular layer in each transparent lateral disk of a muscle fibril. **functional l.**, stratum functionale. **ganglion cell l.**, a layer of the retina, situated between the inner molecular layer and the stratum opticum, or nerve fiber layer, consisting essentially of the ganglion

cells of the retina, and containing also the fibers of Müller, neuroglia, and branches of the retinal vessels. **ganglionic l. of cerebellum**, stratum gangliosum cerebelli. **ganglionic l. of optic nerve**, stratum ganglionare nervi optici. **ganglionic l. of retina**, stratum ganglionare retinae. **Gennari's l.**, see *Baillarger's lines*, under *line*. **germ l.**, one of the three primary layers of cells of the embryo (ectoderm, endoderm, or mesoderm), from which the tissues and organs develop. **germinative l.**, **germinative l. of epidermis**, 1. stratum germinativum epidermidis [Malpighii]. 2. stratum basale epidermidis. **germinative l. of nail**, stratum germinativum unguis. **granular l. of cerebellum**, stratum granulosum cerebelli. **granular l. of epidermis**, stratum granulosum epidermidis. **granular l. of follicle of ovary**, stratum granulosum folliculi ovarici vesiculosi. **granular l. of Tomes**, a layer formed by a series of areas of imperfectly calcified dentin, found immediately under the dentinocemental junction. **granule l.**, stratum granulosum cerebelli. **gray l. of superior colliculus**, stratum griseum colliculi superioris. **half-value l.**, the thickness of a given substance which, when introduced in the path of a given beam of rays, will reduce its intensity to one half of the initial value; called also *half-value thickness*. Abbreviated *HVL*. **Haller's l.**, that portion of the vascular layer of the choroid which is made up of large vessels. **Henle's l.**, the outer layer of cells of the inner root sheath of a hair follicle, lying between the outer root sheath and Huxley's layer. **Henle's fiber l.**, the outer plexiform layer in the region of the macula retinae; see also *entoretina*. **horny l. of epidermis**, stratum corneum epidermidis. **horny l. of nail**, stratum corneum unguis. **Huxley's l.**, a layer of the inner root sheath of a hair follicle, lying between Henle's layer and the inner sheath cuticle. **inferior l. of pelvic diaphragm**, fascia diaphragmatis pelvis inferior. **Kaes-Bekhterev's l.**, Bekhterev's l. **keratohyaline l.**, stratum granulosum epidermidis. **Langerhans' l.**, stratum granulosum epidermidis. **Langhans' l.**, cytrophoblast. **longitudinal l. of muscular tunic of colon**, stratum longitudinale tunicae muscularis coli. **longitudinal l. of muscular tunic of rectum**, stratum longitudinale tunicae muscularis recti. **longitudinal l. of muscular tunic of small intestine**, stratum longitudinale tunicae muscularis intestini tenuis. **longitudinal l. of muscular tunic of stomach**, stratum longitudinale tunicae muscularis ventriculi. **malpighian l.**, stratum germinativum epidermidis [Malpighii]. **mantle l.**, middle layer of the wall of the primitive neural tube, containing primitive nerve cells and later forming the gray substance of the central nervous system. **marginal l.**, the outermost layer of the wall of the primitive neural tube, a fibrous mesh into which the nerve fibers later grow, forming the white substance of the central nervous system. **medullary l's of optic thalamus, internal (obs.)**, laminae medullares thalami. **Meynert's l.**, the layer of pyramidal cells in the cortex of the cerebrum. **molecular l. of cerebellum**, stratum moleculare cerebelli. **molecular l., inner**, plexiform l., inner. **molecular l., outer**, plexiform l., outer. **mucous l.**, stratum germinativum epidermidis [Malpighii]. **mucous l. of tympanic membrane**, stratum mucosum membranae tympani. **muscular l. of fallopian tube**, tunica muscularis tubae uterinae. **muscular l. of stomach, inner**, stratum circulare tunicae muscularis ventriculi. **nerve fiber l.**, a layer of the retina, situated between the ganglion cell layer and the internal limiting membrane, consisting essentially of the axons of the ganglion cells which pass through the lamina cribrosa to form the optic nerve. **nervous l.**, all of the retina except the pigment layer; the inner layer of the optic cup. **neuroepidermal l.**, ectoderm. **neuroepithelial l. of retina**, stratum neuroepitheliale retinae. **Nitabuch's l.**, see under *stria*. **nuclear l. of cerebellum**, stratum granulosum cerebelli. **nuclear l., inner**, a layer of the retina, situated between the outer and inner molecular layers, consisting essentially of the sensory bipolar cells. **nuclear l., outer**, a layer of the retina, situated between the external limiting membrane and the outer molecular layer, consisting essentially of the rod and cone granules (nuclei). **odontoblastic l.**, the epithelioid layer of odontoblasts in contact with the dentin of teeth; the layer of cells lines the pulp cavities, remaining functional after maturation of a tooth. **Ollier's l., osteogenetic l.**, the innermost layer of the periosteum. **palisade l.**, the basal layer of the mucous membrane layer of the tympanic membrane. **Pander's l.**, the splanchnopleural layer of the mesoblast. **papillary l. of corium**, stratum papillare corii. **parietal l. of pelvic fascia**, fascia diaphragmatis pelvis superior. **parietal l. of tunica vaginalis of testis**, lamina parietalis tunicae vaginalis testis. **peripheral l.**, the outer portion of the molecular layer of the cerebral cortex. **perpendicular l. of ethmoid bone**, lamina perpendicularis ossis ethmoidalis. **pigmented l. of ciliary body**, stratum pigmenti corporis ciliaris. **pigmented l. of eyeball**, stratum pigmenti bulbi oculi. **pigmented l. of iris**, stratum pigmenti iridis. **pigmented l. of retina**, stratum pigmenti retinae. **plexiform l., inner**, the inner plexiform layer of the retina, between the inner nuclear layer and the ganglion cell layer, consisting primarily of the arborization of the axons of the bipolar cells with the dendrites of the ganglion cells.

Called also *inner molecular l.* **plexiform l.**, outer, the outer plexiform layer of the retina, between the outer nuclear layer and the inner nuclear layer, consisting essentially of the arborization of the axons of the rod and cone granules with the dendrites of the bipolar cells. Called also *outer molecular l.* **prickle-cell l.**, the layer of the skin between the granular layer and the basal layer, characterized by the presence of prickle cells; called also *stratum spinosum epidermidis* [NA]. **Purkinje l.**, the layer of Purkinje cells in the cerebellar cortex, between the superficial molecular layer and the subjacent granular layer. **radiate l.**, of **tympenic membrane**, stratum radiatum membranae tympani. **Rauber's l.**, the most external of the three layers of cells which form the blastodisc in the young embryo; called also *blastodermic ectoderm* and *primitive ectoderm*. **reticular l.** of **corium**, stratum reticulare corii. **l. of rods and cones**, a layer of the retina, situated immediately beneath the pigment epithelium, between it and the external limiting membrane, comprising the sensitive elements of the retina, the cones, containing a visual pigment, iodopsin, and the rods, containing visual purple, or rhodopsin. **Rohr's l.**, see under *stria*. **Sattler's l.**, that portion of the vascular layer of the choroid which is made up of medium-sized vessels. **sclerotogenous l.**, **skeletogenous l.**, the layer of mesoderm cells surrounding the notochord of the embryo and developing into the axial skeleton. **second half-value l.**, the additional thickness of material needed to reduce a radiation beam from one half to one fourth of its original exposure rate. **somatic l.**, the external layer of the lateral mesoderm after the coelomic split occurs; the inner component of somatopleure of the embryo. **spinous l.** of **epidermis**, stratum spinosum epidermidis. **splanchnic l.**, the internal layer of the lateral mesoderm after the coelomic split occurs; the component of splanchnopleure outside the endoderm of the embryo. **spongy l.**, stratum spongiosum. **subcallosal l.**, the layer of nerve fibers on the lower side of the corpus callosum. **subendocardial l.**, the layer of loose fibrous tissue uniting the endocardium and myocardium. **subendothelial l.**, a middle, fibrous layer of the tunica intima of typical blood vessels, located between the endothelium and internal elastic membrane. **subepicardial l.**, the layer of loose connective tissue uniting the epicardium and myocardium. **submantle l.**, a layer of interglobular dentin usually situated just below the cover (mantle) dentin. **submucous l.**, tela submucosa. **submucous l. of bladder**, tela submucosa vesicae urinariae. **submucous l. of colon**, tela submucosa coli. **submucous l. of esophagus**, tela submucosa esophagi. **submucous l. of pharynx**, tela submucosa pharyngis. **submucous l. of small intestine**, tela submucosa intestini tenuis. **submucous l. of stomach**, tela submucosa ventriculi. **subodontoblastic l.**, Weil's basal l. **subpapillary l.**, the layer of the corium immediately underlying the layer containing the dermal papillae. **subserous l.**, tela subserosa. **subserous l. of peritoneum**, tela subserosa peritonei. **superficial l. of fascia of perineum**, fascia perinei superficialis. **superficial l. of triangular ligament**, fascia diaphragmatis urogenitalis inferior. **superior l. of pelvic diaphragm**, fascia diaphragmatis pelvis superior. **suprachoroid l.**, lamina suprachoroidea. **synovial l. of articular capsule**, membrana synovialis capsulae articularis. **Tomes' granular l.**, granular l. of Tomes. **trophic l.**, the endoderm. **Unna's l.** (obs.), stratum granulosum epidermidis. **vegetative l.**, the endoderm. **vertical l. of ethmoid bone**, lamina perpendicularis ossis ethmoidalis. **visceral l. of pelvic fascia**, fascia pelvis visceralis. **visceral l. of pericardium**, lamina visceralis pericardii. **visceral l. of tunica vaginalis of testis**, lamina visceralis tunicae vaginalis testis. **Waldeyer's l.**, the vascular layer of the ovary. **Weil's basal l.**, a clear layer relatively free of cells, just inside of the layer of odontoblasts of the tooth pulp, made up of delicate fibrils of connective tissue communicating with the processes of odontoblasts. **white l's of cerebellum**, laminae albae cerebelli. **Zeissel's l.**, a layer in the stomach wall between the tunica muscularis mucosae and the tela submucosa. **zonal l. of quadrigeminal body**, stratum zonale corporis quadrigemini. **zonal l. of thalamus**, stratum zonale thalami.

lazar (laz'ar) [*Lazarus*, the leper of the Bible] (obs.) 1. leper; leprosy patient. 2. of or pertaining to leprosy, as lazar house (leprosarium).

lazaretto (laz'ah-ret'o) 1. a hospital for contagious diseases. 2. a quarantine station.

lb. abbreviation for *L. li'bra*, pound.

LBF *lactobacillus bulgaricus* factor.

L.Ch. Licentiate in Surgery.

LD lethal dose; (perception of) light difference.

LD₅₀ median lethal dose; a dose that is lethal for 50 per cent of the test subjects.

L.D.A. left dorso-anterior (position of the fetus).

LDH lactate dehydrogenase.

LDL low-density lipoproteins.

L-dopa see *dopa*.

L.D.P. left dorsoposterior (position of the fetus).

L.D.S. Licentiate in Dental Surgery.

LE lupus erythematosus; see also under *cell*.

leaching (lēch'ing) lixiviation.

lead (led) [*L. plumbum*] a soft, grayish blue metal with poisonous salts; symbol, Pb; atomic number, 82; atomic weight, 207.19. See also under *poisoning*. **l. acetate** [USP], colorless crystals, masses, or granules, $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2 \cdot 3\text{H}_2\text{O}$, used as a reagent and astringent. **l. arsenate**, a mixture of arsenate of soda and acetate of lead, PbHAsO_4 , in water, used as an insecticide, and in veterinary medicine to kill tapeworms. **black l.**, graphite. **l. chloride**, a compound, PbCl_2 , used as a reagent and pigment. **l. chromate**, a lemon-yellow powder, PbCrO_4 , used in stains; called also *chrome yellow*. **l. monoxide**, a binary compound, PbO , called *litharge* when crystalline and *massicot* when amorphous; used as a reagent. **l. nitrate**, a sweetish crystalline agent, $\text{Pb}(\text{NO}_3)_2$, used as a reagent. **l. oleate**, a white powder, $\text{Pb}(\text{C}_{18}\text{H}_{33}\text{O}_2)_2$, used in varnishes. **l. oxide**, see *l. monoxide* and *l. tetroxide*. **radioactive l.**, radiol lead. **red l.**, lead tetroxide. **l. selenide**, a compound, PbSe , occurring as gray crystals. **l. subacetate**, a basic acetate of lead. **sugar of l.**, *l. acetate*. **tetra-ethyl l.**, a highly poisonous organic lead compound, $\text{Pb}(\text{C}_2\text{H}_5)_4$, used as an antiknock agent in internal combustion motors; it can be absorbed through the skin and may cause mental symptoms and death. Called also *ethyl gas*. **l. tetroxide**, a red powder, Pb_2O_4 , which may be used like the monoxide. **white l.**, a basic lead carbonate.

lead (lēd) any of the conductors connected to the electrocardiograph. Also any of the records made by the electrocardiograph, varying with the part of the body from which the current is led off. It is customary to use three peripheral leads; lead I, right arm and left arm; lead II, right arm and left leg; lead III, left arm and left leg; and at least six leads from the precordial region. Called also *derivation*. **aV_F l.**, a unipolar lead in which the positive lead is on the left leg. **aV_L l.**, a unipolar lead in which the positive terminal is on the left arm. **aV_R l.**, a unipolar lead in which the positive terminal is on the right arm. **bipolar l.**, an array involving two electrodes placed at different body sites. **esophageal l.**, one attached to an electrode inserted within the esophagus. **limb l's**, any of the three leads customarily used in electrocardiography. **precordial l's**, leads in which one electrode is placed on the chest and the other is connected to one or more extremities. Such leads are indicated as follows: CR = chest + right arm; CL = chest + left arm; CF = chest and left leg; V = chest + junction of leads from right and left arms and left leg (sometimes called *Wilson's l's*). Subscript numbers 1 to 6 indicate at which points on the chest the lead is taken. **unipolar l.**, an

Precordial leads (Graybiel and White).

array of two electrodes, only one of which transmits potential variation. **V l's**, precordial leads further designated by a subscript numeral (V_1 to V_6) according to the position along the intercostal spaces. **Wilson's l's**, see *precordial l's*.

leaflet (lēf'let) a structure resembling a small leaf, especially a cusp of a heart valve.

leakage (lēk-ij) the escape of fluid from a vessel or other container.

learning (ler'ning) a relatively long-lasting adaptive behavioral change occurring as a result of experience. **insight l.**, the highest form of learning, characterized by the ability to evaluate and combine previous experiences to solve a problem or achieve a desired goal. **latent l.**, that which occurs without reinforcement, becoming apparent only when a reinforcement or reward is introduced.

leash (lēsh) a bundle of cordlike structures, as nerves, blood vessels, fibers, etc.

leben (lēb'en) [Arabic] a ferment drink of Egypt made from the milk of cows, buffaloes, and goats.

Leber's congenital amaurosis, etc. (la-berz') [Theodor Leber, German ophthalmologist, 1840-1917] see under *amaurosis*, *atrophy*, *corpuscle*, *disease*, and *plexus*.

Lebistes (lē-bis'tēz) a genus of small fish, the guppy. **L. reticulatus**, a species of top-feeding minnows, commonly known as "millions," cultivated in the Barbados to eliminate mosquito larvae.

Leboyer method (technique) (lē-boi-ya') [Frederick Leboyer, French obstetrician] see under *method*.

lecanopagus (lek'an-op'ah-gus) [Gr. *lekanē* basin + *pagos* thing fixed] symmetrical conjoined twins fused at the pelvis.

Lecat's gulf (lē-kahz') [Claude Nicolas Lecat, French surgeon, 1700-1768] the hollow of the bulbous portion of the urethra.

leche de higuerón (la'cha da ēg'a-ron') [Sp. milk of fig] the sap or latex of wild fig trees e.g., *Ficus anthelmintica* Mart. (Moraceae), of Central and South America, used as a vermifuge.

lechoyrya (lek'o-pi'rah) [Gr. *lecho* parturient woman + *pyr* fever] puerperal fever.

lecithal (les'i-thal) [Gr. *lekithos* yolk] having a yolk. Used as a word termination, affixed to a word stem descriptive of the state of the yolk substance, as *centrolecithal*, *isolecithal*, etc. See also entries under *ovum*.

lecithalbumin (les'i-thal'bu-min) a compound of albumin and lecithin, found in the stomach, liver, kidney, lungs, and spleen.

lecithid (les'i-thid) a compound of lecithin with venom hemolysin. **cobra l.**, a hemolytic compound formed by cobra toxin and the lecithin of the blood.

lecithin (les'i-thin) [Gr. *lekithos* yolk of egg] any of a group of phosphoglycerides consisting of esters of glycerol with two molecules of long-chain aliphatic acids and one of phosphoric acid, the latter being esterified with the alcohol group of choline. Lecithins are found in animal tissues, especially in nerve tissue, the liver, semen, egg yolk, and in smaller amounts in bile and blood, and are major constituents of cell membranes. They differ from each other in the nature of their long-chain acyl groups. Called also *phosphatidylcholine*.

lecithinase (les'i-thin-ās) a group of enzymes (lecithinase A to D) now known as phospholipase (q.v.). **cobra l.**, phospholipase A, one of the constituents of cobra venom, in part responsible for its hemolytic effect.

lecithinemia (les'i-thi-nē-me-ah) the presence of lecithin in the blood.

lecitho- (les'i-tho) [Gr. *lekithos* yolk] a combining form denoting relationship to the yolk of an egg or ovum.

lecithoblast (les'i-tho-blast') [*lecitho-* + Gr. *blastos* germ] the primitive endoderm of a two-layered blastodisc.

lecithoprotein (les'i-tho-pro'te-in) a compound of the protein molecule with a lecithin; lecithoproteins occur in all cells.

lecithovitellin (les'i-tho-vi-tel'in) a suspension of egg yolk in a solution of sodium chloride; it reacts with the toxin of *Clostridium welchii* to produce a precipitate or an opacity.

Leclanché's cell (lē'k'lan-shāz') [Georges Leclanché, French physicist, 1839-1882] see under *cell*.

lectin (lek'tin) any of a group of hemagglutinating proteins found primarily in plant seeds, which bind specifically to the branching sugar molecules of glycoproteins and glycolipids on the surface of cells. Certain lectins selectively cause agglutination of erythrocytes of certain blood groups and of malignant cells but not their normal counterparts; others stimulate the proliferation of lymphocytes.

lectotype (lek'to-tip) in bacteriology, a type culture taken from a group of organisms for which the original investigator did not designate a type; this type is seldom used.

ledbänder (led'ben-der) [Ger.] Büngner's bands; see under *band*.

Le Dentu's suture (lē-den-tūz') [Jean François-Auguste Le Dentu, Paris surgeon, 1841-1926] see under *suture*.

Lederberg (led'er-berg), Joshua. United States biochemist, born 1925; co-winner, with George Wells Beadle and Edward Lawrie Tatum, of the Nobel prize in medicine and physiology for 1958, for work in genetics and heredity.

Ledercillin (led'er-sil'in) trademark for preparations of penicillin G procaine.

Lederer's anemia (disease) (led'er-erz) [Max Lederer, Brooklyn pathologist, 1885-1952] see under *anemia*.

Leduc's current (lē-dooks') [Stéphane Armand Nicolas Leduc, French physicist, 1853-1939] see under *current*.

Lee's ganglion (lēz) [Robert Lee, English physician, 1793-1877] cervical ganglion of the uterus; see under *ganglion*.

leech (lēch) [*L. hirudo*] 1. any of the annelids of the class Hirudinea, especially *Hirudo medicinalis*. Some species, the bloodsuckers, may become temporarily parasitic upon animals, including man. Leeches were formerly used extensively for drawing blood. See also *hirudin* and *leeching* (def. 1). 2. to apply leeches. 3. (*obs.*) a physician. **American l.**, *Macrobdella decora*. **artificial l.**, an apparatus for drawing blood by artificial suction. **Heurteloup's l.**, an artificial leech. **horse l.**, see *Limnatis* and *Haemopsis*. **land l.**, *Haemadipsa*. **medicinal l.**, *Hirudo medicinalis*.

leeching (lēch'ing) the application of a leech for the with-

drawal of blood; formerly used extensively in the treatment of various disorders; called also *hirudinization*.

Leeuwenhoekia australiensis (lu'en-ho'ke-ah aus-tra'le-en'-sis) [Antonj van Leeuwenhoek, Dutch microscopist, 1632-1723] a mite found at Sydney, New South Wales, which may cause great irritation by burrowing in the skin.

left-handed (left-han'ded) using the left hand preferentially, or more skillfully than the right, in voluntary motor acts. See also *laterality*.

leg (leg) the lower limb, especially the part from knee to foot; called also *crus* [NA]. **Anglesey l.**, a form of jointed artificial leg; named from a marquis of Anglesey. **badger l.**, inequality in the length of the legs. **baker l.**, genu valgum. **bandy l.**, genu varum. **Barbados l.**, elephantiasis of the leg. **bayonet l.**, uncorrected backward displacement of the bones of the leg at the knee, followed by ankylosis at the joint. **black l.**, symptomatic anthrax. **bow l.**, genu varum. **deck l's**, edema of the lower legs, occurring in ship passengers in tropical zones. **elephant l.**, elephantiasis. **milk l.**, phlegmasia alba dolens. **red l.**, a fatal septicemia in frogs apparently caused by *Proteus hydrophilus*. **restless l's**, a condition characterized by a disagreeable, creeping, irritating sensation deep inside both legs, usually between the knee and the ankle. The subject can obtain relief only by walking about or keeping his legs moving. **rider's l.**, strain of the adductor muscles of the thigh in horse-back riders. **scaly l.**, an enlarged and encrusted condition of the legs in fowls caused by sarcoptic mites of the genus *Knemidokoptes*. **scissor l.**, deformity with crossing of the legs in walking, due to spasticity of adductor muscles of the thighs. **tennis l.**, the condition resulting from a sudden tear at the musculotendinous junction of the medial belly of the gastrocnemius muscle, usually occurring in older persons participating in tennis and other sports activities. **tropical l's**, deck l's. **white l.**, phlegmasia alba dolens.

Legal's disease, test (la-galz') [Emmo Legal, German physician, 1859-1922] see under *disease* and *tests*.

Legg's disease (legz) [Arthur Thornton Legg, Boston surgeon, 1874-1939] osteochondritis of the caputular epiphysis of the femur; see *osteochondrosis*.

Legg-Calvé-Perthes disease (leg'-kal-va'-per'tez) [Arthur T. Legg; Jacques Calvé, French orthopedist, 1875-1954; Georg Clemens Perthes, German surgeon, 1869-1927] osteochondritis of the caputular epiphysis of the femur; see *osteochondrosis*.

leghemoglobin (leg'he-mo-glo'bin) a pigment found in leguminous root nodules.

Legionella pneumophila (le'jun-el'ah nu-moff'i-lah) the provisional name for a species of gram-negative, rod-shaped bacteria which require both cysteine and iron for growth; it is the causative agent of legionnaires' disease and Pontiac fever and occurs in several different immunologic forms.

legionellosis (le'jun-el-o'sis) disease caused by infection with *Legionella pneumophila*, including legionnaires' disease and Pontiac fever.

legume (leg'ūm) the pod or fruit of a leguminous plant, such as peas and beans.

legumelin (leg'u-me'lin) an albumin from lentils, beans, and other leguminous seeds.

legumin (lē-gu'min) [*L. legumen* pulse] a globulin from the seeds of various plants, chiefly of the order *Leguminosae*.

leguminivorous (lē-gu'mi-niv'o-rus) feeding on legumes (beans and peas).

leiaesthesia (li'as-the'ne-ah) [*leio-* + *asthenia*] asthenia of smooth muscle.

Leichtenstern's encephalitis (type), sign (phenomenon) (lik'ten-ster-nz) [Otto Michael Leichtenstern, German physician, 1845-1900] see *hemorrhagic encephalitis*, under *encephalitis*, and see under *sign*.

Leiner's disease, test (li'nerz) [Karl Leiner, Austrian pediatrician, 1871-1930] see *erythroderma desquamativum*, and see under *tests*.

leio- (li'o) [Gr. *leios* smooth] a combining form meaning smooth.

leiodermia (li'o-der'me-ah) [*leio-* + Gr. *derma* skin] abnormal glossiness and smoothness of the skin.

leiodystonia (li'o-dis-to'ne-ah) [*leio-* + *dystonia*] dystonia of smooth muscle.

Leiognathus bacoti (li-og'nah-thus bah-ko'te) *Ornithonyssus bacoti*.

leiomyoblastoma (li'o-mi'o-blas-to'mah) epithelioid leiomyoma.

leiomyofibroma (li'o-mi'o-fi-bro'mah) a leiomyoma in which there is a prominent fibromatous component.

leiomyoma (li'o-mi-o'mah) [*leio-* + Gr. *mys* muscle + *-oma*] a benign tumor derived from smooth muscle, most commonly of the uterus; called also *fibroid*. **bizarre l.**, epithelioid l. **l. cutis**, a neoplasm characterized by numerous tender, red nodules, 2 to 10 mm. in diameter, consisting of masses of smooth muscle cells derived from the arrector pili muscles. **epithelioid l.**, a relatively rare smooth muscle tumor, usually of the stomach, in which

the cells are polygonal rather than spindle-shaped; called also *bizarre l.* and *leiomyoblastoma*. **l. u'teri**, a leiomyoma of the uterus, usually occurring in the third and fourth decades, characterized by the development, most commonly within the myometrium, of multiple, sharply circumscribed, unencapsulated, gray-white tumors, which are firm, usually round, and show a whorled pattern on cut section; called also *fibromyoma uteri*, *myoma previum*, and, colloquially, *fibroids*. **vascular l.**, a tumor consisting of a coil of blood vessels surrounded by a network of muscular fibers.

leiomyosarcoma (li'o-mi'o-sar-ko'mah) a sarcoma containing large spindle cells of smooth muscle, most commonly of the uterus or retroperitoneal region.

leiotrichous (li-ah'tri-kus'') [*leio-* + Gr. *thrinx* hair] having smooth, straight hair.

leipo- (lip'o) for words beginning thus, see those beginning *lipo-*.

Leishman's anemia, etc. (lēsh'manz) [Sir William Boog Leishman, English army surgeon, 1865–1926] see under *anemia*, *cell*, *nodule*, and *Table of Stains*.

Leishman-Donovan bodies (lēsh'man-don'o-van) [Sir William B. Leishman; Charles Donovan, Irish physician in Sanitary Service in India, 1863–1951] see under *body*.

Leishmania (lēsh-ma'ne-ah) [Sir William B. Leishman] a genus of parasitic protozoa of the family Trypanosomatidae, order Protomastigida, found chiefly in the reticuloendothelial cells of the skin or viscera of vertebrates. The organisms have only two stages in their life cycle: a leptomonad stage, usually spent in the intestine of an insect host, and the typical leishmanial form, developing in a vertebrate host. The leptomonad stage is elongate and possesses a free flagellum, whereas the leishmanial stage is round or oval and has no free flagellum. **L. aethio'pica**, the name given to the etiologic agent of diffuse cutaneous leishmaniasis in Ethiopia and Kenya. **L. brasili'en'sis**, **L. brasili'en'sis**, a form infecting man, dogs, and monkeys; it is morphologically identical with *L. donovani* and is the cause of mucocutaneous leishmaniasis. **L. brasili'en'sis guyanen'sis**, a subspecies of *L. brasiliensis* that is the etiologic agent of pian bois, a form of cutaneous leishmaniasis of the New World. **L. cani'num**, *L. donovani*. **L. donova'ni**, a species infecting man, dogs, cats, sheep, and cattle; it is the cause of visceral leishmaniasis, or kala-azar. Called also *L. infantum*. **L. enriet'tii**, a species causing an infection in guinea pigs. **L. farcimino'sa**, former name for *Histoplasma farciminosus*. **L. infan'tum**, *L. donovani*. **L. mexica'na**, a species that is the etiologic agent of chichero ulcer, a form of cutaneous leishmaniasis of the New World. **L. nilot'ica**, *L. tropica*. **L. peruvia'na**, a species that is the etiologic agent of uta, a form of cutaneous leishmaniasis of the New World; considered by some to be a subspecies of *L. brasiliensis*. **L. pifa'noi** the name given to the etiologic agent of diffuse cutaneous leishmaniasis in Venezuela. **L. trop'ica**, a species morphologically identical with *L. donovani* and having a similar life history. It has been divided into two subspecies: *L. tropica major*, the cause of the rural form of cutaneous leishmaniasis of the Old World, and *L. tropica minor*, the cause of the urban form.

Leishmanial and leptomonad forms of *Leishmania tropica* (Ch. Nicolle).

leishmania (lēsh-mān'ē-āh) 1. any organism of the genus *Leishmania*. 2. any individual of the family Trypanosomatidae when exhibiting the typical leishmanial (amastigote) form during its life cycle.

leishmanial (lēsh-mān'ē-āl) 1. pertaining to or caused by leishmanias. 2. denoting a morphologic stage in the development of certain hemoflagellates; see *amastigote*.

leishmaniasis (lēsh'mah-ni'ah-sis) infection caused by *Leishmania*. **American l.**, **l. america'na**, mucocutaneous l. **anergic l.**, **anergic cutaneous l.**, diffuse cutaneous l. **Brazilian l.**, mucocutaneous l. **canine l.**, a disease of dogs and children in the Mediterranean region caused by *L. donovani*. In young children the onset is acute with fatalities occurring in untreated cases. Clinically it may very closely resemble congestive splenomegaly. Leukopenia is a prominent feature and agranulocytosis may supervene, with secondary infection and cancerum oris resulting. **l. cuta'nea diffu'sa**, diffuse cutaneous l. **cuta-**

neous l., **dermal l.**, an endemic disease characterized by the development on the exposed parts of the body of a papule, single or multiple, which develops into a nodule and breaks down to form an ulcer with a granulation tissue base and a surrounding zone of inflammation. The disease has been divided into Old World and New World forms. The Old World form is caused by one of the subspecies of *Leishmania tropica*, transmitted by sandflies, usually of the genus *Phlebotomus*, and occurs throughout the Mediterranean region, North Africa, parts of India and China, Middle East, and Soviet Asia. It has been subdivided into two distinct types according to clinical manifestations and epidemiology: an acute, rapidly evolving *rural* (humid, moist, wet) form, caused by *L. tropica major*, with rodents acting as the reservoir host, and having an incubation period of a few weeks to a few months and a duration of up to six months; and an *urban* (dry) form, caused by *L. tropica minor* with both dogs and man acting as reservoir hosts, and having an incubation period of many months to over a year and a duration of many months. The Old World form of the disease has received many names, according to its locality of occurrence, as oriental sore, Aleppo boil, Delhi sore, Penjdeh sore, Natal sore, Bagdad sore, Biskra button, Lahore sore, Kandahar sore, furunculosis orientalis, oriental button, tropical ulcer, etc. The New World form occurs throughout Central and South America with the exception of Chile and Argentina, and is characterized by lesions that develop and heal similarly to those of the Old World form, but tend to be less nodular and more ulcerative and destructive; it is caused by *L. mexicana* or *L. braziliensis*, or their subspecies. Many varieties of cutaneous leishmaniasis of the New World exist, including *mucocutaneous leishmaniasis*, *chicle* or *chichero ulcer*, *uta*, and *pian bois*, which differ as to etiologic agent, vector, distribution, pathology, epidemiology, and clinical course and manifestations. **diffuse cutaneous l.**, **disseminated cutaneous l.**, a rare, chronic form of generalized cutaneous leishmaniasis, occurring in Central and South America, especially Venezuela and Brazil and in India, Sudan, Ethiopia, and Kenya, in which a primary lesion spreads locally to other parts of the skin, producing lesions resembling those of lepromatous leprosy; in Venezuela, the etiologic agent has been called *Leishmania pifanoi* and, in Ethiopia and Kenya, *L. aethiopica*. Called also *l. cutanea diffusa* and *l. tegmentaria diffusa*. **infantile l.**, Mediterranean kala-azar. **lupoid l.**, *l. recidivans*. **Mexican cutaneous l.**, *chichero ulcer*. **mucocutaneous l.**, **naso-oral l.**, **nasopharyngeal l.**, an endemic, zoonotic forest disease, a form of cutaneous leishmaniasis of the New World, found widely distributed in Central and South America, except Chile and Argentina, caused by *Leishmania braziliensis*, and transmitted by sandflies, usually of the genus *Lutzomyia*; it is characterized by the presence of primary cutaneous lesions which spread locally to the mucous membranes of the nose, mouth, and pharynx and which ulcerate and cause widespread destruction of tissue with marked deformity. Called also *l. americana*, *American l.*, *Brazilian l.*, and *espundia*. **New World l.**, see *cutaneous l.* **Old World l.**, see *cutaneous l.* **post-kala-azar dermal l.**, a condition sometimes occurring in India one to two years after treatment of or spontaneous recovery from kala-azar, or in Africa as the disease subsides. The early lesions are hypopigmented or erythematous macules on the face and sometimes on the arms, legs, and trunk; on the face, the lesions become nodular or papular, closely resembling lepromatous leprosy. Thinning of the epidermis over a nodular granulomatous lesion sometimes occurs after inadequate drug therapy of kala-azar. **l. recid'ivans**, a relapsing form of cutaneous leishmaniasis of the Old World, resembling tuberculosis of the skin, in which the ulcer heals incompletely, scarring centrally but spreading peripherally, or heals and recrudesces at the edge of the scar; it may last for many years. Called also *lupoid l. rural l.*, see *cutaneous l.* (of Old World). **l. tegmenta'ria diffu'sa**, diffuse cutaneous l. **urban l.**, see *cutaneous l.* (of Old World). **visceral l.**, kala-azar.

leishmanicidal (lēsh'man-ī-si'dal) destructive to *Leishmania*.

leishmanid (lēsh'man-id) the early cutaneous nodule of cutaneous leishmaniasis.

leishmaniosis (lēsh'man-e-o'sis) leishmaniasis.

leishmanoid (lēsh'mah-noid) an eruption of whitish patches along with nodules and papules following partially cured kala-azar; called also *dermal leishmanoid*.

leistungskern (lis'toongs-kern) [Ger.] the functional part or active center of a cell.

Lelaps (le'laps) *Echinolaelaps*. **L. echidni'nus**, *Echinolaelaps echidninus*.

Leloir's disease (lēl-warz') [Henri Camille Leloir, French dermatologist, 1855–1896] discoid lupus erythematosus.

lema (le'mah) [Gr. *lēmē*] sebum palpebrale.

Lembert's suture (lah-bārz') [Antoine Lembert, French surgeon, 1802–1851] see under *suture*.

lemic (le'mik) [Gr. *loimos* plague] pertaining to an epidemic disease, as the plague.

lemma (lem'ah) [Gr. "rind," "husk"] a collective term for the egg membranes (primary, secondary, and tertiary). Also used as a

word termination denoting a sheath, as the neurilemma and oolemma.

lemmoblast (lem'o-blast) a primitive or immature lemmocyte.

lemmoblastic (lem'o-blas'tik) forming or developing into neurilemma tissue.

lemmocyte (lem'o-sit) [Gr. *lemma* husk + *-cyte*] a cell derived from the neural crest and developing into a neurilemma cell.

lemnisci (lem-nis'si) plural of *lemniscus*.

lemniscus (lem-nis'kus), pl. *lemnisci* [L.; Gr. *lemniskos* fillet] a ribbon or band; [NA] a general term for a band or bundle of fibers in the central nervous system. **acoustic l.**, **l. acus'ticus** (obs.), **l. lateralis**. **lateral l.**, **l. latera'lis** [NA], a tract of longitudinal fibers extending upward through the lateral part of the tegmental substance of the pons, formed chiefly by fibers arising from the opposite cochlear nuclei and the trapezoid body, and ascending to terminate in the inferior colliculus and medial geniculate body. **medial l.**, **l. media'lis** [NA], a tract arising from the internal arcuate fibers of the nuclei gracilis and cuneatus, and crossing to the opposite side in the lower part of medulla oblongata to ascend, first between the two olives, and then through the pars dorsalis pontis just dorsal to the pontine nuclei; it continues through the tegmentum of the midbrain and ends in the ventral posterior part of the thalamus. Each lemniscus carries sensory impulses from the opposite side of the body. Called also *sensory l.* or *l. sensitivus*. **optic l.**, *tractus opticus*. **l. sensiti'vus**, **sensory l.**, **l. medialis**. **spinal l.**, **l. spina'lis** [NA], the part of each spinothalamic tract within the pons and mesencephalon, forming a diffuse bundle between the medial and lateral lemnisci. It carries pain, temperature, and tactile impulses from the opposite side of the body and ends in the ventral posterior part of the thalamus. **trigeminal l.**, **l. trigemina'lis** [NA], fibers conveying sensory impulses from the trigeminal nuclei to the ventral posterior part of the opposite thalamus; they ascend intermingled with the spinal lemniscus and adjacent medial lemniscus.

lemnography (le-mog'rah-fe) [Gr. *loimos* plague + *graphein* to write] a treatise on the plague or other epidemic disease.

lemology (le-mol'o-je) [Gr. *loimos* plague + *-logy*] the science of contagious and epidemic diseases, especially the plague.

lemon (lem'un) the fruit of *Citrus limon* (Linné) Burmann filius (Rutaceae); the peel contains a volatile oil used as a flavoring agent, and the fruit contains citric and ascorbic acids.

lemparalysis (le'mo-pah-ral'i-sis) [Gr. *laimos* gullet + *paralysis*] paralysis of the esophagus.

lemostenosis (lem'o-stē-no'sis) [Gr. *laimos* gullet + *stenōsis* narrowing] stenosis of the esophagus.

Lemuroidea (lem'u-roi'de-ah) a suborder of Primates, consisting of the lemurs, animals resembling monkeys but having, usually, a sharp, foxlike muzzle and a tail which is usually long and furry, but never prehensile.

Lenard rays (len-ard') [Philipp Lenard, Hungarian physicist, 1862-1947] see under *ray*.

Lenetran (len'ē-tran) trademark for a preparation of mephenoqualone.

length (length) an expression of the longest dimension of an object, or of the measurement between the two ends. **arch l.**, the amount of space available for the permanent teeth as measured from the mesial aspect of the first molar on one side to the mesial aspect of the first molar on the opposite side along an imaginary line of the dental arch. **basialveolar l.**, the distance from the basion to the lower end of the intermaxillary suture. **basinasal l.**, the distance from the basion to the center of the suture between the frontal and nasal bones. **crown-heel l.**, an expression of measurement from the crown of the head to the heel in embryos, fetuses, and infants; the equivalent of *standing height* in older individuals. **crown-rump l.**, an expression of measurement from the crown of the head to the breech in embryos, fetuses, and infants; the equivalent of *sitting vertex height* in older individuals. **focal l.**, the distance between a lens and an object from which all rays of light are brought to a focus. **foot l.**, a heel-toe measurement useful in estimating the age of fetuses because the foot dimensions are less subject to artifacts of curvature and shrinkage than is the fetus as a whole. **greatest l.**, a dimension used to express the size of very young embryos that have not yet developed the structures permitting measurement of crown-rump length. **sitting l.**, the distance from the crown of the head to the coccyx. **stem l.**, the distance from the vertex to a line joining the ischial tuberosities. **wave l.**, see *wavelength*.

leniceps (len'i-seps) [L. *lenis* mild + *capere* to seize] a short-handled obstetric forceps.

leniquinsin (len'i-kwin'sin) chemical name: N-[3,4-dimethoxyphenyl)methylene]-6,7-dimethoxy-4-quinolinamine; an anti-hypertensive, C₂₀H₂₀N₂O₄.

lenitive (len'i-tiv) [L. *lenire* to soothe] 1. demulcent or soothing. 2. a demulcent remedy.

Lennander's operation (len-an'derz) [Karl Gustav Lennander, Swedish surgeon, 1857-1908] see under *operation*.

Lennhoff's index, sign (len'hofs) [Rudolf Lennhoff, German physician, 1866-1933] see under *index* and *sign*.

Lennox syndrome [William Gordon Lennox, American neurologist, born 1884] see under *syndrome*.

lisperone (len'per-ōn) chemical name: 4-[4-(4-fluorobenzoyl)-1-piperidinyl]-1-(4-fluorophenyl)-1-butanone; a tranquilizer, C₂₂H₂₃F₂NO₂.

lens (lenz) [L. "lentil"] 1. a piece of glass or other transparent substance so shaped as to converge or scatter the rays of light, especially the glass used in appropriate frames or other instruments to increase the visual acuity of the human eye. See also *glasses* and *spectacles*. 2. [NA] the transparent biconvex body of the eye situated between the posterior chamber and the vitreous body, constituting part of the refracting mechanism of the eye. See *eye*. Called also *l. crystallina* or *crystalline l.* **achromatic l.**,

Lenses: A-F, Spherical lenses: A, biconvex; B, biconcave; C, planoconvex; D, planoconcave; E, concavoconvex; F, convexoconcave; G, H, cylindrical lenses, concave and convex; I, ordinary flat lens.

one corrected for chromatic aberration. **acrylic l.**, a plastic lens used to replace the crystalline lens after cataract surgery. **adherent l.**, contact l. **aplanatic l.**, one that serves to correct spherical aberration. **apochromatic l.**, one corrected for chromatic and spherical aberration. **biconcave l.**, a lens that has both surfaces concave. **biconvex l.**, a lens that has both surfaces convex. **bicylindrical l.**, one that has both surfaces cylindrical. **bifocal l.**, a lens made up of two segments with different refractive powers, ordinarily with the upper for far and the lower segment for near vision; see under *glasses*. **bispherical l.**, one that is spherical on both sides. **Brücke l.**, a combination of a double convex and double concave lens so arranged as to give considerable working distance. **cataract l.**, a powerful lens for glasses to be used after cataract operation. **compound l.**, a lens made up of two or more segments. **concave l.**, a lens with one or both (biconcave) surfaces curved like a section of the interior of a hollow sphere; it diverges the rays of light. Called also *diverging l.* and *minus l.* **concavoconcave l.**, biconcave l. **concavoconvex l.**, one that has one concave surface and one convex surface; a converging meniscus lens. Called also *positive meniscus*. **contact l.**, a curved shell of glass or plastic applied directly over the globe or cornea to correct refractive errors. **converging l.**, **convex l.**, a lens curved like a section of the exterior of a hollow sphere; it brings light to a focus. Called also *plus l.* **convexoconcave l.**, one that has one convex and one concave surface; a diverging meniscus lens. Called also *negative meniscus*. **Coquille plano l.**, one that is +8D on one side and -8D on the other. **Crookes' l.**, one made from glass rendered opaque to ultraviolet and infrared rays but transparent to visible light. **crossed l.**, one with front and back surfaces of different curvatures. **l. crystallina**, **crystalline l.**, the lens of the eye; see *lens*, def. 2. **cylindrical l.**, one that is a section of a cylinder cut parallel to its axis, with one surface plane and the other concave or convex. **de-centered l.**, one in which the optical axis does not pass through the center. **dispersing l.**, an incorrect name for *concave l.* (diverging l.). **diverging l.**, concave l. **immersion l.**, see under *objective*. **iseikonic l.**, one that is used to correct aniseikonia; such lenses affect the focus of the rays entering the eye and also the magnification of the images formed on the retina. **meniscus l.**, a lens that has one spherical convex and one spherical concave surface; see *concavoconvex l.* and *convexoconcave l.* **meter l.**, a converging lens with a focal length of one meter and a refracting power of one diopter. **minus l.**, concave l. **omnifocal l.**, a lens the power of which increases continuously and regularly in a downward direction, thereby avoiding the discontinuity in field and power which is apparent in bifocal and trifocal lenses. **orthoscopic l.**, one that gives a very flat and undistorted field of vision. **periscope l.**, one with a 1.25D base curve. **planoconcave l.**, a lens with one plane and one concave side. **planoconvex l.**, a lens with one plane and one convex side. **plus l.**, convex l. **punktal l.**, a toric lens which is corrected for astigmatism over the entire field of vision. **retroscopic l.**, one tilted inward at the top. **spherical l.**, one that is a segment of a sphere. **toric l.**, a meniscus lens with a cylindrical curve ground on the spherical surface of one side. **trial l.**, any one of a set of lenses used in testing the vi-

sion. **trifocal l.**, a lens made up of three segments with different refractive powers, ordinarily with the upper for distant, the middle for intermediate, and the lower for near vision; see *trifocal glasses*, under *glasses*.

lensometer (lenz-om'ē-ter) a device for measuring the optical characteristics of lenses.

lentectomy (len-tek'to-miz) to remove the crystalline lens by surgical excision.

lentectomy (len-tek'to-me) [*lens* + Gr. *ektomē* excision] surgical excision of the crystalline lens.

lenticel (len'ti-sel) a lens-shaped gland, especially one of those at the base of the tongue.

lenticonus (len'ti-ko'nus) [*lens* + L. *conus* cone] a conical protrusion of the substance of the crystalline lens, covered by capsule or connective tissue, occurring more frequently on the posterior surface, and usually affecting only one eye.

lenticula (len-tik'u-lah) [L.] the lenticular nucleus.

lenticular (len-tik'u-lar) [L. *lenticularis*] 1. pertaining to or shaped like a lens. 2. pertaining to the crystalline lens. 3. pertaining to the lenticular nucleus.

lenticulo-optic (len-tik'u-lo-op'tik) pertaining to the lenticular nucleus and the optic thalamus.

lenticulostriate (len-tik'u-lo-stri'āt) pertaining to the lenticular nucleus and the corpus striatum.

lenticulothalamic (len-tik'u-lo-thah-lam'ik) relating to the lenticular nucleus and the thalamus.

lentiform (len'ti-form) shaped like a lens; see also under *nucleus*.

lentiginous (len-tij'i-nēz) [L.] plural of *lentigo*.

lentiginosis (len-tij'i-no'sis) the presence of multiple lentiginous. **progressive cardiomyopathic l.**, multiple symmetrical lentiginous, hypertrophic obstructive cardiomyopathy, and retarded growth, sometimes with mental retardation.

lentiginous (len-tij'i-nus) characterized by multiple lentiginous; pertaining to or of the nature of a lentigo.

lentiglobus (len'ti-glo'bus) [*lens* + L. *globus* sphere] an exaggerated curvature of the crystalline lens, producing a spherical bulging on its anterior surface.

lentigo (len-ti'go), pl. *lentigines* [L. "freckle"] a round or oval, flat, brown, pigmented spot on the skin due to increased deposition of melanin and associated with an increased number of melanocytes at the epidermodermal junction. Cf. *freckle*. **l. maligna**, **malignant l.**, melanotic freckle of Hutchinson; see under *freckle*.

lentitis (len-ti'tis) phakitis.

lentivirus (len'ti-vi'rus) any of a group of retroviruses, including that cause maedi and visna in sheep.

lentoptosis (len'to-to'sis) [*lens* + Gr. *ptōsis* falling] phacocoele.

lentula (len'chu-lah) a flexible, loosely spiraled, wirelike, rotating instrument, usually mounted in a dental handpiece, used to force sealer cement or paste into the root canal.

Leo's test (la'ōz) [Hans Leo, German physician, 1854-1927] see under *tests*.

Leoniceus (le-on'i-se'nus) [It. Niccolò Leoniceo] (1428-1524). Professor of medicine at Padua, Bologna, and Ferrara; renowned for translating Hippocrates and Galen from Greek into Latin, for an early (1497) work on syphilis, and for a controversial book (1492) in which he courageously corrected many of the errors (particularly botanical) in Pliny's famous *Historia naturalis*.

Leonides (le-on'i-dēz) (2nd-3rd century A.D.) a Greek surgeon who flourished in Rome, and whose writings are cited by Aëtius.

leontiasis (le'on-ti'ah-sis) [Gr. *leōn* lion] the leonine facies of lepromatous leprosy, due to nodular invasion of the subcutaneous tissue of the face, giving it a vaguely leonine appearance. **l. os'sea**, **l. os'sium**, bilateral and symmetrical hypertrophy of the bones of the face and cranium, giving it a vaguely leonine appearance; called also *megalocephaly*.

Leontodon (le-on'to-don) [Gr. *leōn* lion + *odous* tooth] *Taraxacum*.

Leopold's law (la'o-poldz) [Christian Gerhard Leopold, German physician, 1846-1911] see under *law*.

leotropic (le'o-trop'ik) [Gr. *laos* left + *tropos* a turning] running spirally from right to left. Cf. *dextrotropic*.

leper (lep'er) a person afflicted with leprosy; a term now in disfavor.

lepidic (lē-pid'ik) [Gr. *lepis* scale] 1. pertaining to scales. 2. pertaining to embryonic layers.

lepidoid (lep'i-do) [Gr. *lepis* flake or scale] a combining form meaning flake or scale.

lepidoma (lep'i-do'mah) [*lepidoid* + *-oma*] (*obs.*) a tumor derived from lepidic tissue; an endothelioma or a mesothelioma. **endothelial l.** (*obs.*), an endothelioma of the blood vessels or lymphatics.

Lepidophyton (lep'i-doff'i-ton) [*lepidoid* + Gr. *phyton* plant] former name for *Trichophyton concentricum*.

Lepidoptera (lep'i-dop'ter-ah) [*lepidoid* + Gr. *pteron* wing] an order of insects including the butterflies and moths.

lepidosis (lep'i-do'sis) [*lepidoid* + *-osis*] (*obs.*) any scaly eruption.

lepodocyte (lep'o-sit) [Gr. *lepos* rind + *-cyte*] any nucleated cell having a cell wall.

lepothrix (lep'o-thriks) [Gr. *lepos* scale + *thrix* hair] trichomycosis axillaris.

lepra (lep'rah) [Gr. *lepra* the leprosy, which makes the skin scaly] leprosy; (prior to the mid 19th century) psoriasis. See also under *reaction*. **l. manchada**, lazarine leprosy.

leprechaunism (lep'rē-kon'izm) an exceedingly rare and lethal familial condition marked by slow development both physically and mentally, by elfin facies (wide-set eyes and low-set ears, with hirsutism), as suggested by the name, and by severe endocrine disorders, as indicated by enlargement of the clitoris and breasts in females and of the phallus in males. Called also *Donohue's syndrome*.

leprid (lep'rid) cutaneous lesion or lesions of tuberculoid leprosy, being hypopigmented or erythematous macules or plaques showing no evidence of *Mycobacterium leprae* by ordinary methods of examination. Cf. *leproma*.

lepride (lep'rēd) leprid.

leprologist (lep-rol'o-jist) a physician experienced in the study and treatment of leprosy.

leprology (lep-rol'o-je) the study of leprosy.

leproma (lep-ro'mah) a superficial granulomatous nodule rich in *Mycobacterium leprae*, and the characteristic lesion of lepromatous leprosy. Cf. *leprid*.

lepromatous (lep-ro'mah-tus) pertaining to lepromas; see *lepromatous leprosy*, under *leprosy*.

lepromin (lep-ro-min) a repeatedly boiled, autoclaved, gauze-filtered suspension of finely triturated lepromatous tissue and leprosy bacilli, used in the skin test for tissue resistance to leprosy; called also *Mitsuda antigen*. See also under *tests*.

leprosarium (lep'ro-sa're-um) [L.] a hospital or colony for the treatment and isolation of leprosy patients.

leprosary (lep'ro-sār'e) [L. *leprosa'rium*] leprosarium.

leprostatic (lep'ro-stat'ik) 1. inhibiting the growth of *Mycobacterium leprae*. 2. an agent that inhibits the growth of *Mycobacterium leprae*.

leprosy (lep'ro-se) [Gr. *lepros* scaly, scabby, rough] a chronic communicable disease, caused by a specific microorganism, *Mycobacterium leprae*, which produces various granulomatous lesions in the skin, the mucous membranes, and the peripheral nervous system. Two principal or polar types are recognized: lepromatous and tuberculoid. A combination of these types is called *borderline* or *dimorphous leprosy*. Called also *lepra*, *elephantiasis graecorum*, and *Hansen's disease*. **anesthetic l.**, former term for tuberculoid leprosy. **borderline l.**, a form of leprosy that is transitional between the tuberculoid and lepromatous forms; called also *dimorphous l.* **cutaneous l.**, lepromatous l. **dimorphous l.**, *borderline l.* **indeterminate l.**, leprosy in which hypopigmented macules of uncharacteristic histology occur; it may develop into the lepromatous, tuberculoid, or borderline type. **Kabyle l.**, a congenital disease affecting Kabyles, members of a tribe of Berbers of Algeria and Tunisia; it is probably tertiary syphilis. **lazarine l.**, a pure diffuse variant of lepromatous leprosy in which lepromas are absent but the entire integument may become infiltrated and localized gangrenous macules may occur; it is rarely seen outside Costa Rica and western Mexico. Loosely used to refer to bullous or ulcerating manifestations of leprosy. Called also *lepra manchada*, *spotted leprosy*, and *Lucio leprosy*. **lepromatous l.**, that polar form of leprosy characterized by the development of lepromas and invariably by the presence of *Mycobacterium leprae* in abundance from the onset; nerve damage occurs very slowly, usually symmetrically, and the skin reaction to lepromin is negative. It is the only form which may regularly serve as a source of infection to others, until treatment is begun. **Lucio l.**, lazarine l. **macular l.**, **maculoanesthetic l.**, tuberculoid leprosy with hypopigmented, anesthetic, macular skin lesions. **mixed l.**, obsolete term for a supposed combination of lepromatous and tuberculoid leprosy; actually a combination of skin and nerve lesions. As originally used, it included both lepromatous and tuberculoid cases. **murine l.**, a progressive infection of rats caused by *Mycobacterium leprae murium*, much used as a laboratory model for the evaluation of antimycobacterial drugs; called also *rat l.* **neural l.**, tuberculoid l. **nodular l.**, lepromatous l. **rat l.**, murine l. **reactional l.**, the condition observed during any of the recurring episodes of acute exacerbation of leprosy (accompanied in the lepromatous form by fever and, often, erythema multiforme) which may punctuate the course of either polar form of the disease. **spotted l.**, lazarine l. **trophoneurotic l.**, tuberculoid leprosy in which the visible lesions result entirely from the effects of denervation of tissue in the course of the disease, rather than from the leprosy infection itself. **tuberculoid l.**, that polar type of leprosy (known formerly as neural or maculoanesthetic l.) in which, as a result of high cell-mediated resistance to the infection, *Mycobacterium leprae* are few or lacking by ordinary

methods of examination, and nerve damage occurs very early, so that all skin lesions are denervated from the start, often with dissociation of sensation. The cutaneous reaction to injected lepromin is positive, and the patient is rarely a source of infection to others. **water-buffalo l.**, a chronic disease of water buffaloes caused by the acid-fast bacillus *Mycobacterium leprae bubalorum*.

leprotic (lep-rot'ik) pertaining to or affected with leprosy.

leptous (lep'rus) [L. *leprosus*] afflicted with leprosy.

leptandra (lep-tan'drah) [Gr. *leptos* thin + *anēr* anther] the rhizome and rootlets of *Veronica virginica* (L.) Farw. (Scrophulariaceae), used as a cathartic.

leptazol (lep'tah-zol) pentylenetetrazol.

lepto- (lep'to) [Gr. *leptos* slender] a combining form meaning slender, thin, or delicate.

leptocephalic (lep'to-sē-fal'ik) characterized by leptocephaly.

leptocephalous (lep'to-sef'ah-lus) leptocephalic.

leptocephalus (lep'to-sef'ah-lus) [lepto- + Gr. *kephalē* head] a person with an abnormally tall, narrow skull.

leptocephaly (lep'to-sef'ah-le) abnormal tallness and narrowness of the skull.

leptochroa (lep-to-kro'ah) [lepto- + Gr. *chroa* skin] (obs.) abnormal delicacy of skin.

leptochromatic (lep'to-kro-mat'ik) [lepto- + *chromatin*] having a fine chromatin network.

Leptocimex (lep'to-si'meks) *Cimex*. **L. boue'ti**, *Cimex boueti*.

Leptocnops (lep'to-ko'nops) a genus of blood-sucking flies of the family Heleidae.

leptocyte (lep'to-sit) [lepto- + Gr. *kytos* cell] an erythrocyte characterized by a hemoglobinated peripheral border, surrounding a clear area containing a "bull's-eye" center of pigment, as seen in thalassemia.

leptocytosis (lep'to-si-to'sis) the presence of leptocytes in the blood.

leptodactylous (lep'to-dak'ti-lus) [lepto- + Gr. *daktylos* finger] possessing slender digits.

leptodactyly (lep'to-dak'ti-le) abnormal slenderness of the digits.

Leptodera pello (lep-to'der-ah pel'e-o) *Rhabditis pello*.

leptodermic (lep'to-der'mik) [lepto- + Gr. *derma* skin] (obs.) thin skinned.

leptodontous (lep'to-don'tus) [lepto- + Gr. *odous* tooth] having slender teeth.

leptomeningeal (lep'to-mē-nin'je-al) pertaining to the leptomeninges.

leptomeninges (lep'to-mē-nin'jēz), sing. *leptomeninx* [lepto- + *meninges*] the pia mater and arachnoid considered together as one functional unit; the pia-arachnoid.

leptomeningioma (lep'to-me-nin'je-o'mah) a tumor of the leptomeninges.

leptomeningitis (lep'to-men'in'ji-tis) [*leptomeninx* + *-itis*] inflammation of the pia and arachnoid of the brain or spinal cord. Leptomeningitis is variously qualified as acute, basilar, cerebrospinal, chronic, epidemic, external, infantile, intracranial, purulent, nonpurulent, serous, tuberculous, etc. Cf. *pachymeningitis*. **l. inter'na**, inflammation of the pia mater. **sarcomatous l.**, diffuse sarcomatous infiltration of the pia mater.

leptomeningopathy (lep'to-men'in-gop'ah-the) [*leptomeninges* + Gr. *pathos* disease] any disease of the leptomeninges.

leptomeninx (lep'to-men'in'ks) [lepto- + Gr. *mēninx* membrane] singular of leptomeninges.

Leptomitus (lep-tom'i-tus) former name for the genus *Absidia*.

leptomonad (lep'to-mo'nad) 1. pertaining to the genus *Leptomonas*. 2. denoting a morphologic stage in the development of certain protozoa of the family Trypanosomatidae; see *promastigote*. 3. any individual of the family Trypanosomatidae when exhibiting the typical leptomonad (promastigote) form during its life cycle.

Leptomonas (lep'to-mo'nas) a genus of parasitic protozoa of the family Trypanosomatidae, order Protomastigida, found in the digestive tract of various insects, and characterized by having an elongate body with a relatively large nucleus near the center and a long thin flagellum arising from a blepharoplast and kinetoplast near the anterior end. During their life cycle, the organisms lose the flagellum, round up into typical amastigote (leishmanial) forms, and become cysts; when the cysts are ingested by the next host, they escape, develop another flagellum, and attain the adult form.

leptomonas (lep'to-mo'nas) 1. any organism of the genus *Leptomonas*. 2. leptomonad (def. 3).

leptonema (lep'to-ne'mah) [lepto- + Gr. *nēma* thread] a pre-synaptic stage of meiosis in which the chromatin is in the form of fine spireme threads.

leptonomorphology (lep'to-no-mor-fol'o-je) the morphology of membranes.

leptopellic (lep'to-pel'ik) [lepto- + Gr. *pella* bowl] having a narrow pelvis.

leptophonia (lep'to-fo'ne-ah) [lepto- + Gr. *phōnē* voice] weakness or feebleness of the voice.

leptophonic (lep'to-fon'ik) pertaining to or characterized by leptophonia.

leptoprosope (lep-top'ro-sōp) an individual exhibiting leptoprosopia.

leptoprosopia (lep'to-pro-so'pe-ah) [lepto- + Gr. *prosōpon* face + *-ia*] narrowness of the face, with slender features, round, open orbits, long nose, narrow nostrils, and small mouth.

leptoprosopic (lep'to-pro-so'pik) pertaining to or characterized by leptoprosopia.

Leptopsylla (lep'to-sil'ah) a genus of fleas. **L. mus'culi**, *L. segnis*. **L. seg'nis**, the common flea of the mouse and rat, being the vector of plague; called also *Ctenopsyllus segnis* and *L. musculi*.

leptorrhine (lep'to-rin) [lepto- + Gr. *rhis* nose] having a nasal index below 48.

leptoscope (lep'to-skōp) [lepto- + Gr. *skopein* to examine] an optical apparatus for measuring the thickness of the plasma membrane of a cell.

leptosomatic (lep'to-so-mat'ik) [lepto- + Gr. *sōma* body] having a light, thin body.

leptosome (lep'to-sōm) a person with a slender light physique.

Leptospira (lep'to-spi'rah) [lepto- + Gr. *speira* coil] a genus of microorganisms of the family Treponemataceae, order Spirochaetales, made up of finely coiled organisms 6 to 20 μ long, the spirals measuring 0.3 μ in depth and 0.5 μ in amplitude with hooked ends. They have been separated into antigenic varieties or serotypes given species status, but it is now proposed that all serotypes be placed in the single species *L. interrogans*. The organisms are pathogenic for man and other mammals, and usually occur in rodent reservoirs of infection. **L. austra'lis**, the etiologic agent of Mossman fever in Queensland, Australia. **L. autum-na'lis**, the etiologic agent of Hasami fever in Japan, pre-tibial fever in the United States, and Sumatra jaundice. **L. bata'viae**, a species found in naturally occurring infections in rats and field mice; it causes leptospiral infections in Southeast Asia, Japan, and Europe. **L. biflex'a**, a name used in the United States and Great Britain to designate a nonpathogenic saprophytic species resembling *L. icterohaemorrhagiae*. In Germany, it is called *Spirochaeta pseudocitrogenes*. It has been suggested that this name be used to include all the nonpathogenic leptospirae. See *L. interrogans*. **L. canico'la**, the etiologic agent of Stuttgart disease. **L. grippotypho'sa**, the etiologic agent of leptospiral jaundice, harvest fever, and Schlammeieber in western Europe, and probably of Andaman A fever in the Netherlands East Indies. **L. heb'domidis**, the etiologic agent of nanukayami (seven-day fever) in Japan; the field vole, *Microtus montebelli* is the probable host. **L. hy'os**, an etiologic agent of swineherd's disease. **L. icterohaemorrhagiae**, the etiologic agent of leptospiral jaundice (Weil's disease) in man and yellows in dogs. **L. inter'rogans**, the proposed single species of *Leptospira*, containing all serotypes, including the interrogans complex, which comprises all pathogenic strains (over 120 serotypes), and the biflexa complex, which contains mainly saprophytic strains with no known hosts. **L. poma'na**, an etiologic agent of swineherd's disease, swine and bovine leptospirosis, and Pomona fever. **L. pyrog'enes**, the etiologic agent of Salinemia infection.

leptospira (lep'to-spi'rah) an individual organism belonging to the genus *Leptospira*.

leptospiral (lep'to-spi'ral) of, pertaining to, or caused by leptospiras.

leptospire (lep'to-spir) an individual organism belonging to the genus *Leptospira*.

leptospirosis (lep'to-spi-ro'sis) infection by *Leptospira*. The infections are transmitted to man from dogs, swine, and rodents or by contact with contaminated water, as in swamps, canals, or ponds. All pathogenic leptospiral species (or serotypes) are probably capable of causing any of the clinical syndromes, including lymphocytic meningitis, hepatitis, and nephritis, separately or in combinations. Epidemics of meningitis, of febrile disease, or of hepatitis have been named for the regions in which they occurred or for the leptospiral species, implying a specific relationship between a species and a single clinical syndrome. **anicteric l.**, benign l. **benign l.**, leptospirosis characterized by the absence of jaundice and by a milder course and symptoms than those in the more severe forms. Marked meningism may occur, and a skin rash may be an outstanding feature. Called also *anicteric l.* and *seven-day fever*. **bovine l.**, l. of cattle, a disease of cattle caused primarily by *Leptospira pomona* and marked by fever, icterus, and anemia, especially in calves. Pregnant animals may abort, and lactating animals may develop mastitis. **canine l.**, see *Stuttgart disease*, under *disease*, and see *yellows*. **equine l.**, a disease caused by several serotypes of *Leptospira* and characterized by fever, icterus, and depression. Recurrent iridocyclitis and abortion are also associated. **l. icterohaemorrhagica**,

leptospirosis. **swine l.**, a disease of swine most commonly caused by *Leptospira pomona*. In the acute form, occurring in young pigs, it is marked by fever, icterus, hemorrhages, and death. It may cause abortion in pregnant sows. Transmitted to man, it causes swineherd's disease.

leptospiuria (lep'to-spir-u're-ah) [*lepto*-Gr. *ouron* urine + *ia*] excretion of *Leptospira* in the urine, due to their invasion of the renal tubules.

leptostaphyline (lep'to-staf'i-lin) [*lepto*- + Gr. *staphylē* bunch of grapes, uvula] having a palatal index of 79.9 or less.

leptotene (lep'to-tēn) [*lepto*- + Gr. *tainia* ribbon] the stage of meiosis in which the chromosomes are slender, like threads. See *meiosis*.

leptothricosis (lep'to-thri-ko'sis) leptotrichosis.

Leptothrix (lep'to-thriks) [*lepto*- + Gr. *thrix* hair] a genus of microorganisms of the family Chlamydobacteriaceae, order Chlamydobacteriales, made up of attached or unattached, straight or spirally twisted trichomes, with a sheath originally thin and colorless but later becoming thicker and yellow or brown, with the deposition of ferric hydroxide. Widely distributed and usually found in fresh water, it includes thirteen species: *L. buccalis*, *L. discophora*, *L. echinata*, *L. epiphytica*, *L. lopholea*, *L. major*, *L. ochracea*, *L. pseudovacualetta*, *L. sideropous*, *L. skujae*, *L. thermalis*, *L. volubilis*, and *L. winogradskii*.

leptothrix (lep'to-thriks) any microorganism of the genus *Leptothrix*.

leptotrichosis (lep'to-tri-ko'sis) infection with any species of *Leptothrix*. **l. conjunctivae**, Parinaud's oculoglandular syndrome caused by a leptothrix.

Leptotrombidium (lep'to-trom-bid'e-um) a subgenus of *Trombicula*.

Leptus (lep'tus) [L.] a name for the larval form of mites of the genus *Trombicula* and the subgenus *Eutrombicula*. **L. akamushi**, *Trombicula akamushi*. **L. irritans**, *Eutrombicula irritans*.

Lerch's percussion [Otto Lerch, physician in New Orleans, born 1894] drop percussion.

leresis (ler-e'sis) [Gr. *lērēsis*] agitated or senile loquacity or garrulousness.

lertogtrile (ler'go-tril) chemical name: 2-chloro-6-methylergoline-8-acetonitrile; a prolactin inhibitor, $C_{17}H_{18}ClN_3$. **l. mesylate**, the monomethanesulfonate salt of lertogtrile, $C_{17}H_{18}ClN_3 \cdot CH_3O_3S$, which has been used as an antiparkinsonian agent.

Leri's sign (la'rēz) [André Leri, French physician, 1875-1930] see under *sign*.

Leriche's disease, syndrome (lē-rēsh'ez) [René Leriche, French surgeon, 1879-1955] see *post-traumatic osteoporosis*, under *osteoporosis*, and see under *syndrome*.

Leritine (ler'i-tin) trademark for preparations of anileridine.

Lermoyez's syndrome (ler'moi-yāz') [Marcel Lermoyez, French otolaryngologist, 1858-1929] see under *syndrome*.

l.e.s. local excitatory state.

lesbian (lez'be-an) [Gr. *Lesbos* of Lesbos, an island off the west coast of Asia Minor, the home of the poetess Sappho and her followers] 1. pertaining to homosexuality between females. 2. a female homosexual.

lesbianism (lez'be-ah-nizm) homosexuality between women; called also *sapphism*.

Lesch-Nyhan syndrome [Michael Lesch, American physician, born 1939; William L. Nyhan, Jr., American physician, born 1926] see under *syndrome*.

Lesgaft's space (triangle) (les'gafts) [Petr Frantsevich Lesgaft, Russian physician, 1837-1909] see under *space*.

lesion (le'zhun) [L. *laesio*; *laedere* to hurt] any pathological or traumatic discontinuity of tissue or loss of function of a part.

Armanni-Ebstein l., vacuolization of the renal tubular epithelium in the region of the loop of Henle and the convoluted tubules in diabetes, due to glycogen deposition. **Baehr-Löhlein l.**, Löhlein-Baehr l. **birds' nest l.**, crescentic thickenings or pockets resembling secondary valve structures, below the aortic valve. **Blumenthal l.**, a proliferative vascular lesion in the smaller arteries in diabetics. **Bracht-Wächter l.**, focal collections of lymphocytic and mononuclear cells in the myocardium.

central l., any lesion of the central nervous system. **coin l.**, a rounded coinlike tumor. **Councilman l.**, see under *body*.

Duret's l., effusion of blood in the region of the fourth ventricle of the cerebrum as a result of slight injury. **Ebstein's l.**, hyaline degeneration and insular necrosis of epithelial cells of the renal tubules in diabetes mellitus. **Ghon's primary l.**, Ghon focus. **gross l.**, a lesion that is visible to the naked eye.

herpetiform l. of Cole, a vesicle which develops within a few days after venereal exposure to lymphogranuloma venereum. It occurs on the penis, within the urethra, in the anal region, on the labia, within the vagina, or in the cervix. It bursts to form a shallow grayish chancre. **histologic l.**, a microscopic lesion.

impaction l., an osteopathic term for a lesion of any spinal joint in which there is present abnormal thickening of the intervertebral disk with approximation of all the bony parts. **indis-**

crimate l., a lesion affecting different distinct parts or systems of the body. **initial syphilitic l.**, chancre, def. 1. **irritative l.**, one that stimulates the functions of the part where it is situated. **Janeway l.**, a small erythematous or hemorrhagic lesion, usually on the palms or soles, in bacterial endocarditis.

local l., one in the nervous system giving origin to distinctive local symptoms. **Löhlein-Baehr l.**, a focal glomerular lesion of necrosis and hyalinization occurring in bacterial endocarditis; the process has been described as focal embolic glomerulonephritis.

molecular l., a lesion not visible even with the aid of a microscope. **onion scale l.**, the concentric circumvascular fibrosis often found in the spleen and lymph nodes in systemic lupus erythematosus.

organic l., structural l. **partial l.**, one that involves only a part of an organ or of the diameter of a conducting tract.

peripheral l., a lesion of the nerve endings. **precancerous l.**, a lesion in a tissue in which the cells are likely to become malignant.

primary l., the original lesion manifesting a disease, such as chancre in syphilis or tuberculous chancre. **ring-wall l.**, multiple small ring hemorrhages which simulate proliferation of a glial ring; seen in pernicious anemia.

structural l., one that produces an obvious change in a tissue. **systemic l.**, one limited to a system or set of organs with a common function.

total l., one involving the whole of an organ or of the diameter of a conducting tract. **trophic l.**, a lesion manifested by a disturbance in the nutrition of a part.

wire-loop l., thickened capillary walls of some parts of a glomerular tuft in disseminated lupus erythematosus.

lesocupethy (les'o-ku'peh-the) [*learning, society, culture, and personality theory*] a term suggested by Murdock to embrace the unified psychological and social sciences.

Lesser's test (les'erz) [Fritz Lesser, Berlin dermatologist, born 1873] see under *tests*.

LET linear energy transfer: the energy dissipation of ionizing radiation over a given linear distance. Highly penetrating radiations, such as gamma rays, cause very low ion concentration and thus have a relatively low LET, beta particles and x-rays have an intermediate LET, and alpha particles have a relatively high LET.

let-down (let'down) the transport of milk from the alveoli of the breast to the ducts; called also *milk l.* See also under *reflex*.

lethal (le'thal) [L. *lethalis*, from *lethum* death] deadly; fatal. See under *dose, equivalent, factor, gene, etc.*

lethality (le-thal'i-te) the ratio of deaths from a given disease to existing cases of that disease.

lethargus (le-thar'gus) [Gr. *lēthargos* lethargic, forgetful] African trypanosomiasis.

lethargy (leth'ar-je) [Gr. *lēthargia* drowsiness] a condition of drowsiness or indifference. **African l.**, African trypanosomiasis. **hysteric l.**, the sleep stage of hypnosis. **induced l.**, hypnotic trance. **lucid l.**, loss of will power with consequent inability to act, although intellectually conscious.

lethe (le'the) [Gr. *lēthē* forgetfulness] amnesia; complete loss of memory.

lethral (le'ther-al) pertaining to lethe.

lethologica (leth-o-loj'i-kah) [Gr. *lēthē* forgetfulness + *logos* word] (*obs.*) inability to remember the proper word.

letimide hydrochloride (let'i-mid) chemical name: 3-[2-(diethylamino)ethyl]-2H-1,3-benzoxazine-2,4-(3H)-dione monohydrochloride; an analgesic, $C_{14}H_{18}N_2O_3 \cdot HCl$.

Letter (let'er) trademark for a preparation of levothyroxine sodium.

Letterer-Siwe disease (let'ter-er si'we) [Erich Letterer, German physician, born 1895; Sture August Siwe, German physician, born 1897] see under *disease*.

Leu leucine.

leucemia (loo-se'me-ah) leukemia.

leucine (loo'sin) [Gr. *leukos* white] chemical name: 2-amino-4-methylpentanoic acid. An amino acid, $C_6H_{13}NO_2$, or α -aminoisocaproic acid, essential for optimal growth in infants and for nitrogen equilibrium in human adults. It is obtained by the digestion or hydrolytic cleavage of protein.

leucinethylester (loo'sin-eth'il-es'ter) an oily liquid, $(CH_3)_2 \cdot CH \cdot CH_2 \cdot CH(NH_2) \cdot CO_2 \cdot C_2H_5$.

leucinimide (loo'sin-im'id) the anhydride of leucine, $C_{12}H_{22}N_2O_2$, a diketopiperazine; it may be produced by evaporation of leucine solutions.

leucinosis (loo'si-no'sis) any condition in which leucine appears in the urine.

leucinuria (loo'sin-u're-ah) [*leucine* + Gr. *ouron* urine + *-ia*] the presence of leucine in the urine.

leucismus (loo-siz'mus) [Gr. *leukos* white + *-izō* + *-mos*] a state of whiteness. **l. pilo'rum**, blaze.

leucitis (loo-si'tis) scleritis.

leuco- [Gr. *leukos* white] a combining form meaning white; see also words beginning *leuko-*.

leucocyte (loo'ko-sit) leukocyte.

leucocytosis (loo'ko-si-to'sis) leukocytosis.

Leucocytozoon (loo'ko-si'to-zo'on) [*leuco*- + *cyto*- + Gr. *zoon*

animal] a genus of sporozoan parasites of the family Haemoproteidae, order Haemosporidia, found primarily in birds, and transmitted by the blackfly (*Simulium*) or by other dipterans. The schizogonic stages are found in endothelial cells of the liver, kidney, and spleen; the gametocytes are found in erythrocytes. **L. ana'tis**, a species found in ducks. **L. an'seris**, a species found in geese. **L. maclea'n'i**, a species found in the common pheasant (*Phasianus colchicus*). **L. pal'lidum**, see *Ross' bodies*, under *body*. **L. sakharo'fi**, a species found in the crow (*Corvus cornix*). **L. smith'i**, a species found in the domestic turkey (*Meleagris gallopavo*).

leucofluorescein (loo'ko-floo'o-res'e-in) fluorescein, produced from fluorescein by reduction with zinc powder in an acid medium.

Leucoium (loo-ko'i-um) [L.; Gr. *leukos* white + *ion* violet] a genus of old world amaryllidaceous plants. *L. aesti'vum* and *L. ver'num* (called snowflake) are common in garden culture: emetic and poisonous.

leucon (loo'kon) leukon.

leucomycin (loo'ko-mi'sin) kitasamycin.

Leuconostoc (loo'ko-nos'tok) a genus of nonpathogenic, gram-positive, saprophytic, facultative anaerobes assigned in some systems of classification to the tribe Streptococceae, family Lactobacillus; in other classifications, assigned to the family Streptococcaceae. They are spherical but often lenticular, nonmotile cells, some species of which form dextran. **L. citro'vorum**, **L. cremor'is**, a species found in milk and dairy products. **L. dextra'nicum**, a dextran-forming species found on fruit and vegetables and in milk and dairy products. **L. lac'tis**, a species found in milk and dairy products. **L. mesenteroi'des**, a dextran-forming species found in slimy sugar solutions, on fruit and vegetables, and in milk and dairy products. **L. oeno's**, a species found in wine.

leucopterin (loo-kop'ter-in) chemical name: 2-amino-4,6,7-pteridinediol. A colorless pigment, $C_6H_5N_5O_3$, isolated from butterfly wings, especially white wings, and also from xanthopterin by oxidation. See *pterin*.

leucosin (loo'ko-sin) an albumin found in the cereal grains.

leucotomy (loo-kot'o-me) leukotomy.

Leucotrichaceae (loo'ko-tri'ka'se-e) a family of schizomycetes (order Beggiatales), made up of short cylindrical cells occurring in long trichomes, found in fresh and salt water containing decomposing algae. It includes a single genus, *Leucothrix*. These microorganisms resemble the blue-green algae but do not contain photosynthetic pigments.

leucovorin (loo'ko-vo'rin) folic acid. **L. calcium** [USP], the calcium salt of folic acid, $C_{20}H_{21}CaN_7O_7 \cdot 5H_2O$, occurring as a yellowish white or yellow powder; used as an antidote for folic acid antagonists, e.g., methotrexate, when there is need to reverse the toxic effects of the latter and in the treatment of megaloblastic anemias due to folic acid deficiency, administered intramuscularly.

Leudet's tinnitus (bruit, sign) (led-āz') [Théodor Emile Leudet, physician at Rouen, 1825-1887] see under *tinnitus*.

leukapheresis (loo'kah-fē-re'sis) [*leukocyte* + Gr. *aphairesis* removal] the selective separation and removal of leukocytes from withdrawn blood, the remainder of the blood then being retransfused into the donor.

leukemia (loo-ke'me-ah) [Gr. *leukos* white + *haima* blood + *-ia*] a progressive, malignant disease of the blood-forming organs, characterized by distorted proliferation and development of leukocytes and their precursors in the blood and bone marrow. Leukemia is classified clinically on the basis of (1) the duration and character of the disease—*acute* or *chronic*; (2) the type of cell involved—*myeloid* (*myelogenous*), *lymphoid* (*lymphogenous*), or *monocytic*; (3) increase or nonincrease in the number of abnormal cells in the blood—*leukemic* or *aleukemic* (*subleukemic*). **acute promyelocytic l.**, promyelocytic l. **aleukemic l.**, **aleukocythem'ic l.**, leukemia in which the total white blood cell count in the peripheral blood is either normal or below normal; it may be lymphocytic, monocytic, or myelogenous. **basophilic l.**, a disorder resembling acute or chronic leukemia in which the basophilic leukocytes predominate. **blast cell l.**, stem cell l. **chronic granulocytic l.**, **chronic myelocytic l.**, a form of leukemia occurring mainly between the age of 25 and 60, usually associated with a unique chromosomal abnormality, in which the major clinical manifestations of malaise, hepatosplenomegaly, anemia, and leukocytosis are related to abnormal, excessive, unrestrained overgrowth of granulocytes in the bone marrow. **L. cu'tis**, involvement of the skin in leukemia, with tumor-like lesions. See *leukemid*. **embryonal l.**, stem cell l. **eosinophilic l.**, a form of leukemia in which the eosinophil is the predominating cell. Although resembling chronic myelocytic leukemia in many ways, this form may follow an acute course despite the absence of predominantly blast forms in the peripheral blood. **L. of fowls**, an infectious disease of the hematopoietic organs of fowls with atrophy of the bone marrow and changes in the viscera. **granulocytic l.**, myelocytic l. **Gross' l.**, a transmissible murine leukemia, first transmitted to newborn C3H mice by inoculation of filtrate of leukemic tissue from AK2 mice, thus demonstrating its viral etiology.

hairy-cell l., leukemic reticuloendotheliosis. **hemoblastic l.**, **hemocytoblastic l.**, stem cell l. **histiocytic l.**, acute monocytic l. **leukopenic l.**, aleukemic l. **lymphatic l.**, **lymphoblastic l.**, **lymphocytic l.**, **lymphogenous l.**, **lymphoid l.**, leukemia associated with hyperplasia and overactivity of the lymphoid tissue, in which the leukocytes are lymphocytes or lymphoblasts. **lymphosarcoma cell l.**, a form of leukemia characterized by large numbers of lymphosarcoma cells in the peripheral blood; depending on the degree of bone marrow involvement, it may be a variant of lymphosarcoma. **mast cell l.**, a type of leukemia characterized by the presence of overwhelming numbers of tissue mast cells in the peripheral blood. **megakaryocytic l.**, hemorrhagic thrombocythemia. **micromyeloblastic l.**, a form of granulocytic leukemia in which the immature, nucleoli-containing cells are small and are distinguishable from lymphocytes only by supravital staining. **monocytic l.**, leukemia in which the predominating leukocytes are identified as monocytes. The disease is generally divided into two main categories: the Naegeli type, in which many of the cells resemble myeloblasts, or cells of the myeloid series; and the Schilling type, in which the cells more truly resemble monocytes or histiocytes. **myeloblastic l.**, leukemia in which myeloblasts predominate. **myelocytic l.**, **myelogenous l.**, **myeloid granulocytic l.**, leukemia arising from myeloid tissue in which the granular, polymorphonuclear leukocytes and their precursors predominate. **myelomonocytic l.**, the Naegeli type of monocytic leukemia in which the predominate leukocytes resemble cells of the myeloid series. **Naegeli l.**, see *monocytic l.* **plasma cell l.**, leukemia in which the predominating cell in the peripheral blood is the plasma cell; whether this is a distinct form of leukemia or a phase of multiple myeloma remains moot. **plasmacytic l.**, plasma cell l. **promyelocytic l.**, a subvariety of acute granulocytic leukemia in which the predominant cells are promyelocytes, rather than myeloblasts, often associated with abnormal bleeding secondary to thrombocytopenia, hypofibrinogenemia, and decreased levels of Factor V. **Rieder cell l.**, a form of myeloblastic leukemia in which the blood contains asynchronously developed cells with immature cytoplasm and a lobulated, indented, comparatively more mature nucleus. **Schilling's l.**, see *monocytic l.* **stem cell l.**, a form of leukemia in which the predominating cell is so immature and primitive that its classification becomes exceedingly difficult. Called also *embryonal l.*, *hemoblastic l.*, *hemocytoblastic l.*, and *undifferentiated cell l.* **subleukemic l.**, aleukemic l. **undifferentiated cell l.**, stem cell l.

leukemic (loo-ke'mik) pertaining to or affected with leukemia.

leukemid (loo-ke'mid) any of the polymorphic skin eruptions associated with leukemia; clinically, they may be nonspecific, i.e., papular, macular, purpuric, etc., but histopathologically they may represent true leukemic infiltrations.

leukemogen (loo-ke'mo-jen) any substance that causes or produces leukemia.

leukemogenesis (loo-ke'mo-jen'ē-sis) the induction of or development of leukemia.

leukemogenic (loo-ke'mo-jen'ik) causing leukemia.

leukemoid (loo-ke'moid) [*leukemia* + Gr. *eidos* form] characterized by blood and sometimes clinical findings resembling true leukemia to such a degree that initial differentiation between the process causing the observed alterations and leukemia becomes extremely difficult.

leukencephalitis (lōōk'en-sef'ah-li'tis) [*leuko* + *encephalitis*] inflammation of the white matter of the brain.

Leukeran (loo'ker-an) trademark for a preparation of chlorambucil.

leukexosis (loo'kek-so'sis) an aggregation of dead leukocytes in one of the channels of the body.

leukin (loo'kin) 1. a relatively thermostable lytic substance that can be extracted from polymorphonuclear leukocytes and that attacks particularly *Bacillus anthracis* and other spore-bearing aerobes. Called also *leukocytic alexin* and *leukocytic endolysin*. 2. leucine.

leuko [Gr. *leukos* white] a combining form meaning white, or denoting relationship to a white corpuscle, or leukocyte.

leukoagglutinin (loo'ko-ah-gloo'ti'nin) an agglutinin directed against leukocytes. *Isoleukoagglutinins* are isoantibodies directed against the leukocytes of some but not all members of a species. Isoimmunization with these, as when incompatible blood is received by transfusion or placental transfer, may lead to disease. *Autoleukoagglutinins* are autoantibodies associated with leukopenia.

leukoblast (loo'ko-blast) [*leuko* + Gr. *blastos* germ] an immature granular leukocyte. **granular l.**, promyelocyte.

leukoblastosis (loo'ko-blas-to'sis) a general term for proliferation of leukocytes, including myelosis and lymphadenosis.

leukocidin (loo'ko-si'din) [*leukocyte* + *L. caedere* to kill] a substance produced by some pathogenic bacteria that is toxic to polymorphonuclear leukocytes, killing the cells with or without lysis. **Neisser-Wechsberg l.**, a leukocidin produced by staphylococci that destroys rabbit but not human leukocytes; it is

identical with alpha hemolysin. **Panton-Valentine (P-V) I.**, a leukocidin produced by staphylococci that destroys human and rabbit leukocytes.

leukocoria (loo'ko-ko're-ah) leukokoria.

leukocrit (loo'ko-krit) [*leuko-* + Gr. *krinein* to separate] the volume percentage of leukocytes in whole blood.

leukocytal (loo'ko-si'tal) leukocytic.

leukocyte (loo'ko-sit) [*leuko-* + Gr. *kytos* cell] 1. any colorless, amoeboid cell mass. 2. white blood cell or corpuscle. The varieties of leukocytes may be classified into two main groups: *granular I's* and *nongranular I's* (see below). **agranular I's**, nongranular I's. **basophilic I.**, basophil, def. 2. **endothelial I.**, Mallory's name for the large wandering cells of the circulating blood and the tissues which have notable phagocytic properties; see *endotheliocyte*. **eosinophilic I.**, eosinophil. **granular I's (granulocytes)**, leukocytes with abundant granules in the cytoplasm, which are divided into three groups: (1) *Neutrophils*, cells with fine neutrophilic granules in the cytoplasm and an irregular lobed nucleus; see *neutrophil* (def. 1). (2) *Eosinophils*, cells with coarse eosinophilic granules in the cytoplasm and a bilobed nucleus; see *eosinophil*. (3) *Basophils*, cells with coarse basophilic granules in the cytoplasm and a bent nucleus that is partially constricted into two lobes; see *basophil* (def. 2). See also *granulocytic series*, under *series*. **heterophilic I's**, heterophil, def. 1. See also *neutrophil*, def. 1. **hyaline I.**, monocyte. **lymphoid I's**, nongranular I's. **mast I.**, a name sometimes used to designate the circulating blood basophil, which is morphologically and histogenetically different from the tissue mast cell. **motile I.**, a leukocyte that has the power of amoeboid movement. **neutrophilic I.**, neutrophil, def. 1. **nongranular I's**, leukocytes without specific granules in their cytoplasm, including the lymphocytes and monocytes. Called also *agranular I's* and *lymphoid I's*. **nonmotile I.**, a leukocyte without the power of amoeboid movement. **polymorphonuclear I.**, any of the fully developed, segmented cells of the granulocytic series, especially a neutrophil, whose nuclei contain three or more lobes joined by filamentous connections. See *neutrophil*, def. 1. **polynuclear neutrophilic I.**, neutrophil, def. 1. **transitional I.**, former name for monocyte. **Türk's irritation I.**, Türk's cell; see under *cell*.

leukocythemia (loo'ko-si-the'me-ah) [*leuko-* + *-cyte* + Gr. *haima* blood + *-ia*] leukemia.

leukocytic (loo'ko-sit'ik) pertaining to leukocytes.

leukocytoblast (loo'ko-si'to-blast) [*leukocyte* + Gr. *blastos* germ] leukoblast.

leukocytogenesis (loo'ko-si'to-jen'é-sis) [*leukocyte* + Gr. *genesis* production] the formation of leukocytes.

leukocytoid (loo'ko-si'toid) [*leukocyte* + Gr. *eidos* form] resembling a leukocyte.

leukocytology (loo'ko-si-tol'o-je) the study of leukocytes.

leukocytolysin (loo'ko-si-tol'i-sin) a lysin that leads to disruption of leukocytes.

leukocytolysis (loo'ko-si-tol'i-sis) [*leukocyte* + Gr. *lysis* dissolution] the breaking down or destruction of leukocytes. **venom I.**, destruction of leukocytes with snake venom.

leukocytolytic (loo'ko-si'to-lit'ik) 1. pertaining to, characterized by, or causing leukocytolysis. 2. an agent that causes leukocytolysis.

leukocytoma (loo'ko-si-to'mah) [*leukocyte* + *-oma*] a tumor-like mass of leukocytes.

leukocytopenia (loo'ko-si'to-pe'ne-ah) [*leukocyte* + Gr. *penia* poverty] leukopenia.

leukocytophagy (loo'ko-si-tof'ah-je) [*leukocyte* + Gr. *phagein* to devour] the ingestion and destruction of leukocytes by histiocytes of the reticuloendothelial system.

leukocytopenia (loo'ko-si'to-pla'ne-ah) [*leukocyte* + Gr. *planē* wandering] the wandering of leukocytes or their passage through a membrane.

leukocytopenia (loo'ko-si'to-poi-e'sis) [*leukocyte* + Gr. *poiein* to make] the production of leukocytes.

leukocytosis (loo'ko-si-to'sis) a transient increase in the number of leukocytes in the blood, resulting from various causes, as hemorrhage, fever, infection, inflammation, etc. **absolute I.**, increase in the total number of leukocytes in the blood. **agonal I.**, leukocytosis occurring just before death. **basophilic I.**, increase of the basophilic leukocytes in the blood. **mononuclear I.**, mononucleosis. **neutrophilic I.**, an increase in the number of polymorphonuclear neutrophil leukocytes in the blood. **pathologic I.**, that occurring as the result of some morbid condition, such as infection or trauma. **physiologic I.**, that caused by factors other than disease or trauma. **pure I.**, increase of the polymorphonuclear leukocytes of the blood. **relative I.**, increase in the proportion of any variety of leukocytes in the blood, without increase of the total number of leukocytes. **terminal I.**, agonal I. **toxic I.**, leukocytosis occurring in intoxication with blood poisons.

leukocytotactic (loo'ko-si'to-tak'tik) pertaining to or marked by leukotaxis.

leukocytotaxis (loo'ko-si'to-tak'sis) leukotaxis.

leukocytotherapy (loo'ko-si'to-ther'ah-pe) treatment by the administration of leukocytes.

leukocytotoxicity (loo'ko-si'to-tok-sis'i-te) lymphocytotoxicity.

leukocytotoxin (loo'ko-si'to-tok'sin) a toxin that destroys leukocytes.

leukocytotropic (loo'ko-si'to-trop'ik) having a selective affinity for leukocytes.

Leukocytozoon (loo'ko-si'to-zo'on) *Leukocytozoon*.

leukocyturia (loo'ko-si-tu're-ah) [*leukocyte* + Gr. *ouron* urine + *-ia*] the discharge of leukocytes in the urine.

leukoderivative (loo'ko-de-riv'ah-tiv) any white derivative from a pigment or coloring matter.

leukoderma (loo'ko-der'mah) [*leuko-* + Gr. *derma* skin] an acquired type of localized loss of melanin pigmentation of the skin, differing from vitiligo only in that the cause may be more or less apparent. **I. acquisi'tum centri'fugum**, halo nevus. **I. col'li**, syphilitic I. **syphilitic I.**, indistinct coarsely mottled hypopigmentation, usually on the sides of the neck, occurring in late secondary syphilis; called also *collar of pearls* and *I. colli*.

leukodermatous (loo'ko-der'mah-tus) pertaining to or characterized by leukoderma.

leukodermia (loo'ko-der'me-ah) leukoderma.

leukodermic (loo'ko-der'mik) leukodermatous.

leukodextrin (loo'ko-deks'trin) an intermediate compound formed in the transformation of starch into sugar; achroodextrin.

leukodystrophy (loo'ko-dis'tro-fe) disturbance of the white substance of the brain. See *leukoencephalopathy*. **globoid I.**, **globoid cell I.**, Krabbe's disease. **hereditary cerebral I.**, familial centrolobar sclerosis. **Krabbe's I.**, see under *disease*. **metachromatic I.**, a form of leukoencephalopathy transmitted as an autosomal recessive trait, characterized by an accumulation of a sphingolipid (sulfatide) in neural and non-neural tissues, with a diffuse loss of myelin in the central nervous system. The *infantile* form usually begins in the second year of life, most commonly before the thirtieth month, with blindness, motor disturbances, rigidity, mental deterioration, and sometimes convulsions; called also *Greenfield's disease* and *diffuse cerebral sclerosis*. The *adult* form begins after 16 years of age, usually with psychiatric disturbances that progress to dementia; the motor and posture disturbances appear late in the course of this form. A *juvenile* form with an onset between four and ten years of age has also been observed. Called also *metachromatic leukoencephalopathy*, *metachromatic leukoencephaly*, and *sulfatide lipidosis*. **spongiform I.**, Canavan's disease. **sudanophilic I.**, familial centrolobar sclerosis.

leukoedema (loo'ko-e-de'mah) an abnormality of the buccal mucosa, resembling early leukoplakia, consisting of an increase in thickness of the epithelium, with intracellular edema of the spinous or malpighian layer.

leukoencephalitis (loo'ko-en-sef'ah-li'tis) [*leuko-* + Gr. *enkephalos* brain + *-itis*] 1. inflammation of the white substance of the brain. 2. forage poisoning; a noncontagious disease of horses, the lesion of which is softening of the white matter of the brain. It is marked by drowsiness, dimmed vision, unsteady gait, and paralysis of the throat. **acute hemorrhagic I.**, a fatal postinfection or allergic encephalopathy with a fulminating course, characterized by necrosis of the walls of the blood vessels, particularly the venules, resulting in multiple petechial hemorrhages in the white matter of the brain. **I. periaxia'lis concentric'a**, Baló's disease. **van Bogaert's sclerosing I.**, subacute sclerosing panencephalitis.

leukoencephalopathy (loo'ko-en-sef'ah-lop'ah-the) any of a group of diseases affecting the white matter of the brain, especially of the cerebral hemispheres, and occurring as a rule in infants and children. The term *leukodystrophy* is used to denote such disorders due to defect in the formation and maintenance of myelin in infants and children. **metachromatic I.**, see under *leukodystrophy*. **multifocal progressive I.**, progressive multifocal I. **progressive multifocal I.**, a generally fatal disease probably of viral origin, in which the demyelination is usually found in the white matter but may rarely be seen in the brain stem and cerebellum. It occurs secondary to various neoplastic diseases, including lymphosarcoma and lymphatic or myeloid leukemia. Called also *multifocal progressive I.* **subacute sclerosing I.**, subacute sclerosing panencephalitis.

leukoencephaly (loo'ko-en-sef'ah-le) leukoencephalopathy. **metachromatic I.**, see under *leukodystrophy*.

leukoerythroblastosis (loo'ko-ē-rith'to-blas-to'sis) an anemic condition associated with space-occupying lesions (myelophthisis) of the bone marrow and characterized by a variable number of immature erythroid and myeloid cells in the circulation; called also *leukoerythroblastic anemia*, and *myelopathic or myelophthisic anemia*.

leukogram (loo'ko-gram) a diagram or tabulation representing the leukocytes of a specimen of blood.

leukokeratosis (loo''ko-ker''ah-to'sis) [*leuko-* + *keratosis*] leukoplakia.

leukokinesis (loo''ko-ki-ne'sis) the movement of the leukocytes within the circulatory system.

leukokinetic (loo''ko-ki-net'ik) pertaining to leukokinesis.

leukokinetics (loo''ko-ki-net'iks) [*leukocyte* + Gr. *kinētikos* of or for putting in motion] the quantitative, dynamic study of *in vivo* production, circulation, and destruction of leukocytes.

leukokoria (loo''ko-ko're-ah) [*leuko-* + Gr. *korē* pupil + *-ia*] a condition characterized by appearance of a whitish reflex or mass in the pupillary area back of the lens.

leukokraurosis (loo''ko-kraw-ro'sis) kraurosis vulvae.

leukolymphosarcoma (loo''ko-lim''fo-sar-ko'mah) lymphosarcoma cell leukemia.

leukolysin (loo-kol'i-sin) leukocytolysin.

leukolysis (loo-kol'i-sis) leukocytolysis.

leukolytic (loo-ko-lit'ik) leukocytolytic.

leukoma (loo-ko'mah) [Gr. *leukōma* whiteness] 1. a dense white opacity of the cornea. 2. leukoplakia buccalis. **l. adhaerens**, a white tumor of the cornea enclosing a prolapsed adherent iris.

leukomaine (loo''ko-mān) [Gr. *leukōma* whiteness] any one of a large group of basic substances resembling alkaloids, normally present in the tissues, which are products of metabolism and are probably excrementitious. Some of them may become toxic, and many are physiologically active.

leukomainemia (loo''ko-mān-e'me-ah) [*leukomaine* + Gr. *haima* blood + *-ia*] excess of leukomaines in the blood.

leukomainic (loo''ko-mān'ik) pertaining to, caused by, or characterized by a leukomaine.

leukomatous (loo-ko'mah-tus) affected with or of the nature of leukoma.

leukomonocyte (loo''ko-mon'o-sit) [*leuko-* + Gr. *monos* single + *-cyte*] a lymphocyte.

leukomyelitis (loo''ko-mi''ē-li'tis) [*leuko-* + Gr. *myelos* marrow + *-itis*] inflammation of the white substance of the spinal cord.

leukomyelopathy (loo''ko-mi''ē-lop'ah-the) [*leuko-* + Gr. *myelos* marrow + *pathos* disease] any disease of the white substance of the spinal cord.

leukomyoma (loo''ko-mi-o'mah) lipomyoma.

leukon (loo'kōn) a general term once applied to the circulating leukocytes and the cells from which they arise; it is the counterpart of erythron and thrombon.

leukonecrosis (loo''ko-nē-kro'sis) [*leuko-* + Gr. *nekrōsis* necrosis] gangrene resulting in the formation of a white slough.

leukonychia (loo''ko-nik'e-ah) [*leuko-* + Gr. *onyx* nail + *-ia*] a whitish discoloration of the nails of unknown cause; it may rarely be total, but is usually partial. Exceptionally, it may occur in transverse streaks (*l. striata*) or bands.

leukopathia (loo''ko-path'e-ah) [*leuko-* + Gr. *pathos* illness] leukoderma. **l. punctata reticularis symmetrica**, an eruption of depigmented macules on the forearms and shins of adults; probably identical with idiopathic guttate hypomelanosis. **l. unguium**, leukonychia.

leukopathy (loo-kop'ah-the) leukopathia. **symmetric progressive l.**, an eruption of depigmented macules on the forearms and shins of adults; probably identical with idiopathic guttate hypomelanosis.

leukopedesis (loo''ko-pē-de'sis) [*leukocyte* + Gr. *pēdan* to leap] the outward passage of leukocytes through intact vessels walls; leukocytic diapedesis.

leukopenia (loo''ko-pe'ne-ah) [*leukocyte* + Gr. *penia* poverty] reduction in the number of leukocytes in the blood, the count being 5000 per cu. mm. or less. **basophil l.**, **basophilic l.**, abnormal reduction in the number of basophil leukocytes in the blood. **congenital l.**, congenital neutropenia. **malignant l.**, **pernicious l.**, agranulocytosis.

leukopenic (loo''ko-pe'nik) pertaining to, characterized by, or causing leukopenia.

leukophagocytosis (loo''ko-fag'o-si-to'sis) leukocytophagy.

leukophyll (loo''ko-fil) leukophyll.

leukophyll (lu'ko-fil) [*leuko-* + Gr. *phyllon* leaf] a colorless substance in plant tissues which becomes converted into protochlorophyll.

leukophyte (loo''ko-fit) an alga containing no chlorophyll, i.e., a colorless alga.

leukoplakia (loo''ko-pla'ke-ah) [*leuko-* + Gr. *plax* plate + *-ia*] a disease marked by the development upon the mucous membrane of the cheeks (*l. buccalis*), gums, or tongue (*l. lingualis*) of white, thickened patches which cannot be rubbed off and which sometimes show a tendency to fissure. It is common in smokers and sometimes becomes malignant. Called also *leukokeratosis*, *leukoma*, *smokers' tongue*, *smokers' patches*, *psoriasis buccalis*, *psoriasis linguae*, and *ichthyosis linguae*. **l. penis**, balanitis xerotica obliterans. **l. vulvae**, a sometimes precancerous condition in which there are hypertrophic grayish white infiltrated

Leukoplakia of the tongue (Homans).

patches on the vulvar mucosa, characterized chiefly by intense pruritus, although erosion, ulceration, and fissuring are common. When associated with atrophic changes, it is known as *kraurosis vulvae* or *lichen sclerosus et atrophicus*.

leukoplasia (loo''ko-pla'ze-ah) leukoplakia.

leukoplast (loo''ko-plast) leukoplastid.

leukoplastid (loo''ko-plas'tid) [*leuko-* + Gr. *plassein* to form] a colorless granule of the plant cells from which the starch-producing elements are formed.

leukopoiesis (loo''ko-poi-e'sis) production of leukocytes.

leukopoietic (loo''ko-poi-et'ik) [*leukocyte* + Gr. *poiein* to make] forming or producing leukocytes.

leukopietin (loo''ko-poi-e'tin) a hypothetical substance(s) believed to serve as the humoral regulator of leukopoiesis; granulopietin.

leukoprecipitin (loo''ko-pre-sip'i-tin) a precipitin specific for leukocyte antigens.

leukophrophylaxis (loo''ko-pro''fi-lak'sis) the increase by artificial means of the number of leukocytes in the blood in order to secure immunity to surgical infection.

leukopsin (loo-kop'sin) [*leuko-* + Gr. *ops* eye] visual white; the colorless matter into which rhodopsin is changed by exposure to white light. It is reconvertible into rhodopsin under proper conditions.

leukorrhagia (loo''ko-ra'je-ah) [*leuko-* + Gr. *rhēgnynai* to break forth] profuse leukorrhea.

leukorrhea (loo''ko-re'ah) [*leuko-* + Gr. *rhoia* flow] a whitish, viscid discharge from the vagina and uterine cavity. **menstrual l.**, **periodic l.**, leukorrhea in place of or along with the menses.

leukorrheal (loo''ko-re'al) pertaining to or marked by leukorrhea.

leukosarcoma (loo''ko-sar-ko'mah) [*leuko-* + *sarcoma*] the development of a leukemic blood picture in patients originally having a well-differentiated, lymphocytic type of malignant lymphoma. The circulating cells contain an ovoid nucleus and nucleoli, and are morphologically different from the mature-type lymphocyte seen in chronic lymphocytic leukemia.

leukosarcomatosis (loo''ko-sar-ko'mah-to'sis) a condition marked by the development of multiple sarcomas composed of leukemic cells.

leukoscope (loo''ko-skōp) [*leuko-* + Gr. *skopein* to examine] an instrument of Helmholtz's, modified by A. König, for testing color blindness.

leukosis (loo-ko'sis), pl. *leuko'ses*. Proliferation of leukocyte-forming tissue, including myelosis and lymphadenosis. Such proliferation forms the basis of leukemia. **acute l.**, see *Marek's disease*, under *disease*. **avian l.**, a group of transmissible, virus-induced diseases of chickens, characterized by proliferation of immature erythroid, myeloid, or lymphoid cells. Leukemic forms include erythroblastosis and myelosis and, rarely, lymphoblastic leukemia. Solid tumors in visceral organs are seen in cases of lymphoid leukemia, erythroblastosis, and myelocytomatosis. All of the causative viruses are related, and some induce "related neoplasms," such as sarcomas, hemangiomas, nephroblastomas, hepatocarcinomas, and osteopetrosis, a condition marked by thickening of the diaphyses of the long bones. These conditions are now classified as belonging to the leukosis sarcoma group, but were once included, along with Marek's disease, in the avian leukosis complex. Called also, according to the form taken, *avian lymphomatosis*, *osteopetrosis gallinarum*, and *visceral lymphomatosis*. **avian l. complex**, see *avian l. fowl l.*, *avian l. lymphoid l.*, a form of leukosis involving chiefly the lymphocytes. **myeloblastic l.**, a form involving chiefly the myeloblasts. **myelocytic l.**, a form involving chiefly the myelocytes. **skin l.**, see *Marek's disease*, under *disease*.

leukotactic (loo''ko-tak'tik) pertaining to leukotaxis; having the power of attracting leukocytes.

leukotaxin (loo''ko-tak'sin) leukotaxine.

leukotaxine (loo''ko-tak'sin) a crystalline nitrogenous polypeptide that appears when tissue is injured, that can be recovered from inflammatory exudates, and that promotes leukocytosis and increases capillary permeability and the diapedesis of leukocytes.

leukotaxis (loo''ko-tak'sis) [*leuko-* + Gr. *taxis* arrangement] the cytotoxicity of leukocytes; the tendency of leukocytes to collect in regions of injury and inflammation; see also *leukotaxine*.

leukotherapy (loo/'ko-ther'ah-pe) [*leuko-* + Gr. *therapeia* treatment] treatment by the administration of leukocytes. **pre-ventive I.**, leukoprophylaxis.

Leukothrix (loo/'ko-thriks) a genus of Schizomycetes of the order Beggiatoales, family Leukotrichaceae.

leukothrombin (loo/'ko-throm'bin) a fibrin factor formed by leukocytes in the blood.

leukotome (loo/'ko-tōm) [*leuko-* + Gr. *tomē* a cut] a cannula through which a loop of wire is passed to perform the operation of leukotomy or lobotomy.

leukotomy (loo-kot/'o-me) the operation of cutting the white matter in the oval center of the frontal lobe of the brain; prefrontal lobotomy. **transorbital I.**, leukotomy performed by way of the orbital plate.

leukotoxic (loo/'ko-tok'sik) destructive to leukocytes.

leukotoxicity (loo/'ko-tok-sis'i-te) the quality of having a toxic or deleterious effect on leukocytes.

leukotoxin (loo/'ko-tok'sin) [*leukocyte* + *toxin*] a cytotoxin destructive to the leukocytes.

Leukotrichaceae (loo/'ko-tri-ka'se-e) a family of Schizomycetes, order Beggiatoales.

leukotrichia (loo/'ko-trik'e-ah) [*leuko-* + Gr. *thrix* hair + *-ia*] whiteness of the hair, in a circumscribed area.

leukourobilin (loo/'ko-u-ro-bi'lin) [*leuko-* + *urobilin*] a colorless decomposition product of urobilin.

leukovirus (loo/'ko-vi'rus) any of a group of morphologically similar, ether-sensitive, RNA viruses causing leukemia and tumors in animals; the group includes avian leukosis virus, Rous sarcoma virus, and murine leukemia virus.

Leunbach's paste (loi'en-bakhs') [Jonathan Høegh *Leunbach*, Danish physician, born 1884] see under *paste*.

Levaditi's stain (lev'ah-de'tēz) [Constantin *Levaditi*, Roumanian bacteriologist in Paris, 1874–1928] see *Table of Stains*.

levallorphan tartrate (lev'al-lor'fan) [USP] chemical name: 17-allylmorphinan-3-ol [*R*-(*R**,*R**)]-2,3-dihydroxybutanedioate (1:1) (salt). An analogue of levorphanol, C₁₈H₂₅NO·C₄H₆O₆, occurring as a white to practically white, crystalline powder, which acts as an antagonist to analgesic narcotics; used in the treatment of respiratory depression produced by narcotic analgesics, administered parenterally.

levamfetamine (lev'vam-fet'ah-mēn) chemical name: (–)-α-methylbenzeneethanamine. The levorotatory form of amphetamine, C₉H₁₁N, having actions similar to the racemic form but less potent than the racemic or dextrorotatory (dextroamphetamine) forms. See *amphetamine*, def. 1. Spelled also *levamphetamine*. **I. succinate**, the succinate salt of levamfetamine, C₉H₁₃N·C₄H₆O₄, used in the treatment of narcolepsy, hyperkinetic behavior disorders, and as an anorexic agent in the treatment of obesity; administered orally.

levamisole hydrochloride (le-vam'i-sōl) chemical name: (S)-2,3,5,6-tetrahydro-6-phenylimidazo[2,1-b]thiazole monohydrochloride. An oral imidazole used as an anthelmintic, C₁₁H₁₂N₂S·HCl, effective against roundworms, hookworms, and strongyloids. It is also an immunopotentiator and has been used (investigatively) to stimulate the immune response in cancer.

levamphetamine (lev'vam-fet'ah-mēn) levamfetamine.

levan (lev'an) a hexosan from various grasses which on hydrolysis yields levulose.

levansucrase (lev'an-su'krās) β-2,6-fructan:D-glucose 6-fructosyltransferase: a bacterial enzyme that converts sucrose into fructan (levan) and glucose.

levarterenol (lev'ar-tē-re'nol) the levorotatory isomer of norepinephrine (q.v.), a much more potent pressor agent than the natural dextrorotatory isomer. **I. bitartrate**, norepinephrine bitartrate.

levator (le-va'tor), pl. *levato'res* [L. *levare* to raise] 1. [NA] a muscle for elevating the organ or structure into which it is inserted; see entries beginning *musculus levator*, in *Table of Musculi*. 2. a surgical instrument used to raise depressed osseous fragments in fractures of the skull and other bones.

levatores (lev'ah-to'rēz) [L.] plural of *levator*.

level (lev'el) 1. relative position, rank, or concentration. 2. a cerebrospinal center for combining or integrating impulses; the first level is spinal, the second is brainstem, the third is cortical. 3. in psychology, the sphere in which a tendency shows itself toward consciousness and adult activity. **isoelectric I.**, the level of recorded resting potential of a cell; the baseline of the electrocardiogram.

Lévi's syndrome (lévi'vez) [E. Léopold *Lévi*, Paris endocrinologist, 1868–1933] see under *syndrome*.

levicellular (lev'i-sel'u-lar) [L. *levis* smooth + *cellula* cell] smooth celled.

levidulose (le-vid'u-lin-ōs) a naturally occurring trisaccharide found in manna; on hydrolysis it yields one molecule of glucose and two molecules of mannose.

levigation (lev'i-ga'shun) [L. *levigare* to render smooth] the grinding to a powder of a hard or moistened substance.

Levin's tube (lē-vinz') [Abraham Louis *Levin*, New Orleans physician, 1880–1940] see under *tube*.

levitation (lev'i-ta'shun) [L. *levis* light] 1. a hallucinatory sensation of floating or rising in the air. 2. a support system for severe burn victims, consisting of a bed in the form of an inflatable chamber containing numerous outlets through which humidified, warm, sterile air is released at a pressure sufficient to raise the patient so that he is supported in a sterile air environment.

levo- (le'vo) [L. *laevus* left] 1. a combining form meaning left, to the left. 2. a chemical prefix, for which the symbol (–) is frequently substituted, used to emphasize that the substance is the levorotatory enantiomorph, whether the configurational family is known or not. This practice avoids possible confusion with the occasional erroneous use of *l-* standing alone to designate the configurational family to which the substance belongs. Opposed to *dextro-*.

levocardia (le'vo-kar'de-ah) [*levo-* + Gr. *kardia* heart] a term denoting the normal position of the heart, used when other viscera are transposed; cf. *dextrocardia*. **isolated I.**, levocardia associated with transposition (*situs inversus*) of the abdominal viscera, congenital structural anomaly of the heart; and sometimes with absence of the spleen. **mixed I.**, corrected transposition of the great vessels; see under *transposition*.

levocardiogram (le'vo-kar'de-o-gram) [*levo-* + *cardiogram*] a rarely used term denoting that part of the normal electrocardiogram representing electric activity or depolarization potentials of the left ventricle.

levoclination (le'vo-kli-na'shun) [*levo-* + L. *clinatus* leaning] rotation of the upper poles of the vertical meridians of the two eyes to the left. Cf. *dextroclination*.

levocycloduction (le'vo-si'klo-duk'shun) levoduction.

levodopa (le'vo-do'pah) [USP] chemical name: 3-hydroxy-L-tyrosine. The levorotatory isomer of dopa, C₉H₁₁NO₄, occurring as a white to off-white crystalline powder; used as an antiparkinsonian agent, administered orally. See *dopa*.

Levo-Dromoran (le'vo-dro'mo-ran) trademark for preparations of levorphanol tartrate.

levoduction (le'vo-duk'shun) movement of either eye to the left.

levofuraltadone (le'vo-für-al'tah-dōn) chemical name: (–)-5-(4-morpholinylmethyl)-3-[[[5-nitro-2-furanyl]methylene]amino]-2-oxazolidinone; an antibacterial and antiprotozoal, C₁₃H₁₆N₄O₆.

levogram (lev'o-o-gram) [*levo-* + Gr. *graphein* to record] a rarely used term denoting electrocardiographic tracing showing left axis deviation, indicative of left ventricular hypertrophy.

levogyral (le'vo-ji'ral) [*levo-* + L. *gyrare* to turn] levorotatory.

levogyration (le'vo-ji-ra'shun) levorotation.

Levoid (le'void) trademark for a preparation of levothyroxine sodium.

levomepromazine (le'vo-mē-pro'mah-zēn) methotrimeprazine.

levomethadyl acetate (le'vo-meth'ah-dil) chemical name: (–)-β-[2-(dimethylamino)propyl]-α-ethyl-β-phenylbenzeneethanol acetate (ester). A narcotic analgesic, C₂₃H₃₁NO₂, used in the treatment of heroin addiction.

levonordefrin (le'vo-nor'dē-frin) [USP] chemical name: (–)-4-(2-amino-1-hydroxypropyl)-1,2-benzenediol. An adrenergic, C₉H₁₃NO₃, the levo isomer of nordefrin, occurring as a white to buff-colored, crystalline powder; used as a vasoconstrictor in solutions of local anesthetics, especially in dentistry.

Levophed (lev'o-fed) trademark for a preparation of norepinephrine bitartrate.

Levoprome (le'vo-prōm) trademark for a preparation of methotrimeprazine.

levopropoxyphene napsylate (le'vo-pro-pok'sē-fēn nap'si-lāt) [USP] chemical name: [*R*-(*R**,*S**)]-α-[2-(dimethylamino)-1-methylethyl]-α-phenylbenzenethanol propanoate (ester) compound with 2-naphthalenesulphonic acid (1:1) monohydrate. The napsylate salt of the levo isomer of propoxyphen, C₂₂H₂₉NO₂·C₁₀H₇O₃S·H₂O, occurring as a white powder; used as an antitussive, administered orally.

levopropylcillin potassium (le'vo-pro'pil-sil'in) chemical name: potassium 3,3-dimethyl-7-oxo-6-(–)-(2-phenoxybutyramido)-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate; an antibacterial, C₁₈H₂₁KN₂O₈S, effective against gram-positive organisms. Called also *propicillin*.

levorotary (le'vo-ro'tah-re) levorotatory.

levorotation (le'vo-ro-ta'shun) a turning to the left.

levorotatory (le'vo-ro'tah-to're) [*levo-* + L. *rotare* to turn] turning the plane of polarization of polarized light to the left.

levorphanol (lēv-or'fah-nol) see *sodium levothyroxine*, under *sodium*.

levorphanol tartrate (le-vor'fah-nōl) [USP] chemical name: 17-methylmorphinan-3-ol [*R*-(*R**,*R**)]-2,3-dihydroxybutanedioate (1:1) (salt) dihydrate. A synthetic narcotic analgesic, C₁₇H₂₃NO·C₄H₆O₆·2H₂O, occurring as a white, crystalline powder; administered orally and subcutaneously.

levosin (le'vo-sin) a starch occurring in wheat flour, rye, bran, and stubble.

levothyroxine sodium (le'vo-thi-rok'sēn) [USP] chemical name: *O*-(4-hydroxy-3,5-diiodophenyl)-3,5-diiodo-L-tyrosine monosodium salt hydrate. The monosodium salt of the levo isomer of the thyroid hormone thyroxine, $C_{15}H_{10}I_4NNa_4 \cdot xH_2O$, occurring as a light yellow to buff-colored, hygroscopic powder; used for replacement therapy in reduced or absent thyroid function, administered orally.

levotorsion (le'vo-tor'shun) levocination.

levoversion (le'vo-ver'zhun) an act of turning to the left; in ophthalmology, movement of the eyes to the left.

levoxadrol hydrochloride (le-voks'ah-drōl) chemical name: (-)-2-(2,2-diphenyl-1,3-dioxolan-4-yl)piperidine hydrochloride; a local anesthetic and smooth muscle relaxant, $C_{20}H_{23}NO_2 \cdot HCl$.

Levret's forceps, law, etc. (lev-rāz') [André Levret, French accoucheur, 1703-1780] see under the nouns.

Levugen (lev'u-jen) trademark for a preparation of fructose.

levulan (lev'u-lan) fructosan.

levulin (lev'u-lin) a starchlike compound, $C_6H_{10}O_5$, occurring in certain plant tubers.

levulosan (lev'u-lo'san) fructosan, a fructose (fructofuranose) polysaccharide, e.g., inulin.

levulosazone (lev'u-lo'sa-zōn) fructosazone.

levulose (lev'u-lōs) [L. *laevus* left + -ose] fructose.

levulosemia (lev'u-lo-se'me-ah) [levulose + Gr. *haima* blood + -ia] fructosemia.

levulosuria (lev'u-lo-su're-ah) [levulose + Gr. *ouron* urine + -ia] fructosuria.

levurid (lev'u-rid) a generalized allergic dermatitis ("id") caused by infection at a remote site with *Candida* or *Cryptococcus*.

levuride (lev'u-rid) levurid.

lewisite (lu'i-sit) [named for W. Lee Lewis, American chemist, 1879-1943] chemical name: dichloro(2-chlorovinyl)arsine. A lethal war gas, $AsCl_2CH:CHCl$. It is a vesicant, lacrimator, and lung irritant.

Lewisohn's method (lu'i-sonz) [Richard Lewisohn, New York surgeon, born 1875] see under *method*.

Leyden's ataxia, crystals, disease (li'denz) [Ernst Victor von Leyden, German physician, 1832-1910] see *pseudotabes*, see *Charcot-Leyden crystals*, under *crystal*, and see under *disease*.

Leyden jar (li'den) see under *jar*.

Leyden-Moebius dystrophy, type (li'den-me'be-us) [E. V. von Leyden; Paul Julius Moebius, German neurologist, 1853-1907] limb-girdle muscular dystrophy.

Leydig's cells, cylinders, duct (li'digz) [Franz von Leydig, German anatomist, 1821-1908] see under *cell* and *cylinder*, and see *ductus mesonephricus*.

leydigarche (li'dig-ar'ke) [Leydig cells + Gr. *archē* beginning] the establishment or beginning of gonadal function in the male.

Lf limit flocculation; see *Lf unit*, under *unit*.

L.F.A. left fronto-anterior (left mento-anterior, a position of the fetus).

L.F.D. least fatal dose (of a toxin).

L-form L-phase variant; see under *variant*.

L.F.P. left frontoposterior (left mentoposterior, a position of the fetus).

L.F.P.S. Licentiate of the Faculty of Physicians and Surgeons.

L.F.T. left frontotransverse (left mentotransverse, a position of the fetus).

LGH lactogenic hormone.

LH luteinizing hormone.

Lhermitte's sign (lär'mits) [Jean Lhermitte, Paris neurologist, 1877-1959] see under *sign*.

LH-RH luteinizing hormone releasing hormone; see *gonadotropin releasing hormone*, under *hormone*.

Li chemical symbol for lithium.

LIA leukemia-associated inhibitory activity; see under *activity*.

Lib. abbreviation for *li'bra*, a pound.

liberomotor (lib'er-o-mo'tor) [L. *liber* free + *motor* mover] pertaining to voluntary and conscious movements or actions.

libidinal (li-bid'i-nal) pertaining to or of the nature of libido; erotic.

libidinous (li-bid'i-nus) [L. *libidinosus*] lustful or salacious.

libido (li-be'do, li-bi'do), pl. *libid'ines* [L.] 1. sexual desire. 2. the energy derived from the primitive impulses. In psychoanalysis the term is applied to the motive power of the sex life; in freudian psychology to psychic energy in general. **bisexual l.**, the fixation of the sexual impulse on both masculine and feminine. **ego l.**, self-love; narcissism.

Libman-Sacks disease (syndrome) (lib'man-saks') [Emanuel Libman, New York physician, 1872-1946; Benjamin Sacks, New York physician] atypical verrucous endocarditis.

LiBr lithium bromide.

libra (li'brah) [L.] 1. pound. 2. balance.

Librium (lib're-um) trademark for preparations of chlordiazepoxide hydrochloride.

lice (lis) plural of *louse*.

license (li'sens) [L. *licere* to be permitted] a permit to perform acts which without it would be illegal.

licentiate (li-sen'she-āt) [L. *licentia* license] one holding a license from an authorized agency entitling him to practice a particular profession.

lichen (li'ken) [Gr. *leichen* a tree-moss] 1. any of the many thallophytic plants formed by mutualistic combination of an alga and a fungus, the algal component being a green or blue-green alga, and the fungal usually an ascomycete. 2. a name applied to many different kinds of papular skin diseases in which the lesions are typically small, firm papules that are usually set very close together, the specific type being indicated by a modifying term.

l. amyloido'sus, a lichenoid skin eruption, most often of the shins, characterized by localized cutaneous amyloidosis; called also *lichenoid amyloidosis*. **l. chron'icus simplex**, 1. simplex chronicus. **l. cor'neus hypertro'phicus**, a papular skin eruption of thickened and horny lesions. **l. fibro-mucinoido'sus**, 1. myxedematosus. **l. myxedemato'sus**, a condition characterized by abnormal amounts of acid mucopolysaccharides (mucinosis) in the interstices of the cutis, as well as in vessels of many organs, and a widespread eruption of asymptomatic soft, pale-red or yellowish papules 2 to 3 mm. in diameter, which do not coalesce. Although the condition resembles myxedema, it is not associated with thyroid dysfunction. **l. nit'i-dus**, a rare skin eruption consisting of numerous, pinhead-sized, pale, flat, sharply margined, glistening, exquisitely discrete papules, scarcely raised above the level of the skin; called also *Pinkus' disease*. **l. obtus'us cor'neus**, a papular eruption of thickened, blunt lesions; probably identical with prurigo nodularis. **l. pila'ris**, 1. spinulosus. **l. planopila'ris**, a variant of lichen planus characterized by formation, around the hair follicles, of acuminate horny papules, in addition to the typical lesions of ordinary lichen planus; in its full-blown form there is also loss of hair from the scalp and other regions of the body.

l. pla'nus, an inflammatory skin disease with wide, flat, violaceous, itchy, polygonal papules having a characteristic sheen, occurring in circumscribed patches, and often very persistent. The hair follicles and nails may become involved, and the buccal mucosa may be affected. The etiology is unknown but an emotional basis is suspected. **l. pla'nus, acute bullous**, a variety of lichen planus in which the dermal infiltrate produces subepidermal clefts that become frank blisters; binding of complement to the basement membrane may be the fundamental lesion. **l. pla'nus, hypertrophic**, 1. **pla'nus hypertro'phicus**, lichen planus in which there is marked acanthosis and a great increase in the thickness of the granular layer of the epidermis, with a particularly heavy lymphocytic infiltration immediately under the epidermis, and a verrucous surface. **l. ru'ber monilifor'mis**, a variant of lichen simplex chronicus, the supposed beaded arrangement of papules being the prominent alveolar pattern of the skin between the deepened furrows. **l. ru'ber pla'nus**, 1. planus. **l. sclero'sus**, 1. sclerosus et atrophicus. **l. sclero'sus et atroph'icus**, a chronic, atrophic skin disease characterized by white, angular, flat, well-defined, indurated papules with an erythematous halo and follicular, black, keratotic plugs. It is the most common cause of kraurosis vulvae in females and balanitis xerotica obliterans in males. Called also *white-spot disease* and *Csillag's disease*. **l. scrofuloso'rum**, 1. **scrofulo'sus**, an eruption of minute reddish lichenoid follicular papules, occurring in children or young adults with tuberculosis, as a result of hematogenous dissemination of bacilli in a person with strong tuberculin sensitivity. **l. sim'plex chron'icus**, a skin disease of psychogenic origin, marked by a pruritic discrete or, more often, confluent lichenoid papular eruption, usually confined to a localized area, especially the anogenital region, back of the neck, knee, ankle, or elbow flexures, or dorsum of the hands and feet; called also *circumscribed* or *localized neurodermatitis*, *neurodermatitis circumscripta*, *lichen Vidal*, and *Vidal's disease*. **l. spinulo'sus**, a condition in which there is a horn or spine in the center of each hair follicle; called also *l. pilaris*. **l. stria'tus**, a condition characterized by an otherwise asymptomatic linear lichenoid papular eruption, usually occurring in children, almost always along the line separating the lumbar from the sacral neuromeres or the cervical from the thoracic neuromeres and clearing spontaneously after about 6 to 18 months. **l. trop'icus**, miliaria rubra. **l. urtica'tus**, papular urticaria. **l. Vidal**, 1. simplex chronicus.

lichenase (li'ken-ās) laminarinase.

lichenification (li-ken'i-fi-ka'shun) thickening of the epidermis, with exaggeration of its normal markings so that the striae form a criss-cross pattern, enclosing flat-topped, shiny, smooth quadrilateral facets between them. It is caused by scratching and rubbing in excess of what the normal pain threshold would permit, usually in persons predisposed by inheritance of the atopic diathesis.

licheniformin (li-ken'i-fi-form'in) a group of antibiotic sub-

stances (licheniformin A, B, and C) isolated from *Bacillus subtilis*, resembling subtilin in their properties.

lichenin (li'kē-nin) a starchy demulcent polysaccharide, (C₆H₁₀O₅)_n, which yields glucose on hydrolysis. It occurs abundantly in Iceland moss, *Cetraria islandica*. Called also *lichen starch* and *moss starch*.

lichenization (li'ken-i-za'shun) (obs.) the development of patches of lichen.

lichenoid (li'ken-oid) [*lichen* + Gr. *eidos* form] resembling the skin lesions designated as lichen.

Lichtheim's aphasia, etc. (likt'himz) [Ludwig *Lichtheim*, German physician, 1845–1928] see under *aphasia*, *disease*, *plaque*, *sign*, *syndrome*, and *tests*.

Lichtheimia (lik-thi'me-ah) former name for the genus *Asidia*.

Lic.Med. Licentiate in Medicine.

Li₂CO₃ lithium carbonate.

licorice (lik'o-ris) glycyrrhiza.

lid (lid) an eyelid. **granular l's**, trachoma, def. 1. **tucked l. of Collier**, a retraction of the upper eyelid in cases of ophthalmoplegia due to a supranuclear lesion in the brain stem.

Lida-Mantle (li'dah-man'tl) trademark for a preparation of lidocaine.

Liddel and Sherrington reflex [Edward George Tandy *Liddel*, British physiologist, born 1895; Sir Charles Scott *Sherrington*, English physiologist, 1857–1952] stretch reflex.

Lidex (li'deks) trademark for preparations of fluocinonide.

lidocaine (li'do-kān) [USP] chemical name: 2-(diethylamino)-N-(2,6-dimethylphenyl)acetamide. A drug, C₁₄H₂₂N₂O, having anesthetic, sedative, analgesic, anticonvulsant, and cardiac depressant activities, occurring as a white or slightly yellow, crystalline powder; used as a local anesthetic, applied topically to the skin and mucous membranes. **l. hydrochloride** [USP], the monohydrated monohydrochloride salt of lidocaine, C₁₄H₂₂N₂O·HCl·H₂O, occurring as a white, crystalline powder; used as a cardiac antiarrhythmic, administered intravenously, and to produce local anesthesia by infiltration injection and epidural and peripheral nerve block.

lidofenin (li'do-fen'in) chemical name: N-(carboxymethyl)-N-[2-[(2,6-dimethylphenyl)amino]-2-oxoethyl]glycine; a diagnostic aid for determination of hepatic function, C₁₄H₁₈N₂O₅.

lidofilcon (li'do-fil'kon) chemical name: 1-ethenyl-2-pyrrolidone polymer with methyl 2-methyl-2-propenoate, 2-propenyl 2-methyl-2-propenoate, and 1,2-ethanedil bis(2-methyl-2-propenoate); either of two hydrophilic contact lens materials, (C₆H₅NO)₁₀(C₅H₈O₂)₂(C₇H₁₀O₂)₂(C₁₀H₁₄O₄)₂, one of which contains 70 per cent water (*lidofilcon A*), and the other 85 per cent water (*lidofilcon B*).

lidoflazine (li-do-fla'zēn) chemical name: 4-[4,4-bis-(4-fluorophenyl)butyl]-N-(2,6-dimethylphenyl)-1-piperazineacetamide; a coronary vasodilator, C₃₀H₃₅F₂N₂O.

lie (li) the situation of the long axis of the fetus with respect to that of the mother; see *presentation*. **transverse l.**, the situation of the fetus during labor when the long axis of its body crosses the long axis of the maternal body. The shoulder usually presents first, but the arm, trunk, or any other part of the trunk may be the first to appear. Called also *torso*, *transverse*, or *trunk presentation*. See table of Positions of the Fetus in Various Presentations, under *position*.

Lieben's test (reaction) (le'bēnz) [Adolf *Lieben*, Austrian chemist, 1836–1914] see under *tests*.

Lieberkühn's ampulla, crypts, follicles, glands (le'ber-kēnz) [Johann Nathaniel *Lieberkühn*, German anatomist, 1711–1756] see under *ampulla*, and see *glandulae intestinales*.

Liebermann's test (le'ber-mahnz) [Leo von Szentlörincz *Liebermann*, Hungarian physician, 1852–1926] see under *tests*.

Liebermeister's furrows, grooves, rule (le'ber-mis'terz) [Carl von *Liebermeister*, German physician, 1833–1901] see under *furrow*, *groove*, and *rule*.

Liebig's test, theory (le'bigz) [Baron Justus von *Liebig*, German chemist, 1803–1873] see under *tests* and *theory*.

lien (li'en) [L.] [NA] the spleen: a large glandlike but ductless organ situated in the upper part of the abdomen; see *spleen*. **l. accessorius** [NA], a connected or detached outlying portion, or exclave, of the spleen; called also *accessory spleen*. **l. mo'bilis**, floating spleen.

lienal (li-e'nal) pertaining to the spleen; splenic.

lienculus (li-en'ku-lus) an accessory spleen (lien accessorius [NA]).

lienectomy (li'ē-nek'to-me) splenectomy.

lienitis (li'ē-ni'tis) splenitis.

lien- (li-e'no) [L. *lien* spleen] a combining form denoting relationship to the spleen.

lienocèle (li-e'no-sēl) splenocèle.

lienography (li'e-nog'rah-fe) splenography.

lienomalacia (li-e'no-mah-la'she-ah) splenomalacia.

lienomedullary (li-e'no-med'u-la're) splenomedullary.

lienomyelogenous (li-e'no-mi'ē-loj'ē-nus) splenomyelogenous.

lienomyelomalacia (li-e'no-mi'ē-lo-mah-la'she-ah) splenomyelomalacia.

lienopancreatic (li-e'no-pan'kre-at'ik) splenopancreatic.

lienopathy (li'e-nop'ah-the) splenopathy.

lienorenal (li-e'no-re'nal) pertaining to the spleen and the kidney.

lienotoxin (li-e'no-tok'sin) [*lien-* + *toxin*] splenotoxin.

lienteric (li'en-ter'ik) affected by or of the nature of a lientery.

lientery (li'en-ter'e) [Gr. *leienteria*; *leios* smooth + *enteron* intestine] diarrhea in which the stools contain undigested food.

lienunculus (li'en-ung'ku-lus) a detached mass or exclave of splenic tissue; an accessory spleen.

Liepmann's apraxia (lēp'manz) [Hugo Carl *Liepmann*, Berlin neurologist, 1863–1925] see under *apraxia*.

Liesegang's phenomenon (striae, waves) (le'zē-gahng) [Ralph Eduard *Liesegang*, German chemist, 1869–1947] see under *phenomenon*.

Lieutaud's triangle (body), uvula (luette) (lu-toz') [Joseph *Lieutaud*, French physician, 1703–1780] see *trigonum vesicae* and *uvula vesicae*.

LIF left iliac fossa; leukocyte inhibitory factor.

life (lif) [L. *vita*; Gr. *bios* or *zōē*] the aggregate of vital phenomena; a certain peculiar stimulated condition of organized matter; that obscure principle whereby organized beings are peculiarly endowed with certain powers and functions not associated with inorganic matter. Generally, living things share, in varying degrees, the following characteristics: organization, irritability, movement, growth, reproduction, and adaptation. **animal l.**, vegetative life conjoined with the employment of the senses and with spontaneous movements. **intellectual l.**, **mental l.**, **psychic l.**, that which is attended by conscious exercise of feelings, impulses, and will, and by reason. **intrauterine l.**, **uterine l.**, the period of life spent in the uterus; i.e., embryonic and fetal life. **vegetative l.**, that which is manifested in automatic acts requisite for the maintenance of the individual and the propagation of the species.

lifibrate (li-fi'brāt) chemical name: bis(4-chlorophenoxy)acetic acid 1-methyl-4-piperidinyl ester; an antihyperlipidemic, C₂₀H₂₁Cl₂NO₄.

lig. ligament; ligamentum.

ligament (lig'ah-ment) 1. a band of fibrous tissue that connects bones or cartilages, serving to support and strengthen joints; see *ligamentum*. 2. a double layer of peritoneum extending from one visceral organ to another. 3. cordlike remnants of fetal tubular structures that are nonfunctional after birth. **accessory l.**, any ligament that strengthens or supports another. **accessory l's**, **volar**, **ligamenta palmaria**. **accessory l's of digits of hand**, **ligamenta palmaria**. **accessory l. of Henle**, **lateral**, **ligamentum laterale articulationis temporomandibularis**. **accessory l. of Henle**, **medial**, **ligamentum sphenomandibulare**. **accessory l. of humerus**, **ligamentum coracohumerale**. **accessory l's of metacarpophalangeal joints**, **ligamenta collateralia articulationum metacarpophalangeorum**. **acromioclavicular l.**, **ligamentum acromioclavulare**. **acromioclavicular l.**, **ligamentum coracacromiale**. **adipose l. of knee (of Cruveilhier)**, **plica synovialis infrapatellaris**. **alar l's**, **ligamenta alaria**. **alar l's of knee**, **plicae alares**. **alveolodental l.**, **periodontal l.** **annular l.**, **dorsal common**, **retinaculum extensorum manus**. **annular l.**, **inferior**, **ligamentum arcuatum pubis**. **annular l.**, **internal**, **retinaculum musculorum flexorum pedis**. **annular l's**, **tracheal**, **ligamenta anularia trachealia**. **annular l. of ankle**, **external**, **retinaculum musculorum peroneorum superius**. **annular l. of ankle**, **internal**, **retinaculum musculorum flexorum pedis**. **annular l. of base of stapes**, **ligamentum anulare stapedis**. **annular l. of carpus**, **posterior**, **retinaculum extensorum manus**. **annular l's of digits of foot**, see *pars anularis vaginae fibrosae digitorum pedis*. **annular l's of digits of hand**, see *pars anularis vaginae fibrosae digitorum manus*. **annular l. of femur**, **zona orbicularis articulationis coxae**. **annular l. of finger**, *pars anularis vaginae fibrosae digitorum manus*. **annular l. of malleolus**, **external**, **retinaculum musculorum extensorum pedis inferius**. **annular l. of malleolus**, **internal**, **retinaculum musculorum flexorum pedis**. **annular l. of radius**, **ligamentum anulare radii**. **annular l. of stapes**, **ligamentum anulare stapedis**. **annular l. of tarsus**, **anterior**, **retinaculum musculorum extensorum pedis inferius**. **annular l's of tendon sheaths of fingers**, see *pars anularis vaginae fibrosae digitorum manus*. **annular l. of wrist**, **dorsal posterior**, **retinaculum extensorum manus**. **anococcygeal l.**, **ligamentum anococcygeum**. **anterior l. of colon**, **tenia omentalis**. **anterior l. of head of fibula**, **ligamentum capitis fibulae anterius**. **anterior l. of head of rib**, **ligamentum capitis costae radiatum**. **anterior l. of malleus**, **ligamentum mallei anterius**. **anterior l. of neck of rib**, **ante-**

LIGAMENTS OF THE ELBOW

rior portion of ligamentum costotransversarium superius. **anterior l. of radiocarpal joint**, ligamentum radiocarpeum palmare. **l. of antibrachium** (of Weitbrecht), chorda obliqua membranae interosae antibrachii. **apical dental l.**, **apical odontoid l.**, ligamentum apicis dentis axis. **appendiculo-ovarian l.**, a fold of peritoneum extending between the appendix and the broad ligament of the uterus. **Aran-tius' l.**, ligamentum venosum. **arcuate l.**, ligamentum flavum. **arcuate l.**, **lateral**, ligamentum arcuatum laterale. **arcuate l.**, **medial**, ligamentum arcuatum mediale. **arcuate l.**, **median**, l. arcuatum medianum. **arcuate l.**, **pubic**, ligamentum arcuatum pubis. **arcuate l. of diaphragm**, **external**, ligamentum arcuatum laterale. **arcuate l. of diaphragm**, **internal**, ligamentum arcuatum mediale. **arcuate l. of diaphragm**, **lateral**, ligamentum arcuatum laterale. **arcuate l. of knee**, ligamentum popliteum arcuatum. **arcuate l. of pubis**, **inferior**, ligamentum arcuatum pubis. **Arnold's l.**, ligamentum incudis superius. **articular l. of vertebrae**, capsula articularis articulationum vertebrarum. **arytenoepiglottic l.**, plica aryepiglottica. **atlantooccipital l.**, **anterior**, atlantooccipital l., **deep**, membrana atlantooccipitalis anterior. **atlantooccipital l.**, **posterior**, membrana atlantooccipitalis posterior. **l's of auditory ossicles**, ligamenta ossiculorum auditus. **l's of auricle of external ear**, ligamenta auricularia. **auricular l.**, **anterior**, ligamentum auriculare anterius. **auricular l.**, **posterior**, ligamentum auriculare posterius. **auricular l.**, **superior**, ligamentum auriculare superius. **Barkow's l.**, the anterior and posterior parts of the elbow joint capsule. **Bellini's l.**, a band passing as part of the capsule of the hip joint to the greater trochanter. **Bérard's l.**, the suspensory ligament of the pericardium, extending to the third and fourth thoracic vertebrae. **Berry's l.**, ligamentum thyrohyoideum. **Bertin's l.**, ligamentum iliofemorale. **Bichat's l.**, the lower bundle of the dorsal sacroiliac ligament. **bifurcate l.**, ligamentum bifurcatum. **bifurcate l's**, **deep**, ligamenta metatarsae plantaria. **bifurcate l's of Arnold**, **deep**, ligamenta tarsometatarsae plantaria. **Bigelow's l.**, ligamentum iliofemorale. **bigeminate l's of Arnold**, ligamenta tarsometatarsae dorsalia. **l. of Botallo**, ligamentum arteriosum. **Bourgery's l.**, ligamentum popliteum obliquum. **brachioradial l.**, ligamentum collaterale radiale. **broad l. of liver**, ligamentum falciforme hepatis. **broad l. of lung**, ligamentum pulmonale. **broad l. of uterus**, the peritoneal fold that supports the uterus on either side; called also *ligamentum latum uteri* [NA]. **Brodie's l.**, the transverse humeral ligament. **Burns' l.**, margo falciformis hiatus saphenus. **calcaneocuboid l.**, ligamentum calcaneocuboidum. **calcaneocuboid l.**, **plantar**, ligamentum calcaneocuboidum plantare. **calcaneofibular l.**, ligamentum calcaneofibulare. **calcaneonavicular l.**, ligamentum calcaneonaviculare. **calcaneonavicular l.**, **dorsal**, ligamentum calcaneonaviculare dorsale. **calcaneonavicular l.**, **plantar**, ligamentum calcaneonaviculare plantare. **calcaneotibial l.**, pars tibio calcanea ligamenti medialis. **Caldani's l.**, a band passing from the inner border of the coracoid process to the lower border of the clavicle, the first rib, and the tendon of the subclavius. **Campbell's l.**, suspensory l. of axilla. **Camper's l.**, diaphragma urogenitale. **canthal l's**, see *ligamentum palpebrale mediale* and *raphe palpebralis lateralis*. **capitular l.**, volar, ligamentum metacarpeum transversum profundum. **capsular l.**, capsula articularis. **capsular l.**, **internal**, ligamentum capitis femoris. **capsular l.**, **pelvi-prostatic**, fascia prostatae. **Carcassonne's l.**, ligamentum puboprostaticum. **cardinal l.**, part of a thickening of the visceral pelvic fascia beside the cervix and vagina, passing laterally to merge with the upper fascia of the pelvic diaphragm; called also *lateral cervical l.* **carpal l.**, **dorsal**, see *ligamenta intercarpea dorsalia*. **carpal l.**, **oblique accessory**, ligamentum radiocarpeum palmare. **carpal l.**, **radiate**, ligamentum carpi radiatum. **carpal l.**, **ulnar**, ligamentum collaterale carpi ulnare. **carpometacarpal l's**, **anterior**, ligamenta carpometacarpea palmaria. **carpometacarpal l's**, **dorsal**, ligamenta carpometacarpea dorsalia. **carpometacarpal l's**, **oblique palmar**, ligamenta carpometacarpea palmaria. **carpometacarpal l's**, **palmar**, ligamenta metacarpea palmaria. **carpometacarpal l's**, **posterior**, ligamenta carpometacarpea dorsalia. **carpometacarpal l's**, **volar**, ligamenta carpometacarpea palmaria. **Casser's l.**, **casserian l.**, ligamentum mallei laterale. **caudal l. of common integument**, retinaculum caudale. **cervical l.**, **anterior**, membrana tectoria. **cervical l.**, **lateral**, cardinal l. **cervical l.**, **posterior**, ligamentum nuchae. **cervical l. of sinus tarsi**, a strong band behind the bifurcate ligament, extending upward to the neck of the talus. **cervicobasilar l.**, membrana tectoria. **check l's of axis**, ligamenta alaria. **chondrostronal l.**, **interarticular**, ligamentum sternocostale intraarticulare. **chondroxiphoid l's**, ligamenta costoxiphoida. **l. of Civinini**, ligamentum pterygospinale. **Clado's l.**, an occasional peritoneal fold connecting the infundibulo-pelvic ligament and the mesoappendix. **clavicular l.**, **external capsular**, ligamentum acromioclaviculare. **Cloquet's**

l., vestigium processus vaginalis. **coccygeal l.**, **superior**, ligamentum iliofemorale. **collateral l.**, **fibular**, ligamentum collaterale fibulare. **collateral l.**, **radial**, ligamentum collaterale radiale. **collateral l.**, **radial carpal**, ligamenta collaterale carpi radiale. **collateral l.**, **tibial**, ligamentum collaterale tibiale. **collateral l.**, **ulnar**, ligamentum collaterale ulnare. **collateral l.**, **ulnar carpal**, ligamenta collaterale carpi ulnare. **collateral l. of carpus**, **radial**, ligamentum collaterale carpi radiale. **collateral l. of carpus**, **ulnar**, ligamentum collaterale carpi ulnare. **collateral l's of interphalangeal articulations of foot**, ligamenta collateralia articulationum interphalangearum pedis. **collateral l's of interphalangeal articulations of hand**, ligamenta collateralia articulationum interphalangearum manus. **collateral l's of joints of fingers**, ligamenta collateralia articulationum interphalangearum manus. **collateral l's of joints of toes**, ligamenta collateralia articulationum interphalangearum pedis. **collateral l's of metacarpophalangeal articulations**, ligamenta collateralia articulationum metacarpophalangearum. **collateral l's of metatarsophalangeal articulations**, ligamenta collateralia articulationum metatarsophalangearum. **Colles' l.**, ligamentum inguinale reflexum. **l's of colon**, teniae coli. **common l. of knee** (of Weber), ligamentum transversum genus. **common l. of wrist joint**, **deep**, ligamentum collaterale carpi radiale. **conoid l.**, ligamentum conoideum. **Cooper's l.**, ligamentum pectineale. **Cooper's suspensory l's**, ligamenta suspensoria mammae. **coracoacromial l.**, ligamentum coracoacromiale. **coracocapsular l's**, ligamenta cinguli extremitatis superioris. **coracoclavicular l.**, ligamentum coracoclaviculare. **coracoclavicular l.**, **external**, ligamentum trapezoidum. **coracoclavicular l.**, **internal**, ligamentum conoideum. **coracohumeral l.**, ligamentum coracohumerale. **coracoid l. of scapula**, ligamentum transversum scapulae superius. **cordiform l. of diaphragm**, centrum tendinum. **coronary l. of liver**, ligamentum coronarium hepatis. **coronary l. of radius**, ligamentum anulare radii. **costo-central l.**, **anterior**, ligamentum capitis costae radiatum. **costocentral l.**, **interarticular**, ligamentum capitis costae intraarticulare. **costoclavicular l.**, ligamentum costoclaviculare. **costocolic l.**, ligamentum phrenicolicum. **costo-coracoid l.**, ligamentum transversum scapulae superius. **costopericardiac l.**, a band of connective tissue joining the upper costosternal articulation with the pericardium. **costosternal l's**, **radiate**, ligamenta sternocostalia radiata. **costotransverse l.**, ligamentum costotransversarium. **costotransverse l.**, **anterior**, ligamentum costotransversarium superius. **costotransverse l.**, **lateral**, ligamentum costotransversarium laterale. **costotransverse l.**, **posterior**, ligamentum costotransversarium superius. **costotransverse l.**, **superior**, ligamentum costotransversarium superius. **costotransverse l. of Krause**, **posterior**, ligamentum costotransversarium laterale. **costovertebral l.**, ligamentum capitis costae radiatum. **costoxiphoid l's**, ligamenta costoxiphoida. **cotyloid l.**, labrum acetabulare. **Cowper's l.**, fascia pectinea. **cricoarytenoid l.**, **posterior**, ligamentum cricoarytenoideum posterius. **cricopharyngeal l.**, **crico-santorinian l.**, ligamentum cricopharyngeum. **cricothyro-arytenoid l.**, conus elasticus laryngis. **cricothyroid l.**, ligamentum cricothyroideum. **cricotracheal l.**, ligamentum cricotracheale. **crucial l's of fingers**, see *pars cruciformis vaginae fibrosae digitorum manus*. **crucial l. of foot**, retinaculum musculorum extensorum pedis inferius. **cruciate l. of atlas**, ligamentum cruciforme atlantis. **cruciate l's of fingers**, see *pars cruciformis vaginae fibrosae digitorum manus*. **cruciate l's of knee**, ligamenta cruciata genus. **cruciate l. of knee**, **anterior**, ligamentum cruciatum anterius genus. **cruciate l. of knee**, **posterior**, ligamentum cruciatum posterius genus. **cruciate l. of leg**, retinaculum musculorum extensorum pedis inferius. **cruciate l's of toes**, see *pars cruciformis vaginae fibrosae digitorum pedis*. **cruciform l. of atlas**, ligamentum cruciforme atlantis. **crural l.**, ligamentum inguinale. **Cruveilhier's l's**, ligamenta palmaria. **cubito-radial l.**, chorda obliqua membranae interosae antibrachii. **cubito-ulnar l.**, ligamentum collaterale ulnare. **cuboideo-metatarsal l's**, **short**, ligamenta tarsometatarsae plantaria. **cuboideonavicular l.**, **dorsal**, ligamentum cuboideonaviculare dorsale. **cuboideonavicular l.**, **oblique**, ligamentum cuboideonaviculare plantare. **cuboideonavicular l.**, **plantar**, ligamentum cuboideonaviculare plantare. **cubonavicu-lar l.**, ligamentum cuboideonaviculare plantare. **cubo-scaphoid l.**, **plantar**, ligamentum cuboideonaviculare plantare. **cuneocuboid l.**, **dorsal**, ligamentum cuneocuboidum dorsale. **cuneocuboid l.**, **interosseous**, ligamentum cuneocuboidum interosseum. **cuneocuboid l.**, **plantar**, ligamentum cuneocuboidum plantare. **cuneometatarsal l's**, **interosseous**, ligamenta cuneometatarsae interosae. **cuneonavicular l's**, **dorsal**, ligamenta cuneonavicularia dorsalia. **cuneonavicular l's**, **plantar**, ligamenta cuneonavicularia plantaria. **cutaneophalangeal l's**, ligamentous fibers from the sides of the phalanges near the joints to the skin. **cystico-duodenal l.**, an anomalous fold of peritoneum extending be-

tween the gallbladder and the duodenum. **deep l's of tarsus**, ligamenta tarsi profunda. **deltoid l. of ankle**, ligamentum mediale. **deltoid l. of elbow**, ligamentum collaterale ulnare. **dentate l. of spinal cord**, denticulate l., ligamentum denticulatum. **Denucé's l.**, a short, wide band connecting the radius and the ulna at the wrist. **diaphragmatic l.**, the involuting urogenital ridge that becomes the suspensory ligament of the ovary. **dorsal l's, carpal**, ligamenta intercarpea dorsalia. **dorsal l., talonavicular**, ligamentum talonaviculare. **dorsal l's of bases of metacarpal bones**, ligamenta metacarpea dorsalia. **dorsal l's of bases of metatarsal bones**, ligamenta metatarsea dorsalia. **dorsal l. of radiocarpal joint**, ligamentum radiocarpeum dorsale. **dorsal l's of tarsus**, ligamenta tarsi dorsalia. **dorsal l. of wrist**, retinaculum extensorum manus. **Douglas' l.**, plica rectouterina. **duodenohepatic l.**, ligamentum hepatoduodenale. **duodeno renal l.**, ligamentum duodeno-renale. **epiphyal l.**, ligamentum stylohyoideum. **external l's of Barkow, plantar**, ligamenta intercuneiformia plantaria. **external l. of mandibular articulation**, ligamentum laterale articulationis temporomandibularis. **external l. of neck of rib**, ligamentum costotransversarium posterius. **fabellofibular l.**, an occasional ligament apparently replacing the short lateral ligament when the fabella is present; it originates directly from the fabella, passes between the condylar portions of the plantaris and lateral gastrocnemius muscles, and is attached to the apex of the fibula. **falciform l.**, processus falciformis ligamenti sacrotuberosi. **falciform l. of liver**, ligamentum falciforme hepatis. **fallopian l., l. of Fallopius**, ligamentum inguinale. **false l.**, 1. any suspensory ligament that is a peritoneal fold and not of true ligamentous structure. 2. a peritoneal connection between the vertex and sides of the bladder and the walls of the pelvis. **Ferrein's l.**, the thick external part of the capsule of the temporomandibular joint. **fibrous l., anterior**, ligamentum sternoclaviculare anterius. **fibrous l., posterior**, ligamentum sternoclaviculare posterius. **flaval l.**, ligamentum flavum. **Flood's l.**, the superior glenohumeral ligament. **fundiform l. of penis**, ligamentum fundiforme penis. **gastrocolic l.**, ligamentum gastrocolicum. **gastrohepatic l.**, ligamentum hepatogastricum. **gastrolial l.**, ligamentum gastroliale. **gastropneumatic l's of Huschke**, plicae gastropneumaticae. **gastrophrenic l.**, ligamentum gastrophrenicum. **gastrosplenic l.**, ligamentum gastrosplenicum. **genitoinguinal l.**, ligamentum genitoinguinale. **Gerdy's l.**, suspensory l. of axilla. **Gimbernat's l.**, ligamentum lacunare. **l's of girdle of inferior extremity**, ligamenta cinguli extremitatis inferioris. **l's of girdle of superior extremity**, ligamenta cinguli extremitatis superioris. **glenohumeral l's**, ligamenta glenohumeralia. **glenoid l's of Cruveilhier**, ligamenta plantaria articulationum metatarso-phalangearum. **glenoid l. of humerus**, **glenoid l. of Macalister**, labrum glenoidale. **glenoid l. of mandibular fossa**, a ring of fibrocartilage connected with the rim of the mandibular fossa. **Günz's l.**, part of the obturator membrane. **hamatometacarpal l.**, fibers connecting the hamulus of the hamate bone with the base of the fifth metacarpal bone. **l. of head of femur**, ligamentum capitis femoris. **Helmholtz's l.**, that part of the anterior ligament of the malleus which is attached to the greater tympanic spine. **l's of Helvetius**, ligamenta pylori. **Henle's l.**, falx inguinalis. **Hensing's l.**, a small serous fold from the upper end of the descending colon to the abdominal wall. **hepatic l's**, folds of peritoneum extending from the liver to adjacent structures. **hepatocolic l.**, ligamentum hepatocolicum. **hepatocystocolic l.**, a hepatocolic ligament arising from the gallbladder. **hepatoduodenal l.**, ligamentum hepatoduodenale. **hepatogastric l.**, ligamentum hepatogastricum. **hepatogastroduodenal l.**, omentum minus. **hepatorenal l.**, ligamentum hepatorenale. **hepatoumbilical l.**, ligamentum teres hepatis. **Hesselbach's l.**, ligamentum interfoveolare. **Hey's l.**, margo falciformis hiatus sapheneus. **Hueck's l.**, ligamentum pectinatum anguli iridocornealis. **Humphry's l.**, ligamentum meniscofemorale anterius. **Hunter's l.**, ligamentum teres uteri. **Huschke's l's**, plicae gastropneumaticae. **hyaloidocapsular l.**, the tissue connecting the vitreous body to the peripheral zone of the lens capsule. **hyoepiglottic l.**, ligamentum hyoepiglotticum. **iliocostal l.**, ligamentum lumbocostale. **iliofemoral l.**, ligamentum iliofemorale. **iliolumbar l.**, ligamentum iliolumbale. **iliopectineal l.**, arcus iliopectineus. **iliopubic l.**, ligamentum inguinale. **iliosacral l's, anterior**, ligamenta sacroiliaca ventralia. **iliosacral l's, interosseous**, ligamenta sacroiliaca interossea. **iliosacral l., long**, ligamentum sacroiliaca dorsalia. **iliotibial l. of Maissiat**, tractus iliotibialis. **iliotrochanteric l.**, a portion of the articular capsule of the hip joint. **inferior l. of epididymis**, ligamentum epididymidis inferius. **inferior l. of neck of rib**, posterior portion of ligamentum costotransversarium posterius. **inferior l. of neck of rib of Henle**, ligamentum costotransversarium. **inferior l. of tubercle of rib**, ligamentum costotransversarium laterale. **infundibulopelvic l.**, ligamentum suspensorium ovarii. **inguinal l.**, ligamentum inguinale. **inguinal l., anterior**, crus mediale an-

uli inguinalis superficialis. **inguinal l., external**, ligamentum inguinale. **inguinal l., internal**, 1. ligamentum inguinale reflexum. 2. crus mediale anuli inguinalis superficialis. **inguinal l., posterior**, ligamentum interfoveolare. **inguinal l., reflex**, ligamentum inguinale reflexum. **inguinal l. of Blumberg**, ligamentum interfoveolare. **inguinal l. of Cooper**, ligamentum pectineale. **interarticular l.**, any ligament situated within the capsule of a joint. **interarticular l. of articulation of humerus**, caput longum musculi bicipitis brachii. **interarticular l. of head of rib**, ligamentum capitis costae intraarticulare. **interarticular l. of hip joint**, ligamentum capitis femoris. **intercarpal l's, dorsal**, ligamenta intercarpea dorsalia. **intercarpal l's, interosseous**, ligamenta intercarpea interossea. **intercarpal l's, palmar**, ligamenta intercarpea palmaria. **intercarpal l's, volar**, ligamenta intercarpea palmaria. **interclavicular l.**, ligamentum interclaviculare. **intercostal l's, external**, see *membrana intercostalis externa*. **intercostal l's, internal**, see *membrana intercostalis interna*. **intercuneiform l's, dorsal**, ligamenta intercuneiformia dorsalia. **intercuneiform l's, interosseous**, ligamenta intercuneiformia interossea. **intercuneiform l's, plantar**, ligamenta intercuneiformia plantaria. **interfoveolar l.**, ligamentum interfoveolare. **intermaxillary l.**, raphe pterygomandibularis. **intermetacarpal l's, anterior**, **intermetacarpal l's, distal**, see *ligamentum metacarpeum transversum profundum*. **intermetacarpal l's, dorsal**, ligamenta metacarpea dorsalia. **intermetacarpal l's, interosseous**, ligamenta metacarpea interossea. **intermetacarpal l's, palmar**, ligamenta metacarpea palmaria. **intermetacarpal l's, proximal, anterior**, ligamentametacarpea palmaria. **intermetacarpal l's, proximal, posterior**, ligamenta metacarpea dorsalia. **intermetacarpal l's, transverse, dorsal**, ligamenta metacarpea dorsalia. **intermetacarpal l's, transverse, volar**, ligamenta metacarpea palmaria. **intermetatarsal l's, interosseous**, ligamenta metatarsea interossea. **intermetatarsal l's, plantar, distal**, see *ligamentum metatarseum transversum profundum*. **intermetatarsal l's, proximal, dorsal**, ligamenta metatarsea dorsalia. **intermetatarsal l's, proximal, plantar**, ligamenta metatarsea plantaria. **intermetatarsal l's, transverse, dorsal**, ligamenta metatarsea dorsalia. **intermetatarsal l's, transverse, volar**, ligamenta metatarsea palmaria. **intermuscular l., fibular**, septum intermusculare anterius cruris. **intermuscular l. of arm, external**, septum intermusculare brachii laterale. **intermuscular l. of arm, internal**, septum intermusculare brachii mediale. **intermuscular l. of arm, lateral**, septum intermusculare brachii laterale. **intermuscular l. of arm, medial**, septum intermusculare brachii mediale. **intermuscular l. of thigh, external**, septum intermusculare femoris laterale. **intermuscular l. of thigh, lateral**, septum intermusculare femoris laterale. **intermuscular l. of thigh, medial**, septum intermusculare femoris mediale. **internal l. of neck of rib**, ligamentum costotransversarium superius. **interosseous l., radioulnar**, membrana interossea antebrachii. **interosseous l's, transverse metacarpal**, ligamenta metacarpea interossea. **interosseous l's of Barkow**, internal, ligamenta intercuneiformia plantaria. **interosseous l's of bases of metacarpal bones**, ligamenta metacarpea interossea. **interosseous l's of bases of metatarsal bones**, ligamenta metatarsea interossea. **interosseous l. of Cruveilhier**, costovertebral, ligamentum capitis costae intraarticulare. **interosseous l. of Cruveilhier**, transversocostal, ligamentum costotransversarium. **interosseous l's of knee**, ligamenta cruciata genus. **interosseous l. of leg**, membrana interossea cruris. **interosseous l. of pubis**, discus interpubicus. **interosseous l. of pubis (of Winslow)**, ligamentum transversum perinei. **interosseous l's of tarsus**, ligamenta tarsi interossea. **interprocess l.**, a ligament that connects two processes on the same bone. **interpubic l.**, discus interpubicus. **interspinous l.**, ligamentum interspinale. **intertarsal l's, dorsal**, ligamenta tarsi dorsalia. **intertarsal l's, interosseous**, ligamenta tarsi interossea. **intertarsal l's, plantar**, ligamenta tarsi plantaria. **intertransverse l.**, ligamentum intertransversarium. **interureteral l.**, plica interureterica. **intervertebral l.**, 1. either of the two longitudinal ligaments of the vertebrae (ligamentum longitudinale anterius and ligamentum longitudinale posterius). 2. one of the discs intervertebrales. **intraarticular l. of head of rib**, ligamentum capitis costae intraarticulare. **ischiocapsular l.**, **ischiofemoral l.**, ligamentum ischiofemorale. **ischioepitrostatic l.**, diaphragma urogenitale. **ischiosacral l's**, see *ligamentum sacrospinale* and *ligamentum sacrotuberale*. **Krause's l.**, ligamentum transversum perinei. **lacinate l.**, retinaculum musculorum flexorum pedis. **lacinate l., external**, retinaculum musculorum peroneorum superiorum. **lacunar l., lacunar l. of Gimbernat**, ligamentum lacunare. **lambdoid l.**, retinaculum musculorum extensorum pedis inferiorum. **lateral l. of carpus, radial**, ligamentum collaterale carpi radiale. **lateral l. of carpus, ulnar**, ligamentum collaterale carpi ulnare. **lateral l. of colon**, tenia omentalis. **lateral l's of**

joints of fingers, ligamenta collateralia articulationum interphalangearum manus. **lateral l's of joints of toes**, ligamenta collateralia articulationum interphalangearum pedis. **lateral l. of knee**, ligamentum collaterale fibulare. **lateral l's of liver**, see *ligamentum triangulare dextrum hepatis* and *ligamentum triangulare sinistrum hepatis*. **lateral l. of malleus**, ligamentum mallei laterale. **lateral meniscotemorall l.**, ligamentum meniscotemorale posterius. **lateral l's of metacarpophalangeal joints**, ligamenta collateralia articulationum metacarpophalangearum. **lateral l's of metatarsophalangeal joints**, ligamenta collateralia articulationum metatarsophalangearum. **lateral l. of temporomandibular articulation**, ligamentum laterale articulationis temporomandibularis. **lateral l. of temporomandibular joint, external**, ligamentum laterale articulationis temporomandibularis. **lateral l. of temporomandibular joint, internal**, ligamentum sphenomandibulare. **lateral l. of wrist joint, external**, ligamentum collaterale carpi radiale. **lateral l. of wrist joint, internal**, ligamentum collaterale carpi ulnare. **Lauth's l.**, ligamentum transversum atlantis. **l. of left superior vena cava**, plica venae cavae sinistrae. **lienophrenic l.**, ligamentum phrenicolienale. **lienorenal l.**, a fold of peritoneum connecting the spleen and the left kidney. **Lisfranc's l.**, a fibrous band running from the lower external surface of the medial cuneiform bone to the internal surface of the base of the second metatarsal bone. **Lockwood's l.**, the thickened area of contact between Tenon's capsule and the sheaths of the inferior rectus and inferior oblique muscles. **longitudinal l., anterior**, ligamentum longitudinale anterius. **longitudinal l., posterior**, ligamentum longitudinale posterius. **longitudinal l. of abdomen**, linea alba. **lumbocostal l.**, ligamentum lumbocostale. **l's of Luschka**, ligamenta sternopericardica. **Mackenrodt's l.**, plica rectouterina. **l. of Maissiat**, tractus iliotibialis. **Mauchart's l's**, ligamenta alaria. **maxillary l., lateral**, ligamentum laterale articulationis temporomandibularis. **maxillary l., middle**, ligamentum sphenomandibulare. **l. of Mayer**, ligamentum carpi radiatum. **Meckel's l.**, Meckel's band. **medial l.**, ligamentum mediale. **medial l. of elbow joint**, ligamentum collaterale ulnare. **medial l. of wrist**, ligamentum collaterale carpi ulnare. **meniscotemorall l., anterior**, ligamentum meniscotemorale anterius. **meniscotemorall l., posterior**, ligamentum meniscotemorale posterius. **mesocolic l. of colon**, tenia mesocolica. **metacarpal l's**, dorsal, ligamenta metacarpea dorsalia. **metacarpal l's**, interosseous, ligamenta metacarpea interossea. **metacarpal l's, palmar**, ligamenta metacarpea palmaria. **metacarpal l's, transverse, deep**, ligamenta metacarpeum transversum profundum. **metacarpal l., transverse, superficial**, ligamentum metacarpeum transversum superficiale. **metacarpophalangeal l's, anterior**, metacarpophalangeal l's, palmar, ligamenta palmaria. **metatarsal l., anterior**, ligamentum metatarseum transversum profundum. **metatarsal l's, dorsal**, ligamenta metatarsea dorsalia. **metatarsal l's, interosseous**, ligamenta metatarsea interossea. **metatarsal l's, lateral**, ligamenta metacarpea interossea. **metatarsal l's, lateral proper (of Weber)**, metatarsal l's, lateral (of Weitbrecht), ligamenta metatarsea interossea. **metatarsal l's, plantar**, ligamenta metatarsea plantaria. **metatarsal l., plantar, anterior**, ligamentum metatarseum transversum profundum. **metatarsal l., transverse, deep**, ligamentum metatarseum transversum profundum. **metatarsal l., transverse, interosseous**, ligamenta metatarsea interossea. **metatarsal l., transverse, superficial**, ligamentum metatarseum transversum superficiale. **metatarsophalangeal l's, inferior**, ligamenta plantaria articulationum metatarsophalangearum. **metatarsophalangeal l's, plantar**, ligamenta plantaria articulationum metatarsophalangearum. **middle l. of neck of rib**, ligamentum costotransversarium. **mucous l.**, plica synovialis. **l. of nape**, ligamentum nuchae. **navicularicuneiform l's, plantar**, ligamenta cuneonavicularia plantaria. **nephrocolic l.**, fasciculi from the fatty capsule of the kidney passing down on the right side to the posterior wall of the ascending colon and on the left side to the posterior wall of the descending colon. **nuchal l.**, ligamentum nuchae. **oblique l. of Cooper**, oblique l. of forearm, chorda obliqua membranae interossea antebrachii. **oblique l's of knee**, ligamenta cruciata genus. **oblique l. of knee, posterior**, ligamentum popliteum obliquum. **oblique l. of scapula**, ligamentum transversum scapulae superius. **oblique l. of superior radioulnar joint**, chorda obliqua membranae interossea antebrachii. **obturator l., antlatooocipital**, membrana atlantooocipitalis anterior. **obturator l. of atlas**, see *membrana atlantooocipitalis anterior* and *posterior*. **obturator l. of pelvis**, membrana obturatoria. **occipitoaxial l.**, membrana tectoria. **occipitodontoid l's**, ligamenta alaria. **odontoid l., middle**, ligamentum apicis dentis axis. **odontoid l's of axis**, ligamenta alaria. **orbicular l. of radius**, ligamentum anulare radii. **ovarian l.**, ligamentum ovarii proprium. **palmar l's**, 1. ligamenta palmaria. 2. see *aponeurosis palmaris*. **palmar l., transverse, deep**, ligamentum metacarpeum transversum pro-

fundum. **palmar l. of carpus**, ligamentum carpi radiatum. **palmar l. of radiocarpal joint**, ligamentum radiocarpeum palmare. **palpebral l., medial**, ligamentum palpebrale mediale. **patellar l.**, ligamentum patellae. **patellar l., internal**, retinaculum patellae mediale. **patellar l., lateral**, retinaculum patellae laterale. **pectinate l. of iridocorneal angle**, ligamentum pectinatum anguli iridocornealis. **pectineal l.**, ligamentum pectineale. **pelvic l., posterior, great**, ligamentum sacrotuberale. **pelvic l., posterior, short**, ligamentum sacrospinale. **pelvic l., transverse**, ligamentum transversum perinei. **l's of pelvic girdle**, ligamenta cinguli extremitatis inferioris. **pelviprostatic l.**, basal, fascia prostatae. **perineal l., transverse**, ligamentum transversum perinei. **perineal l. of Carcassone**, ligamentum transversum perinei. **periodontal l.**, the connective tissue structure that surrounds the roots of the teeth and holds them in the dental alveoli. See also *periodontium*. **Petit's l.**, uterosacral l. **Pétrequin's l.**, the anterior thickened portion of the temporomaxillary capsule. **petrosphenoid l.**, 1. synchondrosis sphenopetrosa. 2. synchondrosis sphenooocipitalis. **petrosphenoid l., anterior**, synchondrosis sphenopetrosa. **pharyngeal l., pharyngeal l., middle**, raphe pharyngis. **phrenicocolic l.**, ligamentum phrenicocolicum. **phrenocolienal l.**, phrenicosplenic l., ligamentum phrenicolienale. **phrenocolic l.**, ligamentum phrenicocolicum. **pisometacarpal l.**, ligamentum pisometacarpeum. **pisohamate l.**, ligamentum pisohamatum. **pisometacarpal l.**, ligamentum pisometacarpeum. **pisounciform l.**, pisouncinate l., ligamentum pisohamatum. **plantar l's**, ligamenta plantaria articulationum metatarsophalangearum. **plantar l., long**, ligamentum plantare longum. **plantar l's of bases of metatarsal bones**, ligamenta metatarsea plantaria. **plantar l's of little heads of metatarsal bones**, see *ligamentum metacarpeum transversum profundum*. **plantar l. of second metatarsal bone**, see *ligamenta tarsometatarsea plantaria*. **plantar l. of tarsus**, ligamentum tarsi plantaria. **popliteal l., arcuate**, ligamentum popliteum arcuatum. **popliteal l., external**, retinaculum ligamenti arcuati. **popliteal l., oblique**, ligamentum popliteum obliquum. **posterior l. of head of fibula**, ligamentum capitis fibulae posterius. **posterior l. of incus**, ligamentum incudis posterius. **posterior l. of pinna**, ligamentum auriculare posterius. **posterior l. of radiocarpal joint**, ligamentum radiocarpeum dorsale. **Poupart's l.**, ligamentum inguinale. **preurethral l. of Waldeyer**, ligamentum transversum perinei. **prismatic l. of Weitbrecht**, ligamentum capitis femoris. **proper l's of costal cartilages**, see *membrana intercostalis externa*. **pterygomandibular l.**, raphe pterygomandibularis. **pterygomaxillary l.**, raphe pterygomandibularis. **pterygosplinal l.**, ligamentum pterygosplinale. **pubic l., inferior**, 1. ligamentum arcuatum pubis. 2. ligamentum suspensorium ovarii. **pubic l., superior**, ligamentum pubicum superius. **pubic l. of Cowper**, ligamentum inguinale. **pubic l. of Cruveilhier**, anterior, discus interpubicus. **pubocapsular l.**, ligamentum pubofemorale. **pubofemorall l.**, ligamentum pubofemorale. **puboischiadic l. of prostate gland**, fascia diaphragmatis urogenitalis superior. **puboprosthetic l.**, ligamentum puboprostaticum. **puborectal l.**, 1. ligamentum puboprostaticum. 2. ligamentum pubovesicale. **pubovesical l.**, ligamentum pubovesicale. **pulmonary l.**, ligamentum pulmonale. **quadrate l.**, ligamentum quadratum. **radial l., lateral**, ligamentum collaterale carpi radiale. **radial l. of cubitocarpal articulation**, ligamentum collaterale carpi radiale. **radiate l.**, ligamentum capitis costae radiatum. **radiate l., lateral**, ligamentum collaterale carpi ulnare. **radiate l. of carpus**, ligamentum carpi radiatum. **radiate l. of head of rib**, ligamentum capitis costae radiatum. **radiate l. of Mayer**, ligamentum carpi radiatum. **radiocarpal l., anterior**, ligamentum radiocarpeum palmare. **radiocarpal l., dorsal**, ligamentum radiocarpeum dorsale. **radiocarpal l., palmar**, ligamentum radiocarpeum palmare. **radiocarpal l., volar**, ligamentum radiocarpeum palmare. **rectouterine l.**, musculus rectouterinus. **reflex l. of Gimbernat**, ligamentum inguinale reflexum. **reinforcing l's**, ligaments that serve to reinforce joint capsules. **rhomboid l. of clavicle**, ligamentum costoclaviculare. **rhomboid l. of wrist**, ligamentum radiocarpeum dorsale. **ring l. of hip joint**, zona orbicularis articulationis coxae. **Robert's l.**, ligamentum meniscotemorale posterius. **round l. of acetabulum**, ligamentum capitis femoris. **round l. of Cloquet**, ligamentum capitis costae intraarticulare. **round l. of femur**, ligamentum capitis femoris. **round l. of forearm**, chorda obliqua membranae interossea antebrachii. **round l. of uterus**, ligamentum teres uteri. **sacciform l.**, capsula articularis radioulnaris distalis. **sacroccocygeal l., dorsal, deep**, ligamentum sacroccocygeum dorsale profundum. **sacroccocygeal l., dorsal, superficial**, ligamentum sacroccocygeum dorsale superficiale. **sacroccocygeal l., lateral**, ligamentum sacroccocygeum laterale. **sacroccocygeal l., ventral**, ligamentum sacroccocygeum ventrale. **sacroiliac l's, anterior**, ligamenta sacroiliaca ventralia. **sacroiliac l's, dorsal**, ligamenta sacroiliaca dorsalia. **sacroiliac l's,**

interosseous, ligamenta sacroiliaca interossea. **sacroiliac l.**, posterior, long, sacroiliac l., posterior, short, see *ligamenta sacroiliaca dorsalia*. **sacroiliac l.**, ventral, ligamenta sacroiliaca ventralia. **sacrosciatic l.**, anterior, ligamentum sacrospinale. **sacrosciatic l.**, great, ligamentum sacrotuberale. **sacrosciatic l.**, internal, ligamentum sacrospinale. **sacrosciatic l.**, least, ligamentum sacrospinale. **sacrospinal l.**, sacrospinous l., ligamentum sacrospinale. **sacrosubular l.**, sacrotuberous l., ligamentum sacrotuberale. **salpingopharyngeal l.**, plica salpingopharyngea. **Santorini's l.**, ligamentum cricopharyngeum. **Sappey's l.**, the thicker posterior part of the capsule of the temporomandibular joint. **scaphocuneiform l.**, plantar, ligamenta cuneonavicularia plantaria. **l. of Scarpa**, cornu superius marginis falciformis. **Schlemm's l.**, two ligamentous bands strengthening the capsule of the shoulder joint. **scrotal l. of testis**, gubernaculum testis. **serous l.**, ligamentum serosum. **short lateral l.**, a knee ligament attached to the lowest part of the lateral femoral condyle and extending beyond the dorsum of the semilunar cartilage to the apex of the fibula. See also *fabelofibular l.* **short plantar l.**, ligamenta calcaneocuboidum plantare. **l.'s of shoulder girdle**, ligamenta cinguli extremitatis superioris. **sphenoidal l.**, external, ligamentum intercuneiformia plantaria. **sphenoideotarsal l.**, ligamenta tarsometatarsa plantaria. **sphenomandibular l.**, ligamentum sphenomandibulare. **spinoglenoid l.**, ligamentum transversum scapulae inferius. **spinossacral l.**, ligamentum sacrospinale. **spiral l. of cochlea**, ligamentum spirale cochleae. **splenogastric l.**, ligamentum gastrolieinale. **splenophrenic l.**, ligamentum phrenicolenale. **spring l.**, ligamentum calcaneonavicular plantare. **stapedial l.**, 1. anulare stapedis. **stellate l.**, anterior, ligamentum capitis costae radiatum. **sternoclavicular l.**, anterior, ligamentum sternoclaviculare anterius. **sternoclavicular l.**, posterior, ligamentum sternoclaviculare posterius. **sternocostal l.**, ligamenta sternocostalia radiata. **sternocostal l.**, interarticular, **sternocostal l.**, intraarticular, ligamentum sternocostale intraarticular. **sternocostal l.**, radiate, ligamenta sternocostalia radiata. **sternopericardiac l.**, ligamenta sternopericardica. **stylohyoid l.**, ligamentum stylohyoideum. **stylomandibular l.**, **stylomaxillary l.**, **stylomylohyoid l.**, ligamentum stylomandibulare. **subflaval l.**, ligamentum flavum. **subpublic l.**, ligamentum arcuatum pubis. **superficial l. of carpus**, 1. ligamentum radiocarpum dorsale. 2. ligamentum radiocarpum palmare. **superior l. of epididymis**, ligamentum epididymidis superius. **superior l. of hip**, ligamentum iliofemorale. **superior l. of incus**, ligamentum incudis superius. **superior l. of malleus**, ligamentum mallei superius. **superior l. of neck of rib**, anterior, the anterior part of the superior costotransverse ligament. **superior l. of neck of rib**, external, the posterior part of the superior costotransverse ligament. **superior l. of pinna**, ligamentum auriculare superius. **suprascapular l.**, ligamentum transversum scapulae superius. **supraspinal l.**, **supraspinous l.**, ligamentum supraspinale. **suspensory l.**, **marcupial**, plica synovialis infrapatellaris. **suspensory l. of axilla**, a layer ascending from the axillary fascia and ensheathing the pectoralis minor muscle; so called because traction by it, when the arm is abducted, produces the hollow of the armpit. Called also *Campbell's l.* and *Gerdy's l.* **suspensory l. of axis**, ligamentum apicis dentis. **suspensory l. of bladder**, plica umbilicalis mediana. **suspensory l.'s of breast**, ligamenta suspensoria mammae. **suspensory l. of clitoris**, ligamentum suspensorium clitoridis. **suspensory l. of humerus**, ligamentum coracohumerale. **suspensory l. of lens**, zonula ciliaris. **suspensory l. of liver**, ligamentum falciforme hepatis. **suspensory l.'s of mammary gland**, ligamenta suspensoria mammae. **suspensory l. of ovary**, ligamentum suspensorium ovarii. **suspensory l. of penis**, ligamentum suspensorium penis. **suspensory l. of spleen**, ligamentum phrenicolenale. **sutural l.**, a band of fibrous tissue between the opposed bones of a suture or immovable joint. **synovial l.**, a large synovial fold. **synovial l. of hip**, ligamentum capitis femoris. **talocalcaneal l.**, anterior, ligamentum talocalcaneum anterius. **talocalcaneal l.**, interosseous, ligamentum talocalcaneum interosseum. **talocalcaneal l.**, lateral, ligamentum talocalcaneum laterale. **talocalcaneal l.**, medial, ligamentum talocalcaneum mediale. **talocalcaneal l.**, posterior, ligamentum talocalcaneum posterius. **talofibular l.**, anterior, ligamentum talofibulare anterius. **talofibular l.**, posterior, ligamentum talofibulare posterius. **talonavicular l.**, ligamentum talonavicular. **talotibial l.**, anterior, pars tibiotalaris anterior ligamenti medialis. **talotibial l.**, posterior, pars tibiotalaris posterior ligamenti medialis. **tarsal l.**, anterior, retinaculum musculorum extensorum pedis inferius. **tarsometatarsal l.**, dorsal, ligamenta tarsometatarsa dorsalia. **tarsometatarsal l.**, plantar, ligamenta tarsometatarsa plantaria. **temporomandibular l.**, ligamentum laterale articulationis temporomandibularis. **tendinotrochanteric l.**, a portion of the capsule of the hip joint. **tensor l.**, musculus tensor tympani. **Teutleben's l.**, lateral folds joining the

pericardium and diaphragm. **thyroepiglottic l.**, ligamentum thyroepiglotticum. **thyrohyoid l.**, ligamentum thyrohyoideum. **thyrohyoid l.**, median, ligamentum thyrohyoideum medianum. **tibiofibular l.**, syndesmosis tibiofibularis. **tibiofibular l.**, anterior, ligamentum tibiofibulare anterius. **tibiofibular l.**, posterior, ligamentum tibiofibulare posterius. **tibionavicular l.**, pars tibionavicularis ligamenti medialis. **Toynbee's l.**, musculus tensor tympani. **transverse l. of acetabulum**, ligamentum transversum acetabuli. **transverse l. of atlas**, ligamentum transversum atlantis. **transverse l. of carpus**, retinaculum flexorum manus. **transverse l. of knee**, ligamentum transversum genus. **transverse l. of leg**, retinaculum musculorum extensorum pedis superius. **transverse l.'s of little heads of metacarpal bones**, see *ligamentum metacarpeum transversum profundum*. **transverse l.'s of little heads of metatarsal bones**, see *ligamentum metatarsium transversum profundum*. **transverse l. of little head of rib**, ligamentum capitis costae intraarticular. **transverse l. of pelvis**, ligamentum transversum perinei. **transverse l. of scapula**, inferior, ligamentum transversum scapulae inferius. **transverse l. of scapula**, superior, ligamentum transversum scapulae superius. **transverse l. of tibia**, retinaculum musculorum extensorum pedis superius. **transverse l. of wrist**, retinaculum flexorum manus. **transverse l.'s of wrist**, dorsal, ligamenta intercarpea dorsalia. **transverse humeral l.**, a band of fibers bridging the intertubercular groove of the humerus and holding the tendon of the biceps muscle in the groove; called also *Brodie's l.* **transversocostal l.**, superior, ligamentum costotransversarium superius. **trapezoid l.**, ligamentum trapezoideum. **l. of Treitz**, musculus suspensorius duodeni. **triangular l. of abdomen**, ligamentum inguinale reflexum. **triangular l. of Colles**, fascia diaphragmatis urogenitalis superior. **triangular l. of linea alba**, adminiculum lineae albae. **triangular l. of liver**, left, ligamentum triangulare sinistrum hepatis. **triangular l. of liver**, right, ligamentum triangulare dextrum hepatis. **triangular l. of pubis**, anterior, ligamentum arcuatum pubis. **triangular l. of scapula**, ligamentum transversum scapulae inferius. **triangular l. of thigh**, ligamentum inguinale reflexum. **triangular l. of urethra**, ligamentum puboprostaticum. **trigeminate l.'s of Arnold**, ligamenta tarsometatarsa dorsalia. **triquetral l.**, 1. ligamentum cricoarytenoideum posterius. 2. ligamentum coracoacromiale. **triquetral l. of foot**, ligamentum calcaneofibulare. **triquetral l. of scapula**, ligamentum transversum scapulae inferius. **trochlear l.**, ligamentum metacarpeum transversum profundum. **trochlear l.'s of foot**, ligamenta plantaria articulationum metatarsophalangearum. **trochlear l.'s of hand**, ligamenta palmaria. **trochlear l.'s of little heads of metacarpal bones**, see *ligamenta metacarpeum transversum profundum*. **true l. of bladder**, anterior, 1. ligamentum puboprostaticum. 2. ligamentum pubovesicale. **tuberososacral l.**, ligamentum sacrotuberale. **tubopharyngeal l. of Rauber**, plica salpingopharyngea. **Tuffier's inferior l.**, that part of the mesentery which is connected with the wall of the iliac fossa. **ulnar l.**, lateral, **ulnar l. of carpus**, ligamentum collaterale carpi ulnare. **ulnocarpal l.**, palmar, ligamentum ulnocarpum palmare. **umbilical l.**, lateral, ligamentum umbilicale mediale. **umbilical l.**, medial, ligamentum umbilicale mediale. **umbilical l.**, median, **umbilical l.**, middle, ligamentum umbilicale medianum. **utero-ovarian l.**, ligamentum ovarii proprium. **uteropelvic l.'s**, expansions of muscular tissue in the broad ligament of the uterus, radiating from the fascia over the obturator internus to the side of the uterus and the vagina. **uterosacral l.**, a part of the thickening of the visceral pelvic fascia beside the cervix and vagina, passing posteriorly in the rectouterine fold to attach to the front of the sacrum; called also *Petit's l.* **vaginal l.**, ligamentum vaginale. **vaginal l.'s of fingers**, vaginae fibrosae digitorum manus. **vaginal l.'s of toes**, vaginae fibrosae digitorum pedis. **l. of vaginal sheaths**, ligamentum vaginale. **l.'s of vaginal sheaths of fingers**, vaginae fibrosae digitorum manus. **l.'s of vaginal sheaths of toes**, vaginae fibrosae digitorum pedis. **l.'s of Valsalva**, ligamenta auricularia. **venous l. of liver**, ligamentum venosum. **ventricular l. of larynx**, ligamentum vestibulare. **vertebropleural l.**, membrana suprapleuralis. **l. of Vesalius**, ligamentum inguinale. **vesical l.**, lateral, ligamentum umbilicale mediale. **vesicopubic l.**, ligamentum pubovesicale. **vesicumbilical l.**, ligamentum umbilicale mediale. **vesicouterine l.**, a ligament that extends from the anterior aspect of the uterus to the bladder. **vestibular l.**, ligamentum vestibulare. **vocal l.**, ligamentum vocale. **volar l.'s of bases of metacarpal bones**, ligamenta metacarpea palmaria. **volar l. of carpus**, proper, retinaculum flexorum manus. **volar l.'s of carpus**, **transverse**, **deep**, ligamenta metacarpea palmaria. **volar l.'s of little heads of metacarpal bones**, see *ligamentum metacarpeum transversum profundum*. **volar l. of wrist**, anterior, retinaculum flexorum manus. **Walther's oblique l.**, ligamentum talofibulare posterius. **Weitbrecht's l.**, chorda obliqua membranae interossea antebrachii. **Winslow's l.**, ligamentum popliteum

obliquum. **Wrisberg's l.**, ligamentum meniscofemorale posterius. **xiphicostal l's of Macalister**, xiphoid l's, ligamenta costoxiphoidea. **Y l.**, ligamentum iliofemorale. **yellow l.**, ligamentum flavum. **Zinn's l.**, anulus tendineus communis. **zonal l. of thigh**, zona orbicularis articulationis coxae.

ligamenta (lig'ah-men'tah) [L.] plural of *ligamentum*; and see *Table of Ligamenta*.

ligamentopexis (lig'ah-men'to-pek'sis) [*ligament* + Gr. *pēxis* fixation] ligamentopexy.

TABLE OF LIGAMENTA

Descriptions are given on NA terms, and include anglicized names of specific ligaments.

ligamen'ta accesso'ria planta'ria, ligamenta plantaria articulationum metatarsophalangearum.

ligamen'ta accesso'ria vola'ria, ligamenta palmaria.

l. acromioclavicula're [NA], acromioclavicular ligament: a dense band that joins the superior surface of the acromion and the acromial extremity of the clavicle together, and strengthens the superior part of the articular capsule.

ligamen'ta ala'ria [NA], alar ligaments: two strong bands that pass from the posterolateral part of the tip of the dens of the axis upward and laterally to the condyles of the occipital bone; they limit rotation of the head.

l. annula're ba'seos stape'dis, l. anulare stapedis.

ligamen'ta annula'ria digito'rum ma'nus, see *pars anularis vaginae fibrosae digitorum manus*.

ligamen'ta annula'ria digito'rum pe'dis, see *pars anularis vaginae fibrosae digitorum pedis*.

l. annula're ra'dii, l. anulare radii.

ligamen'ta annula'ria [trachea'lia], ligamenta anularia trachealia.

l. anococcyg'eum [NA], anococcygeal ligament: a fibrous band connecting the posterior fibers of the sphincter of the anus to the coccyx.

l. anula're ra'dii [NA], annular ligament of radius: a strong fibrous band that encircles the head of the radius and holds it in position; it is attached to the anterior and posterior margins of the radial notch of the ulna, forming, with the notch, a complete ring. Called also *l. anulare radii*.

l. anula're stape'dis [NA], annular ligament of stapes: a ring of fibrous tissue that attaches the base of the stapes to the fenestra vestibuli of the inner ear; called also *l. anulare baseos stapedis*.

ligamen'ta anula'ria trachea'lia [NA], tracheal annular ligaments: circular horizontal ligaments that join the tracheal cartilages together; called also *ligamenta annularia* [trachealia] and *tracheal annular ligaments*.

l. a'p'icis den'tis ax'is [NA], apical dental ligament: a cord of tissue extending from the tip of the dens of the axis to the occipital bone, near the anterior margin of the foramen magnum; it is usually delicate, but is sometimes well developed. Called also *l. apicis dentis epistrophei*.

l. a'p'icis den'tis epistro'phei, l. apicis dentis axis.

l. arcua'tum latera'le [NA], lateral arcuate ligament: the ligamentous arch, formed by the fascia of the quadratus lumborum muscle, constituting part of the lumbar portion of the diaphragm; called also *arcus lumbocostalis lateralis* [Halleri].

l. arcua'tum media'le [NA], medial arcuate ligament: the ligamentous arch, formed by the fascia of the psoas muscle, constituting part of the lumbar portion of the diaphragm; called also *arcus lumbocostalis medialis* [Halleri].

l. arcua'tum media'num [NA], median arcuate ligament: the ligamentous arch across the front of the aorta, interconnecting the crura of the diaphragm; called also *median arcuate ligament*.

l. arcua'tum pu'bis [NA], arcuate ligament of pubis: a thick archlike band of fibers situated along the inferior margin of the symphysis pubis. Its fibers are attached to the medial borders of the inferior rami of the pubic bones and thus it rounds out and forms the summit of the pubic arch. Called also *inferior pubic ligament*.

l. arterio'sum [NA], a short, thick, strong fibromuscular cord extending from the pulmonary artery to the arch of the aorta; it is the remains of the ductus arteriosus. Called also *l. arteriosum arteriae pulmonalis* and *ligament of Botallo*.

l. arterio'sum arte'riae pulmona'lis, l. arteriosum.

ligamen'ta auricula'ria [NA], ligaments of auricle: the three ligaments, anterior, superior, and posterior, that help attach the auricle to the side of the head; called also *ligaments of Valsalva*.

ligamen'ta auricula'ria [Valsal'vae], ligamenta auricularia.

l. auricula're ante'rius [NA], anterior auricular ligament: the auricular ligament that passes from the helix and tragus to the zygoma.

l. auricula're ante'rius [Valsal'vae], l. auriculare anterius.

l. auricula're poste'rius [NA], posterior auricular ligament: the auricular ligament that passes from the eminence of the concha to the mastoid part of the temporal bone.

ligamentopexy (lig'ah-men'to-pek'se) ventrosuspension by shortening or suturing the round ligaments of the uterus.

ligamentous (lig'ah-men'tus) pertaining to or of the nature of a ligament.

ligamentum (lig'ah-men'tum), pl. *ligamen'ta* [L. "a bandage," from *ligare* to bind] [NA] a ligament: a band of tissue that connects bones or supports viscera. Some ligaments are distinct fibrous structures; some are folds of fascia or of indurated peritoneum; still others are relics of fetal organs. For names of specific structures, see *Table of Ligamenta*.

l. auricula're poste'rius [Valsal'vae], l. auriculare posterius.

l. auricula're supe'rius [NA], superior auricular ligament: the auricular ligament that passes from the spine of the helix to the superior margin of the bony external acoustic meatus.

l. auricula're supe'rius [Valsal'vae], l. auriculare superius.

ligamen'ta ba'sium [os'sium metacarpa'lium] dor-sa'lia, ligamenta metacarpea dorsalia.

ligamenta ba'sium [os'sium metacarpa'lium] in-teros'sea, ligamenta metacarpea interossea.

ligamen'ta ba'sium [os'sium metacarpa'lium] vo-la'ria, ligamenta metacarpea palmaria.

ligamen'ta ba'sium [os'sium metatarsa'lium] dor-sa'lia, ligamenta metatarsae dorsalia.

ligamen'ta ba'sium [os'sium metatarsa'lium] in-teros'sea, ligamenta metatarsae interossea.

ligamen'ta ba'sium [os'sium metatarsa'lium] plan-ta'ria, ligamenta metatarsae plantaria.

l. bifurca'tum [NA], bifurcate ligament: a Y-shaped ligament on the dorsum of the foot, comprising the calcaneonavicular and calcaneocuboid ligaments.

l. calcaneocuboi'deum [NA], calcaneocuboid ligament: the band of fibers connecting the superior surface of the calcaneus and the dorsal surface of the cuboid bone; called also *pars calcaneocuboidae ligamenti bifurcati*.

l. calcaneocuboi'deum planta're [NA], plantar calcaneocuboid ligament: a short, wide, strong band connecting the plantar surfaces of the calcaneus and the cuboid bone; called also *short plantar ligament*.

l. calcaneofibula're [NA], calcaneofibular ligament: a band of fibers arising from the lateral surface of the lateral malleolus of the fibula just anterior to the apex and passing inferiorly and posteriorly to be attached to the lateral surface of the calcaneus.

l. calcaneonavicular'e [NA], calcaneonavicular ligament: the band of fibers connecting the superior surface of the calcaneus and the lateral surface of the navicular bone; called also *pars calcaneonavicularis ligamenti bifurcati*.

l. calcaneonavicular'e dorsa'le, dorsal calcaneonavicular ligament: the dorsal portion of the calcaneonavicular part of the bifurcate ligament, connecting the dorsal surfaces of the calcaneus and the navicular bone.

l. calcaneonavicular'e planta're [NA], plantar calcaneonavicular ligament: a broad, thick band passing from the anterior margin of the sustentaculum tali to the plantar surface of the navicular bone; it bears on its deep surface a fibrocartilage that helps to support the head of the talus.

l. calcaneotibia'le, pars tibiocalcanea ligamenti medialis.

l. cap'itis cos'tae intraarticula're [NA], interarticular ligament of head of rib: a horizontal band of fibers attached to the crest separating the two articular facets on the head of the rib, and to the intervertebral disk, thus dividing the joint of the head of the rib into two cavities. It is lacking in the joints of the first, tenth, eleventh, and twelfth ribs. Called also *l. capituli costae interarticulare*.

l. cap'itis cos'tae radia'tum [NA], radiate ligament of head of rib: fibers that from their attachment on the ventral surface of the head of a rib radiate medially, in a fanlike manner, to attach to the two adjacent vertebrae and to the intervertebral disk between them; called also *l. capituli costae radiatum*.

l. cap'itis fem'oris [NA], ligament of head of femur: a curved triangular or V-shaped fibrous band, attached by its apex to the anterosuperior part of the fovea of the head of the femur and by its base to the sides of the acetabular notch and the intervening transverse ligament of the acetabulum. Called also *l. teres femoris* and *round ligament of femur*.

l. cap'itis fib'ulae ante'rius [NA], anterior ligament of head of fibula: a band of fibers that passes obliquely superiorly from the anterior part of the head of the fibula to the lateral condyle of the tibia.

l. cap'itis fib'ulae poste'rius [NA], posterior ligament of head of fibula: a band of fibers that passes obliquely superiorly from

TABLE OF LIGAMENTA (Continued)

the posterior part of the head of the fibula to the lateral condyle of the tibia.

l. capituli costae interarticularis, *l. capitis costae intra-articularis*.

l. capituli costae radiatum, *l. capitis costae radiatum*.

ligamentum capituli fibulae, see *l. capitis fibulae anterioris* and *l. capitis fibulae posterioris*.

ligamentum capitulum [os] sium metacarpalium *transversum*, see *l. metacarpeum transversum profundum*.

ligamentum capitulum [os] sium metatarsalium *transversum*, see *l. metatarsale transversum profundum*.

l. carpi radiale, *retinaculum extensorum manus*.

l. carpi radiale [NA], radiate carpal ligament: a group of about seven fibrous bands which diverge in all directions on the palmar surface of the mediocarpal joint; the majority radiate from the capitate to the scaphoid, lunate, and triquetral bones.

l. carpi transversum, *retinaculum flexorum manus*.

l. carpi volare, transverse reinforcing fibers in the antebrachial fascia over the palmar surface of the wrist.

ligamentum carpometacarpeum dorsale [NA], dorsal carpometacarpal ligaments: a series of bands on the dorsal surface of the carpometacarpal articulations, joining the carpal bones to the bases of the second to fifth metacarpals. The second metacarpal bone is thus joined to the trapezium, trapezoid, and capitate, the third to the capitate, the fourth to the capitate and hamate, and the fifth to the hamate.

ligamentum carpometacarpeum palmaria [NA], palmar carpometacarpal ligaments: a series of bands on the palmar surface of the carpometacarpal articulations, joining the carpal bones to the second to fifth metacarpals. The second metacarpal bone is thus joined to the trapezium, the third to the trapezium, capitate, and hamate, the fourth to the hamate, and the fifth to the hamate. Called also *ligamenta carpometacarpea volaria* and *volar carpometacarpal ligaments*.

ligamentum carpometacarpeum volare, *ligamenta carpometacarpea palmaria*.

l. caudale integumentum communitis, *retinaculum caudale*.

l. ceratocricoidae anterius, a fibrous band that extends from the inferior surface of the tip of the inferior cornu of the thyroid cartilage forward and downward and is attached to the side of the arch of the cricoid cartilage.

ligamentum ceratocricoidae laterale, fibrous bands that extend downward and back from the tip of the inferior cornu of the thyroid cartilage and are attached to the lower, lateral, outer surface of the lamina of the cricoid cartilage.

ligamentum ceratocricoidae posterius, fibrous bands that extend from the posterior surface of the inferior cornu of the thyroid cartilage near its tip upward, backward, and medially, and are attached to the superior lateral margin of the lamina of the cricoid cartilage.

ligamentum cinguli extremitatis inferioris, ligaments of the pelvic girdle, including (intrinsic) the iliolumbar, sacrotuberous, and sacrospinous ligaments and the superior and arcuate ligaments of the symphysis pubis, and (extrinsic) those of the sacroiliac and hip joints.

ligamentum cinguli extremitatis superioris, ligaments of the shoulder girdle, including (intrinsic) the coracoacromial and the inferior and superior transverse scapular ligaments and (extrinsic) those of the sternoclavicular articulation.

ligamentum collaterale articulationum digitorum manus, *ligamenta collateralia articulationum interphalangearum manus*.

ligamentum collaterale articulationum digitorum pedis, *ligamenta collateralia articulationum interphalangearum pedis*.

ligamentum collaterale articulationum interphalangearum manus [NA], collateral ligaments of interphalangeal articulations of hand: massive fibrous bands on each side of the interphalangeal joints of the fingers; they are placed diagonally, the proximal ends being near the dorsal, and the distal ends near the palmar margins of the digits. Called also *ligamenta collateralia articulationum digitorum manus*.

ligamentum collaterale articulationum interphalangearum pedis [NA], collateral ligaments of interphalangeal articulations of foot: fibrous bands, one on either side of each of the interphalangeal joints of the toes; Called also *ligamenta collateralia articulationum digitorum pedis*.

ligamentum collaterale articulationum metacarpophalangearum [NA], collateral ligaments of metacarpophalangeal articulations: massive, strong fibrous bands on either side of each metacarpophalangeal joint, holding the two bones involved in each joint firmly together.

ligamentum collaterale articulationum metatarsophalangearum [NA], collateral ligaments of metatarsophalangeal articulations: strong fibrous bands on either side of each metatarsophalangeal joint, holding the two bones involved in each joint firmly together.

l. collaterale carpi radiale [NA], radial carpal collateral ligament: a short, thick band that passes from the tip of the styloid process of the radius to attach to the scaphoid bone.

l. collaterale carpi ulnare [NA], ulnar carpal collateral ligament: a strong fibrous band that passes from the tip of the styloid

process of the ulna and is attached to the triquetral and pisiform bones.

l. collaterale fibulae [NA], collateral fibular ligament: a strong, round fibrous cord on the lateral side of the knee joint, entirely independent of the capsule of the knee joint; it is attached superiorly to the posterior part of the lateral epicondyle of the femur and inferiorly to the lateral side of the head of the fibula just in front of the styloid process.

l. collaterale radiale [NA], collateral radial ligament: a large bundle of fibers arising from the lateral epicondyle of the humerus and fanning out to be attached to the lateral side of the annular ligament of the radius.

l. collaterale tibiae [NA], collateral tibial ligament: a broad, flat, longitudinal band on the medial side of the knee joint; it is attached superiorly to the medial epicondyle of the femur, inferiorly to the medial surface of the body of the tibia, and in between to the medial meniscus.

l. collaterale ulnae [NA], collateral ulnar ligament: a triangular bundle of fibers attached proximally to the medial epicondyle of the humerus, distally to the coronoid process of the ulna and the medial surface of the olecranon, and to a ridge running between the two.

l. colli costae, *l. costotransversarium*.

ligamentum columnae vertebrae et cranii, ligaments of the vertebral column and cranium.

l. conoideum [NA], conoid ligament: the conical, posteromedial portion of the coracoclavicular ligament, attached inferiorly by its tip to the base of the coracoid process of the scapula and superiorly by its base to the inferior surface of the clavicle.

l. coracoacromiale [NA], coracoacromial ligament: one of three intrinsic ligaments of the scapula, a strong broad triangular band that is attached by its base to the lateral border of the coracoid process and by its tip to the summit of the acromion just in front of the articular facet for the clavicle.

l. coracoclaviculare [NA], coracoclavicular ligament: a strong band that joins the coracoid process of the scapula and the acromial extremity of the clavicle; it is divided into two parts, the trapezoid and conoid ligaments.

l. coracohumerales [NA], coracohumeral ligament: a broad band that arises from the lateral border of the coracoid process of the scapula and passes downward and laterally to be attached to the major tubercle of the humerus.

l. corona hepatis [NA], coronary ligament of the liver: the line of reflection of the peritoneum from the diaphragmatic surface of the liver to the under surface of the diaphragm.

l. costoclaviculare [NA], costoclavicular ligament: a short, powerful ligament that extends from the superior margin of the first costal cartilage to the inferior surface at the sternal end of the clavicle.

l. costotransversarium [NA], costotransverse ligament: short fibers that connect the dorsal surface of the neck of a rib with the anterior surface of the transverse process of the corresponding vertebra; called also *l. colli costae*.

l. costotransversarium anterius, anterior portion of ligamentum costotransversarium superius.

l. costotransversarium laterale [NA], lateral costotransverse ligament: a fibrous band that passes transversely from the posterior surface of the tip of a transverse process of a vertebra to the nonarticular part of the tubercle of the corresponding rib; called also *l. tuberculi costae*.

l. costotransversarium posterius, posterior portion of ligamentum costotransversarium superius.

l. costotransversarium superius [NA], superior costotransverse ligament: a strong band of fibers ascending from the crest of the neck of a rib to the transverse process of the vertebra above; it may be divided into a stronger anterior portion and a weaker posterior portion. It is lacking for the first rib.

ligamentum costoxiphoidae [NA], costoxiphoid ligaments: inconstant strandlike bands that pass obliquely from the anterior surface of the seventh and sometimes from the sixth costal cartilage to the anterior surface of the xiphoid process of the sternum. Some bands may also be present on the posterior surface.

l. cricoarytenoideum posterius [NA], posterior cricoarytenoid cartilage: the ligament extending from the lamina of the cricoid cartilage to the medial surface of the base and muscular process of the arytenoid cartilage.

l. cricopharyngeum [NA], cricopharyngeal ligament: a ligament extending from the cricoid lamina to the midline of the pharynx.

l. cricothyreoideum [medium], *l. cricothyroideum*.

l. cricothyroideum [NA], cricothyroid ligament: a flat band of white fibrous tissue extending from the inferior thyroid notch down to the arch of the cricoid cartilage, thus forming the conus elasticus; called also *l. cricothyroideum [medium]*.

l. cricotracheale [NA], cricotracheal ligament: a narrow fibrous ring that connects the lower margin of the cricoid cartilage with the upper tracheal cartilage; it is continuous posteriorly with the membranous wall of the trachea.

l. cruciatum anterius genus, *l. cruciatum anterius genus*.

l. cruciatum anterius genus [NA], anterior cruciate ligament of knee: a strong band that arises from the posteromedial portion of the lateral condyle of the femur, passes anteriorly and

inferiorly between the condyles, and is attached to the depression in front of the intercondylar eminence of the tibia. Called also *l. cruciatum anterius genu*.

1. crucia'tum atan'tis, *l. cruciforme atlantis*.

1. crucia'tum cru'ris, *retinaculum musculorum extensorum pedis inferius*.

ligamen'ta crucia'ta digito'rum ma'nus, see *pars cruciformis vaginae fibrosae digitorum manus*.

ligamen'ta crucia'ta digito'rum pe'dis, see *pars cruciformis vaginae fibrosae digitorum pedis*.

ligamen'ta crucia'ta ge'nu, *ligamenta cruciata genu*.

ligamen'ta crucia'ta ge'nus [NA], cruciate ligaments of knee: strong, thick bundles situated in the knee joint between the condyles of the femur, which together form a somewhat cross-shaped structure; called also *ligamenta cruciata genu*. See *l. cruciatum anterius genu* and *l. cruciatum posterius genu*.

1. crucia'tum poste'rius ge'nu, *cruciatum posterius genu*.

1. crucia'tum poste'rius ge'nus [NA], posterior cruciate ligament of knee: a strong band that arises from the anterolateral surface of the medial condyle of the femur, passes posteriorly and inferiorly between the condyles, and is inserted into the posterior intercondylar area of the tibia. Called also *l. cruciatum posterius genu*.

1. crucifor'me atan'tis [NA], cruciform ligament of atlas: a ligament in the form of a cross, of which the transverse ligament of the atlas forms the horizontal bar, and the longitudinal fascicles the vertical bar of the cross; called also *l. cruciatum atlantis*.

1. cuboideonavicu'la're dorsa'le [NA], dorsal cuboideonavicular ligament: a fibrous bundle connecting the dorsal surfaces of the cuboid and navicular bones.

1. cuboideonavicu'la're planta're [NA], plantar cuboideonavicular ligament: a fibrous band connecting the plantar surfaces of the cuboid and navicular bones.

1. cuneocubo'i'deum dorsa'le [NA], dorsal cuneocuboid ligament: fibers connecting the dorsal surfaces of the cuboid and lateral cuneiform bones.

1. cuneocubo'i'deum interos'seum [NA], interosseous cuneocuboid ligament: fibers connecting the central portions of the adjacent surfaces of the cuboid and lateral cuneiform bones, between the articular surfaces.

1. cuneocubo'i'deum planta're [NA], plantar cuneocuboid ligament: a band of fibers connecting the plantar surfaces of the cuboid and lateral cuneiform bones.

ligamen'ta cuneometatar'sea interos'sea [NA], interosseous cuneometatarsal ligaments: fibrous bands that join the adjacent surfaces of the cuneiform and the metatarsal bones.

ligamen'ta cuneonavicu'la'ria dorsa'lia [NA], dorsal cuneonavicular ligaments: bands that join the dorsal surface of the navicular bone to the dorsal surfaces of the three cuneiform bones; called also *ligamenta navicularicuneiformia dorsalia*.

ligamen'ta cuneonavicu'la'ria planta'ria [NA], plantar cuneonavicular ligaments: bands that join the plantar surface of the navicular bone to the adjacent plantar surfaces of the three cuneiform bones; called also *ligamenta navicularicuneiformia plantaria*.

1. deltoi'deum, NA alternative for *l. mediale*.

1. denticula'tum [NA], denticulate ligament: a fold of pia mater of the spinal cord, beginning in a longitudinal line along the spinal cord between the lines of attachment of the anterior and posterior roots. The lateral edge is scalloped and has about 21 pointed processes that extend laterally and fuse with the arachnoid and dura mater. Called also *dentate ligament of spinal cord*.

1. duodenorena'le, duodenorenal ligament: a fold of peritoneum that passes from the duodenum to the right kidney.

1. epididym'idis infe'rius [NA], inferior ligament of epididymis: a strand of fibrous tissue, covered with a reflection of the tunica vaginalis, which connects the lower end of the body of the epididymis with the testis.

1. epididym'idis supe'rius [NA], superior ligament of epididymis: a strand of fibrous tissue, covered with a reflection of the tunica vaginalis, which connects the upper end of the body of the epididymis with the testis.

ligamen'ta extracapsula'ria [NA], ligaments of a joint capsule that are outside the capsule.

1. falcifor'me hep'atis [NA], falciform ligament of the liver: a sickle-shaped sagittal fold of peritoneum that helps to attach the liver to the diaphragm, separates the right and left lobes of the liver, and extends from the coronary ligament of the liver behind to the umbilicus in front; called also *broad ligament of liver*.

ligamen'ta fla'va, plural of *l. flavum*.

1. fla'vum [NA], any of a series of bands of yellow elastic tissue attached to and extending between the ventral portions of the laminae of two adjacent vertebrae, from the junction of the axis and the third cervical vertebra to the junction of the fifth lumbar vertebra and the sacrum. They assist in maintaining or regaining the erect position and serve to close in the spaces between the arches. Called also *arcuate, flaval, or yellow ligament*.

1. fundifor'me pe'nis [NA], fundiform ligament of penis: a broad elastic band of fascial fibers that arises from the linea alba and from the fibrae intercrurales just above the symphysis pubis and then passes down to the penis, where it divides and passes around the penis and on into the scrotum.

1. gastrocol'icum [NA], gastrocolic ligament: a peritoneal fold, part of the greater omentum, that extends from the greater curvature of the stomach to the transverse colon.

1. gastroliena'le [NA], gastrosplenic ligament: a peritoneal fold extending from the greater curvature of the stomach to the hilus of the spleen and containing blood vessels, nerves, and lymph nodes.

1. gastrophren'icum [NA], gastrophrenic ligament: a fold of peritoneum continuous with the gastrosplenic ligament, extending from right under surface of the diaphragm to the cardiac part of the stomach.

1. genitoinguina'le [NA], genitoinguinal ligament: the embryonic precursor of the gubernaculum testis.

ligamen'ta glenohumera'lia [NA], glenohumeral ligaments: bands, usually three in number, on the inner surface of the articular capsule of the humerus, attached to the margin of the glenoid cavity and to the anatomical neck of the humerus.

1. hepatocol'icum [NA], hepatocolic ligament: an occasional fold of peritoneum, an extension of the lesser omentum to the right, passing from the lower surface of the liver near the gallbladder to the right colic flexure.

1. hepatoduodena'le [NA], hepatoduodenal ligament: a peritoneal fold that passes from the porta hepatis to the superior portion of the duodenum. It is continuous on the left with the gastrophrenic ligament, and on the right it forms one of the borders of the epiploic foramen. It contains the hepatic artery, portal vein, bile duct, nerves, and lymphatics.

1. hepatogas'tricum [NA], hepatogastric ligament: a peritoneal fold, part of the lesser omentum, that passes from the under surface of the liver to the lesser curvature of the stomach.

1. hepatorena'le [NA], hepatorenal ligament: a fold of peritoneum that passes from the back part of the lower surface of the liver to the front of the right kidney and forms the right margin of the epiploic foramen.

1. hyoepiglott'icum [NA], hyoepiglottic ligament: a triangular elastic band with its base attached to the upper border of the body of the hyoid bone and its tip to the anterosuperior surface of the epiglottis.

1. hyothyreo'i'deum latera'le, *l. thyrohyoideum*.

1. hyothyreo'i'deum me'dium, *l. thyrohyoideum medianum*.

1. iliofemora'le [NA], iliofemoral ligament: a very strong triangular or inverted Y-shaped band that covers the anterior and superior portions of the hip joint. It arises by its apex from the lower part of the anterior inferior iliac spine and is inserted by its base into the intertrochanteric line of the femur.

1. iliolumba'le [NA], iliolumbar ligament: a strong band that passes from the transverse processes of the fourth and fifth lumbar vertebrae to the internal lip of the adjacent portion of the iliac crest.

1. incu'dis poste'rius [NA], posterior ligament of incus: a fibrous band by which the cartilaginous tip of the short crus of the incus is fixed to the fossa incudis.

1. incu'dis supe'rius [NA], superior ligament of incus: a fibrous band that passes from the body of the incus to the roof of the tympanic cavity just back of the superior ligament of the malleus.

1. inguina'le [NA], inguinal ligament: a fibrous band running from the anterior superior spine of the ilium to the spine of the pubis.

1. inguina'le [Poupar'ti], *l. inguinale*.

1. inguina'le reflex'um [NA], reflex inguinal ligament: a triangular band of fibers arising from the lacunar ligament and the pubic bone and passing diagonally upward and medially behind the superficial abdominal ring and in front of the inguinal aponeurotic falx to the linea alba.

1. inguina'le reflex'um [Colle'si], *l. inguinale reflexum*.

ligamen'ta intercar'pea dorsa'lia [NA], dorsal intercarpal ligaments: several bands that extend transversely across the dorsal surfaces of the carpal bones, connecting various ones together.

ligamen'ta intercar'pea interos'sea [NA], interosseous intercarpal ligaments: short fibrous bands that join the adjacent surfaces of the various carpal bones.

ligamen'ta intercar'pea palma'ria [NA], palmar intercarpal ligaments: several bands that extend transversely across the palmar surfaces of the carpal bones, connecting various ones together; called also *ligamenta intercarpea volaria* and *volar intercarpal ligaments*.

ligamen'ta intercar'pea vola'ria, *ligamenta intercarpea palmaria*.

1. interclavicula're [NA], interclavicular ligament: a flattened band that passes from the superior surface of the sternal end of one clavicle across the superior margin of the sternum to the same position on the other clavicle.

ligamen'ta intercosta'lia, see *membrana intercostalis externa* and *membrana intercostalis interna*.

ligamen'ta intercosta'lia exter'na, see *membrana intercostalis externa*.

ligamen'ta intercosta'lia inter'na, see *membrana intercostalis interna*.

ligamen'ta intercuneifor'mia dorsa'lia [NA], dorsal intercuneiform ligaments: fibrous bands connecting the dorsal surfaces of the three cuneiform bones.

ligamen'ta intercuneifor'mia interos'sea [NA], interosseous intercuneiform ligaments: short fibrous bands that join the adjacent surfaces of the medial and intermediate, and the intermediate and lateral, cuneiform bones.

ligamen'ta intercuneifor'mia planta'ria [NA], plantar intercuneiform ligaments: fibrous bands that join the plantar surfaces of the cuneiform bones.

1. interfoveola're [NA], interfoveolar ligament: a thickening in the transversalis fascia on the medial side of the deep inguinal ring; it is connected above to the transversus muscle and below to the inguinal ligament.

1. interfoveola're [Hesselba'chi], 1. interfoveolare.

1. interspina'le [NA], interspinal ligament: any of several fine fibrous membranes that extend from one vertebral spinous process to the next. They extend obliquely from the yellow ligaments ventrally to the supraspinous ligament dorsally, and contain white fibrous and yellow elastic tissue. They are poorly developed or lacking in the cervical region.

ligamen'ta interspina'lia, see *1. interspinalis*.

ligamen'ta intertransversa'ria, see *1. intertransversarium*.

1. intertransversa'rium [NA], intertransverse ligament: any of several poorly developed fibrous bands that extend from one vertebral transverse process to the next. They consist of fine membranes in the lumbar region and of small cords in the thoracic region, and are lacking in the cervical region.

ligamen'ta intracapsula'ria [NA], ligaments within a joint capsule.

1. ischiocapsula're, 1. ischiofemorale.

1. ischiofemorale [NA], ischiofemoral ligament: a broad triangular band on the posterior surface of the hip joint. Its base is attached to the ischium posterior and inferior to the acetabulum; its fibers pass superiorly, laterally, and anteriorly across the capsule, bend over the neck, and in part are inserted into the inner side of the trochanteric fossa of the femur and in part blend into the zona orbicularis. Called also *1. ischiocapsulare* and *ischiocapsular ligament*.

1. lacinia'tum, retinaculum musculorum flexorum pedis.

1. lacuna're [NA], lacunar ligament: a small triangular membrane with its base just medial to the femoral ring; one side is attached to the inguinal ligament and the other to the pectineal line of the pubis.

1. lacuna're [Gimberna'ti], 1. lacunare.

1. latera'le articulatio'nis temporomandibula'ris [NA], lateral ligament of temporomandibular articulation: a strong triangular fibrous band that is attached superiorly by its base to the zygomatic process of the temporal bone, passes down on the lateral side of the joint in contact with the capsule, and is inserted by its apex into the lateral and posterior surfaces of the neck of the condyloid process of the mandible. Called also *1. temporomandibulare* and *temporomandibular ligament*.

1. la'tum u'teri [NA], broad ligament of uterus: a broad fold of peritoneum extending from the side of the uterus to the wall of the pelvis; it is divided into the mesometrium, mesosalpinx, and mesovarium.

1. lienorena'le, NA alternative for *1. phrenicolienale*.

1. longitudina'le ante'rius [NA], anterior longitudinal ligament: a single long, fibrous band in the midline, attached to the ventral surfaces of the bodies of the vertebrae; it extends from the occipital bone and the anterior tubercle of the atlas down to the sacrum.

1. longitudina'le poste'rius [NA], posterior longitudinal ligament: a single mid-line fibrous band attached to the dorsal surfaces of the bodies of the vertebrae, extending from the occipital bone to the coccyx.

1. lumbocosta'le [NA], lumbocostal ligament: a strong fascial band that passes from the twelfth rib to the tips of the transverse processes of the first and second lumbar vertebrae.

1. mal'lei ante'rius [NA], anterior ligament of malleus: a fibrous band that extends from the neck of the malleus just above the anterior process to the anterior wall of the tympanic cavity close to the petrotympanic fissure. Some of the fibers pass through the fissure to the spina angularis of the sphenoid bone.

1. mal'lei latera'le [NA], lateral ligament of malleus: a triangular fibrous band that passes from the posterior portion of the incisura tympanica to the head or neck of the malleus.

1. mal'lei supe'rius [NA], superior ligament of malleus: a delicate fibrous strand passing from the roof of the tympanic cavity to the head of the malleus.

1. malle'oli latera'lis ante'rius, 1. tibiofibulare anterius.

1. malle'oli latera'lis poste'rius, 1. tibiofibulare posterius.

1. media'le [NA], medial ligament: a large fan-shaped ligament on the medial side of the ankle, passing from the medial malleolus of the tibia down onto the tarsal bones. It comprises four parts: pars tibionavicularis, pars tibiocalcaneal, pars tibiotalaris anterior, and pars tibiotalaris posterior. Called also *1. deltoideum* [NA alternative] and *deltoid ligament of ankle*.

1. meniscofemora'le ante'rius [NA], anterior meniscofemoral ligament: a small fibrous band of the knee joint, attached to the posterior area of the lateral meniscus and passing superiorly and medially, anterior to the posterior cruciate ligament, to attach to the anterior cruciate ligament.

1. meniscofemora'le poste'rius [NA], posterior meniscofemoral ligament: a small fibrous band of the knee joint, attached to the posterior area of the lateral meniscus and passing superiorly and medially, posterior to the posterior cruciate ligament, to the medial condyle of the femur.

ligamen'ta metacar'pea dorsa'lia [NA], dorsal metacarpal ligaments: bands that interconnect the bases of the second to fifth metacarpal bones by passing transversely from bone to bone on their dorsal surfaces; called also *ligamenta basium* [ossium metacarpalium] *dorsalia*.

ligamen'ta metacar'pea interos'sea [NA], interosseous metacarpal ligaments: short, strong fibrous bands situated between the adjacent surfaces of the bases of the second to fifth metacarpal bones, just distal to the articular surfaces; called also *ligamenta basium* [ossium metacarpalium] *interossea*.

ligamen'ta metacar'pea palma'ria [NA], palmar metacarpal ligaments: bands that interconnect the bases of the second to fifth metacarpal bones by passing transversely from bone to bone on their palmar surfaces; called also *ligamenta basium* [ossium metacarpalium] *volaria*.

1. metacar'peum transver'sum profun'dum [NA], deep transverse metacarpal ligament: a narrow fibrous band that extends across and is attached to the palmar surfaces of the heads of the second to fifth metacarpal bones, joining them together. Called also *ligamenta capitulorum* [ossium metacarpalium] *transversa*.

1. metacar'peum transver'sum superficia'le [NA], superficial transverse metacarpal ligament: transverse fibers occupying the intervals between the diverging longitudinal bands of the palmar aponeurosis.

ligamen'ta metatar'sea dorsa'lia [NA], dorsal metatarsal ligaments: light transverse bands on the dorsal surfaces of the bases of the second to fifth metatarsal bones, similar to the corresponding ligaments on the metacarpal bones; called also *ligamenta basium* [ossium metatarsalium] *dorsalia*.

ligamen'ta metatar'sea interos'sea [NA], interosseous metatarsal ligaments: bands between the bases of the second to fifth metatarsal bones, similar to the corresponding ligaments of the hand; called also *ligamenta basium* [ossium metatarsalium] *interossea*.

ligamen'ta metatar'sea planta'ria [NA], plantar metatarsal ligaments: strong transverse bands on the plantar surfaces of the bases of the second to fifth metatarsal bones; called also *ligamenta basium* [ossium metatarsalium] *plantaria*.

1. metatar'seum transver'sum profun'dum [NA], deep transverse metatarsal ligament: a narrow fibrous band that extends across, is attached to the plantar surfaces of, and thus joins together the heads of all the metatarsal bones; called also *ligamenta capitulorum* [ossium metatarsalium] *transversa*.

1. metatar'seum transver'sum superficia'le [NA], superficial transverse metatarsal ligament: fibers that lie in the superficial fascia of the sole of the foot beneath the heads of the metatarsal bones.

ligamen'ta navicularicuneifor'mia dorsa'lia, ligamenta cuneonavicularia *dorsalia*.

ligamen'ta navicularicuneifor'mia planta'ria, ligamenta cuneonavicularia *plantaria*.

1. nu'chae [NA], nuchal ligament: a broad, fibrous, roughly triangular sagittal septum in the back of the neck, separating the right and left sides. It extends from the tips of the spinous processes of all the cervical vertebrae to attach to the entire length of the external occipital crest. Caudally it is continuous with the supraspinous ligament.

ligamen'ta ossiculo'rum audi'tus [NA], ligaments of auditory ossicles: the ligaments of the auditory ossicles, comprising the anterior, lateral, and superior ligaments of the malleus, the posterior and superior ligaments of the incus, and the annular ligament of the stapes.

1. ova'rii pro'prium [NA], ovarian ligament: a musculo-fibrous cord in the broad ligament, joining the ovary to the upper part of the lateral margin of the uterus just below the attachment of the uterine tube; called also *utero-ovarian ligament*.

ligamen'ta palma'ria [NA], palmar ligaments: thick, dense fibrocartilaginous plates on the palmar surfaces of the metacarpophalangeal articulations, between the collateral ligaments. They are firmly connected to the bases of the proximal phalanges but only loosely connected to the metacarpal bones. Called also *ligamenta accessoria volaria* and *volar accessory ligaments*.

1. palpebra'le latera'le [NA], lateral palpebral ligament: a ligament that anchors the lateral end of the superior and inferior tarsal plates to the margin of the orbit; called also *canthal ligament*.

1. palpebra'le media'le [NA], medial palpebral ligament: fibrous bands that connect the medial ends of the tarsi to the bones of the orbit, an anterior-bundle passing in front of the lacrimal sac and being attached to the frontal process of the maxilla, and a posterior bundle passing behind the lacrimal sac and being attached to the posterior crest of the lacrimal bone.

1. patel'lae [NA], patellar ligament: the continuation of the central portion of the tendon of the quadriceps femoris muscle distal to the patella; it extends from the patella to the tuberosity of the tibia.

1. pectina'tum an'guli iridocornea'lis [NA], pectinate ligament of iridocorneal angle: a few poorly developed fibers found in the iridocorneal angle, interconnecting the cornea, iris, and ciliary muscle; called also *1. pectinatum iridis*.

1. pectina'tum i'ridis, 1. pectinatum anguli iridocornealis.

1. pectinea'le [NA], pectineal ligament: a strong aponeurotic lateral continuation of the lacunar ligament along the pectineal line

TABLE OF LIGAMENTA (Continued)

of the pubis; called also *Cooper's ligament* and *inguinal ligament* of *Cooper*.

1. phrenicocol'icum [NA], phrenicocolic ligament: a peritoneal fold that passes from the left colic flexure to the adjacent costal portion of the diaphragm.

1. phrenicoli'ena/le [NA], phrenicosplenic ligament: a peritoneal fold that passes from the diaphragm to the concave surface of the spleen; called also *l. lienorenale* [NA alternative].

1. pisohama'tum [NA], pisohamate ligament: a fibrous band extending from the pisiform bone to the hook of the hamate bone.

1. pisometacar'peum [NA], pisometacarpal ligament: a fibrous band extending from the pisiform bone to the bases of the fifth, usually the fourth, and sometimes the third metacarpal bone.

ligamen'ta planta'ria articulatio'num metatarso-phalangea'rurum [NA], thick, dense bands situated on the plantar surfaces of the metatarsophalangeal articulations between the collateral ligaments; called also *ligamenta accessoria plantaria*.

1. planta're lon'gum [NA], long plantar ligament: the longest ligament of the foot, arising from the lower surface of the calcaneus as far back as the lateral and the medial processes, passing forward over the tendon of the peroneus longus, and inserting into the bases of the second through fifth metatarsal bones.

1. poplite'um arcua'tum [NA], arcuate popliteal ligament: a band of variable and ill-defined fibers at the posterolateral part of the knee joint; it is attached inferiorly to the apex of the head of the fibula, arches superiorly and medially over the popliteal tendon, and merges with the articular capsule. Called also *popliteal arch* and *arcuate ligament of knee*.

1. poplite'um obli'quum [NA], oblique popliteal ligament: a broad band of fibers that arises from the medial condyle of the tibia, merges more or less with the tendon of the semimembranosus, and passes obliquely across the back of the knee joint to the lateral epicondyle of the femur. It contains large openings for the passage of vessels and nerves.

1. pterygospina'le [NA], pterygospinal ligament: a band of fibers extending from the upper part of the superior border of the lateral pterygoid plate to the spine of the sphenoid bone; called also *l. pterygospinosum*.

1. pterygospino'sum, *l. pterygospinale*.

1. pu'bicum supe'rius [NA], superior pubic ligament: fibers that pass transversely across the superior margin of the symphysis pubis; attached to the bones and to the interpubic disk, they extend laterally as far as the pubic tubercle.

1. pubocapsula're, *l. pubofemorale*.

1. pubofemora'le [NA], pubofemoral ligament: a band that arises from the entire length of the obturator crest of the pubic bone and passes laterally and inferiorly to merge into the capsule of the hip joint, some fibers reaching to the lower part of the neck of the femur. Called also *l. pubocapsulare*.

1. puboprostat'icum [NA], puboprostatic ligament: a thickening of the superior fascia of the pelvic diaphragm in the male that, laterally, extends from the prostate to the tendinous arch of the pelvic fascia and, medially, is a forward continuation of the tendinous arch to the pubis.

1. puboprostat'icum latera'le, lateral extension of ligamentum puboprostaticum.

1. puboprostat'icum me'dium, medial extension of ligamentum puboprostaticum.

1. pubovesica'le [NA], pubovesical ligament: a thickening of the superior fascia of the pelvic diaphragm in the female that, laterally, extends from the neck of the bladder to the tendinous arch of the pelvic fascia and, medially, is a forward continuation of the tendinous arch to the pubis.

1. pubovesica'le latera'le, lateral extension of ligamentum pubovesicale.

1. pubovesica'le me'dium, medial extension of ligamentum pubovesicale.

1. pulmona'le [NA], pulmonary ligament: a vertical pleural fold that extends from the hilus down to the base on the medial surface of the lung, forming the posterior boundary of the impressio cardiaca; called also *broad ligament of lung*.

ligamen'ta pylo'ri, thickened bands of the longitudinal muscular layer of the stomach situated on the anterior and the posterior surfaces of the antrum pyloricum.

1. quadra'tum [NA], quadrate ligament: a fibrous bundle connecting the distal margin of the radial notch of the ulna to the neck of the radius.

1. radiocar'peum dorsa'le [NA], dorsal radiocarpal ligament: a fibrous band that passes obliquely from the posterior border of the distal extremity of the radius to the dorsal surfaces of the proximal row of carpal bones, especially the triquetral and lunate, and to the dorsal intercarpal ligaments.

1. radiocar'peum palma're [NA], palmar radiocarpal ligament: several bundles of fibers that pass obliquely from the styloid process and the distal anterior margin of the radius to the lunate, triquetral, capitate, and hamate bones; called also *l. radiocarpeum volare* and *volar radiocarpal ligament*.

1. radiocar'peum vola're, *l. radiocarpeum palmare*.

1. sacrococcyg'eum ante'rius, *l. sacrococcygeum ventrale*.

1. sacrococcyg'eum dorsa'le profun'dum [NA], deep dorsal sacrococcygeal ligament: the terminal portion of the posterior longitudinal ligament of the vertebral column; it helps to unite the

dorsal surfaces of the fifth sacral and the coccygeal vertebrae. Called also *l. sacrococcygeum posterius profundum*.

1. sacrococcyg'eum dorsa'le superficia'le [NA], superficial dorsal sacrococcygeal ligament: a fibrous band continuous with the supraspinous ligament of the vertebral column; attached cranially to the margin of the sacral hiatus, and diverging as it passes caudally to attach to the dorsal surface of the coccyx. Called also *l. sacrococcygeum posterius superficiale*.

1. sacrococcyg'eum latera'le [NA], lateral sacrococcygeal ligament: a fibrous band, homologous with the intertransverse ligaments, that passes from the transverse process of the first coccygeal vertebra to the lower lateral angle of the sacrum, thus helping to complete the foramen of the fifth sacral nerve.

1. sacrococcyg'eum poste'rius profun'dum, *l. sacrococcygeum dorsale profundum*.

1. sacrococcyg'eum poste'rius superficia'le, *l. sacrococcygeum dorsale superficiale*.

1. sacrococcyg'eum ventra'le [NA], ventral sacrococcygeal ligament: a flat band, homologous with the anterior longitudinal ligament of the vertebral column, that passes from the lower part of the sacrum over onto the anterior part of the coccyx; called also *l. sacrococcygeum anterius*.

ligamen'ta sacroili'aca anterio'ra, ligamenta sacroiliaca ventralia.

ligamen'ta sacroili'aca dorsa'lia [NA], dorsal sacroiliac ligaments: numerous strong bands that pass from the tuberosity of the ilium and the posterior inferior and posterior superior iliac spines to the intermediate sacral crest and adjacent areas of the sacrum.

ligamen'ta sacroili'aca interos'sea [NA], interosseous sacroiliac ligaments: numerous short, strong bundles connecting the tuberosities and adjacent surfaces of the sacrum and the ilium.

1. sacroili'acum poste'rius bre've, see *ligamenta sacroiliaca dorsalia*.

1. sacroili'acum poste'rius lon'gum, see *ligamenta sacroiliaca dorsalia*.

ligamen'ta sacroili'aca ventra'lia [NA], ventral sacroiliac ligaments: numerous thin fibrous bands passing from the ventral margin of the auricular surface of the sacrum to the adjacent portions of the ilium; called also *ligamenta sacroiliaca anteriora* and *anterior sacroiliac ligaments*.

1. sacrospina'le [NA], sacrospinal ligament: a deep, thin triangular band, attached by its apex to the spine of the ischium and by its base to the lateral margins of the sacrum and the coccyx; called also *l. sacrospinosum*.

1. sacrospino'sum, *l. sacrospinale*.

1. sacrotubera'le [NA], sacrotuberal ligament: a large, flat band that is attached below to the ischial tuberosity, spreads out as it ascends, and is attached to the lateral margins of the sacrum and the coccyx and to the posterior inferior iliac spine; called also *l. sacrotuberosum*.

1. sacrotubero'sum, *l. sacrotuberale*.

1. sero'sum, serous ligament: a fold of peritoneum or other serous membrane that helps to hold an organ or part in position and transmits blood vessels and nerves.

1. sphenomandibula're [NA], sphenomandibular ligament: a thin aponeurotic band that extends from the angular spine of the sphenoid bone downward medial to the temporomandibular articulation and attaches to the lingula of the mandible.

1. spira'le coch'leae [NA], spiral ligament of cochlea: the thickened outer or centrifugal portion of the periosteum of the cochlear duct, forming a spiral band to which the basal membrane is attached.

1. sternoclavicula're, see *l. sternoclaviculare anterius* and *l. sternoclaviculare posterius*.

1. sternoclavicula're ante'rius [NA], anterior sternoclavicular ligament: a thick reinforcing band on the anterior portion of the articular capsule of the sternoclavicular articulation. It is attached superiorly to the anterior and superior parts of the sternal extremity of the clavicle and inferiorly to the anterior surface of the manubrium of the sternum.

1. sternoclavicula're poste'rius [NA], posterior sternoclavicular ligament: a thick reinforcing band on the posterior portion of the articular capsule of the sternoclavicular articulation. It is attached superiorly to the posterior and superior parts of the sternal extremity of the clavicle and inferiorly to the posterior surface of the manubrium of the sternum.

1. sternocosta'le interartacula're, *l. sternocostale intraarticulare*.

1. sternocosta'le intraartacula're [NA], intra-articular sternocostal ligament: a horizontal fibrocartilaginous plate in the center of the second sternocostal joint, which joins the tip of the costal cartilage to the fibrous junction between the manubrium and the body of the sternum, and thus divides the joint into two parts. Called also *l. sternocostale interarticulare*.

ligamen'ta sternocosta'lia radia'ta [NA], radiate sternocostal ligaments: fibrous bands attached to the sternal end of a costal cartilage, radiating from there out onto the ventral part of the sternum.

ligamen'ta sternopericardi'aca [NA], sternopericardiac ligaments: two (superior and inferior) or more fibrous bands that attach the pericardium to the dorsal surface of the sternum.

TABLE OF LIGAMENTA (Continued)

1. stylohyoi/deum [NA], stylohyoid ligament: a vertical fibroelastic aponeurotic cord attached above to the tip of the styloid process of the temporal bone and below to the lesser horn of the hyoid bone.

1. stylomandibula/re [NA], stylomandibular ligament: an aponeurotic band attached superiorly to the tip of the styloid process of the temporal bone and inferiorly to the angle and posterior margin of the ramus of the mandible.

1. supraspina/le [NA], supraspinal ligament: a single long, vertical fibrous band passing over and attached to the tips of the spinous processes of the vertebrae from the seventh cervical to the sacrum; it is continuous above with the ligamentum nuchae.

1. suspenso/rium clitor'idis [NA], suspensory ligament of clitoris: a strong fibrous band that comes from the external deep investing fascia and attaches the root of the clitoris to the linea alba, symphysis pubis, and arcuate pubic ligament.

ligamen'ta suspenso/ria mam'mae [NA], suspensory ligaments of mammary gland: fibrous processes, extending from the corpus mammae to the corium, homologous with the retinacula cutis of other regions of the body.

1. suspenso/rium ova'rii [NA], suspensory ligament of ovary: the portion of the broad ligament lateral to and above the ovary; it contains the ovarian vessels and nerves and passes upward over the iliac vessels.

1. suspenso/rium pe'nis [NA], suspensory ligament of penis: a strong fibrous band that comes from the external deep investing fascia and attaches the root of the penis to the linea alba, symphysis pubis, and arcuate pubic ligament.

1. talocalca/neum ante'rius, anterior talocalcaneal ligament: a fibrous band passing from the front and lateral surface of the neck of the talus to the superior surface of the calcaneus; it forms the posterior border of the sinus tarsi.

1. talocalca/neum interos/seum [NA], interosseous talocalcaneal ligament: fibrous bands in the sinus tarsi, passing between the opposed surfaces of the calcaneus and the talus.

1. talocalca/neum latera/le [NA], lateral talocalcaneal ligament: a fibrous band passing from the lateral surface of the talus to that of the calcaneus.

1. talocalca/neum media/le [NA], medial talocalcaneal ligament: a fibrous band connecting the medial tubercle of the talus with the sustentaculum tali of the calcaneus.

1. talocalca/neum poste'rius, posterior talocalcaneal ligament: a fibrous band connecting the processus posterior tali with the upper and medial part of the calcaneus.

1. talofibula/re ante'rius [NA], anterior talofibular ligament: one or more fibrous bands that pass from the anterior surface of the lateral malleolus of the fibula to the anterior margin of the lateral articular surface of the talus.

1. talofibula/re poste'rius [NA], posterior talofibular ligament: a strong fibrous horizontal band passing from the posteromedial face of the lateral malleolus of the fibula to the area of the posterior process of the talus.

1. talonavicular/re [NA], talonavicular ligament: a broad, thin fibrous band passing from the dorsal and lateral surfaces of the neck of the talus to the dorsal surface of the navicular bone; called also *1. talonaviculare [dorsale]* and *talonavicular dorsal ligament*.

1. talonavicular/re [dorsa/le], *1. talonaviculare*.

1. talotibia/le ante'rius, pars tibiotalaris anterior ligamenti medialis.

1. talotibia/le poste'rius, pars tibiotalaris posterior ligamenti medialis.

ligamen'ta tar'si dorsa/lia [NA], dorsal ligaments of tarsus: including the bifurcate, the dorsal cuboideonavicular, cuneocuboid, cuneonavicular, and intercuneiform, and the talonavicular ligaments; called also *dorsal intertarsal ligaments*.

ligamen'ta tar'si interos/sea [NA], interosseous ligaments of the tarsus, including the interosseous cuneocuboid, intercuneiform, talocalcaneal ligaments.

ligamen'ta tar'si planta'ria [NA], plantar ligaments of tarsus: the inferior ligaments of the foot, comprising the long plantar and the plantar calcaneocuboid, calcaneonavicular, cuneonavicular, cuboideonavicular, intercuneiform, and cuneocuboid ligaments.

ligamen'ta tar'si profun'da, the deep ligaments of the tarsus.

ligamen'ta tarsometatar/sea dorsa/lia [NA], dorsal tarsometatarsal ligaments: fibrous bands passing from the dorsal surfaces of the bases of the metatarsal bones to the dorsal surfaces of the cuboid and the three cuneiform bones.

ligamen'ta tarsometatar/sea planta'ria [NA], plantar tarsometatarsal ligaments: fibrous bands passing from the plantar surfaces of the bases of the metatarsal bones to the plantar surfaces of the cuboid and the three cuneiform bones.

1. temporomandibula/re, *1. laterale articulationis temporomandibularis*.

1. te/res fem'oris, *1. capitis femoris*.

1. te/res hep'atis [NA], a fibrous cord, the remains of the left umbilical vein, extending from the porta hepatis, where it is attached to the left branch of the portal vein, out through the fissure of the ligamentum teres and the falciform ligament to the umbilicus.

1. te/res u'teri [NA], round ligament of uterus: a fibromuscular band in the female that is attached to the uterus near the attachment of the uterine tube, passing then along the broad ligament, out through the inguinal ring, and into the labium majus.

1. thyreoepiglot'ticum, *1. thyreoepiglotticum*.

1. thyreoepiglot'ticum [NA], thyreoepiglottic ligament: a fibrous band that attaches the petiolus of the epiglottis to the thyroid cartilage just below the superior notch; called also *1. thyreoepiglotticum*.

1. thyrohyoi/deum [NA], thyrohyoid ligament: a round elastic cord that forms the posterior margin of the thyrohyoid membrane; it extends from the tip of the superior horn of the thyroid cartilage upward to the tip of the greater horn of the hyoid bone. Called also *1. hyothyreoideum laterale* and *Berry's ligament*.

1. thyrohyoi/deum media/num [NA], median thyrohyoid ligament: the central, thicker portion of the thyrohyoid membrane; its broader upper part is attached to the body of the hyoid bone and its narrow lower end to the superior incisure of the thyroid cartilage. Called also *1. hyothyreoideum medium*.

1. tibiofibula/re ante'rius [NA], anterior tibiofibular ligament: a flat triangular band that passes diagonally, inferiorly, and laterally from the anterior portion of the lateral surface of the distal end of the tibia to the anterior surface of the distal end of the fibula; called also *1. malleoli lateralis anterioris*.

1. tibiofibula/re poste'rius [NA], posterior tibiofibular ligament: a fibrous band that passes diagonally, inferiorly, and laterally from the posterior surface of the distal end of the tibia to the adjacent posterior surface of the distal end of the fibula; called also *1. malleoli lateralis posterioris*.

1. tibionavicular/re, *pars tibionavicularis ligamenti medialis*.

1. transver'sum acetab'uli [NA], transverse ligament of acetabulum: a fibrous band continuous with the acetabular lip of the hip joint, which bridges the acetabular notch and converts it into a foramen.

1. transver'sum atlan'tis [NA], transverse ligament of atlas: the strong horizontal portion of the cruciform ligament of the atlas. It is attached at each end to the lateral masses of the atlas and curves posteriorly around the dens of the axis. It thus divides the atlantal ring into a smaller anterior division for the dens and a larger posterior division for the spinal cord and related structures. Called also *Lauth's ligament*.

1. transver'sum cru'ris, *retinaculum musculorum extensorum pedis superius*.

1. transver'sum ge'nu, *1. transversum genus*.

1. transver'sum ge'nus [NA], transverse ligament of knee: a more or less distinct bundle of fibers in the knee joint, joining together the anterior convex margin of the lateral meniscus and the anterior concave margin or anterior end of the medial meniscus; called also *1. transversum genu*.

1. transver'sum pel'vis, *1. transversum perine*.

1. transver'sum perine'i [NA], transverse perineal ligament: the strengthened fused portion of the superior and inferior fasciae of the urogenital diaphragm at the anterior border of the diaphragm; called also *1. transversum pelvis* and *transverse pelvic ligament*.

1. transver'sum scap'ulae infe'rius [NA], inferior transverse ligament of scapula: one of three intrinsic ligaments of the scapula, composed of more or less distinct fascial fibers that pass from the lateral border of the spine of the scapula to the adjacent margin of the glenoid cavity, thus converting the notch at the base of the spine into a foramen for the passage of the suprascapular vessels and nerves to the infraspinous fossa.

1. transver'sum scap'ulae supe'rius [NA], superior transverse ligament of scapula: one of three intrinsic ligaments of the scapula, a band of fibers that bridges the scapular notch, thus forming a foramen for the passage of the suprascapular nerve. One end is attached to the base of the coracoid process, the other end to the medial border of the scapular notch.

1. trapezoi/deum [NA], trapezoid ligament: a broad, flat band forming the anterolateral portion of the coracoclavicular ligament; it is attached inferiorly to the superior surface of the coracoid process of the scapula and superiorly to the oblique ridge on the inferior surface of the clavicle.

1. triangula/re dex'trum hep'atis [NA], right triangular ligament of liver: the pointed right extremity of the coronary ligament of the liver where the superior and the inferior layer join in their attachment to the diaphragm.

1. triangula/re sinis'trum hep'atis [NA], left triangular ligament of liver: a triangular extension of the left extremity of the coronary ligament, which helps to attach the left lobe of the liver to the diaphragm.

1. tuber'culi cos'tae, *1. costotransversarium laterale*.

1. ulnocar'peum palma/re [NA], palmar ulnocarpal ligament: bundles of fibers that pass from the styloid process of the ulna to the carpal bones.

1. umbilica/le latera/le, former NA term for *1. umbilicale mediale*.

1. umbilica/le media/le [NA], a fibrous cord, the remains of the obliterated umbilical artery, which is situated in and produces the lateral umbilical fold. Called also *obliterated hypogastric artery*, *lateral umbilical ligament*, *1. umbilicale laterale*, and *medial umbilical ligament*.

1. umbilica/le media/num [NA], median umbilical ligament: a fibrous cord, the remains of the partially obliterated urachus, that extends from the bladder to the umbilicus; it is situated in and

produces the median umbilical fold. Called also *l. umbilicale medium* and *middle umbilical ligament*.

l. umbilica'le me'dium, *l. umbilicale medianum*.

l. vagina'le, *vinculum tendinum*.

ligamen'ta vagina'lia digito'rum ma'nus, vaginae fibrosae digitorum manus.

ligamen'ta vagina'lia digito'rum pedis, vaginae fibrosae digitorum pedis.

l. ve'nae ca'vae sinis'trae, *plica venae cavae sinistrae*.

l. veno'sum [NA], venous ligament of liver: a fibrous cord, the remains of the fetal ductus venosus, lying in the fissura ligamenti venosi.

ligand (li'gand, lig'and) [L. *ligare* to tie or bind] an organic molecule that donates the necessary electrons to form coordinate covalent bonds with metallic ions, as oxygen is bound to the central iron atom of hemoglobin. The term is also used to indicate any ion or molecule that reacts to form a complex with another molecule, frequently a macromolecule, as an antigen-antibody complex.

ligase (li'gās, lig'ās) any of a class of enzymes that catalyze the joining together of two molecules coupled with the breakdown of a pyrophosphate bond in ATP or a similar triphosphate. Called also *synthetase* (q.v.).

ligate (li'gāt) to tie or bind with a ligature.

ligation (li-ga'shun) [L. *ligatio*] the application of a ligature.

Barron l., treatment of hemorrhoids by binding them with rubber ligatures so that the ligated portion sloughs away within several days. **pole l.**, ligation of both poles of the thyroid gland for the purpose of limiting the amount of blood to and from the gland; employed in Basedow's disease. **teeth l.**, 1. the binding together of teeth with wire for stabilization and immobilization following traumatic injury. 2. the tying of arch wires into orthodontic brackets. **tubal l.**, sterilization of the female by constricting the uterine tubes by means of ligatures; the tubes may, in addition, be severed or crushed.

ligature (lig'ah-chūr) [L. *ligatura*] 1. any substance, such as catgut, cotton, silk, or wire, used to tie a vessel or strangulate a part. 2. in orthodontics, a string or wire used to fasten a tooth to an orthodontic appliance or to another tooth. **chain l.**, a kind of interlocking ligature used in typing pedicles in several places, a long thread being carried through the pedicle in several places. **elastic l.**, a band of caoutchouc used to strangulate hemorrhoids and pedunculated growths. **Erichsen's l.** (obs.), a double thread of white and black for ligating nevi. **interlacing l., interlocking l.**, a continuous suture in which the loops interlock. **kangaroo l.**, a prepared tendon from a kangaroo's tail; used as a ligature. **lateral l.**, a ligature so applied as to check, but not to interrupt, the distal blood flow. **occluding l.**, a ligature that occludes the blood supply to distal tissue. **provisional l.**, one applied at the beginning of an operation, but removed before its termination. **soluble l.**, a ligature of prepared animal membrane which is subsequently absorbed, the time of absorption depending upon the method of preparation and the size of the ligature. **suboccluding l.**, a ligature that obstructs the main blood supply, but leaves unimpaired a portion of tissue capable of establishing capillary anastomosis. **terminal l.**, a ligature applied to the transected end of a vessel. **thread-elastic l.**, an elastic thread used for various force applications in orthodontic therapy.

ligg. ligaments, or ligamenta.

light (lit) the electromagnetic radiation having a velocity of about 3×10^{10} cm. (186,284 miles) per second, and the vibrations in space being at right angles to the direction of transmission. Frequently construed as limited to the range of wavelength between 3900 and 7700 angstroms, which provides the stimulus for the subjective sensation of sight, but sometimes considered as including part of the ultraviolet and infrared ranges as well. **actinic l.**, light rays capable of producing chemical effects. **axial l., central l.**, light whose rays are parallel to each other and to the optic axis. **coherent l.**, light of a single frequency that travels in intense, nearly perfect, parallel rays without appreciable divergence. **cold l.**, a light transmitted through a quartz or plastic structure to dissipate the heat. The lamp may be applied directly to the skin and is used for transillumination of the tissues for cancer diagnosis. **l. difference**, the difference between the two eyes in their sensitivity to light; often abbreviated L.D. **diffused l.**, that which has been scattered by reflection and refraction. **Finsen l.**, light consisting principally of the violet and ultraviolet rays given off by a Finsen lamp; used in the treatment of lupus and similar diseases. **idioretinal l.**, sensation of light that occurs in the complete absence of the electromagnetic waves that ordinarily stimulate the sensation. **infrared l.**, see under ray. **intrinsic l.** (of the retina), the dim light always present in the visual field. **Landeker-Steinberg l.**, a light that emits a spectrum similar to that of the sun except that the ultraviolet waves are eliminated; used therapeutically. **l. minimum**, the smallest degree of light perceived by the eye; often abbreviated L.M. **Minin l.**, a therapeutic lamp for the administration of violet and ultraviolet light.

l. veno'sum [Aran'tii], *l. venosum*.

l. ventricula're, *l. vestibulare*.

l. vestibula're [NA], vestibular ligament: the membrane that extends from the thyroid cartilage in front to the anterolateral surface of the arytenoid cartilage behind; it lies within the vestibular fold, above the vocal ligament. Called also *l. ventricular* and *ventricular ligament of larynx*.

l. voca'le [NA], vocal ligament: the elastic tissue membrane that extends from the thyroid cartilage in front to the vocal process of the arytenoid cartilage behind; it lies within the vocal fold, below the vestibular ligament.

monochromatic l., one of the colors of the spectrum into which light is divided by a prism. **neon l.**, a light that contains no ultraviolet and no infrared rays. **oblique l.**, the light that falls obliquely on a surface. **polarized l.**, light the vibrations of which are made over one plane or in circles or ellipses. **reflected l.**, light whose rays have been turned back from an illuminated surface. **refracted l.**, light whose rays have been bent out of their original course by passing through a transparent membrane. **Simpson l.**, an electric arc light with electrodes of tungstate of iron and manganese; formerly used in the treatment of skin lesions. **transmitted l.**, light the rays of which have passed through an object. **Tyndall l.**, the light that is reflected or dispersed by particles suspended in a gas or liquid; see *Tyndall phenomenon*, under *phenomenon*. **ultraviolet l.**, see under ray. **white l.**, that produced by a mixture of all wavelengths of electromagnetic energy perceptible as light. **Wood's l.**, ultraviolet radiation from a mercury-vapor source, transmitted through a nickel-oxide filter (Wood's filter or glass), which holds back all but a few violet rays of the visible spectrum and passes ultraviolet wavelengths of about 365 nm.; much used in the diagnosis of fungus infections of the scalp and erythrasma, and also to reveal the presence of porphyrins and fluorescent minerals.

lightening (lit'en-ing) the sensation of decreased abdominal distention produced by the descent of the uterus into the pelvic cavity, occurring from two to three weeks before labor begins.

ligneous (lig'ne-us) woody; having a wooden feeling.

Lignières' test (reaction) (lën-yārz') [José Lignières, physician in Buenos Aires, 1868-1933] see under tests.

lignin (lig'nin) a polysaccharide which in connection with cellulose forms the cell wall of plants and thus of wood.

lignocaine (lig'no-kān) lidocaine.

lignocellulose (lig'no-sel'u-lōs) a heterohexosan composed of lignin and cellulose, and forming the cell walls of woody plants.

lignum (lig'num), gen. *lig'ni* [L.] wood. **l. sanc'tum**, **l. vi'tae**, the heartwood of *Guajacum officinale* Linne or of *G. sanctum* Linne.

ligroin, ligroine (lig'ro-in) a petroleum fraction similar in nature to (and sometimes used synonymously with) petroleum benzine; it is used as an organic solvent. Called also *naphtha*.

ligula, ligule (lig'u-lah, lig'ül) [L. "strap"] (obs.) tenia ventriculi quarti.

Lilienthal's probe (li'l'e-en-thalz') [Howard Lilienthal, surgeon in New York, 1861-1946] see under probe.

limb (lim) 1. one of the paired appendages of the body used in locomotion or grasping. In man, an arm or a leg with all its component parts; called also *membrum* [NA] and, formerly, *extremitas*. In embryology, the limbs are divided into four main parts: the *zonoskeleton*, comprising the scapula and clavicle (as a unit) and the hip bone; the *stylopodium*, comprising the humerus and femur; the *zygopodium*, comprising the radius and ulna and the tibia and fibula; and the *autopodium*, comprising the hand and the foot. 2. a structure or part resembling an arm or leg. **an-acrotic l.**, the ascending portion of a tracing of the pulse wave obtained by the manometer or the sphygmograph. **l's of ant-helix**, crura antelhelis; see under crus. **catacrotic l.**, the descending portion of a tracing of the pulse wave obtained by the manometer or the sphygmograph. **l. of incus, long**, crus longum incudis. **l. of incus, short**, crus breve incudis. **l. of internal capsule, anterior**, crus anterior capsulae internaе. **l. of internal capsule, posterior**, crus posterior capsulae internaе. **pectoral l.**, the arm (*membrum superius*), or a homologous part. **pelvic l.**, the leg (*membrum inferius*), or a homologous part. **phantom l.**, the sensation, after amputation of a limb, that the absent part is still present; there may also be paresthesias, transient aches, and intermittent or continuous pain perceived as originating in the absent limb. **l. of stapes, anterior**, crus anterior stapedis. **l. of stapes, posterior**, crus posterior stapedis. **thoracic l.**, pectoral l.

limbal (lim'bal) limbic; occurring at the junction of the cornea and conjunctiva.

limberneck (lim'ber-nek) a disease of fowl resulting from ingestion of food contaminated with *Clostridium botulinum*, and characterized by a flaccid paralysis which gives the condition its name.

limbi (lim'bi) [L.] plural of *limbus*.

limbic (lim'bik) pertaining to a limbus, or margin; forming a border around; see under *system*.

Limbitrol (lim'bi-trol) trademark for a combination of amitriptyline and chlordiazepoxide.

limbus (lim'bus), pl. *lim'bi* [L.] a border, hem, fringe; [NA] a general term for the border of certain structures. See also *labium* and *margo*. **alveolar l. of mandible**, arcus alveolaris mandibulae. **alveolar l. of maxilla**, arcus alveolaris maxillae. **l. alveola'ris mandib'ulae**, arcus alveolaris mandibulae. **l. alveola'ris maxil'lae**, arcus alveolaris maxillae. **l. angulo'sus**, linea obliqua cartilaginis thyroideae. **l. chorio'i'deus** (obs.), that part of the embryonic gyrus fornicatus which forms, in the adult, the choroid plexus of the lateral ventricle. **l. conjuncti'vae**, 1. l. corneae. 2. anulus conjunctivae. **l. of cornea**, **l. cor'neae** [NA], the periphery of the cornea where it joins the sclera. **l. cortica'lis** (obs.), the part of the embryonic gyrus which forms, in the adult, the subiculum, dentate gyrus, and indusium griseum. **l. foram'inis ova'lis**, the border of the foramen ovale. **l. fos'sae ova'lis** [NA], **l. fos'sae ova'lis** [Vioussens'ii], the prominent rounded margin of the fossa ovalis cordis. **l. lam'inae spira'lis os'seae** [NA], the thickened periosteum of the osseous spiral lamina at the attachment of the vestibular membrane. **l. lu'teus ret'inae**, macula retinae. **l. medulla'ris** (obs.), the part of the embryonic gyrus fornicatus which forms, in the adult, the fimbria of the hippocampus and the fornix. **l. membra'nae tym'pani**, 1. the thickened margin of the tympanic membrane attached to the tympanic sulcus. 2. anulus fibrocartilagineus membranae tympani. **lim'bi palpebra'les anterio'res** [NA], the rounded anterior edges of the free margin of the eyelids, from which the eyelashes arise. **lim'bi palpebra'les posterio'res** [NA], the sharp posterior edges of the free margin of the eyelids, closely applied to the eyeball. **spiral l.**, 1. laminae spiralis osseae. **l. of Vioussens**, 1. fossae ovalis.

lime (lim) [L. *calx*] 1. calcium oxide. 2. [USP] a pharmaceutical preparation containing not less than 95 per cent of calcium oxide; used as a pharmaceutical necessity. 3. the acid fruit of *Citrus aurantifolia*; its juice, which contains ascorbic acid, is antiscorbutic and refrigerant. **l. arsenate**, a solution of white arsenic and sal soda in water, used as an insecticide. **barium hydroxide l.**, a mixture of barium hydroxide octahydrate and calcium hydroxide used as a carbon dioxide absorbant in the administration of anesthetic gases and oxygen. **chlorinated l.**, a white or grayish white powder used as a bleaching agent and disinfectant and, formerly, as a topical germicide. **slaked l.**, calcium hydroxide. **soda l.**, a mixture of calcium oxide and sodium hydroxide. **sulfurated l.**, see *calx sulfurata*.

limen (li'men), pl. *lim'ina* [L.] threshold, as of a stimulus; [NA] a general term for the beginning point, boundary, or threshold of a structure. **l. of insula**, **l. in'sulae** [NA], the point at which the cortex of the insula is continuous, on the inferior surface of the cerebral hemisphere, with the cortex of the frontal lobe. **l. na'si** [NA], the ridge at the junction of the lateral nasal cartilage and the lateral crus of the greater alar cartilage, marking the boundary between the vestibule of the nose and the nasal cavity proper. **l. of twoness**, the distance between two points of contact on the skin necessary for their recognition as giving rise to separate stimuli.

limina (lim'i-nah) [L.] plural of *limen*.

liminal (lim'i-nal) [L. *limen* threshold] barely appreciable to the senses; pertaining to a threshold.

liminometer (lim'i-nom'ē-ter) [*limen* + Gr. *metron* measure] an instrument for measuring the strength of stimulus applied over a tendon and determining the reflex threshold.

limit (lim'it) [L. *limes* boundary] a boundary, as one that confines. **Anstie's l.**, see under *rule*. **assimilation l.**, the amount of carbohydrate that an organism can metabolize without causing glycosuria; called also *saturation limit*. **audibility l.**, the extremes of frequency beyond which the human ear perceives no sound: lower limit, 8 Hz; upper, 20,000 Hz. **elastic l.**, the extent to which elastic material may be deformed without impairing its ability to return to original dimensions. **l. of flocculation**, a term used in expressing the strength of toxin, toxoid, and antitoxin; see *Lf dose*, under *dose*. **l. of perception**, the minimum visual angle below which perception is impossible: an object to be perceived must subtend a visual angle of four or five minutes, thus making its image on the retina about the size of a retinal cone of 3.3–3.6 microns in diameter. **quantum l.**, minimum wavelength. **saturation l.**, assimilation l.

limitans (lim'i-tanz) [L.] limiting; see *membrana limitans*.

limitation (lim-i-ta'shun) circumscription; the act of limiting, or state of being limited. **eccentric l.**, a circumscribed condition of the visual field, more pronounced at some parts of the periphery than at others. **genetic l.**, the necessity that all cells react in accordance with the standards of the particular species to which they belong.

limtrophic (lim'i-trof'ik) controlling nutrition.

Limnatis (lim-na'tis) the land leeches, a genus of the family Gnathobdellidae, class Hirudinea. **L. nilot'ica**, a species of

North Africa, middle Europe, and the Near East, where they are commonly used for drawing blood. They sometimes become lodged in the nasal passages, larynx and pharynx of mammals, and when present in large numbers may cause anemia and asphyxia. Called also *Hirudo aegyptiaca*.

limo (li'mo), gen. *limo'nis* [L.] lemon.

limonene (lim'o-nēn) an essential oil found in the peel of oranges and lemons; it is a terpene, C₁₀H₁₆·C₆H₈·CH₃.

limonis (li-mo'nis) [L.] genitive of *limo*, lemon.

limonite (lim'o-nīt) hydrous ferric oxide, 2Fe₂O₃·3H₂O, an ore of iron.

limphthisis (li-mof'thī-sis) [Gr. *limos* hunger + *phthisis* wasting] wasting from lack of food or starvation.

limosis (li-mo'sis) [Gr. *limos* hunger] abnormal or morbid hunger.

limotherapy (li'mo-ther'ah-pe) [Gr. *limos* hunger + *therapeia* cure] hunger cure, the treatment of disease by fasting or by a meager diet. Formerly used in an attempt to treat a variety of diseases, e.g., syphilis and cancer; now used in the treatment of obesity.

Linacre (lin'ah-ker), Thomas (1460–1524). A noted English physician and classicist, who was physician to Henry VIII and the first president of the Royal College of Physicians of London. He was also renowned for his translations of Greek classics (e.g., Galen) into Latin.

linamarin (lin'ah-mah'rin) a bitter glycoside, C₁₀H₁₇O₆N, found in flax, *Linum usitatissimum* L. (Linaceae) and the lima bean, *Phaseolus limensis* Macf. (Leguminosae). Called also *phaseolunatin*.

Lincoinc (lin-ko'sin) trademark for a preparation of lincomycin hydrochloride.

lincomycin (lin'ko-mi'sin) chemical name: (2S-*trans*)-methyl-6,8-dideoxy-6-[[[(1-methyl-4-propyl-2-pyrrolidinyl) carbonyl] amino]-1-thio-D-erythro-α-D-galacto-octopyranoside. An antibiotic, C₁₈H₃₄N₂O₆S, primarily a gram-positive specific antibacterial, produced by a variant of *Streptomyces lincolnensis*. **l. hydrochloride** [USP], the monohydrated monohydrochloride salt of lincomycin, C₁₈H₃₄N₂O₆S·HCl·H₂O, occurring as a white or practically white, crystalline powder; used as an antibacterial, mainly in the treatment of infections due to susceptible strains of streptococci, pneumococci, and staphylococci, administered intramuscularly and intravenously.

lincture (lingk'tūr) an electuary.

linctus (lingk'tus) [L. "a licking"] an electuary.

lindane (lin'dān) [USP] chemical name: 1α,2α,3β,4α,5α,6β-hexachlorocyclohexane. The gamma isomer of benzene hexachloride, C₆H₆Cl₆, occurring as a white, crystalline powder; an insecticide more potent than chlorophenothane (DDT), it is used as a pediculicide and scabicide, applied topically to the skin. Called also *gamma benzene hexachloride*.

Lindau's disease (lin'dowz) [Arvid Lindau, Swedish pathologist, born 1892] von Hippel-Lindau disease.

Lindau-von Hippel disease (lin'dow-von hip'el) [Arvid Lindau; Eugen von Hippel, German ophthalmologist, 1867–1939] von Hippel-Lindau disease.

Lindbergh pump [Charles A. Lindbergh, American aviator, born 1902] see under *pump*.

Lindemann's cannula, method (lin'dē-manz) [August Lindemann, German surgeon, born 1880] see under *cannula* and *method*.

line (līn) [L. *lin'ea*] a stripe, streak, mark, or narrow ridge; often an imaginary line connecting different anatomical landmarks. Called also *linea* [NA]. **abdominal l.**, any line upon the surface of the abdomen, such as one indicating the boundary of a muscle. **absorption l's**, dark lines in the spectrum due to absorption of light by the substance (usually an incandescent gas or vapor) through which the light has passed. Cf. *absorption bands*, under *band*. **accretion l's**, incremental l's. **adrenal l.**, Sergeant's white adrenal l. **alveolar l.**, a line from the nasion to the prosthion (alveolar point). **alveolobasilar l.**, a line from the basion to the prosthion (alveolar point). **alveolonasal l.**, a line from the prosthion (alveolar point) to the nasion. **l. of Amici**, Z band; see under *band*. **angular l.**, an irregular jagged line dividing the anterior surface of the iris into two regions. **anococcygeal l.**, white, ligamentum anococcygeum. **anocutaneous l.**, pectinate l. **arcuate l. of ilium**, linea arcuata ossis ilii. **arcuate l. of occipital bone**, **external superior**, linea nuchae superior. **arcuate l. of occipital bone**, **highest**, linea nuchae suprema. **arcuate l. of occipital bone**, **inferior**, linea nuchae inferior. **arcuate l. of occipital bone**, **superior**, linea nuchae superior. **arcuate l. of occipital bone**, **supreme**, linea nuchae suprema. **arcuate l. of pelvis**, linea terminalis pelvis. **arcuate l. of sheath of rectus abdominis muscle**, linea arcuata vaginae musculi recti abdominis. **atropic l.**, one normal to the place of the axes of rotation of the eye. **auriculobregmatic l.**, a line from the auricular point to the bregma. **axillary l.**, linea axillaris. **Baillarger's l's**, two bands of white fibers seen on section of the cerebral cortex, running

parallel to the surface of the cortex, and distinguished as *inner* (lying in the internal granular layer) and *outer* (lying in the granular layer). In the area striata only the outer line is visible and here it is known as the *l. or stripe of Gennari*. In agranular cortex, both lines tend to be absent. **base l.**, 1. one from the infraorbital ridge to the external auditory meatus and the middle line of the occiput. 2. a known quantity or a set of known quantities used as a reference point in evaluating similar data. **base-apex l.**, a line perpendicular to the edge of a prism and bisecting the refracting angle of the prism. **basinasal l.**, one from the basion to the nasion. **basiobregmatic l.**, one from the basion to the bregma. **Baudelocque's l.**, see under *diameter*. **Beau's l's**, transverse furrows occurring on the fingernails, usually a sign of systemic disease, but also due to trauma, coronary occlusion, hypercalcemia, skin disease, etc. **biauricular l.**, a line passing over the vertex from one auditory meatus to the other. **bi-iliac l.**, one joining the most prominent points of the two iliac crests. **bismuth l.**, a thin blue-black line along the gingival margin in bismuth poisoning, especially in persons with poor oral hygiene; cf. *lead l.* **Blaschko's l's**, the pattern of lines separating skin surface areas supplied by individual peripheral nerves. **blood l.**, a line of direct descent through several generations. **blue l.**, see *bismuth l.* and *lead l.* **Borsieri's l.**, see under *sign*. **Brödel's white l.**, a longitudinal white line on the anterior surface of the kidney near the convex border. **Brücke's l's**, broad bands alternating with Z bands in the fibrils of the striated muscles. **Bryant's l.**, 1. the vertical side of the iliofemoral triangle. 2. a test line for detecting shortening of the femur. **Burton's l.**, *lead l.* **calcification l's**, incremental l's. **cell l.**, a group of animal cells derived from a primary culture at the time of first subculture; it is considered to be an *established cell line* when it demonstrates the potential for indefinite subculture *in vitro*. **cement l.**, a name applied to a line, visible in microscopical examination of bone in cross section, marking the boundary of an osteon (haversian system). **cervical l.**, an anatomical landmark determined by the junction of the enamel- and the cementum-covered portions of a tooth (the cemento-enamel junction); the dividing line between the crown and root portions of a tooth. **Chaus-sier's l.**, the median raphe of the corpus callosum. **Chiene's l's**, a set of lines established to aid in localizing the cerebral centers. **Clapton's l.**, a green line on the gums in copper poisoning. **clavicular l.**, one following the course of the clavicles. **cleavage l's**, linear clefts in the skin indicative of direction of the fibers. The cleavage lines, which correspond closely to the crease lines of the skin, assume a characteristic pattern in each part of the body but vary with body configuration. Called also *Langer's lines*. **Conradi's l.**, a line from the base of the xiphoid process to the point on the chest at which the apex beat is felt, indicating the upper limit of percussion dullness of the left lobe of the liver. **contour l's**, l's of Owen. **copper l.**, a greenish or red line at the border of the gums in copper poisoning. **Correra's l.**, a line in the roentgenogram of the chest, around the outline of the thorax, and bounding the lung fields. **Corrigan's l.**, a purplish line observed on the gums in copper poisoning. **costoarticular l.**, a line from the sternoclavicular joint to a point on the eleventh rib. **costoclavicular l.**, linea parasternalis. **costophrenic septal l's**, see *Kerley's l's*. **crucoclavicular l.**, a line from the cricoid cartilage of the larynx to the point at which the upward projection of the anterior axillary line intersects the clavicle. **cruciate l.**, eminentia cruciformis. **curved l. of ilium**, linea arcuata ossis ilii. **curved l. of ilium, inferior**, linea glutea inferior. **curved l. of ilium, middle**, linea glutea anterior. **curved l. of ilium, superior**, linea glutea posterior. **curved l. of occipital bone, highest**, linea nuchae suprema. **curved l. of occipital bone, inferior**, linea nuchae inferior. **curved l. of occipital bone, superior**, linea nuchae superior. **curved l. of occipital bone, supreme**, linea nuchae suprema. **Czermak's l's**, spatia interglobularia; see under *spatium*. **Daubenton's l.**, a line from the opisthion to the basion. **dentate l.**, pectinate l. **De Salle's l.**, nasal l. **Dobie's l.**, Z band; see under *band*. **l. of Douglas**, linea arcuata vaginae musculi recti abdominis. **Duhot's l.**, a line from the superior iliac spine to the apex of the sacrum. **dynamic l's**, lines on the face, e.g., laugh lines and frown lines, which develop as a result of repetitious right-angled pull on the skin by the muscles of expression; they are considered a sign of aging. **Eberth's l's**, microscopic broken or scalariform lines at the junction of the cardiac muscle cells. **ectental l.**, the line of junction between the ectoderm and entoderm. **l's of election**, l's of expression. **Ellis' l.**, **Ellis-Garland l.**, an S-shaped line on the chest, showing the upper border of pleuritic effusions. **embryonic l.**, the primitive streak in the center of the germinal area. **epiphys-eal l.**, 1. linea epiphysialis. 2. a strip of lesser density apparent in the roentgenogram of a long bone, representing the noncalcified portion of the cartilaginous growth plate between the epiphysis and the diaphysis. **established cell l.** see *cell l.* **l's of expression**, the natural skin lines and creases of the face and neck, which are the preferred lines of incision in facial and cervical surgery; called also *l's of election*. **facial l.**, a straight line connecting the nasion and pogonion. **Farre's white l.**

the boundary of the insertion of the mesovarium at the hilus of the ovary. **Feiss' l.**, a line from the medial malleolus to the plantar surface of the first metatarsophalangeal joint. **l. of fixation**, a straight line extending through the center of rotation of the eye to the object of vision. **focal l., anterior**, a line whose direction is perpendicular to the meridian of greatest curvature of a refracting surface. **focal l., posterior**, a line whose direction is perpendicular to the meridian of least curvature of a refracting surface. **Fraunhofer's l's**, dark lines of the solar spectrum. **Frommann's l's**, transverse marks on the axon of a medullated nerve fiber, rendered visible by silver nitrate. **fulcrum l.**, the imaginary axis around which a removable partial denture tends to rotate. **fulcrum l., retentive**, an imaginary line connecting the retentive points of clasp arms on retaining teeth adjacent to mucosa-borne denture bases, around which a denture tends to rotate when subjected to such forces as the pull of sticky foods. **fulcrum l., stabilizing**, an imaginary line connecting occlusal rests, around which a denture tends to rotate during mastication. **Gant's l.**, one described on the femur below the greater trochanter, for service as a guide in surgical operations. **genal l.**, one of Jadelot's lines, extending from the nasal line near the mouth toward the malar bone. **l. of Gennari**, see *Baillarger's l's*. **gingival l.**, 1. a line determined by the level to which the gingiva extends on a tooth; although it tends to follow the curvature of the cervical line, the two rarely coincide. 2. any linear mark visible on the surface of the gingiva, such as the discoloration resulting from the ingestion of lead (lead l.). **gluteal l., anterior**, linea glutea anterior. **gluteal l., inferior**, linea glutea inferior. **gluteal l., posterior**, linea glutea posterior. **Gottinger's l.**, a line along the upper border of the zygomatic arch. **Granger l.**, a curved line seen in the roentgenograms of skulls, indicating the position of the optic groove. **Gubler's l.**, a line connecting the apparent origins of the roots of the fifth nerve. **gum l.**, gingival l. (def. 1.). **Haller's l.**, fissura mediana anterior medullae spinalis. **Hampton l.**, a significant roentgenologic characteristic associated with the niche of the typical benign gastric ulcer in profile. **Harris l's**, lines of retarded growth seen radiographically at the epiphyses of long bones. **heave l.**, a groove appearing along the costal arch coincidental with forced contraction of the abdominal muscles following the normal passive expiratory movement in an animal with heaves. **Helmholtz's l.**, a line perpendicular to the plane of the axis of rotation of the eyes. **Hensen's l.**, M band; see under *band*. **Hilton's white l.**, pectinate l. **Holden's l.**, a sulcus below the inguinal fold, crossing the capsule of the hip joint. **hot l.**, see under *H.* **Hudson's l.**, **Hudson-Stähli l.**, pigmented line of the cornea; a linear horizontal brown mark located at about the junction of the middle and lower thirds of the cornea but not reaching the limbus, seen in the normal corneas of 16 per cent of aged individuals. Called also *Stähli's pigment l.* and *superficial l. of the cornea*. **Hueter's l.**, a straight line connecting the medial epicondyle of the humerus with the top of the olecranon when the arm is extended. **Hunter's l.**, linea alba. **iliopectineal l.**, linea arcuata ossis ilii. **incremental l's of Ebner**, **incremental l's of Owen**, l's of Owen. **infracostal l.**, one connecting the lower borders of the tenth costal cartilages. **infrascapular l.**, a horizontal line at the level of the inferior angles of the scapulae. **intercondylar l.**, **intercondyloid l.**, linea intercondylaris femoris. **intermediate l. of iliac crest**, linea intermedia cristae iliacae. **interspinal l.**, a line on the abdomen connecting the two anterior superior iliac spines. **intertrochanteric l.**, **intertrochanteric l., anterior**, linea intertrochanterica. **intertrochanteric l., posterior**, crista intertrochanterica. **intertuberal l.**, a line drawn between the prominences of the frontal bone. **intertubercular l.**, an imaginary line drawn transversely across the abdomen at the level of the iliac crests. **intraparoid l's**, see *period l's*. **isoeffect l's**, in radiotherapy, lines on a rectangular graph representing doses of radiation having tumoricidal effects and those having complicating necrotic effects in normal tissues. **isothermal l's**, lines on a map or chart indicating areas of uniform temperature. **Jadelot's l's**, lines of the face in young children, described as being indicative of specific types of disease; the genal, labial, nasal, and oculozygomatic lines. Called also *Jadelot's furrows*. **K l's**, **L l's**, **M l's**, **N l's**, **O l's**, **P l's**, groups of lines in a roentgen-ray spectrum, determined by the stability level to which the replacement electron "drops"; the K lines come from the level nearest the nucleus of the atom and have the shortest wavelength. **l. of Kaes**, a thin layer of fibers in the external granular layer of the cerebral cortex. **Kerley's l's**, horizontal linear densities 1 to 2.5 cm. long on chest roentgenograms; they are arranged in stepladder fashion and are believed to represent widening of the interlobular septa, as by edema (in mitral stenosis) or fibrosis (in silicosis). When peripherally situated, particularly at the base of the lungs, they are called *Kerley's B l's*, or *costophrenic septal lines*. When centrally situated, they are called *Kerley's A l's*. **Kilian's l.**, a prominent line on the promontory of the sacrum. **Krause's l.**, Z band; see under *band*. **L l's**, see under *K l's*. **labial l.**, one of Jadelot's lines, extending laterally from the angle of the mouth; said to indicate disease of the lungs. **Langer's l's**, cleavage l's. **lead l.**, a gray or bluish black line at the gin-

gival margin in lead poisoning, seen especially in patients with poor oral hygiene; it is similar to the bismuth line, but is somewhat more diffuse. Called also *blue l.* and *Burton's line* or *sign*. **lip l.**, a line at the level to which the margin of either lip extends on the teeth. **lip l., high**, the highest level on the teeth or gingival tissue reached by the upper lip in normal function or during a broad smile. **lip l., low**, the lowest level on the teeth reached by the lower lip in normal function or during a broad smile. **lower lung l.**, a horizontal line in roentgenograms of the upper part of the abdomen, running from the lateral chest wall toward the first lumbar vertebra on each side, and representing the lower posterior boundary of the pleural cavity. **M l's**, see *K l's*. **magnetic l's of force**, lines indicating direction of force in a magnetic field. **major dense l's**, **major period l's**, see *period l's*. **mamillary l.**, *linea mamillaris*. **mammary l.**, *milk line*. **median l.**, an imaginary vertical line on the body surface, dividing the surface equally into right and left sides. **median l., anterior**, *linea mediana anterior*. **median l., posterior**, *linea mediana posterior*. **Mees' l's**, transverse white lines on the fingernails, as in chronic arsenic poisoning and sometimes in leprosy. **mesenteric l.**, see *mesenteric triangle*, under *triangle*. **Meyer's l.**, the axial line of the big toe which if extended passes through the center of the heel if shoes have never been worn. **midaxillary l.**, *linea axillaris*. **midclavicular l.**, *linea mamillaris*. **middle l. of scrotum**, *raphe scroti*. **midspinal l.**, a perpendicular line down the middle of the vertebral column. **midsternal l.**, a line passing through the middle of the sternum from the cricoid cartilage to the xiphoid. **milk l.**, a ridge of thickened epithelium from axilla to groin in the mammalian embryo along which nipples and mammary glands develop, all but one subsequently disappearing in the human. Called also *mammary l.* and *mammary ridge*. **Monro's l.**, one from the umbilicus to the anterior superior spine of the ilium. **Monro-Richter l.**, one from the umbilicus to the left anterior superior iliac spine. **Morgan's l.**, a secondary crease in the lower eyelids in atopic dermatitis; called also *Dennie's sign*. **Moyer's l.**, a line from the middle of the body of the third sacral vertebra to a point midway between the anterior superior iliac spines. **muscular l's of scapula**, *lineae musculares scapulae*. **mylohyoid l. of mandible**, *mylohyoidean l.*, *linea mylohyoidea mandibulae*. **N l's**, see under *K l's*. **nasal l.**, one of Jadelot's lines, extending from the ala nasi in a semicircle around the mouth. **nasobasilar l.**, a line through the basion and nasal point. **nasolabial l.**, a line extending from the ala nasi to the angle of the mouth. **Nélaton's l.**, a line from the anterior superior spine of the ilium to the most prominent part of the tuberosity of the ischium. **neonatal l.**, a line in the enamel and dentin of a tooth at a position corresponding to the surface of enamel and dentin present at the time of birth. **nigra l.**, *linea nigra*. **nipple l.**, *linea mamillaris*. **nuchal l., highest**, *linea nuchae suprema*. **nuchal l., inferior**, *linea nuchae inferior*. **nuchal l., median**, **nuchal l., middle**, *crista occipitalis externa*. **nuchal l., superior**, *linea nuchae superior*. **nuchal l., supreme**, *linea nuchae suprema*. **O l's**, see under *K l's*. **oblique l.**, one which follows an oblique course; see terms beginning *linea obliqua*. **oblique l. of femur**, *linea intertrochanterica*. **oblique l. of fibula**, 1. *crista medialis fibulae*. 2. *margo anterior fibulae*. **oblique l. of mandible**, *linea obliqua mandibulae*. **oblique l. of mandible, internal**, *linea mylohyoidea mandibulae*. **oblique l. of thyroid cartilage**, *linea obliqua cartilaginis thyroideae*. **oblique l. of tibia**, *linea musculi solei*. **l. of occlusion**, Angle's term for "the line with which, in form and position according to type, the teeth must be in harmony if in normal occlusion"; the line of contact between the maxillary and mandibular teeth when the jaws are closed. **oculozygomatic l.**, one of Jadelot's lines, extending outward from the medial canthus toward the zygoma; said to be a sign of some disorder of the nervous system. **Ogston's l.**, a line from the tubercle of the femur to the intercondylar notch. **omphalospinous l.**, a line on the abdomen connecting the umbilicus and the anterior superior spine of the ilium; a guide to the location of McBurney's point. **orthostatic l's**, natural furrows on the neck, due to physiologic skin excess required at certain areas for the purpose of flexion and extension. **Ouchterlony l.**, in immunodiffusion, a line of antigen-antibody precipitate formed in agar gel. **l's of Owen**, curvilinear lines resembling the growth rings of a tree on transverse section, demarcating layers of interglobular spaces in the deeper parts of the dentin of the crown of a tooth; they are caused by incomplete calcification of the dentin. Called also *incremental l's of Owen*. **P l's**, see under *K l's*. **papillary l.**, *linea mamillaris*. **parasternal l.**, *linea parasternalis*. **Pastia's l's**, see under *sign*. **pectinate l.**, a sinuous line following the level of the anal valves and crossing the bases of the columns between them, marking the junction of the zone of the anal canal lined with stratified squamous epithelium and the zone lined with columnar epithelium; called also *anocutaneous l.* and *dentate l.* or *margin*. **pectineal l.**, 1. *linea pectinea femoris*. 2. *pecten ossis pubis*. **pelvic pain l.**, an imaginary line beneath which pain impulses from the bladder neck, prostate, urethra, uterine cervix, and the lower end of the colon are conducted. **period l's**, a series of

light and dark lines occurring in a concentric, repeating pattern in mature myelin; the darker lines (*major dense l's*) represent the apposition of the inner, cytoplasmic surfaces of the Schwann cell plasma membrane; the lighter lines (*intraperiod l's*) bisect the spaces between the darker lines, and represent the apposition of the outer surfaces of the membrane. **Pickerill's imbrication l's**, horizontal lines on the surface of tooth enamel. **pigmented l. of the cornea**, Hudson's l. **Poirier's l.**, a line running from the nasofrontal angle to a point just above the lambda. **popliteal l. of femur**, *linea intercondylaris femoris*. **popliteal l. of tibia**, *linea musculi solei*. **Poupart's l.**, an imaginary line on the surface of the abdomen, passing perpendicularly through the midpoint of Poupart's ligament. **precentral l.**, a line on the head, extending from a point midway between theinion and glabella downward and forward. **primitive l.**, primitive streak. **pupillary l.**, pupillary axis. **quadrate l.**, a slight ridge sometimes seen passing vertically downward from the middle of the intertrochanteric crest on the posterior surface of the femur. **recessional l's**, lines or markings on the teeth due to the recession, in the formative period of the teeth, of the soft tissue which gives place to the dentin. **Reid's base l.**, base l. (def. 1). **Retzius' l's**, incremental l's. **Robson's l.**, an imaginary line drawn from the nipple to the umbilicus. **Rolando's l.**, a line on the head marking the position of the fissure of Rolando beneath. **Roser's l.**, Nélaton's l. **rough l. of femur**, *linea aspera femoris*. **Salter's l's**, l's of Owen. **scapular l.**, *linea scapularis*. **Schoemaker's l.**, one connecting the point of the trochanter with the anterior superior iliac spine; the extension of this line normally runs above the umbilicus, but runs below the umbilicus when the trochanter is higher than normal. **Schreger's l's**, bands of Schreger. **Schwalbe's l.**, see under *ring*. **semicircular l's**, **supreme**, *linea nuchae suprema*. **semicircular l. of Douglas**, *linea arcuata vaginae musculi recti abdominis*. **semicircular l. of frontal bone**, *linea temporalis ossis frontalis*. **semicircular l. of occipital bone, highest**, *linea nuchae suprema*. **semicircular l. of occipital bone, middle**, *linea nuchae superior*. **semicircular l. of occipital bone, superior**, *linea nuchae superior*. **semicircular l. of parietal bone, inferior**, *linea temporalis inferior ossis parietalis*. **semicircular l. of parietal bone, superior**, *linea temporalis superior ossis parietalis*. **semilunar l.**, *linea semilunaris*. **Sergeant's white adrenal l.**, a white line on the abdomen caused by drawing the finger nail across it; seen in cases of deficient adrenal activity. **Shenton's l.**, a curved line seen in the roentgenogram of the normal hip joint, formed by the top of the obturator foramen. **l. of sight**, a straight line from the center of the pupil to the object viewed. **simian l.**, see under *crease*. **Skinner's l.**, Shenton's l. **soleal l. of tibia**, *linea musculi solei*. **Spiegel's l.**, **spigelian l.**, **Spigelius' l.**, *linea semilunaris*. **spiral l. of femur**, *linea intertrochanterica*. **Stähli's l.**, **Stähli's pigment l.**, Hudson's l. **sternal l.**, **sternal l., lateral**, *linea sternalis*. **subcostal l.**, a transverse line on the surface of the abdomen at the level of the lower edge of the tenth costal cartilage. **subscapular l's**, *lineae musculares scapulae*. **superficial l. of the cornea**, Hudson's l. **supraorbital l.**, a line across the forehead, just above the root of the external angular process of the frontal bone. **survey l.**, 1. the line indicating the height of a tooth after the cast has been positioned according to the chosen path of insertion. 2. a line produced on a cast of a tooth by a surveyor scribe, marking the greatest height of contour in relation to the chosen path of insertion of the restoration. 3. a line drawn on a tooth or teeth by means of a surveyor for the purpose of determining the positions of the various parts of a clasp or clasps. Called also *clasp guideline*. **Sydney l.**, see under *crease*. **sylvian l.**, a line on the head extending from the external angular process of the frontal bone to a point three fourths of an inch below the most prominent point of the parietal bone. It coincides with the direction of the fissure of Sylvius. **temporal l., inferior**, *linea temporalis inferior ossis parietalis*. **temporal l., superior**, *linea temporalis superior ossis parietalis*. **temporal l. of frontal bone**, *linea temporalis ossis frontalis*. **temporal l. of parietal bone, inferior**, *linea temporalis inferior ossis parietalis*. **temporal l. of parietal bone, superior**, *linea temporalis superior ossis parietalis*. **terminal l. of pelvis**, *linea terminalis pelvis*. **Thompson's l.**, a red line observed on the gingivae in pulmonary tuberculosis. **thyroid red l.**, an erythematous line produced by irritation of the skin on the front of the neck and upper part of the chest in patients with hyperthyroidism. **Topinard's l.**, a line between the glabella and the mental point. **transverse l's of sacral bone**, **transverse l. of sacrum**, *lineae transversae ossis sacri*. **trapezoid l.**, *linea trapezoidea*. **triradiate l's**, the stars of the embryonic lens. **Trümmerfeld l.**, a zone of metaphyseal degeneration sometimes seen in the bones in infantile scurvy. **Ullmann's l.**, in cases of spondylolisthesis, a line extended upward at a right angle from the anterior edge of the first sacral vertebra to the superior surface of the sacrum will pass through the last lumbar vertebra. **umbilicociliac l.**, a line from the umbilicus to the anterior superior spine of the ilium. **l. of Venus**, the principal transverse line on the palmar surface of the

wrist. **vibrating l.**, a functional line marking the anatomical boundary between the movable and immovable tissues of the palate. **Virchow's l.**, a line from the root of the nose to the lambda. **visual l.**, axis opticus. **Voigt's l's**, a dorsoventral pigmented line of demarcation on the skin, usually extending bilaterally and symmetrically for about 10 cm., along the lateral edge of the biceps muscle; seen in 20 to 26 per cent of blacks and rarely in whites. Called also *Futcher l's*. **Wagner's l.**, a thin whitish line at the junction of the epiphysis and diaphysis of a bone, formed by preliminary calcification. **white l.**, linea alba. **white adrenal l.**, Sergeant's white adrenal l. **white l. of ischiococcygeal muscle**, ligamentum anococcygeum. **white l. of pelvic fascia**, arcus tendineus fasciae pelvis. **white l. of pelvis**, arcus tendineus muscili levatoris ani. **white l. of pharynx**, raphe pharyngis. **Wrisberg's l's**, a set of filaments connecting the motor and sensory roots of the trigeminal nerve. **Z l.**, Z band. **l's of Zahn**, laminations visible in antemortem blood clots, caused by alternating layers of gray-white fibrin interspersed with narrow zones of apparent red-blue clot. **Zöllner's l's**, a set of lines of peculiar arrangement designed to be used as an ocular test.

linea (lin'e-ah), pl. *lin'ae* [L.] a stripe, streak, mark, or narrow ridge; [NA] a general term for a streak or narrow ridge on the surface of some structure. Called also *line*. **l. al'ba** [NA], **l. al'ba abdom'inis**, white line: the tendinous median line on the anterior abdominal wall between the two rectus muscles, formed by the decussating fibers of the aponeuroses of the three flat abdominal muscles. **l. al'ba cervica'lis**, the blending of the fascial sheaths of the sternothyroid and sternothyoid muscles in the median plane of the neck. **lin'ae albian'tes**, see *striae atrophicae*. **l. arcua'ta os'sis il'i** [NA], arcuate line of ilium: the iliac portion of the terminal line, limiting the ala of the ilium inferiorly on its medial surface. **l. arcua'ta vagi'nae mus'culi rec'ti abdom'inis** [NA], arcuate line of sheath of rectus abdominis muscle: a crescentic line marking the termination of the posterior layer of the sheath of the rectus abdominis muscle, just below the level of the iliac crest; called also *l. semicircularis* [Douglass] and *semicircular line of Douglas*. **l. as'pera fem'oris** [NA], rough line of femur: a roughened longitudinal line with two lips, on the posterior surface of the shaft of the femur; it gives attachment to various muscles. **lin'ae atroph'icae**, striae atrophicae. **l. axilla'ris** [NA], axillary line: an imaginary vertical line passing through the middle of the axilla, dividing the body into an anterior and a posterior portion. **l. epiphysia'lis** [NA], epiphyseal line: a line on the surface of an adult long bone marking the site of junction of the epiphysis and diaphysis. **l. glu'tea ante'rior** [NA], anterior gluteal line: the middle of three rough curved lines on the gluteal surface of the ala of the ilium; it begins from the iliac crest about an inch posterior to the anterior superior iliac spine and arches more or less posteriorly to the greater sciatic notch. **l. glu'tea infe'rior** [NA], inferior gluteal line: a rough curved line, often indistinct, on the gluteal surface of the ala of the ilium; it runs from the notch between the anterior superior and anterior inferior iliac spines posteriorly to the anterior part of the greater sciatic notch. **l. glu'tea poste'rior** [NA], posterior gluteal line: a rough curved line on the gluteal surface of the ala of the ilium; it begins from the iliac crest about two inches anterior to the posterior superior iliac spine and runs downward to the greater sciatic notch. **l. iliopectin'ea**, **l. arcuata ossis ilii**. **l. in-nomina'ta**, **l. terminalis pelvis**. **l. intercondyla'ris fem'oris** [NA], **l. intercondylo'dea fem'oris**, intercondylar line: a transverse ridge separating the floor of the intercondylar fossa from the popliteal surface of the femur, and giving attachment to the posterior portion of the capsular ligament of the knee. **l. interne'dia cris'tae ili'acae** [NA], intermediate line of iliac crest: the area between the inner and outer lips of the iliac crest. **l. intertrochanter'ica** [NA], intertrochanteric line: a line running obliquely downward and medially from the tubercle of the femur, winding around the medial side of the body of the bone. **l. intertrochanter'ica poste'rior**, crista intertrochanterica. **l. mamilla'ris** [NA], mamillary line: an imaginary vertical line on the anterior surface of the body, passing through the center of the nipple; called also *l. medioclavicularis* [NA alternative] and *midclavicular line*. **l. media'na ante'rior** [NA], anterior median line: an imaginary vertical line on the anterior surface of the body, dividing the surface equally into right and left sides. **l. media'na poste'rior** [NA], posterior median line: an imaginary vertical line on the posterior surface of the body, dividing the surface equally into right and left sides. **l. medioclavicu-laris**, NA alternative for *l. mamillaris*. **l. mensa'lis**, any one of the lines on the palm caused by flexion of the middle, ring, and little fingers. **lin'ae muscula'res scap'ulae**, muscular lines of scapula: low ridges on the costal surface of the scapula, marking the site of attachment of muscle fibers. **l. mus'culi sol'ei** [NA], soleal line of tibia: a line extending from the fibular facet downward and inward across the posterior surface of the tibia, giving attachment to fibers of the soleus muscle; called also *l. poplitea tibiae* and *popliteal line of tibia*. **l. mylohyoi'dea mandib'ulae** [NA], mylohyoid line of mandible: a ridge on the inner surface of the mandible from the base of the symphysis to the ascending ramus behind the last molar tooth; it affords

attachment to the mylohyoid muscle and superior constrictor of the pharynx. **l. ni'gra**, a name given the tendinous mesial line of the abdomen (*l. alba*) when it has become pigmented in pregnancy. **l. nu'chae infe'rior** [NA], inferior nuchal line: the lowest of the three nuchal lines found on the outer surface of the occipital bone, extending laterally from the middle of the external occipital crest to the jugular process. **l. nu'chae supe'rior** [NA], superior nuchal line: a curved line on the outer surface of the occipital bone, extending from the external occipital protuberance toward the lateral angle, and giving attachment medially to the trapezius muscle and laterally to the sternocleidomastoid muscle. **l. nu'chae supe'ma** [NA], highest or supreme nuchal line: a sometimes indistinct line arching upward from the external occipital protuberance and running toward the lateral angle of the occipital bone: the epicranial aponeurosis attaches to it. **l. obli'qua cartilag'inis thyroi'deae** [NA], oblique line of thyroid cartilage: a line on the external surface of the lamina of the thyroid cartilage, extending between the two thyroid tubercles. **l. obli'qua fib'ulae**, crista medialis fibulae. **l. obli'qua mandib'ulae** [NA], oblique line of mandible: a ridge on the external surface of the body of the mandible extending from the mental tubercle to the anterior border of the ascending ramus on either side. **l. obli'qua tib'iae**, **l. musculi solei**. **l. parasterna'lis**, parasternal line: an imaginary line on the anterior surface of the body midway between the mamillary line and the border of the sternum. **l. pectin'ea fem'oris** [NA], pectineal line: a line running down the posterior surface of the shaft of the femur, giving attachment to the pectineus muscle. **l. poplite'a tib'iae**, **l. musculi solei**. **l. scapula'ris** [NA], scapular line: an imaginary vertical line on the posterior surface of the body, passing through the inferior angle of the scapula. **l. semicircula'ris** [Douglass], **l. arcuata vaginae musculi recti abdominis**. **l. semiluna'ris** [NA], **l. semiluna'ris** [Spigel], semilunar line: a curved line along the lateral border of each rectus abdominis muscle, corresponding to the meeting of the aponeuroses of the internal oblique and transverse abdominal muscles; called also *Spiegel's line* and *Spigelius' line*. **l. spira'lis**, **l. intertrochanterica**. **l. splen'dens**, **Macal'ister**, the sheath for the anterior spinal artery formed by the pia mater in the fissura mediana anterior medullae spinalis. **l. sterna'lis**, sternal line: an imaginary verticle line on the ventral surface of the body, corresponding to the lateral border of the sternum. **l. tempora'lis infe'rior os'sis parietal'is** [NA], inferior temporal line of parietal bone: a curved line on the external surface of the parietal bone, marking the limit of attachment of the temporal muscle. **l. tempora'lis os'sis fronta'lis** [NA], temporal line of frontal bone: a ridge extending upward and backward from the zygomatic process of the frontal bone, dividing into superior and inferior parts that are continuous with corresponding lines on the parietal bone, and giving attachment to the temporal fascia. **l. tempora'lis supe'rior os'sis parietal'is** [NA], superior temporal line of parietal bone: a curved line on the external surface of the parietal bone, above and parallel to the inferior temporal line, giving attachment to the temporal fascia. **l. termina'lis pel'vis** [NA], terminal line of pelvis: a line on the inner surface of either pelvic bone, extending from the sacroiliac joint to the iliopubic eminence anteriorly, and marking the plane separating the false from the true pelvis. **lin'ae transver'sae os'sis sa'cri** [NA], transverse lines of sacrum: four transverse ridges on the pelvic surface of the sacrum, running between the pairs of pelvic sacral foramina, marking the positions of the former intervertebral disks. **l. trapezoi'dea** [NA], trapezoid line: a ridge extending anterolaterally from the conoid tubercle on the inferior surface of the clavicle, giving attachment to the trapezoid portion of the coracoclavicular ligament. **l. vi'sus**, an imaginary line from the fovea centralis of the retina to the point of fixation of the eye. **l. vita'lis** [L. "line of life"], a line on the palm curving around the thenar eminence.

lineae (lin'e-e) [L.] plural of *linea*.

lineage (lin'e-ij) [L. *linea* line] descent traced down from or back to a common ancestor. **cell l.**, the developmental history of cells as traced from the first division of the original cell or cells.

linear (lin'e-ar) [L. *linearis*] pertaining to or resembling a line.

liner (lin'er) material applied to the inside of the walls of a cavity or container, for protection or insulation of the surface. **cavity l.**, a substance, e.g., a varnish, applied to the tooth surface exposed by caries, to protect the dentin and insulate the pulp and to enhance the initial seal of the restoration.

lingua (ling'gwah), pl. *lin'guae* [L. "tongue"] [NA], the tongue: the movable, muscular organ on the floor of the mouth, subserving the special sense of taste and aiding in mastication, deglutition, and the articulation of sound; called also *glossa*. See *tongue*. **l. dissect'ta**, geographic tongue. **l. fistura'ta**, fissured tongue. **l. frena'ta**, tongue-tie. **l. geograph'ica**, geographic tongue. **l. ni'gra**, black tongue. **l. plica'ta**, fissured tongue. **l. scrota'lis**, fissured tongue. **l. villosa ni'gra**, black tongue.

linguae (ling'gwe) [L.] plural of *lingua*.

lingual (ling'gwah) [L. *lingualis*] pertaining to or toward the tongue; glossal.

linguale (ling-gwa'le) the point at the upper end of the symphysis of the lower jaw on its lingual surface.

lingualis (ling-gwa'lis), pl. *lingua'les* [L.] relating to the tongue.

lingually (ling'gwal-le) toward the tongue.

Linguatula (ling-gwat'u-lah) the tongueworms, a genus of the family Linguatulidae, order Porocephalidae, which, in the adult form, inhabit the frontal, nasal, and maxillary sinuses of animals, sometimes including man. Their larval form (known as *Pentastoma* and *Porocephalus*) infests the digestive organs and lungs. See *halzoun*. **L. rhina'ria**, *L. serrata*. **L. serra'ta**, a species whose adult forms are found in the frontal sinuses and nasal passages of canines and felines. Eggs, passed in the nasal discharges of infected animals, may be ingested by cattle, sheep, rabbits, or occasionally man, and on hatching, bore through the intestinal wall and finally become encysted in the viscera.

linguatuliasis (ling-gwat'u-li'ah-sis) invasion of the body by *Linguatula*.

linguatulid (ling-gwat'u-lid) any member of the family Linguatulidae.

Linguatulidae (lin-gwah-tu'li-de) a family of endoparasitic wormlike arthropods of the order Porocephalida, class Pentostomida, having flattened bodies. Adults are usually found in the nasal passages of felines and canines, and the larvae are found in the viscera of a variety of mammals, including man. It includes the genus *Linguatula*.

linguatulosis (ling-gwat'u-lo'sis) linguatuliasis.

linguiform (ling'gwi-form) tongue-shaped.

lingula (ling'gu-lah), pl. *lin'gulae* [L., dim. of *lingua*] [NA] a general term for a small tongue-like structure. **L. cerebel'li** [NA], **l. of cerebellum**, the most ventral part of the vermis of the cerebellum, where the superior medullary velum attaches. **l. of left lung**, **l. pulmonis sinistri**. **l. of lower jaw**, **l. mandibulae**. **l. of mandible**, **l. mandib'ulae** [NA], the sharp medial boundary of the mandibular foramen, to which is attached the sphenomandibular ligament. **l. pulmo'nis sinis'tri** [NA], lingula of left lung: a projection from the lower portion of the upper lobe of the left lung, just beneath the cardiac notch, between the cardiac impression and the inferior margin. **l. of sphenoid**, **sphenoidal l.**, **l. of sphenoida'lis** [NA], a slender ridge of bone on the lateral margin of the carotid sulcus, projecting backward between the body and great wing of the sphenoid bone.

lingulae (ling'gu-le) [L.] plural of *lingula*.

lingular (ling'gu-lar) pertaining to a lingula.

lingulectomy (ling'gu-lek'to-me) excision of the lingula of the upper lobe of the left lung.

linguo- [L. *lingua* tongue] a combining form denoting relationship to the tongue.

linguoaxial (ling'gwo-ak'se-al) pertaining to or formed by the lingual and axial walls of a tooth cavity.

linguocervical (ling'gwo-ser'vi-kal) 1. pertaining to the lingual surface of the neck of a tooth. 2. linguogingival.

linguoclination (ling'gwo-kli-na'shun) lingual inclination.

linguocclusion (ling'gwo-kloo'zhun) lingual occlusion.

linguodental (ling'gwo-den'tal) pertaining to the tongue and the teeth.

linguodistal (ling'gwo-dis'tal) pertaining to or formed by the lingual and distal surfaces of a tooth, or the lingual and distal walls of a tooth cavity.

linguogingival (ling'gwo-jin'ji-val) pertaining to the tongue and gingiva; pertaining to or formed by the lingual and gingival walls of a tooth cavity.

linguoincisor (ling'gwo-in-si'zal) pertaining to or formed by the lingual and incisal surfaces of a tooth.

linguomesial (ling'gwo-me'ze-al) pertaining to or formed by the lingual and mesial surfaces of a tooth, or the lingual and mesial walls of a tooth cavity.

linguo-occlusal (ling'gwo-δ-kloo'zal) pertaining to or formed by the lingual and occlusal surfaces of a tooth.

linguopapillitis (ling'gwo-pap'i-li'tis) [L. *lingua* tongue + *papillitis*] inflammation or ulceration of the papillae of the edges of the tongue.

linguopacement (ling'gwo-plās'ment) [L. *lingua* tongue + *displacement*] lingual placement.

linguopulpal (ling'gwo-pul'pal) pertaining to or formed by the lingual and pulpal walls of a tooth cavity.

linguoversion (ling'gwo-ver'zhun) displacement of a tooth lingually from the line of occlusion.

liniment (lin'i-ment) [L. *linimentum*; *linere* to smear] an oily liquid preparation to be used on the skin. **camphor l.**, a

preparation of camphor and cottonseed oil used as a local irritant to the skin. **camphor and soap l.**, a preparation of green soap, camphor, rosemary oil, alcohol, and purified water, used as a local irritant to the skin. **chloroform l.**, a preparation of chloroform with camphor and soap liniment used as a local irritant to the skin. **medicinal soft soap l.**, green soap tincture.

linimentum (lin'i-men'tum) [L.] liniment. **l. cam'phorae**, camphor liniment. **l. cam'phorae et sapo'nis**, camphor and soap liniment. **l. chlorofo'rm**, chloroform liniment. **l. sapo'nis mol'lis**, green soap tincture.

linin (li'nin) [L. *linum* thread] the faintly staining substance composing the fine, netlike threads found in the nucleus of a cell, where it bears the chromatin in the form of granules. Cf. *achromatin*.

linitis (li-ni'tis) [Gr. *linon* thread + *-itis*] inflammation of the gastric cellular tissue. **l. plas'tica**, diffuse fibrous proliferation of the submucous connective tissue of the stomach, resulting in thickening and fibrosis so that the organ is constricted, inelastic, and rigid (like a leather bottle). It is almost always a manifestation of adenocarcinoma but is also seen in benign conditions such as gastric syphilis. Called also *Brinton's disease*, *gastric sclerosis*, *cirrrosis of the stomach*, *cirrhotic gastritis*, and *leather bottle stomach*.

linkage (lingk'ij) 1. the connection between different atoms in a chemical compound, or the symbol representing it in structural formulas; see also *bond*. 2. in genetics, the association of genes having loci on the same chromosome, which results in the tendency of a group of such nonallelic genes to be associated in inheritance. 3. in psychology, the connection between a stimulus and its response.

linked (linkt) in genetics, referring to characters which are united so as invariably to be inherited together. See also *X-linked*, under *gene*.

Linodil (lin'o-dil) trademark for a preparation of inositol niacinate.

Linognathus (lin-og'nah-thus) a genus of insects of the order Anoplura, sucking lice. *L. peda'lis* infests sheep. *L. seto'sus* the dog. *L. sten'opis* the goat. *L. vitu'li* is the long-nosed louse of the ox.

linolein (lin-o'le-in) [L. *linum* flax + *oleum* oil] a neutral fat from linseed oil; the triglyceride of linoleic acid.

linseed (lin'sēd) the dried ripe seed of *Linum usitatissimum* L. (Linaceae), used as a topical demulcent and emollient; called also *flaxseed* and *linum*.

Linser's method (lin'serz) [Paul Linser, German dermatologist, born 1871] see under *method*.

Linstowiidae (lin-sto-wi'de) a family of medium-sized or small tapeworms of the order Cyclophyllidea, subclass Cestoda, which parasitize birds, reptiles, and mammals, including man; medically important genera are *Oochoristica* and *Inermicapsifer*.

lint (lint) [L. *linteum*, from *linum*, flax] an absorbent surgical dressing material once made by scraping or picking apart old woven linen, but now a specially finished fabric woven in sheets; called also *patent l.* or *sheet l.*

lintin (lin'tin) a loose fabric of prepared absorbent cotton used in dressing wounds.

lintine (lin'tēn) cotton lint from which the oil has been removed.

linum (li'num) [L. "flax"] linseed.

lio- (li'o) for words beginning thus, see also those beginning *leio-*.

Li₂O lithium oxide.

LiOH lithium hydroxide.

Lioreal (li-ōr'ē-sal) trademark for a preparation of baclofen.

liothyronine (li'o-thi'ro-nēn) chemical name: O-(4-hydroxy-3-iodophenyl)-3,5-diiodo-L-tyrosine. The synthetic levo isomer of the thyroid hormone triiodothyronine, C₁₅H₁₂I₃NO₄, which is more potent and has a more rapid action than thyroxine. **l. sodium** [USP], the monosodium salt of liothyronine, C₁₅H₁₁I₃NNa O₄, occurring as a light tan, crystalline powder; used for thyroid replacement or supplementation in hypothyroidism and simple (nontoxic) goiter, administered orally.

liotrix (li'o-triks) a mixture of liothyronine sodium and levothyroxine sodium in a ratio of 1:4 in terms of weight; used for replacement therapy in conditions in which there is deficient production of thyroid hormones, administered orally.

lip (lip) 1. either the upper or lower fleshy margin of the mouth, together called *labia oris* [NA]. 2. a marginal part; called also *labium*. **acetabular l.**, labrum acetabulare. **anterior l. of cervix of uterus**, labium anterius ostii uteri. **anterior l. of ostium of uterus**, labium anterius ostii uteri. **anterior l. of pharyngeal opening of auditory tube**, labium anterius ostii pharyngei tubae auditivae. **cleft l.**, harelip. **double l.**, redundancy of the submucous tissue and mucous membrane of the lip on either side of the median line. **external l. of iliac crest**, labium externum cristae iliaceae. **external l. of linea aspera of femur**, labium laterale lineae asperae femoris. **fibrocartilaginous l. of acetabulum**, labrum acetabulare. **glenoid l.**, labrum glenoidale. **gle-**

Linguatula, larval form (Mitchell).

noid l. of articulation of hip, labrum acetabulare. **glenoid l. of articulation of humerus**, labrum glenoidale. **greater l. of pudendum**, labium majus pudendi. **Hapsburg l.**, a thick overdeveloped lower lip that often accompanies a Hapsburg jaw. **inferior l.**, the lower lip (labium inferius oris [NA]). **inferior l. of ileocecal valve**, labium inferius valvulae coli. **internal l. of iliac crest**, labium internum cristae iliacae. **lateral l. of linea aspera of femur**, labium laterale lineae asperae femoris. **lesser l. of pudendum**, labium minus pudendi. **lower l.**, labium inferius oris. **medial l. of linea aspera of femur**, labium mediale lineae asperae femoris. **posterior l. of cervix of uterus**, labium posterius ostii uteri. **posterior l. of ostium of uterus**, labium posterius ostii uteri. **posterior l. of pharyngeal opening of auditory tube**, labium posterius ostii pharyngei tubae auditivae. **rhombic l.**, the lateral boundary of the rhombencephalon during embryonic life. **superior l.**, the upper lip (labium superius oris [NA]). **superior l. of ileocecal valve**, labium superius valvulae coli. **tympanic l. of limb of spiral lamina**, labium tympanicum limbi laminae spiralis. **upper l.**, labium superius oris. **vestibular l. of limb of spiral lamina**, labium vestibulare limbi laminae spiralis.

lipacidemia (lip'as-i-de'me-ah) [*lipo-* + *L. acidus* acid + *Gr. haima* blood + *-ia*] the presence of an excess of fatty acids in the blood, as in diabetes mellitus.

lipaciduria (lip'as-i-du're-ah) [*lipo-* + *L. acidus* acid + *Gr. ouron* urine + *-ia*] the presence of fatty acids in the urine.

liparocele (lip-ar'o-sēl) [*Gr. liparos* oily + *kēlē* tumor] a fatty scrotal tumor; also a hernia containing fatty material.

liparodyspnea (lip'ah-ro-disp'ne-ah) the dyspnea of the obese.

liparoid (lip'ah-roid) fatty; resembling fat.

liparomphalus (lip'ah-rom'fah-lus) [*Gr. liparos* oily + *omphalos* navel] (*obs.*) a lipoma of the umbilicus.

lipase (lip'ās, lī'pās) [*Gr. lipos* fat + *-ase*] glycerol-ester hydrolase; any of a group of widely occurring enzymes that catalyze the hydrolysis of ester linkages between the fatty acids and glycerol of the triglycerides and phospholipids. They occur in milk, the pancreas, adipose tissue, the stomach, and other tissues. **lipoprotein l.**, an esterase that catalyzes the hydrolysis of the constituent triglycerides of chylomicrons to form free fatty acid anions and glycerol. **pancreatic l.**, steapsin.

lipasic (lī-pa'sik) 1. pertaining to lipase. 2. lipolytic.

lipasuria (lip'ās-u're-ah) the presence of lipase in the urine.

lipectomy (lī-pek'to-me) [*lipo-* + *Gr. ektomē* excision] the excision of a mass of subcutaneous adipose tissue, as from the abdominal wall; called also *adipectomy*.

lipedema (lip'ē-de'mah) [*lipo-* + *edema*] an accumulation of excess fat and fluid in subcutaneous tissues.

lipemia (lī-pe'me-ah) [*lipo-* + *Gr. haima* blood + *-ia*] an excess of fat or lipid in the blood; hypercholesterolemia; hyperlipemia. **alimentary l.**, that which occurs after the ingestion of food. **l. retina/lis**, a high level of lipids in the blood, manifested by a milky appearance of the veins and arteries of the retina.

lipese (lip'ēs) an early term used to describe an enzyme that brings about the synthesis of fats.

lipid (lip'id) any of a heterogeneous group of fats and fatlike substances characterized by being water-insoluble and being extractable by nonpolar (or fat) solvents such as alcohol, ether, chloroform, benzene, etc. All contain as a major constituent aliphatic hydrocarbons. The lipids, which are easily stored in the body, serve as a source of fuel, are an important constituent of cell structure, and serve other biological functions. Lipids may be considered to include fatty acids, neutral fats, waxes, and steroids. *Compound lipids* comprise the glycolipids, lipoproteins, and phospholipids.

lipidase (lip'i-dās) a general term for an enzyme that catalyzes the splitting up of lipids.

lipide (lip'id) lipid.

lipidemia (lip'i-de'me-ah) hyperlipidemia.

lipidic (lip'id'ik) pertaining to or containing lipids.

lipidol (lip'i-dol) a lipid alcohol; an aliphatic fatty alcohol.

lipidolysis (lip'i-dol'ī-sis) the splitting up of lipids.

lipidolytic (lip'i-dol-it'ik) pertaining to, characterized by, or causing lipidolysis.

lipidosis (lip'i-do'sis) a general term for disorders of cellular lipid metabolism involving abnormal accumulations of lipids. The lipidoses include Hand-Schüller-Christian disease, Niemann-Pick disease, Tay-Sachs disease, and Gaucher's disease. **ceramide lactoside l.**, ceramide lactosidosis. **cerebroside l.**, cerebrosidosis. **hereditary dystopic l.**, angiokeratoma corporis diffusum. **sphingomyelin l.**, Niemann-Pick disease. **sulfatide l.**, metachromatic leukodystrophy.

lipidtemns (lip'id-temnz) a collective name for the products formed by the digestion of fats, namely, glycerin and fatty acids.

lipiduria (lip'i-du're-ah) [*lipid* + *Gr. ouron* urine + *-ia*] the presence of lipids in the urine.

lipin (lip'in) [*Gr. lipos* fat] lipid.

Lipiodol (lip-i'o-dol) trademark for iodized oil used as a contrast medium.

Lipmann (lip'man), Fritz Albert. German biochemist in America, born 1899; co-winner, with Hans Adolph Krebs, of the Nobel prize in medicine and physiology for 1953 for his discovery of coenzyme A and its importance in intermediary metabolism.

lipo- (lip'o) [*Gr. lipos* fat] a combining form denoting relationship to fat or to lipids.

lipoadenoma (lip'o-ad'ē-no-mah) lipomatosis of the parenchyma of a gland.

lipoarthritis (lip'o-ar-thri'tis) [*lipo-* + *arthritis*] inflammation of the fatty tissue of a joint.

lipoatrophy (lī'po-at'ro-fe) 1. focal atrophy of subcutaneous fat at the sites of insulin injections. 2. lipodystrophy.

lipoblast (lip'o-blast) [*lipo-* + *Gr. blastos* germ] a specialized connective tissue cell which develops into a fat cell.

lipoblastoma (lip'o-blas-to'mah) [*lipo-* + *Gr. blastos* germ + *-oma*] a benign fatty tumor composed of a mixture of embryonal lipoblastic cells in a myxoid stroma and mature fat cells; the tumor cells are arranged in lobules and occur most often in children.

lipocaic (lip'o-ka'ik) [*lipo-* + *Gr. kaiein* to burn] a substance extracted from the pancreas which reputedly prevents the deposition of fat in the livers of animals after pancreatectomy and after other experimental procedures.

lipocardiac (lip'o-ka'r-de-ak) [*lipo-* + *Gr. kardia* heart] relating to a fatty heart.

lipocatabolic (lip'o-kat'ah-bol'ik) pertaining to or effecting the destructive metabolism of fat.

lipoccele (lip'o-sēl) [*lipo-* + *Gr. kēlē* tumor] adipoccele.

lipocellulose (lip'o-sel'u-lōs) a heterohexosan composed of lipids and cellulose.

lipoceratous (lip'o-ser'ah-tus) adipoceratous.

lipocere (lip'o-sēr) [*lipo-* + *L. cera* wax] adipocere.

lipochondria (lip'o-kon'dre-ah) [*lipo-* + *Gr. chondrion* granule] lipid-containing inclusions in the cytoplasm of amphibian eggs.

lipochondrodystrophy (lip'o-kon'dro-dis'tro-fe) [*lipo-* + *Gr. chondros* cartilage + *dystrophy*] Hurler's syndrome.

lipochondroma (lip'o-kon-dro'mah) [*lipo-* + *Gr. chondros* cartilage + *-oma*] a tumor composed of mature lipomatous and cartilaginous elements; such lesions are now generally called *benign mesenchymoma*.

lipochrome (lip'o-krōm) [*lipo-* + *Gr. chrōma* color] any one of a group of fat-soluble hydrocarbon pigments, such as carotin, xanthophyll, lutein, chromophane, and the natural coloring material of butter, egg yolk, and yellow corn. They are also known as carotenoids.

lipochromemia (lip'o-kro-me'me-ah) [*lipochrome* + *Gr. haima* blood + *-ia*] the presence of an excess of lipochrome in the blood.

lipochromogen (lip'o-kro'mo-jen) a substance that becomes converted into lipochrome.

lipoclastis (lī-pok'lah-sis) [*lipo-* + *Gr. klasis* breaking] lipolysis.

lipoclastic (lip'o-klas'tik) [*lipo-* + *Gr. klastikos* breaking up] lipolytic.

lipocorticoid (lip'o-kor'ti-koid) a corticoid effective in causing deposition of fat, especially in the liver.

lipocyanine (lip'o-si'ah-nin) [*lipo-* + *Gr. kyanos* blue] a blue pigment resulting from the action of strong sulfuric acid on lipochrome.

lipocyte (lip'o-sit) [*lipo-* + *-cyte*] a fat cell.

lipodieresis (lip'o-di-er'ē-sis) [*lipo-* + *Gr. diairesis* a taking] the splitting up or the decomposition of fat.

lipodieretic (lip'o-di-er-et'ik) pertaining to, characterized by, or causing lipodieresis.

lipodystrophia (lip'o-dis'tro'fe-ah) lipodystrophy. **l. intestinalis**, intestinal lipodystrophy. **l. progressiva**, a disease characterized by the progressive and symmetrical disappearance of subcutaneous fat from the parts above the pelvis, facial emaciation, and abnormal accumulation of fat about the thighs and buttocks. Called also *lipodystrophy*.

lipodystrophy (lip'o-dis'tro-fe) [*lipo-* + *Gr. dystrophia* dystrophy] 1. any disturbance of fat metabolism. 2. lipodystrophia progressiva. **congenital generalized l.**, a hereditary condition characterized by the virtual absence of subcutaneous adipose tissue, macrosomia (thick skin, large hands and feet, muscular hypertrophy, heavy bones), visceromegaly (heart, kidneys, spleen, and liver), hypertrichosis, acanthosis nigricans, and reduced glucose tolerance in the presence of high insulin levels; it is transmitted as an autosomal recessive trait. **inferior l.**, lipodystrophy of the lower limbs. **insulin l.**, a local reduction of the subcutaneous fat in a region repeatedly injected with insulin. **intestinal l.**, a disease marked by diarrhea with fatty stools, arthritis, emaciation, and loss of strength, and attended with deposit of fat in the intestinal lymphatic tissue; called also *Whipple's disease* and *lipophagia granulomatosis*. **progressive l.**, lipodystrophia progressiva.

lipoferous (lĭ-pōf'er-us) [*lipo-* + *L. ferre* to carry] 1. carrying fat. 2. sudanophil.

lipofibroma (lĭp'o-fi-brō'mah) a lipoma containing areas of fibrosis.

lipofuscin (lĭp'o-fus'sin) any one of a class of fatty pigments formed by the solution of a pigment in fat. Cf. *lipochrome*.

lipofuscinosis (lĭp'o-fu'sin-o'sis) any disorder due to abnormal storage of lipofuscins. **neuronal ceroid l.**, a group of hereditary autosomal recessive diseases characterized by the accumulation in neurons and other tissues of lipopigments (ceroid and lipofuscin); clinically there is central nervous deterioration, optic atrophy, macular degeneration, retinitis pigmentosa, and seizures.

lipogenesis (lĭp'o-jen'ē-sis) [*lipo-* + *genesis*] the formation of fat; the transformation of nonfat food materials into body fat.

lipogenetic (lĭp'o-jē-net'ik) . lipogenic.

lipogenic (lĭp'o-jen'ik) forming, producing, or caused by fat.

lipogenous (lĭ-poj'ē-nus) [*lipo-* + *Gr. gennan* to produce] producing fatness.

lipogranuloma (lĭp'o-gran-u-lo'mah) [*lipo-* + *granuloma*] a nodule of lipid material; a foreign body inflammation of adipose tissue containing granulation tissue and oil cysts.

lipogranulomatosis (lĭp'o-gran'u-lo-mah-to'sis) a condition of faulty lipid metabolism in which yellow nodules of lipid matter are deposited in the skin and mucosae, giving rise to granulomatous reactions. **Farber's l.**, see under *syndrome*.

lipohemarthrosis (lĭp'o-hem'ar-thro'sis) [*lipo-* + *Gr. haima* blood + *arthron* joint + *-osis*] the presence of fat-containing blood in a joint, with intra-articular fracture.

lipohemia (lĭp'o-he'me-ah) lipemia.

Lipo-Hepin (lĭp'o-hep'in) trademark for a preparation of heparin sodium.

lipohistiodieresis (lĭp'o-his'te-o-di-er'ē-sis) the disappearance of stored fat from body tissue.

lipohyalin (lĭp'o-hi'ah-lin) the lipid deposited in the beta cells of the pancreas in association with hyalinization in diabetes.

lipoid (lĭp'oid) [*lipo-* + *Gr. eidos* form] 1. fatlike; resembling fat; adipoid. 2. lipid. **acetone-insoluble p's**, lipids, consisting largely of lecithins, precipitated from an ethereal extract of dried ox heart by adding an excess of acetone; used as an antigen in the Wassermann test after being brought into solution in a mixture of 1 part of ether and 9 parts of methanol. **anisotropic l.**, a lipid having doubly refractive properties. **Forssman's l.**, Forssman's antigen.

lipoidal (lĭp'oi'dal) fatlike; resembling fat.

lipoidemia (lĭp'oi-de'me-ah) lipemia.

lipoidic (lĭ-poi'dik) fatlike; resembling fat.

lipoidolytic (lĭ-poi'do-lit'ik) lipidolytic.

lipoidosis (lĭp'oi-do'sis) a disturbance of lipid metabolism with abnormal deposit of lipids in the cells. **arterial l.**, atherosclerosis. **cerebroside l.**, Gaucher's disease. **cholesterol l.**, Hand-Schüller-Christian disease. **l. cu'tis et muco'sae**, lipid proteinosis. **phosphatide l.**, Niemann-Pick disease. **renal l.**, lipid nephrosis.

lipoidproteinosis (lĭp'oid-pro'te-in-o'sis) a familial disease occurring in the course of latent diabetes, marked by yellowish nodules on the skin and mucosae, keratotic lesions on the extremities, and hoarseness due to faulty lipid metabolism.

lipoidsiderosis (lĭp'oid-sid-ē-ro'sis) the deposit of iron pigment in lipids.

lipoiduria (lĭp'oi-du're-ah) lipiduria.

lipolipoidosis (lĭp'o-lip'oi-do'sis) the presence of lipoids and neutral fats in the cells.

Lipo-Lutin (lĭ-po-lu'tin) trademark for preparations of progesterone.

lipolysis (lĭ-pol'i-sis) [*lipo-* + *Gr. lysis* dissolution] the decomposition or splitting up of fat; called also *adipolysis*.

lipolytic (lĭp'o-lit'ik) pertaining to, characterized by, or causing lipolysis; adipolytic.

lipoma (lĭ-po'mah) [*lipo-* + *-oma*] a benign tumor usually composed of mature fat cells. At times the tumor may be composed partly or entirely of fetal fat cells (hibernoma). **l. annula're col'li**, Madelung's neck. **l. arborescens**, a lipoma within a joint having a treelike form. **l. capsula're**, a fatty tumor due to increase of the fat in the capsule of an organ. **l. caver-no'sum**, angiolipoma. **diffuse l.**, diffuse lipomatosis. **l. diffu'sum re'nis**, lipomatous nephritis. **l. doloro'sa**, see *nodular circumscribed lipomatosis*, under *lipomatosis*. **fat cell l.**, fetal, hibernoma. **l. fibro'sum**, a lipoma in which there are areas of fibrosis. **intradural l.**, lipoma with components within or beneath the dura mater of the spine or sacrum. **l. myxomato'des**, a lipomyxoma. **nevus l.** (obs.), angiolipoma. **l. ossif'icans**, an ossified lipoma. **l. petrif'icans** (obs.), a calcified lipoma. **l. petrif'icum ossif'icans** (obs.), an ossified lipoma. **l. sarcomato'des**, liposarcoma. **telangiectatic l.**, **l. telangiecto'des**, angiolipoma.

lipomatoid (lĭ-po'mah-toid) resembling a lipoma.

lipomatosis (lĭp'o-mah-to'sis) a condition characterized by abnormal localized, or tumor-like, accumulations of fat in the tissues. **l. atroph'icans**, localized accumulations of fat in certain tissues, associated with emaciation of the rest of the body; see also *lipodystrophia progressiva*. **congenital l. of pancreas**, Schwachman-Diamond syndrome. **diffuse l.**, abnormal increase of subcutaneous fat in the parts above the pelvis, usually in males. **l. doloro'sa**, lipomatosis in which the adipose de-

Diffuse lipomatosis (Babcock).

posits are tender or painful. **l. gigan'tea**, a form in which the adipose deposits form large masses. **nodular circumscribed l.**, the formation of multiple circumscribed or encapsulated lipomas which may be distributed symmetrically (multiple symmetrical lipomatosis) or haphazardly or which may form a collar around the neck (Madelung's neck). At times they may be painful (lipoma, or lipomatosis, dolorosa). **renal l.**, **l. re'nis**, replacement l. of kidney, partial replacement of the renal parenchyma (usually an atrophic or hydronephrotic kidney) by adipose tissue. **symmetrical l.**, see *nodular circumscribed l.*

lipomatous (lĭ-po'mah-tus) affected with, or of the nature of, lipoma.

lipomenigocele (lĭp'o-mē-ning'go-sēl) meningocele associated with an overlying lipoma, in spina bifida.

lipomeria (lĭ'po-me're-ah) [*Gr. leipein* to leave + *meros* a part] monstrosity consisting of the congenital absence of a limb.

lipometabolic (lĭp'o-met'ah-bol'ik) pertaining to metabolism of fat.

lipometabolism (lĭp'o-mē-tab'o-lizm) [*lipo-* + *metabolism*] the metabolism of fat; utilization of fat.

lipomicron (lĭp'o-mi'kron) a microscopic fat particle in the blood.

lipomucopolysaccharidosis (lĭp'o-mu'ko-pol'e-sak-ah-rĭ-do'sis) . mucopolidosis I.

lipomyohangioma (lĭp'o-mi'o-hē-man'je-o'mah) a hamartoma composed of adipose, muscle, and vascular tissue.

lipomyoma (lĭp'o-mi-o'mah) a benign mesenchymoma composed of leiomyomatous and lipomatous tissues.

lipomyxoma (lĭp'o-miks-o'mah) a myxoma containing fatty elements.

liponephrosis (lĭp'o-nēfro'sis) lipid nephrosis.

liponeurocyte (lĭp'o-nu'ro-sīt) the name given by Cramer to cells found in the pituitary body of rats.

Liponyssus (lĭp'o-nis'us) [*lipo-* + *Gr. nyssein* to pierce] former name for *Ornithonyssus*. **L. baco'ti**, *Ornithonyssus bacoti*. **L. bur'sa**, *Ornithonyssus bursa*. **L. sylvia'rum**, *Ornithonyssus sylvium*.

lipopathy (lĭ-pop'ah-thē) [*lipo* + *pathy*] any disorder of lipid metabolism.

lipectic (lĭp'o-pek'tik) pertaining to, characterized by, or causing lipectia.

lipopenia (lĭp'o-pe'ne-ah) [*lipo-* + *Gr. penia* poverty] deficiency of lipids in the body.

lipopenic (lĭp'o-pe'nik) pertaining to, characterized by, or causing lipopenia.

lipeptid (lĭp'o-pep'tid) a poorly defined group of fat-like substances composed of amino acids and fatty acids.

lipopexia (lĭp'o-pek'se-ah) [*lipo-* + *Gr. pēxis* fixation] the accumulation of fat in the tissues.

lipopexic (lĭp'o-pek'sik) lipectic.

lipophag (lĭp'o-fāj) a cell that ingests or absorbs fat.

lipophagia (lĭp'o-fa'je-ah) lipophagy. **l. granulomato'sis**, intestinal lipodystrophy.

lipophagic (lĭp'o-fa'jik) [*lipo-* + *Gr. phagein* to eat] pertaining to, characterized by, or causing lipophagy; lipolytic.

lipophagy (lĭ-pof'ah-je) the absorption of fat; lipolysis.

lipophanerosis (lĭp'o-fan'ē-ro'sis) the process by which invisible fat in certain cells becomes detectable as small droplets.

lipophil (lĭp'o-fil) an element that has an affinity for fat.

lipophilia (lĭp'o-fil'e-ah) [*lipo-* + *Gr. philein* to love + *-ia*] 1. affinity for fat. 2. a tendency of the obese for fat fixation.

lipophilic (lĭp'o-fil'ik) having an affinity for fat; pertaining to or characterized by lipophilia.

lipophore (lip'o-för) [*lipo-* + Gr. *phoros* bearing] a pigment cell containing a lipochrome pigment; chromatophore.

lipopolysaccharide (lip'o-pol'e-sak'ah-rid) a molecule or compound in which lipids and polysaccharides are linked, as in cell membranes.

lipoprotein (lip'o-pro'te-in) a combination of a lipid and protein, possessing the general properties (e.g., solubility) of proteins. Practically all of the lipids of the plasma are present as lipoprotein complexes, α - and β -lipoproteins being distinguished by electrophoresis. The β -lipoproteins transport more of the total plasma cholesterol, contain a higher concentration of both free and esterified cholesterol, and have a higher cholesterol/phospholipid ratio than α -lipoproteins. Cf. *proteolipid*. **high-density 1. (HDL)**, a plasma lipoprotein containing high levels of protein, little triglycerides, moderate levels of phospholipids, and relatively little cholesterol. **low-density 1. (LDL)**, a plasma lipoprotein containing a low percentage of triglycerides, moderate levels of phospholipids, high levels of cholesterol, and moderate levels of protein. **very low-density 1. (VLDL)**, a plasma lipoprotein containing high concentrations of triglycerides, moderate concentrations of both phospholipids and cholesterol, and little protein. Called also *prebetalipoprotein*.

lipoproteinemia (lip'o-pro'te-in-e'me-ah) the presence of excessive lipoproteins in the blood.

lipoproteinosis (lip'o-pro'te-in-o'sis) lipid proteinosis.

liporhodin (lip'o-ro'din) [*lipo-* + Gr. *rhodon* rose] a red lipochrome.

liposarcoma (lip'o-sar-ko'mah) [*lipo-* + *sarcoma*] a malignant tumor derived from primitive or embryonal lipoblastic cells which exhibit varying degrees of lipoblastic and/or lipomatous differentiation.

liposis (li-po'sis) [Gr. *lipos* fat + *-osis*] lipomatosis.

liposoluble (lip'o-sol'u-b'l) [*lipo-* + *soluble*] soluble in fats.

liposome (lip'o-söm) [*lipo-* + Gr. *sōma* body] a spherical particle in an aqueous medium, formed by a lipid bilayer enclosing an aqueous compartment.

lipostomy (li-pos'to-me) [Gr. *leipein* to fail + *stoma* mouth] congenital smallness or absence of the mouth.

Liposyn (lip'o-sin) trademark for an intravenous fat emulsion containing 10 per cent safflower oil stabilized with egg phospholipids; used to prevent deficiency of essential fatty acids during prolonged total parenteral nutrition.

lipothymia (li'po-thi'me-ah) [Gr. *leipein* to fail + *thymos* mind] a feeling of faintness; syncope.

lipotrophic (lip'o-trof'ik) pertaining to, characterized by, or causing lipotrophy.

lipotrophy (li-pot'ro-fe) [*lipo-* + Gr. *trophē* nutrition] increase of bodily fat.

lipotropic (lip'o-trop'ik) 1. acting on fat metabolism by hastening the removal of or decreasing the deposit of fat in the liver. 2. an agent that has such effects.

β -lipotropin (lip'o-tro'pin) a polypeptide synthesized by cells of the adenohypophysis which promotes the mobilization of fat and the darkening of the skin by stimulation of melanocytes. It also contains two sequences of amino acid residues identified as β -endorphin and methionine enkephalin.

lipotropism (li-pot'ro-pizm) the condition of being lipotropic.

lipotropy (li-pot'ro-pe) [*lipo-* + Gr. *tropē* a turning] lipotropism.

lipotuberculin (lip'o-tu-ber'ku-lin) a preparation of tuberculin that includes the fatty fraction of *Mycobacterium tuberculosis* in solution or emulsion.

lipovaccine (lip'o-vak'sēn) [*lipo-* + *vaccine*] a vaccine prepared by suspending microorganisms in vegetable oil for the purpose of delaying absorption of the antigenic substances.

lipovitellin (lip'o-vi-tel'in) a lipoprotein found in the yolk of eggs.

lipoxanthine (lip'o-zan'thin) [*lipo-* + Gr. *xanthos* yellow] a yellow lipochrome.

lipoxidase (li-pok'si-dās) lipoxygenase.

lipoxygenase (li-poks'i-jē-nās) linoleate:oxygen oxidoreductase. An enzyme that catalyzes the addition of molecular oxygen to the double bonds of polyunsaturated fatty acids, to form a peroxide of the acid. Obtained from plants. Called also *lipoxidase*.

lipoxysm (lip-oks'izm) [Gr. *lipos* fat + *oxys* sharp, acid] poisoning by oleic acid.

lippa (lip'ah) blepharitis ciliaris.

lipping (lip'ing) 1. a wedge-shaped shadow in the roentgenogram of chondrosarcoma between the cortex and the elevated periosteum. 2. the development of a bony overgrowth in osteoarthritis.

lippitude (lip'i-tūd) [L. *lippitudo*; *lippus* bleary-eyed] blepharitis ciliaris.

Lipschütz bodies, cell, ulcer (disease) (lip'shitz) [Benjamin Lipschütz, Austrian dermatologist, 1878–1931] see under *body*, and see *centrocyte* and *ulcus vulvae acutum*.

lipsotrichia (lip'so-trik'e-ah) [Gr. *leipein* to leave + *thrix* hair] trichomadesis.

lipuria (li-pu're-ah) [Gr. *lipos* fat + *ouron* urine + *-ia*] the presence of oil or fat in the urine.

lipuric (li-pu'rik) pertaining to or characterized by lipuria.

Liq. abbreviation for *liquor*.

Liquaemin (lik'wah-min) trademark for preparations of sodium heparin.

Liquamar (lik'wah-mar) trademark for a preparation of phenprocoumon.

liquefacient (lik'wē-fa'shent) [L. *liquefaciens*] having the quality to convert a solid material into a liquid, producing liquefaction.

liquefaction (lik'wē-fak'shun) [L. *liquefactio*; *liquere* to flow + *facere* to make] the conversion of a material into a liquid form.

liquefactive (lik'wē-fak'tiv) pertaining to, characterized by, or causing liquefaction.

liquescent (lik-wes'ent) [L. *liquescere* to become liquid] tending to become liquid; becoming liquid.

liquid (lik'wid) [L. *liquidus*; *liquere* to flow] 1. a substance that flows readily in its natural state. 2. flowing readily; neither solid nor gaseous. See also *fluid*, *liquor*, *mixture*, and *solution*. **Declat's 1.**, a solution of carbolate of ammonia for external and internal use in cholera. **Müller's 1.**, see under *fluid*. **Pasteur's 1.**, see under *solution*.

liquiform (lik'wē-form) resembling a liquid.

Liquiprin (lik'wī-prin) trademark for a preparation of acetaminophen.

liuogel (lik'wo-jel) a gel which after melting gives a sol of low viscosity. Cf. *viscogel*.

liquor (lik'er, li'kwor), pl. *liquors*, *liquores* [L.] 1. a liquid, especially an aqueous solution containing a medicinal substance. 2. a general term used in anatomical nomenclature for certain fluids of the body. See also *fluid*, *liquid*, and *solution*. **1. am'nii**, amniotic fluid. **1. cerebrospinal/1is** [NA], cerebrospinal fluid (CSF): the fluid contained within the four ventricles of the brain, the subarachnoid space, and the central canal of the spinal cord; formed by choroid plexuses and brain parenchyma, it circulates through the ventricles into the subarachnoid space and is absorbed into the venous system. **1. cho'rii**, a fluid which separates the amnion from the chorion in the early stages of gestation. **1. cotun'nii**, perilymph (perilymph [NA]). **1. enter'icus**, succus entericus. **1. follic'uli**, follicular fluid: an albuminous fluid in the vesicular ovarian follicle surrounding the ovum. **1. gas'tricus**, succus gastricus. **Morgagni's 1. (obs.)**, a fluid between the eye lens and its capsule. **mother 1.**, the liquid from which any substance has been separated by crystallization. **1. pancreat'icus**, succus pancreaticus. **1. pericar'dii**, pericardial fluid: a fluid found in small amount in the potential space between the parietal and visceral laminae of the serous pericardium. **1. prostat'icus**, succus prostaticus. **1. pu'ris**, the fluid portion of pus. **1. san'guinis**, the fluid portion of the blood; the blood plasma. **1. of Scarpa**, **1. scar'pae**, endolymph (endolymph [NA]). **1. sem'inis**, the fluid portion of the semen.

liquores (li-kwo'rēz) [L.] plural of *liquor*.

liquorice (lik'er-is) see *Glycyrrhiza*.

liquorrhea (li'kwo-re'ah) [L. *liquor* liquid + Gr. *rhoia* flow] an excessive discharge of any body fluid, e.g., liquorrhea nasalis.

Lirugen (li'ru-jen) trademark for a preparation of live attenuated measles virus vaccine.

Lisacort (lis'ah-kort) trademark for a preparation of prednisone.

Lisfranc's amputation, etc. (lis-frahns') [Jacques Lisfranc, French surgeon, 1790–1847] see under *amputation*, *joint*, *ligament*, and *tubercle*.

Lissauer's marginal zone, paralysis, tract (column) (lis'ow-erz) [Heinrich Lissauer, German neurologist, 1861–1891] see under *paralysis* and *zone*, and see *tractus dorsolateralis*.

Lissancephala (lis'en-sef'ah-lah) [Gr. *lissos* smooth + *enkephalos* brain] a group of placental mammals in which the brain is characteristically smooth or is marked by few convolutions, as bats, rodents, etc. Cf. *Gyrencephala*.

lissancephalia (lis'en-sē-fa'le-ah) agyria.

lissancephalic (lis'en-sē-fal'ik) 1. pertaining to the Lissancephala. 2. having cerebral hemispheres without or with only shallow convolutions, the normal appearance of the brain of many animals (e.g., bats, rodents). Cf. *gyrencephalic*. 3. agyric.

lissancephaly (lis'sen-sef'ah-le) agyria.

lissive (lis'iv) [Gr. *lissos* smooth] relieving muscle spasm without interfering with function.

Lister (lis'ter), Baron Joseph (1827–1912). English surgeon whose publication in 1867 of the principles of antiseptic surgery made "clean" operations a reality, and catalyzed the development of modern surgery.

Listerella (lis'ter-el'ah) *Listeria*.

listerellosis (lis'ter-el-lo'sis) listeriosis.

Listeria (lis-ter/'e-ah) [Baron Joseph Lister] a genus of microorganisms of the family Corynebacteriaceae, order Eubacteriales, made up of coccoid to bacillary gram-positive microorganisms apparently occurring primarily in lower animals, in which it produces septicemic or encephalomyelitic disease in sporadic or epizootic form. It infects man to produce an upper respiratory disease, with angina, lymphadenitis, and conjunctivitis, or a septicemic disease which may be transmitted transplacentally in pregnant women, or it may assume an encephalitic form. Human disease is often, but not invariably, associated with a monocytosis. There is a single species, *L. monocytogenes*.

listerial (lis-ter/'e-al) pertaining to or caused by organisms of the genus *Listeria*.

listeriosis (lis-ter/'e-o'sis) a sporadic disease of animals and occasionally of man caused by *Listeria monocytogenes*; nervous signs are common in ruminants, and necrosis of the liver in monogastric animals. Because affected animals tend to move in circles, it is also known as *circling disease*.

listerism (lis-ter-'izm) the principles and practice of antiseptic and aseptic surgery.

Listing's law, plane (lis-'tingz) [Johann Benedict Listing, German physiologist, 1808-1882] see under *law* and *plane*.

Liston's forceps, knives, operation (lis-'tonz) [Robert Liston, Scottish surgeon in London, 1794-1847] see under *forceps*, *knife*, and *operation*.

liter (le-'ter, li-'ter) [Fr. *litre*] a unit of volume in the metric system, equal to 1000 cubic centimeters, or 1 cubic decimeter, or to 1.0567 quarts liquid measure. Abbreviated *l* or *L*.

lithagoectasia (lith-'ah-go/'jek-ta'se-ah) [*litho-* + Gr. *agōgos* leading + *ektasis* stretching] lithectasy.

lithagogue (lith-'ah-gog) [*litho-* + Gr. *agōgos* leading] 1. expelling calculi. 2. a remedy that promotes the expulsion of calculi.

Lithane (lith-'ān) trademark for a preparation of lithium carbonate.

lithangiuria (lith-'an-je-u're-ah) [*litho-* + Gr. *angeion* vessel + *ouron* urine + *-ia*] calculous disease of the urinary tract.

litharge (lith-'arj) [Gr. *lithargyros*; *lithos* stone + *argyros* silver] see *lead monoxide*.

lithate (lith-'āt) a urate.

lithebole (li-thek-'bo-le) [*litho-* + Gr. *ekbolē* expulsion] expulsion of a calculus.

lithectasy (li-thek-'tah-se) [*litho-* + Gr. *ektasis* stretching] the extraction of calculi through the mechanically dilated urethra.

lithectomy (li-thek-'to-me) lithotomy.

lithemia (li-the'me-ah) [*lithic acid* + Gr. *haima* blood + *-ia*] excess of lithic or uric acid and the urates in the blood; it is due to imperfect metabolism of the nitrogenous elements.

lithemic (li-the'mik) pertaining to, affected with, or of the nature of lithemia.

lithia (lith/'e-ah) see *lithium*.

lithiasic (lith/'e-as'ik) pertaining to lithiasis.

lithiasis (li-thi-'ah-sis) [*litho-* + *-iasis*] 1. a condition characterized by the formation of calculi and concretions. 2. the gouty diathesis. Called also *calculosis*. **appendicular l.**, a condition in which the lumen of the vermiform appendix becomes obstructed with calculi; it is said to run in families, and to be akin to gout and rheumatism. **l. conjunctivae**, a condition marked by the formation of white, calcareous concretions in the acini of the meibomian glands. **pancreatic l.**, the presence of calcium concretions in the pancreas, usually associated with pancreatic exocrine (digestive enzymes) and endocrine (insulin) insufficiency, with steatorrhea, weight loss, and diabetes mellitus.

lithic (lith-'ik) 1. pertaining to calculus. 2. pertaining to lithium.

lithium (lith/'e-um) [Gr. *lithos* stone] a white metal; atomic number, 3; atomic weight, 6.939; symbol, *Li*; its oxide, lithia, Li_2O , is alkaline; its salts are solvents of uric acid to a certain extent in the test tube: based on this, it was formerly erroneously thought to be indicated in gout and rheumatic conditions. Lithium salts (lithium carbonate) are used in treating the manic phase of manic-depressive disorders. **l. benzoate**, a salt, $\text{C}_6\text{H}_5\cdot\text{CO}\cdot\text{O}\cdot\text{Li}$, in a white powder or in scales. **l. bromide**, a white, deliquescent, slightly bitter granular powder, $\text{LiBr}\cdot\text{H}_2\text{O}$, formerly used as a central nervous system depressant. **l. cacodylate**, a salt, $(\text{CH}_3)_2\text{AsOLi}$, formerly used as an arsenical remedy in gouty and rheumatic conditions and in anemia. **l. caffeine sulfonate**, a salt formerly used in gout and rheumatism and as a diuretic. **l. carbonate** [USP], chemical name: carbonic acid dilithium salt. A white, granular powder, Li_2CO_3 , used in the treatment of acute manic states and in the prophylaxis of recurrent affective disorders manifested by depression or mania only, or those in which both mania and depression occur occasionally, administered orally. **l. citrate**, a white crystalline powder, $\text{C}_6\text{H}_5\text{O}_7\text{Li}_3 + 4\text{H}_2\text{O}$. **l. diethiosaliclate**, an amorphous salt formerly used in the treatment of gout and rheumatism. **l. formate**, a salt in colorless needles, $\text{HCOOLi} + \text{H}_2\text{O}$, formerly used in gout and rheumatism. **l. glycerophosphate**, a white powder, $\text{C}_3\text{H}_5(\text{OH})_2\cdot\text{PO}_2(\text{OLi})_2$, formerly used as a nerve

tonic and antilithic. **l. iodate**, a salt, LiIO_3 , formerly used in gouty and renal disorders. **l. salicylate**, a white crystalline powder, $\text{OH}\cdot\text{C}_6\text{H}_4\cdot\text{COOLi}$, once used in rheumatism.

litho- (lith/'o) [Gr. *lithos* stone] a combining form denoting relationship to stone or to a calculus.

lithocenosia (lith/'o-sē-no'sis) [*litho-* + Gr. *kenōsis* evacuation] the removal from the bladder of the fragments of calculi that have been crushed.

lithoclast (lith/'o-klast) [*litho-* + Gr. *klaō* to crush] a lithotrite, or stone-crushing forceps, of various forms.

lithoclysmia (lith/'o-kliz'me-ah) [*litho-* + Gr. *klysmā* clyster] treatment of calculus by injecting solvent liquids into the bladder.

lithocystotomy (lith/'o-sis-tot'o-me) [*litho-* + Gr. *kystis* bladder + *temnein* to cut] a cutting operation for removing a stone from the bladder.

lithodialysis (lith/'o-di-al'i-sis) [*litho-* + Gr. *dialyein* to dissolve] 1. the solution of calculi in the bladder by injected solvents. 2. the crushing of a calculus in the bladder.

lithogenesis (lith/'o-jen'ē-sis) [*litho-* + Gr. *gennan* to produce] the formation of calculi.

lithogenic (lith/'o-jen'ik) promoting the formation of calculi.

lithogenous (li-thoj'ē-nus) producing or causing the formation of calculi.

lithokelyphopiedion (lith/'o-kel'i-fo-pe'de-on) [*litho-* + Gr. *kelyphos* sheath + *paidion* child] a lithopiedion in which both the fetus and the membranes are petrified.

lithokelyphos (lith/'o-kel'i-fos) [*litho-* + Gr. *kelyphos* sheath] a dead fetus in which the fetal membranes are calcified.

lithokonion (lith/'o-ko'ne-on) [*litho-* + Gr. *konios* dusty] an instrument for pulverizing calculi in the bladder.

litholabe (lith/'o-lab) [*litho-* + Gr. *lambanein* to hold] an instrument for holding a vesical calculus in the operation for its removal.

litholapaxy (li-thol'ah-pak'se) [*litho-* + Gr. *lapaxis* evacuation] the crushing of a calculus in the bladder, followed at once by the washing out of the fragments; called also *lithotripsy*. **Bigelow's l.**, the crushing of a stone by a special kind of lithotrite and the removal of the fragments by another apparatus.

lithology (li-thol'o-je) [*litho-* + *-logy*] the sum of what is known regarding calculi and their treatment.

litholysis (li-thol'i-sis) [*litho-* + Gr. *lysis* dissolution] the solution of calculi in the bladder.

litholyte (lith/'o-lit) [*litho-* + Gr. *lysis* dissolution] an instrument used in injecting solvents of calculi into the bladder.

litholytic (lith/'o-lit'ik) 1. dissolving stones or calculi. 2. an agent that dissolves calculi.

lithometer (li-thom'ē-ter) [*litho-* + Gr. *metron* measure] an instrument for measuring calculi.

lithomoscus (lith/'o-mos'kus) [*litho-* + Gr. *moschos* calf] lithopiedion in cattle.

lithomyl (lith/'o-mil) [*litho-* + Gr. *mylē* mill] an instrument for crushing a stone in the bladder.

lithonephria (lith/'o-neff're-ah) [*litho-* + Gr. *nephros* kidney] any disease condition due to the presence of calculi in the kidney.

lithonephritis (lith/'o-nē-fri'tis) [*litho-* + *nephritis*] inflammation of the kidney due to irritation of calculi.

lithonephrotomy (lith/'o-nē-frot'o-me) [*litho-* + Gr. *nephros* kidney + *tomē* a cutting] the operative removal of a renal calculus.

lithontriptic (lith/'on-trip'tik) lithotriptic.

lithopiedion (lith/'o-pe'de-on) [*L. lithopaedium*; from Gr. *lithos* stone + *paidion* child] a dead fetus that has become stony or petrified *in utero*; calcified fetus.

Lithopiedion (Arey).

lithophone (lith/'o-fōn) [*litho-* + Gr. *phōnē* sound] a device for indicating the presence of a calculus by the sound which the latter emits when struck.

lithoscope (lith/'o-skōp) [*litho-* + Gr. *skopein* to examine] an instrument for examining calculi in the bladder.

lithotome (lith/'o-tōm) a knife for performing lithotomy.

lithotomist (li-thot'o-mist) one who performs a lithotomy.

lithotomy (lith'ot'o-me) [*litho-* + Gr. *tomē* a cutting] incision of a duct or organ, especially of the bladder, for removal of stone. **bilateral l.**, one performed by a transverse incision across the perineum. **high l.**, suprapubic l. **lateral l.**, one in which the incision is before the rectum and to one side of the raphe. **marian l.**, **median l.**, one in which the incision is made on the raphe of the perineum anterior to the anus. **mediolateral l.**, a combination of the median and lateral operations. **perineal l.**, that in which the incision is made in the perineum. **pre-rectal l.**, marian l. **rectal l.**, **rectovesical l.**, one performed by an incision within the dilated rectum. **suprapubic l.**, one performed by an incision above the pubes. **vaginal l.**, **vesicovaginal l.**, one performed by an incision within the vagina.

lithotomy (lith'ot'o-ne) [*litho-* + Gr. *teinein* to stretch] the creation of an artificial bladder fistula which is dilated to allow the extraction of a stone.

lithotresis (lith'ot-re'sis) [*litho-* + Gr. *trēsis* a boring] the drilling or boring of holes in a calculus.

lithotripsy (lith'ot-trip'se) [*litho-* + Gr. *tribein* to rub] litholapaxy.

lithotriptic (lith'ot-trip'tik) pertaining to or producing lithotripsy.

lithotriptor (lith'ot-trip'tor) an instrument for crushing calculi in the bladder.

lithotriptoscope (lith'ot-trip'to-skōp) an instrument for performing lithotripsy.

lithotripsy (lith'ot-trip'to-skōp) the crushing of a vesical calculus under direct visual control.

lithotrite (lith'ot-trīt) [*litho-* + Gr. *tribein* to rub] an instrument for crushing a stone in the bladder.

lithotrity (lith'ot'rīt-te) the crushing of a vesical calculus within the bladder by means of the lithotrite.

lithotroph (lith'ot-trōf) [*litho-* + Gr. *trophē* nutrition] a microorganism that lives in and obtains energy from the oxidation of inorganic materials. The group includes the sulfur, nitrifying, and perhaps also the iron bacteria. Formerly called *inorgoxydant*.

lithotrophic (lith'ot-trōf'ik) pertaining to a lithotroph.

lithous (lith'us) [Gr. *lithos* stone] pertaining to or of the nature of a calculus.

lithoxiduria (lith'ok-sī-du're-ah) [*litho-* + *oxide* + Gr. *ouron* urine + *-ia*] xanthinuria.

lithuresis (lith'ū-re'sis) [*litho-* + Gr. *ourēsis* urination] the passage of gravel through the urethra with the urine.

lithureteria (lith'ū-rē-te're-ah) [*litho-* + Gr. *ourētēr* ureter] calculous disease of the ureter.

litmoxidin (lit'mo-sī'din) a toxic antibiotic substance obtained from *Nocardia cyaneus*. It is an anthocyanidine derivative and is bacteriostatic and bactericidal for cocci, *Vibrio cholerae*, and tubercle bacilli in vitro. It is a red indicator pigment (acid—red; alkali—blue).

litmus (lit'mus) a pigment prepared from *Rocella tinctoria* and other lichens, used as a test for acidity and alkalinity. It has a pH range of 4.5 to 8.3. Crude fractions are azolitmin, erythrolitmin and erythrolein. The principal chemically-defined component is a polymer of 7-hydroxy-2-phenoxazone.

Litomosoides carinii (lit'o-mo-soi'dēz kah-rin'e-i) a filarial worm found in the pleural and peritoneal cavities of the cotton rat, *Sigmodon hispidus*.

litre (le'ter) [Fr.] liter.

Litten's diaphragm phenomenon (sign) (lit'enz) [Moritz Litten, German physician, 1845–1907] see under *phenomenon*.

litter (lit'er) 1. a stretcher for transporting the sick or wounded. 2. the offspring produced at one birth by a multiparous animal.

Little's area (lit'elz) [James Laurence Little, American surgeon, 1836–1885] see *Kiesselbach's area* under *area*.

Little's disease (lit'elz) [William John Little, English physician, 1810–1894] see under *disease*.

Littre's crypts, glands, hernia, operation (le'trz) [Alexis Littre, French surgeon, 1658–1725] see *glandulae preputiales* and *glandulae urethrales urethrae masculinae*; see *diverticular hernia*, under *hernia*; and see under *operation*.

litritis (lit-tri'tis) inflammation of the urethral (Littre's) glands.

Litzmann's obliquity (litz'manz) [Karl Konrad Theodor Litzmann, German gynecologist, 1815–1890] see under *obliquity*.

livedo (li've'do) [L.] a discolored spot or patch on the skin, commonly due to passive congestion; commonly used alone to refer to *l. reticularis*. **l. annula'ris**, **l. racemo'sa**, *l. reticularis*. **l. reticula'ris**, a peripheral vascular condition characterized by a reddish blue netlike mottling of the skin of the extremities; called also *asphyxia reticularis*, *l. annularis* and *l. racemosa*. **l. reticula'ris idiopath'ica**, a reticulated mottling of the skin occurring at first on exposure of the skin to cold, but later often becoming persistent. **l. reticula'ris symptomat'ica**, mottling of the skin due to some demonstrable cause, often to

polyarteritis nodosa. **l. telangiectat'ica**, permanent mottling of the skin due to anomaly of the capillaries of the skin.

livedoid (liv'e-doid) pertaining to or resembling livedo.

liver (liv'er) [L. *jecur*; Gr. *hēpar*] 1. a large gland of a dark-red color situated in the upper part of the abdomen on the right side. Called also *hepar* [NA]. Its domed upper surface fits closely against and is adherent to the inferior surface of the right diaphragmatic dome, and it has a double blood supply from the hepatic artery and the portal vein. It comprises thousands of minute lobules (lobuli hepatitis), the functional units of the liver (see also *liver acinus*, under *acinus*, and *portal lobule*, under *lobule*). Its manifold functions include the storage and filtration of blood, the secretion of bile, the excretion of bilirubin and other substances formed elsewhere in the body, and numerous metabolic functions, including the conversion of sugars into glycogen, which it stores. It is essential to life. 2. the same gland of certain animals sometimes used as food or from which pharmaceutical products are prepared. **albuminoid l.**, **amyloid l.**, a liver which is the seat of an albuminoid or amyloid degeneration; called also *waxy l.* **biliary cirrhotic l.**, one in which the bile ducts are clogged and distended, the substance of the organ being inflamed; due to biliary cirrhosis. **brimstone l.**, an enlarged liver of a deep-yellow color, seen in some cases of congenital syphilis. **bronze l.**, the bronze-colored liver seen in malaria, which results from deposition of malarial pigment (q.v.). **cirrhotic l.**, one that is the site of cirrhosis. **degraded l.**, a human liver divided into many lobes. **fatty l.**, one affected with fatty infiltration. **fatty l. of Brahmin children**, a term used for kwashiorkor in India. **floating l.**, wandering l. **foamy l.**, a liver seen post mortem, marked by the presence of numerous gas bubbles. **frosted l.**, perihepatitis chronica hyperplastica. **hobnail l.**, a liver whose surface is marked by nail-like points from cirrhosis. **icing l.**, perihepatitis chronica hyperplastica. **infantile l.**, biliary cirrhosis of children; see under *cirrhosis*. **iron l.**, the condition of the liver in hepatic siderosis. **lardaceous l.**, albuminoid l. **nutmeg l.**, one presenting a mottled appearance when cut. **pigmented l.**, one containing pigment, usually a result of malaria and melanemia, or the Dubin-Johnson syndrome. **polycystic l.**, congenital cystic disease of the liver. **sago l.**, one affected with amyloid degeneration, the acini resembling boiled sago grains, i.e., translucent granules 2 or 3 mm. in diameter. **stasis l.**, the liver in stasis cirrhosis. **sugar-icing l.**, perihepatitis chronica hyperplastica. **wandering l.**, a displaced and movable liver. **waxy l.**, albuminoid l.

livetin (li've-tin) a protein found in yolk of egg.

Livi's index (le'vēz) [Rodolfo Livi, Italian physician, 1856–1920] see under *index*.

livid (liv'id) [L. *lividus*, lead-colored] discolored, as from the effects of contusion or congestion; black and blue.

lividity (li-vid'i-te) [L. *lividitas*] the quality of being livid; discoloration, as of dependent parts, by the gravitation of the blood. **postmortem l.**, livor mortis.

Livierato's sign (le've-er-at'ōz) [Panagino Livierato, Italian physician, 1860–1936] see under *sign*.

Livingston's triangle (liv'ing-stunz) [Edward Meakin Livingston, American surgeon, born 1895] see under *triangle*.

livor (li'vor), pl. *livores* [L.] discoloration. **l. mor'tis**, discoloration appearing on dependent parts of the body after death, as a result of cessation of circulation, stagnation of blood, and settling of the blood by gravity; called also *postmortem lividity*.

Lixaminol (liks-am'i-nol) trademark for preparations of aminophylline.

lixivation (liks'iv-e-a'shun) [L. *lixivia* lye] the separation of soluble from insoluble matter by dissolving out the soluble matter and drawing off the solution; called also *leaching*.

lixivium (liks-iv'e-um) [L.] any alkaline filtrate obtained by leaching ashes or other similar powdered substance; lye.

Lizars' operation (li'zarz) [John Lizars, Edinburgh surgeon, 1787(?)–1860] see under *operation*.

L.K.Q.C.P.I. Licentiate of the King and Queen's College of Physicians of Ireland.

L.L.L. left lower lobe (of the lung).

L.M. Licentiate in Midwifery; light minimum; linguomesial.

L.M.A. left mentoanterior (position of the fetus).

LMF leukocyte mitogenic factor.

L.M.P. left mentoposterior (position of the fetus); last menstrual period.

L.M.R.C.P. Licentiate in Midwifery of the Royal College of Physicians.

L.M.S. Licentiate in Medicine and Surgery.

L.M.S.S.A. Licentiate in Medicine and Surgery of the Society of Apothecaries.

L.M.T. left mentotransverse (position of the fetus).

LNPF lymph node permeability factor.

L.O.A. left occipito-anterior (position of the fetus).

Loa (lo'ah) [a native word in Angola, West Africa] a genus of filarial nematodes. **L. lo'ah**, a threadlike worm of West Africa,

1–2 inches long, that inhabits the subcutaneous connective tissue of the body, which it traverses freely. It is seen especially about the orbit and even under the conjunctiva. It causes itching and occasionally edematous swellings (Calabar swellings). The immature forms or microfilariae are diurnal, being found in the peripheral circulation in greatest concentrations during the day. Flies of the genus *Chrysops* are the intermediate hosts and vectors. Formerly called *Filaria loa*.

load (lōd) the quantity of a measurable entity borne, by an object or organism, such as the work (*work l.*) required of an individual, or the body content, as of water, salt, or heat, especially as it varies from normal. **occlusal l.**, the total force exerted on the teeth through the occlusal surfaces during mastication.

loading (lōd'ing) administering sufficient quantities of a substance to test the subject's ability to metabolize it, as in the histidine loading test.

loaiasis (lo'ah-i'ah-sis) loiasis.

lobar (lo'ber) of, pertaining to, or affecting a lobe.

lobate (lo'bāt) [*L. lobatus*] provided with lobes, or disposed in lobes.

lobation (lo-ba'shun) the formation of lobes; the state of having lobes. **renal l.**, the appearance on x-ray films of small notches along the surface of the kidney, indicating the location of renal lobes.

lobe (lōb) [*L. lobus*; *Gr. lobos*] 1. a more or less well-defined portion of any organ, especially of the brain, lungs, and glands. Lobes are demarcated by fissures, sulci, connective tissue, and by their shape. 2. one of the main divisions of the crown of a tooth, developmentally representing a center of calcification. **anterior l. of hypophysis, anterior l. of pituitary gland, lobus anterior hypophyseos. appendicular l.**, Riedel's l. **azygos l.**, a small accessory or anomalous lobe situated at the apex of the right lung. **caudate l. of cerebrum** (*obs.*), insula. **caudate l. of liver, lobus caudatus. l's of cerebrum, lobi cerebri. crescentic l. of cerebellum, inferior, lobulus semilunaris inferior. crescentic l. of cerebellum, superior, lobulus semilunaris superior. cuneate l.**, cuneus. **digastric l.**, lobulus biventer. **flocculonodular l.**, the archicerebellum: the phylogenetically oldest portion of the cerebellum consisting of a node and two flocculi; it receives direct and secondary vestibular fibers and projects chiefly to the vestibular nuclei and reticular formation. **frontal l.**, the anterior portion of the pallium; see *lobus frontalis*. **hepatic l's**, the lobes of the liver, designated the right and left and the caudate and quadrate; see *lobus caudatus, lobus hepatis dexter* and *sinister*, and *lobus quadratus hepatis*. **lateral l's of prostate gland, see lobus prostaticae** [*dexter et sinister*]. **limbic l.**, gyrus fornicatus. **linguiform l.**, Riedel's l. **l's of liver, hepatic l's. l. of liver, left, lobus hepatis sinister. l. of liver, right, lobus hepatis dexter. l's of lung, see lung. l's of mammary gland, lobi glandulae mammariae. median l. of prostate, l. medius prostaticae. neural l.**, see *pituitary gland, under gland*. **occipital l.**, the posterior portion of the cerebral hemisphere; see *lobus occipitalis*. **olfactory l.**, lobus olfactorius. **optic l's, corpora quadrigemina. parietal l.**, the upper central lobe of the pallium; see *lobus parietalis*. **piriform l.**, the piriform area (q.v.); in lower mammals, the lateral exposed portion of the olfactory cerebral cortex. **polyalveolar l.**, a congenital disorder characterized in early infancy by the presence of far more than the normal number of alveoli in a lobe of the lungs; thereafter, normal multiplication of alveoli does not take place and they become enlarged, i.e., emphysematous. **posterior l. of hypophysis, posterior l. of pituitary gland, lobus posterior hypophyseos. prefrontal l.**, the part of the frontal lobe of the brain anterior to the ascending convolution. **l's of prostate, see lobus prostaticae** [*dexter et sinister*]. **pulmonary l's, see lung. pyriform l.**, piriform l. **pyramidal l. of thyroid gland, lobus pyramidalis glandulae thyroideae. quadrangular l. of cerebellum, lobulus quadrangularis cerebelli. quadrate l. of cerebral hemisphere, precuneus. quadrate l. of liver, lobus quadratus hepatis. renal l's, lobi renales. Riedel's l.**, an anomalous tongue-shaped mass of tissue projecting from the right lobe of the liver. **semilunar l., inferior, lobulus semilunaris inferior. semilunar l., superior, lobulus semilunaris superior. spigelian l.**, lobus caudatus. **temporal l.**, the lower lateral lobe of the cerebral hemisphere; see *lobus temporalis*. **temporoparietal l. of cerebral hemisphere** (*obs.*), lobus temporalis. **l's of thymus, see lobus thymi** [*dexter et sinister*]. **l's of thyroid gland, see lobus glandulae thyroideae** [*dexter et sinister*]. **vagal l.**, visceral l. **vermiform l. (obs.)**, vermis cerebelli. **visceral l.**, the visceral sensory area of fishes.

lobectomy (lo-bek'to-me) [*Gr. lobos lobe + ektomē excision*] excision of a lobe, as of the thyroid, liver, brain, or lung. See also *lobotomy*.

lobelia (lo-be'le-ah) the dried leaves and tops of *Lobelia inflata* L. (Campanulaceae), an herb with properties resembling those of nicotine.

lobeline (lob'e-lin) alpha-lobeline, C₂₂H₂₇NO₂, the principal alkaloid of *Lobelia inflata*, an annual herb of eastern United States

and Canada, formerly used to restore normal respiration in asphyxia due to traumatic shock. Currently used in certain anti-smoking preparations.

lobendazole (lo-ben'dah-zōl) chemical name: 1*H*-benzimidazol-2-yl-carbamic acid ethyl ester; a veterinary anthelmintic, C₁₀H₁₁N₃O₂.

lobi (lo'bi) [*L.*] plural of *lobus*.

lobite (lo'bīt) limited to a definite lobe.

lobitis (lo-bi'tis) inflammation of a lobe, especially of a lobe of the lung.

Loboa loboi (lo-bo'ah lo'boi) an as yet uncultured yeast that is the causative agent of keloidal blastomycosis.

lobopod (lo'bo-pod') lobopodium.

lobopodia (lo'bo-po'de-ah) plural of *lobopodium*.

lobopodium (lo'bo-po'de-um), pl. *lobopodia* [*Gr. lobos lobe + pous foot*] a blunt pseudopodium composed of both ectoplasm and endoplasm, or of endoplasm alone. Cf. *axopodium, filopodium, and rhizopodium*.

lobotomy (lo-bot'o-me) incision into a lobe; in psychosurgery, surgical incision of all the fibers of a lobe of the brain. **frontal l., prefrontal l.**, an operation in which, through holes drilled in the skull, the white matter of the frontal lobe is incised with a leukotome passed through a cannula; called also *leukotomy*. **transorbital l.**, see under *leukotomy*.

Lobstein's disease (syndrome), ganglion (lōb'stinz) [Johann Friedrich Georg Christian Martin Lobstein, surgeon in Strasbourg, 1777–1835] see *osteogenesis imperfecta*, and see under *ganglion*.

lobular (lob'u-lar) [*L. lobularis*] of or pertaining to a lobule.

lobulated (lob'u-lāt'ed) made up of or divided into lobules.

lobulation (lob'u-la'shun) the process of becoming or the state of being lobulated. **portal l.**, in the liver, the lobulated pattern of surviving tissue and the areas in which the tissue has been destroyed after occlusion of the hepatic vein.

lobule (lob'ūl) a small lobe; see *lobulus*. **anterior l. of pituitary gland, lobus anterior hypophyseos. l. of auricle, lobulus auricularis. biventral l.**, lobulus biventer. **central l. of cerebellum, lobulus centralis cerebelli. cortical l's of kidney, lobuli corticales renis. l's of epididymis, lobuli epididymidis. falciform l. (obs.)**, cuneus. **fusiform l. (obs.)**, polus temporalis. **hepatic l's, lobuli hepatis. l's of liver, lobuli hepatis. l's of lung, segmenta bronchopulmonalia. l's of mammary gland, lobuli glandulae mammariae. paracentral l.**, lobulus paracentralis. **parietal l., inferior, lobulus parietalis inferior. parietal l., superior, lobulus parietalis superior. portal l.**, a polygonal mass of liver tissue, larger than a liver acinus, containing portions of three adjacent hepatic lobules, and having a portal vein at its center and a central vein peripherally at each corner. **primary l. of lung, the anatomical and functional unit of the lung; distal to a terminal bronchiole, it consists of respiratory bronchioles, two or more alveolar ducts, atria, alveolar sacs, and alveoli. See Plate XLVI. pulmonary l's, segmenta bronchopulmonalia. quadrangular l. of cerebellum, lobulus quadrangularis cerebelli. respiratory l., primary l. of lung. secondary l. of lung, an anatomical subdivision of a pulmonary segment, consisting of several branching primary lobules. semilunar l., inferior, lobulus semilunaris inferior. semilunar l., superior, lobulus semilunaris superior. l's of testis, lobuli testis. l's of thymus, lobuli thymi. l's of thyroid gland, lobuli glandulae thyroideae.**

lobulette (lob'u-let') [*Fr.*] (*obs.*) 1. a minute lobule. 2. any one of the primary divisions of a lobule.

lobuli (lob'u-li) [*L.*] plural of *lobulus*.

lobulose (lob'u-lōs) divided into lobules.

lobulus (lob'u-lus) lobulose.

lobulus (lob'u-lus), pl. *lobuli* [*L.*, dim of *lobus*] a lobule, or small lobe; [*NA*] a general term for a small lobe or one of the primary divisions of a lobe. **l. auriculæ** [*NA*], lobule of auricle: the inferior, dependent part of the auricle below the antitragus, which contains fibrous and fatty tissue but no cartilage. **l. biven'ter** [*NA*], biventral lobule: a lobule on the inferior surface of the hemisphere of the cerebellum situated between the tonsilla of the cerebellum and the inferior semilunar lobule; called also *digastric lobe*. **l. centra'lis cerebel'li** [*NA*], central lobule of cerebellum: the portion of the vermis between the lingula and the culmen, resting on the lingula and the anterior medullary velum. **lob'uli cortica'les re'nis** [*NA*], cortical lobules of kidney: more or less distinctly marked small polygonal areas on the surface of a kidney; each area corresponds to a medullary ray together with its attached renal corpuscles and tubules. **lob'uli epididym'idis** [*NA*], lobules of epididymis: the wedge-shaped parts of the head of the epididymis, each comprising a single efferent ductule of the testis; called also *coni epididymidis* [*NA* alternative]. **lob'uli glan'dulae mam-ma'riae** [*NA*], lobules of mammary gland: the smaller subdivisions that make up a lobe of the mammary gland, each drained by a single branch of a lactiferous duct. Called also *lobuli mam-mae*. See *mammary gland, under gland*. **lob'uli glan'dulae**

thyroi'deae [NA], lobules of thyroid gland: irregular areas on the surface of the thyroid gland produced by entrance into the gland of fibrous trabeculae from the sheath. **lob'uli hep'a-tis** [NA], hepatic lobules: the small vascular units comprising the substance of the liver, each of which is polygonal in shape with a central vein at its center and portal canals peripherally at the corners. See also *liver acinus*, under *acinus*. **lob'uli mam'mae**, lobuli glandulae mammae. **l. paracentra'lis** [NA], paracentral lobule: a lobe on the medial surface of the cerebral hemisphere, continuous with the precentral and postcentral gyri of the frontal and parietal lobes, and limited below by the cingulate sulcus; it is comprised of motor and sensory cortex, chiefly for the lower limb. **l. parieta'lis infe'rior** [NA], inferior parietal lobule: the lobule that forms the posterior part of the lateral portion of the parietal lobe of the cerebrum. It lies below the intraparietal sulcus, above the posterior ramus of the lateral cerebral fissure, and behind the postcentral sulcus. It includes the supramarginal and the angular gyri. In the dominant hemisphere, it is concerned with language mechanisms. **l. parieta'lis supe'rior** [NA], superior parietal lobule: the posterior part of the upper portion of the parietal lobe of the brain; it lies behind the postcentral sulcus, in front of the parietooccipital fissure, and above the intraparietal sulcus. It comprises association areas concerned with general sensory functions. **lob'uli pulmo'num**, segmenta bronchopulmonalia. **l. quadrangula'ris cerebel'li** [NA], quadrangular lobule of cerebellum: the part of the hemisphere of the cerebellum continuous with the culmen and declive of the vermis. Sometimes used to refer to only that part of the hemisphere continuous with the culmen. **l. semiluna'ris infe'rior** [NA], inferior semilunar lobule: that part of the hemisphere of the cerebellum continuous with the tuber vermis. Called also *inferior crescentic lobe of cerebellum* and, in comparative anatomy, *crus II*. **l. semiluna'ris supe'rior** [NA], superior semilunar lobule: that part of the hemisphere of the cerebellum continuous with the folium vermis. Called also *superior crescentic lobe of cerebellum* and, in comparative anatomy, *crus I*. **l. sim'plex** [NA], that part of the cerebellar hemisphere which is continuous with the declive of the vermis. **lob'uli tes'tis** [NA], lobules of testis: the pyramidal subdivisions of the testicular substance, each with its base against the albuginea and its apex at the mediastinum, and composed largely of tubuli seminiferi. **lob'uli thy'mi** [NA], lobules of thymus: the smaller subdivisions of the lobes of the thymus gland, separated by fibrous trabeculae.

lobus (lo'bus), pl. *lo'bi* [L.] a lobe; a more or less well defined portion of any organ; [NA] a general term for such subdivisions, especially of the brain, lungs, and various glands, demarcated by fissures, sulci, or connective tissue septa. **l. ante'rior hypo-phys'eos** [NA], the anterior lobe of the pituitary gland (hypophysis), which arises from the buccal epithelium in the embryo; called also *adenohypophysis* [NA alternative]. See discussion under *pituitary gland*. **l. cauda'tus** [NA], **l. cauda'tus** [Spige'li], caudate lobe of liver: a small lobe of the liver bounded on the right by the inferior vena cava, which separates it from the right lobe, and on the left by the attachment of the gastrohepatic ligament, which separates it from the left lobe. **lo'bi cer'e-bri** [NA], lobes of cerebrum: the well defined areas of the pallium, demarcated by fissures, sulci, and arbitrary lines, including the frontal, temporal, parietal, and occipital lobes. See Plate accompanying *brain*. **l. fronta'lis** [NA], frontal lobe: the anterior portion of the cerebral hemisphere, extending from the frontal pole to the sulcus centralis. **lo'bi glan'dulae mamma'riae** [NA], lobes of mammary gland: the major subdivisions of the secreting portion of the mammary gland, each drained by a single lactiferous duct and further subdivided into lobules (lobuli glandulae mammae). See *mammary gland*, under *gland*. Called also *lobi mammae*. **l. glan'dulae thyroi'deae** [dex'ter et sinis'ter] [NA], lobe of thyroid gland: either of the lobes (right or left) of the thyroid gland, closely applied to either side of the trachea, cricoid cartilage, and thyroid cartilage. **l. hep'atis dex'ter** [NA], right lobe of liver: the largest of the four lobes of the liver. Anteriorly, it is separated from the left lobe by the falciform ligament. Posteroinferiorly, it is separated from the caudate lobe by the inferior vena cava and from the quadrate lobe by the gallbladder. Used in the broad sense, the term includes the caudate and quadrate lobes. **l. hep'atis sinis'ter** [NA], left lobe of liver: the smaller of the two main lobes of the liver. Anteriorly, it is separated from the right lobe by the falciform ligament. Posteroinferiorly, it is separated from the caudate and quadrate lobes by the attachment of the gastrohepatic ligament and the ligamentum teres. **l. infe'rior pulmo'nis** [NA], the inferior lobe of either lung. **lo'bi mam'mae**, lobuli glandulae mammae. **l. me'dius prosta'tae** [NA], median lobe of prostate: a normal enlargement of the isthmus of the prostate that sometimes occurs. **l. me'dius pulmo'nis dex'tri** [NA], the middle lobe of the right lung. **l. occipita'lis** [NA], occipital lobe: the posterior portion of the cerebral hemisphere, extending from the posterior pole to the parieto-occipital fissure on the medial surface, but continuous with the parietal lobe on the lateral surface. **l. olfacto'rius**, olfactory lobe: a term applied to the olfactory apparatus on the lower surface of the frontal lobe of the brain. It consists of the olfactory bulb, tract, and trigone.

l. parieta'lis [NA], parietal lobe: the upper central lobe of the cerebral hemisphere, separated from the temporal lobe below by the lateral sulcus, but continuous at the posterior end of that sulcus, and separated from the frontal lobe in front by the central sulcus. Behind, it is continuous with the occipital lobe on the lateral surface, but separated from it by the parieto-occipital sulcus on the medial surface. **lo'bi placen'tae**, distinct areas on the uterine surface of the placenta, demarcated by the connective tissue septa. **l. poste'rior hypophys'eos** [NA], the posterior lobe of the pituitary gland (hypophysis), which originates in the embryo as an evagination from the floor of the diencephalon; called also *neurohypophysis* [NA alternative]. See discussion under *pituitary gland*. **l. prosta'tae** [dex'ter et sinis'ter] [NA], lobe of prostate: either of the paired halves (right and left) of the prostate, separated by a more or less distinct median sulcus; called also *lateral lobes of prostate gland*. **l. pyramida'lis glan'dulae thyroi'deae** [NA], pyramidal lobe of the thyroid gland: an occasional third lobe of the thyroid gland which extends upward from the isthmus across the thyroid cartilage to the hyoid bone; it is the remains of the thyroid stalk of the fetus. **l. quadra'tus hep'atis** [NA], quadrate lobe of liver: a small lobe of the liver bounded on the right by the gallbladder, which separates it from the right lobe, and on the left by the ligamentum teres, which separates it from the left lobe. **lo'bi rena'les** [NA], renal lobes: the units of the kidney, each consisting of a pyramid and its surrounding cortical substance; the division of the kidney into lobes is more distinctly marked in some animals and in infants than in the human adult. **l. spige'lii**, **l. caudatus**. **l. supe'rior pulmo'nis** [NA], the superior lobe of either lung. **l. tempora'lis** [NA], temporal lobe: the lower lateral lobe of the cerebral hemisphere, lying below the posterior ramus of the lateral sulcus, lateral to the collateral sulcus, and merging behind with the occipital lobe. **l. thy'mi** [dex'ter et sinis'ter] [NA], lobe of thymus: either of the two chief parts (right or left) of the thymus, which meet in the midline. **l. va'gi**, visceral lobe.

local (lo'kal) [L. *localis*] restricted to or pertaining to one spot or part; not general.

localization (lo'kah-li-za'shun) 1. the determination of the site or place of any process or lesion. 2. restriction to a circumscribed or limited area. 3. prelocalization. **cerebral l.**, the determination of the situation of the various centers of the brain; also the limitation of the various cerebral faculties to a particular center or organ of the brain. **elective l.**, selective l. **germi-nal l.**, the location on a blastoderm of prospective organs; see *fate map*, under *map*. **selective l.**, the tendency of a microorganism to infect a specific variety of tissue.

localized (lo'kal-izd) not general; restricted to a limited region or to one or more spots.

localizer (lo'kal-iz'er) an instrument for locating solid particles in the eyeball by means of the roentgen ray, as the Berman localizer, Roper-Hall localizer, and Wildgen-Reck localizer.

locator (lo'ka-ter) an instrument or apparatus by which the location of an object is determined. **abutment l.**, a thin resin base made on a diagnostic denture cast into which holes have been cut to predetermine locations of the cuspids and molars. **Berman-Moorhead l.**, an instrument for locating metallic fragments embedded in body tissues. **electroacoustic l.**, an apparatus that amplifies into an audible click the contact of a probe with a solid object; used in locating foreign objects within the body.

Loc. dol. abbreviation for *L. lo'co dolent'i*, to the painful spot.

lochia (lo'ke-ah) [Gr. *lochia*] the vaginal discharge that takes place during the first week or two after childbirth. **l. al'ba**, the final vaginal discharge after childbirth, when the amount of blood is decreased and the leukocytes are increased. **l. cruen'ta**, **l. rubra**. **l. purulen'ta**, **l. alba**. **l. ru'bra**, the vaginal discharge of almost pure blood immediately after childbirth. **l. sanguinolen'ta**, the thick, maroon-colored vaginal discharge occurring a few days after childbirth. **l. sero'sa**, the serous vaginal discharge occurring about four or five days after childbirth.

lochial (lo'ke-al) pertaining to the lochia.

lochiocolpos (lo'ke-o-kol'pos) [*lochia* + Gr. *kolpos* vagina] distention of the vagina by retained lochia.

lochiocyte (lo'ke-o-sit'') [*lochia* + *-cyte*] one of the characteristic decidual cells of the lochia.

lochiometra (lo'ke-o-me'trah) [*lochia* + Gr. *mētra* uterus] distention of the uterus by retained lochia.

lochiometritis (lo'ke-o-me-tri'tis) [*lochia* + *metritis*] puerperal metritis.

lochiorrhagia (lo'ke-o-ra'je-ah) [*lochia* + Gr. *rhēgnynai* to burst forth] lochiorrhea.

lochiorrhoea (lo'ke-o-re'ah) [*lochia* + Gr. *rhoia* flow] an abnormally profuse discharge of lochia.

lochioschesis (lo'ke-os'kē-sis) [*lochia* + Gr. *schesis* retention] retention of the lochia; lochiostasis.

lochiostasis (lo'ke-os'tah-sis) [*lochia* + Gr. *stasis* halt] retention of the lochia; lochioschesis.

lochometritis (lo'ko-me-tri'tis) [Gr. *lochos* childbirth + *metritis* puerperal metritis].

loci (lo'si) [L.] plural of *locus*.

Locke's solution (fluid) (loks) [Frank Spiller *Locke*, British physician] see under *solution*.

lockjaw (lok'jaw) 1. tetanus. 2. trismus.

Lockwood's ligament (lok'woodz) [Charles Barrett *Lockwood*, English surgeon, 1856–1914] see under *ligament*.

loco (lo'ko) [Sp. "insane"] 1. a name of various leguminous plants of the genera *Astragalus*, *Hosackia*, *Sophora*, and *Oxytropis*, poisonous to horses, cattle, and sheep in certain arid regions because of the selenium they contain. 2. locoism. 3. an animal affected with locoism.

locoism (lo'ko-izm) a disease of horses, cattle, and sheep caused by poisoning by loco and marked by locomotor disturbances, trembling, depression, and, in pregnant animals, absorption. Called also *loco disease* and *loco poisoning*.

locomotion (lo'ko-mo'shun) [L. *locus* place + *movere* to move] movement or the ability to move from one place to another. **brachial l.**, brachiation.

locomotive (lo'ko-mo'tiv) pertaining to locomotion.

locomotor (lo'ko-mo'tor) of or pertaining to locomotion; pertaining to or affecting the locomotive apparatus of the body. See under *ataxia*.

locomotorial (lo'ko-mo-to're-al) pertaining to the locomotorium.

locomotorium (lo'ko-mo-to're-um) the locomotive apparatus of the body.

locomotory (lo'ko-mo'tor-e) pertaining to locomotion.

Locorten (lo-kor'ten) trademark for a preparation of flumethasone pivalate.

ocular (lok'u-lar) pertaining to a *loculus*.

loculate (lok'u-lāt) divided into *loculi*.

loculi (lok'u-li) [L.] plural of *loculus*.

Loculoascomycetidae (lok'u-lo-as'ko-mi-se'ti-de) a subclass of ascomycetous fungi, including the order Myriangiales.

loculus (lok'u-lus), pl. *loculi* [L.] 1. a small space or cavity. 2. a local enlargement of the uterus in some mammals, containing an embryo.

locum (lo'kum) [L.] place. **1. ten'ens, 1. ten'ent**, a practitioner who temporarily takes the place of another.

locus (lo'kus), pl. *loci* [L.] place; [NA] a general term for a site in the genome. In genetics, the specific site of a gene on a chromosome. **1. ceru'leus** [NA], a pigmented eminence in the superior angle of the floor of the fourth ventricle of the brain. **1. cine'reus, 1. ceruleus. complex l.**, one in which recombination can occur at more than one site. **1. ferrugin'eus, 1. ceruleus. H-2 l.**, the major histocompatibility locus of the mouse, having more than twenty alleles coding for at least thirty-three alloantigenic specificities; believed to be composed of two gene clusters, H-2k and H-2D, the H-2k being closest to the centromere. **heteromorphic l.**, a locus that exists in two or more allelic forms. **1. mino'ris resisten'tiae**, a site of lessened resistance; an area, structure, or organ offering little resistance to invasion by microorganisms and/or their toxins. **1. ni'ger** (obs.), substantia nigra. **1. perforatus anticus** (obs.), substantia perforata anterior. **1. perforatus posticus** (obs.), substantia perforata posterior. **1. ru'ber**, nucleus ruber.

lodoxamide tromethamine (lo-dok'sah-mid) chemical name: 2,2'-[2-chloro-5-cyano-1,3-phenylene]diimino]bis[2-oxoacetic acid] compound with 2-amino-2-(hydroxymethyl)-1,3-propanediol (1:2); an antiasthmatic and antiallergic, C₁₁H₈ClN₉O₆·2C₄H₁₁NO₃.

Loeb's deciduoma, reaction (lēb) [Leo *Loeb*, American pathologist, born 1869] see under *deciduoma* and *reaction*.

Loefflerella (lef'ler-el'ah) former name for a genus of schizomycetes, species of which are now assigned to *Pseudomonas*.

loemology (le-mol'o-je) [Gr. *loimos* plague + *-logy*] lemology.

loempe (lem'pe) beriberi.

Loevit's cell (le'fits) [Moritz *Loevit*, Prague pathologist, 1851–1918] erythroblast.

Loewi's test (reaction, symptom) (la'vez) [Otto *Loewi*, German pharmacologist in the United States, 1873–1961; co-winner in 1936, with Sir Henry Hallett Dale, of the Nobel prize for physiology and medicine, for their work on the chemical transmission of nerve impulses] see under *tests*.

Löffler's agar (culture medium) blood serum, stain (lef'lerz) [Friederich August Johannes *Löffler*, German bacteriologist, 1852–1915] see under *agar*, *blood serum*, and *Table of Stains*.

Löffler's endocarditis (disease), syndrome (eosinophilia, pneumonia) (lef'lerz) [Wilhelm *Löffler*, Swiss physician] see under *endocarditis* and *syndrome*.

löffleria (lef-le're-ah) [F.A.J. *Löffler*] a condition in which the diphtheria bacillus is present without the ordinary symptoms of diphtheria.

logadectomy (log'ah-dek'to-me) [Gr. *logades* the whites of the eyes + *ektomē* excision] excision of a portion of the conjunctiva.

logaditis (log'ah-di'tis) [Gr. *logades* the whites of the eyes + *-itis*] inflammation of the sclera.

logagnosia (log'ag-no'ze-ah) [*logo-* + *a neg.* + Gr. *gnōsis* knowledge] aphasia, alogia, or other central word defect.

logagraphia (log'ah-graf'e-ah) [*logo-* + *a neg.* + Gr. *graphein* to write] inability to express ideas in writing.

logamnesia (log'am-ne'ze-ah) [*logo-* + Gr. *amnēsia* forgetfulness] receptive aphasia.

logaphasia (log'ah-fa'ze-ah) [*logo-* + *aphasia*] expressive aphasia.

logasthenia (log'as-the'ne-ah) [*logo-* + *asthenia*] disturbance of that faculty of the mind which deals with the comprehension of speech.

logo- (log'o) [Gr. *logos* word] a combining form denoting relationship to words or speech.

logoclonia (log'o-klon'e-ah) [*logo-* + Gr. *klonos* tumult + *-ia*] spasmodic repetition of end syllables of words; logoklony.

logogram (log'o-gram) the graphic record of the symptoms and signs exhibited by a specific patient, charted by means of the logoscope.

logoklony (log'o-klon'e) logoclonia.

logokopphosis (log'o-ko-fō'sis) [*logo-* + Gr. *kōphōsis* deafness] word deafness; inability to comprehend spoken language.

logomania (log'o-ma'ne-ah) [*logo-* + Gr. *mania* madness] overtalkativeness.

logoneurosis (log'o-nu-ro'sis) [*logo-* + *neurosis*] (obs.) any neurosis with disorder of the speech.

logopathy (log-op'ah-the) [*logo-* + Gr. *pathos* illness] any disorder of speech arising from derangement of the central nervous system.

logopedia (log'o-pe'de-ah) logopedics.

logopedics (log-o-pe'diks) [*logo-* + *orthopedics*] the science dealing with the study and treatment of speech defects.

logoplegia (log'o-ple'je-ah) [*logo-* + Gr. *plēgē* stroke] paralysis of the speech organs.

logorrhea (log'o-re'ah) [*logo-* + Gr. *rhoia* flow] excessive or abnormal volubility.

logoscope (log'o-skōp) [Gr. *logos* a thought, idea, or word + *skopein* to regard or view] a device, in slide-rule form, designed to facilitate identification of the diseases in which certain signs and symptoms occur.

logoscopy (lo-gos'ko-pe) the use of a logoscope for determining the differential diagnostic possibilities in a patient exhibiting certain signs and symptoms.

logospasm (log'o-spazm) [*logo-* + Gr. *spasmos* spasm] the spasmodic utterance of words.

-logy [Gr. *logos* word, reason] a word termination meaning the science or study of, or a treatise on, the subject designated by the stem to which it is affixed.

Löhlein's diameter (la'linz) [Hermann Christian Adolf *Löhlein*, German gynecologist, 1847–1901] see under *diameter*.

Lohnstein's saccharimeter (lōn'stinz) [Theodor *Lohnstein*, German physician, 1866–1918] see under *saccharimeter*.

loiasis (lo-i'ah-sis) the state of being infected with nematodes of the genus *Loa*.

loimic (loi'mik) [Gr. *loimos* plague] lemic.

loimographia (loi'mo-gra'fe-ah) [Gr. *loimos* plague + *graphein* to write] lemography.

loimology (loi-mol'o-je) lemology.

loin (loin) the part of the back between the thorax and the pelvis; called also *lumbus* [NA].

Lombardi's sign (lom-bar'dēz) [Antonio *Lombardi*, physician in Naples] see under *sign*.

lometraline hydrochloride (lo-met'rah-lēn) chemical name: 8-chloro-1,2,3,4-tetrahydro-5-methoxy-N,N-dimethyl-1-naphthalenamine hydrochloride; a tranquilizer and antiparkinsonian agent, C₁₃H₁₆ClNO·HCl.

lomofungin (lo-mo-fun'jin) chemical name: 6-formyl-4,7,9-trihydroxy-1-phenazinecarboxylic acid methyl ester; an antifungal antibiotic derived from *Streptomyces lomondensis* var. *lomondensis*.

lomosoma (lo'mo-sōm) [Gr. *lōma* hem, fringe + *sōma* body] a sponge-like structure in fungi contiguous with the hyphal wall as revealed by the electron microscope.

Lomotil (lo'mo-til) trademark for preparations of diphenoxylate hydrochloride and atropine.

lomustine (lo-mus'tēn) chemical name: N-(2-chloroethyl)-N'-cyclohexyl-N-nitrosourea. An antineoplastic, C₉H₁₆ClN₂O₂, having actions similar to those of the alkylating agents; used in conjunction with other agents as palliative therapy in the treatment of Hodgkin's disease and brain tumors, administered orally. Code name: CCNU.

Lonchocarpus (lon'ko-kar'pus) a genus of leguminous tropical trees and shrubs which furnish rotenone.

Long's formula (coefficient) (longz) [John Harper Long, American physician, 1856-1927] see under *formula*.

longevity (lon-jev'i-te) [L. *longus* long + *aevum* age] the condition or quality of being long lived.

longilineal (lon'ji-lin'e-al) built along long, narrow lines; dolichomorphic.

longimanous (lon'ji-man'us) [L. *longus* long + *manus* hand] having long hands.

longipede (lon'ji-pe'dāt) [L. *longus* long + *pes* foot] having long feet.

longiradiata (lon'ji-ra'de-āt) having long radiations; a term applied to certain neuroglial cells.

longissimus (lon-jis'i-mus) [L.] longest; [NA] a general term denoting a long structure, as a muscle.

longitudinal (lon'ji-tu'di-nal) [L. *longitudo* length] lengthwise; parallel to the long axis of the body or an organ.

longitudinalis (lon'ji-tu'di-na'lis) [L.] lengthwise; [NA] a term denoting a structure that is parallel to the long axis of the body or an organ.

longitypal (lon'ji-tip'i-kal) longilineal; dolichomorphic.

longsightedness (long-sit'ed-nes) hyperopia.

longus (long'gus) [L.] long; [NA] a general term denoting a long structure, as a muscle.

loop (lōōp) a turn or sharp curve in a cordlike structure; see also *ansa*. **capillary l's**, minute endothelial tubes that carry blood in the papillae of the skin. **closed l.**, a system in which the input to one or more of the subsystems is affected by its own output. **Gerdy's interauricular l.**, a small muscular bundle in the interatrial septum of the heart. **Henle's l.**, a U-shaped turn in the medullary portion of a renal tubule, with a descending limb from the proximal convoluted tubule and an ascending limb to the distal convoluted tubule; see also *kidney*. **l. of hypoglossal nerve**, *ansa cervicalis*. **Hyrtl's l.**, an occasional looplike anastomosis between the right and left hypoglossal nerves in the geniohyoid muscle. **lenticular l.**, *ansa lenticularis*. **Meyer's l.**, one formed by some of the fibers of the optic radiation as they loop around the inferior horn of the lateral ventricle before turning posteriorly. **open l.**, a system on which an input alters the output, but the output has no effect on the input. Cf. *closed l.* **peduncular l.**, *ansa peduncularis*. **platinum l.**, a loop of platinum or other suitable wire mounted in a handle for use in transferring microorganisms to other culture media. **l's of spinal nerves**, *ansae nervorum spinalium*. **Stoerck's l.**, the primitive loop in the embryonic uriniferous tubule which develops into a Henle loop and a portion of the proximal convoluted tubule. **subclavian l.**, *ansa subclavia*. **ventricular l.**, the early, U-shaped loop of the embryonic heart. **l. of Vieussens**, *ansa subclavia*.

loopful (lōōp'ful) the quantity of liquid that can be held within the loop of platinum wire used in transferring microorganisms to other culture media.

loosening (lu'sen-ing) in psychiatry, a disorder of thinking in which association of ideas become so shortened, fragmented, and disturbed as to lack logical relationship; often seen in schizophrenia.

L.O.P. left occipitoposterior (position of the fetus).

loperamide hydrochloride (lo-per'ah-mid) chemical name: 4-(4-chlorophenyl)-4-hydroxy-N,N-dimethyl- α,α -diphenyl-1-piperidinebutanamide monohydrochloride. An antiperistaltic, $C_{29}H_{33}ClN_2O_2 \cdot HCl$, which exerts a direct effect on the muscles of the intestinal wall; used in the treatment of acute nonspecific diarrhea and chronic diarrhea associated with inflammatory bowel disease and to reduce the volume of discharge from ileostomies. It is administered orally.

lophodont (lof'o-dont) [Gr. *lophos* ridge + *odous* tooth] having cheek teeth on which the cusps have become connected to form ridges, as in elephants and some rodents.

Lophophora (lo-fof'o-rah) a genus of Mexican cacti. **L. williamsii**, a species whose flowering heads (mescal buttons) are the source of peyote and mescaline.

lophophorine (lo-fof'o-rin) a poisonous alkaloid, $C_{13}H_{17}NO_3$, from *Lophophora williamsii*, having effects similar to those of mescaline.

Lophotrichea (lo'fo-trik'e-ah) a group of bacteria, including those forms which have a tuft of cilia at one pole.

lophotrichous (lo-fot'ri-kus) [Gr. *lophos* ridge, tuft + *thrix* hair] having two or more flagella at one end; said of a bacterial cell. See *flagellum*.

Lopressor (lo-pres'or) trademark for preparations of metoprolol tartrate.

Lorain's infantilism (disease, type) (lo-rān') [Paul Joseph Lorain, Paris physician, 1827-1875] hypophyseal infantilism.

lorajmine hydrochloride (lor-aj'mēn) chemical name: 17-(chloroacetate)ajmalan-17R,21a-diol monohydrochloride; a cardiac depressant with antiarrhythmic action, $C_{22}H_{27}ClN_2O_3 \cdot HCl$.

lorazepam (lor-ah'zē-pam) chemical name: 7-chloro-5-(2-chlorophenyl)-1,3-dihydro-3-hydroxy-2H-1,4-benzodiazepin-2-one. A benzodiazepine derivative, $C_{15}H_{10}Cl_2N_2O_2$, occurring as a nearly white powder; used as an antianxiety agent, administered orally.

lorbamate (lor-bah'māt) chemical name: 2-(hydroxymethyl)-2-methylpentyl cyclopropanecarbamate carbamate (ester); a muscle relaxant, $C_{12}H_{22}N_2O_4$.

lorcainide hydrochloride (lor-ka'nid) chemical name: N-(4-chlorophenyl)-N-[1-(1-methylethyl)-4-piperidinyl] benzeneacetamide monohydrochloride; an antiarrhythmic cardiac depressant, $C_{22}H_{27}ClN_2O \cdot HCl$.

lordoscoliosis (lor'do-sko'le-o'sis) [*lordosis* + *scoliosis*] lordosis complicated with scoliosis.

lordosis (lor-do'sis) [Gr. *lordosis*] the anterior concavity in the curvature of the lumbar and cervical spine as viewed from the side. The term is used to refer to abnormally increased curvature (hollow back, saddle back, swayback) and to the normal curvature (normal lordosis). Cf. *kyphosis* and *scoliosis*.

lordotic (lor-dot'ik) pertaining to or characterized by lordosis.

Lorenz (lo-renz'), Konrad Z. Vienna zoologist, born 1903; co-winner, with Karl von Frisch and Nikolaas Tinbergen, of the Nobel prize in medicine and physiology for 1973, for his pioneer work in ethology, particularly on imprinting and aggression.

Lorenz's operation, osteotomy, sign (lo'rents-ez) [Adolf Lorenz, Austrian surgeon, 1854-1946] see under *operation*, *osteotomy*, and *sign*.

Loreta's operation (lo-re'tahz) [Pietro Loreta, Italian surgeon, 1831-1889] see under *operation*.

Lorfan (lor'fan) trademark for preparations of levallorphan tartrate.

Loridine (lor'i-dēn) trademark for a preparation of cephaloridine.

Lossen's rule (law) (los'eniz) [Herman Friedrich Lossen, Heidelberg surgeon, 1842-1909] see under *rule*.

L.O.T. left occipitotransverse (position of the fetus).

Lot. abbreviation for L. *lotio*, lotion.

lota (lo'tah) pinta.

lotio (lo'she-o) [L.] lotion. **l. adstrin'gens**, a mixture of sulfuric acid, alcohol, and oil of turpentine. **l. al'ba**, **l. sulfura'ta**, white lotion.

Lotioblanc (lo'she-o-blangk') trademark for a preparation of white lotion.

lotion (lo'shun) [L. *lotio*] a liquid suspension or dispersion for external application to the body. **Abercrombie's l. (obs.)**, an infusion of tobacco. **amphotericin B l. [USP]**, a lotion containing 90 to 125 per cent of the labeled amount of amphotericin B and conforming to FDA regulations for antibiotics; used as a topical antifungal. **benzyl benzoate l. [USP]**, a watery solution of benzyl benzoate, triethanolamine, and oleic acid; used as a topical scabicide. **benzyl benzoate-chlorophenothane-benzocaine l.**, a watery solution of benzyl benzoate, chlorophenothane, benzocaine, and polysorbate 80; used as a scabicide and pediculicide, applied topically. **betamethasone dipropionate l. [USP]**, a lotion containing 90 to 110 per cent of the labeled amount of betamethasone; used as a topical glucocorticoid. **betamethasone valerate l. [USP]**, a preparation containing betamethasone valerate equivalent to 95 to 115 per cent of the labeled amount of betamethasone; used as an anti-inflammatory glucocorticoid. **calamine l. [USP]**, a preparation of calamine with zinc oxide, glycerin, bentonite magma, and calcium hydroxide solution, used topically as a protectant. **calamine l., phenolated [USP]**, a mixture of calamine lotion and liquefied phenol, used topically as a protectant. **dimethisoquin hydrochloride l. [USP]**, a preparation containing 90 to 115 per cent of the labeled amount of dimethisoquin hydrochloride; used as a local anesthetic to relieve pain, itching, and burning of the skin. **flurandrenolide l. [USP]**, a lotion containing 90 to 110 per cent of the labeled amount of flurandrenolide; used as a topical glucocorticoid. **gamma benzene hexachloride l., lindane l.** **Goulard's l.**, diluted lead subacetate solution. **hydrocortisone l. [USP]**, a preparation containing 90 to 110 per cent of the labeled amount of hydrocortisone; used as a topical anti-inflammatory in steroid-responsive dermatoses. **lindane l. [USP]**, a preparation containing 90 to 110 per cent of the labeled amount of gamma benzene hexachloride in a suitable aqueous vehicle; used as a pediculicide and scabicide, applied topically to the skin. Called also *gamma benzene hexachloride l.* **methylbenzethonium chloride l. [USP]**, an emulsion containing 0.067 per cent methylbenzethonium chloride; used as a local anti-infective, applied topically to the genitalia, rectum, thighs, and intertriginous areas in the treatment of ammonia dermatitis and in the treatment and prevention of dermatoses caused by contact with urine, feces, and perspiration. **nystatin l. [USP]**, a lotion containing 90 to 140 per cent of the labeled amount of nystatin and conforming to FDA regulations for antibiotics; used as a topical antifungal. **selenium sulfide l. [USP]**, an aqueous, stabilized suspension containing 90 to 110 per cent of the labeled amount of selenium sulfide; used as a topical antifungal in the treatment of tinea versicolor, as a topical keratolytic, and

applied to the scalp to control seborrheic dermatitis and dandruff. **white l.** [USP], a preparation of zinc sulfate, sulfurated potash, and purified water, used as a topical astringent and protectant; called also *lotio alba*.

Lotrimin (lo-trim'in) trademark for preparation of clotrimazole.

Lotusate (lo'tū-sāt) trademark for a preparation of talbutal.

louchettes (loo-shets') [Fr.] a kind of goggles formerly worn for the correction of strabismus.

Louis's angle, law (loo-ēz') [Pierre Charles Alexandre Louis, French physician, 1787-1872; the founder of medical statistics] see *angulus sternalis*, and see under *law*.

loupe (lōöp) [Fr.] a convex lens for magnifying or for concentrating light upon an object. **corneal l.**, a magnifying lens, properly mounted, for examining the cornea of the eye.

louse (lows), pl. *lice* [L. *pediculus*] a general name for various parasitic insects; the true lice, which infest mammals, belong to the order Anoplura. Species parasitic upon man are *Pediculus humanus capitis*, the head louse; *P. humanus corporis*, the body or clothes louse; and *Phthirus pubis*, the crab louse, which lives in the hair upon the pubes and other hairy areas of the body, such as the eyelashes, eyebrows, and axillae. The causal organisms of typhus, relapsing fever, trench fever, and possibly plague are transmitted by the bite of lice. **biting l.**, Mallophaga. **body l.**, *Pediculus humanus corporis*. **chicken l.**, *Dermanyssus gallinae*. **clothes l.**, *Pediculus humanus corporis*. **crab l.**, *Phthirus pubis*. **goat l.**, *Linognathus stenopsis*. **head l.**, *Pediculus humanus capitis*. **horse l.**, *Trichodectes pilosus*. **pubic l.**, *Phthirus pubis*. **sucking l.**, Anoplura.

lousicide (lows'i-sid) pediculicide.

Löwe's ring (la'vez) [Karl Friedrich Löwe, German optician, born 1874] see under *ring*.

Lowe's syndrome (disease) (lōz) [Charles Upton Lowe, American pediatrician, born 1921] oculocerebrorenal syndrome.

Löwenberg's canal, forceps, scala (la'ven-bergz) [Benjamin Benno Löwenberg, otologist in Vienna and Paris, born 1836] see under *canal* and *forceps*, and see *ductus cochlearis*.

Löwenstein's culture medium (la'ven-stinz) [Ernst Löwenstein, Vienna pathologist, born 1878] see under *culture medium*.

Löwenthal's tract (la'ven-talz) [Wilhelm Löwenthal, German physician, 1850-1894] see under *tractus tectospinalis*.

Lower's rings, tubercle (lo'erz) [Richard Lower, English anatomist, 1631-1691] see under *anuli fibrosi cordis* and *tuberculum intervenosum*.

Löwitt's bodies, lymphocytes (la'vits) [Moritz Löwitt, German physician, 1851-1918] lymphogonia.

Lowman balance board (lo'man) [Charles LeRoy Lowman, American orthopedic surgeon, born 1879] an isosceles triangle board on which the patient walks with feet in supination; for correction of flatfeet.

Lowy's test (lo'ēz) [Otto Lowy, American pathologist, born 1879] see under *tests*.

loxapine (loks'ah-pēn) chemical name: 2-chloro-11-(4-methyl-1-piperazinyl)dibenz[*b,f*]1,4-oxazepine; a tricyclic antipsychotic agent, C₂₀H₁₈ClN₃O. **l. succinate**, the succinate salt of loxapine, C₁₈H₁₈ClN₃O₄, used in the treatment of schizophrenia, administered orally.

loxarthron (loks-ar'thron) [Gr. *loxos* oblique + *arthron* joint] an oblique deformity of a joint without luxation.

loxarthrosis (loks'ar-thro'sis) loxarthron.

loxia (loks'e-ah) torticollis.

Loxitane (loks'i-tān) trademark for preparations of loxaprine succinate.

loxophthalmus (loks'of-thal'mus) [Gr. *loxos* oblique + *ophthalmos* eye] strabismus.

Loxosceles (loks-os'sē-lēz) a genus of six-eyed spiders of the family Loxoscelidae. **L. lae'ta**, the brown spider, which is the causative agent of loxoscelism in Central South America. **L. reclu'sa**, the brown recluse spider, which causes loxoscelism in North America.

Loxoscelidae (loks'os-sel'i-de) a family of spiders (suborder Labidognatha), the false hackled band spinners, which includes the genus *Loxosceles*.

loxoscelism (loks-sos'sē-lizm) a morbid condition resulting from the bite of the brown spider, *Loxosceles laeta*, or the (brown) recluse spider, *L. reclusa*, beginning with a painful erythematous vesicle and progressing to a gangrenous slough of the affected area; first recognized in South America, a few cases have been diagnosed in North America. **viscerocutaneous l.**, a sometimes fatal condition resulting from the bite of the brown spider, with fever and hematuria occurring, in addition to the local reaction.

loxotomy (loks-sot'o-me) [Gr. *loxos* oblique + *temnein* to cut] oval amputation.

Loxotrema ovatum (loks'tre'mah o-va'tum) *Metagonimus yokogawai*.

lozenge (loz'enj) [Fr.] 1. a medicated tablet or disk; a troche. 2. a triangular area of tissue marked for excision in plastic surgery.

L.P.F. leukocytosis-promoting factor.

L.P.N. licensed practical nurse.

L.R.C.P. Licentiate of the Royal College of Physicians.

L.R.C.P.&S.I. Licentiate of the Royal College of Physicians and Surgeons, Ireland.

L.R.C.S. Licentiate of the Royal College of Surgeons.

L.R.C.S.E. Licentiate of the Royal College of Surgeons, Edinburgh.

LRF luteinizing hormone releasing factor; see *gonadorelin*.

L.S.A. left sacroanterior (position of the fetus); Licentiate of Society of Apothecaries.

L.Sc.A. left scapulo-anterior (position of the fetus).

L.Sc.P. left scapuloposterior (position of the fetus).

LSA lysergic acid diethylamide; see *lysergide*.

L.S.P. left sacroposterior (position of the fetus).

L.S.T. left sacrotransverse (position of the fetus).

LT lymphotoxin.

LTF lymphocyte transforming factor.

LTH luteotropic hormone (lactogenic hormone).

Lu chemical symbol for lutetium.

Lubarsch's crystals (loo'barsh-ēz) [Otto Lubarsch, German pathologist, 1860-1933] see under *crystal*.

lubb (lub) a syllable used to represent, or mimic, the first sound of the heart in auscultation. See *lubb-dupp*.

lubb-dupp (lub-dup') syllables used to represent the combination of the first and second heart sounds. See *lubb* and *dupp*.

Luc's operation (luks) [Henri Luc, French laryngologist, 1855-1925] Caldwell-Luc operation.

Lucae's probe (loo'kāz) [August Lucae, otologist in Berlin, 1835-1911] see under *probe*.

lucanthone hydrochloride (loo-kan'thōn) chemical name: 1-[[2-(diethylamino)ethyl]amino]-4-methyl-9H-thioxanthen-9-one monohydrochloride. An antischistosomal, C₂₀H₂₄N₂OS·HCl, occurring as a yellowish orange powder; administered orally.

Lucas' sign (loo'kas) [Richard Clement Lucas, English physician, 1846-1915] see under *sign*.

Lucatello's sign (loo'kah-tel'ōz) [Luigi Lucatello, Italian physician, 1863-1926] see under *sign*.

Luciani's triad (loo'che-an'ēz) [Luigi Luciani, Italian physiologist, 1842-1919] see under *triad*.

lucid (loo'sid) [L. *lucidus* clear] clear; not obscure; as, *lucid interval*.

lucidification (loo-sid'i-fi-ka'shun) [L. *lucidus* clear + *facere* to make] the clearing up of the protoplasm of cells.

lucidity (loo-sid'i-te) the quality or state of having a clear mind; clearness of the mind.

luciferase (loo-sif'er-ās) [L. *lux* light + *ferre* to bear + *-ase*] an enzyme, of which there are many forms, that catalyzes the bioluminescent reaction in certain animals capable of luminescence. The substrate is luciferin; ATP and molecular oxygen are required for the complete reaction. The color of light emitted is determined by the form of the enzyme.

luciferin (loo-sif'er-in) a heterocyclic phenol which can be reduced and oxidized. It exists in many forms and is present in certain animals capable of bioluminescence; when acted upon by luciferase, in the presence of ATP and molecular oxygen, it produces light.

lucifugal (loo-sif'u-gal) [L. *lux* light + *fugere* to flee from] avoiding, or being repelled by, bright light.

Lucilia (loo-sil'e-ah) the greenbottle flies, a genus of the family Calliphoridae that have a blue or green metallic iridescence. **L. cae'sar**, the common "gold fly" which ordinarily breeds in meat or carrion; its larvae have been found in the intestine and in myiasis of the skin. **L. cupri'na**, *Phaenicia cuprina*. **L.**

Larva and adult of *Lucilia caesar*.

illu'stris, a species which usually deposits its eggs in carcasses, but is sometimes found in the wool of sheep. **L. regi'na**, *Phormia regina*. **L. serica'ta**, *Phaenicia sericata*.

lucipetal (loo-sip'i-tal) [L. *lux* light + *petere* to seek] seeking, or being attracted to, bright light.

lucium (loo'se-um) a supposed chemical element discovered in 1896, later found to be a mixture of rare earth metals.

Lücke's test (lik'ez) [George Albert *Lücke*, German surgeon, 1829-1894] see under *tests*.

lückenschädel (lik'en-sha'del) [Ger.] a condition marked by defective calcification of the skull bones, combined with meningocele or encephalocele.

lucotherapy (loo'ko-ther'ah-pe) [L. *lux* light + *therapy*] the treatment of disease by rays of light.

Ludloff's sign (lood'laws) [Karl *Ludloff*, surgeon in Breslau, born 1864] see under *sign*.

Ludwig's angina (lood'vigz) [Wilhelm Friedrich von *Ludwig*, German surgeon, 1790-1865] see under *angina*.

Ludwig's angle (lood'vigz) [Daniel *Ludwig*, German anatomist, 1625-1680] *angulus sterni*.

Ludwig's ganglion, theory (lood'vigz) [Karl Friedrich Wilhelm *Ludwig*, eminent German physiologist, 1816-1895, one of the greatest teachers of physiology of all time] see under *ganglion* and *theory*.

Luer's syringe (loo'erz) [German instrument maker in Paris, died 1883] see under *syringe*.

lues (loo'ez) [L. "a plague"] syphilis. **l. hep'atis**, syphilis of the liver. **l. nervo'sa**, syphilis with marked nervous lesions. **l. tar'da**, late syphilis. **l. vene'rea**, syphilis.

luetie (loo-et'ik) syphilitic.

luetin (loo'ē-tin) an extract of a killed culture of several strains of *Treponema pallidum*, used in the skin test for syphilis. See *Noguchi's luetin reaction* under *reaction*.

luette (loo-et') [Fr.] uvula. **Lieutaud's l.**, uvula vesicae.

lug (lug) the part of a dental casting that projects. **retention l.**, a piece of metal soldered either to an orthodontic band or to an artificial crown to create greater undercut for retention of a dental prosthesis.

Lugol's caustic, solution (loo-golz') [Jean Guillaume Auguste *Lugol*, physician in Paris, 1786-1851] see under *caustic*, and see *iodine solution*, *strong*, under *solution*.

L.U.L. left upper lobe (of lungs).

lumbago (lum-ba'go) [L. *lumbus* loin] pain in the lumbar region. **ischemic l.**, pain in the lower back and buttock(s) due to vascular insufficiency, as in terminal aortic occlusion.

lumbar (lum'ber) pertaining to the loins, the part of the back between the thorax and the pelvis.

lumbarization (lum'ber-i-za'shun) a condition in which the first segment of the sacrum is not fused with the second, so that there is one additional articulated vertebra and the sacrum consists of only four segments.

lumbo- [L. *lumbus*] a combining form denoting relationship to the loins.

lumboabdominal (lum'bo-ab-dom'i-nal) pertaining to the loins and abdomen.

lumbocolostomy (lum'bo-ko-lost'o-me) [L. *lumbus* loin + *colostomy*] the operation of forming a permanent opening into the colon by an incision through the lumbar region.

lumbocolotomy (lum'bo-ko-lot'o-me) [L. *lumbus* loin + *colotomy*] an incision into the colon through the loin.

lumbocostal (lum'bo-kos'tal) [L. *lumbus* loin + *costa* rib] pertaining to the loin and ribs.

lumbocrural (lum'bo-kroo'ral) pertaining to or affecting the lumbar and crural regions.

lumbodorsal (lum'bo-dor'sal) pertaining to the lumbar and dorsal regions.

lumbodynia (lum'bo-din'e-ah) [L. *lumbus* loin + Gr. *odynē* pain] lumbago.

lumboiliac (lum'bo-il'e-ak) pertaining to the loin and ilium.

lumboinguinal (lum'bo-ing'gwī-nal) pertaining to the loins and the groin.

lumbosacral (lum'bo-sa'kral) pertaining to the loins and sacrum.

lumbrical (lum'bri-kal) 1. of the earthworms or related annelids. 2. a muscle of the hand; see *musculi lumbricales*.

lumbrici (lum'bri'se) [L.] plural of *lumbricus*.

lumbricide (lum'bri-sid) [*lumbricus* + L. *caedere* to kill] an agent that destroys lumbrici (ascarides).

lumbricoid (lum'bri-koid) [*lumbricus* + Gr. *eidōs* form] resembling the earthworm; designating the ascaris.

lumbricosis (lum'bri-ko'sis) the condition of being infected with lumbrici (ascarides).

Lumbricus (lum'bri'kus) [L. "earthworm"] a genus of annelids, including the earthworm, *L. terrestris*, which may act as the host of *Metastrongylus elongatus*, the intermediate host of the virus causing swine influenza.

lumbricus (lum'bri'kus), pl. *lumbri'ci* [L.] 1. the ascaris. 2. an earthworm.

lumbus (lum'bus) [L.] [NA] the part of the back between the thorax and the pelvis; called also *loin*.

lumen (loo'men), pl. *lu'mina* [L. "light"] 1. the cavity or channel within a tube or tubular organ. 2. the unit of light flux: it is the

flux emitted in a unit solid angle by a uniform point source of one candela. Called also *meter candle*. **residual l.**, the remains of Rathke's pouch located between the pars distalis and pars intermedia of the pituitary gland.

lumichrome (loo'mi-krōm) chemical name: 7,8-dimethylalloxazine. A product, C₁₂H₁₀N₄O₂, of the irradiation decomposition of riboflavin.

lumiflavin (loo'mi-fla'vin) chemical name: 7,8,10-trimethylisalloxazine. A product, C₁₃H₁₂N₄O₂, of the luminiferous decomposition of riboflavin.

lumina (loo'min-ah) plural of *lumen*.

Luminal (loo'mī-nal) trademark for preparations of phenobarbital.

luminal (loo'mī-nal) pertaining to the lumen of a tubular structure.

luminescence (loo'mi-nēs'ens) the property of giving off light without showing a corresponding degree of heat.

luminiferous (loo'mi-nif'er-us) [L. *lumen* light + *ferre* to bear] conveying light or propagating those vibrations which constitute light.

luminophore (loo'mi-no-fōr') [L. *lumen* light + Gr. *phoros* bearing] a chemical group that gives the property of luminescence to organic compounds.

luminous (loo'mi-nus) emitting or reflecting light; glowing with light.

lumirhodopsin (loo'mi-ro-dop'sin) a partially split combination of all-*trans* retinal and scotopsin, occurring as rhodopsin if exposed to light.

lumps (lumps) hypopterionosis cystica.

Lumsden's center (lumz'denz) [Thomas William *Lumsden*, British physician, 1874-1953] pneumotaxic center.

lunacy (loo'nah-se) [L. *luna* moon] insanity; so named because it was supposed to be sometimes due to or affected by the influence of the moon.

lunar (loo'nar) [L. *lunaris*; *luna* moon, also silver] 1. pertaining to the moon. 2. pertaining to or containing silver, as lunar caustic (silver nitrate).

lunare (loo-na're) the lunate bone (os lunatum [NA]).

lunate (loo'nāt) [L. *luna* moon] moon-shaped, or crescentic; see os *lunatum*.

lunatic (loo'nah-tik) [L. *lunaticus*; from *luna* moon] a mentally deranged person.

lunatomalacia (loo-na'to-mah-la'she-ah) osteochondrosis of the semilunar (carpal lunate) bone; see *Kienböck's disease* (def. 1), under *disease*.

Lundvall's blood crisis (loond'valz) [Halvar *Lundvall*, Swedish neurologist] see under *crisis*.

lung (lung) [L. *pulmo*; Gr. *pneumōn* or *pleumōn*] the organ of respiration; called also *pulmo* [NA]. Either of the pair of organs that effect the aeration of the blood. The lungs occupy the lateral cavities of the chest, separated from each other by the heart and mediastinal structures. The right lung is composed of superior, middle, and inferior lobes, and the left, of superior and inferior lobes. Each lobe is subdivided into two to five bronchopulmonary segments which are separated by connective tissue septa. Pulmonary disorders may be confined to, or localized in, one or more of these segments. Each lung consists of an external serous coat (the visceral layer of the pleura), subserous areolar tissue, and lung parenchyma. The latter is made up of lobules, which are bound together by connective tissue. A primary lobule consists of a terminal bronchiole, respiratory bronchioles, and alveolar ducts, which communicate with many alveoli, each alveolus being surrounded by a network of capillary blood vessels. It is between the alveoli and capillaries that gas exchange takes place. See Plates XXVI and XLIX. **arc-welder l.**, siderosis (def. 1). **artificial l.**, oxygenator. **bird-breeder's l.**, pigeon-breeder's l. **black l.**, pneumoconiosis of coal workers. **brown l.**, byssinosis. **cardiac l.**, chronic congestion of the lung due to mitral stenosis or left ventricular failure; microscopic examination shows evidence of recurring edema, heart failure cells, and vascular changes. **coalminer's l.**, pneumoconiosis of coal workers. **drowned l.**, airless lung, the air passages being filled with exudate. The volume occupied by a drained lung (or lobe) is usually greater than normal, whereas in atelectasis it is less than normal. **eosinophilic l.**, tropical eosinophilia. **farmer's l.**, a morbid condition caused by inhalation of moldy hay dust, characterized by breathlessness with cyanosis or with a dry cough, anorexia, and weight loss; called also *thresher's l.* and *harvester's l.* **fibroid l.**, a lung affected with chronic fibrosis. **harvester's l.**, farmer's l. **honeycomb l.**, the appearance of multiple small radiolucent shadows on the lung x-ray, representing dilations of the smaller, less rigid airways or multiple small cysts or cavities. **hyperlucent l.**, unilateral emphysema. **iron l.**, a popular name for the Drinker respirator. **masons' l.**, a lung affected with pneumoconiosis due to the inhalation of dusts associated with this occupation. **miners' l.**, pneumoconiosis of coal workers. **pigeon-breeder's l.**, a respiratory disorder caused by an acquired hypersensitivity to bird

excreta following intimate contact with birds; symptoms include chills, fever, and cough. Pulmonary fibrosis may result. Called also *bird-breeder's l.* **shock l.**, adult respiratory distress syndrome. **silo-filler's l.**, a rare form of acute bronchitis affecting individuals who inhale high levels of nitrogen oxides, particularly the dioxide, while working in freshly filled silos. **thresher's l.**, farmer's l. **trench l.**, a condition observed in the trenches in World War I, characterized by attacks of rapid breathing. **vanishing l.**, in emphysema, conversion of the lungs into a delicate, fine network of remaining blood vessels among which no alveolar walls survive. **wet l.**, accumulation of fluid in the lungs; pulmonary edema. **white l.**, pneumonia alba.

lungmotor (lung'mo-tor) an apparatus for forcing air or air and oxygen into the lungs.

lungworm (lung'worm) a parasitic worm that invades the lungs, e.g., the trematode *Paragonimus westermani* in man, the nematode *Metastrongylus elongatus* in hogs, etc.

lunula (loo'nu-lah), pl. *lu'nulae* [L., dim. of *luna* moon] [NA] a general term for a small crescentic or moon-shaped area. **lunulae of aortic valves**, lunulae valvularum semilunarium aortae. **l. of nail**, l. unguis. **lunulae of pulmonary trunk valves**, lunulae valvularum semilunarium trunci pulmonalis. **l. of scapula**, incisura scapulae. **lunulae of semilunar valves**, lunulae valvularum semilunarium. **lunulae of semilunar valves of aorta**, lunulae valvularum semilunarium aortae. **l. unguis** [NA], lunula of the nail: the crescentic white area at the base of the nail on a finger or toe. **lu'nulae valvula'rum semilunarium aor'tae** [NA], lunulae of semilunar valves of aorta: small thinned areas in the cusps of the valve of the aorta, one located on each side of the nodule of each cusp, between the free margin and the most peripheral segment of the cusp. **lu'nulae valvula'rum semilunarium trunci pulmonalis** [NA], lunulae of semilunar valves of pulmonary trunk: small thinned areas in the cusps of the valve of the pulmonary trunk, one located on each side of the nodule of each cusp, close to the free margin and the most peripheral segment of the cusp. **lu'nulae valvula'rum semilunarium arte'riae pulmona'lis**, lunulae valvularum semilunarium trunci pulmonalis.

lunulae (loo'nu-le) [L.] plural of *lunula*.

lupeose (loo'pe-ös) a tetrasaccharide from the seeds of herbs of the genus *Lupinus*.

lupia (loo'pe-ah) an old term for encysted tumor of the eyelids (Himley).

lupiform (loo'pi-form) [L. *lupus* + *forma* form] 1. resembling lupus. 2. resembling a wen.

lupinosis (loo'-pi-no'sis) a morbid often fatal condition affecting domestic animals, including cattle, sheep, goats, and horses, due to the ingestion of seeds of leguminous herbs of the genus *Lupinus*, and characterized chiefly by acute atrophy of the liver. Cf. *lathyrism*.

lupoid (loo'poid) 1. pertaining to lupus vulgaris. 2. a variant of sarcoidosis marked by small papular lesions.

lupus (loo'pus) [L. "wolf" or "pike"] a name originally given to a destructive type of skin condition, implying "a local degeneration, strumous in its origin, essentially chronic in its character, and attended with more or less hypertrophy, with absorption, and with ulceration." As one or other of these characters is most marked, . . . a special name [is applied], e.g., lupus erythematosus, lupus tuberculosus. Although the term is frequently used alone to designate lupus vulgaris and sometimes lupus erythematosus, without a modifier it has no specific meaning. **chilblain l.**, l. pernio, def. 2. **drug-induced l.**, a syndrome closely resembling systemic lupus erythematosus, precipitated by prolonged use of various drugs, most commonly hydralazine, isoniazid, various anticonvulsants, and procainamide. **l. erythemato'sus**, an inflammatory dermatitis; see *l. erythematosus*, *discoid*, and *l. erythematosus*, *systemic*. **l. erythemato'sus, discoid**, **l. erythemato'sus discoides**, a chronic, superficial inflammation of the skin, marked by red macules up to 3 or 4 cm. in width, and covered with scanty adherent scales, which extend into patulous follicles, which fall off, leaving scars. The lesions typically form a butterfly pattern over the bridge of the nose and cheeks, but other areas may be involved. Clinical variants include *l. erythematosus hypertrophicus*, *l. erythematosus profundus*, and *l. tumidus*. **l. erythemato'sus, systemic (SLE)**, a generalized connective tissue disorder, affecting mainly middle-aged women, ranging from mild to fulminating, and characterized by skin eruptions similar to those seen in discoid lupus erythematosus, arthralgia, arthritis, leukopenia, anemia, visceral lesions (including renal involvement, pericarditis, and pleurisy), neurologic manifestations, lymphadenopathy, fever, and other constitutional symptoms. Typically, there are many abnormal immunologic phenomena, including hypergammaglobulinemia and hypocomplementemia, deposition of antigen-antibody complexes, and the presence of antinuclear antibodies and LE cells. **l. erythemato'sus hypertrophicus**, **l. erythemato'sus hypertrophicus et profundus**, a rare form of discoid lupus erythematosus, occurring chiefly on the lower face, especially the lower lip with extension to the vermilion border and sides of the

mouth and chin, in which great thickening of the skin in conjunction with scarring produces an almost warty plaque, with deep involvement of the corium. **l. erythemato'sus profundus**, a variant of discoid or systemic lupus erythematosus, in which deep brawny indurations or subcutaneous nodules occur under normal or, less often, involved skin; the overlying skin may be erythematous, atrophic and ulcerated and on healing may leave a depressed scar. **l. erythemato'sus tu'midus**, a variant of discoid or systemic lupus erythematosus in which the lesions consist of raised reddish purple or brown plaques, which may resemble erysipelas or cellulitis. **l. exul'cerans**, a variant of lupus vulgaris in which the lesions break down to produce deep, indolent ulcers. **hydralazine l.**, see under *syndrome*. **l. hypertrophicus**, 1. a variant of lupus vulgaris in which the lesions consist of a warty vegetative growth, often crusted or slightly exudative, usually occurring on moist areas near body orifices. 2. *l. erythematosus hypertrophicus*. **laryngeal l.**, infection of the larynx and epiglottis in lupus vulgaris. **l. milia'ris dissemina'tus fa'ciei**, lupus characterized by multiple, discrete, superficial nodules 2 to 3 mm. in diameter on the face, particularly on the eyelids, upper lip, chin, and nares; the lesions are considered by some to be tuberculids. **l. nephritis**, see under *nephritis*. **l. per'nio**, 1. a condition marked by soft, violaceous skin lesions on the cheeks, forehead, nose, ears, and digits, frequently associated with bone cysts; it may be the first manifestation of sarcoidosis or occur in the chronic stage of the disease. The term is sometimes used as a synonym of sarcoidosis. 2. a form of discoid lupus erythematosus aggravated by cold, initially resembling chilblains, in which the lesions consist of erythematous infiltrated patches on the exposed areas of the body, such as the face, nose, ears, and hands, especially the knuckles of the fingers; called also *chilblain l.* **l. pla'nus**, a variant of lupus vulgaris in which the lesions are smooth flat patches composed of reddish brown nodules. **l. tu'midus**, 1. a variant of lupus vulgaris in which the lesions consist of localized, soft edematous patches somewhat resembling keloids. 2. *l. erythematosus tumidus*. **l. vulga'ris**, the most common and severe form of tuberculosus of the skin, most often affecting the face, characterized by the formation of reddish brown (apple-jelly colored) patches of nodules in the corium, which progressively spread peripherally, with central atrophy, causing ulceration and scarring and destruction of cartilage in involved sites. Clinical variants of the disease include *lupus exulcerans*, *lupus hypertrophicus*, *lupus planus*, and *lupus tumidus*. **warty l.**, tuberculosis verrucosa cutis.

Luria (loor'i-ah), Salvador Edward. Italian biologist in the United States, born 1912; co-winner, with Max Delbruck and Alfred D. Hershey, of the Nobel Prize in medicine and physiology for 1969, for research on the mechanisms and materials of inheritance in bacteriophage.

Luride (loo'rid) trademark for a preparation sodium fluoride.

Luschka's crypts, etc. (lush'kahz) [Hubert von Luschka, celebrated German anatomist, 1820-1875] see under *bursa*, *crypt*, *duct*, *gland*, *muscle*, etc.

lusus (loo'sus) [L.] a game, sport. **l. natu'rae**, a sport, a minor congenital anomaly; see *mutation* (def. 2) and *theory of mutation*.

luteal (loo'te-al) pertaining to or having the properties of the corpus luteum or its active principle.

lutecium (loo-te'she-um) lutetium.

luteectomy (loo'te-ek'to-me) excision of the corpus luteum.

lutein (loo'te-in) [L. *luteus* yellow] 1. a yellow pigment, or lipochrome, $C_{44}H_{56}O_2$, from the corpus luteum, from fat cells, and from the yolk of eggs. It is closely related to xanthophyll. 2. any lipochrome. **serum l.**, a lipochrome found in blood serum.

luteinic (loo'te-in'ik) 1. pertaining to lutein or to the corpus luteum. 2. pertaining to luteinization.

luteinization (loo'te-in'i-za'shun) the process by which a post-ovulatory ovarian follicle transforms into a corpus luteum through vascularization, follicular cell hypertrophy, and lipid accumulation, the latter in some species giving the yellow color indicated by the term.

Lutembacher's syndrome (complex, disease) (loo'tem-bak'arz) [René Lutembacher, French physician, born 1884] see under *syndrome*.

luteohormone (loo'te-o-hor'mōn) progesterone.

luteoid (loo'te-oid) [*luteum* + Gr. *eidos* form] a substance simulating the hormone activity of the corpus luteum.

luteoma (loo'te-o'mah) 1. a granulosa-theca cell tumor in which there has been luteinization of the cells. 2. nodular hyperplasia of ovarian lutein cells sometimes occurring in the last trimester of pregnancy; it may be unilateral or bilateral. Called also *l. of pregnancy* or *pregnancy l.*

luteose (loo'te-ös) a neutral polysaccharide present in luteic acid.

luteotrope (loo'te-o-trōp) mammotrope.

luteotrophic (loo'te-o-trōf'ik) luteotropic.

luteotrophin (loo'te-o-trō'fin) luteotropin.

luteotropic (loo'te-o-trōp'ik) stimulating the formation of the corpus luteum; see *luteotropin*.

PULMONARY SEGMENTS

Tracheobronchial branching correlated with subdivision of the lungs. Each bronchus is marked the same as the segment it branches out to supply, and should be designated by the same name. The terminology used is that suggested by Jackson and Huber (Diseases of the Chest, volume 9, 1943).

DIAGRAMMATIC REPRESENTATION OF LYMPHATIC DRAINAGE
OF VARIOUS PARTS OF THE BODY

luteotropin (loo'te-o-tro'pin) a hormone of the anterior pituitary gland which stimulates formation of the corpus luteum; identical with prolactin. Called also *luteotropic hormone*.

lutetium (loo-te'she-um) the chemical element, atomic number 71, atomic weight 174.97, symbol Lu.

Lutrexin (loo-trek'sin) trademark for a preparation of lututrin.

Lutromone (loo'tro-mōn) trademark for a preparation of progesterone.

lututrin (loo'tu-trin) a protein or polypeptide substance obtained from the corpus luteum of sow ovaries by a process of salting out followed by dialysis; used as a uterine relaxant in treatment of functional dysmenorrhea.

Lutzomyia (lōōt'zo-mi'ah) a genus of sandflies of the family Psychodidae, the females of which suck blood. **L. andu'zei**, a species that transmits pian bois (forest yaws) in the Guyanas, Brazil, and Venezuela. **L. flaviscutella'ta**, a species that is a vector of *Leishmania mexicana*; sometimes used as a synonym of *L. olmeca*. **L. longipal'pis**, a species believed to transmit kala-azar in South America. **L. nogu'chu**, *Phlebotomus noguchii*. **L. olme'ca**, a species that is the vector of *Leishmania mexicana* in Brazil; sometimes used as a synonym of *L. flaviscutellata*. **L. peruen'sis**, a species that transmits uta in the Peruvian Andes. **L. verruca'rum**, a species that transmits uta in the Peruvian Andes.

lux (luks) [L. "light"] in SI, the metric unit of illumination, being one lumen per square meter; called also *meter candle*. Cf. *foot-candle*.

luxatio (luk-sa'she-o) [L.] dislocation. **l. cox'ae congen'ita**, congenital dislocation of the hip. **l. erēc'ta**, dislocation of the shoulder so that the arm stands straight up above the head. **l. imperfec'ta**, a sprain. **l. perinea'lis**, a form of dislocation of the hip in which the head of the femur lies in the perineum.

luxation (luk-sa'shun) [L. *luxatio*] dislocation. **Malgaigne's l.**, pulled elbow.

luxuriant (luk-su're-ant) growing freely or excessively.

luxus (luks'us) [L.] excess; see under *consumption* and *heart*.

Luys' body, body syndrome, nucleus (loo-ēz') [Jules Bernard Luys, French physician, 1828-1897] see *pituitary gland*, under *gland*, see *body of Luys syndrome*, under *syndrome*, and see *nucleus subthalamicus*.

Luys' segregator (separator) (loo-ēz') [Georges Luys, French physician, 1870-1953] see under *segregator*.

luz (looz) [Hebrew] a bone, located in the spinal column, from which, according to the Talmudists, the body is restored at the resurrection.

L.V.H. left ventricular hypertrophy.

L.V.N. licensed vocational nurse.

Lwoff (lwauf), André Michael. French microbiologist and virologist, born 1902; co-winner, with François Jacob and Jacques Lucien Monod, of the Nobel prize in medicine and physiology for 1965, for discoveries concerning the genetic control of enzymes and virus synthesis.

Ly any T-cell antigen that serves as a basis for grouping T-lymphocytes into classes on the basis of function.

lyase (li'ās) any of a class of enzymes that remove groups from their substrates (other than by hydrolysis), leaving double bonds, or that conversely add groups to double bonds. They include decarboxylases, carboxylases, aldolases, synthetases, hydratases, and dehydratases. **N-acetylneuraminase l.**, an enzyme that catalyzes the conversion of N-acetylneuraminase to 2-acetamido-2-deoxy-D-mannose and pyruvate. **adenylosuccinate l.**, one that catalyzes the conversion of adenylosuccinate to fumarate and AMP. **alginate l.**, one that catalyzes the elimination of 4,5-D-mannuronate residues from alginate, thus bringing about depolymerization. **S-alkylcysteine l.**, one that catalyzes the conversion of S-methyl-L-cysteine to pyruvate, ammonia, and methyl mercaptan. **alliin l.**, a pyridoxal-phosphate protein that catalyzes the conversion of S-alkyl-L-cysteinesulfoxide to 2-aminoacrylate and an alkyl sulfenate. **argininosuccinate l.**, one that catalyzes the conversion of L-argininosuccinate to fumarate and L-arginine. **chondroitin sulfate l.**, an enzyme that catalyzes the elimination of 4,5-D-glucuronate residues, thus bringing about depolymerization. **citrate l.**, one that catalyzes the conversion of citrate to acetate and oxaloacetate. **hyaluronate l.**, one that catalyzes the conversion of hyaluronate to *n*-3(β-D-gluc-4,5-en-uron)-2-acetamido-2-deoxy-D-glucose. **hydroxymethylglutaryl-CoA l.**, one that catalyzes the conversion of 3-hydroxy-3-methylglutaryl-CoA to acetyl-CoA and acetoacetate. **hydroxynitrile l.**, an enzyme (flavoprotein) that catalyzes the conversion of mandelonitrile to benzaldehyde and hydrocyanic acid. **isocitrate l.**, an enzyme that catalyzes the conversion of isocitrate to succinate and glyoxylate. **lactoyl-glutathione l.**, an enzyme occurring in the liver, kidney, and muscle that catalyzes the change of methylglyoxal to lactic acid by the addition of water; called also *glyoxalase l.* **pectate l.**, an enzyme that catalyzes the elimination of 4,5-D-galacturonate residues from pectate, thus bringing about depolymerization. **polyglucuronide l.**, an enzyme that catalyzes the elimination of 4,5-D-glucuronate residues from polysaccha-

rides containing 1,4-linked D-glucuronate, thus bringing about depolymerization.

lycanthropy (li-kan'thro-pe) [Gr. *lykos* wolf + *anthrōpos* man] a delusion in which the patient believes himself a wolf.

lycetamine (li-se'tah-mēn) chemical name: (S)-2,6-diamino-N-hexadecylhexanamide; a topical antimicrobiol, C₂₂H₄₇N₃O.

Lychnis githago (lik'is gith-a'go) *Agrostemma githago*.

lycine (li'sin) betaine.

lycomania (li'ko-ma'ne-ah) lycanthropy.

lycopene (li'ko-pēn) the red carotinoid pigment, C₄₀H₅₆, of tomatoes and various berries and fruits.

lycopenemia (li'ko-pē-ne'me-ah) a variant of carotenemia resulting from the prolonged and excessive ingestion of tomato juice, which contains lycopene.

Lycoperdales (li'ko-per-da'lēs) the puffballs, an order of fungi of the series Gasteromycetes, class Basidiomycetes, including the genera *Calvatia*, *Lycoperdon*, and *Geaster*.

Lycoperdon (li'ko-per'don) [Gr. *lykos* wolf + *perdesthai* to break wind] a genus of fungi of the order Lycoperdales, class Basidiomycetes; the puffballs. In folk medicine, the dust (spores) is puffed and inhaled to treat nosebleeds.

lycoperdonosis (li'ko-per'do-no'sis) a respiratory disease caused by the inhalation of many spores from mature *Lycoperdon* mushrooms.

Lycopodium (li'ko-po'de-um) [Gr. *lykos* wolf + *pous* foot] a genus of club-mosses which yield lycopodium.

lycopodium (li'ko-po'de-um) a light dry powder formed by the yellow inflammable spores of *Lycopodium clavatum*, *L. saururus*, and other species; formerly used as a dusting and absorbent powder, and as a coating for pills. The spores are uniform in size and for this reason are used as a measuring unit in microscopy.

lycorexia (li'ko-rek'se-ah) [Gr. *lykos* wolf + *orexis* appetite] ravenous, wolfish hunger.

lycorine (lik'o-rin) an alkaloid having emetic properties, from the bulbs of the plant *Lycoris radiata*; identical with narcissine.

Lycoris (lik'ō-ris) a genus of poisonous, amaryllidaceous plants of China and Japan. *L. radiata* Herb. is the source of sekisanine; the bulbs, which contain lycorine, are used in Chinese medicine as an expectorant and emetic.

Lycosa tarentula (li-ko'sah tah-ren'tu-lah) the European tarantula.

lydimycin (lid'i-mi'sin) chemical name: 5-(hexahydro-2-oxo-1*H*-thieno[3,4-*d*]imidazol-4-yl)pentenoic acid; an antifungal antibiotic produced by *Streptomyces lydicus*, C₁₀H₁₄N₂O₅S.

lye (li) an alkaline percolate from wood ashes; lixivium. Household lye is a crude mixture of sodium hydroxide with some sodium carbonate.

lying-in (li'ing-in') 1. puerperal. 2. the puerperium.

Lymnaea (lim-ne'ah) a genus of pond snails. *L. ollula* and *L. bulimoides* serve as first intermediate hosts of *Fasciola hepatica*; other species are the hosts of schistosome flukes that cause schistosome dermatitis.

lymph (limf) [L. *lympa* water] 1. a transparent, slightly yellow liquid of alkaline reaction, found in the lymphatic vessels and derived from the tissue fluids. It is occasionally of a light-rose color from the presence of red blood corpuscles, and is often opalescent from particles of fat. Under the microscope, lymph is seen to consist of a liquid portion and of cells, most of which are lymphocytes. Lymph is collected from all parts of the body and returned to the blood via the lymphatic system. Called also *lympa* [NA]. See Plate XXVII. 2. any clear, watery fluid resembling true lymph. **animal l.**, vaccine or other lymph from an animal. **aplastic l.**, lymph that contains an excess of leukocytes and does not tend to become organized; called also *corpuscular l.* **bovine l.**, vaccine lymph from the cow. **calf l.**, lymph for vaccination or other lymph obtained from calves. **corpuscular l.**, aplastic l. **croupous l.**, inflammatory lymph that tends to the formation of a false membrane. **euplastic l.**, fibrinous l., that which tends to coagulate and become organized. **glycerinated l.**, vaccine virus mixed with glycerin in order to destroy any bacteria. **humanized l.**, material containing vaccinia virus collected from vaccinal vesicles of humans. **inflammatory l.**, the lymph produced by inflammation, as in a wound. **intercellular l.**, lymph occupying the intercellular spaces of tissues. **intravascular l.**, the lymph of the lymph vessels. **Koch's l.**, see *New and Old tuberculin*, under *tuberculin*. **plastic l.**, inflammatory lymph that has a tendency to become organized. **tissue l.**, lymph derived from the tissues and not from the blood. **vaccine l.**, **vaccinia l.**, material containing vaccinia virus collected from vaccinal vesicles of calves; used for active immunization against smallpox.

lymph- see *lympho-*.

lympa (lim'fah) [L. "water"] [NA] the fluid found in the lymphatic vessels; see *lymph*.

lymphaden (lim'fah-den) [*lymph-* + Gr. *adēn* gland] a lymph node.

lymphadenectasis (lim-fad/'ē-nek'tah-sis) [*lymph-* + Gr. *adēn* gland + *ektasis* distention] enlargement of a lymph node.

lymphadenectomy (lim-fad/'ē-nek'to-me) [*lymphaden* + Gr. *ektomē* excision] surgical excision of one or more lymph nodes.

lymphadenhypertrophy (lim-fad/'en-hi-per'tro-fe) [*lymphaden* + *hypertrophy*] hypertrophy of a lymph node.

lymphadenia (lim/'fah-de'ne-ah) [*lymphaden* + *-ia*] hypertrophy of the lymph nodes. **l. os/sea** (*obs.*), multiple myeloma.

lymphadenitis (lim-fad/'ē-ni'tis) [*lymph-* + Gr. *adēn* gland + *-itis*] inflammation of lymph nodes. **caseous l.**, inflammation of the lymph nodes associated with tuberculosis of some other part, but showing no tubercle bacilli in the lymphatics. **mesenteric l.**, a condition clinically resembling acute appendicitis, in which there is inflammation of the mesenteric lymph nodes receiving lymph from the intestine. A septic form, which is frequently fatal, and a milder form, which is self-limited, are caused by *Yersinia* (*Pasteurella*) *pseudotuberculosis*. Called also *mesenteric adenitis*. **nonbacterial regional l.**, cat-scratch disease. **paratuberculous l.**, caseous l. **regional l.**, cat-scratch disease. **tuberculoid l.**, inflammation of the lymph nodes similar to that in tuberculosis lymphadenitis; it may be caused by such disorders as sarcoidosis, regional enteritis, leprosy, syphilis, and several fungal infections. **tuberculous l.**, tuberculosis of the lymph nodes, involving most often the cervical and mediastinal nodes, due to lymphatic spread from a primary pulmonary infection or to hematogenous dissemination. Affected nodes may suppurate, with formation of draining sinuses. Primary infection of the cervical lymph nodes, once a common disorder, was known as scrofula. Called also *tuberculous lymphadenopathy*.

lymphadenocoele (lim-fad/'ē-no-sē'l') a cyst of a lymph node; called also *adenolymphocoele*.

lymphadenocyst (lim-fad/'ē-no-sist') a degenerated lymph node caused by occlusion of its incoming lymph vessels. By dilatation of the lymph sinuses it becomes a fine-meshed network.

lymphadenogram (lim-fad/'ē-no-gram') a roentgenogram of lymph nodes.

lymphadenography (lim-fad/'ē-nog'rah-fe) roentgenographic visualization of the lymph nodes, following injection of radiopaque material into a lymphatic vessel.

lymphadenoid (lim-fad/'ē-noid) [*lymph-* + Gr. *adēn* gland + *eidōs* form] resembling the tissue of lymph nodes; lymphadenoid tissue includes the spleen, bone marrow, tonsils, and the lymphatic tissue of the organs and mucous membranes.

lymphadenoleukopoiesis (lim-fad/'ē-no-lu'ko-poi-e'sis) the production of leukocytes by the lymphadenoid tissue.

lymphadenoma (lim/'fad-ē-no'mah) hyperplasia of the lymphadenoid tissue; lymphoma. **malignant l.** (*obs.*), malignant lymphoma. **multiple l.**, (*obs.*), Hodgkin's disease.

lymphadenomatosis (lim-fad/'ē-no-mah-to'sis) (*obs.*) generalized malignant lymphoma. **general l. of bones** (*obs.*), multiple myeloma.

lymphadenopathy (lim-fad/'ē-nop'ah-the) [*lymphaden* + Gr. *patōs* disease] disease of the lymph nodes. **angioimmunoblastic l.**, immunoblastic l. **dermatopathic l.**, regional lymph node enlargement associated with melanoderma and various diseases in which erythroderma is chronically present, e.g., exfoliative dermatitis and generalized neurodermatitis; called also *lipomelanotic reticulosis*. **giant follicular l.**, see under *lymphoma*. **immunoblastic l.**, a hyperimmune disorder resembling Hodgkin's disease, characterized by fever, night sweats, weight loss, maculopapular rash, malaise, and generalized lymphadenopathy, and by proliferation of arborizing small vessels, prominent immunoblastic proliferation, hepatosplenomegaly, polyclonal hypergammaglobulinemia, mild hemolytic anemia and leukocytosis, and deposition of an amorphous interstitial material. Called also *angioimmunoblastic l.* **tuberculous l.**, see under *lymphadenitis*.

lymphadenosis (lim-fad/'ē-no'sis) [*lymphaden* + *-osis*] hypertrophy or proliferation of lymphoid tissue. **acute l.**, infectious mononucleosis. **l. aleuce/mica parasita/ria**, East Coast fever. **aleukemic l.**, a disease marked by diffuse generalized hyperplasia of the lymphadenoid system (lymph glands, spleen, bone marrow, tonsils, and other lymphatic tissues), but without leukemia; see also *pseudoleukemia* and *lymphosarcoma*. **l. benigna cutis**, a benign inflammatory hyperplasia of lymphocytes in the skin, often in follicular arrangement, principally occurring on the face or ears of young adults in the form of solitary or disseminated yellowish brown to bluish red nodules that may progressively enlarge but usually involute spontaneously after a few months or years. Called also *lymphocytoma cutis*, *Bärfverstedt's syndrome*, and *Spiegler-Fendt sarcoïd*.

lymphadenotomy (lim-fad/'ē-not'o-me) incision of a lymph node.

lymphadenovarix (lim-fad/'ē-no-va'riks) enlargement of the lymph nodes from the pressure of dilated lymph vessels.

lymphagogue (lim/'fah-gog) an agent that promotes the production of lymph.

lymphangeitis (lim/'fan-je-i'tis) lymphangitis.

lymphangial (lim-fan/'je-al) pertaining to a lymphatic vessel.

lymphangiectasia (lim-fan/'je-ek-ta'ze-ah) lymphangiectasis. **intestinal l.**, dilatation of the intestinal lymphatic system, particularly the lacteals in the intestinal villi, characterized by protein-losing enteropathy, steatorrhea, and lymphopenia. It may be congenital, due to abnormality of the lymphatic system (as in Milroy's disease), or acquired, due to involvement of the major intestinal lymphatic ducts by inflammatory processes or neoplasm, or to increased lymphatic pressure, as in valvular heart disease and constrictive pericarditis.

lymphangiectasis (lim-fan/'je-ek'tah-sis) [*lymph-* + Gr. *angeion* vessel + *ektasis* distention] dilatation of the lymphatic vessels. **cystic l.**, cystic lymphangioma.

lymphangiectatic (lim-fan/'je-ek-tat'ik) pertaining to or marked by lymphangiectasis.

lymphangiectodes (lim-fan/'je-ek-to'dēz) (*obs.*) lymphangioma circumscriptum.

lymphangiectomy (lim-fan/'je-ek'to-me) excision of one or more lymphatic vessels.

lymphangiitis (lim-fan/'je-i'tis) lymphangitis.

lymphangioadenography (lim-fan/'je-o-ad/'ē-nog'rah-fe) lymphography.

lymphangioendothelioblastoma (lim-fan/'je-o-en/'do-the/'le-o-blas-to'mah) (*obs.*) lymphangioendothelioma.

lymphangioendothelioma (lim-fan/'je-o-en/'do-the-le-o'mah) lymphangioma in which the endothelial cells are the dominant component.

lymphangiofibroma (lim-fan/'je-o-fi-bro'mah) a fibrosing lymphangioma.

lymphangiogram (lim-fan/'je-o-gram) a roentgenogram of the lymphatic vessels.

lymphangiography (lim-fan/'je-og'rah-fe) roentgenography of the lymphatic vessels following the injection of contrast medium. **pedal l.**, radiography of the lymphatic channels of the lower extremity after injection of contrast medium into the first and second interdigital spaces of the foot.

lymphangiology (lim-fan/'je-ol'o-je) [*lymph-* + Gr. *angeion* vessel + *-logy*] the branch of anatomy relating to the lymphatic vessels.

lymphangioma (lim-fan/'je-o'mah) a tumor composed of new-formed lymph spaces and channels; called also *angioma lymphaticum*. **l. capsula/re varico/sum** (*obs.*), lymphangioma circumscriptum. **l. caverno/sum**, dilatation of the lymphatic vessels resulting in cavities filled with lymph; called also *cavernosa lymphaticum*. **cavernous l.**, *l. cavernosum*. **l. circumscrip'tum**, a skin lesion of early life marked by the development of groups, a few centimeters in diameter, of yellow to red vesicles, connected with the lymphatic vessels. **cystic l.**, **l. cysticum**, a cystic growth occurring almost exclusively in the neck or groin and more commonly in children than in adults, and thought to originate from some anomaly in development of the primitive lymphatic spaces. The symptoms are largely the result of compression of adjoining structures by the mass. **fissural l.**, simple or cavernous lymphangiomas at the site of fetal fissures. **l. sim'plex**, dilatation of a lymph vessel over a circumscribed area. **l. tubero/sum mul'tiplex** (*obs.*), a skin disease marked by the development of groups of papules or tubercles resembling and believed to be lymphangioma. **l. xanthelas-moi/deum** (*obs.*), lymphangioma circumscriptum marked by formation on the skin of yellow or brownish patches.

lymphangiomyomatosis (lim-fan/'je-o-mi/'o-mah-to'sis) a progressive disorder of women of child-bearing age, marked by nodular and diffuse interstitial proliferation of smooth muscle in the lungs, lymph nodes, and thoracic duct.

lymphangiophlebitis (lim-fan/'je-o-flē-bi'tis) inflammation of the lymph vessels and veins.

lymphangioplasty (lim-fan/'je-o-plas'te) [*lymph-* + Gr. *angeion* vessel + *plassein* to form] operative restoration or replacement of lymph vessels that have been destroyed. **Handley's l.**, treatment of elephantiasis by means of drains made of long cotton and silk threads inserted into the tissues; called also *Handley's method*.

lymphangiosarcoma (lim-fan/'je-o-sar-ko'mah) a malignant tumor of lymphatic vessels, usually arising in a limb that is the site of chronic lymphedema.

lymphangiotomy (lim-fan/'je-ot'o-me) [*lymph-* + Gr. *angeion* vessel + *temnein* to cut] incision into a lymphatic vessel, usually performed for cannulation prior to lymphangiography.

lymphangitis (lim/'fan-ji'tis) inflammation of a lymphatic vessel or vessels. Acute lymphangitis may result from spread of bacterial infection (most commonly beta-hemolytic streptococci) into the lymphatics, manifested by painful subcutaneous red streaks along the course of the vessels. **l. carcinomato'sa**, a pseudo-inflammatory lesion of the lymphatic vessels of the peritoneum, with edema of the area and proliferation of fibrous tissues around the vessels, due to the infiltration of cancer cells from peritoneal tumors. **l. epizoot'ica**, a chronic contagious disease of horses caused by a yeast fungus, *Histoplasma farciminosus*,

and marked by purulent inflammation of the subcutaneous lymphatic vessels and of the regional lymph glands. Called also *pseudofarcy*, *blastomycosis farciminosus*, *cryptococcus farcy*, *lymphosporidiosis*, *African glanders*, *Japanese glanders*, *Japanese farcy*, *Neapolitan farcy*. **gummatous l.**, cladiosis. **ulcerative l.**, a chronic contagious disease of horses and other equines, characterized by inflammation of the lymph vessels and a tendency toward ulceration of the skin over the parts affected; called also *ulcerative cellulitis*. **l. ulcero/sa pseudofarcino/sa**, a disease of horses resembling glanders, and due to a bacillus closely resembling the glanders bacillus, *Actinobacillus mallei*; called also *pseudoglanders*.

lymphapheresis (lim'fah-fer'ē-sis) lymphocytopheresis.

lymphatic (lim-fat'ik) [L. *lymphaticus*] 1. pertaining to lymph or a lymph vessel; by extension, the term is used alone to designate a lymphatic vessel or, in the plural, to designate the lymphatic system. 2. of a sluggish or phlegmatic temperament.

lymphaticostomy (lim-fat'ī-kos'to-me) [*lymphatic* + Gr. *stomion* to provide with an opening, or mouth] surgical creation of an opening into a lymphatic duct, usually the thoracic duct.

lymphatism (lim'fah-tizm) 1. a morbid state due to excessive production or growth of lymphoid tissues, resulting in impaired development and lowered vitality; called also *lymphotoxemia*, *lymphoidtoxemia*, and *status lymphaticus*. 2. the lymphatic temperament; a slow or sluggish habit.

lymphatitis (lim'fah-ti'tis) inflammation of some part of the lymphatic system.

lymphatogenous (lim'fah-toj'ē-nus) produced by or derived from the lymph; disseminated by the lymph circulation or through the lymph channels.

lymphatology (lim'fah-tol'o-je) the study of the lymph and lymphatic system.

lymphatolysin (lim'fah-tol'ī-sin) a lysin that acts on lymphatic tissue.

lymphatolysis (lim'fah-tol'ī-sis) [*lymphatic* + Gr. *lysis* dissolution] the destruction or solution of lymphatic tissue.

lymphatolytic (lim'fah-to-lit'ik) [*lymphatic* + Gr. *lysis* dissolution] destroying lymphatic tissue.

lymphatome (lim'fah-tōm) lymphotome.

lymphectasia (lim'fek-ta'ze-ah) [*lymph* + Gr. *ektasis* distention] distention with lymph.

lymphedema (lim'fe-de'mah) [*lymph* + *edema*] chronic unilateral or bilateral edema of the extremities due to accumulation of interstitial fluid as a result of stasis of lymph, which is secondary to obstruction of lymph vessels or disorders of the lymph nodes. **congenital l.**, Milroy's disease. **l. prae/cox**, primarily of young females, characterized by puffiness and swelling of the lower limbs, and occurring at or near puberty. **l. tar'da**, lymphedema of late onset, after 35 years of age.

lymphendothelioma (lim'fen-do-the'le-o'mah) (*obs.*), lymphangioendothelioma.

lymphenteritis (lim'fen-ter-i'tis) enteritis with serous infiltration.

lymphepithelioma (limf'ep-i-the'le-o'mah) lymphoepithelioma.

lymphization (lim'fi-za'shun) the formation of lymph.

lymphnoditis (limf'no-di'tis) inflammation of a lymph node; lymphadenitis.

lympho-, lymph- [L. *lympa* water] a combining form denoting relationship to lymph, lymphoid tissue, lymphatics, or lymphocytes.

lymphoblast (lim'fo-blast) [*lympho* + Gr. *blastos* germ] the immature, nucleolated precursor of the mature lymphocyte.

lymphoblastic (lim'fo-blas'tik) pertaining to a lymphoblast.

lymphoblastoma (lim'fo-blas-to'mah) poorly differentiated lymphocytic malignant lymphoma.

lymphoblastomatosis (lim'fo-blas'to-mah-to'sis) the condition produced by the presence of lymphoblastomas.

lymphoblastomatous (lim'fo-blas-to'mah-tus) of the nature of or characterized by lymphoblastoma.

lymphoblastomid (lim'fo-blas-to'mid) any specific cutaneous lesion of lymphoblastoma.

lymphoblastosis (lim'fo-blas-to'sis) excess of lymphoblasts in the blood. **acute benign l.**, former term for infectious mononucleosis.

lymphoceles (lim'fo-sēl) [*lympho* + Gr. *kēlē* tumor] (*obs.*) cystic lymphangioma.

lymphocerastism (lim'fo-se-ras'tizm) [*lympho* + Gr. *kerastos* mixed] the formation of lymphoid cells.

lymphocinesia (lim'fo-si-ne'ze-ah) [*lympho* + Gr. *kinēsis* motion] lymphokinesis.

lymphocyst (lim'fo-sist) (*obs.*) cystic lymphangioma.

lymphocytopheresis (lim'fo-si'tah-fer'ē-sis) [*lymphocyte* + Gr. *aphairesis* removal] the selective removal of lymphocytes from withdrawn blood, which is then retransfused into the donor. Called also *lymphapheresis*.

lymphocyte (lim'fo-sit) [*lympho* + *-cyte*] a mononuclear leukocyte 7 μ to 20 μ in diameter, with a deeply staining nucleus containing dense chromatin, and a pale-blue-staining cytoplasm. It is chiefly a product of lymphoid tissue and participates in humoral and cell-mediated immunity. See also *lymphocytic series*, under *series*. **activated l.**, one that has reacted immunologically on exposure to antigen or to a mitogen, such as phytohemagglutinin. **B-l's**, "bursa-equivalent" lymphocytes, i.e., lymphocytes that are thymus-independent, migrating to the tissues without passing through or being influenced by the thymus; they are analogous to the avian lymphocytes governed by the bursa of Fabricius. Humans have no discrete bursa and the exact location of B-lymphocyte production is not known, but gut-associated lymphoid tissue, fetal liver, and bone marrow are considered to be the primary sites of origin of B-lymphocytes, being designated bursal equivalent tissue. B-lymphocytes play a major role in humoral immunity; on stimulation by antigen, they mature into plasma cells that synthesize humoral antibody. Called also *B cells*. Cf. *T-l's*. **"bursa-equivalent" l's**, B-l's. **killer l's**, see under *cell*. **null l's**, see under *cell*. **Rieder's l.**, a lymphocyte having a nucleus which is lobed and twisted; seen in chronic lymphocytic leukemia. **T-l's**, thymus-dependent lymphocytes, i.e., lymphocytes that either pass through the thymus or are influenced by it on their way to the tissues; they can suppress or assist the stimulation of antibody production in B-lymphocytes in the presence of antigen, and can kill such cells as tumor and transplant tissue cells. They act directly or by elaboration of lymphokines, are largely responsible for cell-mediated immunity, and have the property of anamnestic response. Several subsets of T-lymphocytes are recognized on the basis of surface markers and function. Called also *T cells*. Cf. *B-l's*. **thymus-dependent l's**, T-l's. **thymus-independent l's**, B-l's. **transformed l's**, blastlike cells occurring as a result of stimulation *in vitro* by nonspecific mitogens or by specific antigens; they are increased in size, have abundant cytoplasm, and their nucleoli are visible.

lymphocytic (lim'fo-sit'ik) pertaining to, characterized by, or of the nature of lymphocytes; see also under *series*.

lymphocytoblast (lim'fo-sit'o-blast) lymphoblast.

lymphocytoma (lim'fo-si-to'mah) [*lymphocyte* + *-oma*] well-differentiated lymphocytic malignant lymphoma. **l. cu'tis**, lymphadenosis benigna cutis.

lymphocytomatosis (lim'fo-si'to-mah-to'sis) the condition produced by the presence of lymphocytomas.

lymphocytomatous (lim'fo-si-to'mah-tus) of the nature of or characterized by lymphocytoma.

lymphocytopenia (lim'fo-si'to-pe'ne-ah) reduction in the number of lymphocytes in the blood.

lymphocytopheresis (lim'fo-si'to-fer'ē-sis) lymphocytopheresis.

lymphocytopoiesis (lim'fo-si'to-poi-e'sis) [*lymphocyte* + Gr. *poiein* to make] the development of lymphocytes.

lymphocytopoietic (lim'fo-si'to-poi-et'ik) pertaining to or characterized by lymphocytopoiesis.

lymphocytorrhesis (lim'fo-si'to-rek'sis) the rupturing or bursting of lymphocytes.

lymphocytosis (lim'fo-si-to'sis) excess of normal lymphocytes in the blood or in any effusion. **acute infectious l.**, an acute, benign infectious disease of children characterized by an excess of normal small lymphocytes in the blood without lymphadenopathy or splenomegaly, and with varying degrees of clinical expression and constitutional response; called also *Carl Smith disease*.

lymphocytotic (lim'fo-si-to'tik) pertaining to lymphocytosis.

lymphocytotoxicity (lim'fo-si'to-tok-sis'i-te) the quality or capability of lysing lymphocytes, as in procedures in which lymphocytes having a specific cell surface antigen are lysed when incubated with antiserum and complement. Called also *leukocyto-toxicity*.

lymphocytotoxin (lim'fo-si'to-tok'sin) a toxin that has a specific destructive action on lymphocytes.

lymphodermia (lim'fo-der'me-ah) [*lympho* + Gr. *derma* skin] (*obs.*) any disease of the lymphatics of the skin.

lymphoduct (lim'fo-dukt) a lymphatic vessel.

lymphoepithelioma (lim'fo-ep'i-the'le-o'mah) a pleomorphic, poorly differentiated (transitional cell) carcinoma arising from modified epithelium overlying the lymphoid tissue of the nasopharynx; it has a high frequency among young adults of Oriental extraction. Called also *lymphoepithelial carcinoma*, *Schmincke tumor*, and *Regaud tumor*.

lymphoganglin (lim'fo-gang'glin) a hypothetical hormone from lymph nodes.

lymphogenesis (lim'fo-jen'ē-sis) the production of lymph.

lymphogenous (lim'foj'ē-nus) [*lympho* + Gr. *gennan* to produce] 1. producing lymph. 2. produced from lymph or in the lymphatics.

lymphoglandula (lim'fo-glan'du-lah), pl. *lymphoglan'dulae*. Lymph node (*nodus lymphaticus* [NA]).

lymphogram (lim'fo-gram) a roentgenogram of the lymphatic vessels and lymph nodes.

lymphogranuloma (lim'fo-gran'u-lo-mah) Hodgkin's disease. **l. benignum** (obs.), sarcoidosis. **l. inguinalis**, **l. venereum**. **l. malignum**, Hodgkin's disease. **Schaumann's benign l.** (obs.), sarcoidosis. **l. venereum**, an infectious disease of venereal origin caused by a strain of *Chlamydia* and marked initially by a primary transient ulcerative lesion of the genitals, followed by regional lymph node hypertrophy; in later stages, lymphatic obstruction may result in elephantiasis of the external genitalia, while scarring accounts for strictures of the rectum. Called also *lymphogranuloma inguinale*, *lymphopathia venereum*, *poradenitis nostras*, *Frei's disease*, *Nicolas-Favre disease*, *fifth venereal disease*, *climatic bubo*, *tropical bubo*, etc.

lymphogranulomatosis (lim'fo-gran'u-lo-mah-to'sis) 1. infectious granuloma of the lymphatic system. 2. a term used by continental writers as a synonym for Hodgkin's disease. See also *pseudoleukemia*. **benign l.**, sarcoidosis. **l. cutis**, the cutaneous manifestation of Hodgkin's disease. **l. inguinalis**, lymphogranuloma venereum. **l. maligna**, Hodgkin's disease.

lymphography (lim-fog'rah-fe) roentgenography of the lymphatic channels and lymph nodes, following injection of radiopaque material in a lymphatic vessel.

lymphohistiocytic (lim'fo-his'te-o-sit'ik) involving lymphocytes and histiocytes.

lymphohistioplasmacytic (lim'fo-his'te-o-plas'mah-sit'ik) involving lymphocytes, histiocytes, and plasmacytes.

lymphoid (lim'foid) [*lymph* + Gr. *eidos* form] resembling or pertaining to lymph or tissue of the lymphoid system.

lymphoidectomy (lim'foi-dek'to-me) excision of lymphoid tissue, such as adenoids and tonsils.

lymphoidocyte (lim'foi'do-sit) an embryonic cell considered by some to be the stem cell for all types of blood cells; hemocytoblast.

lymphoidotoxemia (lim'foi'do-tok-se'me-ah) lymphatism (def. 1).

lymphokentric (lim'fo-ken'trik) [*lympho* + Gr. *kentron* a stimulant] stimulating the formation of lymphoid cells. Cf. *myelokentric*.

lymphokine (lim'fo-kin) [*lympho* + Gr. *kinēsis* movement] a general term for soluble protein mediators released by sensitized lymphocytes on contact with antigen and which play a role in macrophage activation, lymphocyte transformation, and cell-mediated immunity.

lymphokinosis (lim'fo-ki-ne'sis) [*lympho* + Gr. *kinēsis* movement] 1. the movement of the endolymph in the semicircular canals. 2. the circulation of lymph in the body.

lymphology (lim-fol'o-je) [*lympho* + -logy] the study of the lymphatic system.

lympholytic (lim'fo-lit'ik) causing destruction of lymphocytes.

lymphoma (lim'fo-mah) a general term applied to any neoplastic disorder of the lymphoid tissue, including Hodgkin's disease. Benign lymphoma is rare; the term *lymphoma* often is used alone to denote malignant lymphoma. Recent classifications of malignant lymphomas are based on the predominant cell type and its degree of differentiation; the various categories may be subdivided into nodular and diffuse types depending on the predominant pattern of cell arrangement. **African l.**, Burkitt's l. **Burkitt's l.**, a form of undifferentiated malignant lymphoma, usually found in central Africa, but also reported from other areas, and manifested most often as a large osteolytic lesion in the jaw or as an abdominal mass. The Epstein-Barr virus, a herpesvirus, has been isolated from Burkitt's lymphoma, and has been implicated as a causative agent. Called also *Burkitt's tumor* and *African l.* **clasmocytic l.**, histiocytic malignant l. **giant follicular l.**, nodular well differentiated lymphocytic malignant lymphoma, so called because its microscopic appearance is characterized by multiple, proliferative, follicle-like nodules which disturb the normal architecture of the lymph nodes. Called also *giant follicular lymphadenopathy*, and *Brill-Symmers* or *Symmers' disease*. **granulomatous l.**, Hodgkin's disease. **lymphoblastic l.**, poorly differentiated lymphocytic malignant l. **lymphocytic l.**, see *malignant l.*, *well-differentiated lymphocytic* and *poorly-differentiated lymphocytic*. **malignant l.**, see *lymphoma*. **malignant l.**, *histiocytic*, a form in which the predominant cell is the primitive mesenchymal element or one which has differentiated into the identifiable reticulum cell; called also *reticulum cell sarcoma* and *clasmocytic l.* **malignant l.**, *mixed cell*, a form that contains proliferations of both histiocytes and lymphocytes. **malignant l.**, *poorly differentiated lymphocytic*, a form in which the predominant cell is morphologically similar to the lymphoblast and contains a fine nuclear chromatin structure with one or more nucleoli; called also *lymphoblastoma*, *lymphoblastic l.*, and *lymphoblastic lymphosarcoma*. **malignant l.**, *undifferentiated*, a form in which relatively large stem cells with large nuclei, pale, scanty cytoplasm, and indistinct borders are predominant; called also *stem cell l.* and *reticulosarcoma*. **malignant l.**, *well-differentiated lymphocytic*, a form in which the predominant cell is the

mature lymphocyte; called also *lymphocytoma*, *lymphocytic l.*, and *lymphocytic lymphosarcoma*. **stem cell l.**, malignant l., undifferentiated.

lymphomatoid (lim'fo-mah-toid) resembling lymphoma.

lymphomatosis (lim'fo-mah-to'sis) the development of multiple lymphomas in various parts of the body. **avian l.**, l. of fowl, avian leukosis involving chiefly the lymphocytes. **l. granulomato'sa** (obs.), Hodgkin's disease. **neural l.**, see *Marek's disease*, under *disease*. **ocular l.**, see *Marek's disease*, under *disease*. **visceral l.**, see *avian leukosis*, under *leukosis*.

lymphomatous (lim'fo-mah-tus) pertaining to or of the nature of lymphoma.

lymphomyloma (lim'fo-mi-ē-lo-mah) (obs.) multiple myeloma.

lymphomyxoma (lim'fo-mik-so-mah) any benign growth consisting of adenoid tissue.

lymphonodi (lim'fo-no'di) [L.] plural of *lymphonodus*.

lymphonodus (lim'fo-no'dus), pl. *lymphono'di* [*lympho* + L. *nodis* a knot] NA alternative for *nodus lymphaticus*.

lymphopathia (lim'fo-path'e-ah) lymphopathy. **l. venereum**, lymphogranuloma venereum.

lymphopathy (lim-fop'ah-the) [*lympho* + Gr. *pathos* disease] any disease of the lymphatic system. **ataxic l.**, a sudden swelling of the lymph nodes sometimes accompanying the pain crises of locomotor ataxia.

lymphopenia (lim-fop'e-ne-ah) [*lymphocyte* + Gr. *penia* poverty] decrease in the proportion of lymphocytes in the blood.

lymphoplasm (lim'fo-plazm) spongioplasm, def. 1.

lymphoplasty (lim'fo-plas'te) lymphangioplasty.

lymphopoiesis (lim'fo-poi-e'sis) [*lympho* + Gr. *poiein* to make] 1. the development of lymphatic tissue. 2. lymphocytopoiesis.

lymphopoietic (lim'fo-poi-et'ik) pertaining to, characterized by, or causing lymphopoiesis.

lymphoproliferative (lim'fo-pro-lif'er-ah-tiv) pertaining to or characterized by proliferation of lymphoid tissue; see under *syndrome*.

lymphoreticular (lim'fo-rē-tik'u-lar) pertaining to the reticuloendothelial cells of the lymph nodes.

lymphoreticulosis (lim'fo-re-tik'u-lo'sis) proliferation of the reticuloendothelial cells of the lymph glands. **benign l.**, cat-scratch fever.

lymphorrhage (lim'fo-rij) an accumulation of lymphocytes in a muscle.

lymphorrhagia (lim'fo-ra'je-ah) [*lympho* + Gr. *rhēgnynai* to break out] lymphorrhea.

lymphorrhea (lim'fo-re'ah) [*lympho* + Gr. *rhoia* flow] a flow of lymph from cut or ruptured lymph vessels.

lymphorrhoid (lim'fo-ro'id) a localized dilatation of a perianal lymph channel, resembling a hemorrhoid; sometimes occurring in lymphogranuloma venereum.

lymphosarcoma (lim'fo-sar-ko-mah) a general term applied to malignant neoplastic disorders of lymphoid tissue, but not including Hodgkin's disease. See *lymphoma*. **fascicular l.**, sclerosing l. **lymphoblastic l.**, poorly differentiated lymphocytic malignant lymphoma. **lymphocytic l.**, well-differentiated lymphocytic malignant lymphoma. **sclerosing l.**, a form occurring mainly in childhood, in which the tumor has a fine collagenous stroma and the lymphocytes are arranged in serried rows between the fibers, often giving the tumor a distinctive whorled pattern.

lymphosarcomatosis (lim'fo-sar'ko-mah-to'sis) a condition characterized by the presence of multiple lesions of lymphosarcoma.

lymphosporidiosis (lim'fo-spo-rid'e-o'sis) lymphangitis epizootica.

lymphostasis (lim-fos'tah-sis) [*lympho* + Gr. *stasis* standing] stoppage of the lymph flow.

lymphotaxis (lim'fo-tak'sis) [*lymphocyte* + Gr. *taxis* arrangement] the property of attracting or repulsing lymphocytes.

lymphotism (lim'fo-tizm) a disordered state associated with the development of adenoid tissue.

lymphotome (lim'fo-tōm) [*lympho* + Gr. *tomē* a cut] an instrument for excising accumulations of lymphoid tissue.

lymphotoxemia (lim'fo-tok-se'me-ah) toxemia due to excess of lymphoid material or lymphoid tissue, as in rickets, Graves' disease, enlarged thymus, etc.

lymphotoxin (lim'fo-tok'sin) a chemical mediator released by sensitized lymphocytes and involved in target-cell injury and inhibition of cell division.

lymphotrophy (lim-fot'ro-fe) [*lympho* + Gr. *trephein* to nourish] the attractive energy of cells for lymph.

lymphous (lim'fus) pertaining to or containing lymph.

lymph-vascular (limf-vas'ku-lar) pertaining to or containing lymphatic vessels.

Lynchia maura (lin'ke-ah maw'rah) *Pseudolynchia canariensis*.

Lynen (li'nēn), Feodor. German biochemist, born 1911; co-winner, with Konrad Bloch, of the Nobel prize for medicine and physiology in 1964, for investigations in biosynthesis of fatty acids and cholesterol.

lynestrenol (lin-es'trē-nōl) chemical name: 19-nor-17 α -pregn-4-en-20-yn-17-ol; a progestin, C₂₀H₂₈O.

Lynoral (lin'or-al) trademark for a preparation of ethinyl estradiol.

lyo- (li'o) [Gr. *lyein* to dissolve] combining form meaning dissolved.

lyochrome (li'o-krōm) [*lyo-* + Gr. *chrōma* color] flavin.

lyogel (li'o-jel) [*lyo-* + *gel*] a gel containing much liquid. Cf. *xerogel*.

Lyon hypothesis (li'on) [Mary L. Lyon, British geneticist] see under *hypothesis*.

Lyon method, test (li'on) [Bethuel Boyd Vincent Lyon, American physician, 1880-1953] Meltzer-Lyon test; see under *tests*.

lyonization (li'on-i-zā'shun) [after Mary L. Lyon] the process by which or the condition in which all X chromosomes of the cells in excess of one are inactivated on a random basis.

lyonized (li'o-nīzd) [after Mary L. Lyon] denoting the inactivated X chromosome in a cell, according to the Lyon hypothesis.

lyophil (li'o-fil) a lyophilic substance; a material that readily goes into solution.

lyophile (li'o-fil) 1. lyophil. 2. lyophilic.

lyophilic (li'o-fil'ik) [*lyo-* + Gr. *philein* to love] having an affinity for solution; designating a colloid system in which the solvent and the dispersed particles mutually attract each other and which is quite stable.

lyophilization (li-of'i-li-zā'shun) the creation of a stable preparation of a biological substance (blood plasma, serum, etc.), by rapid freezing and dehydration of the frozen product under high vacuum.

lyophilize (li-of'i-līz) to subject to lyophilization.

lyophilizer (li-of'i-li-zer) an instrument used in lyophilization; a freeze dryer.

lyophobe (li'o-fōb) [*lyo-* + *phobia*] a lyophobic substance; a material that does not readily go into or tends to separate out from solution.

lyophobic (li'o-fō'bik) [*lyo-* + Gr. *phobein* to fear] not having an affinity for solution; designating a colloid system in which no attraction exists between the solvent and the dispersed particles and which is unstable.

lyosol (li'o-sol) a sol in which the dispersion medium is a liquid.

lyosorption (li'o-sorp'shun) the selective adsorption of the solvent portion of a solution.

lyotropic (li'o-trop'ik) [*lyo-* + Gr. *tropos* a turning] entering easily into solution; readily soluble.

Lyperosia irritans (li'per-o'se-ah ir'i-tans) *Haematobia irritans*.

Lyponyssus (li'po-nis'us) a genus of mites which sometimes attack man. *L. baco'ti* live normally on rats, *L. bur'sae* on birds.

lypressin (li-pres'in) chemical name: 8- α -lysine vasopressin. A form of vasopressin that contains lysine, C₄₆H₆₆N₁₃O₁₂S, as that from pigs. A synthetic preparation is used as an antidiuretic and vasoconstrictor in the treatment of diabetes insipidus due to deficiency of endogenous posterior pituitary antidiuretic hormone (vasopressin), administered by intranasal spray. See also *argipressin*.

lyra (li'rah) [L., Gr. "a stringed instrument resembling the lute"] a name applied to certain anatomical structures because of their fancied resemblance to a lute. **1. Da'vidis** (*obs.*), commissura fornicis.

lyre (lir) *lyra*. **1. of David** (*obs.*), commissura fornicis.

Lys lysine.

lysate (li'sāt) 1. the material formed by the lysis of cells. 2. a medicinal preparation obtained from an animal organ by means of artificial digestion.

lysatin (li'sah-tin) a principle derived from casein by Drechsel, later shown to be a mixture of lysine and arginine.

lyse (liz) 1. to cause or produce disintegration of a compound, substance, or cell. 2. to undergo lysis.

lysergide (li'ser-jid) chemical name: *N,N*-diethyllysergamide. A hallucinogenic compound, C₂₀H₂₅N₃O, derived from lysergic acid; it has been used experimentally in the study and treatment of mental disorders. The substance has also been found to be antagonistic to serotonin in its action on smooth muscle. The side effects include bizarre behavior and, reportedly, psychosis and chromosomal damage. Called also *LSD* and *lysergic acid diethylamide*.

lysidin (li'si-din) a red crystalline body, methylglyoxalidin, CH₂·NH·C(CH₃)₂·N·CH₂; also its yellowish or pinkish, soapy, 50 per cent solution: used as a solvent for uric acid. **1. bitartrate**, a soluble, white, crystalline powder, of one third the solvent power of pure lysidin.

lysimeter (li-sim'ē-ter) [Gr. *lysis* dissolution + *metron* measure] an apparatus for determining the solubilities of substances.

lysin (li'sin) [Gr. *lyein* to dissolve] an antibody, such as an alpha lysin, which has the power of causing dissolution of cells. The term includes hemolysin, bacteriolysin, cytolysin, etc. **beta 1**, a naturally occurring and relatively thermostable bactericidal serum constituent of certain animals that is not inactivated by a temperature of 56-60° C. for 30-40 minutes. **Dubos' 1** (*obs.*), tyrothricin. **immune 1**, a cytolytic antibody that interacts with cellular antigen to mediate lysis of the cell by complement. **sperm 1**, a general term for the enzymatic substances of spermatozoa which dissolve egg membranes and permit penetration; these lysins are thought to be produced by the acrosome.

lysine (li'sēn) an amino acid, NH₂(CH₂)₄·CH(NH₂)·COOH, or α - ϵ -diaminocaproic acid, a hydrolytic product of protein first isolated from casein (Drechsel, 1889); essential for optimal growth in infants and for maintenance of nitrogen equilibrium in human adults.

lysingen (li-sin'o-jen) [*lysin* + Gr. *gennan* to produce] an antigenic substance capable of inducing the formation of lysins.

lysingenesis (li'sin-o-jen'ē-sis) the production or formation of lysins.

lysinosis (li'si-no'sis) [Gr. *lyein* to dissolve + *is*, *inos* fiber + *-osis*] lung disease due to inhaling cotton fibers, as in mills; lyssinosis.

lysis (li'sis) [Gr. "dissolution; a loosing, setting free, releasing"] 1. destruction, as of cells by a specific lysin. 2. decomposition, as of a chemical compound by a specific agent. 3. mobilization of an organ by division of restraining adhesions. 4. the gradual abatement of the symptoms of a disease; cf. *crisis*, def. 1. **hot-cold 1**, lysis that occurs only if the material is incubated as usual and then allowed to stand overnight at room temperature.

lyso- (li'so) [Gr. *lysis* dissolution] a combining form, indicating lysis or dissolution.

lysobacteria (li'so-bak-te're-ah) (*obs.*) bacteria that are able to dissolve other bacteria, both alive and dead.

lysocephalin (li'so-sef'ah-lin) a cephalin from which a fatty acid radical has been removed, as by the action of cobra venom.

lysocythin (li'so-si'thin) a substance formed by combination between an animal poison and the body tissues and having a cytolytic action.

Lysodren (li'so-dren) trademark for a preparation of mitotane.

lysojen (li'so-jen) [*lysin* + Gr. *gennan* to produce] an antigen that elicits the formation of a lytic antibody; called also *lysinogen*.

lyso genesis (li'so-jen'ē-sis) 1. the production of lysis or lysins. 2. lysogenicity.

lysogenic (li-so-jen'ik) [*lysin* + Gr. *gennan* to produce] 1. producing lysins or causing lysis. 2. pertaining to lysogenicity.

lysogenicity (li'so-jē-nis'i-te) [*lyso-* + Gr. *gennan* to produce + *-ity* condition] 1. the ability to produce lysins or cause lysis. 2. the potentiality of a bacterium to produce phage. 3. the specific association of the phage genome, the prophage, with the bacterial genome in such a way that only a few, if any, phage genes are transcribed.

lysogeny (li-soj'e-ne) lysogenicity.

lysokinas (li'so-ki'nās) a general term for substances of the fibrinolytic system that activate the plasma proactivators.

lysolecithin (li'so-les'i-thin) a lecithin from which the α' (i.e., terminal) fatty acid radical has been removed, as by the action of phospholipase A; it has strong hemolytic properties and occurs in trace amounts in the pancreas.

lysophosphatide (li'so-fos'fah-tid) a phosphatide from which one molecule of fatty acid has been split off, as by the action of cobra venom.

lysosomal (li'so-so'mal) of or pertaining to a lysosome.

lysosome (li'so-sōm) [*lyso-* + Gr. *sōma* body] one of the minute bodies seen with the electron microscope in many types of cells, containing various hydrolytic enzymes and normally involved in the process of localized intracellular digestion. Injury to a lysosome is followed by release into the cell of the enzymes, which may damage the cell and give rise to wasting and other pathologic aspects of certain diseases, as in muscular dystrophy. **primary 1**, one that has not yet been engaged in digestive activities. **secondary 1**, a primary (or another secondary) lysosome that has fused with a phagosome (or pinosome), bringing hydrolases in contact with the ingested material and resulting in digestion of the material. See also *autophagy* (def. 2) and *heterophagy*.

lyso staphin (li-so-staf'in) an antibacterial enzyme produced by *Staphylococcus staphylolyticus*; it is specifically active against staphylococci.

lyso stripping (li'so-strip'ing) the phenomenon in which antigens of the cell membrane, in the presence of excess antibody, gather over one pole of the cell and are then phagocytized by the cell, so that the cell membrane is "stripped" of that particular antigen.

lysotype (li'so-tīp) [*lyso-* + *type*] phage type.

lysozym (li'so-zīm) lysozyme.

lysozyme (li'so-zim) [Gr. *lysis* dissolution + *zyme* leaven] muco-

- peptide *N*-acetylmuramylhydrolase: a crystalline, basic enzyme which is present in saliva, tears, egg white, and many animal fluids and which functions as an antibacterial agent, especially effective in lysing *Micrococcus lysodeikticus*. Other bacteria, e.g., *Escherichia coli* and *Salmonella typhosa*, as well as chitin are attacked to a lesser extent. Called also *mucopeptide glucosylhydrolase* and *muramidase*.
- lysozymuria** (li'so-zi-mu're-ah) urinary excretion of elevated levels of lysozyme.
- lyssa** (lis'ah) [Gr. "frenzy"; "the worm under the tongue of dogs, removed because of the belief that it caused rabies"] 1. rabies. 2. septum linguae.
- lyssic** (lis'ik) pertaining to rabies.
- lyss-** (lis'o) [Gr. *lyssa* frenzy] a combining form denoting relationship to rabies.
- lyssodexis** (lis'o-dek'sis) [*lyss-* + Gr. *dexis* a bite] the bite of a rabid dog.

- lyssoid** (lis'oid) [*lyss-* + Gr. *eidos* form] resembling rabies.
- lyssophobia** (lis'o-f'o-be-ah) [*lyss-* + *phobia*] morbid dread of rabies, with symptoms simulating those of that disease.
- Lyster tube** (lis'ter) [William J. Lyster, U. S. Army surgeon, 1869–1947] see under *tube*.
- lyterian** (li-te're-an) indicative of the approach of lysis.
- lytic** (lit'ik) 1. pertaining to lysis or to a lysin. 2. producing lysis. 3. a word termination denoting lysis of the substance indicated by the stem to which it is affixed.
- Lytta** (lit'ah) a genus of blister beetles; called also *Russian fly*.
- L. vesicatoria**, a species of beetles known as Spanish fly, or blister bug; it is the source of cantharidin. Called also *Cantharis vesicatoria*.
- lytta** (lit'ah) rabies.
- lyxose** (lik'sōs) an aldopentose, $\text{CH}_2\text{OH} \cdot (\text{CHOH})_3 \cdot \text{CHO}$.
- lyze** (liz) lyse.

M

- M** 1. symbol for *molar* (solution); the expressions M/10, M/100, etc., denote the strength of a solution in comparison with the molar, as tenth molar, hundredth molar, etc. 2. symbol for *mega*.
- M.** abbreviation for *L. mil*, *mille*, thousand; *misce*, mix; *mistura*, mixture; *macerare*, macerate; and for *maximal*, *meter*, *minim*, *muscle*, *myopia*, and *mucoid* colony (see under *colony*).
- m.** meter.
- μ** mu, the twelfth letter of the Greek alphabet; symbol for *micron*. See also *mu*.
- M.A.** mental age; meter angle; Master of Arts.
- Ma** symbol for *masurium*; now called *technetium*.
- ma.** milliamper.
- M.A.B.** British abbreviation for *Metropolitan Asylums Board*.
- M.A.C.** maximum allowable concentration (of poisons encountered in industry, etc.).
- Mac.** abbreviation for *L. macerare*, macerate.
- Macaca** (mah-kak'ah) a genus of Old World monkeys. **M. cynomul'gus**, a species of South American monkeys, much used as laboratory animals. **M. mulat'ta**, a species of monkeys widely used in physiological research.
- macaja, macaya** (mah-kah'yah) a fixed oil obtained from the fruit of the palm tree, *Acrocomia sclerocarpa*.
- McBurney's incision**, etc. (mak-ber'nēz) [Charles McBurney, New York surgeon, 1845–1913] see under *incision*, *operation*, *point*, and *sign*.
- McCarthy's reflex** (mah-kar'thēz) [Daniel J. McCarthy, American neurologist, 1874–1958] see under *reflex*.
- MacConkey's agar, broth** (mah-kon'kēz) [Alfred Theodore MacConkey, English bacteriologist, 1861–1931] see under *culture medium*.
- Mace** (mās) trademark for an aerosol mixture of organic lacrimators.
- macerate** (mas'er-āt) to soften by wetting or soaking; see *maceration*.
- maceration** (mas'er-a'shun) [*L. maceratio*] the softening of a solid by soaking. In histology, the softening of a tissue by soaking, especially in acids, until the connective tissue fibers are so dissolved that the tissue components can be teased apart. In obstetrics, the degenerative changes with discoloration and softening of tissues, and eventual disintegration, of a fetus retained in the uterus after its death.
- macerative** (mas'er-a'tiv) characterized by maceration.
- Macewen's operation, sign, triangle** (mak-u'enz) [Sir William Macewen, surgeon in Glasgow, 1848–1924] see under *operation* and *sign*, and see *suprameatal triangle*, under *triangle*.
- McGinn-White sign** (mak-gin'hwit) [Sylvester McGinn, American cardiologist, born 1904; Paul Dudley White, American cardiologist, born 1886] see under *sign*.
- Machaon** (mak'ah-on) the older of two brothers, the younger being Podalirius, who were the sons of Aesculapius and, according to legend, were the chief medical officers attached to the Greek forces during the Trojan war.
- Mache unit** (mah'keh) [Heinrich Mache, Austrian physicist, born 1876] see under *unit*.
- machine** (mah-shēn') [*L. machina*] a contrivance or apparatus for the production, conversion, or transmission of some form of energy or force. **heart-lung m.**, a combination blood pump (artificial heart) and blood oxygenator (artificial lung) used in open-heart surgery. **Holtz m.**, an apparatus for developing static electricity. **Van de Graaff m.**, an electrostatic gener-

- ator of high voltage. **Wimshurst m.**, a machine for the development of static current.
- macho** (mah'cho) (*obs.*) the tubercle type of cutaneous leishmaniasis.
- Macht's test** (makts) [David Israel Macht, American pharmacologist, born 1882] see under *tests*.
- macies** (ma'she-ēz) [*L.*] wasting.
- macintosh** (mak'in-tosh) [Charles Macintosh, Scottish chemist, 1766–1843, the inventor] cloth made waterproof by treating with a solution of India-rubber; once used for surgical dressings.
- macis** (ma'sis) [*L.*] mace.
- Mackenrodt's ligament, operation** (mahk'en-rōts) [Alwin Karl Mackenrodt, German gynecologist, 1859–1925] see *plica rectouterina*, and see under *operation*.
- Mackenzie's disease** (mah-ken'zēz) [Sir James Mackenzie, Scottish physician, 1853–1925] see *x disease* (def. 1), under *disease*.
- Mackenzie's syndrome** (mah-ken'zēz) [Sir Stephen Mackenzie, London physician, 1844–1909] see under *syndrome*.
- MacLagan's thymol turbidity test** (mak-lahg'anz) [Noel Francis MacLagan, English pathologist, born 1904] see *thymol turbidity test*, under *tests*.
- McLean's formula (index)** (mak-lānz') [Franklin C. McLean, American pathologist, born 1888] see under *formula*.
- MacLean-Maxwell disease** (mak-lān' maks'-wel) [Charles Murray MacLean, physician in West Africa; James Laidlaw Maxwell, English physician in Formosa] see under *disease*.
- Macleod** (mak-lowd'), John James Rickard. Scottish physiologist, 1876–1935; co-winner, with Sir Frederick Grant Banting, of the Nobel prize for medicine and physiology in 1923, for their discovery of insulin.
- MacLeod's capsular rheumatism** (mak-lowdz') [Roderick MacLeod, Scottish physician, 1795–1852] see under *rheumatism*.
- MacMunn's test** (mak-munz') [Charles Alexander MacMunn, British pathologist, 1852–1911] see under *tests*.
- McNaughten** see *M'Naghten*.
- McPheeters' treatment** (mak-fe'terz) [Herman Oscar McPheeters, American surgeon, born 1891] see under *treatment*.
- MacQuarrie's test** (mah-kwor'ēz) [F. W. MacQuarrie, American psychologist] see under *tests*.
- Macracanthorhynchus** (mak'rah-kan'tho-ring'kus) a genus of acanthocephalans. **M. hirudina'ceus**, a species parasitic in swine in the United States; formerly called *Echinorhynchus gigas* and *E. hominis*.
- macradenous** (mak-rad'ē-nus) [*macro-* + Gr. *adēn* gland] having large glands.
- macrencephalia** (mak-ren'sē-fa'le-ah) macrencephaly.
- macrencephaly** (mak'ren-sef'ah-le) [*macro-* + Gr. *enkephalos* brain] overgrowth of the brain.
- macro-** [Gr. *makros* large, or long] a combining form meaning large, or of abnormal size or length.
- macroaggregate** (mak'ro-ag're-gāt) an unusually large aggregate of a substance.
- macroaleuriospore** (mak'ro-ah-lu're-o-spōr) a large, usually multicellular, aleuriospore; sometimes used interchangeably with macrocondium.
- macroamylase** (mak'ro-am'fī-lās) a homogeneous molecular complex in which normal serum amylase may be bound to a variety of specific binding proteins, probably immunoglobulins, forming a complex too large for renal excretion; although not correlated with specific disease states, it may be suspected in

hyperamylasemia or pancreatitis when urinary amylase levels are not raised concomitantly with serum levels.

macroamylasemia (mak''ro-am''il-ah-se''me-ah) the presence of macroamylase in the blood.

macroamylasemic (mak''ro-am''il-ah-se''mik) pertaining to or characterized by macroamylasemia.

macroanalysis (mak''ro-ah-nal''i-sis) chemical analysis using 0.1 to 0.2 gm. of the substance under study.

Macrobdella (mak''ro-del''ah) a genus of leeches of the family Gnathobdellidae. **M. deco''ra**, the American leech, a small species widely distributed in United States and Canada, which is sometimes used in drawing blood.

macrobiota (mak''ro-bi-o''tah) the macroscopic living organisms of a region; the combined macroflora and macrofauna of a region.

macrobiotic (mak''ro-bi-o''tik) pertaining to the macrobiota, or to macroscopic living organisms.

macroblast (mak''ro-blast) [*macro-* + Gr. *blastos* germ] an abnormally large nucleated red blood cell; a large young normoblast with megaloblastic features. **m. of Naegeli**, proerythroblast.

macroblepharia (mak''ro-blē-fa''re-ah) [*macro-* + Gr. *blepharon* eyelid] abnormal largeness of the eyelid.

macrobrachia (mak''ro-bra''ke-ah) [*macro-* + Gr. *brachion* arm] abnormal size or length of the arms.

macrocardius (mak''ro-kar''de-us) [*macro-* + Gr. *kardia* heart] a monster with an extremely large heart.

macrocephalia (mak''ro-sē-fa''le-ah) macrocephaly.

macrocephalic (mak''ro-se-fal''ik) macrocephalous.

macrocephalous (mak''ro-sef''ah-lus) having an excessively large head.

macrocephalus (mak''ro-sef''ah-lus) megalcephaly.

macrocephaly (mak''ro-sef''ah-le) [*macro-* + Gr. *kephalē* head] excessive size of the head.

macrocheilia (mak''ro-ki''le-ah) [*macro-* + Gr. *cheilos* lip + *-ia*] excessive size of the lips.

macrocheiria (mak''ro-ki''re-ah) [*macro-* + Gr. *cheir* hand + *-ia*] excessive size of the hands.

macrochemical (mak''ro-kem''ē-kal) pertaining to macrochemistry.

macrochemistry (mak''ro-kem''is-tre) [*macro-* + *chemistry*] chemistry in which the reactions may be seen with the naked eye. Cf. *microchemistry*.

macrochilia (mak''ro-ki''le-ah) macrocheilia.

macrochiria (mak''ro-ki''re-ah) macrocheiria.

macroclitoris (mak''ro-klit''o-ris) hypertrophy of the clitoris.

macrocnemia (mak''rok-ne''me-ah) [*macro-* + Gr. *knēmē* shin + *-ia*] a condition in which the legs are abnormally large below the knee.

macrocolon (mak''ro-ko''lon) megacolon.

macroconidium (mak''ro-ko-nid''e-um), pl. *macroconidia* [*macro-* + *conidium*] a large, frequently multicelled conidium or exospore; sometimes used interchangeably with macroaleuriospore; see *spore*.

macrocornea (mak''ro-kor''ne-ah) [*macro-* + *cornea*] megalocornea.

macrocrania (mak''ro-kra''ne-ah) abnormal increase in the size of the skull, the facial area being disproportionately small in comparison.

macrocyt (mak''ro-sist) [*macro-* + *cyst*] a large cyst.

macrocytase (mak''ro-sit''ās) a term once used to describe the proteolytic activity of macrophages.

macrocyte (mak''ro-sit) [*macro-* + *-cyte*] an abnormally large erythrocyte, i.e., one from 10 to 12 microns in diameter. Cf. *megalocyte* and *gigantocyte*.

macrocytic (mak''ro-sit''ik) pertaining to macrocytes.

macrocythemia (mak''ro-si-the''me-ah) [*macrocyte* + Gr. *haima* blood + *-ia*] a condition in which the erythrocytes are larger than normal.

macrocytosis (mak''ro-si-to''sis) macrocythemia.

macroductyilia (mak''ro-dak-til''e-ah) macroductyly.

macroductyly (mak''ro-dak-ti''le) [*macro-* + Gr. *daktylos* finger] abnormal largeness of the fingers and toes.

Macrofantin (mak''ro-dan''tin) trademark for a preparation of nitrofurantoin.

macrodont (mak''ro-dont) macrodontic.

macrodontia (mak-ro-don''she-ah) [*macro-* + Gr. *odous* tooth] abnormal increase in size of the teeth; it may affect a single tooth, or all of them (*generalized macrodontia*), and be true or only relative.

macrodontic (mak''ro-don''tik) pertaining to or characterized by macrodontia.

macrodontism (mak''ro-don''tizm) macrodontia.

macrodytrophia (mak''ro-dis-tro''fe-ah) [*macro-* + *dys-* + *trophē* nutrition] overgrowth of a part. **m. lipomato''sa**

progressi''va, partial gigantism associated with tumor-like overgrowth of adipose tissue.

macroelement (mak''ro-el''ē-ment) a chemical element, such as sodium or potassium, that is essential in nutrition and is distributed throughout the tissues in relatively large amounts, as opposed to trace elements.

macroencephaly (mak''ro-en-sef''ah-le) macrencephaly.

macroerythroblast (mak''ro-ē-rith''ro-blast) macroblast.

macroesthesia (mak''ro-es-the''ze-ah) [*macro-* + Gr. *aisthēsis* perception + *-ia*] a sensory impression that all things are larger than they really are.

macrofauna (mak''ro-faw''nah) the animal life, visible to the naked eye, which is present in or characteristic of a special location.

macroflora (mak''ro-flo''rah) the plant life, visible to the naked eye, which is present in or characteristic of a special location.

macrogamete (mak''ro-gam''et) [*macro-* + Gr. *gametē* wife] the larger, less active female gamete in anisogamy, which is fertilized by the smaller male gamete (microgamete).

macrogametocyte (mak''ro-gah-me''to-sit) [*macro-* + Gr. *gametē* wife + *-cyte*] 1. a cell that produce macrogametes. 2. the female gametocyte of certain Sporozoa, such as malarial plasmodia, which matures into a macrogamete.

macrogastrica (mak''ro-gas''tre-ah) [*macro-* + Gr. *gastēr* stomach + *-ia*] (*obs.*) dilatation of the stomach.

macrogenesis (mak''ro-jen''ē-se) [*macro-* + Gr. *genesis* production] gigantism.

macrogenia (mak''ro-jen''e-ah) [*macro-* + Gr. *genys* jaw] overdevelopment of the chin area.

macrogenitosomia (mak''ro-jen''i-to-so''me-ah) [*macro-* + *genito-* + Gr. *sōma* body + *-ia*] excessive bodily development, with unusual enlargement of the genital organs. **m. pre''cox**, excessive bodily development, with marked enlargement of the genital organs, occurring at an unusually early age.

macrogingivae (mak''ro-jin''ji've) fibromatosis gingivae.

macroglia (mak-rog''le-ah) neuroglial cells of ectodermal origin, i.e., the astrocytes and oligodendrocytes considered together. Originally, the term was used synonymously with astroglia.

macroglobulin (mak''ro-glob''u-lin) a globulin of high molecular weight, in the 1,000,000 category, with sedimentation constants of 19S, as determined by ultracentrifugation; it has many of the characteristics of IgM. It is observed in the blood in a number of diseases, but mainly in various proliferative disturbances affecting the lymphoid, plasma cell, and reticuloendothelial systems.

macroglobulinemia (mak''ro-glob''u-lī-ne''me-ah) [*macroglobulin* + Gr. *haima* blood + *-ia*] a condition characterized by increase in macroglobulins in the blood. **Waldenström's m.**, a rare, progressive syndrome of the reticuloendothelial system first described by J. Waldenström, observed particularly in males past age 50, and associated with the presence of (monoclonal) IgM paraprotein, adenopathy, hepatomegaly, splenomegaly, hemorrhagic phenomena, anemia, and lymphocytosis and plasmacytosis of the bone marrow.

macroGLOSSIA (mak''ro-glos''e-ah) [*macro-* + Gr. *glōssa* tongue + *-ia*] excessive size of the tongue.

macrognathia (mak''ro-na''the-ah) [*macro-* + Gr. *gnathos* jaw + *-ia*] enlargement of the jaw.

macroGOL (mak''ro-gol) solid and liquid polyethylene glycols, used as ointment bases and available in a wide range of degrees of solidity designated by numbers, the higher the harder.

macroGRAPHIA (mak''ro-gra''fe-ah) macrography.

macroGRAPHY (mak-rog''rah-fe) [*macro-* + Gr. *graphein* to write] the formation in writing of letters that are larger than the normal writing of the individual.

macrogyria (mak''ro-ji''re-ah) [*macro-* + *gyrus*] moderate reduction in the number of sulci of the cerebrum, sometimes with increase in the brain substance, resulting in excessive size of the gyri.

macroLABIA (mak''ro-la''be-ah) [*macro-* + L. *labium* lip] macrocheilia.

macrolecithal (mak''ro-les''i-thal) [*macro-* + Gr. *lekithos* yolk] having a large amount of yolk; see under *ovum*.

macroleukoblast (mak''ro-lu''ko-blast) a large leukoblast.

macrolide (mak''ro-lid) a macrolide antibiotic; see under *antibiotic*.

macroLYMPHOCYTE (mak''ro-lim''fo-sit) a large lymphocyte.

macroLYMPHOCYTOSIS (mak-ro-lim''fo-si-to''sis) the presence of an increased number of large lymphocytes.

macromanía (mak''ro-ma''ne-ah) [*macro-* + Gr. *mania* madness] 1. delusive belief that external objects or one's own members are larger than they really are. 2. megalomania; delusions of grandeur.

macromastia (mak''ro-mas''te-ah) [*macro-* + Gr. *mastos* breast + *-ia*] oversize of the breasts or mammae.

macromazia (mak''ro-ma'ze-ah) [*macro-* + Gr. *mazos* breast + *-ia*] macromastia.

macromelia (mak''ro-me'le-ah) enlargement of one or more limbs.

macromelus (mak-rom'e-lus) [*macro-* + Gr. *melos* limb] a fetus with abnormally large or long limbs.

macromere (mak''ro-mēr) [*macro-* + Gr. *meros* part] one of the large blastomeres formed by unequal cleavage of a fertilized ovum, located in the vegetal hemisphere and dividing less rapidly than the micromeres of the animal hemisphere.

macromethod (mak''ro-meth''od) a chemical method in which the substance to be analyzed is used in customary (not minute) quantity. Cf. *micromethod*.

macromimia (mak''ro-mim'e-ah) excessive or exaggerated mimicry.

macromolecular (mak''ro-mo-lek'u-lar) having large molecules; pertaining to macromolecules.

macromolecule (mak''ro-mol'ē-kūl) a very large molecule having a polymeric chain structure, as in proteins, polysaccharides, and other natural and synthetic polymers.

macromonocyte (mak''ro-mon'o-sit) a very large monocyte.

macromyeloblast (mak''ro-mi'ē-lo-blast) a large myeloblast.

macronodular (mak''ro-nod'u-lar) characterized by large nodules.

macronormoblast (mak''ro-nor'mo-blast) a very large nucleated red blood corpuscle; macroblast.

macronucleus (mak''ro-nu'kle-us) [*macro-* + *nucleus*] in ciliate protozoa, the larger of two types of nucleus in each cell, which governs cell metabolism and growth. Called also *trophic nucleus* or *trophonucleus*. Cf. *micronucleus*, def. 1.

macronychia (mak''ro-nik'e-ah) [*macro-* + Gr. *onyx* nail + *-ia*] abnormal length of the finger nails.

macropathology (mak''ro-pah-thol'o-je) [*macro-* + *pathology*] the nonmicroscopic pathologic account of any disease or organ.

macrophage (mak''ro-fāj) [*macro-* + Gr. *phagein* to eat] any of the large, mononuclear highly phagocytic cells with a small, oval, sometimes indented nucleus and inconspicuous nucleoli, occurring in the walls of blood vessels (adventitial cells) and in loose connective tissue (histiocytes, phagocytic reticular cells). Derived from monocytes, they are components of the reticuloendothelial system and are usually immobile (fixed macrophages, resting wandering cells), but when stimulated by inflammation become actively mobile (free macrophages, wandering histiocytes). Macrophages also interact with B- and T-lymphocytes to facilitate antibody production. **alveolar m's**, rounded, granular, mononuclear phagocytes within the alveoli of the lungs that ingest inhaled particulate matter; called also *alveolar phagocytes* and *dust cells*. **armed m's**, those capable of inducing cytotoxicity as a consequence of antigen-binding by cytophilic antibodies on their surfaces or by factors derived from T-lymphocytes. **fixed m.**, a quiescent phagocyte, such as the histiocyte of loose connective tissue or those lining the sinuses of the liver, spleen, lymph nodes, and bone marrow. **free m.**, an ameboid phagocyte present at the site of inflammation; called also *polyblast* and *inflammatory macrophage*. **inflammatory m.**, free m.

macrophagocyte (mak''ro-fag'o-sit) a phagocyte of relatively large size.

macrophagus (mak-krof'ah-gus) macrophage.

macrophallus (mak''ro-fal'us) [*macro-* + Gr. *phallos* penis] abnormal largeness of the penis.

macrophthalmia (mak''rof-thal'me-ah) [*macro-* + Gr. *ophthalmos* eye + *-ia*] abnormal enlargement of the eyeball.

macrophthalmous (mak''rof-thal'mus) having abnormally large eyes.

macropia (mah-kro'pe-ah) [*macro-* + Gr. *ōps* eye] macropsia.

macroplasia (mak''ro-pla'ze-ah) [*macro-* + Gr. *plasis* forming + *-ia*] excessive growth of a part or tissue.

macroplastia (mak''ro-plas'te-ah) macroplasia.

macropodia (mak''ro-po'de-ah) [*macro-* + Gr. *pous* foot + *-ia*] excessive size of the feet.

macropolyocyte (mak''ro-pol'e-sit) a hypersegmented polymorphonuclear leukocyte of greater than normal size. Cf. *polycyte*.

macropromyelocyte (mak''ro-pro-mi'ē-lo-sit) a very large promyelocyte.

macroprosopia (mak''ro-pro-so'pe-ah) [*macro-* + Gr. *prosōpon* face + *-ia*] excessive size of the face.

macropsia (mah-krop'se-ah) [*macro-* + Gr. *opsis* vision + *-ia*] a disturbance of vision in which objects are seen as larger than they actually are.

macrorhinia (mak''ro-rin'e-ah) [*macro-* + Gr. *rhis* nose + *-ia*] excessive size of the nose.

macroscelia (mak''ro-se'le-ah) [*macro-* + Gr. *skelos* leg + *-ia*] excessive size of the legs.

macroscopic (mak''ro-skop'ik) [*macro-* + Gr. *skopein* to examine] visible with the unaided eye or without the microscope.

macroscopical (mak''ro-skop'e-kal) 1. pertaining to macroscopy. 2. macroscopic.

macroscopy (mah-kros'ko-pe) examination with the naked eye.

macrosigmoid (mak''ro-sig'moid) [*macro-* + *sigmoid*] abnormal enlargement of the sigmoid.

macrosis (mah-kro'sis) [*macro-* + *-osis*] increase in size.

macrosmatic (mak''ros-mat'ik) [*macro-* + Gr. *osmasthanai* to smell] having the sense of smell strongly or acutely developed.

macrosomatia (mak''ro-so-ma'she-ah) [*macro-* + Gr. *sōma* body] great bodily size. **m. adipo'sa congen'ita**, an obese type of premature development probably dependent on hyperfunction of the adrenal cortex.

macrosplanchnic (mak''ro-splank'nik) [*macro-* + Gr. *splanchnon* viscus] having large viscera: a term applied to that type of body constitution in which the horizontal diameters are excessively developed as compared with the vertical ones. Cf. *microsplanchnic* and *pyknic*.

macrospore (mak''ro-spōr) [*macro-* + Gr. *sporos* seed] 1. the larger spore form when spores of two sizes are present, as in certain fungi and protozoa. 2. megaspore.

macrostereognosis (mak''ro-ste're-o-no'se-ah) [*macro-* + Gr. *stereos* solid + *gnōsis* knowledge + *-ia*] abnormality of perception in which objects felt seem larger than they really are.

macrostomia (mak''ro-sto'me-ah) [*macro-* + Gr. *stoma* mouth + *-ia*] greatly exaggerated width of the mouth, resulting from failure of union of the maxillary and mandibular processes, with extension of the oral orifice toward the ear. The defect may be unilateral or bilateral.

macrostructural (mak''ro-struk'tūr-al) pertaining to gross structure.

macrotia (mak-ro'she-ah) [*macro-* + Gr. *ous* ear] abnormal enlargement of the pinna of the ear.

macrotome (mak''ro-tōm) [*macro-* + Gr. *tomē* cut] an apparatus for cutting large sections of tissue for anatomical study.

macrotooth (mak''ro-tōōth), pl. *macroteeth*. An abnormally large tooth.

macula (mak'u-lah), pl. *mac'ulae* [L.] 1. a stain, spot, or thickening; [NA] a general term for an area distinguishable by color or otherwise from its surroundings. Often used alone to refer to the macula retinae. 2. a macule: a discolored spot on the skin that is not elevated above the surface. 3. a moderately dense scar of the cornea that can be seen without special optical aids, appreciated as a gray spot intermediate between a nebula and a leukoma. **acoustic maculae**, **mac'ulae acus'ticae**, see *m. sacculi* and *m. utriculi*. **m. acus'tica sac'culi**, *m. sacculi*. **m. acus'tica utric'uli**, *m. utriculi*. **m. adher'ens**, desmosome. **mac'ulae al'bidae**, white spots sometimes seen after death on the serous layer of the peritoneum. **mac'ulae atroph'icae**, white patches resembling scars formed on the skin by atrophy. **mac'ulae caeru'leae**, faint grayish blue spots, less than 1 cm. in diameter, sometimes occurring peripheral to the axillae or groins in patients with pediculosis corporis or pubis, caused by a substance in louse saliva that converts bilirubin to biliverdin; called also *taches bleuâtres*. **cerebral m.**, tache cérébrale. **m. commu'nis**, a thickened area on the wall of the otic vesicle which divides into the macula sacculi and macula utriculi. **m. cor'neae**, a circumscribed opacity of the cornea. **mac'ulae cribro'sae** [NA], see *m. cribrosa inferior*, *m. cribrosa media*, and *m. cribrosa superior*. **m. cribro'sa inferior** [NA], the perforated area on the wall of the vestibule through which branches of the vestibulocochlear nerve pass to the posterior semicircular canal. **m. cribro'sa me'dia** [NA], the perforated area on the vestibular wall through which branches of the vestibulocochlear nerve pass to the sacculus. **m. cribro'sa supe'rior** [NA], the perforated area on the vestibular wall through which branches of the vestibulocochlear nerve pass to the utricle and to the anterior and lateral semicircular canals. **m. den'sa**, a zone of compact, heavily nucleated cells, located in the distal renal tubule where it makes contact with the vascular pole of the glomerulus, and closely associated anatomically with the juxtaglomerular cells of the afferent arteriole. **false m.**, the extramacular point on the retina of a squinting eye which receives the same light stimulus as the macula of the fixing eye. **m. fla'va laryn'gis**, a yellowish nodule visible at one end of a vocal cord. **m. fla'va ret'inae**, *m. retinae*. **m. follic'uli**, the point on the surface of a vesicular ovarian follicle where rupture occurs. **m. germinati'va**, germinal area. **m. gonorrhoe'ica**, the red inflamed orifice of the duct of Bartholin's gland in gonorrheal vulvitis; called also *Saenger's m.* **mac'ulae lac'teae**, maculae albae. **m. lu'tea ret'inae**, *m. retinae*. **maculae of membranous labyrinth**, see *m. sacculi* and *m. utriculi*. **mongolian m.**, see under *spot*. **m. ret'inae** [NA], an irregular yellowish depression on the retina, about 3 degrees wide, lateral to and slightly below the optic disk; it is the site of absorption of short wavelengths of light, and it is thought that its variation in size, shape, and coloring may be related to variant types of color vision. Called also *m. lutea retinae*. **m. sac'culi** [NA], a thickening in the wall of the sacculi where the epithelium contains hair cells that are stimulated by linear

acceleration and deceleration and gravity. The *m. sacculi* and *m. utriculi* together are called *maculae acusticae* or *acoustic maculae*. **Saenger's m.**, *m. gonorrhoeica*. **m. sola'ris** (*obs.*), a freckle. **mac'ulae tendin'ae**, *maculae albiae*. **m. utric'uli** [NA], a thickening in the wall of the utricle where the epithelium contains hair cells that are stimulated by linear acceleration and deceleration and gravity. The *macula sacculi* and the *macula utriculi* together are called *maculae acusticae* or *acoustic maculae*.

maculae (mak'u-le) [L.] plural of *macula*.

macular (mak'u-lar) pertaining to or characterized by the presence of macules; pertaining to the macula retinae.

maculate (mak'u-lāt) [L. *maculatus* spotted] macular.

macule (mak'ūl) a macula.

maculocerebral (mak'u-lo-ser'e-bral) pertaining to the macula retinae and the brain.

maculopapular (mak'u-lo-pap'u-lar) both macular and papular, as an eruption consisting of both macules and papules; sometimes erroneously used to designate a papule that is only slightly elevated.

maculovesicular (mak'u-lo-vē-sik'u-lar) both macular and vesicular.

MacWilliam's test (mak-wil'yamz) [John Alexander *MacWilliam*, British physician, 1857-1937] see under *tests*.

mad (mad) 1. insane. 2. rabid.

madarosis (mad'ah-ro'sis) [Gr. *madaros bald*] loss of the eyelashes or eyebrows.

madder (mad'er) the root of *Rubia tinctoria* L. (Rubiaceae) affording a red dye, mainly alizarin and purpurin.

Maddox prism, rods (mad'oks) [Ernest Edmund *Maddox*, English ophthalmologist, 1860-1933] see under *prism* and *rod*.

Madelung's deformity, etc. [Otto Wilhelm *Madelung*, surgeon in Strasbourg, 1846-1926] see under *deformity*, *disease*, and *neck*.

Madurella (mad'u-rel'ah) a genus of imperfect fungi of the family Dematiaceae. *M. gris'ea* and *M. myceto'mi* are etiologic agents of maduromycosis.

maduromycosis (mah-du'ro-mi-ko'sis) a chronic disease caused by a variety of fungi (e.g., *Madurella mycetomi* or actinomycetes (e.g., *Nocardia brasiliensis*, *Streptomyces madurae*, and others), affecting the foot, hands, legs, or other parts, including the internal organs. The most common form is that of the foot, known as *Madura foot*. Following infection through a penetrating wound, the deep tissues become necrosed, sinuses form, and there is marked swelling of the part, in which nodules and vesicles develop. Sinuses discharge pus and penetrate into the bone. The pus contains red, black, or yellow granules which are composed of mycelial filaments of the infecting organism.

Maduromycosis.

maedi (mi'theh) a chronic progressive pulmonary disease of sheep in Iceland, caused by a virus.

mafénide (maf'en-id) chemical name: 4-(aminomethyl)benzenesulfonamide. An antibacterial homologue of sulfanilamide, $C_7H_{10}N_2O_2S$, active against many gram-positive and gram-negative organisms. **m. acetate** [USP], the monoacetate salt of mafénide, $C_7H_{10}N_2O_2S \cdot C_2H_4O_2$, occurring as a white, crystalline powder, having the same antibacterial activity as the base; used as a topical anti-infective for adjunctive therapy of patients with second- and third-degree burns. **m. hydrochloride**, the hydrochloride salt of mafénide, $C_7H_{10}N_2O_2S \cdot HCl$, having antibacterial activity similar to that of the acetate salt; used as a topical anti-infective.

Maffucci's syndrome (mah-fu'chēz) [Angelo *Maffucci*, Italian physician, 1845-1903] see under *syndrome*.

mafilcon A (mah-fil'kon) chemical name: 2-methyl-2-propenoic acid 2-hydroxyethyl ester polymer with pentyl 2-methyl-2-propenoate, ethenyl acetate, ethenyl propanoate, and 3-hydroxy-2-naphthalenyl 2-methyl-2-propenoate; a hydrophilic contact lens material, $(C_6H_{10}O_2)_v(C_6H_8O_2)_w(C_4H_8O_2)_x(C_5H_8O_2)_y(C_{14}H_{12}O_3)_z$.

Mag. abbreviation for L. *mag'nus*, large.

magaldrate (mag'al-drāt) [USP] chemical name: aluminum magnesium hydroxide. A chemical combination of aluminum hydroxide and magnesium hydroxide, corresponding approximately to the formula $Al_2H_4Mg_2O_{14} \cdot 2H_2O$; used as an oral antacid.

Magan (mag'an) trademark for magnesium salicylate.

mageiric (mah-jī'rik) [Gr. *mageirikos* relating to cookery] pertaining to cookery or dietetics.

magenblase (mah'gen-blah'zē) [Ger. "stomach bubble"] in the radiograph of the stomach, a dark area above the light shadow of the opaque meal, marking a collection of gas in the upper part of the stomach.

Magendie's foramen, etc. (ma-jen'dēz) [François *Magendie*, French physiologist, 1783-1855; the pioneer of experimental physiology in France] see under *foramen*, *law*, *phenomenon*, *solution*, and *space*.

Magendie-Hertwig sign (ma-jen'de-hert'vig) [François *Magendie*; Richard *Hertwig*, German zoologist, 1850-1937] skew deviation.

magenstrasse (mah'gen-stras'sē) [Ger. "stomach street"] canalis ventriculi.

magenta (mah-jen'tah) basic fuchsin. **acid m.**, acid fuchsin. **basic m.**, basic fuchsin. **m. O**, pararosanilin. **m. I**, rosanilin. **m. II**, triaminoditolylphenylmethane chloride, a component of basic fuchsin. **m. III**, new fuchsin.

magersucht (mah'ger-sookt) [Ger.] pathologic leanness.

maggot (mag'ot) a soft-bodied larva of an insect, especially a form living in decaying flesh. The living maggots of the greenbottle fly (*Phaenicia sericata*) and the blackbottle fly (*Phormia regina*) have been used in the treatment of osteomyelitis and other suppurative infections in order to clear away dead tissue and promote healing, this latter effect being due to the allantoin in the secretions of the maggots. **Congo floor m.**, *Auchmeromyia luteola*. **rat-tail m.**, a maggot of a hover-fly of the genera *Eristalis* and *Helophilus*; they cause intestinal and nasal myiasis. **sheep m.**, the maggot of *Phaenicia sericata* and other species of the family Calliphoridae, which invade the tissue of sheep in the British Isles and elsewhere.

magistry (maj'is-ter'e) [L. *magisterium*; *magister* master] a precipitate; any subtle or masterly preparation.

magistral (maj'is-tral) [L. *magister* master] pertaining to a master; applied to medicines that are prepared in accordance with a physician's prescription.

Magitot's disease (mazh'i-tōz') [Emile *Magitot*, French dentist, 1833-1897] see under *disease*.

magma (mag'mah) [Gr. *massein* to knead] 1. a suspension of finely divided material in a small amount of water. 2. a thin, pasty substance composed of organic material. **bentonite m.** [NF], a preparation of bentonite and purified water used as a suspending agent. **bismuth m.**, milk of bismuth. **dihydroxyaluminum aminoacetate m.** [USP], a white viscous suspension of dihydroxyaluminum aminoacetate in water, yielding an amount of aluminum oxide equivalent to between 28.5 and 35.0 per cent of the labeled amount of dihydroxyaluminum aminoacetate; used as a gastric antacid. **magnesia m.**, milk of magnesia; see under *milk*. **m. reticula're**, a mesenchymal reticulum within the early chorionic sac.

Magnacort (mag'nah-kort) trademark for a preparation of hydrocortamate.

Magnan's movement, symptom (sign) (mag'nanz) [Valentin Jacques Joseph *Magnan*, alienist in Paris, 1835-1916] see under *movement* and *symptom*.

magneemia (mag'nes-e'me-ah) the presence of an excess of magnesium in the blood.

magnesia (mag-ne'zhe-ah) [the name of a district in ancient Lydia] magnesium oxide. **m. al'ba**, magnesium carbonate. **m. calcina'ta**, magnesium oxide. **m. carbonata'da**, magnesium carbonate. **citrate of m.**, magnesium citrate. **milk of m.**, see under *milk*. **m. us'ta**, magnesium oxide.

magnesite (mag-ne'sit) native magnesium carbonate, $MgCO_3$; used like plaster of Paris in splints and dressings.

magnesium (mag-ne'ze-um), gen. *magne'sii* [L.] a light, silvery, metallic element; symbol, Mg; atomic number, 12; atomic weight, 24.312; specific gravity, 1.74. Its salts are essential in nutrition, being required for the activity of many enzymes, especially those concerned with oxidative phosphorylation. It is a component of both intra- and extracellular fluids and is excreted in the urine and feces. The serum level is approximately 2 mEq/liter. Deficiency causes irritability of the nervous system with tetany, vasodilation, convulsions, tremors, depression, and psychotic behavior. **m. aluminum silicate** [NF], a colloidal montmorillonoid saponite, in which magnesium has substantially replaced aluminum in the crystal lattice. It is available in Types IA, IB, IC, IIA, IIB, and IIIB, which differ in viscosity and ratio of aluminum content to magnesium content. Used as a suspending agent for pharmaceuticals. **m. carbonate** [USP], a basic hydrated magnesium carbonate containing the equivalent of 40 to 43.5 per cent of magnesium oxide, used as an antacid. **m. chloride** [USP], colorless, deliquescent flakes or crystals, $MgCl_2 \cdot 6H_2O$, used as an electrolyte replenisher and as a pharmacologic necessity for hemodialysis and peritoneal dialysis fluids. **m. citrate**, a white, odorless crystalline powder or granules, $Mg_3(C_6H_5O_7)_2 \cdot 14H_2O$, used in solution as a mild cathartic; called also *citrate of magnesia*. **m. hydroxide** [USP], a bulky white powder, $Mg(OH)_2$, used as an antacid and cathartic. **m. oxide** [USP], a bulky (*light m. oxide*) or relatively dense (*heavy m. oxide*) white powder, containing, after ignition, at least 96 per cent of MgO ;

used as a sorbent in pharmaceutical preparations, and as an antacid and laxative. **m. peroxide**, a white powder, MgO_2 , insoluble in water, but gradually decomposed with the liberation of oxygen; used as an antacid. **m. phosphate** [USP], a bulky, white powder, $\text{Mg}_3(\text{PO}_4)_2 \cdot 5\text{H}_2\text{O}$, used as an antacid. **m. salicylate**, the magnesium salt of salicylic acid, used as an antiarthritic. **m. stearate** [NF], a compound of magnesium with varying proportions of stearic and palmitic acids, used as a tablet lubricant in pharmaceutical preparations. **m. sulfate** [USP], small, colorless crystals, usually needle-like, $\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$, used as an anticonvulsant and electrolyte replenisher, administered intramuscularly and intravenously. It is also used as a cathartic and as a local anti-inflammatory. Called also *Epsom salt*. **m. sulfate, exsiccated**, hydrated magnesium sulfate the weight of which has been reduced 25 per cent by drying at 100°C : an aperient. **m. trisilicate** [USP], a compound of magnesium oxide and silicon dioxide with varying proportions of water, used as a pharmaceutical necessity and antacid.

magnet (mag'net) [L. *magnes*; Gr. *magnēs* magnet] a lodestone; native iron oxide that attracts iron; also a bar of steel or iron that attracts iron and has magnetic polarity. **Grüning's m.**, one made up of a number of steel rods; used in removing metal particles from the eye. **Haab's m.**, a powerful magnet for extracting foreign metallic bodies from the eye. **Hirschberg's m.**, an electromagnet for removing particles of iron from the eye. **permanent m.**, one with permanent magnetic qualities. **temporary m.**, a substance that possesses magnetic properties only during the passage of an electric current or when a permanent magnet is near it.

magnetic (mag-net'ik) pertaining to, derived from, or having the properties of a magnet.

magnetism (mag-nē'tizm) magnetic attraction or repulsion. **animal m.**, a hypothetical force or power alleged by Mesmer to be transmitted to his subjects undergoing therapeutic hypnosis. Cf. *mesmerism*.

magnetization (mag'net-i-za'shun) the act or process of rendering an object or substance magnetic.

magnetocardiograph (mag-ne'to-kar'de-o-graf) a cardiograph that generates electrical signals proportional to magnetic pulses emanating from electrical activity in the heart.

magnetoconstriction (mag-ne'to-kon-strik'shun) a change in the dimensions of a body produced by the application of a magnetic field.

magnetolectricity (mag-ne'to-e'lek-tris'i-te) electricity induced by means of a magnet.

magnetoencephalograph (mag-ne'to-en-sef'ah-lo-graf) an instrument for recording magnetic signals proportional to electroencephalographic waves emanating from electrical activity in the brain.

magnetoinduction (mag-ne'to-in-duk'shun) magnetic induction.

magnetology (mag'nē-tol'o-je) that branch of physics which treats of magnetics.

magnetometer (mag'nē-tom'ē-ter) [*magnetic* + Gr. *metron* measure] an apparatus for measuring magnetic forces.

magneton (mag'nē-ton) an ultimate elemental magnetic particle.

magnetotherapy (mag-ne'to-ther'ah-pe) the treatment of disease by magnets or by magnetism.

magnetron (mag'nē-tron) an electric vacuum tube for generating extremely short electromagnetic waves (microwaves).

magnetropism (mag-net'ro-pizm) [*magnet* + Gr. *tropē* a turn, turning] a growth response in a nonmotile organism under the influence of a magnet.

magnicellular (mag'nī-sel'u-lar) composed of large cells, as opposed to parvicellular.

magnification (mag'nī-fi-ka'shun) [L. *magnificatio*; *magnus* great + *facere* to make] 1. apparent increase in size as under the microscope. 2. the process of making something appear larger, as by use of lenses. 3. the ratio of apparent (image) size to real size.

magnify (mag'nī-fi) [L. *magnus* great + *facere* to make] to cause to appear larger by the use of lenses or suitable mirrors.

magnocellular (mag'no-sel'u-lar) magnicellular.

Magnolia (mag-no'le-ah) [after Pierre *Magnol*, 1638-1715] a genus of magnoliaceae trees.

magnolia (mag-no'le-ah) the bitter aromatic bark of *Magnolia acuminata* L., *M. glauca* L., and *M. tripetala* (Magnoliaceae), once used as a diaphoretic and antifebrile in southern United States.

magnum (mag'num) [L.] great; the os magnum (os capitatum [NA]).

mahamari (mah'hah-mah're) the native name for a form of plague occurring in the southern slopes of the Himalayas.

Maher's disease (mah'herz) [James J. E. *Maher*, New York physician, 1857-1931] paracolicitis.

Mahler's sign (mah'lerz) [Richard A. *Mahler*, German obstetrician] see under *sign*.

ma huang (mah hoo-ang') the native name for various species of *Ephedra*, including *E. sinica* Stapf., *E. equisetina* Bunge, and *E. vulgaris*, whose stems and leaves furnish ephedrine.

Maier's sinus (mi'erz) [Rudolf *Maier*, German physician 1824-1888] see under *sinus*.

maim (mām) 1. to disable by a wound; to dismember by violence. 2. a dismemberment or disablement effected by violence.

Maimonides (mi-mon'i-dēz) (1135-1204) Rabbi Moses ben Maimon, called the greatest Jew after Moses, a native of Spain who later practiced medicine in Morocco and Egypt. A prayer attributed to him is considered to rank beside the oath of Hippocrates as an ethical guide to the medical profession.

main (mān) [Fr.] hand. **m. d'accoucheur** (mān'dak-oo-shuhr'), obstetrician's hand; see under *hand*. **m. de tranchées** (mān'dū-tran-sha'), trench hand. **m. en crochet** (ma'nong-kro-sha'), a permanently flexed condition of the third and fourth fingers. **m. en griffe** (ma'nong-grif'), clawhand. **m. en lorgnette** (ma'nong-lor-nyet'), opera-glass hand. **m. en pince** (ma'nong-pins'), cleft hand. **m. en singe** (ma'nong-sēnz'), monkey hand. **m. en squelette** (ma'nong-skel-et'), skeleton hand. **m. fourché** (mān'foor-sha'), cleft hand. **m. succulente** (mān'suk-u-lent'), see *Marinesco's succulent hand*, under *hand*.

Mainini (mi-ne'ne) see *Galli Mainini*.

maise (māz) [L. *mais* maize] Indian corn; a cereal grain, the seed of *Zea mays*.

maisin (ma'zin) a protein found in the seeds of maize.

maisonneuve (ma'zo-nev') Maisonneuve's urethrotome.

Maisonneuve's amputation, bandage, urethrotome (ma'zo-nevz') [Jules Germain François *Maisonneuve*, French surgeon, 1809-1897] see under *amputation, bandage*, and *urethrotome*.

Maissiat's band (ligament, tract) (ma'se-ahz') [Jacques Henri *Maissiat*, French anatomist, 1805-1878] tractus iliotibialis.

maizenate (ma'zen-āt) any salt of maizenic acid.

Majocchi's disease (purpura) (mah-yok'ēz) [Domenico *Majocchi*, Italian physician, 1849-1929] purpura annularis telangiectodes.

majoon (mah-joon') see *ganja*.

makro- (mak'ro) for words thus beginning, see those beginning *macro-*.

mal (mahl) [Fr.; L. *malum* ill] disease. **m. de caderas**, a disease of horses, mules, and dogs in South America, characterized by weakness, especially of the hind quarters, and a staggering, swinging gait. It is caused by *Trypanosoma equinum* (now considered to be identical with *T. evansi*), which is transmitted by tabanid flies and by vampire bats (*Desmodus rotundus*). **m. de Cayenne**, elephantiasis. **m. comitial**, epilepsy. **grand m.**, see under *epilepsy*. **haut m.**, grand mal epilepsy. **m. de Meleda**, symmetrical keratosis of the palms and soles associated with an ichthyotic thickening of the wrists and ankles, a hereditary congenital disorder occurring endemically in the island of Meleda, off the coast of Dalmatia. It is transmitted as an autosomal dominant. **m. de mer**, seasickness. **m. morado**, a dermatitis caused by infection with *Onchocerca volvulus*. **m. perforant**, perforating ulcer of the foot. **petit m.**, see under *epilepsy*. **m. del pinto**, pinta. **m. rouge**, a syndrome occurring after inhalation or ingestion of calcium cyanamide followed by drinking an alcoholic beverage, marked by intense flushing, rapid pulse and pounding heart, panting respiration, and perception of the taste and smell of acetaldehyde in the exhaled breath, which may be followed by nausea, vomiting, and a precipitous fall in blood pressure; the extent and severity of the symptoms depend on the amount of calcium cyanamide and alcohol in the system. The reactions are due to the inhibition by calcium cyanamide of one or more of the enzymes required for oxidation of acetaldehyde formed from alcohol, resulting in the accumulation of acetaldehyde and the altered vascular reaction to it. A similar syndrome, also due to accumulation of acetaldehyde, occurs on ingestion of disulfiram followed by drinking an alcoholic beverage, but in addition there is impaired taste, unpleasant breath and perspiration, and lessened sexual potency.

mala (ma'lah) [L.] 1. NA alternative for *bucca*, or cheek. 2. the cheek bone.

malabsorption (mal'ab-sorp'shun) impaired intestinal absorption of nutrients; see also under *syndrome*.

Malacarne's pyramid, space (antrum) (mal'ah-kar'nāz) [Michele Vincenzo *Malacarne*, Italian surgeon, 1744-1816] see *substantia perforata posterior*, and see under *pyramid*.

malacia (mah-la'she-ah) [Gr. *malakia*] 1. the morbid softening or softness of a part or tissue. Also used with combining forms to denote specific conditions, as *osteomalacia*. 2. craving for highly spiced food and dishes, as pickles, salads, mustard, etc. **metaplastic m.**, osteitis fibrosa cystica. **myeloplastic m.**, osteogenesis imperfecta. **porotic m.**, softening accompanied by proliferation of connective tissue. **m. traumat'ica**, Kienböck's disease (def. 2.).

malacic (mah-la'sik) marked by malacia or morbid softness.

malaco- [Gr. *malakos* soft] a combining form meaning a condition of abnormal softness.

malacoma (mal'ah-ko'mah) [*malaco-* + *-oma*] a morbidly soft part or spot.

malacoplakia (mal'ah-ko-pla'ke-ah) [*malaco-* + Gr. *plax* plaque] the formation of soft patches on the mucous membrane of a hollow organ. **m. vesicae**, a soft, yellowish, fungus-like growth on the mucous membrane of the bladder and ureters.

malacosarcosis (mal'ah-ko-sar-ko'sis) [*malaco-* + Gr. *sarx* flesh] softness of muscular tissue.

malacosis (mal'ah-ko'sis) malacia.

malacosteon (mal'ah-kos'te-on) [*malaco-* + Gr. *osteon* bone] osteomalacia.

malacotic (mal'ah-kot'ik) inclined to malacia; soft; said of teeth.

malactic (mah-lak'tik) 1. softening; emollient. 2. an emollient medicine.

maladie (mal'ah-de') [Fr.] a disease. **m. bleue**, morbus caeruleus. **m. de Capdepont**, dentinogenesis imperfecta. **m. des jambes** (da-zhamb'), a disease of rice growers in Louisiana, probably beriberi. **m. de Nicolas et Favre**, lymphogranuloma venereum. **m. de plongeurs** (duh-plon-zher'), inflammation and ulceration in divers in the Mediterranean caused by the stings of sea anemones. **m. de Roger**, Roger's disease. **m. du sommeil** (du-so-ma'e), African trypanosomiasis. **m. des tics**, Gilles de la Tourette syndrome.

maladjustment (mal'ad-just'ment) in psychiatry, defective adaptation to environment, marked by anxiety, depression, and irritability.

malady (mal'ah-de) [Fr. *maladie*] any disease or illness.

malagma (mah-lag'mah) [Gr.] an emollient or cataplasm.

malaise (mal-āz') [Fr.] a vague feeling of bodily discomfort.

malakoplakia (mal'ah-ko-pla'ke-ah) malacoplakia.

malalignment (mal'ah-lin'ment) displacement out of line, especially displacement of the teeth from their normal relation to the line of the dental arch.

malalinement (mal'ah-lin'ment) malalignment.

malar (ma'lar) [L. *mala* cheek] pertaining to the cheek or cheek bone.

malaria (mah-la're-ah) [It. "bad air"] an infectious febrile disease caused by protozoa of the genus *Plasmodium*, which are parasitic in the red blood cells, and are transmitted by the bites of infected mosquitoes of the genus *Anopheles*. The disease is characterized by attacks of chills, fever, and sweating, occurring at intervals which depend on the time required for development of a new generation of parasites in the body. After recovery from the acute attack, the disease has a tendency to become chronic, with occasional relapses. **algid m.**, falciparum malaria characterized by peripheral vascular failure, with coldness of the skin, prostration, and extensive involvement of the vessels of the gastrointestinal tract and other abdominal viscera. **benign tertian m.**, vivax m. **bilious remittent m.**, a pernicious form of falciparum malaria characterized by severe nausea, continual vomiting, high remittent fever, and jaundice appearing about the second day after onset. **bovine m.**, Texas fever. **cerebral m.**, falciparum malaria with delirium or coma, as a result of localization of parasites (parasitic thrombus) in the brain. **cold m.**, algid m. **m. comato'sa**, cerebral malaria characterized by coma. **dysenteric m.**, falciparum malaria characterized by bloody diarrhea. **estivoautumnal m.**, former name for falciparum malaria when it was endemic in the United States. **falciparum m.**, the most serious form of malaria, caused by *Plasmodium falciparum*, characterized by severe constitutional symptoms and sometimes causing death. **gastric m.**, falciparum malaria in which there is continual vomiting. **hemolytic m.**, blackwater fever. **hemorrhagic m.**, falciparum malaria in which hemorrhage is a prominent symptom. **induced m.**, malaria that is purposely produced by introduction of the causative parasites, as sometimes used in treating neurosyphilis. **malignant tertian m.**, falciparum m. **ovale m.**, a mild disease caused by infection with *Plasmodium ovale*, usually characterized by a few regularly recurring tertian febrile paroxysms, beginning with a feeling of chilliness or cold shivers rather than the rigors typical of vivax malaria, and tending to end in spontaneous recovery. **pernicious m.**, falciparum m. **quartan m.**, that in which the febrile paroxysms occur every 72 hours, or every fourth day counting the day of occurrence as the first day of each cycle; it is caused by *Plasmodium malariae*, which requires 72 hours for completion of each asexual cycle in the erythrocyte. **quotidian m.**, that in which the febrile paroxysms occur daily, due to simultaneous infection with two broods of *Plasmodium vivax*, which complete their 42- to 47-hour cycle on alternate days. See *vivax m.* **subtertian m.**, falciparum m. **tertian m.**, that in which the febrile paroxysms occur every 42 to 47 hours, or every third day counting the day of occurrence as the first day of the cycle. See *vivax m.* **therapeutic m.**, induced m. **vivax m.**, malaria caused by *Plasmodium vivax*, the form most common and most likely to recur; the febrile

paroxysms commonly occur every other day (tertian m.), but may occur daily (quotidian m.), if there are two broods of parasites segmenting on alternate days.

malariacidal (mah-la're-ah-si'dal) destructive to malarial plasmodia; plasmodicidal.

malarial (mah-la're-al) pertaining or due to malaria.

malariatherapy (mah-la're-ah-ther'ah-pe) malariotherapy.

malariologist (mah-la're-ol'o-jist) a person versed in or engaged in the study of malaria.

malariology (mah-la're-ol'o-je) [*malaria* + *-logy*] the study of malaria.

malariometry (mah-la're-om'ē-tre) the employment of quantitative methods in the study of malaria.

malariotherapy (mah-la're-o-ther'ah-pe) treatment of dementia paralytica by infecting the patient with malarial parasites, usually the parasite of tertian malaria (*Plasmodium vivax*) or of quartan malaria (*P. malariae*).

malarious (mah-la're-us) pertaining to or marked by the presence of malaria.

malaris (mah-la'ris) [L.] malar.

Malassez's disease, rests (mal'ah-sāz') [Louis Charles Malassez, physiologist in Paris, 1842-1909] see under *disease* and *rest*.

Malassezia (mal'ah-se'ze-ah) [Louis Charles Malassez] *Pityrosporon*. **M. furfur**, **M. macfadyani**, **M. tropica**, *Pityrosporon orbiculare*.

malassimilation (mal'ah-sim'i-lā'shun) [L. *malus* ill + *assimilatio* a rendering like] 1. imperfect, faulty, or disordered assimilation. 2. the inability of the gastrointestinal tract to transport to the body fluids one or more ingested nutrients, whether due to faulty digestion (maldigestion) or to impaired intestinal mucosal transport (malabsorption).

malate (ma'lāt) any salt of malic acid; in biochemistry, the term is often used interchangeably with malic acid (see under *acid*).

malathion (mal'ah-thi'on) chemical name: *O,O*-dimethyl-S-(1,2-dicarboxyethyl)dithiophosphate. An organophosphorus compound used as an insecticide.

malaxate (mal'ak-sāt) to knead, as in making pills.

malaxation (mal'ak-sā'shun) [Gr. *malaxis* a softening] an act of kneading.

Malcotran (mal'ko-tran) trademark for a preparation of homatropine methylbromide.

maldevelopment (mal'de-vel'op-ment) abnormal growth or development.

maldigestion (mal'di-jes'chun) impaired digestion.

male (māl) 1. an organism of the sex that begets young or that produces spermatozoa. 2. masculine.

maleate (ma'lē-āt) any salt or ester of maleic acid.

malemission (mal'e-mish'un) failure of the semen to be discharged from the urinary meatus in coitus.

Malerba's test (mah-ler'bahz) [Pasquale Malerba, Italian physician, 1849-1917] see under *tests*.

maleruption (mal'ē-rup'shun) faulty eruption of a tooth, so that it is out of its normal position.

malethamer (mal-eth'ah-mer) a high weight copolymer of ethylene with maleic anhydride, cross-linked with 1 to 2 per cent, by weight, of vinyl crotonate; an antiperistaltic agent.

malformation (mal'for-mā'shun) [L. *malus* evil + *formatio* a forming] defective or abnormal formation; deformity; an anatomical aberration, especially one acquired during development. **Arnold-Chiari m.**, see under *deformity*.

malfunction (mal-funk'shun) dysfunction.

Malgaigne's amputation, etc. (mal-gānz') [Joseph François Malgaigne, French surgeon, 1806-1865] see under *amputation*, *hook*, *luxation*, *pad*, and *triangle*.

maliasmus (mal'e-as'mus) glanders, or farcy.

maligancy (mah-lig'nan-se) [L. *malignare* to act maliciously] a tendency to progress in virulence; the quality of being malignant.

malignant (mah-lig'nant) [L. *malignans* acting maliciously] tending to become progressively worse and to result in death. Having the properties of anaplasia, invasion, and metastasis; said of tumors.

malignin (mah-lig'nin) a protein fragment present in the serum of patients with malignant glial tumors.

malignogram (mah-lig'no-gram) a systematic arrangement of numerical values assigned to the various factors in cases of carcinoma.

mali-mali (mah'le-mah'le) a form of saltatory spasm endemic in the Philippines.

malingerer (mah-ling'ger-er) [Fr. *malingre* sickly] an individual who is guilty of malingering.

malingering (mah-ling'ger-ing) the willful, deliberate, and

fraudulent feigning or exaggeration of the symptoms of illness or injury, done for the purpose of a consciously desired end.

malinterdigitation (mal'in-ter-dij'i-ta'shun) failure of interdigitation of parts which are normally so related.

Mall's formula (mahlz) [Franklin Paine Mall, Baltimore anatomist, 1862-1917] see under *formula*.

malleability (mal'e-ah-bil'i-te) the quality of being malleable.

malleable (mal'e-ah-b'l) [L. *malleare* to hammer] susceptible of being beaten out into a thin plate.

malleal (mal'e-al) mallear.

mallear (mal'e-ar) pertaining to a malleus (def. 1).

malleation (mal'e-a'shun) [L. *malleare* to hammer] sharp and swift muscular twitching of the hands.

mallein (mal'e-in) [L. *malleus* glanders] a fluid from cultures of the glanders bacillus or an extract of the bacillus, which causes a rise of temperature when injected into an animal affected with glanders.

malleoidosis (mal'e-oi-do'sis) melioidosis.

malleoincudal (mal'e-o-ing'ku-dal) pertaining to the malleus and incus.

malleolar (mal'e-o-lar) pertaining to a malleolus.

malleoli (mal-le'o-li) [L.] plural of *malleolus*.

malleolus (mal-le'o-lus), pl. *malle'oli* [L., dim. of *malleus* hammer] a rounded process, such as the protuberance on either side of the ankle joint; [NA], a general term for such a process. **external m., m. exter'nus**, m. *lateralis*. **m. fib'ulae**, *fibular m.*, m. *lateralis fibulae*. **inner m., internal m., m. inter'nus**, m. *medialis*. **lateral m., m. lateralis. **lateral m. of fib'ula**, m. *lateralis fibulae*. **m. latera'lis** [NA], lateral malleolus: the rounded protuberance on the lateral surface of the ankle joint, produced by the m. *lateralis fibulae*. **m. latera'lis fib'ulae** [NA], lateral malleolus of fibula: the process at the outer side of the lower end of the fibula, forming, with the malleolus *medialis tibiae*, the mortise in which the talus articulates. **medial m., m. medialis**. **medial m. of tibia**, m. *medialis tibiae*. **m. media'lis** [NA], medial malleolus: the rounded protuberance on the medial surface of the ankle joint, produced by the m. *medialis tibiae*. **m. media'lis tib'iae** [NA], medial malleolus of tibia: the process at the inner side of the lower end of the tibia, forming, with the malleolus *lateralis fibulae*, the mortise in which the talus articulates. **outer m., m. lateralis**. **radial m., m. radia'lis**, *processus styloideus radii*. **m. tib'iae**, *tibial m.*, m. *medialis tibiae*. **ulnar m., m. ulna'ris**, *processus styloideus ulnae*.**

Malleomyces (mal'e-o-mi'sēz) [L. *malleus* glanders + Gr. *mykēs* fungus] a name formerly given a genus of schizomycetes (order Eubacteriales). **M. mal'lei**, *Pseudomonas mallei*. **M. pseudomal'lei**, *M. whitmo'ri*, *Pseudomonas pseudomallei*.

malleotomy (mal'e-o'to-me) [*malleus* + Gr. *tomē* a cutting] 1. the operation of dividing the malleus in cases of ankylosis of the ossicles of the middle ear. 2. the operation of separating the malleoli by dividing the ligaments which hold them together.

malleus (mal'e-us) [L. "hammer"] 1. [NA] the largest of the auditory ossicles, and the one attached to the membrana tympani; its club-shaped head articulates with the incus. Called also *hammer*. See Plate accompanying ear. 2. glanders.

mallochorion (mal'o-ko're-on) [Gr. *mallos* wool + *chorion*] the primitive chorion; so called because of its villi.

Mallophaga (mal-of'ah-gah) [Gr. *mallos* wool + *phagein* to eat] an order of biting lice, the bird lice, which feed on the feathers and hair of birds and which may attack man and other mammals. It includes the genera *Damalinia*, *Felicola*, *Heterodoxus*, and *Trichodectes*. Cf. *Anoplura*.

Mallory's bodies, stain (mal'o-rēz) [Frank Burr Mallory, pathologist in Boston, 1862-1941] see under *body*, and see *Table of Stains*.

mallow (mal'o) [L. *malva*] any plant of the genus *Malva*. The flowers and leaves of *M. sylvestris* L. and *M. rotundifolia* L. (malvaceae) are demulcent and emollient, and are used in Asia and India for these properties.

malnutrition (mal'nu-trish'un) any disorder of nutrition; it may be due to unbalanced or insufficient diet or to defective assimilation or utilization of foods. **malignant m.**, kwashiorkor. **protein m.**, kwashiorkor.

malocclusion (mal'o-kloo'zhun) such malposition and contact of the maxillary and mandibular teeth as to interfere with the highest efficiency during the excursive movements of the jaw that are essential for mastication; originally classified by Angle into four major groups, depending on the anteroposterior jaw relationship as indicated by interdigitation of the first molar teeth, but Class IV is not used (see table). **closed-bite m.**, see *closed bite*, under *bite*. **open-bite m.**, see *open bite*, under *bite*.

malonal (mal'o-nal) (obs.) barbital.

malonyl (mal'o-nil) the divalent radical, OCCH₂CO.

Malpighi's pyramids, vesicles (mal-pig'ēz) [Marcello Malpighi, Italian anatomist, 1628-1694] see *pyramides renales* and *alveoli pulmonis*.

ANGLE'S CLASSIFICATION OF MALOCCLUSION

Class I (Neutroclusion). Normal anteroposterior relationship of the jaws, as indicated by correct interdigitation of maxillary and mandibular molars, but with crowding and rotation of teeth elsewhere, i.e., a dental dysplasia or an arch length deficiency.

Class II (Distocclusion). The lower dental arch is posterior to the upper in one or both lateral segments; the lower first molar is distal to the upper first molar.

Division 1. Bilaterally distal with narrow maxillary arch and protruding upper incisors.

Subdivision, unilaterally distal with other characteristics the same.

Division 2. Bilaterally distal with normal or square-shaped maxillary arch, retruded maxillary central incisors, labially malposed maxillary lateral incisors, and an excessive overbite.

Subdivision. Unilaterally distal with other characteristics the same.

Class III (Mesiocclusion). The lower arch is anterior to the upper in one or both lateral segments; lower first molar is mesial to upper first molar.

Division. Mandibular incisors are usually in anterior cross-bite.

Subdivision. Unilaterally mesial, with other characteristics the same.

Class IV. The occlusal relations of the dental arches present the peculiar condition of being in distal occlusion upon one lateral half, and in mesial occlusion upon the other half of the mouth.

malpighian bodies, etc. (mal-pig'i-an) [Marcello Malpighi, Italian anatomist, 1628-1694] see under *body*, *capsule*, *cell*, *corpuscle*, *glomerulus*, *layer*, *rete*, *stigma*, and *tuft*.

malposed (mal-pōzd') not in the normal position.

malposition (mal'po-zish'un) [L. *malus* bad + *positio* placement] abnormal or anomalous position.

malpractice (mal-prak'tis) [L. *mal* bad + *practice*] improper or injurious practice; unskillful and faulty medical or surgical treatment.

malpraxis (mal-prak'sis) malpractice.

malpresentation (mal'prez-en-ta'shun) a faulty or abnormal fetal presentation.

malrotation (mal'ro-ta'shun) abnormal or pathologic rotation, as of the vertebral column; failure of normal rotation of an organ, as of the gut, during embryological development.

malt (mawlt) [L. *malturn*] grain, for the most part barley, which has been soaked, made to germinate, and then dried; it contains dextrin, maltose, and diastase. It is nutritive and digestant, aiding in the digestion of starchy foods, and is used in tuberculosis, cholera infantum, and other wasting diseases.

maltase (mawl'tās) α-glucosidase. See *glucosidase*.

malthusian law (mal-thu'se-an) [Rev. Thomas Robert Malthus, English economist, 1766-1834] see under *law*.

maltobiose (mawl'to-bi'ōs) maltose.

maltodextrin (mawl'to-dek'strin) a dextrin convertible into maltose.

maltoflavin (mawl'to-fla'vin) a flavin or lyochrome malt.

maltol (mawl'tol) a compound, 3-hydroxy-2-methyl-4-pyrone, $\text{CH}_3\text{CH}_2\text{CO}\cdot\text{C}(\text{OH})\cdot\text{C}(\text{CH}_3)_2$.

maltosazone (mawl'to-sa'zōn) the phenylsazone of maltose, a yellow crystalline substance formed by treating maltose with phenyl hydrazine and acetic acid; the crystals melt at 205° C. and may be used in identifying maltose.

maltose (mawl'tōs) 4-O-[α-D-glucopyranosyl]-D-glucopyranose: a white crystalline disaccharide formed when starch is hydrolyzed by amylase; used as a nutrient and sweetener. Called also *maltobiose*.

maltoside (mawl'to-sid) acetal of maltose, formed by condensation of an anomeric hydroxyl group with an alcohol; a compound homologous with a glucoside, but in which the sugar is maltose instead of glucose.

maltosuria (mawl'to-su're-ah) the presence of maltose in the urine.

maltotriose (mawl'to-tri'ōs) a sugar consisting of three glucose molecules, resulting from the action of amylase on starch or glycogen.

malturn (mal'tum) [L.] malt.

malturned (mal-turnd') turned abnormally; said of teeth twisted on their central axes.

Malucidin (mal'u-si'din) trademark for a yeast extract which has abortifacient activity in the dog, cat, and sheep.

malum (ma'lum) [L.] evil or disease. **m. articulo'rum seni'lis**, a painful, degenerative state of a joint, occurring as a result of aging. **m. cox'ae**, hip-joint disease. **m. cox'ae seni'lis**, osteoarthritis of the hip joint. **m. malan'num** ["evil year disease"], the name given during the Middle Ages to a

carbunculus or gangrenous eruption affecting the jaws of man or animals, possibly anthrax or glands. **m. perforans pedis**, perforating ulcer of the foot. **m. seni/le**, a variety of osteoarthritis peculiar to aged persons; see *morbus coxae senilis*. **m. vene/reum**, syphilis. **m. vertebra/le suboccipita/le**, tuberculosis of the atlas and axis.

malunion (mal-ūn'yōn) union of the fragments of a fractured bone in a faulty position.

Malva (mal'vah) [L.] see *mallow*.

malvaria (mal-va're-ah) [L. *malva* mallow + *-ia*] a term suggested by Hoffer and Osmond for a condition characterized by the presence of mauve factor (a substance that, on paper chromatography, gives a mauve color) in the urine; it has been reported in schizophrenia.

Maly's test (mah'lēz) [Richard Leo Maly, Austrian chemist, 1839-1894] see under *tests*.

mamanpian (mah-mahn'pe-ahn') [Fr. *maman* mother + *pian* yaw] mother yaw.

mamba (mam'bah) an extremely venomous elapid tree snake of the genus *Dendroaspis*.

mamelon (mam'ē-lon) [Fr. "nipple"] 1. one of three tubercles sometimes present on the cutting edge of an incisor tooth. 2. the nipple-like elevation in the umbilicus, considered to be the remains of the solid lower part of the umbilical cord which contained the umbilical arteries and urachus.

mamelonated (mam'ē-lon-āt'ed) (*obs.*) mamillated.

mamelonation (mam'ē-lo-na'shun) (*obs.*) mamillation.

mamilla (mah-mil'ah), pl. *mamil'lae* [L., dim. of *mamma*, a breast, teat] 1. the nipple (papilla mammae [NA]). 2. any nipple-like structure. Written also *mammilla*.

mamillae (mah-mil'le) [L.] plural of *mamilla*.

mamillaria (mam'il-la're-a) *miliaria profunda*.

mamillary (mam'i-ler'e) [L. *mamilla*, dim. of *mamma*, a breast, teat] pertaining to or resembling a nipple.

mamillated (mam'i-lāt'ed) having nipple-like projections.

mamillation (mam'il-la'shun) 1. the condition of being mamillated. 2. a nipple-like elevation or projection.

mamilliform (mah-mil'i-form) [*mamilla* + L. *forma* form] shaped like a nipple.

mamillioplasty (mah-mil'i-plas'te) theleplasty.

mamillitis (mam'i-li'tis) [*mamilla* + *-itis*] inflammation of the mamilla, or nipple; thelitis.

mamma (mam'ah), pl. *mam'mae* [L.] [NA] the breast: the modified cutaneous, glandular structure on the anterior aspect of the thorax that contains, in the female, the elements that secrete milk for nourishment of the young. See *mammary gland*, under *gland*. **mam'mae accessor'iae** [*femini'nae et masculi'nae*] [NA], **accessory mammae**, mammary glands present in excess of the normal number, generally found along the line of the embryonic mammary crest; called also *accessory mammary glands*. **m. areola'ta**, a condition of the breast in which there is bulging of the areola of the nipple. **m. masculi'na** [NA], the rudimentary mammary gland of the male; called also *m. virilis*. **supernumerary mammae**, mammae accessor'iae [*femini'nae et masculinae*]. **m. virilis**, *m. masculina*.

mammae (mam'e) [L.] plural of *mamma*.

mammal (mam'al) an individual belonging to the class *Mammalia*.

mammalgia (mah-mal'je-ah) mastalgia.

Mammalia (mah-ma'le-ah) a class of warm-blooded vertebrate animals, including all that possess hair and suckle their young.

mammalogy (mah-mal'o-je) [*mammal* + *-logy*] the study of mammals.

mammoplasty (mam'ah-plas'te) [L. *mamma* + Gr. *plassein* to shape, form] plastic reconstruction of the breast, as may be performed to augment or reduce its size. **Aries-Pitanguy m.**, an operation to reduce mild to moderate macromastia. **augmentation m.**, plastic reconstruction of the breast, with increase of its volume by insertion of an autogenous or prosthetic material.

mammary (mam'er-e) [L. *mammarius*] pertaining to the mamma, or breast.

mammatrope (mam'ah-trōp) mammotrope.

mammectomy (mah-mek'to-me) [*mamma* + Gr. *ektomē* excision] excision of the breast; mastectomy.

mammiform (mam'i-form) [*mamma* + L. *forma* form] shaped like the mamma, or breast.

mammilla (mah-mil'ah) mamilla.

Mammillaria (mam'il-la're-ah) a genus of cacti which have numerous sharp spines capable of inflicting painful wounds.

mamillary (mam'i-ler'e) mamillary.

mamillated (mam'i-lāt'ed) mamillated.

mamillation (mam'i-la'shun) mamillation.

mamilliform (mah-mil'i-form) mamilliform.

mamillitis (mam'i-li'tis) mamillitis.

mammiplasia (mam'i-pla'ze-ah) mammo-plasia.

mammitis (mam-i'tis) mastitis.

mammo- [Gr. *mammē*, Gr., L. *mamma* the mother's breast] a combining form denoting relationship to the breast, or mammary gland; see also words beginning *masto-* and *mazo-*.

mammogen (mam'o-jen) any compound that promotes breast development.

mammogenesis (mam'mo-jen'ē-sis) the development of the mammary glands to the functional state.

mammogram (mam'o-gram) a roentgenogram of the breast.

mammography (mam-og'rah-fe) roentgenography of the mammary gland.

mammoplasia (mam'mo-pla'ze-ah) [*mammo-* + Gr. *plasis* formation + *-ia*] the development of breast tissue; called also *mastoplasia*. **adolescent m.**, the development of breast tissue at adolescence, applied especially to the development and later regression which occurs in males during puberty.

mammoplasty (mam'o-plas'te) [*mammo-* + Gr. *plassein* to shape, form] plastic reconstruction of the breast, as may be done to augment or reduce its size.

mammose (mah-mōs') [L. *mammōsus*] 1. having large breasts, or mammae. 2. mamillated.

mammotomy (mam-mot'o-me) mastotomy.

mammotrope (mam'o-trōp) one of the acidophils (alpha cells) of the adenohypophysis that stain with an affinity for azocarmine and erythrosin, and are thought to secrete prolactin or luteotropin. Called also *luteotrope* and *prolactin cell*.

mammotropic (mam'o-trop'ik) [*mammo-* + Gr. *tropikos* inclined] having affinity for or a stimulating effect on the mammary gland.

mammotropin (mah-mot'ro-pin) the lactogenic hormone, prolactin.

Man. abbreviation for L. *manip'ulus*, a handful.

manaca (man'ah-kah) the Brazilian plant, *Brunfelsia* (*Franciscea*) *hopeana* Benth. (Solanaceae); formerly used in the treatment of syphilis and rheumatism.

manchette (man-chet') [Fr. "a cuff"] a temporary band around the neck of a spermatozoon.

manchineel (man'ki-nēl') the *Hippomane mancinella*, a tree of tropical America; it contains a caustic poisonous sap or juice.

mancinism (man'si-nizm) [L. *mancus* crippled] left-handedness.

mandama (man-dam'ah) the native name for phrynoderma.

Mandelamine (man'del-ah'mēn) trademark for a preparation of methenamine mandelate.

mandelate (man'del-āt) any salt of mandelic acid; *ammonium mandelate* and *calcium mandelate* are used as urinary anti-infectives.

mandible (man'di-b'l) the bone of the lower jaw; see *mandibula*.

mandibula (man-dib'u-lah), pl. *mandib'ulae* [L.] [NA] the mandible: the horseshoe-shaped bone forming the lower jaw; the largest and strongest bone of the face, presenting a body and a pair of rami, which articulate with the skull at the temporomandibular joints.

mandibulae (man-dib'u-le) [L.] plural of *mandibula*.

mandibular (man-dib'u-lar) pertaining to the lower jaw bone, or mandible.

mandibulopharyngeal (man-dib'u-lo-fah-rin'je-al) pertaining to the mandible and the pharynx.

Mandragora (man-drag'o-rah) [L.] a genus of solanaceous plants. *M. officinarum* L. (Solanaceae), the true European or oriental mandrake, has the general properties of belladonna, and was formerly used as a narcotic and sedative. It contains the alkaloids mandragorine, hyoscyamine, and scopolamine.

mandrake (man'drāk) see *Mandragora*.

mandrel (man'drel) the shaft on which a dental tool is held in the dental handpiece, for rotation by the dental engine.

mandril (man'dril) mandrel.

mandrin (man'drin) a stilet or guide for a catheter.

maneuver (mah-noo'ver) any dextrous proceeding; applied especially to procedures employed by the obstetrician in manual delivery of an infant. See also entries under *method*, *technique*, etc. **Adson's m.**, see under *tests*. **Allen m.**, with the forearm flexed at a right angle, the arm is extended horizontally and rotated externally at the shoulder, the head being rotated to the contralateral shoulder; obliteration of the radial pulse suggests scalenus anticus syndrome. **Bracht's m.** (for breech presentation), the breech is allowed to spontaneously deliver up to the umbilicus. The body and extended legs are held together with both hands maintaining the upward and anterior rotation of the fetal body. When the anterior rotation is nearly complete, the fetal body is held against the mother's symphysis. Maintenance of this position leads to spontaneous completion of delivery. **Brandt-Andrews m.**, a method of expressing the placenta from the uterus in the third stage of labor: the left hand grasps the

umbilical cord while the right is placed on the maternal abdomen with the fingers over the anterior uterine surface. The right hand is gently pressed backward and slightly upward as the left applies gentle traction on the cord. **Chassard-Lapiné m.**, the patient sits and bends forward as far as possible. The roentgen rays, directed from above, penetrate the spine and outline the sigmoid loops in a transverse projection. **Credé's m.**, see under *method*. **DeLee's m.**, an obstetrical method of changing a face presentation to a brow presentation. **Engel-Lysholm m.**, a radiologic method of determining the size of the retrogastric organs or masses: the patient takes effervescent powders to fill his stomach with carbon dioxide, and assumes a prone position; a lateral view of the abdomen with a horizontal beam, and a posteroanterior projection with a vertical beam are made. **forward-bending m.**, a method of detecting retraction signs in neoplastic changes in the mammae; the patient bends forward from the waist with chin held up and arms extended toward the examiner. If retraction is present, an asymmetry in the breast is seen. **Fowler m.**, a test for tight intrinsic muscles in ulnar deviation of the digits: in rheumatoid arthritis a heavy, taut ulnar band is demonstrated when the digit is held in its normal axial relationship. **Halstead m.**, while the examiner exerts downward traction on the upper limb to be tested, the subject rotates his head toward the contralateral shoulder; obliteration of the radial pulse is suggestive of scalenus anticus syndrome. **Heiberg-Esmarch m.** (*obs.*), a pushing forward by the anesthetist of the patient's lower jaw in order to prevent the tongue from slipping backward. **Heimlich m.**, a method of dislodging food or other material from the throat of a choking victim: after wrapping the arms around the victim and allowing his upper torso to hang forward, make a fist with one hand and grasp it with the other; with both hands placed against the victim's abdomen slightly above the navel and below the rib cage, forcefully press into the abdomen with a quick upward thrust. If the victim is sitting, stand behind him and perform the same procedure, and if he is prone or unconscious, turn him on his back, kneel astride the torso, place both hands at the location on the victim's abdomen as described above and press forcefully with a sharp upward thrust. The maneuver may be repeated several times if necessary. **Hodge m.**, pressing up on the sinciput of the fetus during the labor pains, to increase flexion and thus assist rotation. **Hoguet's m.**, withdrawing the sac from beneath the deep epigastric vessels in hernioplasty. **Hueter's m.**, downward and forward pressure on the patient's tongue by the left forefinger of the physician during introduction of a stomach tube. **Jendrasik's m.**, a procedure for emphasizing the patellar reflex: the patient hooks his hands together by the flexed fingers and pulls apart as hard as he can. **Kappeler's m.** (*obs.*), a drawing forward of the patient's lower jaw by the anesthetist. **Leopold's m's**, four maneuvers in palpating the abdomen for ascertaining the position and presentation of the fetus. **Lovset's m.**, extraction of the arms in breech birth by clockwise and counterclockwise rotation of the fetus, after it has been expelled up to the umbilicus. **McDonald m.**, measurement of the contour of the abdomen from the upper margin of the symphysis pubis to the uterine fundus to calculate the duration of pregnancy. **Mauriceau m.**, a method of delivering the after-coming head in cases of breech presentation. **Müller's m.**, an inspiratory effort with a closed glottis after expiration, used during fluoroscopic examination to cause a negative intrathoracic pressure with engorgement of intrathoracic vascular structures, which is helpful in recognizing esophageal varices, and distinguishing vascular from nonvascular structures. **Müller-Hillis m.**, procedures for ascertaining the relation between the size of the fetal head and the pelvis of the mother. **Munro Kerr m.**, a maneuver for ascertaining the proportion between the head of the fetus and the pelvis of the mother. **Nägeli's m.**, upward traction on the patient's head applied with one hand under the occiput and the other under the jaw, for cure of nosebleed. **Pajot's m.**, for forceps traction along the axis of superior strait; one hand over the lock of the forceps pulls downward towards the floor, while the other hand applies horizontal traction. **Phalen's m.** (for detection of carpal tunnel syndrome), the size of the carpal tunnel is reduced by holding the affected hand with the wrist fully flexed or extended for 30 to 60 seconds, or by placing a sphygmomanometer cuff on the involved arm and inflating to a point between diastolic and systolic pressure for 30 to 60 seconds. **Pinard's m.**, a method of bringing down the foot in breech extraction. **Prague m.**, a method in breech presentation of engaging the head by bringing down the breech and making traction on the head with the finger, which is hooked over the nape of the neck. **Ritgen m.**, delivery of the fetal head by lifting the head upward and forward through the vulva, between pains, by pressing with the tips of the fingers upon the perineum behind the anus. **Saxtorph's m.**, Pajot's m. **Scanzoni m.**, a method of forceps rotation of the fetal head in the posterior position of the occiput. **Schatz's m.**, an obstetrical method of changing a face presentation into a brow presentation. **Schreiber's m.**, rubbing of the inner side of the upper part of the thigh while testing for patellar reflex. **Toynbee m.**, pinching the nostrils and swallowing; if the auditory tube is patent, the tympanic membrane will retract medially. **Valsalva's m.**, 1. forcible

exhalation effort against a closed glottis; the resultant increase in intrathoracic pressure interferes with venous return to the heart. 2. forcible exhalation effort against occluded nostrils and a closed mouth; the increased pressure in the eustachian tube and middle ear causes the tympanic membrane to move outward. **Van Hoorn's m.**, a maneuver like the Prague maneuver, with the addition of pressure on the fetal forehead from outside. **Wigand's m.**, see under *version*.

manganese (man'gah-nēs) [*L. manganum, manganesium*] a metal resembling iron; symbol, Mn; atomic number, 25; atomic weight, 54.938; specific gravity, 7.2. Manganous salts occur in body tissue in very small amounts and act as an activator of liver arginase and other enzymes. See also *manganese poisoning*, under *poisoning*. **m. butyrate**, a red powder, $(\text{CH}_3\text{CH}_2\text{CH}_2\text{COO})_2\text{Mn}$, formerly used in treatment of some skin diseases. **m. glycerophosphate**, a white or pinkish white powder, $\text{C}_3\text{H}_7\text{MnO}_6\text{P}$, formerly used as a hematinic and nerve tonic. **m. hypophosphite**, a pink, granular or crystalline powder, $\text{Mn}(\text{H}_2\text{PO}_2)_2 \cdot \text{H}_2\text{O}$, used as a nutrient and dietary supplement and formerly as a hematinic. **m. sulfate**, a salt, $\text{MnSO}_4 + 4\text{H}_2\text{O}$, used in veterinary medicine in the prevention of perosis in poultry.

manganic (man-gan'ik) pertaining to manganese as a trivalent element.

manganism (man'gah-nizm) manganese poisoning; see under *poisoning*.

manganous (man'gah-nus) pertaining to manganese as a divalent element.

manganum (man'gah-num) [*L.*] manganese.

mange (mānj) a communicable skin disease of domestic animals, due to various mites, including *Chorioptes*, *Demodex*, *Notedres*, *Psoroptes*, *Sarcoptes*, etc. **demodectic m.**, **follicular m.**, an often intractable form of mange caused by infestation with mites of the genus *Demodex*. **psoroptic m.**, mange caused by species of the genus *Psoroptes*. **sarcoptic m.**, mange due to infestation with mites of the genus *Sarcoptes*, which burrow into the skin. **Texas m.** (*obs.*), grain itch.

Mangoldt's epithelial grafting (mahn'gölts) [Heinrich von Mangoldt, Dresden surgeon, 1860-1909] see under *grafting*.

mangosteen (man'gos-tēn) the pericarp of the fruit of *Garcinia mangostana* L. (Guttiferaceae); astringent.

mangostin (man'gos-tin) a yellow, crystalline, xanthone type of pigment, $\text{C}_{22}\text{H}_{24}\text{O}_6$, from mangosteen rind.

mania (ma'ne-ah) [*Gr. "madness"*] 1. a phase of mental disorder characterized by an expansive emotional state, elation, hyperirritability, overtalkativeness or flight of ideas, and increased motor activity; specifically, the manic type of manic-depressive psychosis. 2. as a combining form, it signifies obsessive preoccupation with something, as in *dipsomania*, *erotomania*, *tomomania*, etc. **acute hallucinatory m.**, Ganser's syndrome. **akinetic m.**, marked emotional exaltation with decreased psychomotor activity. **m. apotu**, delirium tremens. **Bell's m.**, acute delirium. **dancing m.**, a disorder characterized by uncontrolled dancing. **doubting m.**, folie de doute. **epileptic m.**, mania with attacks of violence following, preceding, or replacing an epileptic attack. **hysterical m.**, mania as one of the concomitants of a hysterical condition. **periodical m.**, a condition in which maniacal attacks of varying duration follow one another at more or less regular intervals. **puerperal m.**, the manic reaction that sometimes follows childbirth. **Ray's m.**, so-called moral insanity. **reasoning m.**, simple mania with active but perverted ideation. **religious m.**, mania with abnormal or perverted religious impulses. **transitory m.**, severe frenzied mania the attacks of which are of short duration. **unproductive m.**, a condition in which the behavior is that of mania, but the patient's thinking and speech are repressed.

maniac (ma'ne-ak) [*L. maniacus*] one who is affected with mania.

maniacal (mah-ni'ah-kal) affected with mania.

manic (ma'nik) pertaining to or affected with mania.

manic-depressive (ma'nik-de-pres'iv) alternating between attacks of mania and depression; see under *psychosis*.

manikin (man'i-kin) a model of the body, with movable members and parts, used to illustrate anatomy, or for the teaching of nursing and obstetrics, or certain surgical procedures, such as the removal of foreign bodies by bronchoscopy.

maniloquism (mah-nil'o-kwizm) [*L. manus hand + loqui speak*] dactylogy.

maniluvium (man'i-lu've-um) a hand bath.

Manip. abbreviation for *L. manip'ulus*, a handful.

maniphalanx (man'i-fa'lanks) [*L. manus hand + phalanx*] a phalanx of the hand.

manipulation (mah-nip'u-la'shun) [*L. manipulare to handle*] skillful or dextrous treatment by the hand. In physical therapy, the forceful passive movement of a joint beyond its active limit of motion. **conjoined m.**, manipulation with both hands.

manipulus (mah-nip'u-lus) [*L.*] handful.

Mann's sign (manz) [John Dixon Mann, English physician, 1840-1912] see under *sign*.

Mann-Bollman fistula (man-bol'man) [Frank Charles Mann, American physiologist and surgeon, 1887-1962; Jesse Louis Bollman, American physiologist, born 1896] see under *fistula*.

Mann-Williamson ulcer (man'wil'yam-son) [Frank C. Mann; Carl S. Williamson, American surgeon, 1896-1952] see under *ulcer*.

manna (man'ah) [L.] the dried saccharine exudation from the flowering ash tree, *Fraxinus ornus* L. (Oleaceae); its chief constituents are mannitol, mucilage, and sugar, and it has been used as a laxative.

mannan (man'an) a hard, white, insoluble polysaccharide, $(C_6H_{10}O_5)_n$, which yields mannose on hydrolysis; it is found in the vegetable ivory nut, *Phytelephas macrocarpa*, and other plants.

mannans (man'anz) a complex polysaccharide containing mannose ($C_6H_{12}O_6$) and other moieties, frequently found in the cell walls of fungi, particularly yeasts.

mannerism (man'er-izm) a stereotyped movement or habit peculiar to a given individual.

manninotriose (man'i-no-tri'ōs) a trisaccharide, $C_{18}H_{32}O_{16}$, from ash manna, which on hydrolysis yields two molecules of galactose and one of glucose.

mannitan (man'i-tan) a modified form of mannitol, having an internal ring formation in the molecule and which tends to revert to mannitol.

mannite (man'it) mannitol.

mannitol (man'i-tol) a sugar alcohol, $HOCH_2(CHOH)_4CH_2OH$, widely distributed in plants and fungi, and obtained from manna and seaweeds. A preparation [USP] containing between 98 and 102 per cent of mannitol, calculated on a dry basis, is used intravenously as a diuretic. It is also used in diagnostic tests of kidney function. Called also *mannite*. **m. hexanitrate**, a compound formed by the nitration of mannitol; used as a vasodilator, mainly in urinary insufficiency.

mannitose (man'i-tōs) mannose.

Mannkopf's sign (symptom) (mahn'kopfs) [Emil Wilhelm Mannkopf, German physician, 1836-1918] see under *sign*.

Mannkopf-Rumpf sign (mahn'kopf-roompf) [E. W. Mannkopf; Heinrich Theodore Rumpf, German physician, born 1851] Mannkopf's sign.

mannocarolose (man'o-kar'o-lōs) a polysaccharide made up of D-mannose units and formed by the growth of *Penicillium charlesii* on culture media containing glucose.

mannohydrazone (man'o-hi'drah-zōn) the phenylhydrazone of mannose. It consists of colorless platelike crystals which melt at 195° C. and may be used in identifying mannose.

mannoketoheptose (man'o-ke'to-hep'tōs) a natural sugar, $CH_2OH \cdot CO(CHOH)_4 \cdot CH_2OH$, found in the avocado, *Persea americana* mill.

mannopyranose (man'o-pi'rah-nōs) mannose in cyclic hemiacetal form.

mannosan (man'o-san) mannan.

mannose (man'ōs) a monosaccharide, $CH_2OH \cdot (CHOH)_4 \cdot CHO$; an aldohexose sugar produced by the oxidation of mannitol, similar to dextrose in general properties and conveniently prepared by hydrolyzing the vegetable ivory nut.

mannosidase (man'o-si-dās) an enzyme, a glycoside hydrolase that catalyzes the hydrolysis of mannoside to an alcohol and D-mannose. The two forms, α - and β -mannosidase, react with α -D- and β -D-mannoside, respectively.

mannoside (man'o-sid) a glycoside of mannose.

mannosidosis (man'ōs-i-do'sis) an inborn error of metabolism marked by a defect in α -mannosidase activity that results in lysosomal accumulation of mannose-rich substrates; clinically, there are coarse facial features, upper respiratory congestion and infections, profound mental retardation, hepatosplenomegaly, cataracts, radiographic signs of dyostosis multiplex, and gibbus deformity. A much milder clinical form also occurs. It is thought to be an autosomal recessive trait.

mannosidostreptomycin (man'o-si'do-strep'to-mi'sin) a natural compound of streptomycin joined glycosidically to D-mannose.

mannosocellulose (man-o'so-sel'u-lōs) a variety of polysaccharide from coffee; it is changed by hydrolysis into mannose and dextrose.

Manoiloff's (Manoilov's) reaction (man-oi'lōfs) [E. O. Manoiloff, Russian physician, born 1867] see under *reaction*.

manometer (mah-nom'ē-ter) [Gr. *manos* thin + *metron* measure] an instrument for measuring the pressure or tension of liquids or gases, as the blood, etc. **aneroid m.**, a device that measures pressure by means of an elastic container as compared to that of a vacuum, a true total-pressure-measuring instrument.

manometric (man'o-met'rik) 1. pertaining to or ascertained by the manometer. 2. varying with the pressure.

manoptoscope (man-op'to-skōp) [L. *manus* hand + Gr. *optossein* + *skopein* to examine] an apparatus for detecting ocular dominance.

manoscopy (man-os'ko-pe) the measurement of the density of gases.

Man. pr. abbreviation for L. *ma'ne pri'mo*, early in the morning.

manquea (mahn-ka'ah) actinobacillosis of young cattle in South America, marked by the formation of abscesses upon the legs.

mansa (man'sah) the root or rhizome of *Anemonopsis californica* Hook. and Arn. (syn. *Houttuynia californica* Benth. and Hook.), Saururaceae. A perennial herbaceous plant indigenous to southwestern United States and adjacent Mexico, where it is locally used to relieve colds and indigestion, and to purify the blood.

Manson's hemoptysis, schistosomiasis (disease) (man'sonz) [Sir Patrick Manson, British physician, 1844-1922] see under *hemoptysis* and *schistosomiasis*.

Mansonella ozzardi (man'so-nel'ah o-zar'de) a filarial nematode parasite found in the mesentery and visceral fat of man in Panama, Yucatan, Guyana, Surinam, and Argentina.

mansonelliasis (man'so-nel-i'ah-sis) infection with *Mansonella ozzardi*; it is generally asymptomatic.

Mansonia (man-so'ne-ah) a genus of mosquitoes, several species of which transmit *Brugia malayi*. Some species may also transmit viruses such as those causing equine encephalomyelitis.

Mansonioides (man-so-ne-oi'dēz) a subgenus of *Mansonia*.

M. annulifera, the chief vector of *Wuchereria malayi* in India.

mantle (man'tl) [L. *mantellum* cloak] an enveloping cover or layer. **brain m.**, pallium. **chordomesodermal m.**, a continuous epithelial sheet composed of notochordal and mesodermal material during gastrulation. **myoepicardial m.**, a layer of visceral mesoderm in the early embryo, surrounding the endocardial tube and developing into the myocardium and epicardium.

Mantoux conversion, reversion, test (reaction) (man-too') [Charles Mantoux, French physician, 1877-1947] see under *conversion*, *reversion*, and *tests*.

mantra (man'trah) a Sanskrit syllable or word repeated over and over again in the technique of transcendental meditation.

manual (man'u-al) [L. *manualis*; *manus* hand] of or pertaining to the hand; performed by the hand or hands.

manubria (mah-nu'bre-ah) [L.] plural of *manubrium*.

manubrium (mah-nu'bre-um, pl. *manu'bria* [L.] [NA] a general term for a handle-like structure or part; often used alone to designate the manubrium sterni. **m. mal'lei** [NA], **m. of malleus**, the largest process of the malleus; it is attached to the middle layer of the tympanic membrane and has the tendon of the tensor tympani muscle attached to it. **m. ster'ni** [NA], **m. of sternum**, the cranial portion of the sternum, which articulates with the clavicles and the first two pairs of ribs; called also *presternum*.

manudynamometer (man'u-di'nah-mom'ē-ter) [L. *manus* hand + Gr. *dynamis* force + *metron* measure] an apparatus for measuring the force of the thrust of an instrument.

manus (ma'nus), pl. *ma'nus* [L.] [NA], the hand: the distal portion of the arm, including the carpus, metacarpus, and fingers. **m. ca'va**, a hand deformed by a deep hollowing of the palm. **m. exten'sa**, backward deviation of the hand. **m. flex'a**, forward deviation of the hand. **m. pla'na**, flattening of the arch formed normally by the proximal row of the carpal bones; flat hand. **m. superexten'sa**, manus extensa. **m. val'ga**, clubhand marked by deflection of the hand toward the radial side; Madelung's deformity. **m. va'ra**, clubhand marked by deflection of the hand to the ulnar side.

manyples (men'i-pliz') omasum.

Manz's glands (mahnts'ez) [Wilhelm Manz, German ophthalmologist, 1833-1911] see under *gland*.

manzanita (man'zah-ne'ta) [Sp., dim. of *manzana* apple] a small shrub or tree *Arctostaphylos manzanita* Parry (Ericaceae), found in the western part of the United States; the leaves are used by the local Indians as a medicinal tea, astringent, tonic, and diuretic.

Manzullo's test (man-zul'ōz) [Alfredo Manzullo, Buenos Aires physician] see *tellurite test*, under *tests*.

MAO monoamine oxidase.

Maolate (ma'o-lāt) trademark for a preparation of chlorophen-sin carbamate.

map (map') a two-dimensional graphic representation of arrangement in space. **fate m.**, a plan of a blastula or early gastrula stage of an embryo showing areas of prospective significance in normal development. **genetic m.**, a graphic representation of the linear arrangement of genes on a chromosome, their relative distance from one another being given in map units (see under *unit*). **linkage m.**, a graphic representation of the relative positions of, and distances between, genes on the same chromosome.

mapping (map'ing) the locating of the relative position of genes on a chromosome.

maprotiline (mah-pro'ti-lēn) chemical name: *N*-methyl-9,10-ethanoanthracene-9(10*H*)-propylamine; an antidepressant, C₂₀H₂₃N.

Marañón's sign (reaction), syndrome (mar-ahn'yonz) [Gregorio Marañón, Spanish physician, 1888–1960] see under *sign* and *syndrome*.

Maranta (mah-ran'tah) [after B. Maranta, physician in Venosa, died 1554] a genus of tropical herbs; the roots of several species afford a starch used as a dusting powder and demulcent.

marantic (mah-ran'tik) [Gr. *marantikos* wasting away] marasmic.

marasmatic (mar'az-mat'ik) marasmic.

marasmic (mah-raz'mik) pertaining to or characterized by marasmus.

marasmoid (mah-raz'moid) [Gr. *marasmos* a dying away + *eidos* form] resembling marasmus.

marasmus (mah-raz'mus) [Gr. *marasmos* a dying away] a form of protein-calorie malnutrition chiefly occurring during the first year of life, characterized by growth retardation and progressive wasting of subcutaneous fat and muscle, but usually with retention of the appetite and mental alertness. Infectious diseases may be precipitating factors. Marasmus is now considered to be related to kwashiorkor. Called also *infantile atrophy*, *athrepsia*, *pedatrophy*, and *decomposition* (Finkelstein), *m. infantilis*, and *m. lactantium*. **enzootic m.**, a condition of malnutrition in domestic herbivorous animals due to a deficiency of one or more of the trace elements, especially cobalt and copper. It is marked by progressive emaciation, severe anemia, and finally prostration; similar conditions are *bush sickness* in New Zealand, *pine* or *pinning* in Scotland, and *salt sickness* in Florida. **nutritional m.**, marasmic kwashiorkor.

marble (mar'bl) [L. *marmor*] native crystalline calcium carbonate occurring as a rock.

marbleization (mar'bel-i-za'shun) the state of being veined like marble.

marc (mark) [Fr.] the residue left after maceration of substances used in the preparation of various drugs.

Marcaine (mar-kān') trademark for a preparation of bupivacaine hydrochloride.

march (march) in neurology, the progression of epileptic activity through the motor cortex, as in jacksonian epilepsy.

Marchand's adrenals (organs) (mar'shandz) [Felix Jacob Marchand, German pathologist, 1846–1928] see under *adrenal*, and see *adventitial cell*, under *cell*.

marche à petits pas (marsh-ah-pte'pah) [Fr.] a gait in which the patient takes very short steps: seen in cerebral arteriosclerotic rigidity.

Marchi's balls, etc. (mar'kēz) [Vittorio Marchi, Italian physician, 1851–1908] see under *ball*, *globule*, *reaction*, *Table of Stains*, and *tract*.

Marchiafava-Bignami disease (mar'ke-ah-fah'vah-bēn-yah'me) [Ettore Marchiafava, Italian pathologist, 1847–1935; Amico Bignami, Italian pathologist, 1862–1929] see under *disease*.

Marchiafava-Micheli disease, syndrome (mar'ke-ah-fah'vah-me-ka'le) [Ettore Marchiafava; F. Micheli, Italian clinician] paroxysmal nocturnal hemoglobinuria.

marcid (mar'sid) [L. *marcere* to waste away] wasting away.

marcov (mar'kov) [L. *marcere* to waste away] marasmus.

Marcus Gunn (mar'kus gun) see *Gunn*.

marcy (mar'se) a filtrable agent associated with an afebrile type of viral diarrhea.

Maréchal's test (mar'a-shal'z) [Louis Eugène Maréchal, French physician] see under *tests*.

Maréchal-Rosin test (mar'a-shal'-ro'zen) [L. E. Maréchal; Heinrich Rosin, Berlin physician, born 1863] Maréchal's test.

marennin (mah-ren'in) a green pigment from the oysters of Marennes, in France; derived from the chlorophyll of a microorganism that infests them.

Marezine (mar'ē-zēn) trademark for a preparation of cyclizine hydrochloride.

Marfan's puncture (epigastric puncture, method) sign, syndrome (mar-fahn'z) [Bernard-Jean Antonin Marfan, French pediatrician, 1858–1942] see under *puncture*, *sign* and *syndrome*.

marfanoid (mar'fan-oid) having the characteristic symptoms of Marfan's syndrome.

margarid (mar'gar-id) pearl-like.

margarine (mar'jar-in) [Gr. *margaron* pearl] 1. a food product containing 80 per cent of fat, manufactured primarily from refined cottonseed and soybean oils—sources of vitamin E and essential fatty acids—and fortified to supply a minimum of 15,000 U.S.P. units of vitamin A per pound; called also *oleomargarine*. 2. a (theoretical) trimargarate of propenyl.

margaritoma (mar'gar-i-to'mah) cholesteatoma.

margarone (mar'gar-on) palmitone.

Margaropus (mar-gar'o-pus) a genus of ticks of the family Ixodidae. **M. annulatus**, *Boophilus annulatus*. **M. winthemi**, the beady-legged winter horse tick, a species found on horses and other large herbivores in South Africa.

margin (mar'jin) an edge or border, such as the boundary of an organ or other anatomic structure; called also *margo* [NA]. **alveolar m. of mandible**, arcus alveolaris mandibulae. **alveolar m. of maxilla**, arcus alveolaris maxillae. **axillary m. of scapula**, margo lateralis scapulae. **cartilaginous m. of acetabulum**, labrum acetabulare. **ciliary m. of iris**, margo ciliaris iridis. **convex m. of testis**, margo anterior testis. **coronal m. of frontal bone**, margo parietalis ossis frontalis. **coronal m. of parietal bone**, margo frontalis ossis parietalis. **crenate m. of spleen**, cristate m. of spleen, margo superior lienis. **dentate m.**, pectinate line. **falciform m. of fascia lata**, falciform m. of saphenus hiatus, margo falciformis hiatus saphenus. **falciform m. of white line of pelvic fascia**, arcus tendineus fasciae pelvis. **m. of fibula, anterior**, margo anterior fibulae. **m. of fibula, posterior**, margo posterior fibulae. **m. of foot, fibular**, m. of foot, lateral, margo lateralis pedis. **m. of foot, medial**, margo medialis pedis. **free gingival m.**, the localized tissue surrounding the tooth, forming the gingival crest; it maintains the gingival crevice and is free of attachment; free gum margin. **free m. of eyelid**, the conjunctival-lined portion of each eyelid, about 1 mm. broad, overlying the eyeball; the anterior border of each bears the eyelashes, and the posterior border is closely applied to the eyeball. **free m. of ovary**, margo liber ovarii. **free gum m.**, free gingival m. **frontal m. of parietal bone**, margo frontalis ossis parietalis. **gingival m., gum m.**, the border of the gingiva surrounding, but unattached to, the substance of the teeth; the crest of the free gingiva. **m. of humerus, lateral**, margo lateralis humeri. **m. of humerus, medial**, margo medialis humeri. **m. incisalis** [NA], the occlusal margin of an incisor tooth. **m. inferior cerebri** [NA], the inferior lateral margin of the cerebral hemisphere; called also *m. inferolateralis cerebri*. **infraorbital m. of maxilla**, margo infraorbitalis maxillae. **infraorbital m. of orbit**, margo infraorbitalis orbitae. **interosseous m. of fibula**, margo interosseus fibulae. **interosseous m. of tibia**, margo interosseus tibiae. **m. of kidney, lateral**, margo lateralis renis. **m. of kidney, medial**, margo medialis renis. **lacrimal m. of maxilla**, margo lacrimalis maxillae. **lambdoid m. of occipital bone**, margo lambdoideus squamae occipitalis. **lambdoid m. of parietal bone**, margo occipitalis ossis parietalis. **m. of lung, anterior**, margo anterior pulmonis. **m. of lung, inferior**, margo inferior pulmonis. **malar m.**, margo zygomaticus alae majoris. **mamillary m.**, margo mastoideus squamae occipitalis. **mastoid m. of occipital bone**, margo mastoideus squamae occipitalis. **mastoid m. of parietal bone**, angulus mastoideus ossis parietalis. **mesovarial m. of ovary**, margo mesovarius ovarii. **m. of nail, free**, margo liber unguis. **m. of nail, hidden**, margo occultus unguis. **m. of nail, lateral**, margo lateralis unguis. **nasal m. of frontal bone**, margo nasalis ossis frontalis. **obtuse m. of spleen**, margo inferior lienis. **occipital m. of parietal bone**, margo occipitalis ossis parietalis. **occipital m. of temporal bone**, margo occipitalis ossis temporalis. **m. of pancreas, superior**, margo superior pancreatis. **parietal m. of frontal bone**, margo parietalis ossis frontalis. **parietal m. of great wing of sphenoid bone**, margo parietalis alae majoris. **parietal m. of occipital bone**, margo lambdoideus squamae occipitalis. **parietal m. of parietal bone**, margo sagittalis ossis parietalis. **parietal m. of temporal bone**, margo parietalis ossis temporalis. **m. of parietal bone, anterior**, m. of parietal bone, frontal, margo frontalis ossis parietalis. **m. of parietal bone, sagittal**, m. of parietal bone, superior, margo sagittalis ossis parietalis. **parietofrontal m. of great wing of sphenoid bone**, margo frontalis alae majoris. **pupillary m. of iris**, margo pupillaris iridis. **radial m's of fingers**, facies laterales digitorum manus. **radial m. of forearm**, margo lateralis antebrachii. **m. of radius, dorsal**, margo posterior radii. **m. of scapula, anterior**, margo lateralis scapulae. **m. of scapula, external**, margo lateralis scapulae. **m. of scapula, lateral**, margo lateralis scapulae. **m. of scapula, superior**, margo superior scapulae. **sphenoidal m. of parietal bone**, angulus sphenoidalis ossis parietalis. **sphenoidal m. of temporal bone**, margo sphenoidalis ossis temporalis. **sphenotemporal m. of parietal bone**, margo squamosus ossis parietalis. **m. of spleen, anterior**, m. of spleen, superior, margo superior lienis. **squamous m. of great wing of sphenoid bone**, margo squamosus alae majoris. **squamous m. of parietal bone**, margo squamosus ossis parietalis. **straight m. of testis**, margo posterior testis. **supraorbital m. of frontal bone**, margo supraorbitalis ossis frontalis. **supraorbital m. of orbit**, margo supraorbitalis orbitae. **m. of suprarenal gland, inferior**, facies renalis glandulae suprarenalis. **m. of suprarenal gland, medial**, margo medialis glandulae suprarenalis. **m. of suprarenal gland, superior**, margo superior glandulae suprarenalis. **temporal m. of parietal**

bone, margo squamosus ossis parietalis. **m. of testis, anterior**, **m. of testis, external**, margo anterior testis. **m. of testis, internal**, **m. of testis, posterior**, margo posterior testis. **m. of tibia, anterior**, margo anterior tibiae. **m. of tibia, medial**, margo medialis tibiae. **tibial m. of foot**, margo medialis pedis. **m. of tongue, m. of tongue, lateral**, margo linguae. **m. of ulna, anterior**, margo anterior ulnae. **m. of ulna, dorsal**, **m. of ulna, posterior**, margo posterior ulnae. **ulnar m's of fingers**, facies mediales digitorum manus. **ulnar m. of forearm**, margo medialis antebrachii. **m. of uterus, lateral**, margo uteri [dexter et sinister]. **vertebral m. of scapula**, margo medialis scapulae. **volar m. of radius**, margo anterior radii. **volar m. of ulna**, margo anterior ulnae. **zygomatic m. of great wing of sphenoid bone**, margo zygomaticus alae majoris.

marginal (mar'jī-nal) [L. *marginalis*; margo margin] pertaining to a margin or border.

margination (mar'jī-na'shun) accumulation and adhesion of leukocytes to the epithelial cells of blood vessel walls at the site of injury in the early stages of inflammation.

margines (mar'jī-nēz) [L.] plural of margo.

marginoplasty (mar-jin'ō-plas-te) [L. margo margin + Gr. *plassein* to mold] surgical restoration of a border, as of the eyelid.

margo (mar'go), pl. *mar'gines* [L.] a margin, edge, or border; [NA] a general term for the edge of a structure. See also *labium* and *limbus*. **m. alveola'ris**, see *arcus alveolaris mandibulae* and *arcus alveolaris maxillae*. **m. ante'rior fib'ulae** [NA], anterior margin of fibula: the anterolateral border of the body of the fibula; called also *crista anterior fibulae* and *anterior crest of fibula*. **m. ante'rior hep'atis**, m. inferior hepatis. **m. ante'rior lie'nis**, m. superior lienis. **m. ante'rior pancrea'tis** [NA], the anterior margin of the pancreas, which bounds the anterior and inferior surfaces; called also *anterior border of pancreas*. **m. ante'rior pulmo'nis** [NA], anterior margin of lung: the ventral border of either lung, which descends from behind the sternum, a little to the left of the midline, and curves laterally to meet the inferior margin. **m. ante'rior ra'dii** [NA], the edge of the radius that runs obliquely between the radial tuberosity and the styloid process; called also *m. volaris radii*, *volar margin of radius*, and *anterior border of radius*. **m. ante'rior tes'tis** [NA], anterior margin of testis: the rounded free border of the testis. **m. ante'rior tib'iae** [NA], anterior margin of tibia: the prominent anteromedial margin of the body of the tibia, separating the medial and lateral surfaces; called also *crista anterior tibiae* and *anterior border of tibia*. **m. ante'rior ul'nae** [NA], anterior margin of ulna: the volar border of the ulna, separating the medial and posterior surfaces; called also *m. volaris ulnae* and *volar margin of ulna*. **m. axilla'ris scap'ulae**, m. lateralis scapulae. **m. cilia'ris i'ridis** [NA], ciliary margin of iris: the outer border of the iris, where it is continuous with the ciliary body. **m. dex'ter cor'dis** [NA], the curved right margin of the heart, which runs from the apex toward the right, marking the junction of the sternocostal and diaphragmatic surfaces of the heart; the inferior portion, especially, tends to be a sharp edge. Called also *right border of heart*. **m. dorsa'lis ra'dii**, m. posterior radii. **m. dorsa'lis ul'nae**, m. posterior ulnae. **m. falcifor'mis fas'ciae la'tae**, m. falciformis hiatus saphenus. **m. falcifor'mis hia'tus saphe'nus** [NA], falciform margin of saphenous hiatus: the lateral margin of the saphenous hiatus; called also *m. falciformis fasciae latae*. **m. fibula'ris pe'dis**, NA alternative for *m. lateralis pedis*. **m. fronta'lis a'lae mag'nae**, m. frontalis alae majoris. **m. fronta'lis a'lae majo'ris** [NA], frontal margin of great wing of sphenoid bone: a roughened area on the great wing of the sphenoid bone where it articulates with the frontal bone; it is situated at the upper lateral margin of the orbital surface of the great wing where this meets the cerebral and temporal surfaces. Called also *m. frontalis alae magnae*. **m. fronta'lis os'sis parieta'lis** [NA], frontal margin of parietal bone: the edge of the parietal bone that articulates with the frontal bone along the coronal suture. **m. infe'rior hep'atis** [NA], the anteroinferior edge of the liver, separating the anterior and the visceral surface; called also *m. anterior hepatis* and *inferior border of liver*. **m. infe'rior lie'nis** [NA], a straight margin of the spleen somewhat less prominent than the superior margin, separating the renal surface from the diaphragmatic surface; called also *m. posterior lienis* and *inferior border of spleen*. **m. infe'rior pancrea'tis** [NA], the inferior margin of the pancreas, which bounds the inferior and posterior surfaces; called also *m. posterior pancreatis*. **m. infe'rior pulmo'nis** [NA], inferior margin of lung: the border of the lung that extends in a curve behind the sixth costal cartilage, the upper margin of the eighth rib in the axillary line, the ninth or tenth rib in the scapular line, and passes medially to the eleventh costovertebral joint. **m. inferolatera'lis cer'ebri**, NA alternative for *m. inferior cerebri*. **m. inferomedial'is cer'ebri**, NA alternative for *m. medialis cerebri*. **m. infraglenoida'lis tib'iae**, the margin of bone that forms the circumference of the condyles of the tibia just inferior to the facies articularis superior. **m. infraor'bital'is maxil'lae** [NA], infraorbital margin of maxilla: the short rounded edge of the maxilla where the orbital surface

becomes continuous with the anterior surface. **m. infraor'bital'is or'bitae** [NA], infraorbital margin of orbit: the inferior edge of the entrance to the orbit, formed by the infraorbital process of the zygomatic bone and the infraorbital margin of the maxilla. **m. interos'seus fib'ulae** [NA], a prominent ridge medial to the anterior border of the fibula, connected with a similar ridge on the tibia by a strong, wide fibrous sheet, the interosseous membrane; called also *crista interossea fibulae* and *interosseous border, crest, or ridge of fibula*. **m. interos'seus ra'dii** [NA], the prominent medial border of the radius, connected with a similar ridge on the ulna by a strong, wide fibrous sheet, the interosseous membrane; called also *crista interossea radii* and *interosseous border, crest, or ridge of radius*. **m. interos'seus tib'iae** [NA], interosseous margin of tibia: the prominent lateral border of the body of the tibia, which separates the posterior and lateral surfaces and gives attachment to the interosseous membrane; called also *crista interossea tibiae* and *interosseous border, crest, or ridge of tibia*. **m. interos'seus ul'nae** [NA], the prominent lateral border of the ulna, connected with a similar ridge on the radius by the interosseous membrane; called also *crista interossea ulnae* and *interosseous border, crest, or ridge of ulna*. **m. lacrima'lis maxil'lae** [NA], lacrimal margin of maxilla: the posterior border of the frontal process of the maxilla where it articulates with the lacrimal bone; called also *lacrimal border of maxilla*. **m. lambdoi'deus squa'mae occipita'lis** [NA], lambdoid margin of occipital bone: the edge of the occipital bone that extends from the lateral angle to the superior angle, articulating with the parietal bone to help form the lambdoid suture; called also *parietal margin of occipital bone*. **m. latera'lis antebrachii** [NA], the lateral, or radial, border of the forearm; called also *m. radialis antebrachii* [NA alternative]. **mar'gines latera'les digito'rum pe'dis**, facies laterales digitorum pedis. **m. latera'lis hu'meri** [NA], lateral margin of humerus: the edge of the humerus that extends from posteroinferior part of the greater tubercle to the lateral epicondyle; called also *lateral angle or border of humerus*. **m. latera'lis [lin'guae]**, m. linguae. **m. latera'lis pe'dis** [NA], the lateral, or fibular, border of the foot; called also *m. fibularis pedis* [NA alternative]. **m. latera'lis re'nis** [NA], lateral margin of kidney: the convex narrow border of the kidney. **m. latera'lis scap'ulae** [NA], lateral margin of scapula: the thick edge of the scapula, extending from the inferior margin of the glenoid cavity to the inferior angle; called also *m. axillaris scapulae* and *lateral border of scapula*. **m. latera'lis un'guis** [NA], lateral margin of nail: the edge on either side of the nail. **m. latera'lis u'teri**, m. uteri [dexter et sinister]. **m. li'ber ova'rii** [NA], free margin of ovary: the broad, convex border of the ovary, opposite the mesovarial margin. **m. li'ber un'guis** [NA], the overhanging, distal, free edge of the nail. **m. lin'guae** [NA], margin of tongue: the lateral border of the body of the tongue; called also *m. lateralis [linguae]*. **m. mas'toi'deus squa'mae occipita'lis** [NA], mastoid margin of occipital bone: the edge of the occipital bone that extends from the jugular process to the lateral angle, articulating with the part of the temporal bone that bears the mastoid process. **m. media'lis antebrachii** [NA], the medial, or ulnar, border of the forearm; called also *m. ulnaris antebrachii* [NA alternative]. **m. media'lis cer'ebri** [NA], inferior medial margin of the cerebral hemisphere; called also *m. inferomedialis cerebri*. **mar'gines media'les digito'rum pe'dis**, facies mediales digitorum pedis. **m. media'lis glan'dulae suprarena'lis** [NA], medial margin of suprarenal gland: the medial border, which with the superior border divides the anterior from the posterior surface. **m. media'lis hu'meri** [NA], medial margin of humerus: the edge of the humerus that begins at the lesser tubercle above and continues downward to the medial epicondyle; called also *medial angle or border of humerus*. **m. media'lis pe'dis** [NA], the medial, or tibial, border of the foot; called also *m. tibialis pedis* [NA alternative]. **m. media'lis re'nis** [NA], medial margin of kidney: the concave border of the kidney, which contains the hilus. **m. media'lis scap'ulae** [NA], the thin edge of the scapula extending from the superior to the inferior angle; called also *m. vertebralis scapulae* and *vertebral border or margin of scapula*. **m. media'lis tib'iae** [NA], medial margin of tibia: the border that extends between the medial condyle and medial malleolus of the tibia, separating the medial and posterior surfaces; called also *medial angle or border of tibia*. **m. mesova'ricus ova'rii** [NA], mesovarial margin of ovary: the border of the ovary that is attached to the broad ligament by means of the mesovarium. **m. nasa'lis os'sis fronta'lis** [NA], nasal margin of frontal bone: the articular surface, on each nasal part of the frontal bone, that articulates with the nasal bones and with the frontal processes of the maxilla. **m. na'si**, the lower, free, margin of the ala nasi and septum nasi that surrounds the external naris. **m. occipita'lis os'sis parieta'lis** [NA], occipital margin of parietal bone: the edge of the parietal bone that articulates with the occipital bone at the lambdoid suture. **m. occipita'lis os'sis tempora'lis** [NA], occipital margin of temporal bone: the border of the petrous part of the temporal bone that articulates with the occipital bone along the occipitomastoid suture. **m. occul'tus un'guis** [NA], the proximal, buried edge of the nail. **m. pal'pebrae**, see *free margin of eyelid*.

m. parietalis a'lae majo'ris [NA], parietal margin of great wing of sphenoid bone: the superior extremity of the squamous margin of the great wing of the sphenoid bone where it articulates with the parietal bone; called also *angulus parietalis ossis sphenoidalis*. **m. parietalis os'sis fronta'lis** [NA], parietal margin of frontal bone: the posterior border of the frontal bone, semicircular in shape, which articulates with the parietal bones. **m. parietalis os'sis tempora'lis** [NA], parietal margin of temporal bone: the superior border of the squamous part of the temporal bone where it articulates with the parietal bone; called also *m. parietalis squamae temporalis*. **m. parietalis squa'mae tempora'lis**, *m. parietalis ossis temporalis*. **m. pe'dis latera'lis**, *m. lateralis pedis*. **m. pe'dis media'lis**, *m. medialis pedis*. **m. poste'rior fib'ulae** [NA], posterior margin of fibula: the posterolateral margin of the body of the fibula; called also *crista lateralis fibulae* and *posterior border or crest of fibula*. **m. poste'rior lie'nis**, *m. inferior lienis*. **m. poste'rior pancrea'tis**, *m. inferior pancreatis*. **m. poste'rior ra'dii** [NA], the edge of the radius that extends from the posterior part of the radial tuberosity to the middle tubercle; called also *m. dorsalis radii*, and *dorsal margin or posterior border of radius*. **m. poste'rior tes'tis** [NA], posterior margin of testis: the border of the testis that is attached to the epididymis and the lower end of the ductus deferens; called also *dorsum of testis*. **m. poste'rior ul'nae** [NA], posterior margin of ulna: the dorsal border of the ulna, separating the posterior and medial surfaces; called also *m. dorsalis ulnae*. **m. pupilla'ris i'ridis** [NA], pupillary margin of iris: the inner edge of the iris, surrounding the pupil. **m. radia'lis antebra'chii**, NA alternative for *m. lateralis antebra'chii*. **m. radia'lis antebra'chii**, *m. lateralis antebra'chii*. **mar'gines radia'les digito'rum ma'nus**, *facies laterales digitorum manus*. **m. radia'lis hu'meri**, *m. lateralis humeri*. **m. sagitta'lis os'sis parietalis** [NA], sagittal margin of parietal bone: the edge of the parietal bone that articulates with the other parietal bone along the sagittal suture; called also *parietal or superior margin of parietal bone*. **m. sphenoida'lis os'sis tempora'lis** [NA], sphenoidal margin of temporal bone: the anterior border of the temporal bone, articulating with the great wing of the sphenoid bone; called also *m. sphenoidalis squamae temporalis*. **m. sphenoida'lis squa'mae tempora'lis**, *m. sphenoidalis ossis temporalis*. **m. squamo'sus a'lae mag'nae**, *m. squamosus alae majoris*. **m. squamo'sus a'lae majo'ris** [NA], squamous margin of great wing of sphenoid bone: the border of the great wing of the sphenoid bone that articulates with the squama of the temporal bone; called also *m. squamosus alae magnae*. **m. squamo'sus os'sis parietalis** [NA], squamous margin of parietal bone: the inferior edge of the parietal bone, which articulates with the sphenoid and temporal bones along the squamous suture. **m. supe'rior cer'e'ri** [NA], the superior medial margin of the cerebral hemisphere; called also *m. superomedialis cerebri*. **m. supe'rior glan'dulae supra'lena'lis** [NA], the superior margin or border of the suprarenal gland, which with the medial border divides the anterior from the posterior surface. **m. supe'rior lie'nis** [NA], superior margin of spleen: a somewhat sharp, convex line, sometimes serrated, between the gastric and diaphragmatic surfaces of the spleen; called also *m. anterior lienis* and *superior border of spleen*. **m. supe'rior pancrea'tis** [NA], the superior border of the pancreas, which bounds the anterior and posterior surfaces. **m. supe'rior scap'ulae** [NA], superior margin of scapula: the thin, short edge of the scapula, extending from the superior angle to the coracoid process; called also *superior border of scapula*. **m. superome'dia'lis cer'e'ri**, NA alternative for *m. superior cerebri*. **m. supraorbital'is or'bitae** [NA], supraorbital margin of orbit: the superior edge of the entrance to the orbit, formed by the supraorbital margin of the frontal bone. **m. supraorbital'is os'sis fronta'lis** [NA], supraorbital margin of frontal bone: the antero-inferior edge of the frontal bone, bending down laterally to the zygomatic bone and medially to the frontal process of the maxilla; it marks the junction between the squama and the orbital portion of the bone. **m. tibia'lis pe'dis**, NA alternative for *m. medialis pedis*. **m. ulna'ris antebra'chii**, NA alternative for *m. medialis antebra'chii*. **m. ulna'ris antebra'chii**, *m. medialis antebra'chii*. **mar'gines ulna'ris digito'rum ma'nus**, *facies mediales digitorum manus*. **m. ulna'ris hu'meri**, *m. medialis humeri*. **m. u'teri [dex'ter et sini'ster]** [NA], lateral margin of uterus: either border of the uterus (right and left) at the upper portion of which the uterine tube is attached; called also *m. lateralis uteri*. **m. vertebra'lis scap'ulae**, *m. medialis scapulae*. **m. vola'ris ra'dii**, *m. anterior radii*. **m. vola'ris ul'nae**, *m. anterior ulnae*. **m. zygoma'ticus a'lae mag'nae**, *m. zygomaticus alae majoris*. **m. zygoma'ticus a'lae majo'ris** [NA], zygomatic margin of great wing of sphenoid bone: the border on the great wing of the sphenoid bone that separates its temporal and orbital surfaces and articulates with the zygomatic bone; called also *m. zygomaticus alae magnae*.

mariahuana, mariajuana (mah-re-ah-wah'nah) marihuana.

mariculture (mar'f-kul'chur) [L. *mare* sea + *culture*] the cultivation of sea life to provide nutrients.

Marie's ataxia, etc. (mahrëz') [Pierre Marie, French physician,

1853–1940] see under *ataxia*, *disease*, *hypertrophy*, *sign*, and *syndrome*.

Marie-Bamberger disease (mah-re'-bahm'ber-ger) [Pierre Marie; Eugen Bamberger, Austrian physician, 1858–1921] hypertrophic pulmonary osteoarthropathy.

Marie-Strümpell disease, syndrome (mah-re' strim'pel) [Pierre Marie; Adolf von Strümpell, physician in Leipzig, 1853–1925] rheumatoid spondylitis.

Marie-Tooth disease (mah-re'-tooth') [Pierre Marie; Howard Henry Tooth, English physician, 1856–1926] progressive neuropathic (peroneal) muscular atrophy.

mariguana (mar'f-hwah'nah) marihuana.

marihuana (mar'f-hwan'ah) [Portuguese] a crude preparation of the leaves and flowering tops of (male or female plants) *Cannabis sativa* L. (Cannabaceae), usually employed in cigarettes and inhaled as smoke for its euphoric properties. See *cannabis*.

marijuana (mar'f-hwah'nah) marihuana.

Marinesco's succulent hand (sign) (mar'f-nes'kôz) [Georges Marinesco, Roumanian neurologist, 1863–1938] see under *hand*.

marinobufagin (mar'f-no-bu'fah-jin) a cardiac poison, C₂₄H₃₂O₈, from the skin of the toad, *Bufo marinus*.

marinotherapy (mar'f-no-ther'ah-pe) treatment by residence at the seashore.

Mariotte's experiment, law, spot (mar'f-e-ots') [Edme Mariotte, French physicist, 1620–1684] see under *experiment*, and see *Boyle's law*, under *law*, and *blind spot*, under *spot*.

mariposia (mar'f-po'ze-ah) [L. *mare* the sea + Gr. *posis* drinking + *-ia*] thalassoposia.

marisca (mah-ris'kah), pl. *maris'cae* [L. *marisca* a large fig] a hemorrhoid.

mariscal (mah-ris'kal) hemorrhoidal.

marital (mar'f-tal) of or pertaining to marriage.

maritonucleus (mar'f-to-nu'kle-us) [L. *maritus* married + *nucleus*] the nucleus of the ovum after the sperm cell has entered it.

Marjolin's ulcer (mar'zho-lanz') [Jean Nicolas Marjolin, French surgeon 1780–1850] see under *ulcer*.

mark (mark) a spot, blemish, or other circumscribed area visible on a surface, particularly on the skin or mucous membrane. **beauty m.**, a small pigmented nevus, particularly on the cheek, said to enhance the appearance. **birth m.**, see *birthmark*. **pock m.**, see *pockmark*. **Pohl's m.**, a limited thinning of the shaft of a hair, usually accompanied by interruption of the medulla; it is usually a sign of systemic disease, but may be due to trauma, coronary occlusion, skin disease, or the therapeutic administration of a single substantial dose of an antimetabolite, such as methotrexate or cyclophosphamide. **port-wine m.**, nevus flammeus. **raspberry m.**, **strawberry m.**, cavernous hemangioma.

marker (mark'er) something that identifies or that is used to identify. **genetic m.**, a genetic polymorphism with a simple mode of inheritance occurring with different frequencies in different populations, and therefore useful in family studies, studies of the distribution of genes in populations, and linkage analysis.

marking (mark'ing) a conspicuous line or spot visible on a surface. **Fontana's m's**, minute transverse folds seen on a divided nerve trunk.

Marlow's test (mar'lôz) [Frank William Marlow, Syracuse ophthalmologist, 1858–1942] see under *tests*.

marma (mar'mah) the ancient Indian name for a place or region of vital importance in the body which, if injured, results in serious consequences or death.

marmoration (mar'mo-ra'shun) [L. *marmor* marble] marbleization.

marmoreal (mar-mo're-al) resembling marble, as bone in osteopetrosis.

marmot (mar'mot) any of several large terrestrial animals of the squirrel family, members of the genera *Marmota* and *Arctomys*, found in the Northern Hemisphere, such as the hoary marmot, yellow-bellied marmot, and woodchuck or ground-hog of North America and the tarbagan of Asia; they may be natural reservoirs of the plague.

Marplan (mar'plan) trademark for a preparation of isocarboxazide.

Marriott's method (mar'e-ots) [William McKim Marriott, American physician, 1885–1936] see under *method*.

marrow (mar'o) the soft organic material that fills the cavities of the bones (see *medulla ossium*); called also *medulla*. **bone m.**, *medulla ossium*. **bone m., red**, *medulla ossium rubra*. **bone m., yellow**, *medulla ossium flava*. **depressed m.**, bone marrow exhibiting decreased hematopoietic activity. **fat m.**, *medulla ossium flava*. **gelatinous m.**, bone marrow that has lost its blood cells and its fat and has acquired a gelatinous appearance. **red m.**, *medulla ossium rubra*. **spinal m.**, the

spinal cord (medulla spinalis [NA]). **yellow m.**, medulla os-sium flava.

marrowbrain (mar'ō-brān) the myelencephalon; def. 1.

mars (marz) [L.] iron.

Marsden's paste (marz'denz) [Alexander Edwin Marsden, London surgeon, 1832-1902] see under *paste*.

Marsh's disease (marsh'ez) [Sir Henry Marsh, Irish physician, 1790-1860] Graves' disease.

Marsh's test (marsh'ez) [James Marsh, English chemist, 1789-1846] see under *tests*.

Marshall's fold, vein (mar'shalz) [John Marshall, English anatomist, 1818-1891] see *plica pouchae sinistae* and *vena obliqua atrii sinistri*.

Marshall Hall see *Hall*.

marsupia (mar-su'pe-ah) [L.] plural of *marsupium*.

marsupial (mar-su'pe-al) [L. *marsupium* a pouch] a member of the order Marsupialia.

Marsupialia (mar-su'pe-a'le-ah) an order of the class Mammalia characterized by the possession of an abdominal pouch, or marsupium, in which the young, which are born in a very underdeveloped state, are carried and nourished until their development is complete. It includes the opossums, kangaroos, wallabies, koala bears, and wombats. In some systems of classification, it is considered to be an order of the infraclass or subclass Metatheria, class Mammalia.

marsupialization (mar-su'pe-al-i-za'shun) [L. *marsupium* pouch] the creation of a pouch; applied especially to surgical exteriorization of a cyst by resection of the anterior wall and suture of the cut edges of the remaining cyst to the adjacent edges of the skin, thereby establishing a pouch of what was formerly an enclosed cyst.

marsupium (mar-su'pe-um), pl. *mar'su'pia* [L. "a pouch"] 1. the scrotum. 2. an external abdominal pouch or fold of skin for carrying the young; it contains the mammary glands and occurs in marsupials and the spiny anteaters. Also a similar structure for carrying eggs and/or the young, as in the male sea horse. **mar'su'pia patella'ris**, plicae alares.

martial (mar'shal) [L. *martialis*; *mar's* iron] containing iron; ferruginous or chalybeate.

Martin's bandage, disease, operation, etc. (mar'tinz) [Henry Austin Martin, American surgeon, 1824-1884] see under the nouns.

Martinotti's cells (mar'ti-not'ēz) [Giovanni Martinotti, Bologna pathologist, 1857-1928] see under *cell*.

masc. mass concentration.

maschaladenitis (mas'kal-ad'ē-ni'tis) [Gr. *maschalē* armpit + *adēn* gland + *-itis*] inflammation of the glands of the axilla.

maschaloncous (mas'kal-ong'kus) a tumor of the axilla.

masculation (mas'ku-la'shun) the development of male characteristics.

masculine (mas'ku-lin) [L. *masculus*] pertaining to the male sex, or possessing qualities normally characteristic of the male.

masculinity (mas'ku-lin'i-te) the possession of masculine qualities.

masculinization (mas'ku-lin-i-za'shun) the normal induction or development of male sex characters in the male. Also, the induction or development of male secondary sex characters in the female. Called also *virilization*.

masculinize (mas'ku-li-niz") to produce male characteristics (virilism) in a female.

masculinovoblastoma (mas'ku-lin-ō'vo-blas-to'mah) lipoid cell tumor of ovary; see under *tumor*.

masculonucleus (mas'ku-lo-nu'kle-us) arsenoblast.

maser (ma'zer) [microwave amplification by stimulated emission of radiation] a device which produces an extremely intense, small, and nearly nondivergent beam of monochromatic radiation in the microwave region with all waves in phase.

mask (mask) [Fr. *masque*] 1. to cover or conceal, as the masking of the nature of a disorder by the presence of unrelated signs, symptoms, organisms, etc. In audiometry, to obscure or diminish a sound by the presence of another sound of different frequency. 2. an appliance for shading, protecting, or medicating the face. 3. in dentistry, to camouflage metal parts of a prosthesis by covering with opaque material. **BLB m.**, an oxygen-breathing mask for use at high altitudes; it has a combined inspiratory and expiratory valve and a bag for rebreathing (Boothby, Lovelace, Bulbulian). It has also been used for clinical administration of oxygen. **Curschmann's m.**, a mask formerly used for inhaling turpentine vapors. **death m.**, a plaster cast of the face of a dead person. **ecchymotic m.**, cyanotic discoloration of the head and neck as a result of traumatic asphyxia. **full-face m.**, a device used in anesthesia to confine the gas to be delivered through the mask into the respiratory tract through the nose or mouth. **Hutchinson's m.**, a sensation as if the skin of the face were compressed by a mask; often a symptom of tabes dorsalis. **Kuhn's m.**, a mask worn over the nose and mouth, which, by obstructing the respiration, was reported to produce

artificial hyperemia of the pulmonary tissues; formerly used in treating pulmonary tuberculosis. **meter m.**, an oxygen-breathing mask designed to provide fixed percentage admixtures of air and oxygen. **Parkinson's m.**, see under *facies*. **m. of pregnancy**, see *melasma*. **tabetic m.**, Hutchinson's m. **Wansch's m.**, a mask for ether anesthesia.

masochism (mas'ō-kizm) [Leopold von Sacher-Masoch, an Austrian novelist, 1836-1895] a form of sexual perversion in which cruel or humiliating treatment gives sexual gratification to the recipient.

masochist (mas'ō-kist) one who is given to masochism.

Mas. pil. abbreviation for L. *mas'sa pilula'rum*, pill mass.

mass (mas) [L. *massa*] 1. a lump or body made up of cohering particles; see also *massa*. 2. a cohesive mixture suitable for being made up into pills. 3. that characteristic of matter which gives it inertia. The mass of a hypothetical atom of atomic weight 1.000 (a dalton) is 1.648×10^{-24} gm., and the mass of any other atom may be found by multiplying this number by the atomic weight of the atom. **achromatic m.**, the nonstaining portion of the karyokinetic figure. **appendiceal m., appendix m.**, a palpable mass in the right iliac fossa or right loin due to acute appendicitis, usually with abscess secondary to rupture; occasionally caused by adherent omentum and intestine. **atomic m.**, the mass of a neutral atom of a nuclide, usually expressed in atomic mass units (amu). **blue m., mercury m. body cell m.**, the total weight of the cells of the body, including the cell nucleus, cytoplasm, water, salt, protein, and surrounding membrane, but excluding extracellular water and extracellular solids such as collagen, elastin, and bone matrix, constituting in essence the total mass of oxygen-utilizing, carbohydrate-burning, and energy-exchanging cells of the body; regarded as proportional to total exchangeable potassium in the body. **electronic m.**, the mass of a negative electron when moving at moderate velocity; it is 8.999×10^{-28} gm. **ferrous carbonate m.**, a soft, dark greenish gray substance containing 36 to 41 per cent of ferrous carbonate; used in anemia. **fibrillar m. of Flemming**, spongioplasm, def. 1. **injection m.**, a suspension or solution, usually colored, injected into blood vessels or other tissue spaces to permit their demonstration on dissection or sectioning. **inner cell m.**, an aggregation of cells at one pole of the blastocyst, which is destined to form the embryo proper. **intermediate m., adhesio interthalamica. intermediate cell m., nephrotome. lateral m. of atlas, massa lateralis atlantis. lateral m's of ethmoid bone, see labyrinthus ethmoidalis. lateral m. of sacrum, pars lateralis ossis sacri. lateral m. of vertebrae, pediculus arcus vertebrae. lean body m., that part of the body including all its components except neutral storage lipid; in essence, the fat-free mass of the body. mercury m., a mixture of mercury oleate, mercury, honey, glycerin, glycyrrhiza, and althea, containing 31-35 per cent of mercury; used in the treatment of pediculosis pubis. Called also *massa hydrargyri*, *blue mass*, and *blue pill*. **pill m., pilular m.**, a drug mass of the proper consistency for being made into pills. **Priestley's m.**, a green or brownish substance sometimes seen upon the canine and incisor teeth, caused by chromogenic microorganisms. **Stent's m.**, a plastic resinous material which sets into a very hard substance; used in surgery for making molds shaped to keep grafts in place. See also *stent*. **tigroid m's, Nissl's bodies. Vallet's m., ferrous carbonate m. ventrolateral m.**, that portion of the primitive lateral mass of the embryo from which are developed the abdominal, thoracic, and anterior cervical muscles.**

massa (mas'ah), pl. *mas'sae* [L.] a unified lump or mass of material; [NA] a general term for an accumulation of cells or cohesive tissue. Called also *mass*. **m. fer'ri carbona'tis**, ferrous carbonate mass. **m. hydrar'gyri**, mercury mass. **m. in-nomina'ta**, paradidymis. **m. interme'dia**, adhesio interthalamica. **m. latera'lis atlan'tis** [NA], lateral mass of atlas: the thickened lateral portion of the atlas to which the arches are attached and which bears the articulating surfaces and the transverse process. **mas'sae latera'les os'sis ethmoida'lis**, see *labyrinthus ethmoidalis*. **m. latera'lis os'sis sa'cri**, pars lateralis ossis sacri. **m. latera'lis ver'tebrae**, pediculus arcus vertebrae. **m. mol'lis** (obs.), adhesio interthalamica.

massae (mas'se) [L.] plural of *massa*.

massage (mah-sahzh') [Fr.; Gr. *massein* to knead] the systematic therapeutical friction, stroking, and kneading of the body. **auditory m.**, massage of the drum membrane. **cardiac m.**, rhythmic compression of the heart by pressure applied manually over the sternum (closed cardiac massage) or directly to the heart through an opening in the chest wall (open cardiac massage); done to reinstate and maintain circulation. **Cederschiöld's m.**, massage by making rhythmic pressure over the parts. **douche m.**, massage combined with the application of a douche. **electrovibratory m.**, massage by means of an electric vibrator. **heart m., cardiac m. hydropneumatic m.**, massage by means of air forced through a tube at the end of which is a chamber containing water, the water chamber being applied to the part to be massaged. **tremolo m.**, a variety of mechanical massage. **vapor m.**, treatment of a lung cavity by a medi-

cated and nebulized vapor under interrupted pressure. **vibratory m.**, massage by rapidly repeated light percussion with a vibrating hammer or sound.

Masselon's spectacles (mas/'ē-lawz') [Miche Julien Masselon, French ophthalmologist, 1844-1917] see under *spectacles*.

Masset's test (mas-āz') [Alfred Auguste Masset, French physician, born 1870] see under *tests*.

masseter (mas-se'ter) [Gr. *masētēr* chewer] see *musculus masseter*.

masseteric (mas'e-ter'ik) pertaining to the masseter muscle.

masseur (mah-ser') [Fr.] 1. a man who performs massage. 2. an instrument for performing massage.

masseuse (mah-suhz') [Fr.] a woman who performs massage.

massicot (mas'i-kot) lead monoxide, PbO.

massive (mas'iv) having a solid bulky form; heavy; in a mass; complete.

Masson stain (mas-on) [C. L. Pierre Masson, Montreal pathologist, born 1880] see *Table of Stains*.

massotherapy (mas/'o-ther'ah-pe) [Gr. *massein* to knead + *therapy*] the treatment of disease by massage.

MAST acronym for Military Anti-Shock Trousers, inflatable trousers used to induce autotransfusion of blood from the lower to the upper part of the body.

mast- see *masto-*.

mastadenitis (mas'tad-ē-ni'tis) [*mast-* + Gr. *adēn* gland + *-itis*] inflammation of the mammary gland; mastitis.

mastadenoma (mas'tad-ē-no'mah) [*mast-* + Gr. *adēn* gland + *-oma*] tumor of the breast.

mastalgia (mas-tal'je-ah) [*mast-* + *-algia*] pain in the mammary gland.

mastatrophia (mas'tah-tro'fe-ah) mastatroph.

mastatroph (mas-tat'ro-fe) [*mast-* + *atrophy*] atrophy of the mammary gland.

mastauxe (mas-tawk'se) [*mast-* + Gr. *auxē* increase] enlargement of the breast.

mastectomy (mas-tek'to-me) [*mast-* + Gr. *ektomē* excision] excision of the breast; mastectomy. **Halsted radical m.**, removal of the breast, pectoral muscles, axillary lymph nodes, and associated skin and subcutaneous tissue in breast cancer. **modified radical m.**, total mastectomy with axillary node dissection, but leaving the pectoral muscles intact. **subcutaneous m.**, excision of breast tissue with preservation of overlying skin, nipple, and areola so that breast form may be reconstructed. **Willy Meyer radical m.**, an operation basically similar to Halsted's radical mastectomy but differing in certain technical details.

Master "2-step" exercise test (mas'ter) [Arthur M. Master, American physician, born 1895] see under *tests*.

Masterone (mas'tē-rōn) trademark for a preparation of diomostanolone propionate.

masthelcosis (mas'thel-ko'sis) [*mast-* + Gr. *helkōsis* ulceration] ulceration of the breast or mammary gland.

mastic (mas'tik) [L. *mastiche*; Gr. *mastichē*] a yellowish, hard, resinous exudation obtained from the shrub *Pistacia lentiscus* L. (Anacardiaceae), indigenous to the Mediterranean Islands, especially Chios. It is widely used in Greece as characteristically flavored chewing gum base, and contains about 2 per cent volatile oil and several resin acids. Used in tooth cements as dental liner and in plasters, lacquers, and incense, and pharmaceutically in enteric coatings for tablets.

mastication (mas'ti-ka'shun) [L. *masticare* to chew] the process of chewing food in preparation for swallowing and digestion.

masticatory (mas'ti-kah-to're) 1. subserving or pertaining to mastication; affecting the muscles of mastication. 2. a remedy to be chewed but not swallowed.

mastiche (mas'ti-kē) [L.] mastic.

Mastigophora (mas'ti-go'fo-rah) [Gr. *mastix* whip + *pherein* to bear] a subphylum of Protozoa comprising those having one or more flagella throughout most of the life cycle, and a simple, centrally located nucleus. Most are free-living, but many are parasitic in both invertebrates and vertebrates, including man. It includes two classes, Phytomastigophora and Zoomastigophora. Called also *Flagellata* and *Euflagellata*.

mastigophoran (mas'ti-go'fo-rah) any individual of the subphylum Mastigophora.

mastigophorous (mas'ti-go'fo-rus) of or pertaining to the subphylum Mastigophora.

mastigote (mas'ti-gōt) any organism of the subphylum Mastigophora.

mastitis (mas-ti'tis) [*mast-* + *-itis*] inflammation of the mammary gland, or breast. **chronic cystic m.**, cystic disease of breast; see under *disease*. **gargantuan m.**, pathologic enlargement of the breasts to a tremendous size. **glandular m.**, parenchymatous m. **interstitial m.**, inflammation of the stroma of the mammary gland. **m. neonatorum**, a general term applied to an abnormal condition of the breast of the

newborn, such as hypertrophy, engorgement and secretion, or inflammation, with or without suppuration. **parenchymatous m.**, inflammation of the secreting elements of the mammary gland. **periductal m.**, inflammation of tissues about the ducts of the mammary gland. **phlegmonous m.**, inflammation of the breast leading to abscess formation. **plasma cell m.**, a morbid condition of the breast characterized by infiltration of the breast stroma with plasma cells and proliferation of the cells lining the ducts, thought by some to be the end-stage of mammary duct ectasia. **puerperal m.**, a form of mastitis occurring after delivery. **retromammary m.**, submammary m., par-amastitis. **stagnation m.**, a local engorgement affecting one or more lobules of the breast and forming a painful lump in the organ; it occurs during early lactation. Called also *caked breast*. **suppurative m.**, pyogenic infection of the breast.

masto-, mast- [Gr. *mastos* breast] a combining form denoting relationship to the breast or to the mastoid process; see also words beginning *mammo-*.

mastocarcinoma (mas'to-kar'si-no'mah) [*masto-* + *carcinoma*] carcinoma of the breast.

mastoccipital (mas'tok-sip'i-tal) masto-occipital.

mastochondroma (mas'to-kon-dro'mah) [*masto-* + *chondroma*] a chondroma of the breast.

mastochondrosis (mas'to-kon-dro'sis) mastochondroma.

mastocyte (mas'to-sit) [Ger. *Mast* food + *-cyte*] a mast cell.

mastocytoma (mas'to-si-to'mah) a mast cell tumor; see under *tumor*. **solitary m.**, a solid focal aggregation of mast cells, which may be the first manifestation of juvenile urticaria pigmentosa.

mastocytosis (mas'to-si-to'sis) an accumulation, either local or systemic, of mast cells in the tissues; when widespread in the skin it is known as *urticaria pigmentosa*. **diffuse cutaneous m.**, a rare variety of urticaria pigmentosa with diffuse cutaneous involvement, causing leathery thickening of the entire skin, sometimes with an orange color. **systemic m.**, a stationary or progressive form of adult urticaria pigmentosa in which the mast cells infiltrate the skin and such organs as the lymph nodes, bone, blood, spleen, and liver; called also *systemic mast cell disease*.

mastodynia (mas'to-din'e-ah) [*masto-* + Gr. *odynē* pain] pain in the breast.

mastogram (mas'to-gram) a roentgenogram of the breast.

mastography (mas-tog'rah-fe) [*masto-* + Gr. *graphein* to write] roentgenography of the breast.

mastoid (mas'toid) [Gr. *mastos* breast + *eidōs* form] 1. breast shaped. 2. the mastoid process of the temporal bone. 3. pertaining to the mastoid process.

mastoidal (mas-toi'dal) pertaining to the mastoid process of the temporal bone.

mastoidale (mas'toi-da'le) the lowest point of the mastoid process.

mastoidalgia (mas'toi-dal'je-ah) [*mastoid* + *-algia*] pain in the mastoid region.

mastoidea (mas-toi'de-ah) pars mastoideus ossis temporalis.

mastoidectomy (mas'toi-dek'to-me) [*mastoid* + Gr. *ektomē* excision] excision of the mastoid cells or the mastoid process of the temporal bone.

mastoideocentesis (mas-toi'de-o-sen-te'sis) [*mastoid* + Gr. *kentēsis* puncture] paracentesis of the mastoid cells.

mastoideum (mas-toi'de-um) pars mastoideus ossis temporalis.

mastoiditis (mas'toi-di'tis) inflammation of the mastoid antrum and cells. **Bezold's m.**, a form in which the pus has escaped into the digastric groove and deep to the head of the sternocleidomastoid muscle. **m. exter'na**, inflammation of the periosteum of the mastoid process. **m. inter'na**, inflammation of the cells of the mastoid. **sclerosing m.**, mastoiditis attended with hardening and condensation of the bone. **silent m.**, a progressive destructive mastoiditis with mild systemic and local manifestations.

mastoidotomy (mas'toi-dot'o-me) [*mastoid* + Gr. *temnein* to cut] surgical incision of the mastoid process of the temporal bone.

mastoidotomypanectomy (mas-toi'do-tim'pah-nek'to-me) radical mastoidectomy.

mastomenia (mas'to-me'ne-ah) [*masto-* + Gr. *mēniaia* the menses] vicarious menstruation from the breast.

mastoncus (mas-tong'kus) [*masto-* + Gr. *onkos* bulk] a tumor of the breast or mammary gland.

masto-occipital (mas'to-ok-sip'i-tal) pertaining to the mastoid process and the occipital bone.

mastoparietal (mas'to-pah-ri'ē-tal) [*mastoid* + *parietal*] pertaining to the mastoid process and the parietal bone.

mastopathia (mas'to-path'e-ah) mastopathy. **m. cys'tica**, a morbid condition of the mammary gland, with the formation of cysts.

mastopathy (mas-top'ah-the) [*masto-* + Gr. *pathos* disease] disease of the mammary gland. **cystic m.**, mastopathia cystica.

mastopexy (mas'to-pek-se) [*masto-* + Gr. *pēxis* fixation.] mammaplasty performed to correct a pendulous breast.

Mastophora (mas-tof'o-rah) a genus of spiders; called also *Glyptocranium*. **M. gasteracanthoides**, the venomous cat-headed spider of Peru, Chile, and Argentina that has been shown to cause necrotic spot among vineyard workers.

mastoplasia (mas'to-pla'ze-ah) mammoplasia.

mastoplastia (mas'to-plas'te-ah) [*masto-* + Gr. *plassein* to form] hyperplasia of breast tissue.

mastoplasty (mas'to-plas'te) mammaplasty.

mastoptosis (mas'to-to'sis) [*masto-* + Gr. *ptōsis* fall] pendulous breasts.

mastorrhagia (mas'to-ra'je-ah) [*masto-* + Gr. *rhegnynai* to burst forth] hemorrhage from the mammary gland.

mastoscirrhus (mas'to-skir'us) [*masto-* + Gr. *skirros* hardness] hardening, or scirrhus, of the mammary gland.

mastosis (mas-to'sis), pl. *masto'ses* [*mast-* + *-osis*] a general term for pathologic changes in the breast of a degenerative and productive type characterized by enlargement and by the presence of painful nodular tumefactions.

mastosquamous (mas-to-skwa'mus) pertaining to or affecting the mastoid and squama of the temporal bone.

mastostomy (mas-tos'to-me) [*masto-* + Gr. *stomoun* to provide with an opening, or mouth] incision of the breast for drainage.

mastotic (mas-tot'ik) characterized by mastosis.

mastotomy (mas-tot'o-me) [*masto-* + Gr. *tomē* a cutting] surgical incision of a breast.

masturbation (mas'tur-ba'shun) [L. *manus* hand + *stuprare* to rape] production of orgasm by self-manipulation of the genitals.

Matas' band, operation, test (mat'as) [Rudolph Matas, surgeon in New Orleans, 1860-1957] see under *band*, see *endoan-eurysmorrhaphy*, and see *tourniquet test* (def. 2), under *tests*.

matching (mach'ing) comparison for the purpose of selecting objects having similar or identical characteristics. In transplantation immunology, a method of measuring the degree of tissue compatibility between two individuals, done by such tests as the mixed leukocyte culture test. **m. of blood**, the procedure of comparing the blood of a contemplated donor with that of the patient (recipient) to ascertain whether their bloods belong to the same group. **cross m.**, determination of the compatibility of the blood of a donor and that of a recipient before transfusion by placing cells of the donor in the recipient's serum and cells of the recipient in the donor's serum. Absence of agglutination, hemolysis, and cytotoxicity indicates that the two blood specimens are compatible.

maté (mah-ta') [Spanish American] the dried leaves of *Ilex paraguensis* St. Hil., Aquifoliaceae, a tree grown throughout Brazil, Uruguay, Paraguay, and Argentina as a source of tea. Its several synonyms include, yerba maté, Bartholomew's tea, Paraguay tea, and Jesuit's tea. It contains caffeine and tannins, and has been used as a tonic, diuretic, stomachic, stimulant, and laxative (large doses).

Mátéfy test (reaction) (mah-ta'fe) [László Matéfy, Hungarian physician, born 1889] see under *tests*.

mater (ma'ter) [L.] mother. **dura m.** ["hard mother"], see *dura mater*. **pia m.** ["tender mother"], see *pia mater*.

materia (mah-te're-ah), pl. *mate'riae* [L.] matter, or substance; see also *materies*. **m. al'ba**, whitish deposits on the teeth, composed of mucus and epithelial cells containing bacteria and filamentous organisms. **m. den'tica**, that branch of study which deals with medicinal substances used in the practice of dentistry. **m. med'ica**, that branch of medical study which deals with drugs, their sources, preparations, and uses; pharmacology. **M. Med'ica Pu'ra**, Hahnemann's work giving the result of his provings of sixty-one drugs; it forms the basis of the homeopathic materia medica. **m. pec'cans**, materies peccans.

material (mah-te're-al) substance or elements from which a concept may be formulated, or an object constructed. **base m.**, any substance that may be used in making the base for an artificial denture, such as acrylic resin, metal, polystyrene, etc. **cross-reacting m.**, a protein produced by a mutant cistron that reacts antigenically with antibody against the unaltered protein. Abbreviated CRM. **genetic m.**, material transmitted from an organism to those of succeeding generations and responsible for the features characteristic of the species, as well as for the heritable difference between individuals of the species. **impression m.**, any substance that may be used in making an impression of the teeth and other structures of the mouth, such as plaster of paris, alginates, rubber compounds, etc. **tissue equivalent m.**, a material whose absorbing and scattering properties for a given radiation simulate as closely as possible those of a given biological tissue, such as bone, fat, or muscle. Water, for example, is usually the best tissue equivalent material for muscle and soft tissue.

materies (mah-te're-ēz) [L.] substance; see also *materia*. **m. mor'bi** [L. "substance of disease"], the element or principle which

causes a disease. **m. pec'cans** [L. "offending substance"], the principle that causes the pathologic changes occurring in disease.

maternal (mah-ter'nal) [L. *maternus*; *mater* mother] pertaining to the mother.

maternity (mah-ter'nī-te) [L. *mater* mother] 1. motherhood. 2. a lying-in hospital.

maternohemotherapy (mah-ter'no-he'mo-ther'ah-pe) [*mater-nal* + *hemotherapy*] injection of infants with blood from their mothers, formerly used in an attempt to transfer immunity to such diseases as measles and poliomyelitis from mother to child.

Mathieu's disease (mat'e-ūz') [Albert Mathieu, physician in Paris, 1855-1917] leptospiral jaundice.

matico (mah-te'kō) the leaves of *Piper elongatum* Vahl. (*P. angustifolium* R. and P.), Piperaceae, a shrub of South and Central America; formerly used as an astringent and hemostatic. It contains volatile oil, maticin, tannin, and mucilage.

mating (māt'ing) [Ger. *mat* companion] pairing of individuals of the opposite sex, especially for reproduction. **assortative m.**, the mating of individuals with others of similar qualities or constitutions, as intelligence or stature. Called also *nonrandom mating*. **assorted m.**, **assortive m.**, assortative m. **back-cross m.**, the mating of a heterozygote and a recessive homozygote; useful in revealing, through the phenotypes of the offspring, the genotype of the heterozygous parent. **nonrandom m.**, assortative m. **random m.**, the mating of individuals without regard to any similarity between them.

matinose (mah'tin-e-o'se) a Fijian word for yaws, which was once heavily endemic there.

matlazahuatl (mat-lahz'ah-waht'l) a form of typhus endemic in Mexico.

matrass (mat'ras) a glass vessel with a long neck used for treating dry substances in chemical procedures.

matrical (mat'ri-kal) of or relating to a matrix.

Matricaria (mat'ri-ka're-ah) [L.] the dried flower heads of the composit plant *Matricaria chamomilla* L. It contains volatile oil, antheric acid, tannin, and matricarin. Used as a counterirritant externally and as a carminative internally in the form of a tea. Also known as *chamomile tea*.

matrices (ma'trī-sēz) plural of *matrix*.

matricial (ma-trish'al) matrical.

matriclinous (mat'ri-kli'nus) matroclinous.

matrilineal (ma'trī-lin'e-al) [L. *mater* mother + *linea* line] descended through the female line.

matrix (ma'triks), pl. *ma'trices* [L.] 1. the intercellular substance of a tissue, as bone matrix, or the tissue from which a structure develops, as hair or nail matrix. 2. a metal band used to provide proper form to a dental restoration, such as amalgam in a prepared cavity. **amalgam m.**, matrix band. **bone m.**, the intercellular substance of bone, consisting of osteocollagenous fibers embedded in an amorphous ground substance and inorganic salts. **capsular m.**, territorial m. **cartilage m.**, the intercellular substance of cartilage, consisting of cells and extracellular fibers embedded in an amorphous ground substance; see also *interterritorial m.* and *territorial m.* **cytoplasmic m.**, the aggregating factor of the basic molecular fabric which ties together the ribosomes, RNA, proteins, small molecules, and water in the cytoplasm. **fluid m.**, Cannon's term for blood and lymph which bathe the cells of the body; see *homeostasis*. **functional m.**, the contiguous and motivating soft tissue organs and tissues in the growth of the craniofacial complex. **hair m.**, the epidermic root of the hair follicle. **interterritorial m.**, a paler-staining region located among the darker territorial matrices. **mitochondrial m.**, the dense substance, generally homogeneous but sometimes finely filamentous or granulated, found in the inner chamber (intercrystal space) of mitochondria. **nail m.**, m. unguis. **sarcoplasmic m.**, the liquid substance which fills muscle cells; it contains the soluble enzymes of the cell. **territorial m.**, basophilic material surrounding groups of cartilage cells. **m. un'guis** [NA], the nail matrix: the tissue upon which the deep aspect of the nail rests; called also *nail bed*. The term is also used to denote the proximal portion of the nail bed from which growth chiefly proceeds.

matroclinous (mat'ro-kli'nus) [Gr. *mētēr* mother + *klinein* to incline] inheriting or inherited from the mother; possessing characters inherited from the mother.

matrocliny (mat'ro-kli'ne) the state of being matroclinous.

matt (mat) a term applied to a macroscopic morphology of bacterial colonies that are dull and slightly granular, i.e., neither smooth and glistening nor rough.

matter (mat'er) 1. substance; anything that occupies space. 2. pus. **gelatinous m.**, substantia gelatinosa; see entries beginning thus, under *substantia*. **gray m. of nervous system**, substantia grisea. **radiant m.**, matter in a condition of extreme tenuity or ultragaseous state; gas exhausted to about one millionth of its original density, so that it has lost its original properties and has acquired new, particularly luminous, ones. **white m. of nervous system**, substantia alba.

Matulane (mat'u-lān) trademark for a preparation of procarbazine hydrochloride.

maturant (mach'u-rant) an agent that promotes suppuration.

maturate (mach'u-rāt) 1. to mature. 2. to suppurate.

maturation (mach'u-ra'shun) [L. *maturatio*; *maturus* ripe] 1. the stage or process of becoming mature or fully developed. The attainment of emotional and intellectual maturity. In biology, a process of cell division during which the number of chromosomes in the germ cells is reduced to one half the number characteristic of the species. 2. suppuration.

mature (mah-chur) [L. *maturus*] 1. to develop to maturity; to ripen. 2. fully developed; ripe.

maturity (mah-chur'ri-te) the period of attainment of maximal development.

Matut. abbreviation for L. *matutinus*, in the morning.

matutinal (mah-tu'ti-nal) [L. *matutinalis*] pertaining to or occurring in the morning.

matzoon (mat-zūn') [Armenian] a fermented milk preparation similar to yogurt, originally prepared in Asia Minor.

Mauchart's ligament (mow'karts) [Burkhard David *Mauchart*, German anatomist, 1696–1751] ligamenta aloria.

Maumené's test (mōm-nāz') [Edme Jules *Maumené*, French chemist, born 1818] see under *tests*.

Maunoir's hydrocele (mo'nwarz) [Jean Pierre *Maunoir*, French surgeon, 1768–1861] cervical hydrocele.

Maurer's dots (clefts, spots, stippling) (mow'rerz) [Georg *Maurer*, German physician in Sumatra] see under *dot*.

Mauriac's syndrome (mo're-aks') [Pierre *Mauriac*, French surgeon] see under *syndrome*.

Mauriceau's lance, maneuver (mo're-sōz) [François *Mauriceau*, French obstetrician, 1637–1709] see under *lance* and *maneuver*.

Mauthner's cell, fiber, membrane (sheath), test (mowt'nerz) [Ludwig *Mauthner*, Austrian ophthalmologist, 1840–1894] see under *cell*, *fiber*, and *tests*, and see *axolemma*.

mauvein (mo've-in) aniline purple, a violet dye, $C_{27}H_{24}N_4$, used as an indicator, with a pH range of –0.1 to 2.9, being yellow at –0.1 and crimson at 2.9.

Maxcy's disease (mak'sēz) [Kenneth Fuller *Maxcy*, American bacteriologist, born 1889] see under *disease*.

Maxibolin (mak-sib'o-lin) trademark for a preparation of ethylestrenol.

maxilla (mak-sil'ah), pl. *maxil'las*, *maxil'lae* [L.] [NA] the irregularly shaped bone that with its fellow forms the upper jaw; it assists in the formation of the orbit, the nasal cavity, and the palate, and lodges the upper teeth. **inferior m.**, mandible (mandibula [NA]).

maxillae (mak-sil'e) [L.] plural of *maxilla*.

maxillary (mak'si-ler'e) [L. *maxillaris*] pertaining to the maxilla.

maxillectomy (mak'si-lek'to-me) surgical removal of the maxilla.

maxillitis (mak'si-li'tis) inflammation of the maxilla.

maxillo dental (mak-sil'o-den'tal) pertaining to the maxilla and the maxillary teeth.

maxilloethmoidectomy (mak'sil-o-eth'moi-dek'to-me) excision of the portion of the maxilla surrounding the maxillary sinus and of the cribriform plate and anterior ethmoid cells.

maxillofacial (mak-sil'o-fa'shal) pertaining to the maxilla and the face.

maxillojugal (mak-sil'o-ju'gal) pertaining to the maxilla and the cheek.

maxillolabial (mak-sil'o-la'be-al) pertaining to the maxilla and the lip.

maxillomandibular (mak-sil'o-man-dib'u-lar) pertaining to the maxilla and the mandible.

maxillopalatine (mak-sil'o-pal'ah-tin) pertaining to the maxilla and the palatine bone.

maxillopharyngeal (mak-sil'o-fah-rin'je-al) pertaining to the maxilla and the pharynx.

maxillotomy (mak'si-lot'o-me) surgical sectioning of the maxilla which allows movement of all or a part of the maxilla into the desired position.

maxima (mak'si-mah) [L.] plural of *maximum*.

maximal (mak'si-mal) the greatest possible, allowable, or appreciable; the reverse of *minimal*.

maximum (mak'si-mum), pl. *max'ima* [L. "greatest"] 1. the greatest possible or actual effect or quantity. 2. the acme of a disease or process. 3. largest; utmost. 4. Pirquet's term for the greatest quantity of food which the organism can digest. **tubular m.**, the highest rate in milligrams per minute at which the renal tubules can transfer a substance either from the tubular luminal fluid to the interstitial fluid or from the interstitial fluid to the tubular luminal fluid. Abbreviated T_m .

Maxipen (mak'si-pen) trademark for a preparation of phenethicillin potassium.

Maxitate (mak'si-tāt) trademark for preparations of mannitol hexantrate.

maxwell (maks'wel) [James Clerk *Maxwell*, British physicist, 1831–1879] the unit of magnetic flux; replaced in SI by the *weber*.

Maxwell's ring, spot (maks'welz) [Patrick William *Maxwell*, Irish ophthalmologist, 1856–1917] see under *ring*, and see *macula retinae*.

Maydl's operation (ma'delz) [Karel *Maydl*, Bohemian surgeon, 1853–1903] see under *operation*.

mayer (ma'er) [Julius Robert von *Mayer*, German physicist, 1814–1878] a unit of heat capacity; it is the capacity of a body that is warmed one degree centigrade by one joule. Abbreviated *my*.

Mayer's hemalum, muchematein (ma'erz) [Paul *Mayer*, German-Italian scientist, 1848–1923] see *Table of Stains*.

Mayer's test (reagent) (ma'erz) [Ferdinand F. *Mayer*, American pharmaceutical chemist of the 19th century] see under *tests*.

mayfly (ma'fli) an insect of the order Ephemeroptera with two, or sometimes one, pair of triangular membranous wings. See *Hexagenia bilineata*.

Mayo's operation, sign (ma'ōz) [William James (1861–1939) and Charles Horace (1865–1939) *Mayo*, American surgeons] see under *operation* and *sign*.

Mayo Robson see *Robson*.

Mayor's hammer, scarf [Mathias Louis *Mayor*, Swiss surgeon, 1776–1846] see under *hammer* and *scarf*.

maytansine (ma-tan'sēn) an antineoplastic derived from species of *Maytenus*, a genus of tropical American shrubs and trees, $C_{34}H_{46}ClN_3O_{10}$.

maza (maz'ah) [Gr. "a barley cake"] the placenta, def. 1.

maze (māz) a complicated system of intersecting paths used in intelligence tests and in demonstrating learning in experimental animals.

mazic (ma'zik) relating to the placenta; placental.

mazindol (ma'zin-dōl) chemical name: 5-(4-chlorophenyl)-2,5-dihydro-3H-imidazo[2,1-*a*]isoindol-5-ol. An adrenergic, $C_{16}H_{13}ClN_2O$, having amphetamine-like actions; used as an anorexic in the short-term treatment of exogenous obesity, administered orally.

mazo- [Gr. *mazos* breast] a combining form denoting relationship to the breast; see also words beginning *mammo-* and *masto-*.

mazodynia (ma'zo-din'e-ah) mastodynia.

mazopexy (ma'zo-pek'se) mastopexy.

mazoplasia (ma'zo-pla'se-ah) [*mazo-* + Gr. *plassein* to form] degenerative epithelial hyperplasia of the mammary acini.

mazun (ma'zun) a fermented milk preparation made in Armenia from buffalos' or goats' milk.

Mazzini's test (mah-ze'nēz) [L. Y. *Mazzini*, American scientist] see under *tests*.

Mazzoni's corpuscle (mad-zo'nēz) [Vittorio *Mazzoni*, Italian physician] see under *corpuscle*.

M.B. abbreviation for L. *Medici'nae Baccalau'reus*, Bachelor of Medicine.

m.b. abbreviation for L. *mis'ce be'ne*, mix well.

MBP an antigen prepared from *Brucella melitensis*, *B. bovis* and *B. suis*, formerly used in the treatment of brucellosis.

MBSA methylated bovine serum albumin, a commonly employed immunogen in experimental immunology.

mbundu (em-boon'doo) a West African poison made from roots of trees of genus *Strychnos*.

M.C. abbreviation for L. *Magis'ter Chirur'giae*, Master of Surgery, and for *Medical Corps*.

Mc. megacurie; megacycle.

mc. millicurie.

μC microcurie.

μc. microcurie.

mcg. microgram.

MCH mean corpuscular hemoglobin, an expression of the average hemoglobin content of a single cell in micromicrograms, obtained by multiplying the hemoglobin in grams by ten and dividing by the number of red cells (in millions).

mc.h. millicurie-hour.

mc-h millicurie-hour.

μc.h. microcurie-hour.

MCHC mean corpuscular hemoglobin concentration, an expression of the average hemoglobin concentration in per cent, obtained by multiplying the hemoglobin in grams by 100 and dividing by the hematocrit determination.

MCHg mean corpuscular hemoglobin.

mc-hr millicurie-hour.

μC hr. microcurie-hour.

mcoul millicoulomb.

μcoul microcoulomb.

Mc.p.s. megacycles per second.

M.C.S.P. Member of the Chartered Society of Physiotherapists (Brit.).

MCT mean circulation time.

MCV 1. mean corpuscular volume, an expression of the average volume of individual red cells in cubic microns, obtained by multiplying the hematocrit determination by ten and dividing by the number of red cells (in millions). 2. mean clinical value, a number obtained by assigning a numerical value to the response as noted in a number of patients receiving a specific treatment, adding these numbers, and dividing by the number of patients treated.

Md chemical symbol for mendelevium.

M.D. abbreviation for *L. Medici'nae Doc'tor*, Doctor of Medicine.

M.D.A. motor discriminative acuity; [*L.*] mento-dextra anterior (right mento-anterior, a position of the fetus).

M.D.P. [*L.*] *mento-dextra posterior* (right mentoposterior, a position of the fetus).

M.D.T. [*L.*] *mento-dextra transversa* (right mentotransverse, a position of the fetus).

Me chemical symbol for methyl, or CH₃.

meal (mēl) 1. a portion of food or foods taken at some particular and usually stated or fixed time. Often given with the specific purpose of aiding diagnostic examination. See also *test meal* (under *T*). 2. a coarsely ground substance, prepared from various grains. **bismuth m.**, an opaque meal in which some preparation of bismuth is the opaque constituent. **Boyden m.**, a test meal for the study of gallbladder evacuation in cholecystographic studies, consisting of 3 egg yolks, 3 teaspoonfuls of powdered whole milk, and 1 dessertspoonful of sugar with a drop of vanilla, with water slowly added up to make 200 ml. **butter m.**, a concentrated food containing butter, milk, flour, and sugar. **Knoepfelmacher's butter m.**, a preparation of milk, flour, butter, and sugar, used in child feeding. **liver m.**, a mixture of desiccated beef liver, malted milk, and powdered cinnamon; used for liver diet. **opaque m.**, a light meal, sometimes a glass of buttermilk, which contains some substance opaque to the roentgen rays, so that the outline of the stomach and the intestinal tract can be determined by roentgenography or roentgenoscopy. **Oslo m.** [Carl Schiotz of Oslo], a meal for school children consisting of a third of a liter of unskimmed milk, whole-meal bread with margarine and goat's-milk cheese, half an orange, half an apple, and a raw carrot. **retention m.**, a form of test meal which is retained, a specimen of the stomach contents being removed from time to time for analysis. **test m.**, see *test meal*, under *T*.

mean (mēn) an average; a numerical value intermediate between two extremes. In statistical methods, the abscissa of the center of gravity of the variables or of the frequency polygon. **arithmetical m.**, the arithmetical average. **geometrical m.**, the antilogarithm of the arithmetical mean of the logarithm of a series of values.

measles (me'zelz) 1. a highly contagious viral infection involving primarily the respiratory tract and reticuloendothelial tissues. Called also *rubeola*. A prodrome of three to five days duration begins about eight days after inhalation of the virus in droplets derived from a person in the prodromal or early eruptive phase of the infection. Coryza, cervical lymphadenitis, Koplik's spots, palpebral conjunctivitis, photophobia, myalgia, malaise, and a harassing cough with steadily mounting fever precede the skin eruption. The skin becomes covered with red papules that appear behind the ears and on the face before spreading rapidly down the trunk and onto the arms and legs. The papules are discrete but gradually become more confluent. The lesions flatten, turn brown, and slowly desquamate on about the sixth day, when the temperature has returned to normal. It may be complicated by bacterial pneumonia, otitis media, and by a demyelinating encephalitis. Fatalities are due to the severity of measles itself, or to the bacterial or immunological complications. 2. cysticercal disease of domestic animals. **atypical m.**, a form of natural measles infection affecting those who previously received killed measles virus vaccine, characterized by fever, headache, myalgia, abdominal symptoms, and cough, followed by a maculopapular rash that begins on the wrist and ankles, then spreads to the palms, soles, and trunk before fading. There is peripheral edema, pneumonitis and, often, pleural effusion. The disease may be confused with meningococcemia or rickettsial diseases. **bastard m.**, rubella. **black m.**, a severe form in which the eruption is very dark and petechial. **confluent m.**, measles in which the lesions of the eruption coalesce. **German m.**, rubella. **hemorrhagic m.**, black m. **pork m.**, a condition in which pork is infected with the *Cysticercus cellulosae*.

measly (me'zle) containing cysticerci.

measure (mez'h'er) [*L. mensurare*] 1. to determine the extent or quantity of a substance. 2. a specific extent or quantity of a substance. 3. a graduated scale by which the dimensions or mass of an object or substance may be determined. See *tables of weights and measures*, under *weight*.

meatal (me-a'tal) pertaining to a meatus.

meatome (me'ah-tōm) meatotome.

meatometer (me'ah-tom'ē-ter) [*L. meatus* passage + *metrum* measure] an instrument for measuring a meatus.

meatorrhaphy (me'ah-tor'ah-fe) [*L. meatus* + *Gr. rhapsē* suture] suture of the cut end of the urethra to the glans penis after incision for enlarging the meatus.

meatoscope (me-at'o-skōp) [*L. meatus* meatus + *Gr. skopein* to examine] a speculum for examining the urinary meatus.

meatoscopy (me'ah-tos'ko-pe) the inspection of any meatus, especially the urinary meatus or the vesical orifice of a ureter. **ureteral m.**, cystoscopic inspection of the vesical orifice of a ureter.

meatotome (me-at'o-tōm) an instrument for performing meatotomy.

meatotomy (me'ah-tot'o-me) [*L. meatus* passage + *Gr. temnein* to cut] incision of the urinary meatus in order to enlarge it.

meatus (mea'tus), pl. *meat'us* [*L.*, "a way, path, course"] an opening or passage; [NA] a general term for an opening or passageway in the body. **acoustic m.**, **external m.**, **acusticus externus**. **acoustic m.**, **external, bony**, **meatus acusticus externus osseus**. **acoustic m.**, **external cartilaginous**, **m. acusticus externus cartilagineus**. **acoustic m.**, **internal**, **m. acusticus internus**. **acoustic m.**, **internal, bony**, **m. acusticus internus osseus**. **m. acusticus externus** [NA], external acoustic meatus: the passage of the external ear leading to the tympanic membrane; called also *external auditory m.* **m. acusticus externus cartilagineus** [NA], cartilaginous external acoustic meatus: the cartilaginous part of the external acoustic meatus, found lateral to the bony part. **m. acusticus externus osseus** [NA], bony external acoustic meatus: the opening in the external surface of the temporal bone, posterior to the condyle of the mandible and anterior to the mastoid air cells. **m. acusticus internus** [NA], internal acoustic meatus: the passage through which the facial, intermediate, and vestibulocochlear nerves and the labyrinthine artery pass. **m. acusticus internus osseus** [NA], bony internal acoustic meatus: the opening on the posterior surface of the petrous part of the temporal bone through which the facial, intermediate, and vestibulocochlear nerves, and the labyrinthine artery pass. **m. audit'rius externus**, **m. acusticus externus**. **m. audit'rius externus cartilagineus**, **m. acusticus externus cartilagineus**. **m. audit'rius externus osseus**, **m. acusticus externus osseus**. **m. audit'rius internus**, **m. acusticus internus**. **m. audit'rius internus osseus**, **m. acusticus internus osseus**. **auditory m.**, **external**, **m. acusticus externus**. **auditory m.**, **external, bony**, **m. acusticus externus osseus**. **auditory m.**, **external, cartilaginous**, **m. acusticus externus cartilagineus**. **auditory m.**, **internal**, **m. acusticus internus**. **auditory m.**, **internal, bony**, **m. acusticus internus osseus**. **m. con'chae ethmoturbina'lis mino'ris**, **m. nasi superior**. **m. con'chae maxilloturbina'lis**, **m. nasi inferior**. **m. con'chae turbina'lis majo'ris**, **m. nasi inferior**. **fish-mouth m.**, a red, swollen, and everted urinary meatus seen in the first stage of acute gonorrhea. **nasal m.**, **common**, **bony**, **m. nasi communis osseus**. **nasal m.**, **inferior**, **m. nasi inferior**. **nasal m.**, **inferior, bony**, **m. nasi inferior osseus**. **nasal m.**, **middle**, **m. nasi medius**. **nasal m.**, **middle, bony**, **m. nasi medius osseus**. **nasal m.**, **superior**, **m. nasi superior**. **nasal m.**, **superior, bony**, **m. nasi superior osseus**. **m. na'si commun'is**, common meatus of nose: the anterior space on either side of the nasal septum into which the three meatuses open. **m. na'si commun'is osseus**, bony common meatus of nose: the space on either side of the nasal septum bounded by the bones of the cranium. **m. na'si infe'rior** [NA], inferior meatus of nose: the space beneath the inferior nasal concha, into which the nasolacrimal duct opens. **m. na'si infe'rior osseus** [NA], bony inferior meatus of nose: the opening in the cranium overhung by the inferior bony nasal concha. **m. na'si me'dius** [NA], middle meatus of nose: the space beneath the middle nasal concha, with which the anterior ethmoidal cells and frontal and maxillary sinuses communicate. **m. na'si me'dius osseus** [NA], bony middle meatus of nose: the opening in the cranium overhung by the middle bony nasal concha. **m. na'si supe'rior** [NA], superior meatus of nose: the narrow cavity below the superior nasal concha, with which the posterior ethmoidal cells communicate. **m. na'si supe'rior osseus** [NA], bony superior meatus of nose: the slender, channel-like opening in the cranium inferior to the superior bony nasal concha. **nasopharyngeal m.**, **m. nasopharyngeus**. **nasopharyngeal m.**, **bony**, **m. nasopharyngeus osseus**. **m. nasopharyngeus** [NA], nasopharyngeal meatus: the part of the nasal cavity coinciding with the bony nasopharyngeal cavity. **m. nasopharyngeus osseus** [NA], bony nasopharyngeal meatus: the opening in the cranium between the posterior edges of the middle and inferior bony nasal conchae and the choanae. **m's of nose**, see *m. nasi communis*, *m. nasi inferior*, *m. nasi medius*, and *m. nasi superior*. **m. of nose, bony, common**, **m. nasi communis osseus**. **m. of nose, common**, **m. nasi communis**. **m. of nose, inferior**, **m. nasi inferior**. **m. of nose, inferior, bony**, **m. nasi inferior osseus**. **m. of nose, middle**,

m. nasi medius. **m. of nose, middle, osseous**, m. nasi medius osseus. **m. of nose, superior**, m. nasi superior. **m. of nose, superior, osseous**, m. nasi superior osseus. **m. urina'rius, urinary m.**, the external urethral orifice: the opening of the urethra on the body surface through which urine is discharged. See *ostium urethrae externum feminina* and *ostium urethrae externum masculinae*.

Mebaral (mek'ah-ral) trademark for a preparation of mephobarbital.

mebendazole (me-ben'dah-zōl) [USP] chemical name: (5-benzoyl-1*H*-benzimidazol-2-yl)carbamic acid methyl ester. An anthelmintic, $C_{16}H_{13}N_3O_3$, used in the treatment of trichuriasis, enterobiasis, ascariasis, and hookworm disease, administered orally.

mebeverine hydrochloride (mē-bev'er-ēn) chemical name: 4-[ethyl(*p*-methoxy- α -methylphenethylamino)butyl veratrate hydrochloride; a smooth muscle relaxant, $C_{25}H_{35}NO_5 \cdot HCl$.

mebutamate (mē-bu'tah-māt) chemical name: 2-methyl-2-(1-methylpropyl)-1,3-propanediol dicarbamate. A mildly tranquilizing, antihypertensive agent, $C_{10}H_{20}N_2O_4$, occurring as a white, crystalline powder; used alone or in conjunction with diuretics and other hypotensive drugs, administered orally.

mecamine (mek'ah-min) mecamlamine.

mecamylamine hydrochloride (mek'ah-mil'ah-min) [USP] chemical name: *N*,2,3,3-tetramethylbicyclo[2.2.1]heptan-2-amine hydrochloride. A ganglionic-blocking agent, $C_{11}H_{21}N \cdot HCl$, occurring as a white, crystalline powder; used as an antihypertensive, usually in the treatment of moderate to severe hypertension, administered orally.

mechanical (me-kan'i-kal) [Gr. *mēchanikos*] 1. pertaining to or accomplished by mechanical or physical forces. 2. performed by means of some artificial mechanism.

mechanoreceptor (me-kan'i-ko-re-sep'tor) mechanoreceptor.

mechanotherapeutics, mechanotherapy (me-kan'i-ko-ther'ah-pu'tiks, me-kan'i-ko-ther'ah-pe) mechanotherapy.

mechanics (me-kan'iks) the science dealing with the motions of material bodies, including kinematics, dynamics, and statics. **animal m.**, biomechanics. **body m.**, the application of kinesiology to use of the body in daily life activities and to the prevention and correction of problems related to posture. **developmental m.**, embryological mechanisms as revealed mainly by experimentation.

mechanism (mek'ah-nizm) [Gr. *mēchanē* machine] 1. a machine or machine-like structure. 2. the manner of combination of parts, processes, etc., which subserve a common function. 3. the theory that the phenomena of life are based on the same physical and chemical laws which operate in the inorganic world; opposed to *vitalism*. **countercurrent m.**, the renal mechanism by which urine is concentrated; it is dependent upon the anatomical arrangement of the loops of Henle and the vasa recta. **defense m.**, a mental mechanism by which psychic tension is diminished, e.g., repression, denial, overcompensation, rationalization, etc. Called also *escape m.* **Douglas' m.**, see under *method*. **Duncan m.**, expulsion of the placenta with the maternal, or rough, surface appearing at the vulva. **escape m.**, defense m. **Frank-Starling m.**, the ventricular response to an increase in either volume load or pressure load by diastolic distention and increased energy release. **m. of labor**, the factors involved in the expulsion of the fetus, placenta, and membranes through the birth canal in labor. **mental m.**, 1. the organization of mental operations. 2. an unconscious and indirect manner of gratifying a repressed desire. **neutralizing m.**, a mental mechanism which neutralizes the manifest content of a dream. **oculogyric m.**, the series of nerve centers concerned in movements of the eye. **outgoing m.**, the apparatus by which words are uttered or ideas expressed, as in speech, writing, or in the use of expressive gestures. **ping-pong m.**, a process in which one substrate reacts with an enzyme and dissociates into one product, leaving a functional group attached to the enzyme; in a second reaction, the modified enzyme transfers the attached functional group to a second substrate, forming a second product and releasing the enzyme in its original form. **re-entrant m.**, see *re-entry*. **somatic m.**, the structures and organs through which the somatic activities of the body are performed. **splanchnic m.**, the structures and organs through which the visceral activities of the body are performed.

mechanist (mek'ah-nist) one who believes that all phenomena relating to life are based on physical and chemical properties only.

mechano- [Gr. *mēchanē* machine] a combining form meaning mechanical or denoting relationship to a machine.

mechanocyte (mek'ah-no-sit') [*mechano-* + *-cyte*] fibroblast.

mechanogymnastics (mek'ah-no-jim-nas'tiks) gymnastics carried out by means of mechanical apparatus, such as the Zander apparatus.

mechanology (mek'ah-nol'o-je) [*mechano-* + *-logy*] the science of mechanics.

mechanoreceptor (mek'ah-no-re-sep'tor) a receptor that is excited by mechanical pressures or distortions, as those responding to sound, touch, and muscular contractions.

mechanotherapy (mek'ah-no-ther'ah-pe) [*mechano-* + Gr. *therapeia* treatment] the use of mechanical apparatus in the treatment of disease or its results, especially as an aid in performing therapeutic exercises.

mechanotherapy (mek'ah-no-ther'me) [*mechano-* + Gr. *thermē* heat] therapeutic heat produced by massage, exercise, etc.

mechlorethamine hydrochloride (mek'lōr-eth'ah-mēn) [USP] chemical name: 2-chloro-*N*-(2-chloroethyl)-*N*-methylethanamine hydrochloride. A cytotoxic alkylating agent, $C_3H_{11}Cl_2N \cdot HCl$, the first of the nitrogen mustards, having immunosuppressive properties as well as cytotoxic activities, occurring as a white, crystalline powder; used as an antineoplastic in many types of malignancies, especially in the treatment of Hodgkin's disease. Called also *nitrogen mustard*.

Mechnikov (mekh'ni-kov') see *Metchnikoff*.

mecism (me'sizm) [Gr. *mēkos* length] abnormal lengthening of a part.

mecistocephalic (me-sis'to-sē-fal'ik) [Gr. *mēkistos* tallest + *kephalē* head] having a cephalic index less than 71.

mecistocephalous (me-sis'to-sēf'ah-lus) mecistocephalic.

Mecistocirrhous (me-sis'to-sir'us) a genus of nematode parasites found in the fourth stomach of ruminants. **M. digitatus**, a species found in various ruminants, and in man and swine; called also *Strongylus gibsoni*.

Meckel's band (ligament), cavity (space), ganglion (mek'elz) [Johann Friedrich Meckel (the elder), Berlin anatomist, 1714-1774] see under *band*, and see *cautum trigeminale, ganglion pterygopalatinum*, and *ganglion submandibulare*.

Meckel's cartilage (rod), diverticulum, plane, syndrome (mek'elz) [Johann Friedrich Meckel (the younger) (grandson of J. F. Meckel, the elder), anatomist in Halle, 1781-1833] see under *cartilage, diverticulum, plane*, and *syndrome*.

meckelectomy (mek'el-ek'to-me) [*Meckel's ganglion* + Gr. *ektomē* excision] surgical removal of Meckel's lesser (the submandibular) ganglion.

meclizine hydrochloride (mek'li-zēn) [USP] chemical name: 1-[(4-chlorophenyl)phenylmethyl]-4-[(3-methylphenyl)methyl]piperazine dihydrochloride monohydrate. An antihistamine, $C_{25}H_{27}ClN_2 \cdot 2HCl \cdot H_2O$, occurring as a white or slightly yellowish, crystalline powder; used as an antiemetic in the management of nausea, vomiting, and dizziness associated with motion sickness, administered orally. Called also *parachloramine*.

meclocycline (mek-lo-si'klēn) chemical name: 7-chloro-4-(dimethylamino)-1,4,4a,5,6a,11,12a-octahydro-3,5,10,12,12a-penta-hydroxy-6-methylene-1,11-dioxo-2-naphthacene-carboxamide; an antibiotic of unspecified action, $C_{22}H_{21}ClN_2O_8$.

mecloqualone (mē-klo-kwah'lōn) chemical name: 3-(2-chlorophenyl)-2-methyl-4(3*H*)-quinazolinone; a sedative and hypnotic, $C_{15}H_{11}ClN_2O$.

mecobalamine (me'ko-bal'ah-min) a naturally occurring hematopoietic vitamin found in the blood, $C_{65}H_{61}CoN_{13}O_{14}P$, closely related to cyanocobalamin, in which the cyano radical has been replaced by a methyl radical.

mecocephalic (me'ko-sē-fal'ik) [Gr. *mēkos* length + Gr. *kephalē* head] dolichocephalic.

meconate (mek'o-nāt) [Gr. *mēkōn* poppy + *-ate*] any salt of meconic acid.

meconiorrhoea (mē-ko'ne-o-re'ah) [*meconium* + Gr. *rhoia* flow] excessive discharge of meconium.

meconium (mē-ko'ne-um) [L.; Gr. *mēkōnion*] 1. a dark green mucilaginous material in the intestine of the full term fetus, being a mixture of the secretions of the intestinal glands and some amniotic fluid. 2. opium.

mecrylate (mē-kri'lāt) chemical name: 2-cyano-2-propenoic acid methyl ester; a tissue adhesive for use in surgery, $C_5H_5NO_2$.

mecystasis (mē-sis'tah-sis) [Gr. *mēkynein* to lengthen + *stasis* a setting] a state in which a muscle fiber is relatively increased in length, resists stretch, contracts, and relaxes, and manifests the same tension as before elongation.

M.E.D. minimal effective dose; minimal erythema dose.

Medawar (med'ah-war), Peter B. English biologist, born 1915; co-winner, with Macfarlane Burnet, of the Nobel prize in medicine and physiology for 1960, for the theoretical solution to the problem of transplanting tissues and vital organs from one animal to another.

medazepam hydrochloride (mē-daz'ē-pam) chemical name: 7-chloro-2,3-dihydro-1-methyl-5-phenyl-1*H*-1,4-benzodiazepine monohydrochloride; a minor tranquilizer, $C_{16}H_{13}ClN_2 \cdot HCl$.

Medex [Fr. *médecin* extension extension of the physician] a program that recruits former military medics for training and practice as physician assistants; abbreviated Mx.

medi (mi'theh) maedi.

media (mek'de-ah) [L.] 1. plural of *medium*. 2. middle; see *tunica media*.

mediad (mek'de-ad) [L. *medium* middle + *ad* toward] toward a median line or plane.

medial (mek'de-al) [L. *medialis*] 1. pertaining to the middle;

closer to the median plane or the midline of a body or structure.
 2. pertaining to the middle layer of structures.

medialeceithal (me'de-ah-les'i-thal) [*media-* + Gr. *lekithos* yolk] possessing a medium amount of yolk; see under *ovum*.

medialis (me'de-a'lis) medial; [NA] a general term denoting a structure situated nearer to the median plane or the midline of a body or structure.

median (me'de-an) [L. *medianus*] 1. situated in the median plane or in the midline of a body or structure. 2. the perpendicular line which divides the area of a frequency curve into two equal halves.

medianus (me'de-a'nus) [L.] median, or situated in the middle; [NA] a general term denoting structures lying in the median plane, that is, in the plane dividing the body into right and left halves.

mediaometer (me'de-ah-om'ē-ter) [*media* + Gr. *metron* measure] an instrument for detecting and measuring refractive errors of the dioptric mediums.

mediastina (me'de-as-ti'nah) [L.] plural of *mediastinum*.

mediastinal (me'de-as-ti'nal) [L. *mediastinalis*] of or pertaining to the mediastinum.

mediastinitis (me'de-as'ti-ni'tis) inflammation of the mediastinum. **fibrous m., indurative m.,** an exuberant inflammatory sclerogenic process of infectious, rheumatic, hemorrhagic, or undetermined origin, which may be associated with fibrous pericarditis and with inflammatory fibrous masses in other parts of the body; it is often accompanied by obstruction of mediastinal structures, especially the superior vena cava, and, less often, the tracheobronchial tree, the esophagus, and other structures.

mediastinography (me'de-as'ti-nog'rah-fe) roentgenography of the mediastinum.

mediastinogram (me'de-as-ti'no-gram) a roentgenogram of the mediastinum.

mediastinopericarditis (me'de-as'ti-no-per'i-kar-di'tis) adhesive pericarditis in which the adhesions extend from the pericardium to the mediastinum. See also *adhesive pericarditis*, under *pericarditis*.

mediastinoscope (me'de-ah-sti'no-skōp) a specially designed endoscope used in mediastinoscopy.

mediastinoscopic (me'de-as'ti-no-skop'ik) pertaining to the mediastinoscope or to mediastinoscopy.

mediastinoscopy (me'de-as'ti-nos'ko-pe) examination of the mediastinum by means of an endoscope inserted through an anterior midline incision just above the thoracic inlet, permitting direct inspection and biopsy of tissue in the anterior superior mediastinum.

mediastinotomy (me'de-as'ti-not'o-me) [*mediastinum* + Gr. *tomē* a cutting] the operation of cutting into the mediastinum. Performed from the front, it is *anterior* or *cervical m.*; from the back, *posterior* or *dorsal m.*

mediastinum (me'de-as-ti'nūm), pl. *mediasti'na* [L.] 1. a median septum or partition. 2. [NA] the mass of tissues and organs separating the two lungs, between the sternum in front and the vertebral column behind, and from the thoracic inlet above to the diaphragm below. It contains the heart and its large vessels, the trachea, esophagus, thymus, lymph nodes, and other structures and tissues, and is divided into anterior, middle, posterior, and superior regions. Called also *septum mediastinale* or *mediastinal septum*. **anterior m., m. ante'rius** [NA], the division of the mediastinum bounded behind by the pericardium, in front by the sternum, and on each side by the pleura. It contains loose areolar tissue, lymphatic vessels, the internal thoracic vessels of the left side, and the origins of the sternohyoid, sternothyroid, and triangularis sterni muscles. Called also *cavum mediastinale anterius* or *anterior mediastinal cavity*. **m. cerebel'li** (obs.), *falx cerebelli*. **m. cer'ebri** (obs.), *falx cerebri*. **m. me'dium** [NA], **middle m.,** the division of the mediastinum containing the heart enclosed in its pericardium, the ascending aorta, the superior vena cava, the bifurcation of the trachea, the pulmonary arteries and veins, the phrenic nerves, a large portion of the roots of the lungs, and the arch of the azygos vein. **posterior m., m. poste'rius** [NA], the division of the mediastinum bounded behind by the vertebral column, in front by the pericardium, and on each side by the pleurae. It contains the descending aorta, the greater and lesser azygos veins, the superior intercostal vein, the thoracic duct, the esophagus, the vagus nerves, and the great splanchnic nerves. Called also *cavum mediastinale posterius* or *posterior mediastinal cavity*. **superior m., m. supe'rius** [NA], the division of the mediastinum extending from the pericardium to the root of the neck, and containing the esophagus and the trachea behind, the thymus or its remains in front, and the great vessels related to the heart and pericardium in between. **m. tes'tis** [NA], the partial septum of the testis, formed near its posterior border by fibrous tissue which is continuous with the tunica albuginea; called also *body of Highmore*.

mediastinus (me'de-as-ti'nus) [L.] an assistant physician or surgeon.

mediate (me'de-it) indirect; accomplished by the aid of an intervening medium.

mediation (me'de-a'shun) the act of interposing or serving as an intermediary. **chemical m.,** the concept that excitation in passing from a pre- to a postsynaptic neural element undergoes a necessary chemical step.

mediator (me'de-a'tor) an object or substance by which something is mediated, such as (1) a structure of the nervous system that transmits impulses eliciting a specific response; (2) a chemical substance (transmitter substance) that induces activity in an excitable tissue, such as nerve or muscle; or (3) a substance released from cells as the result of the interaction of antigen with antibody or by the action of antigen with a sensitized lymphocyte.

medicable (med'i-kah-bl) subject to treatment with reasonable expectation of cure.

medical (med'i-kal) pertaining to medicine or to the treatment of diseases; pertaining to medicine as opposed to surgery.

medicament (med'i-kah-ment, mē-dik'ah-ment) [L. *medicamentum*] a medicinal substance or agent.

medicamentous (med'i-kah-men-to'sus) [L.] medicamentous.

medicamentous (med'i-kah-men'tus) pertaining to, used in, or caused by a drug or drugs.

Medicare (med'i-kār) a program administered by the Social Security Administration which provides medical care for the aged.

medicaster (med'i-kas'ter) a pretender to medical skill; a charlatan or quack.

medicate (med'i-kāt) [L. *medicatus*] to impregnate or imbue with a medicinal substance.

medicated (med'i-kāt'ed) imbued with a medicinal substance.

medication (med'i-ka'shun) [L. *medicatio*] 1. impregnation with a medicine. 2. the administration of remedies. 3. a medicament. **conservative m.,** treatment aimed to build up the vital powers of the patient. **dialytic m.,** treatment by the internal use of artificial mineral waters, i.e., dilute aqueous solutions of salts. **hypodermatic m.,** the introduction of remedial agents beneath the skin. **ionic m.,** iontophoresis. **sublingual m.,** the administration of medicine by placing it beneath the tongue. **substitutive m.,** medication for the purpose of causing an acute nonspecific inflammation to overcome a specific one. **transduodenal m.,** the administration of medicine through a duodenal tube into the intestines without soiling the stomach.

medicator (med'i-ka'tor) an instrument for carrying medicines into a cavity of the body; an applicator.

medicephalic (me'de-sē-fal'ik) median cephalic; see under *vein*.

medicinal (me-dis'i-nal) [L. *medicinalis*] 1. having healing qualities. 2. pertaining to a medicine or to healing.

medicine (med'i-sin) [L. *medicina*] 1. any drug or remedy. 2. the art and science of the diagnosis and treatment of disease and the maintenance of health. 3. the treatment of disease by nonsurgical means. **aviation m.,** that branch of medicine which has to do with the physiological, medical, psychological, and epidemiological problems involved in aviation. **clinical m.,** 1. the study of disease by direct examination of the living patient. 2. the last two years of the usual curriculum in a medical college. **comparative m.,** the study of phenomena basic to the diseases of all species. **compound m.,** a medicine containing a mixture of several drugs. **domestic m.,** the home treatment of disorders without the advice of a physician. **dosimetric m.,** the practice of administering medicines by an exact and determinate system of doses. **emergency m.,** that specialty which deals with acutely ill or injured patients who require immediate medical treatment. **environmental m.,** that which considers the effects of the environment on man, including rapid population growth, changes and extremes in temperature, alterations in atmospheric pressure, water and air pollution, radiation, travel, etc. **experimental m.,** the study of disease based on experimentation in animals. **family m.,** see under *practice*. **folk m.,** the use of home remedies and procedures as handed down by tradition. **forensic m.,** the application of medical knowledge to questions of law; medical jurisprudence; called also *legal m.* **galenic m.,** an absolute system of practice based upon the teachings of Galen. **geriatric m.,** geriatrics. **group m.,** the practice of medicine by a group of physicians, usually representing various specialties, who are associated together for the cooperative diagnosis, treatment, and prevention of disease. Called also *group practice*. **hermetic m.,** spagyric m. **holistic m.,** a system of medicine which considers man as an integrated whole, or as a functioning unit. **hyperbaric m.,** the treatment of disease in an environment of higher than atmospheric pressure. **Indian m.,** a North American form of quackery alleged to be derived from the aboriginals. **internal m.,** that branch of medicine dealing especially with the diagnosis and medical treatment of diseases and disorders of the internal structures of the human body. **ionic m.,** treatment by electrochemical means, as by cataphoresis and iontophoresis. **laboratory animal m.,** that specialty of veterinary medicine which deals with the diagnosis, treatment, and prevention of disease in animals used as subjects in biomedical activities. **legal m.,** forensic m. **mental m.,** psychiatry. **neo-hippocratic m.,** neo-hippocratism. **nuclear m.,** that branch of medicine con-

cerned with the use of radionuclides in the diagnosis and treatment of disease. **patent m.**, a drug or remedy protected by a trademark, available without prescription. **physical m.**, psychiatrics. **preclinical m.**, 1. medical practice devoted to keeping the well well and preventing or postponing the development of clinical conditions in the near sick; preventive medicine. 2. the first two years of the usual curriculum in a medical college. **preventive m.**, that branch of study and practice which aims at the prevention of disease. **proprietary m.**, a drug or remedy to which the manufacturing pharmaceutical house has exclusive (proprietary) rights, and which is marketed usually under a name that is registered as a trademark. **psychologic m.**, medicine in its relation to mental diseases. **psychosomatic m.**, a system of medicine which aims at discovering the exact nature of the relationship of the emotions and bodily function, affirming the principle that the mind and body are one; the simultaneous application of physiologic and psychologic techniques in the study and treatment of illness. **rational m.**, practice of medicine based upon actual knowledge; opposed to *empiricism*. **social m.**, phases of preventive medicine and the care of the sick which concern the community as a whole or large groups of persons rather than the individual. **socialized m.**, a system of medical care regulated and controlled by the government, in which the government assumes responsibility for providing for the health needs and hospital care of the entire population, at no direct cost or at a nominal fee to the individual, by means of subsidies obtained by taxation. Called also *state m.* **space m.**, that branch of aviation medicine concerned solely with conditions to be encountered by man in space. **spagyric m.** (*obs.*), semi-alchemistic system of practice established by Paracelsus (1493–1541). **sports m.**, the field of medicine concerned with injuries sustained in athletic endeavors, including their prevention, diagnosis, treatment, etc. **state m.**, socialized m. **static m.**, practice of medicine based on the varying relations of administration of food, excretion, and body weight. **suggestive m.**, treatment of disease by suggestion or hypnosis. **tropical m.**, medical science as applied to diseases occurring primarily in tropical and subtropical countries. **veterinary m.**, the science of treatment of the diseases of animals.

medicochirurgic (med'ī-ko-ki-rur'jik) pertaining to medicine and surgery.

medicodental (med'ī-ko-den'tal) pertaining to both medicine and dentistry.

medicolegal (med'ī-ko-le'gal) pertaining to medicine and law, or to forensic medicine.

medicomechanical (med'ī-ko-me-kan'i-kal) both medicinal and mechanical.

medicophysics (med'ī-ko-fiz'iks) physics as applied to medicine.

medicopsychological (med'ī-ko-si'ko-loj'i-kal) pertaining to medicopsychology.

medicopsychology (med'ī-ko-si-kol'o-je) the science of medicine in its relations with the mind or with mental diseases.

medicosocial (med'ī-ko-so'shal) having both medical and social aspects, as, for example, the prevention and treatment of venereal disease.

medicotopographical (med'ī-ko-to'po-graf'i-kal) pertaining to topography in its relation to disease.

medicozoological (med'ī-ko-zo-o-loj'i-kal) pertaining to zoology in its relation to medicine.

medicus (med'ī-kus), pl. *med'ici* [L.] physician.

medifrontal (me'di-fron'tal) median and frontal; pertaining to the middle of the forehead.

Medin's disease (ma'dēnz) [Oskar Medin, Swedish physician, 1847–1928] see *poliomyelitis*.

mediocarpal (me'de-o-kar'pal) midcarpal.

medioccipital (me'de-ok-sip'i-tal) midoccipital.

mediolateral (me'do-o-lat'er-al) [L. *medius* middle + *lateralis* lateral] pertaining to the middle and to one side.

medionecrosis (me'de-o-ne-kro'sis) necrosis of the tunica media of a blood vessel, often leading to its rupture. **m. of aorta**, Erdheim's cystic medial necrosis.

mediotarsal (me'de-o-tar'sal) [L. *medius* middle + *tarsus*] pertaining to the middle of the tarsus.

mediscalenus (me'de-skah-le'nus) musculus scalenus medius.

medisect (me'di-sekt) [L. *medius* middle + *secare* to cut] to divide or dissect medially.

meditation (med'ī-ta'shun) the act of reflecting upon or contemplating; an exercise in contemplation. **transcendental m.**, a technique for attaining a state of physical relaxation and psychological calm by the regular practice of a relaxation procedure which entails the repetition of a mantra.

medium (me'de-um), pl. *mediums* or *me'dia* [L. "middle"] 1. means. 2. a substance which transmits impulses. 3. a substance used in the culture of bacteria; see *culture medium*, under C. 4. a preparation used in treating histologic specimens. **Brun's glucose m.**, a mixture of distilled water, glucose, glycerin, and camphorated spirit, used for mounting fresh tissue specimens.

clearing m., a substance used for rendering histologic specimens transparent. **contrast m.**, a radiopaque substance used to facilitate roentgen visualization of internal structures of the body. **culture m.**, a substance used to support the growth of microorganisms or other cells; see *culture medium*, under C. **dioptric media**, refracting media. **disperse m.**, **dispersion m.**, **dispersive m.**, the continuous or external portion of a colloid system in which the particles of the disperse phase are distributed; it is analogous to the solvent in a true solution. Cf. *disperse phase*. **mounting m.**, mountant. **nutrient m.**, a culture medium to which certain nutrient materials have been added. **radiopaque m.**, a substance that may be injected into a cavity or region to increase its density in x-ray examination and thereby aid in diagnosis. **refracting media**, the transparent tissues and fluids in the eye through which light rays pass and by which they are refracted and brought to a focus on the retina; the structures include the cornea, aqueous humor, crystalline lens, and vitreous body. Called also *dioptric media*. **separating m.**, any substance which facilitates separation, such as a coating used upon a surface which serves to prevent adherence to it of another surface; used in dentistry on impressions to facilitate removal of the cast. **Wickersheimer's m.**, see under *fluid*.

medius (me'de-us) [L.] in the middle; [NA] a term used in reference to a structure lying between two other structures that are anterior and posterior, superior and inferior, or internal and external in position.

MEDLARS (med'larz) [*MED*ical Literature Analysis and Retrieval System] a computerized bibliographic system of the National Library of Medicine, from which the Index Medicus is produced.

MEDLINE (med'lin) [from *MEDLARS on-line*] a computerized bibliographic retrieval system, an on-line segment of MEDLARS.

medorrhea (med'o-re'ah) [Gr. *mēdea* genitals + *rhoia* flow] a urethral discharge.

medrogestone (med-ro-jes'tōn) chemical name: 6,17-dimethylpregna-4,6-diene-3,20-dione; a progestin, C₂₂H₃₂O₂.

Medrol (med'rol) trademark for preparations of methylprednisolone.

medronate disodium (med'ro-nāt) methylenebisphosphonic acid disodium dihydrogen salt; a pharmaceutical aid, CH₄Na₂O₆P₂.

medroxyprogesterone acetate (med-rok'se-pro-jes'ter-ōn) [USP] chemical name: 6(α)-17-(acetyloxy)-6-methyl-pregna-4-ene-3,20-dione. A progestin, C₂₄H₃₄O₄, occurring as a white to off-white, crystalline powder; used in the treatment of endometriosis, uterine cancer, habitual and threatened abortion, and menstrual disorders, administered orally or intramuscularly. It has been used in contraceptive products.

medrysone (med'rī-sōn) chemical name: 11β-hydroxy-6α-methylpregn-4-ene-3,20-dione. A synthetic glucocorticoid, C₂₂H₃₂O₃, occurring as a white to off-white, crystalline powder; used as an anti-inflammatory in allergic and inflammatory eye conditions, such as episcleritis, allergic and vernal conjunctivitis, applied topically to the conjunctiva.

medulla (mē-dul'ah), pl. *medul'lae* [L.] the inmost part; [NA] a general term for the inmost portion of an organ or structure. Called also *marrow*. **adrenal m.**, m. glandulae suprarenalis. **m. of bone**, m. ossium. **m. glandulae suprarenalis** [NA], suprarenal medulla: the inner, reddish brown, soft part of the suprarenal gland; it synthesizes, stores, and releases catecholamines. Called also *substantia medullaris*, *glandulae suprarenalis* and *adrenal medulla*. **m. of kidney**, m. renis. **m. of lymph node**, m. nodi lymphatici. **m. neph'rica**, m. renis. **m. no'di lymphat'ici** [NA], medulla of lymph node: the central part of a lymph node, comprising cords and sinuses; called also *substantia medullaris lymphoglandulae*. **m. oblonga'ta** [NA], the truncated cone of nerve tissue continuous above with the pons and below with the spinal cord; it lies anterior to the cerebellum, and the upper part of its posterior surface forms the floor of the lower part of the fourth ventricle; it contains ascending and descending tracts, and important collections of nerve cells that deal with vital functions, such as respiration, circulation, and special senses. It is derived (developed) from the myelencephalon of the embryo. See also *brain stem*, under B. **m. os'sium**, bone marrow: the soft material filling the cavities of the bones, made up of a meshwork of connective tissue containing branching fibers, the meshes being filled with marrow cells, which consist variously of fat cells, large nucleated cells or myelocytes, and giant cells called megakaryocytes. See *m. ossium flava* and *rubra*. **m. os'sium fla'va** [NA], yellow bone marrow: ordinary bone marrow of the kind in which the fat cells predominate. **m. os'sium ru'bra** [NA], red bone marrow: marrow of developing bone, of the ribs, vertebrae, and many of the smaller bones; it is the site of production of erythrocytes and granular leukocytes. **m. re'nis** [NA], medulla of kidney: the inner part of the substance of the kidney, composed chiefly of collecting elements and loops of Henle, organized grossly into pyramids; called also *substantia medullaris renis*. **spinal m.**, m. spina'lis [NA], the spinal cord; see under *cord*. **suprarenal m.**, m. of suprarenal gland, m. glandulae suprarenalis. **m. of thymus**, the central portion of each lobe of the thymus; it contains

many more reticular cells and far fewer lymphocytes than does the surrounding cortex.

medullae (mĕ-dul'ē) [L.] plural of *medulla*.

medullary (med'u-lār'e) [L. *medullaris*] pertaining to the marrow or to any medulla; resembling marrow.

medullated (med'u-lāt'ed) myelinated.

medullation (med'u-la'shun) the formation of a medulla or marrow; especially the formation of the medullary sheath around a nerve fiber.

medullectomy (med'u-lek'to-me) [L. *medulla* marrow + Gr. *ektomē* excision] excision of the medulla of an organ, as of the adrenal gland.

medulliadrenal (mĕ-dul'y-ah-dre'nal) medulloadrenal.

medullitis (med'u-li'tis) 1. osteomyelitis. 2. myelitis.

medullization (med'u-li-za'shun) the enlargement of the Haversian canals in rarefying osteitis, followed by their conversion into marrow channels; also the replacement of bone by marrow cells.

medulloadrenal (me-dul'o-ah-dre'nal) pertaining to the adrenal medulla.

medulloarthritis (me-dul'o-ar-thri'tis) [L. *medulla* marrow + *arthritis*] inflammation of the marrow spaces of the articular extremities of bones.

medulloblast (mĕ-dul'o-blast) an undifferentiated cell of the embryonic medullary (neural) tube which may develop into either a neuroblast or a spongioblast.

medulloblastoma (mĕ-dul'o-blas-to'mah) a cerebellar tumor composed of undifferentiated neuroepithelial cells; it is highly radiosensitive.

medulloencephalic (mĕ-dul'o-en'sĕ-fal'ik) myeloencephalic.

medulloepithelioma (mĕ-dul'o-ep'i-the'le-o'-mah) a rare tumor of the brain composed of primitive neuroepithelial cells lining the tubular spaces.

medulloid (med'u-loid) [*medulla* + Gr. *eidos* form] an adrenergic substance with a hormonal activity simulating that of the adrenal medulla.

medullosuprarenoma (mĕ-dul'o-su'prah-re-no'mah) pheochromocytoma.

medullotherapy (mĕ-dul'o-ther'ah-pe) Pasteur's preventive treatment of rabies with emulsions of fixed virus in rabbit spinal cord.

medusa (mĕ-doo-sah) [Gr. *Medusa* one of the three mythological gorgons] a jellyfish; a free-swimming, umbrella-shaped form in the life cycle of certain cnidarians.

meduscongestin (mĕ-du'so-kon-jes'tin) a toxic substance derived from the tentacles of the jelly fish, *Rhizostoma cuvieri*, which, when injected into laboratory animals, causes intense congestion of the splanchnic vessels; believed to be identical with congestin.

mefenorex hydrochloride (mĕ-fen'o-reks) chemical name: *N*-(3-chloropropyl)- α -methylphenethylamine hydrochloride; an anorexic, $C_{12}H_{15}ClN \cdot HCl$.

mefexamide (mĕ-feks'ah-mid) chemical name: *N*-(2-(diethylamino)ethyl)-2-(4-methoxyphenoxy)acetamide; a central nervous system stimulant, $C_{17}H_{19}F_3N_2O_3$.

mefloquine (mef'lo-kwin) chemical name: $(\pm)$ -(*R**,*S**)- α -2-piperidinyl-2,8-bis(trifluoromethyl)quinolinemethanol. An antimalarial, $C_{17}H_{16}F_6N_2O$, which has been used in the treatment of drug-resistant falciparum malaria.

mefruside (mef'roo-sid) chemical name: 4-chloro-*N*-methyl-*N'*-(tetrahydro-2-methylfurfuryl)-*m*-benzenedisulfonamide; a diuretic, $C_{13}H_{16}ClN_2O_6S_2$.

MEG see *magnetoencephalograph*.

mega [Gr. *megas* big, great] a combining form designating great size; see also words beginning *megalo-*. Used in naming units of measurement to indicate a quantity one million (10^6) times the unit designated by the root with which it is combined.

megabladder (meg'ah-blad'er) a condition marked by permanent overdistention of the bladder.

megacalycosis (meg'ah-kal'y-ko'sis) [*mega-* + *calyx* + *-osis*] nonobstructive dilatation of the renal calices due to malformation of the renal papillae.

megacardia (meg'ah-kar'de-ah) [*mega-* + Gr. *kardia* heart] cardiomegaly.

megacaryoblast (meg'ah-kar'e-o-blast') megakaryoblast.

megacaryocyte (meg'ah-kar'e-o-sit') megakaryocyte.

Megace (mĕ-gās') trademark for a preparation of meggestrol acetate.

megacecum (meg'ah-se'kum) [*mega-* + *cecum*] a cecum which is abnormally large.

megacephalic (meg'ah-sĕ-fal'ik) megalcephalic.

megacephalous (meg'ah-sef'ah-lus) megalcephalic.

megacephaly (meg'ah-sef'ah-le) megalcephaly.

megacholedochus (meg'ah-ko-led'o-kus) abnormal dilatation of the common bile duct.

megacolon (meg'ah-ko'lon) abnormally large or dilated colon; the condition may be congenital or acquired, acute or chronic. **acquired m.**, **acquired functional m.**, colonic enlargement associated with chronic constipation; it may be due to faulty bowel habits and is particularly common in mentally retarded children and adults with chronic mental illness. Called also *idiopathic m.* **acute m.**, **toxic m.**, **aganglionic m.**, **congenital m.**, **m. congenitum**, megacolon due to congenital absence of myenteric ganglion cells in a distal segment of the large bowel. The resultant loss of motor function in this segment causes massive hypertrophic dilatation of the normal proximal colon; the aganglionic segment usually remains narrowed, but may dilate passively. The condition appears soon after birth, is commoner in males, and causes extreme constipation, abdominal distention, sometimes vomiting, and, when severe, growth retardation. Called also *Hirschsprung's disease*, *aganglionic m.*, and *pelvirectal achalasia*. **idiopathic m.**, **acquired m.**, **toxic m.**, acute dilatation of the colon associated with amebic or ulcerative colitis; the dilatation may precede perforation of the colon. Called also *acute m.*

megacurie (meg'ah-ku're) a unit of radioactivity, being one million (10^6) curies; abbreviated Mc.

megacycle (meg'ah-si'k'l) a unit of one million (10^6) cycles, e.g., 1,000,000 cycles per second, applied to the frequency of electromagnetic waves; abbreviated Mc.

megacystis (meg'ah-sis'tis) megalocystis.

megadont (meg'ah-dont) [*mega-* + Gr. *odous* tooth] having a dental index above 44.

megadontia (meg'ah-don'she-ah) macrodontia.

megadontic (meg'ah-don'tik) macrodontic.

megadontism (meg'ah-don'tizm) the state of having abnormally large teeth, or a dental index above 44.

megaduodenum (meg'ah-du'o-de'nūm) abnormally large or dilated duodenum; it may be congenital or acquired, as in intestinal scleroderma, and is usually due to a disorder of motor function.

megadyne (meg'ah-din') [*mega-* + *dyne*] a million (10^6) dynes.

megaesophagus (meg'ah-ĕ-sof'ah-gus) see *achalasia*.

megagamete (meg'ah-gam'ēt) (obs.) macrogamete.

megagametophyte (meg'ah-gah-me'to-fit) [*mega-* + Gr. *gamete* wife + *phyton* plant] the female gametophyte in heterosporous plants, developed from the megaspore.

megahertz (meg'ah-hertz) one million (10^6) hertz (cycles per second). Abbreviated MHz.

megakaryoblast (meg'ah-kar'e-o-blast) the earliest cytologically identifiable precursor in the thrombocytic series, which matures to form the promegakaryocyte.

megakaryocyte (meg'ah-kar'e-o-sit') [*mega-* + Gr. *karyon* nucleus + *-cyte*] the giant cell of bone marrow, a large cell with a greatly lobulated nucleus; mature blood platelets are released from its cytoplasm.

megakaryocytopoiesis (meg'ah-kar'e-o-sit'o-poi-e'sis) [*megakaryocyte* + Gr. *poiesis* a making] the production of megakaryocytes.

megakaryocytosis (meg'ah-kar'e-o-si-to'sis) the presence of megakaryocytes in the blood or of excessive numbers in the bone marrow.

megalakria (meg'ah-lak're-ah) [*megalo-* + Gr. *akron* extremity] acromegaly.

megalecithal (meg'ah-les'i-thal) [*mega-* + Gr. *lekithos* yolk] macrolecithal.

megalencephalon (meg'al-en-sef'ah-lon) [*megalo-* + Gr. *enkephalos* brain] an abnormally large brain.

megalencephaly (meg'al-en-sef'ah-le) macrencephaly.

megalgia (meg'al'je-ah) [Gr. *megas* large + *-algia*] severe pain, as in muscular rheumatism.

megalo- [Gr. *megas*, *megale* big, great] a combining form designating great size; see also words beginning *mega-*.

megaloblast (meg'ah-lo-blast') [*megalo-* + Gr. *blastos* germ] a large, nucleated, immature progenitor of an abnormal red blood cell series, sequentially following the promegakaryoblast in development and retaining some of its features; megaloblasts correspond to normoblasts of the normal red cell maturation series and are correspondingly classified as basophilic, polychromatic, and orthochromatic. **m. of Sabin**, pronormoblast.

megaloblastoid (meg'ah-lo-blas'toid) resembling a megaloblast.

megalobulbus (meg'ah-lo-bul'bus) enlargement of the duodenal cap in the roentgenogram.

megalocardia (meg'ah-lo-kar'de-ah) [*megalo-* + Gr. *kardia* heart] cardiomegaly.

megalocaryocyte (meg'ah-lo-kar'e-o-sit') megakaryocyte.

megalcephalia (meg'ah-lo-sĕ-fal'le-ah) megalcephaly.

megalcephalic (meg'ah-lo-sĕ-fal'ik) pertaining to or characterized by megalcephaly.

megalcephaly (meg'ah-lo-sef'ah-le) [*megalo-* + Gr. *kephalē*

head] 1. unusually large size of the head. 2. progressive enlargement of the bones of the head, face, and neck; leontiasis ossea.

megaloceros (meg'ah-lo-s'ë-rus) [*megalo-* + *keras* horn] a monster having projections from the forehead resembling horns.

megalochiria (meg'ah-lo-ki're-ah) [*megalo-* + Gr. *cheir* hand + *-ia*] abnormal largeness of the hands.

megalocloritis (meg'ah-lo-kl'i'to-ris) hypertrophy of the clitoris.

megalocornea (meg'ah-lo-kor'ne-ah) [*megalo-* + *cornea*] a usually bilateral developmental anomaly of the cornea, which is of abnormal size at birth, sometimes reaching a diameter of more than 18 mm. in the adult. It may be inherited as an X-linked recessive or as an autosomal dominant trait. Called also *macrocornea*.

megalocystis (meg'ah-lo-sis'tis) [*megalo-* + Gr. *kystis* bladder] an abnormally enlarged bladder.

megalocyte (meg'ah-lo-sit') [*megalo-* + *-cyte*] an extremely large erythrocyte, i.e., one measuring 12 to 25 microns in diameter.

megalocytosis (meg'ah-lo-si-to'sis) macrocythemia.

megalodactylia (meg'ah-lo-dak'til'e-ah) megalodactyly.

megalodactylism (meg'ah-lo-dak'ti-lizm) megalodactyly.

megalodactylous (meg'ah-lo-dak'ti-lus) exhibiting megalodactyly.

megalodactyly (meg'ah-lo-dak'ti-le) [*megalo-* + Gr. *daktylos* finger] abnormal largeness of fingers or toes.

megalodontia (meg'ah-lo-don'she-ah) macrodontia.

megalenteron (meg'ah-lo-en'ter-on) [*megalo-* + Gr. *enteron* intestine] (*obs.*) enteromegaly.

megaloesophagus (meg'ah-lo-ë-söf'ah-gus) see *achalasia*.

megalogastria (meg'ah-lo-gas'tre-ah) [*megalo-* + Gr. *gaster* stomach + *-ia*] enlargement or abnormally large size of the stomach.

megaloglossia (meg'ah-lo-glos'e-ah) [*megalo-* + Gr. *glōssa* tongue + *-ia*] macroglossia.

megalographia, megalography (meg'ah-lo-gra'fe-ah; meg'-ah-log'rah-fe) macrography.

megalohapatia (meg'ah-lo-he-pat'e-ah) [*megalo-* + Gr. *hēpar* liver + *-ia*] hepatomegaly.

megalokaryocyte (meg'ah-lo-kar'e-o-sit') megakaryocyte.

megalomania (meg'ah-lo-ma'ne-ah) [*megalo-* + Gr. *mania* madness] unreasonable conviction of one's own extreme greatness, goodness, or power; the ideas in megalomania are known as *delusions of grandeur*.

megalomaniac (meg'ah-lo-ma'ne-ak) an individual exhibiting megalomania.

megalomelia (meg'ah-lo-me'le-ah) [*megalo-* + Gr. *melos* limb + *-ia*] abnormal largeness of the limbs.

megalomicin potassium phosphate (meg'ah-lo-mi'sin) chemical name: megalomicin A compound with potassium dihydrogen phosphate; an antibiotic of unspecified action, $C_{44}H_{80}N_2O_{15} \cdot 2KH_2PO_4$.

megalonychia (meg'ah-lo-nik'e-ah) the condition of having unusually large nails.

megalopenis (meg'ah-lo-pe'nis) excessive size of the penis.

megalophthalmos (meg'ah-lof-thal'mos) [*megalo-* + Gr. *ophthalmos* eye] abnormally large size of the eyes. **anterior m., megalocornea.**

megalophthalmus (meg'ah-lof-thal'mus) megalophthalmos.

megalopia (meg'ah-lo-pe-ah) [*megalo-* + Gr. *ōps* + *-ia*] abnormal enlargement of the eyes.

megalopodia (meg'ah-lo-po'de-ah) [*megalo-* + Gr. *pous* foot + *-ia*] excessive size of the feet.

megalopsia (meg'ah-lop'se-ah) [*megalo-* + Gr. *opsis* vision + *-ia*] macropsia.

Megalopyge (meg'ah-lo-pij'e) a genus of hairy moths whose larvae (caterpillars) have stinging hairs. **M. opercularis**, a species whose hairs pierce the skin and cause caterpillar hair poisoning (flannel moth dermatitis).

megaloscope (meg'ah-lo-skōp') [*megalo-* + Gr. *skopein* to examine] a large magnifying lens; a magnifying speculum or mirror.

megalosplanchnic (meg'ah-lo-splank'nik) (*obs.*) having abnormally large viscera.

megalosplenitis (meg'ah-lo-sple'ne-ah) [*megalo-* + Gr. *splen* spleen + *-ia*] splenomegaly.

megalospore (meg'ah-lo-spōr') a macrospore.

Megalosporon (meg'ah-lo-s'po-ron) [*megalo-* + Gr. *sporos* seed] a former genus of fungi made up of large-spored dermatophytes (Sabouraud, 1903). *M. ectothrix* included those that form arthrospores on the outside of the hair shaft, and *M. endothrix* included those that form arthrospores within the hair shaft. Now included in *Trichophyton*.

megalosporon (meg'ah-lo-s'po-ron), pl. *megalospora*. An organism of the genus *Megalosporon*.

megalosyndactyly (meg'ah-lo-sin-dak'ti-le) [*megalo-* + *syndac-*

tyly] a condition in which the digits are very large and more or less completely grown together.

megalothymus (meg'ah-lo-thi'mus) an enlarged thymus.

megaloureter (meg'ah-lo-u-re'ter) [*megalo-* + *ureter*] congenital ureteral dilatation without demonstrable cause; called also *congenital or primary m., megaureter, primary ureteral atony, and ureteral neuromuscular dysplasia*. Cf. *hydroureter*. **congenital m., primary m., megaloureter. reflux m.,** dilatation of the ureter associated with vesicoureteral reflux.

-megaly [Gr. *megaleios* magnificent, *megalē* great] a word termination indicating enlargement of the structure signified by the root to which it is attached, as splenomegaly.

meganucleus (meg'ah-nu'kle-us) (*obs.*) macronucleus.

megaprosopous (meg'ah-pros'o-pus) [*mega-* + Gr. *prosōpon* face] having a large face.

megarectum (meg-ah-rek'tum) a greatly dilated rectum.

Megarhinini (meg'a-rhi'ni-ne) a tribe of tropical non-blood-sucking mosquitoes; they fly by day, feed on flowers, and are usually highly colored. Their large larvae are predaceous and have been used to control the breeding of bloodsucking mosquitoes.

Megarhinus (meg'ah-ri'nus) a genus of large, showy, but harmless mosquitoes of tropical and subtropical countries.

Megaselia (meg'ah-se'le-ah) a genus of flies the larvae of which may cause myiasis in man. *M. scalaris* and *M. rufipes* cause wound myiasis, and *M. scalaris* may also cause intestinal myiasis.

megaseme (meg'ah-sēm) [*mega-* + Gr. *sēma* sign] having an orbital index of 89 or more.

megasigmoid (meg'ah-sig'moid) [*mega-* + *sigmoid*] an enormously dilated sigmoid.

megasoma (meg'ah-so'mah) [*mega-* + Gr. *sōma* body] great size and stature, not amounting to gigantism.

megasporangium (meg'ah-spo-ran'je-um), pl. *megasporangia* [*mega-* + Gr. *sporos* seed + *angeion* vessel] the sporangium in which megasporangia develop.

megaspore (meg'ah-spōr) [*mega-* + Gr. *sporos* seed] 1. macrospore. 2. macroconidium. 3. one of four haploid spores, usually larger than the microspore, formed in the megasporangium from a megaspore mother cell, and from which the megagametophyte, or female gametophyte, develops.

Megatrichophyton (meg'ah-tri'ko-fi'ton) a former genus made up of some large-spored dermatophytes (as *M. equinum* and *M. megni'ni*); now considered synonymous with *Trichophyton*.

megauit (meg'ah-u'nit) a quantity one million (10^6) times that of a standard unit.

megaureter (meg'ah-u-re'ter) megaloureter.

megavitamin (meg'ah-vi'tah-min) a dose of vitamin(s) vastly exceeding the amount recommended for nutritional balance.

megavolt (meg'ah-vōlt) [*mega-* + *volt*] a million (10^6) volts.

megavoltage (meg'ah-vol'tij) in ionizing radiation therapy, voltage greater than 1 megavolt. Cf. *supervoltage*.

megestrol acetate (mē-jes'trōl) chemical name: 17-(acetyloxy)-6-methyl-16-methylene-pregna-4,6-diene-3,20-dione. A synthetic progestin, $C_{25}H_{32}O_4$, occurring as a white, crystalline powder; used as an antineoplastic in adjunctive or palliative management of recurrent or metastatic endometrial carcinoma, administered orally.

Megimide (meg'i-mīd) trademark for a preparation of beme-gride.

Méglin's point (mā-glanz') [J. A. Méglin, French physician, 1756-1824] see under *point*.

meglumine (meg'lu-mēn) [USP] chemical name: 1-deoxy-1-(methylamino)-D-glucitol. A crystalline base, $C_7H_{17}NO_5$, occurring as white to faintly yellowish white, crystals or powder; used in the preparation of certain radiopaque media. Called also *methylglucamine*. See also under *diatrizoate* and *iodipamide*.

m. diatrizoate, a salt of 3,5-diacetamido-2,4,6-triiodobenzoic acid, $C_{15}H_{25}I_3N_3O_8$, occurring as a clear, colorless to pale yellow, slightly viscous liquid; used as a diagnostic radiopaque medium for intravascular use in angiocardiology and excretory urography.

m. iodipamide, a salt of iodipamide, occurring as a clear, colorless to pale yellow, slightly viscous liquid; used as a diagnostic radiopaque medium in cholecystography. Called also *methylglucamine iodipamide*.

m. iothalamate, a salt of iodothalamate, $C_{15}H_{25}I_3N_3O_8$, occurring as a clear, colorless to pale yellow, slightly viscous liquid; used as a diagnostic radiopaque medium for intravascular use in cerebral angiography, excretory urography, and peripheral arteriography.

meglutol (meg'lu-tōl) chemical name: 3-hydroxy-3-methyl pentanedioic acid; an antihyperlipoproteinemic, $C_8H_{10}O_6$.

megohm (meg'ōm) [*mega-* + *ohm*] a million (10^6) ohms.

megophthalmos (meg-of-thal'mos) [*mega-* + Gr. *ophthalmoseye*] buphthalmos; hydrophthalmos.

megrim (me'grim) migraine.

mehlnährschaden (mäl'nahr-shad'en) [Ger.] a nutritional deficiency syndrome similar to kwashiorkor, due to inadequate protein intake and overabundance of carbohydrate; the clinical characteristics include growth failure, preservation of subcutane-

Meiosis (only two of the 23 human chromosome pairs are shown, the chromosomes from one parent in black, from the other parent in outline). FIRST MEIOTIC DIVISION: *A*, *leptotene*—first appearance of chromosomes as thin threads; *B*, *zygotene*—pairing (synapsis) of chromosomes; *C*, *pachytene*—chromosomal thickening and shortening, the individual chromatids becoming visible; *D*, *diplotene*—longitudinal separation of chromatids, the centromere remaining intact and a chiasma being formed (NOTE: prophase includes *A* to *D* plus diakinesis [not shown]); *E*, *metaphase*—movement of chromosomes into the equatorial plane; *F*, *anaphase*—separation of pairs, one member going to each pole; *G*, *telophase*—cell division, each of the two daughter cells being haploid. SECOND MEIOTIC DIVISION: *prophase* (not shown)—chromosomes become visible; *H*, *metaphase*—movement of chromosomes into equatorial plane; *I*, *anaphase*—division of centromeres, the chromatids going to opposite poles; *J*, *telophase*—cell division, each daughter cell being diploid. (Thompson and Thompson.)

ous fat with wasting of muscle, edema, and psychomotor abnormalities.

meibomian cyst, foramen, glands, styne (mi-bo'me-an) [Heinrich Meibom, German anatomist, 1638–1700] see *chalazion*, *foramen eecum linguae*, and *glandulae tarsales*, and see under *stye*.

meibomianitis (mi-bo'me-ah-ni'tis) inflammation of the meibomian glands.

meibomitis (mi'bo-mi'tis) meibomianitis.

Meige's disease (mehzh'ez) [Henri Meige, French physician, 1866–1940] Milroy's disease.

Meigs' capillaries, test (megz) [Arthur V. Meigs, Philadelphia physician, 1850–1912] see under *capillary* and *tests*.

Meigs' syndrome (megz) [Joe Vincent Meigs, American surgeon, 1892–1963] see under *syndrome*.

Meinicke test (reaction) (mi'ni-ke) [Ernst Meinicke, German physician, 1878–1945] see under *tests*.

meio- [Gr. *meiōn* smaller] a combining form denoting decrease in size or number; see also words beginning *mio-*.

meiogenic (mi'o-jen'ik) [Gr. *meiosis* + *gennan* to produce] promoting or causing meiosis.

meiosis (mi-o'sis) [Gr. *meiōsis* diminution] a special method of cell division, occurring in maturation of the sex cells, by means of which each daughter nucleus receives half the number of chromosomes characteristic of the somatic cells of the species. See illustration. Cf. *mitosis*.

meiotic (mi-ot'ik) pertaining to, characteristic of, or characterized by meiosis.

Meirowsky phenomenon (mi-rof'ske) [Emil Meirowsky, German-American dermatologist, 1876–1960] see under *phenomenon*.

Meissner's corpuscles, ganglion, plexus (mis'nerz) [Georg Meissner, German physiologist, 1829–1905] see *corpuscula tactus*, *plexus submucosus*, and under *ganglion*.

mel (mel) [L.] 1. honey. 2. a compound of honey with some medicinal agent.

melagra (mel-ag'rah) [Gr. *melos* limb + *agra* seizure] muscular pain in the extremities.

melalgia (mel-al'je-ah) [Gr. *melos* limb + *-algia*] pain in the limbs.

melancholia (mel'an-ko'le-ah) [*melano-* + Gr. *cholē* bile + *-ia*] a depressed and unhappy emotional state with abnormal inhibition of mental and bodily activity. **acute m.**, an acute form of melancholia marked, in addition to the usual symptoms, by loss of appetite, emaciation, insomnia, and subnormal temperature. **affective m.**, melancholia corresponding to the depressive phase of manic-depressive psychosis. **m. agita'ta, agitated m.**, agitated depression. **m. atton'ita**, stuporous m. **m. with delirium**, melancholia with distressing delusions and hallucinations. **m. hypochondri'aca**, extreme hypochondriasis. **involutional m.**, a major affected disorder occurring during involution, and marked by agitation, worry, anxiety, somatic preoccupation, severe insomnia, and sometimes paranoid reactions; formerly thought to be associated with the climacteric. Called also *involutional psychosis*. **recurrent m.**, a condition in which attacks of melancholia follow one another at more or less regular intervals. **m. religio'sa**, the delusion of one's own personal damnation. **m. simplex**, a mild form with neither delusions nor great excitement. **stuporous m.**, a form in which the patient lies motionless and silent, with fixed eyes and indifference to surroundings; there are sometimes hallucinations.

melancholiac (mel'an-ko'le-ak) 1. affected with melancholia. 2. a person affected with melancholia.

melanemesis (mel'ah-nem'ë-sis) [*melano-* + Gr. *emein* to vomit] black vomit.

melanemia (mel'ah-ne'me-ah) [*melano-* + Gr. *haima* blood + *-ia*] the presence of black, pigmentary masses in the blood, as in hemochromatosis.

Melania (më-la'ne-ah) a generic name formerly applied to smaller fresh water operculate snails, now classified under a number of genera of the family Melaniidae (Thiaridae).

melanicterus (mel'ah-nik'ter-us) Winckel's disease.

melaniferous (mel'ah-nif'er-us) [*melanin* + L. *ferre* to bear] containing melanin or other black pigment.

melanin (mel'ah-nin) [Gr. *melas* black] the dark amorphous pigment of the skin, hair, and various tumors, of the choroid coat of the eye and the substantia nigra of the brain. It is produced by polymerization of oxidation products of tyrosine and dihydroxyphenyl compounds, and contains carbon, hydrogen, nitrogen, oxygen, and often sulfur. **artificial m.**, **factitious m.**, a compound resembling melanin, formed when a protein is heated in strong hydrochloric acid; called also *melanoid*.

melanism (mel'ah-nizm) excessive pigmentation or blackening of the integuments or tissues, usually of genetic origin; melanosis. **industrial m.**, the gradual darkening of populations of organisms living in soot-darkened habitats due to the selective pressure of predators, the darker individuals tending to survive as the conspicuous individuals are eaten, thus favoring the genotype that darkens their color. The peppered moth, *Biston betularia*, has undergone this change. **metallic m.**, argyria.

melanistic (mel'ah-nis'tik) characterized by melanism.

melano- [Gr. *melas* black] a combining form meaning black, or denoting relation to melanin.

melanoacanthoma (mel'a-no-ak'an-tho'ma) a rare, benign, shallowly invasive papilloma composed of basal cell-like keratinocytes pervaded with highly dendritic, deeply pigmented melanocytes.

melanomaloblastoma (mel'ah-no-ah-mel'o-blas-to'mah) melanotic neuroectodermal tumor.

melanoblast (mel'ah-no-blast', më-lan'o-blast) [*melano-* + Gr. *blastos* germ] a cell originating from the neural crest that differentiates into a melanocyte.

melanoblastoma (mel'ah-no-blas-to'mah) melanotic neuroectodermal tumor.

melanoblastosis (mel'ah-no-blas-to'sis) a condition characterized by the presence of melanoblasts.

melanocarcinoma (mel'ah-no-kar'si-no'mah) [*melano-* + *carcinoma*] malignant melanoma.

melanocyte (mel'ah-no-sit, më-lan'o-sit) any of the dendritic clear cells of the epidermis that synthesize tyrosinase and, within their melanosomes, the pigment melanin; the melanosomes are then transferred from melanocytes to keratinocytes. **dendritic m.**, those having cytoplasmic projections laden with melanosomes to be transferred to keratinocytes.

melanocytic (mel'ah-no-sit'ik) pertaining to or composed of melanocytes.

melanocytoma (mel'ah-no-si-to'mah) a neoplasm or hamartoma composed of melanocytes. **compound m.**, juvenile melanoma. **dermal m.**, 1. blue nevus. 2. cellular blue nevus.

melanoderm (mel'ah-no-derm) a person belonging to one of the black races.

melanoderma (mel'ah-no-der'mah) [*melano-* + Gr. *derma* skin] an abnormally increased amount of melanin in the skin, due either to an increase in the production of melanin by the melanocytes normally present or to an increase in the number of melanocytes, with production of hyperpigmented patches. **parasitic m.**, vagabonds' disease. **senile m.**, pigmentation of the skin in the aged.

melanodermatitis (mel'ah-no-der'mah-ti'tis) dermatitis associated with an increased deposit of melanin in the skin. **m. tox'ica lichenoi'des**, a condition occurring in persons exposed, usually occupationally, to tars and subsequently to sunlight; marked by pruritus and the appearance of lichenoid papules, hyperpigmentation, and telangiectasia.

melanodermic (mel'ah-no-der'mik) having a dark skin.

melanoepithelioma (mel'ah-no-ep'i-the-le-o'mah) malignant melanoma.

melanoflocculation (mel'ah-no-flok'u-la'shun) a flocculation test for malaria, performed with a melanin antigen; see *Henry's test*, under *tests*.

melanogen (më-lan'o-jen) [*melanin* + Gr. *gennan* to produce] a colorless chromogen, convertible into melanin, which may occur in the urine in certain diseases.

melanogenesis (mel'ah-no-jen'ë-sis) the production of melanin.

melanogenic (mel'ah-no-jen'ik) causing the production of melanin.

melanoglossia (mel'ah-no-glos'e-ah) [*melano-* + Gr. *glōssa* tongue] black tongue.

melanoid (mel'ah-noid) [*melano-* + Gr. *eidos* form] 1. resembling melanin; of a dark color. 2. a material resembling melanin. See *artificial melanin*.

Melanolestes (mel'ah-no-les'tēz) a genus of insects. **M. pic'ipes**, the "black corsair" or "kissing bug"; its bite much resembles the sting of a wasp, but it is often much more serious.

melanoleukoderma (mel'ah-no-lu'ko-der'mah) [*melano-* + Gr. *leukos* white + *derma* skin] a mottled appearance of the skin, as in chronic arsenic poisoning. **m. col'li**, syphilitic leukoderma about the neck.

melanoma (mel'ah-no'mah) [*melano-* + *-oma*] a tumor made up of melanin-pigmented cells. When used alone, the term refers to malignant melanoma. **amelanotic m.**, an unpigmented malignant melanoma. **Cloudman's m. S91**, a firm, black subcutaneous tumor originally found at the base of the tail of a female DBA mouse, and proven to be transplantable to, and invariably metastatic in, other DBA mice and BALB/c mice. **Harding-Passey m.**, a transplantable, nonmetastasizing melanoma originally found on the ear of a brown mouse. **juvenile m.**, a benign, elevated, firm, pink to purplish red papule, perhaps with a slightly scaly surface, which usually occurs on the face, especially on the cheeks, and most commonly originates before puberty. Histologically, the lesion suggests and has been mistaken for malignant melanoma. Called also *compound melanocytoma*, *spindle cell nevus*, and *Spitz nevus*. **malignant m.**, a malignant tumor, usually developing from a nevus and consisting of black masses of cells with a marked tendency to metastasis. Called also *melanocarcinoma*, *melanoepithelioma*, *melanosarcoma*, *melanoscirrhus*, etc. **subungual m.**, melanotic whitlow.

melanomatosis (mel'ah-no'mah-to'sis) the formation of melanomas in various parts of the body.

melanomatous (mel'ah-no'mah-tus) characterized by or pertaining to melanoma.

melanonychia (mel'ah-no-nik'e-ah) [*melano-* + Gr. *onyx* nail + *-ia*] blackening of the nail by melanin pigmentation.

melanophage (mel'ah-no-fā'j) a histiocyte laden with phagocytosed melanin.

melanophore (mel'ah-no-för') [*melano-* + Gr. *phoros* bearing] a pigment cell containing melanin, especially such a cell in fishes, amphibians, and reptiles. Cf. *chromatophore*.

melanophorin (mel'ah-no'fō-rin) a principle thought to stimulate melanophores.

melanoplakia (mel'ah-no-pla'ke-ah) [*melano-* + Gr. *plax* plate + *-ia*] the formation of melanin-pigmented patches on the oral mucous membrane.

melanoprecipitation (mel'ah-no-pre-sip'i-ta'shun) the precipitation of melanin pigment; used as a test for malaria.

melanoptysis (mel'ah-no-pti-sis) [*melano-* + Gr. *ptyein* to spit] the expectoration of black sputum, as in anthracosis.

melanosarcoma (mel'ah-no-sar-ko'mah) [*melano-* + *sarcoma*] malignant melanoma.

melanosarcomatosis (mel'ah-no-sar-ko'mah-to'sis) melanomatosis.

melanoscirrhus (mel'ah-no-skir'us) [*melano-* + *scirrhus*] malignant melanoma.

melanosis (mel'ah-no'sis) [*melano-* + *-osis*] 1. melanism; a condition characterized by abnormal pigmentary deposits. 2. disorder of pigment metabolism. **circumscribed precancerous m. of Dubreuilh**, melanotic freckle of Hutchinson; see under *freckle*. **m. coli**, a condition in which the mucous membrane of the colon is black or dark brown due to the presence of pigment-laden macrophages within the lamina propria. The pigment is not true melanin. **m. oc'uli**, a usually congenital condition in which there is a diffuse increase in pigmentation of the uveal tract and often of the more superficial ocular tissues. **Riehl's m.**, a rare pigmentary affection of the skin of the face marked by itching, reddening, desquamation, and a spotty brown pigmentation. **m. scle'rae**, congenital flecks of pigmentation in the sclera. **tar m.**, a diffuse mottled pigmentation of the skin due to contact with tar or pitch.

melanosome (mel'ah-no-sōm') any of the granules within the melanocytes that contain tyrosinase and synthesize melanin; they are transferred from the melanocytes to keratinocytes.

melanotic (mel'ah-not'ik) pertaining to or characterized by the presence of melanin.

melanotrichia (mel'ah-no-trik'e-ah) [*melano-* + Gr. *thrix* hair + *-ia*] abnormal hyperpigmentation of the hair. **m. lin'guae**, black tongue.

melanotroph (mel'ah-no-trōf') a pituitary cell that elaborates melanocyte-stimulating hormone (MSH).

melanotropic (mel'ah-no-trop'ik) [*melanin* + Gr. *tropikos* turning] having an affinity for melanin; influencing the deposit of melanin.

melanthin (mel-an'thin) an amorphous and poisonous glycoside, or saponin, C₂₆H₃₅O₇, from the seeds of *Nigella sativa*.

melanuresis (mel'an-u-re'sis) melanuria.

melanuria (mel''an-u're-ah) [*melano-* + Gr. *ouron* urine + *-ia*] the excretion of darkly stained urine or of urine which turns dark on standing.

melanuric (mel''an-u'rik) pertaining to or marked by melanuria.

melanurin (mel''an-u'rin) a black substance from morbid urine in certain rare cases.

melarsoprol (mel-ar'so-pröl) chemical name: 2-[4-(4,6-diamino-1,3,5-triazin-2-yl)amino]phenyl-1,3,2-dithiarsolane-4-methanol. An antiprotozoal effective against *Trypanosoma*, $C_{12}H_{15}AsN_6OS_2$, occurring as a cream-colored powder; used in the treatment of advanced cases of African trypanosomiasis, administered intravenously.

melasma (më-laz'mah) [Gr. *melas* black] a condition in which blotchy, brown macules from one to several centimeters in diameter occur typically on the cheeks, temples, and forehead. It often appears during pregnancy (*m. gravidarum*), the macules sometimes becoming confluent ("mask of pregnancy"), and at menopause, but is most frequently seen in those taking oral contraceptives. Occasionally, the condition occurs in the absence of such factors, and infrequently in men. Called also *chloasma*. **m. addisonii**, Addison's disease. **m. gravidarum**, melasma occurring during pregnancy; see *melasma*. Called also *chloasma gravidarum* and *chloasma uterina*. **m. supracrenale**, Addison's disease.

melatonin (mel''ah-to'nin) 5-methoxy-*N*-acetyl tryptamine, a hormone synthesized by the pineal gland, which produces marked lightening of dermal pigmentation in amphibians by stimulating the aggregation of melanosomes in melanophores, and inhibits gonad development and influences estrus in mammals. It is secreted at a rate inversely dependent on environmental lighting, being synthesized and released in response to norepinephrine, whose rate of release, in turn, declines when light activates retinal photoreceptors.

Meleda disease (më'lā-dah) [*Meleda*; a small island off the Dalmatian coast, where the condition is prevalent, because of intermarriage within the small population] mal de Meleda.

melena (më-le'nah) [Gr. *melaina*, feminine of Gr. *melas* black] 1. the passage of dark, pitchy, and grumous stools stained with blood pigments or with altered blood. 2. black vomit. **m. neonatorum**, melena of the newborn, due to the extravasation of blood into the alimentary canal. **m. spu'ria**, melena in nurslings in which the blood comes from the fissured nipple of the nursing mother. **m. ve'ra**, true melena.

melenemesis (mel''ë-nëm'ë-sis) [Gr. *melaina* black + *emesis* vomiting] (*obs.*) black vomit.

melengestrol acetate (mel-en-jës'tröl) chemical name: 17-hydroxy-6-methyl-16-methylene-6,16-diene-3,20-dione acetate; a progestin and antineoplastic, $C_{25}H_{32}O_4$.

melenic (më-le'nik) marked by melena.

meletin (mel'ë-tin) quercetin.

melezitose (më-lez'i-tös) a trisaccharide, $C_{18}H_{32}O_{16}$, from manna, from the sap of poplars and conifers, which on hydrolysis yields glucose and turanose.

meli- [Gr. *meli* honey] combining form meaning sweet, or denoting a relationship to honey.

melibiase (mel'i-bi'äs) α -galactosidase.

melibiose (mel'i-bi'ös) chemical name: 6-*O*- α -D-galactopyranosyl-D-glucose. A disaccharide obtained from melitose. On hydrolysis it yields galactose and dextrose.

melicera, **meliceris** (mel'i-se'rah; mel'i-se'ris) [Gr. *meli* honey + *këros* wax] 1. a cyst filled with honey-like substance. 2. viscid, syrupy.

melitose (më-lis'i-tös) melezitose.

melilotoxin (mel'i-lo-tok'sin) bishydroxycoumarin.

melioidosis (më'le-oi-do'sis) [Gr. *melis* a distemper of asses + *eidos* resemblance] an infectious disease of rodents transmissible to man, caused by *Pseudomonas pseudomallei* and occurring in India, Malay states, and Indonesia. The human disease is characterized in some by a chronic granulomatous pneumonia or a chronic extrapulmonary form with multiple abscess formation, and in others by a fulminant septicemia with a high mortality rate despite antibiotic therapy. Formerly called *Whitmore's disease*.

Melissa (më-lis'ah) [Gr. "bee"] a genus of labiate plants. The tops and leaves of *M. officinalis*, containing tannin and an essential oil, are a cooling stimulant and diaphoretic. Called also *blue*, *lemon*, or *sweet balm*.

melissotherapy (më-lis''o-ther'ah-pe) [Gr. *melissa* bee + *therapeia* medical treatment] treatment with bee venom; called also *apiotherapy*.

melitensis (mel'i-ten'sis) brucellosis.

melitin (mel'i-tin) a preparation of soluble antigen of *Brucella melitensis*.

melitis (më-li'tis) [Gr. *mëlon* cheek + *-itis*] inflammation of the cheek.

melitococcus (mel-i-to-kok'us) (*obs.*) *Brucella melitensis*.

melitoptyalism (mel'i-to-ti'ah-lizm) [*meli-* + Gr. *ptyalon* saliva + *-ism*] the secretion of saliva containing glucose.

melitoptyalon (mel'i-to-ti'ah-lon) glucose occurring in the saliva.

melitose (mel'i-tös) a crystalline sugar from cottonseed meal and Australian manna, which is obtained from various species of *Eucalyptus*. It is a trisaccharide, $C_{18}H_{32}O_{16}$ + $5H_2O$, which on hydrolysis yields dextrose, fructose, and galactose. Called also *raffinose* and *melitriose*.

melitracen hydrochloride (mel'i-tra'sen) chemical name: 3-(10,10-dimethyl-9(10*H*)-anthracenylidene)-*N,N*-dimethyl-1-propanamine hydrochloride; a tricyclic antidepressant, $C_{21}H_{25}\cdot N\cdot HCl$.

melitriose (më-lit'ri-ös) melitose.

Melittangium (mel'i-tan'je-um) [*meli-* + Gr. *angeion* vessel] a genus of bacteria occurring in manure.

melituria (mel'i-tu're-ah) [*meli-* + Gr. *ouron* urine + *-ia*] the presence of any sugar in the urine. **m. inosi'ta**, inosituria.

melituristic (mel'i-tu'rik) pertaining to or affected with melituria.

melizame (mel'i-zām) chemical name: 3-(1*H*-tetrazol-5-yloxy)-phenol; a sweetener, $C_7H_8N_4O_2$.

melizitose (më-liz'i-tös) melezitose.

Mellaril (mel'ah-ril) trademark for preparations of thioridazine hydrochloride.

mellitum (më-li'tum), pl. *melli'ti* [L.] a pharmaceutical preparation made with honey.

mellituria (mel'i-tu're-ah) melituria.

melodidymus (mel'o-did'i-mus) [Gr. *melos* limb + *didymos* twin] an individual with a supernumerary limb.

melomelus (më-lom'e-lus) [Gr. *melos* limb + *melos* limb] a monster with normal limbs and rudimentary supernumerary limbs.

meloncus (më-long'kus) [Gr. *mëlon* cheek + *onkus* bulk] tumor of the cheek.

melonoplasty (më-lon'o-plas'te) meloplasty.

Melophagus (më-lof'ah-gus) a genus of wingless flies of the family Hippoboscidae. **M. ovi'nus**, a species that is a common ectoparasite of sheep and goats; although not a true tick, it is known as the sheep tick, or sheep ked.

meloplasty (mel'o-plas'te) [Gr. *mëlon* cheek + *plassein* to form] plastic surgery of the cheek.

melorheostosis (mel'o-re'os-to'sis) [Gr. *melos* limb + *rhein* to flow + *osteon* bone] a form of osteosclerosis or hyperostosis extending in a linear track through one of the long bones of an extremity, and consisting of proliferated ivory-like new bone. Called also *m. leri*. See *rheostosis*.

melosalgia (mel'o-sal'je-ah) [Gr. *melos* limb + *-algia*] pain in the lower limbs.

meloschisis (më-loš'ki-sis) macrostomia.

melotia (më-lo'she-ah) [Gr. *mëlon* cheek + *ous* ear + *-ia*] a developmental anomaly characterized by displacement of the ear onto the cheek.

Melotte's metal (mel-ots') [George W. Melotte, American dentist, 1835-1915] see under *metal*.

melotus (mëlo'tus) an individual exhibiting melotia.

melophalan (mel'fah-lan) [USP] chemical name: 4-[bis(2-chloroethylamino)-L-phenylalanine. A cytotoxic alkylating agent that is the phenylalanine derivative of nitrogen mustard, $C_{13}H_{18}Cl_2N_2O_2$, occurring as an off-white to buff powder; used as an antineoplastic, especially in the treatment of multiple myeloma, administered orally.

Meltzer's law, method (anesthesia) (melt'serz) [Samuel James Meltzer, American physiologist, 1851-1920] see under *law* and *method*.

Meltzer-Lyon test (method) (melt'ser li'on) [S. J. Meltzer; B. B. Vincent Lyon, Philadelphia physician, 1880-1953] see under *tests*.

MEM macrophage electrophoretic mobility (test).

member (mem'ber) [L. *membrum*] 1. a part of the body distinct from the rest in function or position. 2. a limb. See also *membrum*.

memberment (mem'ber-ment) the manner of arrangement of parts in a body.

membra (mem'bra) plural of *membrum*.

membrana (mem-brah'nah), pl. *membra'nae* [L.] a membrane, or thin skin; [NA] a general term for a thin layer of tissue covering a surface, lining a cavity, or dividing a space or organ. **m. abdom'inis**, peritoneum. **m. adamant'i'na**, cuticula dentis. **m. adventi'tia**, 1. tunica adventitia. 2. decidua capsularis. 3. a membrane not normal to the part; adventitious membrane. **m. agni'na**, amnion. **m. atlantooccipita'lis ante'rior** [NA], anterior atlanto-occipital membrane; a single midline ligamentous structure that passes from the anterior arch of the atlas to the anterior margin of the foramen magnum, and corresponds in position with the anterior longitudinal ligament of the vertebral

column. **m. atlantooccipita'lis poste'rior** [NA], posterior atlanto-occipital membrane: a single midline ligamentous structure that passes from the posterior arch of the atlas to the posterior margin of the foramen magnum, and corresponds in position with the ligamenta flava. **m. basa'lis duc'tus semicircula'ris** [NA], basal membrane of semicircular duct: the basement membrane underlying the epithelium of a semicircular duct. **m. basila'ris duc'tus cochlea'ris**, lamina basilaris ductus cochlearis. **m. cadu'ca**, see *membranae deciduae*. **m. capsula'ris**, capsula articularis. **m. choriocapilla'ris**, lamina choriocapillaris. **membra'nae decid'uae** [NA], decidua or deciduous membranes: the endometrium of the pregnant uterus, all of which, except the deepest layer, is shed at parturition. See subentries under *decidua*. **m. elas'tica laryn'gis**, m. fibroelastica laryngis. **m. epipapilla'ris**, an abnormal fibrous membrane on the optic disk. **m. fibroelas'tica laryn'gis** [NA], fibroelastic membrane of larynx: the fibroelastic layer beneath the mucous coat of the larynx, comprising the quadrangular membrane and the conus elasticus; called also *m. elastica laryngis*. **m. fibro'sa cap'sulae articula'ris** [NA], fibrous membrane of articular capsule: the outer of the two layers of the articular capsule of a synovial joint, composed of dense white fibrous tissue; called also *stratum fibrosum capsulae articularis*. **m. flac'cida**, pars flaccida membranae tympani. **m. fus'ca**, lamina fusca sclerae. **m. germinati'va**, blastoderm. **m. granulo'sa**, layers of cuboidal epithelial cells at the periphery of an ovarian follicle and surrounding the antrum or fluid-filled cavity. **m. granulo'sa exter'na**, the external granular layer of the retina. **m. granulo'sa inter'na**, the internal granular layer of the retina. **m. hyaloi'dea**, m. vitrea. **m. hyothyreo'i'dea**, m. thyrohyoidea. **m. intercosta'lis exter'na** [NA], external intercostal membrane: any of the aponeurotic bands parallel with, and perhaps replacing, the fibers of the external intercostal muscles in the spaces between the costal cartilages, from the ventral tips of the ribs medially to the sternum; called also *ligamenta intercostalia externa*. **m. intercosta'lis inter'na** [NA], internal intercostal membrane: any of the aponeurotic bands parallel with, and perhaps replacing, the fibers of the internal intercostal muscles in the spaces between the ribs, from the angles of the ribs medially to the vertebral column; called also *ligamenta intercostalia interna*. **m. interos'sea antebra'chii** [NA], **m. interos'sea antibra'chii**, interosseous membrane of forearm: a thin fibrous sheet that connects the bodies of the radius and ulna, passing from the interosseous margin of the radius to that of the ulna. **m. interos'sea cru'ris** [NA], interosseous membrane of leg: a thin aponeurotic lamina attached to the interosseous margins of the tibia and fibula, deficient for a short distance at the proximal end of the bones; it separates the muscles on the anterior and posterior parts of the leg. **m. lim'itans**, 1. one of the limiting membranes of the retina; see *external and internal limiting membrane* (def. 1), under *membrane*. 2. the limiting membrane of glia fibrils and perivascular feet separating the neural parenchyma from the pia and blood vessels. **m. muco'sa na'si**, tunica mucosa nasi. **m. muco'sa ves'icae fel'leae**, tunica mucosa vesicae felleae. **m. nic'titans**, 1. plica semilunaris conjunctivae. 2. nictitating membrane. **m. obturato'ria** [NA], obturator membrane: a strong membrane that fills the obturator foramen except superiorly at the obturator groove, where a deficiency is left, the obturator canal. **m. obturato'ria [stape'dis]**, m. stapedis. **m. obtura'trix**, m. obturatoria. **m. orbita'lis musculo'sa**, a system of smooth muscles deep in the orbit. **m. perfora'ta**, a term sometimes used to designate the first appearance of dentin in the fetus, manifested as a thick limiting line between the ameloblasts and odontoblasts. **m. perine'i**, NA alternative for *fascia diaphragmatis urogenitalis inferior*. **m. pituito'sa**, tunica mucosa nasi. **m. pro'pria**, lamina propria mucosae. **m. pro'pria duc'tus semicircula'ris** [NA], proper membrane of semicircular duct: the outer, loose, connective tissue layer of a semicircular duct. **m. pupilla'ris** [NA], pupillary membrane: a mesodermal layer attached to the rim or front of the iris during embryonic development, sometimes persisting in the adult. **m. quadrangula'ris** [NA], quadrangular membrane: the upper part of the fibroelastic membrane of the larynx. **m. reticula'ris duc'tus cochlea'ris** [NA], **m. reticula'ta**, reticular membrane: a netlike membrane over the spiral organ; the free ends of the outer hair cells pass through its apertures. **m. ruyschia'na**, lamina choriocapillaris. **m. saccifor'mis**, the synovial membrane of the inferior radioulnar articulation. **m. sero'sa**, 1. tunica serosa. 2. the chorion. **m. seroti'na**, decidua basalis. **m. spira'lis duc'tus cochlea'ris**, NA alternative for *paries tympanicus ductus cochlearis*. **m. stape'dis** [NA], stapedial membrane: a membrane filling the arch formed by the crura and base of the stapes; called also *m. obturatoria [stapedis]*. **m. statoconio'rum macula'rum** [NA], statoconic membrane of maculae: the gelatinous membrane surmounting the maculae, containing the statoconia, and having special sensory hairs projecting into it. **m. ster'ni** [NA], sternal membrane: the thick fibrous membrane that envelops the sternum; it is formed by the intermingling of fibers of the radiate sternocostal ligaments, the periosteum, and the tendinous origin of the pectoralis

major. **m. succin'gens**, the pleura. **m. suprapleura'lis** [NA], suprapleural membrane: the strengthened portion of the endothoracic fascia attached to the inner part of the first rib and the transverse process of the seventh cervical vertebra. **m. synovia'lis cap'sulae articula'ris** [NA], synovial membrane of articular capsule: the inner of the two layers of the articular capsule of a synovial joint, composed of loose connective tissue and having a free smooth surface that lines the joint cavity. It secretes the synovial fluid. Called also *stratum synoviale capsulae articularis*. **m. tecto'ria** [NA], tectorial membrane: a strong fibrous band connected cranially with the basilar part of the occipital bone and caudally with the dorsal surface of the bodies of the second and third cervical vertebrae. It is actually the cranial prolongation of the deeper portion of the posterior longitudinal ligament of the vertebral column. **m. tecto'ria duc'tus cochlea'ris** [NA], tectorial membrane of cochlear duct: a delicate gelatinous mass resting on the spiral organ of the ear and connected with the hairs of the hair cells; called also *Corti's membrane*. **m. ten'sa**, pars tensa membranae tympani. **m. thyrohyoi'dea** [NA], thyrohyoid membrane: a broad fibroelastic sheet attached above to the upper margin of the posterior surface of the hyoid bone and below to the upper border of the thyrohyoid cartilage; called also *m. hyothyreoidea*. **m. tym'pani** [NA], tympanic membrane: the obliquely placed, thin membranous partition between the external acoustic meatus and the tympanic cavity. The greater portion, the pars tensa, is attached by a fibrocartilaginous ring to the tympanic plate of the temporal bone; the much smaller, triangular portion, the pars flaccida, is situated anterosuperiorly between the two malleolar folds. Called also *drumhead* and, loosely, *eardrum*. **m. tym'pani secunda'ria** [NA], secondary tympanic membrane: the membrane that closes in the fenestra cochlearis; called also *Scarpa's membrane*. **m. versic'olor** of Fielding, tapetum, def. 2. **m. vestibula'ris** [NA alternative], **m. vestibula'ris [Reiss'neri]**, paries vestibularis ductus cochlearis. **m. vi'brans**, pars tensa membranae tympani. **m. vitelli'na**, vitelline membrane. **m. vit'rea** [NA], vitreous membrane: a delicate boundary layer investing the vitreous body of the eye; called also *m. hyaloidea* or *hyaloid membrane*.

membranaceous (mem'brah-na'shus) [L. *membranaceus*] of the nature of a membrane.

membranae (mem-bra'ne) [L.] plural of *membrana*.

membranate (mem'brah-nāt) having the character of a membrane.

membrane (mem'brān) a thin layer of tissue which covers a surface, lines a cavity, or divides a space or organ; see also *membrana*. **abdominal m.**, peritoneum. **accidental m.**, false m. **adamantine m.**, cuticula dentis. **adventitious m.**, a membrane not normal to the part. **alveolocapillary m.**, an exquisitely thin tissue barrier, the mechanism for gas exchange between alveolar air and capillary blood in the lung. **alveolodental m.**, periodontium. **anal m.**, cloacal m. **animal m.**, a thin membranous diaphragm, as of bladder, used as a dialyzer. **aponeurotic m.**, aponeurosis. **arachnoid m.**, arachnoidea. **Ascherson's m.**, the covering of casein enclosing the milk globules. **asphyxial m.**, hyaline m. (def. 2); so called because of its interference with gaseous exchange in the lungs. **atlanto-occipital m., anterior**, membrana atlanto-occipitalis anterior. **atlanto-occipital m., posterior**, membrana atlantooccipitalis posterior. **Baer's m.**, chromicized pig's bladder, used as a dressing over cut bone surfaces. **basal m. of semicircular duct**, membrana basalis ductus semicircularis. **basement m.**, the delicate layer of extracellular condensation of mucopolysaccharides and proteins underlying the epithelium of mucous membranes and secreting glands. **basilar m. of cochlear duct**, lamina basilaris ductus cochlearis. **Bichat's m.**, Henle's fenestrated m. **birth m's**, the amnion and chorion. **Bowman's m.**, a thin layer of the cornea composed of condensed stroma, between the outer layer of stratified epithelium and the substantia propria; called also *lamina limitans anterior corneae* [NA]. **Bruch's m.**, lamina basalis choroidea. **Brunn's m.**, the epithelium of the olfactory region of the nose. **bucconasal m.**, oronasal m. **buc-copharyngeal m.**, 1. fascia pharyngobasilaris. 2. oropharyngeal m. **capsular m.**, capsula articularis. **capsulopupillary m.**, membrana pupillaris. **cell m.**, plasma m. **chorioallantoic m.**, chorioallantois. **chromatic m.**, a continuous layer of chromatin substance situated on the internal surface of a nuclear membrane. **cloacal m.**, the thin, temporary barrier between the hindgut and the exterior, formed by the outer and inner germ layers of the embryo; called also *anal m.* and *anal plate*. **complex m.**, a membrane made up of several layers differing in structure. **compound m.**, a membrane, like that of the tympanum, made up of two distinct layers. **Corti's m.**, membrana tectoria ductus cochlearis. **costocoracoid m.**, fascia clavipectoralis. **cribriform m.**, fascia cribrosa. **cri-cothyroid m.**, cricovocal m., conus elasticus laryngis. **croupous m.**, a false membrane formed in true croup. **cyc-litic m.**, a false membrane which sometimes covers the vitreous body in cyclitis. **Debove's m.**, the delicate layer between the epithelium and the tunica propria of the bronchial, tracheal, and intestinal mucous membranes. **decidual m's**, deciduous

m's, *membranae deciduae*. **Demours' m.** (*obs.*), lamina limitans posterior corneae. **dentinoenamel m.**, a continuous thin membrane laid down by ameloblasts adjoining the basement membrane separating them from the dentin in an early developing tooth. **Descemet's m.**, a thin hyaline membrane between the substantia propria and the endothelial layer of the cornea; called also *lamina limitans posterior corneae* [NA]. **diphtheritic m.**, a false membrane characteristic of diphtheria and resulting from coagulation necrosis. **drum m.**, *membrana tympani*. **Duddell's m.** (*obs.*), lamina limitans posterior corneae. **egg m.**, any of several investments surrounding the ovum or egg; if derived from the ovum itself, as the vitelline membrane, it is *primary*; if from the follicular cells, as the zona pellucida, it is *secondary*; if from the oviduct, as the albumen around rabbit's egg or the albumen and shell of hen's egg, it is *tertiary*. Called also *egg envelope* and, collectively, *lemma*. **elastic m.**, a variety of membrane composed largely of elastic fibers. **elastic m., external**, a fenestrated elastic membrane that constitutes the innermost component of the tunica adventitia of arteries. **elastic m., internal**, a fenestrated elastic membrane that constitutes the outermost component of the tunica intima of arteries. **enamel m.**, 1. cuticula dentis. 2. the inner layer of cells within the enamel organ of the dental germ in the fetus; called also *Hannover's intermediate m.* **endoneural m.**, neurilemma. **exocoelomic m.**, Heuser's m. **extraembryonic m's**, the trophoblastic parts of the conceptus that support the embryo or fetus by attachment, mechanical protection, endocrine action, and the mediation of chemical exchange with the maternal circulation. They include the yolk sac, allantois, amnion, umbilical cord, and chorion, including the placenta. To these, some would add the maternal component, the decidua. Called also *fetal m's*. **false m.**, a morbid pellicle or skinlike layer resembling an organized and living membrane, but made up of coagulated fibrin with bacteria and leukocytes, such as may be formed on mucous membranes in diphtheria. **fenestrated m.**, one of the multiply-perforated elastic sheets of the tunica intima and tunica media of arteries. **fertilization m.**, a strong membrane formed around the fertilized ovum in some species of animals by adhesion of part of the contents of the cortical granules to the inner surface of the vitelline membrane; it prevents the entry of additional spermatozoa. **fetal m's**, extraembryonic m's. **fibroelastic m. of larynx**, *membrana fibroelastica laryngis*. **fibrous m. of articular capsule**, *membrana fibrosa capsulae articularis*. **Fielding's m.**, tapetum, def. 2. **germinal m.**, blastoderm. **glassy m.**, 1. the basement membrane of a vesicular ovarian follicle which in cross-section appears as a distinct brilliant line and which persists in the ovary long after its follicle has degenerated. Called also *m. of Slavianski*. 2. lamina basalis chorioideae. 3. hyaline m., def. 1. **glomerular m.**, the membrane covering a glomerular capillary. **gradocol m's**, thin membranes made of colloidion or similar substances and graded as to porosity; used in ultrafiltration and sometimes to estimate the diameters of viruses. **ground m.**, inophragma. **Hal-ler's m.**, lamina vasculosa chorioideae. **Hannover's intermediate m.**, enamel m., def. 2. **haptogen m.**, the membrane of protein matter formerly believed to enclose milk globules. **Held's limiting m.**, blood-brain barrier. **Henle's m.**, 1. posterior border lamella of Fuchs; see under *lamella*. 2. formerly, the lamina basalis chorioideae. **Henle's elastic m.**, a fenestrated layer between the outer and middle tunics of certain arteries. **Henle's fenestrated m.**, a subendothelial fibroelastic fenestrated layer in the tunica intima of an artery; called also *Bichat's m.* **Heuser's m.**, a delicate sac of mesoblastic tissue that develops as a lining of the blastocyst or chorionic cavity just after implantation, forms the exocoelomic cavity, and quickly disappears; called also *exocoelomic membrane*. **Hovius' m.** (*obs.*), the entochorioideae. **Huxley's m.**, the cellular membrane of the root sheath and proximal end of a hair. **hyaline m.**, 1. the membrane between the outer root sheath and the inner fibrous layer of a hair follicle. 2. a layer of eosinophilic hyaline material lining the alveoli, alveolar ducts, and bronchioles, found at autopsy in infants who have died of respiratory distress syndrome of the newborn. Called also *asphyxial membrane* and *vernix membrane*. See *respiratory distress syndrome*, under *syndrome*. **hyaloid m.**, *membrana vitrea*. **hymenal m.**, hymen. **hyoglossal m.**, a fibrous lamina connecting the under surface of the tongue with the hyoid bone. **hyothyroid m.**, *membrana thyrohyoidea*. **intercostal m., external**, *membrana intercostalis externa*. **intercostal m., internal**, *membrana intercostalis interna*. **interosseous m., radio-ulnar**, *interosseous m. of forearm*, *membrana interossea antebrachii*. **interosseous m. of leg**, *membrana interossea cruris*. **interspinal m's**, see *ligamentum interspinale*. **intersutural m.**, the pericranium lying between the cranial sutures. **ion-selective m.**, a membrane that is more permeable to particular types of ions than to other types, e.g., K^+ -selective glass membrane. Many biological membranes exhibit ion-selective behavior. **Jackson's m.**, a delicate curtain or web of adhesions (regarded by some as a sheet of peritoneum) which may extend from the lateral abdominal wall to the cecum, covering the cecum and producing obstruction of the bowel; called also *Jackson's veil*. **Jacob's m.**, layer of rods and cones. **keratoge-**

nous m., matrix unguis. **Kölliker's m.**, *membrana reticularis ductus cochlearis*. **Krause's m.**, Z band; see under *band*. **ligamentous m.**, *membrana tectoria*. **limiting m.**, a membrane which constitutes the border of some tissue or structure. **limiting m., external**, 1. a thin fenestrated sheet in the retina, through which extend the visual rods and cones. 2. a membrane investing the external surface of the embryonic neural tube. **limiting m., internal**, 1. the innermost layer of the retina. 2. a membrane lining the internal surface of the embryonic neural tube. **Mauthner's m.**, axolemma. **medullary m.**, endosteum. **mucocutaneous m.**, a membrane that is partly mucous and partly cutaneous, like that of the tympanum. **mucous m.**, tunica mucosa. **mucous m., proper**, lamina propria mucosae. **mucous m. of colon**, tunica mucosa coli. **mucous m. of esophagus**, tunica mucosa esophagi. **mucous m. of gallbladder**, tunica mucosa vesicae felleae. **mucous m. of mouth**, tunica mucosa oris. **mucous m. of pharynx**, tunica mucosa pharyngis. **mucous m. of rectum**, tunica mucosa recti. **mucous m. of small intestine**, tunica mucosa intestini tenuis. **mucous m. of stomach**, tunica mucosa ventriculi. **mucous m. of tongue**, tunica mucosa linguae. **mucous m. of ureter**, tunica mucosa ureteris. **mucous m. of urinary bladder**, tunica mucosa vesicae urinariae. **Nasmyth's m.**, primary (enamel) cuticle. **nictitating m.**, a transparent fold of skin lying deep to the other eyelids at the mesial side, which may be drawn over the front of the eyeball; the so-called third eyelid, found in reptiles and birds generally and in many mammals. **nuclear m.**, 1. either of the membranes, inner and outer, comprising the nuclear envelope. 2. nuclear envelope. **oblique m. of forearm**, *chorda obliqua membranae interossea antebrachii*. **obturator m.**, *membrana obturatoria*. **obturator m. of atlas, anterior**, *membrana atlantooccipitalis anterior*. **obturator m. of atlas, posterior**, *membrana atlantooccipitalis posterior*. **obturator m. of larynx**, *membrana thyrohyoidea*. **occipito-axial m., long**, *membrana tectoria*. **olfactory m.**, the olfactory portion of the mucous membrane lining the nasal fossa. **oral m.**, fascia pharyngobasilaris. **oronasal m.**, a thin epithelial plate separating the nasal pits from the oral cavity of the embryo. **oropharyngeal m.**, a transient embryonic septum at the cranial limit of the foregut, in the depths of the stomodaeum; called also *buccopharyngeal m.* **otolithic m.**, *membrana statoconiorum macularum*. **ovular m.**, vitelline m. **palatine m.**, the membrane covering the roof of the mouth. **pericolic m., pericolic m.**, occasional bands of peritoneum extending between the abdominal wall and the serosa of the colon. **peridental m.**, periodontium. **perineal m.**, fascia diaphragmatis urogenitalis inferior. **periodontal m.**, periodontal ligament. **periobital m.**, periorbita. **pharyngeal m.**, pharyngobasilar m., fascia pharyngobasilaris. **pituitary m. of nose**, tunica mucosa nasi. **placental m.**, the semipermeable membrane that separates the fetal from the maternal blood in the placenta. In the human (hemochorial) placenta, it is composed of fetal vascular endothelium, cytotrophoblast, and syncytium, and it becomes thinner as pregnancy progresses. Called also *placental barrier*. **plasma m.**, the structure enveloping a cell, enclosing the cytoplasm, and forming a selective permeability barrier; it consists of lipids, proteins, and some carbohydrates, the lipids thought to form a bilayer in which integral proteins are embedded to varying degrees. Called also *cell m.*, *cytoplasmic m.*, and *plasmalemma*. **platelet demarcation m.**, a more or less tridimensional system of paired membranes that serve to partition the megakaryocyte cytoplasm, each partition containing azurophilic granules and representing a future blood platelet. **pleuropericardial m.**, a membrane in the embryo separating the heart and the lung sac. **pleuro-peritoneal m.**, a membrane in the embryo separating the pleural cavity from the peritoneal cavity and developing into a part of the diaphragm. **proligerous m.**, cumulus oophorus. **proper m. of semicircular duct**, *membrana propria ductus semicircularis*. **prophyllactic m.**, pyophyllactic m. **pseudoserous m.**, a membrane resembling serous membrane, but differing from it in structure. **pulmonary hyaline m.**, hyaline membrane, def. 2. **pupillary m.**, *membrana pupillaris*. **purpurogenous m.**, the pigment epithelium of the eye. **pyogenic m.**, a membrane which produces pus. **pyophyllactic m.**, a fibrinous membrane lining a pus cavity and tending to prevent reabsorption of injurious materials. **quadrangular m.**, *membrana quadrangularis*. **Ranvier's m.**, *Rénaut's layer*. **Reichert's m.** (*obs.*), lamina limitans anterior corneae. **Reissner's m.**, paries vestibularis ductus cochlearis. **reticular m.**, reticulated m., *membrana reticularis ductus cochlearis*. **Ruysch's m.**, *ruyschian m.*, lamina choroidocapillaris. **Scarpa's m.**, *membrana tympani secundaria*. **schneiderian m.**, tunica mucosa nasi. **Schwann's m.**, neurilemma. **semipermeable m.**, a membrane that permits the passage of a solvent, such as water, but prevents the passage of the dissolved substance, or solute. **serous m.**, tunica serosa. **shell m.**, a double fibrous layer lining the shell of the egg of some animals, such as birds. **Shrapnell's m.**, pars flaccida membranae tympani. **m. of Slavianski**, glassy m., def. 1. **slit m.**, one of the exceedingly thin membranes that bridge the slit

pores between adjacent pedicels of the podocytes of the renal glomerulus, and close the pores at their bases. **spiral m. of cochlear duct**, *membrana spiralis ductus cochlearis*. **stapedial m.**, *membrana stapedis*. **statoconic m. of maculae**, *membrana statoconiorum macularum*. **sternal m.**, *m. of sternum*, *membrana sterni*. **striated m.**, see *zona pellucida*, def. 1. **subenamel m.**, a membrane said to exist between the enamel of a tooth and the stellate reticulum. **subepithelial m.**, basement membrane. **submucous m.**, *tela submucosa*. **submucous m. of stomach**, *tela submucosa ventriculi*. **suprapleural m.**, *membrana suprapleuralis*. **synaptic m.**, the layer separating the neuroplasm of an axon from that of the body of the nerve cell with which it makes synapsis. **synovial m. of articular capsule**, *membrana synovialis capsulae articularis*. **tarsal m.**, orbital septum. **tectorial m.**, *membrana tectoria*. **tectorial m. of cochlear duct**, *membrana tectoria ductus cochlearis*. **tendinous m.**, aponeurosis. **Tenon's m.**, *vagina bulbi*. **thyreohyoid m.**, *membrana thyreohyodea*. **Traube's m.**, a film of potassium ions formed at the plane of contact of the two liquids, when a solution of potassium ferrocyanide is brought into contact with a solution of a copper salt. **tympenic m.**, the membrane separating the middle from the external ear; see *membrana tympani*. **tympenic m., secondary**, *membrana tympani secundaria*. **undulating m.**, a protoplasmic membrane running like a fin along the body of certain protozoa; its margin is formed by a flagellum which may continue free beyond the undulating membrane. **unit m.**, the trilaminar structure of the plasma membrane as seen under the electron microscope and postulated to be the same for the membranes of all cells, the cell nucleus, and organelles (mitochondria, etc.). **vascular m. of viscera**, *tela submucosa*. **vernix m.**, hyaline m. (def. 3); so called because it was originally thought to be the result of aspiration of vernix by the fetus *in utero*. **vestibular m. of cochlear duct**, *paries vestibularis ductus cochlearis*. **virginal m.**, hymen. **vitelline m.**, the cytoplasmic, noncellular membrane surrounding the eggs of various animals, especially the membrane enveloping the yolk of teleostic eggs. **vitreous m.**, 1. *membrana vitrea*. 2. lamina basalis choroidea. 3. lamina limitans posterior corneae. 4. hyaline membrane (def. 1). **Volk-mann's m.**, a thin, yellowish membrane, studded with miliary tubercles, lining the fibrous wall of a tubercular abscess. **Wachendorff's m.**, 1. *membrana pupillaris*. 2. plasma m. **yolk m.**, vitelline m. **Zinn's m.**, *zonula ciliaris*.

membranectomy (mem'brah-nek'to-me) excision of a membrane.

membranelle (mem'brah-nel') a small membrane composed of cilia, seen in ciliate organisms.

membraniform (mem-bra'ni-form) resembling a membrane.

membranin (mem'brah-nin) a preparation made from the cell wall and/or cell membrane of yeast cells.

membranocartilaginous (mem'brah-no-kar'ti-laj'i-nus) 1. developed in both membrane and cartilage. 2. partly cartilaginous and partly membranous.

membranoid (mem'brah-noid) resembling a membrane.

membranolysis (mem'brān-ol'i-sis) disruption of a cell membrane.

membranous (mem'brah-nus) [*L. membranosus*] pertaining to or of the nature of a membrane.

membrum (mem'brum), pl. *mem'bra* [*L.*] a limb, or member, of the body; [NA] a general term for one of the limbs, that is, the upper (arm, forearm, hand), or lower (thigh, leg, foot). Called also *extremitas* (pl. *extremitates*) or *extremity*. **m. infe'rius** [NA], the lower limb of the body (thigh, leg, and foot); called also *extremitas inferior*. **m. mulie'bre**, clitoris. **m. supe'rius** [NA], the upper limb of the body (arm, forearm, and hand); called also *extremitas superior*. **m. viri'le**, penis.

memory (mem'o-re) [*L. memoria*] that mental faculty by which sensations, impressions, and ideas are recalled. **anterograde m.**, a memory serviceable for events long past, but not able to acquire new recollections. **coast m.**, tropical amnesia. **eye m.**, visual memory. **immunologic m.**, the capacity of the immune system to respond more rapidly and strongly to subsequent antigenic challenge than to the first exposure. **kines-thetic m.**, the memory of movements in the limbs and other parts of the body. **long-term m.**, memory that is retained over long periods of time. **screen m.**, a consciously tolerable memory serving as a "screen" for another memory that may be disturbing or emotionally painful if recalled. **short-term m.**, memory that is lost within a brief period (seconds, minutes, or longer) unless reinforced. **visual m.**, memory for visual impressions.

memotine hydrochloride (mem'o-tēn) chemical name: 3,4-dihydro-1-[(4-methoxyphenoxy)methyl] isoquinoline hydrochloride; an antiviral agent, $C_{17}H_{17}NO_2 \cdot HCl$.

menacme (mē-nak'me) [*Gr. mēn month + akmē top*] 1. the height of menstrual activity. 2. that period of a woman's life which is marked by menstrual activity.

menadiol sodium diphosphate (men'ah-di'ol) [USP] chemical name: 2-methyl-1,4-naphthalenediol bis(dihydrogen phos-

phate) tetrasodium salt hexahydrate. A synthetic, water-soluble derivative of menadione (vitamin K_3) to which it is converted in the body, $C_{11}H_8N_4O_6P_2 \cdot 6H_2O$, occurring as a white to pink powder, and used as a prothrombinogenic vitamin for the same purposes as menadione (q.v.); administered orally, intravenously, and subcutaneously.

menadione (men'ah-di'ōn) [USP] chemical name: 2-methyl-1,4-naphthalenedione. A synthetic, oil-soluble vitamin K derivative, $C_{11}H_8O_2$, occurring as a bright yellow, crystalline powder; used as a source of vitamin K in the treatment of hemorrhagic conditions associated with hypoprothrombinemia, such as obstructive jaundice, biliary fistula, sprue, celiac disease, and ulcerative colitis, and after prolonged use of salicylates, administered orally and intramuscularly. Called also *menaphthone* and *vitamin K_3* . **m. sodium bisulfite** [USP], a water-soluble derivative of menadione, $C_{11}H_8NaO_6S \cdot 3H_2O$, occurring as a white crystalline powder, having the same actions and uses as menadione; administered intravenously, and subcutaneously, and sometimes orally and intramuscularly.

Menagen (men'ah-jen) trademark for a preparation of estrone.

menalgia (men-al'je-ah) [*Gr. mēn month + -algia*] pain accompanying menstruation.

menaphthone (men-af'thōn) menadione.

menaquinone (men'ah-kwin'ōn) any of a series of compounds in which the phytyl side chain of phytonadione (vitamin K_1) is replaced by a side chain of prenyl units and which have vitamin K activity; they are synthesized, in particular, by gram-positive bacteria. Called also *farnoquinone* and *vitamin K_2* .

menarchal (mē-nar'kal) pertaining to menarche.

menarche (mē-nar'ke) [*Gr. mēn month + archē beginning*] the establishment or beginning of the menstrual function.

menarcheal, menarchial (mē-nar'ke-al) pertaining to or characterized by the establishment of the menstrual function (menarche).

Mendel's law (men'delz) [Gregor Johann Mendel, 1822–1884, Austrian monk and naturalist] see under *law*.

Mendel's reflex [Kurt Mendel, German neurologist, 1874–1946] see under *reflex*.

Mendel's test [Felix Mendel, German physician, 1862–1912] see *Mantoux test*, under *tests*.

Mendel-Bekhterev reflex, sign (men'del-bek-ter'yev) [Kurt Mendel; V. M. Bekhterev, Russian neurologist, 1857–1927] see under *reflex* and *sign*.

Mendeléeff's (Mendeleev's) law, test (men'dē-la'efs) [Dimitri Ivanovich Mendeléeff, Russian chemist, 1834–1907] see *periodic law*, under *law*, and see under *tests*.

mendelevium (men'dē-le've-um) [Dimitri Ivanovich Mendeléeff] the radioactive chemical element of atomic number 101, atomic weight 256, symbol Md, originally discovered in debris from a thermonuclear explosion in 1952.

mendelian (men-de'le-an) named for Gregor Johann Mendel; see under *character*, and see *Mendel's law*, under *law*.

mendelism (men'del-izm) see *mendelian characters*, under *character*, and *Mendel's law*, under *law*.

mendelizing (men'del-iz'ing) exhibiting the simple patterns of inheritance of various contrasting traits elaborated by Gregor Mendel; see *Mendel's laws*, under *law*.

Mendelsohn's test (men'del-sōnz) [Martin Alfred Mendelsohn, German physician, 1860–1930] see under *tests*.

Menest (men'est) trademark for a preparation of esterified estrogens.

Ménétrier's disease (mān'a-tre-ärz') [Pierre Ménétrier, French physician, 1859–1935] giant hypertrophic gastritis.

Menformon (men'for-mon) trademark for a preparation of estrone.

Menge's pessary (meng'gez) [Karl Menge, Heidelberg gynecologist, 1864–1945] see under *pessary*.

menhidrosis (men'hid-ro'sis) [*Gr. mēn month + hidrōs sweat*] a form of vicarious menstruation consisting of monthly discharge of sweat, sometimes bloody.

menidrosis (men'id-ro'sis) menhidrosis.

Meniere's disease (syndrome) (men'e-ärz') [Prosper Meniere, French physician, 1799–1862. The spelling *Meniere* appears on his birth certificate, *Menière* and *Ménière* on his works. Ménière was the choice of his son] see under *disease*.

meningeal (mē-nin'je-al) of or pertaining to the meninges.

meningematoma (mē-nin'jem-ah-to'mah) hematoma of the dura mater.

meningeocortical (mē-nin'je-o-kor'ti-kal) of or pertaining to the meninges and cortex of the brain.

meningeoma (mē-nin'je-o'mah) meningioma.

meningeorrhaphy (mē-nin'je-or'ah-fe) [*Gr. mēnix membrane + raphē suture*] suture of the meninges.

meninges (mē-nin'jēz) [*Gr., pl. of mēnix membrane*] [NA] the three membranes that envelop the brain and spinal cord: the dura mater, pia mater, and arachnoid.

meninghematoma (mě-nin'j'hem-ah-to'mah) meningematoma.

meningina (men'in-jī'nah) (*obs.*) pia-arachnoid.

meninginitis (men'in-jin-i'tis) inflammation of the meningina (pia-arachnoid); leptomeningitis.

meningioma (mě-nin'je-o'mah) [*meninges* + *-oma* tumor] a hard, slow-growing, usually vascular tumor which occurs mainly along the meningeal vessels and superior longitudinal sinus, invading the dura and skull and leading to erosion and thinning of the skull. **angioblastic m.**, angioblastoma.

meningiomas (mě-nin'je-o'mah-to'sis) a condition characterized by the formation of multiple meningiomas.

meningism (mě-nin'jizm) 1. the symptoms and signs of meningeal irritation associated with acute febrile illness or dehydration without actual infection of the meninges. Called also *Duprès disease* or *syndrome*. 2. a hysterical simulation of meningitis.

meningismus (men'in-jis'mus) meningism.

meningitic (men'in-jit'ik) pertaining to or of the nature of meningitis.

meningitides (men'in-jit'i-déz) plural of *meningitis*.

meningitis (men'in-jit'is), pl. *meningitides* [Gr. *mēnix* membrane + *-itis*] inflammation of the meninges. When it affects the dura mater, the disease is termed *pachymeningitis*; when the arachnoid and pia mater are involved, it is called *leptomeningitis*, or meningitis proper. **acute aseptic m.**, aseptic m. **African m.**, see under *trypanosomiasis*. **amebic m.**, an acute meningoencephalitis caused by invasion of the central nervous system by one of the normally free-living species of *Acanthamoeba*, *Hartmannella*, or *Naegleria*. **aseptic m.**, the name given to a mild form of meningitis, most cases of which are caused by viruses; see *viral m.* **m. of the base, basilar m.**, that which affects the meninges at the base of the brain. **benign lymphocytic m.**, viral m. **m. carcinomato'sa**, a misnomer for the condition of widespread carcinomatous infiltration of the meninges; the condition is not inflammatory. **cerebral m.**, inflammation of the meninges of the brain. **cerebrospinal m.**, an inflammation of the membranes of the brain and spinal cord; it may be caused by many different organisms. Abbreviated C.S.M. **eosinophilic m.**, meningitis resulting from infection with *Angiostrongylus cantonensis*, characterized by an increase in lymphocytes and a high percentage of eosinophils in the cerebrospinal fluid; called also *eosinophilic meningoencephalitis*. **epidemic cerebrospinal m.**, an acute infectious disease attended by seropurulent inflammation of the membranes of the brain and spinal cord, and due to infection by the *Neisseria meningitidis*. The disease appears usually in epidemics, and the symptoms are those of acute cerebral and spinal meningitis, in addition to which there is usually an eruption of erythematous, herpetic, or hemorrhagic spots upon the skin. The fulminating or malignant form is known as *Waterhouse-Friderichsen syndrome*. Called also *cerebrospinal fever* and *meningococcic m.* **external m.**, pachymeningitis externa. **gummatous m.**, meningitis during the tertiary stage of syphilis in which there are many small gummata in the membranes. **internal m.**, pachymeningitis interna. **lymphocytic m.**, viral m. **meningococcal m.**, epidemic cerebrospinal m. **Mollaret's m.**, recurrent febrile attacks, malaise, headache, and meningeal signs accompanied by a marked polymorphonuclear inflammatory reaction in the cerebrospinal fluid. **mumps m.**, an aseptic meningitis secondary to mumps. **m. necrotox'ica reacti'va**, a condition marked by areas of focal cerebral softening with symptoms and signs of meningeal irritation suggesting primary inflammatory changes of the cerebral cortex. **occlusive m.**, leptomeningitis of children which leads to the closure of the lateral and median apertures of the fourth ventricle. **m. ossif'icans**, ossification of the cerebral meninges. **otitic m.**, a form that sometimes complicates an attack of otitis media. **parameningococcic m.**, meningitis caused by parameningococcus. **posterior m.**, meningitis of the cerebellar region. **purulent m.**, that which is suppurative. **Quincke's m.**, acute aseptic meningitis. **septicemic m.**, that which is due to septic blood poisoning. **m. sero'sa**, serous m. **m. sero'sa circumscripta**, meningitis giving rise to cystic accumulations of serous fluid which cause symptoms of tumors. **m. sero'sa circumscripta cyst'ica**, chronic meningitis with cyst formation. **serous m.**, meningitis with serous exudation into the ventricles and subarachnoid spaces and slight to moderate changes in the spinal fluid. **simple m.**, that in which there is an exudate of fibrin and serum. **spinal m.**, inflammation of the meninges of the spinal cord. **sterile m.**, meningitis in which there is no infection, e.g., that caused by injection of contrast medium to myelography. **m. sympath'ica**, a condition of the cerebrospinal fluid caused by inflammation in the neighborhood of the meninges. It is marked by increase in the pressure of the fluid and increase in its albumin and cellular content. The fluid is sterile and there may be symptoms of meningitis. **torula m.**, **torular m.**, meningitis due to infection with *Cryptococcus neoformans* (*Torula histolytica*). **tubercular m.**, **tuberculous m.**, a severe meningitis caused by *Mycobacterium tuberculosis*. **viral m.**, meningitis due to various viruses, such as the coxsackieviruses, mumps virus, and the virus of lymphocytic choriomeningitis, characterized by malaise, fever, headache, nausea, cerebrospinal fluid pleocytosis (principally lymphocytic), abdominal pain, stiffness of the neck and back, and a short uncomplicated course. Called also *aseptic m.*, *acute aseptic m.*, *benign lymphocytic m.*, and *lymphocytic m.*

meningo- [Gr. *mēnix* membrane] a combining form denoting relationship to the membranes covering the brain and/or spinal cord, or to other membrane.

meningoarteritis (mě-ning'go-ar'ter-i'tis) inflammation of the meningeal arteries.

meningoblastoma (mě-ning'go-blas-to'mah) primary malignant melanoma of the meninges.

meningocele (mě-ning'go-sēl) [*meningo-* + Gr. *kelē* hernia] hernial protrusion of the meninges through a defect in the skull (*cranial m.*) or vertebral column (*spinal m.*). **spurious m.**, Billroth's disease, def. 1.

meningocephalitis (mě-ning'go-sef'ah-li'tis) meningoencephalitis.

meningocerebritis (mě-ning'go-ser'ē-bri'tis) [*meningo-* + *cerebritis*] meningoencephalitis.

meningococcemia (mě-ning'go-kok-se'me-ah) invasion of the blood stream by meningococci. **acute fulminating m.**, Waterhouse-Friderichsen syndrome.

meningococci (mě-ning'go-kok'si) plural of *meningococcus*.

meningococcidal (mě-ning'go-kok-si'dal) [*meningococcus* + L. *caedere* to kill] destroying meningococci.

meningococcin (mě-ning'go-kok'sin) an antigenic material precipitated from saline suspensions of the meningococcus by means of alcohol. It is applied as a skin test (intradermal) in the detection of meningococcus carriers.

meningococcosis (mě-ning'go-kok-ko'sis) infection caused by meningococci.

meningococcus (mě-ning'go-kok'us), pl. *meningococ'ci* [*meningo-* + Gr. *kokkos* berry] an individual organism of the species *Neisseria meningitidis*.

meningocortical (mě-ning'go-kor'ti-kal) pertaining to or affecting the meninges and cortex of the brain.

meningocyte (mě-ning'go-sit) a histiocyte of the meninges.

meningoencephalitis (mě-ning'go-en-sef'ah-li'tis) [*meningo-* + Gr. *enkephalos* brain + *-itis*] inflammation of the brain and meninges. **chronic m.**, dementia paralytica. Called also *encephalomeningitis*. **eosinophilic m.**, eosinophilic meningitis.

mumps m., a usually benign form seen in children, caused by the mumps virus, and characterized by fever, vomiting, nuchal rigidity, lethargy, parotitis, headache, convulsions, abdominal pain, diarrhea, and delirium. **primary amebic m.**, a highly fatal form of meningoencephalitis, most often caused by free-living amebas of the genus *Naegleria*, and usually acquired by swimming in fresh water inhabited by large numbers of the amebas. It is characterized by a rapidly deteriorating course and death in three to five days. **syphilitic m.**, dementia paralytica.

meningoencephalocele (mě-ning'go-en-sef'ah-lo-sēl') [*meningo-* + Gr. *enkephalos* brain + *kelē* hernia] hernial protrusion of the meninges and brain substance through a defect in the skull. Called also *encephalomeningocele*.

meningoencephalomyelitis (mě-ning'go-en-sef'ah-lo-mi'ē-li'tis) [*meningo-* + Gr. *enkephalos* brain + *myelos* marrow + *-itis*] inflammation of the meninges, brain, and spinal cord.

meningoencephalomyelopathy (mě-ning'go-en-sef'ah-lo-mi'ē-lop'ah-the) disease involving the meninges, brain, and spinal cord.

meningoencephalopathy (mě-ning'go-en-sef'ah-lop'ah-the) noninflammatory disease of the cerebral meninges and the brain. Called also *encephalomeningopathy*.

meningofibroblastoma (mě-ning'go-fi'bro-blas-to'mah) meningioma.

meningogenic (mě-ning'go-jen'ik) [*meningo-* + Gr. *gennan* to produce] arising in the meninges.

meningoma (men'in-go'mah) meningioma.

meningomalacia (mě-ning'go-mah-la'she-ah) [*meningo-* + Gr. *malakia* softness] softening of a membrane.

meningomyelitis (mě-ning'go-mi'ē-li'tis) [*meningo-* + Gr. *myelos* marrow + *-itis*] inflammation of the spinal cord and its membranes.

meningomyelocele (mě-ning'go-mi'ē-lo-sēl') [*meningo-* + Gr. *myelos* marrow + *kelē* hernia] hernial protrusion of a part of the meninges and substance of the spinal cord through a defect in the vertebral column. See illustration on following page.

meningomyeloencephalitis (mě-ning'o-mi'ē-lo-en-sef'ah-li'tis) inflammation of the meninges, spinal cord, and the brain.

meningomyeloradiculitis (mě-ning'go-mi'ē-lo-rah-dik'u-li'tis) inflammation of the meninges, spinal cord, and roots of the spinal nerves.

meningo-osteophlebitis (mě-ning'go-os'te-o-fle-bi'tis) [*meningo-* + Gr. *osteon* bone + *phleps* vein + *-itis*] periostitis with inflammation of the veins of a bone.

Meningomyelocele (after Netter, from Ciba Collection).

meningopathy (men/'in-gop'ah-the) [*meningo-* + Gr. *pathos* disease] any disease of the meninges.

meningopneumonitis (mē-'ning'go-nu-mo-ni'tis) a disease produced in experimental animals by the injection of the etiologic agent of psittacosis (*Chlamydia psittaci*), and marked by acute meningitis and pneumonitis.

meningorachidian (mē-'ning'go-rah-kid'e-an) [*meningo-* + Gr. *rhachis* spine] pertaining to the spinal cord and its membranes.

meningoradicular (mē-'ning'go-rah-dik'u-lar) [*meningo-* + L. *radix* root] pertaining to the meninges and the roots of the cranial and spinal nerves.

meningoradiculitis (mē-'ning'go-rah-dik'u-li'tis) inflammation of the meninges and roots of the spinal nerves.

meningorecurrence (mē-'ning'go-re-kur'ens) syphilitic meningitis induced in a syphilitic patient by antisyphilitic treatment.

meningorrhagia (mē-'ning'go-ra'je-ah) [*meningo-* + Gr. *rhēgnynai* to break] hemorrhage from the cerebral or spinal membranes.

meningorrhea (mē-'ning'go-re'ah) [*meningo-* + Gr. *rhoia* flow] effusion of blood between or upon the meninges.

meningosis (men/'in-go'sis) the membranous attachment of bones to each other.

meningothelioma (mē-'ning'go-the'le-o'mah) meningioma.

meningovascular (mē-'ning'go-vas'ku-lar) pertaining to the blood vessels of the meninges.

meninguria (men/'in-gu're-ah) [*meningo-* + Gr. *ouron* urine + *-ia*] the occurrence of membranous shreds in the urine.

meninx (me'ninks), pl. *meninges* [Gr. *mēnix* membrane] a membrane; especially one of the three membranes enveloping the brain and spinal cord. **m. fibro'sa** (obs.), the dura mater. **m. sero'sa** (obs.), the arachnoidea. **m. ten'uis** (obs.), the pia-arachnoid. **m. vasculo'sa** (obs.), the pia mater.

meniscal (mē-nis'kal) of or pertaining to a meniscus.

meniscectomy (men/'i-sek'to-me) excision of an intra-articular meniscus, as in the knee joint.

menischesis (men/'i-ske'sis) menoschesis.

menisci (men-is'si) plural of *meniscus*.

meniscitis (men/'i-si'tis) inflammation of a meniscus of the knee joint.

meniscocyte (mē-nis'ko-sit) [Gr. *mēniskos* crescent + *-cyte*] a sickle cell.

meniscocytosis (mē-nis'ko-si-to'sis) sickle cell anemia, see under *anemia*.

meniscosynovial (mē-nis'ko-sin-o've-al) pertaining to a meniscus and the synovial membrane.

meniscus (mē-nis'kus), pl. *menis'ci* [L.; Gr. *mēniskos*, crescent] 1. a crescent-shaped structure appearing at the surface of a liquid column, as in a pipet or buret, made concave or convex by the influence of capillarity. 2. [NA] a general term for a crescent-shaped structure of the body. Often used alone to designate one of the crescent-shaped disks of fibrocartilage attached to the superior articular surface of the tibia. **m. of acromioclavicular joint**, discus articularis articulationis acromioclavicularis. **articular m.**, **m. articula'ris** [NA], a pad, commonly a wedge-shaped crescent of fibrocartilage or dense fibrous tissue,

found in some synovial joints; one side forms a marginal attachment at the articular capsule and the other two sides extend into the joint, ending in a free edge. **converging m.**, a concavoconvex lens. **discoid m.**, **discoid lateral m.**, a semilunar lateral meniscus of the knee that has been transformed into a thickened, irregular discoid mass as a result of excess motion of the meniscus, which in turn results from congenital absence of attachment of the posterior horn of the meniscus to the tibial plateau. The excess motion also causes a clicking sound on flexion and extension of the knee. Occasionally, a discoid medial meniscus is observed. Called also *congenital discoid meniscus*. **diverging m.**, a convexoconcave lens. **m. of inferior radioulnar joint**, discus articularis articulationis radioulnaris distalis. **joint m.**, articular m. **Kuhnt's m.**, the lining of the physiologic cup of the optic disk, composed of a thick accumulation of neuroglia. **lateral m. of knee joint**, **m. latera'lis articulationis genu** [NA], a crescent-shaped disk of fibrocartilage, but nearly circular in form, attached to the lateral margin of the superior articular surface of the tibia; called also *m. lateralis articulationis genu*. **medial m. of knee joint**, **m. media'lis articulationis genu** [NA], a crescent-shaped disk of fibrocartilage attached to the medial margin of the superior articular surface of the tibia; called also *m. medialis articulationis genu*. **negative m.**, a convexoconcave lens. **positive m.**, a concavoconvex lens. **m. of sternoclavicular joint**, discus articularis articulationis sternoclavicularis. **tactile meniscus**, **menis'ci tac'tus** [NA], small, cup-shaped, tactile nerve endings within the skin, many of which are formed by branches of a single nerve fiber, and each of which is in contact with a single, modified epithelial cell; they are found in the deep epidermis, in hair follicles, and in the hard palate, and function as touch receptors. Called also *Grandy's corpuscles*, *Grandy-Merkel corpuscles*, *tactile disks*, *Merkel's cells*, *corpuscles*, or *disks*, and *Merkel's tactile cells*. **m. of temporomaxillary joint**, discus articularis articulationis temporomandibularis.

menispermine (men/'i-sper'min) a crystalline alkaloid, C₁₈H₂₄N₂O₂, from *Anamirta cocculus* L. Wight & Arn. (Menispermaceae).

Menispermum (men/'i-sper'mum) [Gr. *mēnē* moon + *sperma* seed] a genus of plants. The rhizome and roots of *M. canadense* L. (Menispermaceae) (moonseed, or yellow parilla) are tonic and alterative. Because this vine, including the leaves and fruits, resemble a grapevine, children have ingested the fruits and been poisoned, sometimes fatally.

meno- [Gr. *mēn* month; *mēniaia* the menses] a combining form denoting relationship to the menses.

menolipsis (men/'o-lip'sis) temporary cessation of the menses.

menometrorrhagia (men/'o-met'ro-ra'je-ah) excessive uterine bleeding occurring both during the menses and at irregular intervals.

menopausal (men/'o-paw'zal) pertaining to or associated with the menopause.

menopause (men/'o-pawz) [*meno-* + Gr. *pausis* cessation] cessation of menstruation in the human female, occurring usually between the age of 48 and 50. See also *climacteric*. **artificial m.**, cessation of menstruation produced by artificial means, such as surgical operation or irradiation. **m. prae'cox**, premature failure of ovulation, possibly due to primary germ cell deficiency, acquired refractoriness to pituitary gonadotropin, or autoimmunization.

menoplasia (men/'o-pla'ne-ah) [*meno-* + Gr. *planē* deviation] metastasis or aberration of the menses; vicarious menstruation.

menorrhagia (men/'o-ra'je-ah) [*meno-* + Gr. *rhēgnynai* to burst forth] excessive uterine bleeding occurring at the regular intervals of menstruation, the period of flow being of greater than usual duration.

menorrhagia (men/'o-ra'je-ah) [*menorrhea* + *-algia*] dysmenorrhea.

menorrhea (men/'o-re'ah) [*meno-* + Gr. *rhoia* flow] 1. the normal discharge of the menses. 2. too free or profuse menstruation.

menorrheal (men/'o-re'al) pertaining to menorrhea.

menoschesis (mē-nos'kē-sis, men/'o-ske'sis) [*meno-* + Gr. *schesis* retention] retention of the menses.

menostasia (men/'o-sta'ze-ah) menostasis.

menostaxis (men/'o-stak'sis) [*meno-* + Gr. *staxis* a dropping, dripping] excessively prolonged menstruation.

menotropins (men/'o-tro'pins) [USP] an extract of human postmenopausal urine containing both follicle-stimulating hormone and luteinizing hormone. In females, it has the property of stimulating growth and maturation of ovarian follicles. In males, it has the properties of maintaining and stimulating testicular interstitial cells (Leydig tissue) related to testosterone production and of being responsible for full development and maturation of spermatozoa in the seminiferous tubules. Called also *human follicle-stimulating hormone* and *human menopausal gonadotropin*.

menses (men'sēz) [L., pl. of *mensis* month] the monthly flow of blood from the genital tract of women; see *menstruation*.

menstrual (men/'stroo-al) [L. *menstrualis*] pertaining to the menses.

menstruant (men/'stroo-ant) a person who is menstruating or is capable of menstruating.

menstruate (men/'stroo-āt) [L. *menstruare*] to discharge blood from the genital tract at monthly intervals; see *menstruation*.

menstruation (men/'stroo-a'shun) the cyclic, physiologic discharge through the vagina of blood and mucosal tissues from the nonpregnant uterus; it is under hormonal control and normally recurs, usually at approximately four-week intervals, in the absence of pregnancy during the reproductive period (puberty through menopause) of the female of the human and a few species of primates. It is the culmination of the menstrual cycle; see illustration accompanying *cycle*. **anovular m.**, **anovulatory m.**, periodic uterine bleeding without preceding ovulation. **delayed m.**, menstruation the first appearance of which is delayed beyond the sixteenth year. **difficult m.**, dysmenorrhea. **infrequent m.**, menstruation occurring less frequently than normal. **nonovulatory m.**, anovular m. **profuse m.**, menstruation marked by excessive flow. **regurgitant m.**, a back flow through the uterine tubes by which epithelial cells and other materials may be discharged through the tubal ostia and deposited on the ovaries and adjacent organs, as in endometriosis. **retrograde m.**, regurgitant m. **scanty m.**, menstruation marked by abnormally slight flow. **supplementary m.**, menstrual discharge from the uterus and also from some other part. **suppressed m.**, failure of the menstrual flow to appear. **vicarious m.**, discharge of blood from an extragenital source at the time a menstrual period is normally expected; thought to result from generally increased capillary permeability related to the menstrual cycle.

menstruous (men/'stroo-us) pertaining to menstruation.

menstruum (men/'stroo-um) [L. *menstruus* menstruous: it was long believed that the menstrual fluid had a peculiar solvent quality] a solvent medium. **Pitkin m.**, a medium for the administration of heparin, consisting of a mixture of gelatin, dextrose, glacial acetic acid, and water.

mensual (men/'su-al) [L. *mensis* month] monthly.

mensuration (men/'su-ra'shun) [L. *mensuratio*; *mensura* measure] the act or process of measuring.

mentagrophyton (men/'tah-groff'i-ton) [L. *mentagra* sycosis + Gr. *phyton* plant] a former name for the fungus, *Trichophyton mentagrophytes*, the cause of sycosis barbae and other skin and nail infections.

mental (men'tal) 1. [L. *mens* mind] pertaining to the mind; psychic. 2. [L. *mentum* chin] pertaining to the chin.

mentalis (men-ta/'lis) [L.] relating to the chin.

mentality (men-tal/'i-te) the mental power or activity.

mentation (men-ta/'shun) mental activity.

Mentha (men/'thah) [L.] a genus of labiate plants, the mints. **M. canadensis**, wild mint. **M. cardia'ca**, Scotch spearmint; see *spearmint*. **M. piperi'ta**, peppermint. **M. pule'gium**, true, or European, pennyroyal. **M. spica'ta**, **M. vir'idis**, common spearmint.

menthol (men'thol) [USP] chemical name: 5-methyl-2-(1-methylethyl)cyclohexanol. An alcohol, $C_{10}H_{20}O$, obtained from diverse mint oils or prepared synthetically, occurring as colorless, hexagonal crystals, usually needle-like, or in fused masses, or crystalline powder; it may be levorotatory (*l*-menthol), from natural or synthetic sources, or racemic (*dl*-menthol). It is used as a topical antipruritic, and in inhalers for treatment of upper respiratory disorders or added to water for inhalation in acute bronchitis. Called also *peppermint camphor*.

menthyl (men'thil) the monovalent radical, $C_{10}H_{19}$.

menticide (men/'ti-sid) [L. *mens* mind + *caedere* to kill] brain-washing.

mentimeter (men-tim/'ē-ter) [L. *mens* mind + Gr. *metron* measure] a method or means of measuring mental capacity.

mento- [L. *mentum* chin] a combining form denoting relationship to the chin. See also words beginning *genio-*.

mentoanterior (men/'to-an-te're-or) [*mento-* + *anterior*] see under *position*.

mentolabial (men/'to-la'be-al) [*mento-* + L. *labium* lip] pertaining to the chin and lip.

menton (men'ton) an anthropologic and cephalometric landmark, indicating the most inferior point on the midline contour of the chin on a lateral jaw projection.

mentoplasty (men/'to-plas'te) [*mento-* + Gr. *plassein* to form] plastic surgery of the chin; surgical correction of deformities and defects of the chin.

mentoposterior (men/'to-pos-te're-or) [*mento-* + *posterior*] see under *position*.

mentotransverse (men/'to-trans-vers') [*mento-* + *transverse*] see under *position*.

mentula (men'tu-lah) [L.] penis.

mentulagra (men'tu-lag'rah) [L. *mentula* penis + Gr. *agra* seizure] 1. priapism. 2. chordee.

mentulate (men'tu-lāt) having a large penis.

mentum (men'tum) [L.] [NA] the chin.

Menyanthes (men/'e-an'thēz) [perhaps from Gr. *mēn* month + *anthos* flower] a genus of gentianaceous plants. *M. trifoliata* L., or buckbean, is a bitter tonic and has febrifuge properties, and has been used as an emergency food, beer additive, and tea substitute.

meobentine sulfate (me/'o-ben'tēn) chemical name: *N*-(4-methoxyphenyl)methyl-*N'*,*N''*-dimethylguanidine sulfate (2:1); an antiarrhythmic cardiac depressant, $(C_{11}H_{17}N_3O_2) \cdot H_2SO_4$.

Meonine (me/'o-nin) trademark for a preparation of racemethionine.

mepacrine hydrochloride (mep/'ah-krin) quinacrine hydrochloride.

meparfynol (mē-par/'fi-nōl) chemical name: 3-methyl-1-pentyn-3-ol. A sedative and hypnotic, $C_8H_{10}O$, administered orally. Called also *methylparafynol* and *methylpentynal*.

mepartricin (mē-par/'tri-sin) an antifungal and antiprotozoal; it is a methyl ester of partricin (q.v.), used chiefly in the treatment of vaginal and cutaneous candidiasis, applied topically.

mepazine acetate (mep/'ah-zēn) chemical name: 10-[(1-methyl-3-piperidinyl)methyl]-10-*H*-phenothiazine acetate. A tranquilizer, $C_{19}H_{22}N_2S$, used mainly in the treatment of tension and anxiety states, but also used as a pre- or postoperative sedative; administered orally or intramuscularly.

mepenzolate bromide (mē-pen/'zo-lāt) [USP] chemical name: 3-[(hydroxydiphenylacetyl)oxy]-1,1-dimethylpiperidinium bromide. An oral anticholinergic, $C_{21}H_{28}BrNO_3$, occurring as a white or light cream-colored powder; used mainly in disorders in which hypermotility of the colon is a feature.

meperidine hydrochloride (mē-per/'i-dēn) [USP] chemical name: 1-methyl-4-phenyl-4-piperidinecarboxylic acid ethyl ester. A synthetic narcotic analgesic, $C_{18}H_{21}NO_2 \cdot HCl$, occurring as a fine, white, crystalline powder, used as a preanesthetic medication, postoperative sedative, obstetric analgesic, and when a relatively short duration of analgesia is desired; administered orally in tablets or intramuscularly or subcutaneously. Abuse of this drug may lead to dependence. Called also *isonipeccaine* and *pethidine hydrochloride*.

mephenamine (mē-fen/'ah-mēn) orphenadrine.

mephenesin (mē-fen/'ē-sin) chemical name: 3-(2-methylphenoxy)-1,2-propanediol. A skeletal muscle relaxant, $C_{10}H_{14}O_3$, occurring as a white crystalline powder; administered orally.

mephinoxalone (mef/'en-ok'sah-lōn) chemical name: 5-[(*o*-methoxyphenoxy)methyl]-2-oxazolidinone; a mild tranquilizer and skeletal muscle relaxant, $C_{11}H_{13}NO_4$.

mephentermine sulfate (mē-fen/'ter-mēn) [NF] chemical name: *N*, α , α -trimethylbenzeneethanamine sulfate (2:1). An adrenergic, $(C_{11}H_{17}N_2) \cdot H_2SO_4$, occurring as white crystals or as a crystalline powder; used for its vasopressor effects in the treatment of certain hypotensive states, administered orally, intramuscularly, and intravenously. It is also applied topically to the nasal mucosa as a decongestant.

mephenytoin (mē-fen/'i-to-in) [USP] chemical name: 5-ethyl-3-methyl-5-phenyl-2,4-imidazolidinedione. An anticonvulsant, $C_{12}H_{14}N_2O_2$, occurring as a white, crystalline powder; used for the control of grand mal, focal, jacksonian, and psychomotor epileptic seizures that are refractory to other drugs, administered orally.

mephitic (mē-fi'tik) [L. *mephiticus*; *mephitis* foul exhalation] emitting a foul odor.

mephitis (mē-fi'tis) [L.] a foul exhalation.

mephobarbital (mef/'o-bar'bī-tal) [USP] chemical name: 5-ethyl-1-methyl-5-phenyl-2,4,6(1*H*,3*H*,5*H*)-pyrimidinetrione. A long-acting barbiturate, $C_{13}H_{14}N_2O_3$, occurring as a white, crystalline powder; used as a sedative in the treatment of anxiety, tension, and apprehension and as an anticonvulsant in grand mal and petit mal epilepsy, administered orally.

Mephyton (mef/'i-ton) trademark for preparations of phytonadione (vitamin K_1).

mepivacaine hydrochloride (mē-piv/'ah-kān) [USP] chemical name: *N*-(2,6-dimethylphenyl)-1-methyl-2-piperidinecarboxamide monohydrochloride. An analogue of lidocaine, $C_{14}H_{22}N_2O \cdot HCl$, occurring as a white, crystalline solid; used to produce local anesthesia by infiltration injection, peripheral nerve block, and epidural block.

Meprane (mē/'prān) trademark for preparations of promethesol dipropionate.

meprednisone (mē-pred/'ni-sōn) [NF] chemical name: 17 α ,21-dihydroxy-16 β -methyl-pregna-1,4-diene-3,11,20-trione. A synthetic glucocorticoid, $C_{22}H_{28}O_5$, occurring as a white to creamy white powder; used in the treatment of inflammatory, allergic, rheumatic, and other corticosteroid-responsive diseases, such as certain endocrine, respiratory, neoplastic, and collagen diseases, administered orally.

meprobamate (mē-pro/'bah-māt, mep/'ro-bam'āt) [USP] chemical name: 2-methyl-2-propyl-1,3-propanediol. A carbamate derivative, $C_8H_{16}N_2O_4$, occurring as a white powder, having tranquilizing, muscle relaxant, and anticonvulsant actions. It is used as an

oral sedative for the relief of anxiety and tension, as an adjunct in the treatment of conditions in which anxiety and tension are manifested, and to promote sleep in anxious tense patients; it is also used in musculoskeletal disorders and as an anticonvulsant in petit mal epilepsy. An intramuscular injection is used as adjunctive therapy in tetanus. **isopropyl m.**, carisoprodol.

Meprospan (mĕ-pro'span) trademark for a preparation of meprobamate.

Meprotabs (mĕ-pro'tabs) trademark for a preparation of meprobamate.

meprylcaine hydrochloride (mep'ril-kān) [USP] chemical name: 2-methyl-2-(propylamino)-1-propanol benzoate (ester) hydrochloride. A local anesthetic, $C_{14}H_{21}NO_2 \cdot HCl$, occurring as a white, crystalline powder; used for infiltration and nerve block anesthesia.

mepyramine maleate (me-pir'ah-mĕn) pyrilamine maleate.

mepyrapone (mĕ-pi'rah-pōn) metyrapone.

mEq. milliequivalent.

meq. milliequivalent.

mequinodox (mek'wi-doks) chemical name: 3-methyl-2-quinoxalinedimethanol 1,4-dioxide; an antibacterial, $C_{10}H_{10}N_2O_3$.

mer- see *mero-*.

meralgia (me-ral'je-ah) [*mero* (2) + *-algia*] pain in the thigh. **m. paresthetica**, a disease marked by paresthesia, pain, and numbness in the outer surface of the thigh, in the region supplied by the lateral femoral cutaneous nerve, due to entrapment of the nerve at the inguinal ligament. Called also *Bernhardt's disturbance of sensation*.

meralluride (mer-al'u-rid) chemical name: [3-[[[(3-carboxy-1-oxopropyl)amino]carbonyl]amino]-2-methoxypropyl](1,2,3,6-tetrahydro-1,3-dimethyl-2,6-dioxo-7H-pyrimidin-7-yl)mercury. A mercurial diuretic, $C_{16}H_{22}HgN_4O_7$, occurring as a white to slightly yellow powder; used in the treatment of edema secondary to such conditions as congestive heart failure, nephrosis, and the ascites of liver disease, administered intramuscularly and subcutaneously.

merbromin (mer-bro'min) chemical name: (2',7'-dibromo-3',6'-dihydroxy-3-oxospiro[isobenzofuran-1(3H),9(9H)xanthene]-4'-yl)-hydroxomercurey disodium salt; a topical antibacterial, $C_{20}H_8Br_2 \cdot HgNa_2O_6$.

mercaptan (mer-kap'tan) [*L. mercurium captans* seizing or combining with mercury] any compound containing the —SH group bound to carbon.
